SUBJECT INDEX

The vast use of transition metal catalysts led to limited citations of individual metals. In many cases, the term metal catalysis, or catalysts, metal is used as a heading, with several examples, often using different metals.

- α -effects, and nucleophilicity, 431
- A^{1,3}-strain, 182, 184
- A2 mechanism, acetal hydrolysis, 456
- ab initio calculations, 34, 233
 - 1,2-alkyl shifts in alkyne anions, 1337
 - and acidity, 319
 - and antiaromaticity, 66
 - and cubyl carbocations, 383
 - and nonclassical carbocations, 396
 - and protonated of
 - cyclopropanes, 881
 - and S_N2 reactions, 377, 378
 - carbocation stability, 862
 - E2 mechanism, 1254
 - Mukaiyama aldol reaction, 1152
 - norbornyl carbocation, 404
 - rate of cyclopropylcarbiny radical rearrangement, 814
 - transition state for radical hydrogen abstraction, 812
- abnormal *Beckmann reaction*, 1359
- abnormal *Beckmann rearrangement*, 1312, 1366
- abnormal *Claisen rearrangement*, 1412
- absolute aromaticity, 37
- absolute configuration, 138
- absolute configuration see enantiomers, chirality, stereogenic, chiral
 - and biochemical methods, 141
 - and circular dichroism, 143
 - and GC, 142
 - and *Mosher's acid* or *Mosher's ester*, 142
 - and NMR, 142
 - and optical comparison, 142
 - and optical rotatory dispersion, 143
- and specific rotation, 143
- and the S_N2 reaction, 141
- and the steering wheel model, 140
- and universal NMR database, 143, 144
- Cahn-Ingold-Prelog system, 138–141
- D/L nomenclature, 138
- determination, 141
- Kishi's NMR method, 143, 144
- molar rotation, 143
- sequence rules, 138–141
- absolute hardness, 332
 - table, 333
- absorbents, chiral, 156
- absorption, and conjugation, 293
 - differential, and diastereomers, 156
 - differential, and resolution, 156
- abstraction, and vinylic hydrogenation, 815
 - by radicals, 694, 867
 - by radicals, transition state, 808
- divalent atoms, 812
- from alkanes, by radicals, 813
- from alkenes, by radicals, 815
- of atoms by radicals, 808
- of atoms from radicals, 247
- of benzylic hydrogens, by radicals, 815
- of H, by radicals, and rearrangements, 1333
 - by halogen radicals, 822
 - by nitrenes, 259
 - by radicals, ab initio study, 812
 - by radicals, transition state, 812
 - photochemical, 306
 - radical, and stereoelectronic effects, 817
 - by radicals, rate, 812
- selectivity by radicals, 813
- selectivity of bromine versus chlorine radicals, 822
- stereoselective, 817
- acceleration, of the Diels-Alder reaction, 1022
- acceptors, in the benzoin condensation, 1188
- acenaphthylene, addition of DBr, 864
- acenes, 57, 78
 - zigzag, 78
- aceptalenes, radical ions, 248
- acetal formation, and drying agents, 1081
 - and microwave irradiation, 1082
- azeotropic distillation, 1081
- in ionic liquids, 1082
- mechanism, 1082
- acetaldehyde, and paraldehyde, 1240
 - rational barrier, 178
- acetals, acid catalyzed hydrolysis, 455
- alkoxymercuration of alkynes, 892
- and enol ethers, 1083
- and Lewis acids, 456
- and transacetalization, 1083
- as protecting groups, 1082
- base induced elimination to enol ethers, 1286
- chiral, 1082
- dimerization, 535
- formation of thioacetals, 478
- from alcohols and aldehydes or ketones, 1081
- from amides, 685
- from Grignard reagents, 534
- from ortho esters, 534
- from oxidation of hydroxy ethers, 831
- hydrolysis, 454

- acetals, acid catalyzed hydrolysis
(*Continued*)
 hydrolysis, and Brønsted coefficient, 456
 hydrolysis, and carbocations, 457
 hydrolysis, and isotope labeling, 455
 hydrolysis, and S_N1 mechanisms, 455
 hydrolysis, rate determining step, 456
 ketene silyl, with alkoxy ketones, 1153
 ketene silyl, with imines, 1137, 1152
 reduction of, 1537
 transesterification, 465
 with allylic silanes, 534
 with organotrifluoroborates, 700
 with silyl enol ethers, 534
 acetanilides see anilines, acyl
 acetates, allylic also see esters, allylic
 as a base, 313
 reaction with nucleophiles, 529
 with boronic acids, Pd catalyst, 560
 with Grignard reagents, 527
 with keto acids, metal catalyzed, 856
 acetates, enol also see enol
 from ketenes with aldehydes or ketones, 892
 acetates, homoallylic, 1126
 metal, and acyloxylation, 835
 propargylic, with dialkylzinc, 1121
 acetic acid, cis conformation, 178
 dimeric structure, 97
 with alkenes, reactivity, 872
 with Zn, reduction of conjugated systems, 916
 acetic anhydride, and acyl fluoroborate, 1012
 and dehydration of oximes to nitriles, 1311
 and nitration of aromatic compounds, 593
 conjugate addition, 968
 acetoacetic acid synthesis, 548, 559
 acetoacetic ester, and enol content, 90
 enol content and solvent, 92
 synthesis, 540
 acetolysis also see solvolysis
 of organomercury compounds, 659
 acetone, tautomerism, and bromination, 285
 acetoxy-ketones, from enols and ketones, 836
 acetoxylation, of alkenes, 1012
 acetoxy-sulfides, by Pummerer rearrangement, 1565
 hydrolysis to aldehydes, 1565
 acetyl carbocations, 215
 acetyl hypofluorite, 608
 acetylene see ethyne

aldehydes or ketones, 1114
alcohols, from aldehydes or
ketones, 1141–1153
from aldehydes, 615
from alkenes, 885, 1375
from alkylboranes, 700
from amides and *Grignard*
reagents, 1228
from amines, 474
from anhydrides and *Grignard*
reagents, 1228
from anhydrides, and
organometallics, 1228
from boranes and carbon
monoxide, 1376
from carboxylic acids, 1515
from carboxylic esters and
Grignard reagents, 1228
from carboxylic esters and
organometallics, 1228
from carboxylic esters,
Bouveault-Blanc
procedure, 1516
from diazoketones, 454
from dienes or trienes, 1376
from epoxides, 535, 1502
from esters, 1516
from ethers, 504, 505
from ethers, by *Wittig*
rearrangement,
1373, 1374
from *Grignard reactions*, 535,
1107–1114
from *Grignard reagents*, and
oxygen, 699
from halomethyl ethers, 1376
from hydrocarbons and ozone,
1469
from hydroperoxides, 1539
from inorganic esters, 453
from ketones, 615
from organolithium reagents,
535
from peroxides, 1540

- alcohols, *Grignard reagents*, with aldehydes or ketones, 1107–1114
- alcohols, halo, with $\text{LiAlH}_4\text{-TiCl}_3$, 1306
- α -halo, 1107
- halogenating agents, 502
- halogenation, rearrangement, 501
- homoallylic, 1116, 1123, 1185, 1285
- alcohols, homoallylic, allylic organometallics, 1115
- chiral, from epoxides, 537
- from alkenes and chloral, 1186
- from allylic silanes and aldehydes, 1180
- pyrolysis, 1314
- with aldehydes, 1186
- alcohols, homopropargylic, 1123
- hydrolysis of esters, 556
- hydroxyalkylation of aromatic compounds, 615
- α -hydroxylation of allylic compounds, 1472
- α -hydroxylation of benzylic compounds, 1472
- in esterification reactions, 1202–1206
- indirect reduction to hydrocarbons, 1535
- insertion by carbenes, 692
- intramolecular addition of alkenes, 890
- metal catalyzed coupling with allyl silanes, 533
- metal catalyzed dehydration, 1283
- metal catalyzed oxidation with oxygen, metals for, 1446
- metal catalyzed oxidation with TEMPO, 1448
- Moffatt oxidation*, 1448
- Oppenauer oxidation, 1447
- alcohols, oxidation, by catalytic dehydrogenation, 1450
- in supercritical CO_2 , 1442
- to acyl fluorides, 1484
- to aldehydes but not acids, reagents, 1443
- to aldehydes or ketones, 1442–1452
- to aldehydes, 831
- to carboxylic acids, 831, 1483
- to carboxylic acids, reagents for, 1483
- to cyclic ethers, 830
- to ketones, reagents for, 1446, 1447
- with air and zeolite, 1451
- with alternative hypervalent iodine reagents, 1450
- with *Bobbitt's reagent*, 1449
- with *Collins reagent*, 1443
- with *Dess-Martin periodinane*, 1449
- with dichromate, 1442
- with DMSO and DCC, 1448
- with DMSO and oxalyl chloride, 1447
- with DMSO and sulfur trioxide, 1448
- with DMSO and trifluoroacetic anhydride, 1448
- with DMSO reagents, 1447
- with *Fremy's salt*, 1452
- with hypervalent iodine, 1449
- with *Jones reagent*, 1442
- with manganese dioxide, 1445
- with miscellaneous reagents, 1451
- with Oxone, 1452
- with periodate, 1452
- with potassium permanganate, 1445
- with TEMPO, co-reagents, 1448
- with TEMPO in water, 1449
- with TPAP, 1446
- with trimethylsilyl chromate, 1443
- and Cr(IV) , 1444
- and cyclodextrin, 1451
- and *Grubb's catalyst*, 1445
- and NBS, 1451
- and Oxone, 1450
- and phase transfer, 1445
- DDQ and ultrasound, 1452
- in ionic liquids, 365
- microwave irradiation, 1446
- radical mechanism, 1445
- alcohols, oxidative coupling with amines, 494
- alcohols, oxidizing reagents for making cyclic ethers, 831
- alcohols, oxymercuration see alkoxymercuration
- alcohols, permanganate oxidation, and ultrasound, 1445
- photochemical addition to alkenes, 891
- photochemistry, 292
- PPh_3 and CCl_4 , 502
- alcohols, propargyl, acid catalyzed rearrangement, 1357
- base induced rearrangement, 1357, 1358
- Friedel-Crafts alkylation*, 612
- isomerization with metal catalysts, 1358
- Meyer-Schuster rearrangement*, 1357
- formation of allenes, 664
- with boronic acids, 1305
- alcohols, protection as ethers, 460
- protonolysis and carbocation formation, 219
- radical dimerization, 839
- reaction with aldehydes or ketones, compatible functional groups, 1082
- reaction with organotin reagents, 533
- reaction with phosgene, 1086
- reaction with sulfinyl halides, 480
- reaction with thiols, 477
- reagents for deoxygenation, 1535
- reagents utilized with DMSO, for oxidation, 1448
- reduction of acyl halides, 1544
- reduction of hydroperoxides, 1539
- reduction to hydrocarbons, reagents, 1534
- reductive alkylation of aldehydes, 1084
- solvent free oxidation, 1442
- solvolysis, 1330
- structural variation of chromates for oxidation, 1444
- supercritical, as a solvent, 1542
- supercritical, reduction of ketones, 1542
- TEMPO oxidation, in ionic liquids, 1448, 1449
- vinylcyclopropyl, sigmatropic shifts, 1395
- Alcohols, with acyl halides and Zn, 1201
- with acyl halides, 1200
- with acyl halides, $\text{S}_{\text{N}}1$ or $\text{S}_{\text{N}}2$ mechanism, 1200
- with acyl halides, tetrahedral mechanism, 1200
- with acyl hydrazides, 1209
- with aldehydes or ketones and HX , 1106
- alcohols, with aldehydes, 1084
- with alkenes and hydrazoic acid, 1364
- with alkenes, 889
- with alkenes, enantioselectivity, 889
- with alkenes, *Markovnikov's rule*, 889
- with alkenes, regioselectivity, 889
- with alkyl halides, 460
- with alkynes, 889
- with allenes, formation of tetrahydrofurans, 890
- with amides, 494
- with anhydrides, 1201
- with anhydrides, catalysts for, 1201
- with anhydrides, microwave irradiation, 1202
- with aziridines, 466
- with borohydride, 1511
- with boron trichloride, 702

alcohols, with aldehydes

(*Continued*)

- with boron trioxide, 702
- with carbon disulfide, 1086
- with carboxylic acids and DCC, 1205
- with carboxylic acids, 1202–1206
- with carboxylic acids, acid catalyzed, 1202
- with carboxylic acids, equilibrium, 1202
- with cyanogen chloride, 1086
- with DAST, 501
- with diazomethane, 462
- with DMF, 1208
- with enol ethers, 891
- with epoxides, 465
- with halogens and alkenes, 984
- with halogens, 986
- with HBr or HI, 504
- with hydrazoic acid, 485
- with hydrogen sulfide, 476
- with imides, 494
- with inorganic acids, 473
- with isothiocyanates, 1085
- with ketenes, 892, 1353
- with *Lawesson's reagent*, 476
- with lead tetraacetate, 830
- with metal halides, 502
- with *Michael type alkenes*, 891
- with mineral acids, 500
- with NaOH and CS₂, 1289
- with onium salts, 467
- with oxidizing agents and ylids, 1166
- with polymer supported oxidizing agents, 1443
- with PPh₃ and iodine, 502
- with sulfonamides, 1250
- with sulfonyl halides, 1250
- with thionyl chloride, 409, 500
- with trifluoroborates, 462
- alcoholysis, metal catalyzed, 891
- of alkenes, 891
- of amides, 1208
- of anhydrides,
 - enantioselectivity, 1202
- of cyclic anhydrides, 1202
- of nitriles, 1085
- aldehyde-alkenes, and radical cyclization, 964
- aldehyde-alkenes, cyclization, 1123
- aldehyde-carboxylic acid, intramolecular reaction, 1155
- aldehydes, acetal formation, 1081
- aldehydes, acid catalyzed addition of aldehydes, 1240
- rearrangement, 1348
- aldehydes, addition of alcohols, 1081
- of allylic boranes, 1124
- of amides, 1099
- of dialkylzinc reagents, 1115
- of diazomethane, 1355
- of *Grignard reagents*,
 - mechanism, 1111, 1112
- of organolithium reagents,
 - mechanism, 1113
- of organometallics, 1114–1125
- of thiols, 1087
- of water, 1075
- to alkenes, 970
- to alkenes, in ionic liquids, 972
- aldehydes, alkylation, 542
- aldehydes, alkylation-reduction, 1114
- aldehydes, amphiprotic properties, 665
- aldehydes, and 9-BBN, 923
- and autoxidation, 832
- and bisulfite addition product, 1090
- and carbanions, 234
- and Claisen condensation, 1154
- and Collman's reagent, 564
- and enolate anion formation, 1113
- and formation of amins, 1091, 1092
- and hemiaminals, 1090
- and insertion, 692
- and *Peterson alkenylation*, 1162
- and reagents for hydrolysis of C=N compounds, 1077, 1078
- and tautomerism, 89
- and the aldol reaction, 1141–1153
- and the *Baylis-Hillman reaction*, 1127
- and the benzoin condensation, 1187
- and the *Cannizzaro reaction*, 1563
- and the *Claisen-Schmidt reaction*, 1144, 1145
- and the *Dakin reaction*, 1370
- and the *Knoevenagel reaction*, 1157
- and the *Mannich reaction*, 1100
- and the *McMurry reaction*, 1559
- and the *Mukaiyama aldol reaction*, 1151–1153
- and the *Paterno-Büchi reaction*, 1243
- and the *Perkin reaction*, 1161
- and the *Reformatsky reaction*, 1129
- and the *Stetter reaction*, 971
- and the *Tischenko reaction*, 1564
- and *Tollens' reaction*, 1164
- and Umpolung, 553

aldehydes, aryl, and the

- Gatterman reaction*, 626
- and iminium salts, 627
- and reverse *Gatterman-Koch reaction*, 643
- benzoin condensation, 1187
- by benzylic CH oxidation, 1479
- by α -CH oxidation of methyl aromatic compounds, 1479
- decarbonylation, 643
- formation of hydrazones, 1093
- from aromatic compounds, 625
- reagents, for benzylic oxidation, 1479

 addition of radicals, 868
 Grignard addition, 936
 Heck reaction, 763
- alkenes, iodination of, 823
 iodoacetyl addition, 986
 ionization potential, and
 addition reactions, 873
- alkenes, isomerization of, E/Z
 isomers, 881
 metal catalysts for, 882
 positional isomers, 881
 via boranes, 664
 and supercritical CO₂, 766
- alkenes, *Jacobsen-Katsuki*
 epoxidation of, 1005
- alkenes, lactam formation from,
 1013
 lactonization of, 1013
 lactonization of, and ultrasound,
 1013
- alkenes, Lewis acid catalyzed
 addition, of acyl halides,
 992
 of alkyl halides, 990
 of silanes, 929
- alkenes, mechanism, halohydrin
 formation, 985
- alkenes, *Meerwein arylation*, 794
- alkenes, metal catalyzed, addition,
 of alkanes, 928
 of alkenes, 931
 of alkynes, 931
 of aromatic compounds, 939
 of diazoacetates, 1010
 of Grignard reagents, 936
 of imides, 901
 of phosphines, 899
 of silanes, 928
 to aldehydes, 971
- alkenes, metal catalyzed, addition,
 to arenes, 939
 amination, 896, 897
 carbonylation, 973, 975
 carboxylation, 978
 cyclization to allenes, 934
 decarbonylation of acyl halides,
 1300
 hydration, 886
 hydroamination, 1007
 hydroformylation, 979
 with aryl diazonium salts, 793
- alkenes, metal induced,
 elimination of halo ethers,
 1306
- alkenes, metal mediated,
 elimination of dihalides,
 1304
- alkenes, metal-mediated, addition
 to nitriles, 1239
- alkenes, *Michael type*, addition of
 amines, 896
 addition of hydrazoic acid, 901
 and addition of thiols, 895
 with alcohols, 891
 with diaryl sulfimides, 1010
- alkenes, mixed halogenation of,
 983
 molecular orbitals, 1031
 nitration of, and nitronium salts,
 677
 nitroso-halogenation of, 989
 orbital overlap in [2+2]-
 cycloaddition, 1044
- alkenes, oxidation of, in the
 Wacker process, 1488
 oxidation of, to aldehydes or
 ketones, 1487–1489
 α -oxidation, to conjugated
 ketones, 1477
 oxidation of, with RuO₄, 1471
 oxidation to, aldehydes or
 ketones, reagents for, 1489
 oxidation to, allylic alcohols,
 1470, 1471
- alkenes, oxidative cleavage of,
 1459, 1460, 1463–1465
 Barbier-Wieland procedure,
 1464
 mechanism, 1464, 1465
 with the *Lemieux-von Rudloff*
 reagent, 1463
- alkenes, oxidative
 decarboxylation, of
 carboxylic acids, 1467
 alkenes, oxyamination of, 1007
 alkenes, oxymercuration of, 874,
 885, 886
- alkenes, ozonolysis of, 1459–1463
 and 1,3-dipolar addition, 1460,
 1462
 and isotope labeling, 1462
 and rearrangement, 1460
 Criegee mechanism, 1460–1462
 mechanism, 1460–1462
 regiochemistry of ozonide
 formation, 1460, 1461
 to aldehydes or ketones, 1459
- alkenes, perdeuteration of, 661
 peroxide epoxidation, and
 microwaves, 10001000
 peroxyacid epoxidation of,
 mechanism, 999
- alkenes, photochemical [2+2]-
 cycloaddition, with
 aldehydes, 1049
- alkenes, photochemical [2+2]-
 cycloaddition, with
 ketones, 1049
- alkenes, photochemical addition,
 of alcohols, 891
 of aldehydes, 972
 of thiols, 895
- alkenes, photochemical
 isomerization of, 304
- alkenes, photochemical
 isomerization of, E/Z, 882
- alkenes, photochemistry of, 293,
 552
 and geometry, 305
 photoisomerization of, 304, 882
 photooxygenated, 1006
 photooxygenation of, with
 singlet oxygen, 1005
 polyhalo, 884
 protonolysis of, to from
 carbocations, 219
 push-pull, 164
 radical halogenation of, 826
 radical halogenation of,
 mechanism, 824
- alkenes, reaction, with peroxides,
 999
 with protons, 863
- alkenes, reactivity, in alkene
 metathesis, 1420
 in catalytic hydrogenation, 904
 in diazo transfer reactions, 1054
 in metal catalyzed
 hydroformylation, 979
 in the *Diels-Alder reaction*,
 1021
 with bromine, 872
 with HCN, 980
 with mixed halogens, 983
- alkenes, reagents, for oxidative
 cleavage, 1463, 1464
- alkenes, reagents, to prepare
 halohydrins, 985
- alkenes, rearrangements, 661
 and carbocations, 662
 and π -allyl complexes, 663
 metal catalyzed, 663
 photochemical, 663
- alkenes, reducing agents, 909
- alkenes, reduction, and CIDNP,
 910
 by hydroboration, 910
 to alkanes, 909
 with diimide, and the
 mechanism, 910
 with lithium aluminum hydride-
 metal salts, 917
 with samarium iodide and
 triamines, 910
 with silanes, 917
 with sodium borohydride-metal
 salts, 917
- alkenes, regioselectivity, in the
 Heck reaction, 765
 resolution of, 174
 selectivity, in catalytic
 hydrogenation, 904
 Sharpless asymmetric
 dihydroxylation, 996
 Sharpless asymmetric
 epoxidation of, 1004
 Sharpless asymmetric
 epoxidation of, structural
 limitation, 1004
 Shi epoxidation of, 1002

 aryl halide with CO₂, 1132
 aryl halides and KOH, 746
 aryl halides with amines, 752
 aryl halides with iodonium salts, 753
 aryl iodides with alkynes, 939
 aryl triflates with *Grignard reagents*, 518
 arylation of amides, 755
 arylation of diazonium salts, 795
 arylation of sulfonamides, 493
 arylboronic acids, *Friedel-Crafts acylation*, 624
 Pd catalysts, aziridination, 1011
 Pd catalysts, boranes, and alcohols, 701
 and aryl iodides, 702
 Pd catalysts, boronic acids, with allylic acetates, 560
 with carboxylic acids, 1131
 with diazonium salts, 793
 with esters, 1231
 with isocyanates, 1140
 with nitriles, 1140
 with O₂, 1485
 Pd catalysts, carbonylation, of aryl halides, 781
 of vinylmercury compounds, 709
 Pd catalysts, chloroformates with alkynes, 1228
 conjugate addition of amines, 966
Cope rearrangement, 1402
 Pd catalysts, coupling, and *Sonogashira coupling*, 775–778
 lithioalkynes, 516
 of aryl halides, 760
 of vinyl groups, 524
 organolithium reagents, 516
 vinyl triflates and phenols, 460
 with organotin reagents, 527
 with trialkylfluoroborates, 560
 Pd catalysts, cyanation or aryl triflates, 633
 cyanides with aryl halides, 758
 cyclic amines from alkynes, 898
 cyclization of carbamates, 901
 cyclization of diene carboxylic acids, 892
 cyclobutane ring openings, 1424
 diacetoxylation, 997
 dienes with diketones, 939
 fluorination of oxindoles, 670
 for coupling reactions, 526
 formation of allenes from propargylic amines, 1305
 formation of thioethers, 477
Heck reaction, 763–768
 homocoupling of alkene-trifluoroborates, 843
 homocoupling of alkyne-trifluoroborates, 843
 hydration of alkynes, 887
 hydrogenation of alkynes, 905
 imidazolium ligands, 772
 imines with boronic acids, 1136
 isomerization of alkenes, 882
 ketones with alkenes, 939
 LiCN and vinyl triflates, 564
 Pd catalysts, *Mannich reaction*, 1102
 organometallic coupling, 524, 525
 oxidation addition, 773
 phosphines with alkynes, 899
 polyene cyclization, 932
 polymer supported, 752, 777
 preparation of amines, 484
 pyrolysis of carboxylic acids, 1288
 pyrrole and vinyl triflates, 708
 recyclable, 760
 reductive elimination, 773
 silanes with aryl halides, 783
 silanes with dienes, 929
Stille coupling, aryl halides, 683
Stille coupling, heteroaryl halides, 683
 thiocarbamate formation, 731
 thiolates with aryl halides, 749, 750
 thiophenes from en-yne, 895
 trifluoroborates with tosylamines, 1136
 vinylation of ketones, 545
 with alkyne carboxylic acids, 893
 with Mo(CO)₆, 753
 Pd complexes, 41
 and *Eschenmoser-Claisen rearrangement*, 1409
 and the *Stille reaction*, 683
 aryl iodides with alkynes, 939
 carbonylation of alkyl halides, 567
 chiral, 1369, 1409
 trans-, 683
 Pd free cross coupling, 771
 Pd hydride, 908
 Pd migration, and the *Heck reaction*, 765
 Pd, peroxo complexes, 773
 Pd, π -allyl complex, 42
 Pd, π -allylic, 528
 Pd, transmetallation, 773
 PDC (pyridinium dichromate), oxidation of alcohols, 1443
Pechmann condensation, 617
 ionic liquids, 617
 microwave irradiation, 617
 PEG 400, 563
 PEG (polyethylene glycol), and alkene metathesis, 1420
 and conjugate addition, 967, 968
 and nitrile hydrolysis, 1080
 and recyclable hydrogenation catalysts, 905
 and the *Baylis-Hillman reaction*, 1127
 diketones with acid, 1083
 solvent, 760
 PEG-telluride, and the Reformatsky reaction, 1131
 pentacoordinated ions, 209
 pentadiene, with DCl, 870
 pentadienyl radical, 239
 pentaerythritol, by the *Tollen's reaction*, 1165
 pentahelicene, and chirality, 134
 and steric crowding, 134
 pentane derivatives, 68
 pentalene, and aromaticity, 62
 pentasulfides, 479
 peptide synthesis, 1219
