

– Preparation by Fries rearrangement of 2,3-dimethyl-4-iso-propylphenyl acetate with aluminium chloride at 140–150° (37%) [3373].

m.p. 132° [3373]; b.p.₂₂ 176–180° [3373].

1-[3-(1,1-Dimethylethyl)-2-hydroxy-5-methylphenyl]ethanone

[14813-18-4]

 $C_{13}H_{18}O_2$ mol.wt. 206.28

Syntheses

- Preparation by Fries rearrangement of 2-tert-butyl-4-methyl-phenyl acetate in the presence of aluminium chloride in cyclohexane at $<105^\circ$ (47%) [3481].
- The reaction of acetyl chloride with a pentane solution of $[AlCH_3(dbmp)_2]$ leads to acylation of one of the (dbmp) ligands and affords $[AlCH_3(dbmp)(bhmap)]$. Hydrolysis of this aluminium complex with a saturated aqueous solution of ammonium chloride gives the ketone attempted (65%) [3482].

N.B.: Hdbmp = 2,6-di-tert-butyl-4-methylphenol and Hbhmap = 3-tert-butyl-2-hydroxy-5-methylacetophenone.

- Also obtained by reaction of p-tert-butyl alcohol with 2-hydroxy-5-methylacetophenone in concentrated sulfuric acid at r.t. for 24 h (49%) [3483].
- Also refer to: [3484].

m.p. $97-98^\circ$ [3481], 58° [3482]. One of the reported melting points is obviously wrong.

X-ray crystallography [3482]; GC/MS [3483];

1H NMR [3482,3483], ^{13}C NMR [3482], IR [3482], MS [3482].

1-[3-(1,1-Dimethylethyl)-2-hydroxy-6-methylphenyl]ethanone $C_{13}H_{18}O_2$ mol.wt. 206.28

Synthesis

- Claimed to be prepared by Fries rearrangement of 2-tert-butyl-5-methylphenyl acetate with aluminium chloride, without solvent, at 110° (76%) [3485].

b.p.₈ 92° [3485].

1-[3-(1,1-Dimethylethyl)-4-hydroxy-5-methylphenyl]ethanone

[18606-50-3]

 $C_{13}H_{18}O_2$ mol.wt. 206.28

Syntheses

- Preparation by reaction of acetyl chloride or acetic anhydride with 2-tert-butyl-6-methylphenol in the presence of aluminium chloride, and saponification of keto ester obtained [3353].
- Also obtained (poor yield) by oxidation of 2-tert-butyl-4-ethyl-6-methylphenol. The oxidation was carried out by bubbling air at $80-100^\circ$ into a solution of 2-tert-butyl-4-ethyl-6-methylphenol in cumene containing cobalt phthalate and cumene hydroperoxide as initiator (4%) [3486].

m.p. 126° [3486], $123-125^\circ$ [3353].

1-[5-(1,1-Dimethylethyl)-4-hydroxy-2-methylphenyl]ethanone $C_{13}H_{18}O_2$ mol.wt. 206.28

Synthesis

– Preparation by Fries rearrangement of 2-tert-butyl-5-methyl-phenyl acetate with aluminium chloride in nitrobenzene at 25° (22%) [3485].

m.p. 124° [3485].

1-[5-(1,1-Dimethylpropyl)-2-hydroxyphenyl]ethanone $C_{13}H_{18}O_2$ mol.wt. 206.28

Synthesis

– Preparation by Fries rearrangement of 4-tert-pentylphenyl acetate with aluminium chloride at 120° (57%) [3356].

b.p.₁₂ 165° [3356].**1-[3-Ethyl-2-hydroxy-5-(1-methylethyl)phenyl]ethanone** $C_{13}H_{18}O_2$ mol.wt. 206.28

Synthesis

– Preparation by chromic acid degradation of 7-ethyl-2,3-dimethyl-5-isopropylbenzofuran (44%) [3224].

b.p.₁₀ 139–140° [3224].**1-[4-Ethyl-2-hydroxy-5-(1-methylethyl)phenyl]ethanone** $C_{13}H_{18}O_2$ mol.wt. 206.28

Synthesis

– Preparation by chromic acid degradation of 6-ethyl-2,3-dimethyl-5-isopropylbenzofuran (44%) [3224].

b.p.₁₁ 152–153° [3224].

1-[4-Ethyl-2-hydroxy-6-(1-methylethyl)phenyl]ethanoneC₁₃H₁₈O₂ mol.wt. 206.28

Synthesis

– Preparation by chromic acid degradation of 6-ethyl-2,3-dimethyl-4-isopropylbenzofuran (60%) [3224].

m.p. 113° [3224]; b.p.₁₄ 167–168° [3224].

1-[6-Ethyl-2-hydroxy-3-(1-methylethyl)phenyl]ethanoneC₁₃H₁₈O₂ mol.wt. 206.28

Synthesis

– Preparation by chromic acid degradation of 4-ethyl-2,3-dimethyl-7-isopropylbenzofuran (60%) [3224].

b.p.₁₁ 145° [3224].

1-(3-Ethyl-2-hydroxy-5-propylphenyl)ethanoneC₁₃H₁₈O₂ mol.wt. 206.28

Synthesis

– Preparation by Fries rearrangement of 2-ethyl-4-propyl-phenyl acetate with aluminium chloride [2957].

b.p.₁₈ 140–141° [2957].

1-[4-Hydroxy-3-(3-methylbutyl)phenyl]ethanoneC₁₃H₁₈O₂ mol.wt. 206.28

Synthesis

– Preparation by Fries rearrangement of 2-isopentylphenyl acetate [3449,3487].

Isolation from natural sources

– Also obtained by catalytic hydrogenation of Tremetone in the presence of Pd/C. Tremetone has been isolated from the *White Snakeroot* plant (*Eupatorium urticaefolium*) [3449,3487].

1-(2-Hydroxy-4-pentylphenyl)ethanone

[60441-58-9]

C₁₃H₁₈O₂ mol.wt. 206.28

Syntheses

– Preparation by Fries rearrangement of 3-pentylphenyl acetate with aluminium chloride at 130° (50%) [3488].

- Also obtained by demethylation of a mixture of 2-methoxy-4-pentylacetophenone and 4-methoxy-2-pentylacetophenone (**I**) with boron tribromide in methylene chloride at 0° and separation of isomers by chromatography (21%). The mixture of anisoles (**I**) was obtained by reaction of acetic anhydride with 3-pentylanisole in the presence of aluminium chloride in refluxing carbon disulfide [3489].

oil [3488,3489]; b.p._{0,5} 130° [3489]; ¹H NMR [3488,3489].

1-(2-Hydroxy-5-pentylphenyl)ethanone

C₁₃H₁₈O₂ mol.wt. 206.28

Synthesis

- Preparation by reaction of acetic acid on 4-pentylphenol with boron trifluoride at 140–150° (87%) [3490].

b.p.₇ 145–148° [3490]; n_D²⁵ = 1.5249 [3490].

1-(4-Hydroxy-2-pentylphenyl)ethanone

[60441-59-0] C₁₃H₁₈O₂ mol.wt. 206.28

Synthesis

- Preparation by demethylation of a mixture of 2-methoxy-4-pentylacetophenone and 4-methoxy-2-pentylacetophenone (**I**) with boron tribromide in methylene chloride at 0° and separation of isomers by chromatography (46%). The mixture of anisoles (**I**) was obtained by reaction of acetic anhydride with 3-pentylanisole in the presence of aluminium chloride in refluxing carbon disulfide [3489].

m.p. 58–59° [3489]; ¹H NMR [3489].

1-(5-Butyl-2-hydroxy-4-methoxyphenyl)ethanone

C₁₃H₁₈O₃ mol.wt. 222.28

Synthesis

- Preparation by reaction of dimethyl sulfate on 5-butyl-2,4-dihydroxyacetophenone with potassium carbonate in boiling acetone [3018].

1-(3,5-Diethyl-2-hydroxy-6-methoxyphenyl)ethanone

[37467-70-2] C₁₃H₁₈O₃ mol.wt. 222.28

Synthesis

- Preparation by reaction of methyl iodide with 3,5-diethyl-2,6-dihydroxyacetophenone in the presence of potassium carbonate in boiling acetone (46%) [2997].

Oil [2997]; MS [2997].

1-[2,4-Dihydroxy-3-(3-methylbutyl)phenyl]ethanone

[50773-37-0]

C₁₃H₁₈O₃ mol.wt. 222.28

Synthesis

– Preparation by catalytic hydrogenation of 3-(dimethyl-allyl)-2,4-dihydroxyacetophenone with platonic oxide as a catalyst in ethanol [3457].

m.p. 115° [3457]; ¹H NMR [3457], IR [3457].

1-[2,4-Dihydroxy-5-(3-methylbutyl)phenyl]ethanone

[56146-52-2]

C₁₃H₁₈O₃ mol.wt. 222.28

Syntheses

– Obtained by Fries rearrangement of 4-isoamyl-resorcinol diacetate with aluminium chloride in nitrobenzene at 50–55° [3449,3487], (11%) [3487].

Isolation from natural sources

– Also obtained by hydrogenolysis of 6-hydroxytremetone in the presence of 10% Pd/C in ethanol at r.t. [3449,3487], (62%) [3487]. The 6-hydroxytremetone has been isolated from the *Eupatorium urticaefolium* Reichard (Compositae) (white snakeroot).

m.p. 93–95° [3487], 92°5–94° [3449]; IR [3487].

1-(2,4-Dihydroxy-3-pentylphenyl)ethanone

[111224-14-7]

C₁₃H₁₈O₃ mol.wt. 222.28

Synthesis

– Refer to: [3014].

1-(2,4-Dihydroxy-5-pentylphenyl)ethanone

[97304-17-1]

C₁₃H₁₈O₃ mol.wt. 222.28

Syntheses

– Preparation by reaction of acetonitrile on 4-n-amyl-resorcinol (Hoesch reaction) (76%) [2676].

– Preparation from 2,4-dimethoxy-5-pentylacetophenone by demethylation with boron tribromide in methylene chloride at r.t. (53%) [2678,2679].

m.p. 110–111° [2676].

1-(2,6-Dihydroxy-4-pentylphenyl)ethanone

[67895-11-8]

 $C_{13}H_{18}O_3$ mol.wt. 222.28

Synthesis

– Preparation by metallation of olivetol tetrahydropyranyl ether with n-butyllithium in tetrahydrofuran under nitrogen, followed by adding cuprous bromide in this solution. The condensation of 2,6-dihydroxy-4-pentylphenylcopper tetrahydropyranyl ether so obtained with acetyl chloride, connected with elimination of protective group under mild conditions gave the expected compound (80%) [3491].

1-[4-(1,1-Dimethylethyl)-2,3-dihydroxy-6-methylphenyl]ethanone

[84297-01-8]

 $C_{13}H_{18}O_3$ mol.wt. 222.28

Synthesis

– Obtained by UV irradiation of a benzene solution of 3-tert-butyl-5-methyl-o-benzoquinone in the presence of a large excess of acetaldehyde (12%) [3386].

m.p. 72–73° [3386]; 1H NMR [3386], IR [3386].

1-[3-(1,1-Dimethylethyl)-4-hydroxy-5-methoxyphenyl]ethanone

[153356-09-3]

 $C_{13}H_{18}O_3$ mol.wt. 222.28

Syntheses

– Obtained by partial methylation of 3,4-dihydroxy-5-tert-butylacetophenone with diazomethane [1952].
– Also refer to: [3339].

N.B.: (*Catechol O-methyltransferase test*).

– Also obtained from 3,4-dihydroxy-5-tert-butylacetophenone in propylene glycol by incubation for 2 h at 37° with 0.5 M phosphate buffer (pH = 7.9), 0.5 M magnesium chloride, S-adenosylmethionine and catechol O-methyltransferase (enzyme). This enzyme solution was prepared from the blood of an adult male rat [1952].

1-[5-(1,1-Dimethylethyl)-2-hydroxy-4-methoxyphenyl]ethanone

[127371-46-4]

 $C_{13}H_{18}O_3$ mol.wt. 222.28

Synthesis

– Refer to: [3478] (patent).

1-[4-Hydroxy-3-(3-hydroxy-3-methylbutyl)phenyl]ethanone

[81944-40-3]

 $C_{13}H_{18}O_3$ mol.wt. 222.28

Isolation from natural sources

- From *Senecio* species of the North of Chile (*Senecio phylloleptus* Cuatr., *Senecio viridis* Phil., *Senecio nutans* Sch. Bip.) [3442].
- From the aerial parts of *Werneria poposa* [3448].
- Also refer to: [3492].

m.p. 100–101° [3442]; 1H NMR [3442,3448],
 ^{13}C NMR [3442,3448], IR [3442], MS [3442,3448].

1-(2-Hydroxy-5-methoxy-4-methyl-3-propylphenyl)ethanone

[43037-71-4]

 $C_{13}H_{18}O_3$ mol.wt. 222.28

Synthesis

- Preparation by catalytic hydrogenation of 3-allyl-2-hydroxy-5-methoxy-4-methylacetophenone, previously obtained by thermal Claisen rearrangement of 2-(allyloxy)-5-methoxy-4-methylacetophenone in *N,N*-dimethylaniline at 170° (42%) [3467].

1-(2-Hydroxy-5-methoxy-6-methyl-3-propylphenyl)ethanone

[43037-72-5]

 $C_{13}H_{18}O_3$ mol.wt. 222.28

Synthesis

- Preparation by catalytic hydrogenation of 3-allyl-2-hydroxy-5-methoxy-6-methylacetophenone, previously obtained by thermal Claisen rearrangement of 2-(allyloxy)-5-methoxy-4-methylacetophenone—via a [2368,,3466] sigmatropic rearrangement—in *N,N*-dimethylaniline at 170° (22%) [3467].

1-[2-Hydroxy-4-(pentyloxy)phenyl]ethanone

[101002-29-3]

 $C_{13}H_{18}O_3$ mol.wt. 222.28

Syntheses

- Preparation by partial alkylation of resacetophenone with pentyl bromide in the presence of potassium carbonate in refluxing acetone for 20 h [3493].

– Also refer to: [3494].

m.p. 36° [3493].

1-(4,6-Diethoxy-2-hydroxy-3-methylphenyl)ethanone $C_{13}H_{18}O_4$ mol.wt. 238.28

Synthesis

– Preparation by reaction of ethyl iodide or diethyl sulfate on 2,4,6-trihydroxy-3-methylacetophenone with potassium carbonate in boiling acetone (77%) [3051].

m.p. 147° [3051].

1-(3,5-Diethyl-2,6-dihydroxy-4-methoxyphenyl)ethanone

[175785-86-1]

 $C_{13}H_{18}O_4$ mol.wt. 238.28

Synthesis

– Refer to: [3495] (Japanese patent).

N.B.: Di-Na salt [175785-89-4] [3495].

1-(3,4-Dimethoxy-6-hydroxy-2-propylphenyl)ethanone $C_{13}H_{18}O_4$ mol.wt. 238.28

Syntheses

– Preparation by catalytic hydrogenation of 6-(benzyloxy)-3,4-dimethoxy-2-propenylacetophenone in the presence of Pd/C in methanol [2849].

– Also obtained by addition of 6-(benzyloxy)-3,4-dimethoxy-2-propenylacetophenone in ethyl ether to calcium in liquid ammonia, and addition of ammonium chloride before evaporation of solvents [2849].

Yellow oil [2849]; b.p._{0.2} 160° [2849]; UV [2849].

1-[2-Hydroxy-3-methoxy-4-(1-methylpropoxy)phenyl]ethanone

[94245-10-0]

 $C_{13}H_{18}O_4$ mol.wt. 238.28

Synthesis

– Refer to: [3496] (Indian patent).

1-[2-Hydroxy-4-(methoxymethoxy)-3-propylphenyl]ethanone

[200355-19-7]

 $C_{13}H_{18}O_4$ mol.wt. 238.28

Synthesis

– Preparation by treatment of 2,4-dihydroxy-3-propyl-acetophenone according to the procedure [3106], (83%) [3497].

b.p.₁ 152–154° [3497]; ¹H NMR [3497], IR [3497].

1-[2,4,6-Trihydroxy-3-(3-methylbutyl)phenyl]ethanone

[39652-85-2]

 $C_{13}H_{18}O_4$ mol.wt. 238.28

Syntheses

– Preparation by reaction of acetonitrile on 2-isoamyl-phloroglucinol (Hoesch reaction) (93%) [3498].

– Preparation by reaction of 2-isoamylphloroglucinol with boron trifluoride–acetic acid complex at 28–30° (70%) [2242].

– Preparation by catalytic hydrogenolysis of 2-acetyl-4,4-bis-(3-methylbut-2-enyl)cyclohexane-1,3,5-trione at r.t. and pressure in the presence of 10% Pd/C in ethanol (93%) [3477].

– Preparation by catalytic hydrogenation of 2',4',6'-trihydroxy-3'-(3-methylbut-2-enyl)acetophenone [3477].

– Also obtained by catalytic hydrogenation of 7-acetyl-4,6-dihydroxy-2-isopropenylcoumaran in the presence of platinum oxide (Adams catalyst) in methanol (72%) [2847].

– Also obtained by catalytic hydrogenation of 9-acetyl-2,5-dihydro-3-methyl-1-benzoxepin-6,8-diol in ethyl acetate in the presence of Adams catalyst (25%) [3499].

– Also obtained (by-product) by reaction of isoamyl iodide with phloracetophenone in the presence of sodium methoxide in methanol (6%) [2878].

m.p. 190–192° [3499], 190° [2242], 188° [2878,3498], 185° [2847], 184–185° [3477], 183–184° [3500], 130–131° (compound **VIII**) [2879]. One of the reported melting points is obviously wrong.

b.p._{0.01} 190° [3498]; ¹H NMR [2879,3499], IR [3499], UV [3477].

1-(2,3-Diethoxy-6-hydroxy-4-methoxyphenyl)ethanone $C_{13}H_{18}O_5$ mol.wt. 254.28

Synthesis

– Preparation by reaction of diethyl sulfate on 2-ethoxy-3,6-dihydroxy-4-methoxyacetophenone with potassium carbonate in boiling acetone [2851].

– oil [2851].

1-(2,4-Diethoxy-6-hydroxy-3-methoxyphenyl)ethanone

[18086-01-6]

 $C_{13}H_{18}O_5$ mol.wt. 254.28

Syntheses

- Preparation by reaction of dimethyl sulfate on 2,4-diethoxy-3,6-dihydroxyacetophenone with potassium carbonate in refluxing acetone [2851,3394,3395], (47%) [3394].
- The same ketone was also obtained by alkaline degradation of 4',5,7-triethoxy-3',6-dimethoxyflavone with potassium hydroxide in refluxing dilute ethanol [2851]. Oil [2851,3394].

1-(3,6-Diethoxy-2-hydroxy-4-methoxyphenyl)ethanone

[105342-72-1]

 $C_{13}H_{18}O_5$ mol.wt. 254.28

Syntheses

- Preparation from 1,4-diethoxy-2,6-dimethoxybenzene by reaction,
 - with acetyl chloride in the presence of aluminium chloride in ethyl ether cooled in an ice bath (89%) [3501];
 - with acetic acid in the presence of boron trifluoride for 5 h at 80° (50%) [3131].
- m.p. 104–105° [3501], 101–103° [3131].

1-(2,3-Dihydroxy-4,5-dimethoxy-6-propylphenyl)ethanone

[76576-61-9]

 $C_{13}H_{18}O_5$ mol.wt. 254.28

Synthesis

- Preparation by treatment of acetyldihydrodillapiole with boron trifluoride (almost quantitative yield) [3502].

m.p. 110° [3502];

 1H NMR [3502], IR [3502], MS [3502].**1-(3-Ethyl-2-hydroxy-4,5,6-trimethoxyphenyl)ethanone** $C_{13}H_{18}O_5$ mol.wt. 254.28

Synthesis

- Preparation by Fries rearrangement of 2-ethyl-3,4,5-trimethoxyphenyl acetate with aluminium chloride in nitrobenzene at r.t. (25%) [3135].

b.p._{0.15} 98–102° [3135]; $n_D^{25} = 1.5293$ [3135].

1-(3-Ethyl-6-hydroxy-2,4,5-trimethoxyphenyl)ethanone $C_{13}H_{18}O_5$ mol.wt. 254.28

Syntheses

- Preparation by Fries rearrangement of 4-ethyl-2,3,5-tri-methoxyphenyl acetate with aluminium chloride in nitrobenzene at r.t. (51%) [3135].
- Preparation by reaction of acetyl chloride on 1-ethyl-2,3,4,6-tetramethoxybenzene with aluminium chloride in ethyl ether between -20° and -15° , followed by standing overnight at r.t. (46%) [3135].

Clear, orange coloured oil [3135]; b.p._{0.3} 117–118°5 [3135];
 $n_D^{25} = 1.5421$ [3135].

1-[6-Hydroxy-2,4-dimethoxy-3-(2-methoxyethyl)phenyl]ethanone

[34288-74-9]

 $C_{13}H_{18}O_5$ mol.wt. 254.28

Synthesis

- Obtained by reaction of methyl iodide with 2-hydroxy-4,6-dimethoxy-5-(2-hydroxyethyl)acetophenone (m.p. 133–134°) in chloroform in the presence of silver oxide at r.t. overnight (25%) [3407].

m.p. 94–94°5 [3407];
 1H NMR [3407], UV [3407].

1-[2-Hydroxy-3,6-dimethoxy-4-(1-methylethoxy)phenyl]ethanone

[93344-52-6]

 $C_{13}H_{18}O_5$ mol.wt. 254.28

Syntheses

- Refer to: [3503] (compound **11**) and [3504] (Japanese paper).

1-[6-Hydroxy-2,3-dimethoxy-4-(1-methylethoxy)phenyl]ethanone

[119136-17-3]

 $C_{13}H_{18}O_5$ mol.wt. 254.28

Synthesis

- Preparation by reaction of dimethyl sulfate with 2,5-di-hydroxy-4-isopropoxy-6-methoxyacetophenone in the presence of potassium carbonate in refluxing acetone (82%) [2830].

colourless oil [2830]; 1H NMR [2830], IR [2830], MS [2830].

1-[6-Hydroxy-2,4-dimethoxy-3-(1-methylethoxy)phenyl]ethanone

[96501-84-7]

 $C_{13}H_{18}O_5$ mol.wt. 254.28

Synthesis

– Obtained by partial isopropylation of 2,5-dihydroxy-4,6-di-methoxyacetophenone with isopropyl bromide, according to [3505], (compound **27**) (44%) [3506].

Brown oil [3506]; 1H NMR [3506].

1-[6-Hydroxy-3,4-dimethoxy-2-(1-methylethoxy)phenyl]ethanone

[188927-29-9]

 $C_{13}H_{18}O_5$ mol.wt. 254.28

Synthesis

– Preparation by treatment of 3,4,6-trimethoxy-2-isopropoxy-acetophenone (m.p. 69–71°) with aluminium bromide in acetonitrile at 0° for 10–15 min (80%) [3507].

N.B.: The partial demethylation realized with aluminium bromide–sodium iodide system at 0° for 10 min gave a 94% yield.

m.p. 65–67° [3507].

1-(3,6-Diethoxy-2,5-dihydroxy-4-methoxyphenyl)ethanone $C_{13}H_{18}O_6$ mol.wt. 270.28

Synthesis

– Preparation from 3,6-diethoxy-2-hydroxy-4-methoxy-acetophenone by persulfate oxidation (Elbs reaction) (33%) [3501].

m.p. 131–132° [3501].

1-(4-Ethoxy-2-hydroxy-3,5,6-trimethoxyphenyl)ethanone $C_{13}H_{18}O_6$ mol.wt. 270.28

Synthesis

– Preparation by Friedel–Crafts acylation of 1-ethoxy-2,3,5,6-tetramethoxybenzene with acetyl chloride in the presence of aluminium chloride (46%) [3313].

b.p._{0.1} 117–119° [3313].

1-[2-Hydroxy-4,6-bis(methoxymethoxy)-3-methylphenyl]ethanone

[106929-57-1]

C₁₃H₁₈O₆ mol.wt. 270.28**Synthesis**

– Preparation by reaction of chloromethyl methyl ether with 2,4,6-trihydroxy-3-methylacetophenone in cooled acetone in the presence of potassium carbonate for 1 h (34%) [3508].

m.p. 77–78° [3508]; ¹H NMR [3508].

1-[2-Hydroxy-3,4,6-trimethoxy-5-(methoxymethoxy)phenyl]ethanone

[173217-34-0]

C₁₃H₁₈O₇ mol.wt. 286.28**Synthesis**

– Preparation by reaction of chloromethyl methyl ether with 2,5-dihydroxy-3,4,6-trimethoxyacetophenone in methylene chloride in the presence of N,N-diisopropylethylamine at r.t. for 3–4 h [3319].

1-[2-Hydroxy-3,5,6-trimethoxy-4-(methoxymethoxy)phenyl]ethanone

[176662-07-0]

C₁₃H₁₈O₇ mol.wt. 286.28**Synthesis**

– Obtained by stirring a solution of 2,4-dihydroxy-3,5,6-tri-methoxyacetophenone, N,N-diisopropylethylamine and chloromethyl methyl ether in methylene chloride at 5° for 40–50 min [3316].

1-[3-(Aminomethyl)-5-(1,1-dimethylethyl)-2-hydroxyphenyl]ethanone

[75060-91-2]

C₁₃H₁₉NO₂ mol.wt. 221.30**Synthesis**

– Refer to: [3509].

1-[3-(Aminomethyl)-5-(1,1-dimethylethyl)-2-hydroxyphenyl]ethanone*(Hydrochloride)*C₁₃H₁₉NO₂, HCl mol.wt. 268.77**Synthesis**

– Preparation by hydrolysis of 2-acetyl-4-tert-butyl-6-(N-chloroacetylaminomethyl)phenol with concentrated hydrochloric acid in refluxing ethanol (89%) [3354].

m.p. 191–193° [3354].

1-[2-(Diethylamino)-6-hydroxy-4-methylphenyl]ethanone[97066-07-4] C₁₃H₁₉NO₂ mol.wt. 221.30**Synthesis**

– Preparation by reaction of potassium hydroxide with 2-acetyl-3-diethylamino-5-hydroxy-5-methyl-2-cyclo-hexenone in ethanol at 40° (75%) [2712].

Yellow oil [2712];

¹H NMR [2712], IR [2712], UV [2712], MS [2712].**1-[6-[(1,1-Dimethylethyl)amino]-3-hydroxy-2-methylphenyl]ethanone**[158013-69-5] C₁₃H₁₉NO₂ mol.wt. 221.30**Synthesis**

– Obtained from N-tert-butyl-2-acetyl-4-methyl quinol imine by refluxing overnight in trifluoroethanol (TFE) (quantitative yield) [3510].

Red oil [3510]; ¹H NMR [3510],¹³C NMR [3510], IR [3510], MS [3510].**1-(5-Bromo-2-hydroxy-3-iodo-4-phenoxyphenyl)ethanone**[145489-48-1] C₁₄H₁₀BrIO₃ mol.wt. 433.04**Synthesis**

– Preparation by hypervalent iodine oxidation of 5-bromo-resacetophenone with iodosobenzene diacetate in the presence of potassium hydroxide in methanol via the rearrangement of iodonium ylide previously formed (35%) [3511].

m.p. 160–161° [3511]; ¹H NMR [3511], MS [3511].

1-(2-Hydroxy-3-iodo-5-nitro-4-phenoxyphenyl)ethanone

[145489-93-6]

 $C_{14}H_{10}INO_5$ mol.wt. 399.14

Syntheses

- Preparation by hypervalent iodine oxidation of 5-nitro-resacetophenone with iodosobenzene diacetate in the presence of potassium hydroxide in methanol via the rearrangement of iodonium ylide previously formed (77%) [3511].
- Preparation by thermal rearrangement of 4-acetyl-3-hydroxy-6-nitro-2-phenyliodonio-phenolate (SM) in refluxing acetonitrile for 30 min (47%) [3512]. SM was obtained by reaction of iodosobenzene diacetate with 5-nitroresacetophenone in methanol in the presence of potassium hydroxide at 0° for 30 min (45%, m.p. 145–147°).

m.p. 190–191° [3511], 180–185° [3512];

 1H NMR [3511,3512], IR [3511,3512], MS [3512].**1-(5-Bromo-2-hydroxy[1,1'-biphenyl]-3-yl)ethanone** $C_{14}H_{11}BrO_2$ mol.wt. 291.14

Synthesis

- Preparation by treatment of 1-(2-hydroxy[1,1'-biphenyl]-3-yl)ethanone in acetic acid with NBS at 85° for 2 h (quantitative yield) [1804].

 1H NMR [1804].**1-(4'-Chloro-2-hydroxy[1,1'-biphenyl]-3-yl)ethanone**

[77893-89-1]

 $C_{14}H_{11}ClO_2$ mol.wt. 246.69

Synthesis

- Obtained by Fries rearrangement of 2-acetoxy-4'-chloro-biphenyl with aluminium chloride at 150° for 30 min (26%) [3513].

m.p. 76–78° [3513].

1-(4'-Chloro-4-hydroxy[1,1'-biphenyl]-3-yl)ethanone

[86608-89-1]

 $C_{14}H_{11}ClO_2$ mol.wt. 246.69

Synthesis

N.B.: It must be pointed out that in the referenced paper [3514], the described product [(chloro-4 phenyl)-5 hydroxy-2 phenyl]-1 ethanone is not consistent with the mentioned starting material, (chloro-4 phenoxy)-4 phenol.

In such a case, the obtained product should be the 1-[5-(4-chlorophenoxy)-2-hydroxyphenyl]ethanone. One of the authors of this paper, Daniel Humbert, has confirmed this typing mistake [3515].

1-(4'-Chloro-6-hydroxy[1,1'-biphenyl]-3-yl)ethanone

[77893-88-0]

 $C_{14}H_{11}ClO_2$

mol.wt. 246.69

Synthesis

– Preparation by Fries rearrangement of 2-acetoxy-4'-chloro-biphenyl with aluminium chloride at 150° for 30 min (60%) [3513].

m.p. 165°5–167°5 [3513].

1-(5-Chloro-2-hydroxy[1,1'-biphenyl]-3-yl)ethanone

 $C_{14}H_{11}ClO_2$

mol.wt. 246.69

Synthesis

– Obtained by treatment of 1-(2-hydroxy[1,1'-biphenyl]-3-yl)ethanone in DMF solution with NCS at r.t. overnight (96%) (crude product) [1804].

1-(4-Chloro-3,5-dihydroxy[1,1'-biphenyl]-2-yl)ethanone

[76538-42-6]

 $C_{14}H_{11}ClO_3$

mol.wt. 262.69

Synthesis

– Preparation by adding lithium chloride to a solution of 3-acetoxy-6-acetyl-2,6-dichloro-5-phenyl-2-cyclohexenone in DMF and heating for 2 h at 100° (83%) [3516].

m.p. 111–112° [3516]; 1H NMR [3516], IR [3516], MS [3516].

1-[5-(4-Chlorophenoxy)-2-hydroxyphenyl]ethanone

[73051-30-6]

 $C_{14}H_{11}ClO_3$

mol.wt. 262.69

Syntheses

– Preparation by acetylation of 4-phenoxyphenol with,

- 39.7% (w/w) boron trifluoride in acetic acid at 75° for 24 h (71%) [3514];
- 35–37% boron trifluoride in acetic acid at 90° for 3 days (quantitative yield) [3515].

– Also refer to: [3517].

m.p. 88° [3514,3517].

1-(2-Hydroxy-3-iodo-4-phenoxyphenyl)ethanone

[144691-35-0]

 $C_{14}H_{11}IO_3$ mol.wt. 354.14

Syntheses

- Preparation by thermal rearrangement of 4-acetyl-3-hydroxy-2-phenyliodonio-phenolate (SM) in refluxing acetonitrile for 30 min (70%). SM was obtained by reaction of iodosobenzene diacetate with resacetophenone in methanol in the presence of potassium hydroxide at 0° for 30 min (40%, m.p. 81–85°) [3512].
- Preparation by reaction of resacetophenone with iodosobenzene diacetate in refluxing methanol (55%) [3518].
- Preparation by hypervalent iodine oxidation of resacetophenone with iodosobenzene diacetate in the presence of potassium hydroxide in methanol *via* the rearrangement of iodonium ylide previously formed (20%) [3511].

m.p. 116–118° [3511], 101–103° [3518], 72° [3512]. There is a discrepancy between the different melting points indicated in literature.

1H NMR [3511,3512,3518], IR [3518], MS [3512].

1-(2-Hydroxy-5-nitro[1,1'-biphenyl]-3-yl)ethanone

[360791-69-1]

 $C_{14}H_{11}NO_4$ mol.wt. 257.25

Synthesis

- Obtained by treatment of 3-bromo-2-hydroxy-5-nitro-acetophenone and phenylboronic acid mixture in THF with tetrakis(triphenylphosphine)palladium (0) and 10% aqueous sodium carbonate. The mixture was heated at 80° for 3 h. Then, 10% Pd/C catalyst was added and heating continued for 1.5 h (70%) (compound **32**) [1804].

1H NMR [1804], ^{13}C NMR [1804].

1-(4-Hydroxy-5-nitro[1,1'-biphenyl]-3-yl)ethanone

[84942-37-0]

 $C_{14}H_{11}NO_4$ mol.wt. 257.25

Synthesis

- Preparation by reaction of 100% nitric acid with 3-acetyl-4-hydroxybiphenyl in acetic acid at r.t. (90%) [1852].

m.p. 113–114° [1852].

1-(2,6-Dihydroxy-5-nitro[1,1'-biphenyl]-3-yl)ethanone[160246-79-7] $C_{14}H_{11}NO_5$ mol.wt. 273.25

Syntheses

– Obtained by irradiation of 4-acetyl-3-hydroxy-6-nitro-2-phenyliodonio-phenolate (1 mmol),

- in benzene suspension (65%) [3512];
- in the presence of cyclohexene (3–5 mmol) in methylene chloride/acetonitrile solution (1:1) for 4 h (20–30%) [3512].

N.B.: The irradiations were performed with a 250 W low pressure Hg lamp.
m.p. 160–161° [3512]; 1H NMR [3512], IR [3512], MS [3512].

1-(2-Hydroxy-3-nitro-5-phenoxyphenyl)ethanone[84942-38-1] $C_{14}H_{11}NO_5$ mol.wt. 273.25

Synthesis

– Preparation by reaction of 100% nitric acid with 2-hydroxy-5-phenoxyacetophenone in acetic acid at r.t. (73%) [1852].

m.p. 126–127° [1852].

1-(2-Hydroxy[1,1'-biphenyl]-3-yl)ethanone[21424-82-8] $C_{14}H_{12}O_2$ mol.wt. 212.25

Syntheses

- Preparation by Fries rearrangement of 2-acetoxybiphenyl with aluminium chloride,
- without solvent between 130° and 160° [3519–3522];
 - in boiling o-dichlorobenzene for 30 min (15%) [3523].
- Also obtained by UV light irradiation (254 nm) of 2-acetoxybiphenyl in benzene (11%) [3524].
 3H NMR [3523], IR [3523].

1-(3-Hydroxy[1,1'-biphenyl]-2-yl)ethanone[136819-93-7] $C_{14}H_{12}O_2$ mol.wt. 212.25

Synthesis

– Obtained by adding potassium fluoride to a solution of 1-phenyl-2-octene-1,5,7-trione in dry toluene and the whole refluxed overnight (32%) [3525].

Colourless oil [3525];
 1H NMR [3525], IR [3525], MS [3525].

1-(3-Hydroxy[1,1'-biphenyl]-4-yl)ethanone[32101-38-5] $C_{14}H_{12}O_2$ mol.wt. 212.25

Syntheses

- Preparation by reaction of acetyl chloride with 3-methoxy-biphenyl in the presence of aluminium chloride in refluxing methylene chloride for 11 h (50%) [3526].
 - Preparation by aromatization of 2-acetyl-3-chloro-5-phenyl-2-cyclohexenone in the presence of Pd/C in refluxing cyclohexene for 4 h (70%) [3527].
 - Preparation by dehydrogenation of 6-acetyl-3-phenyl-2-cyclohexen-1-one with refluxing 16% bromine solution in acetic acid [2612].
 - Also refer to: [2018].
- m.p. 91° [2612], 90°5–91°5 [3526], 90–90°5 [3527].

1-(4-Hydroxy[1,1'-biphenyl]-3-yl)ethanone[14031-80-2] $C_{14}H_{12}O_2$ mol.wt. 212.25

Syntheses

- Preparation by Fries rearrangement of 4-acetoxybiphenyl,
 - with aluminium chloride without solvent at 120–140° [1852,3528,3529], (48%) [1852] or in tetrachloroethane at 140° [3521,3522,3530,3531], (46%) [3531];
 - with titanium tetrachloride in nitrobenzene at r.t. (6%) [3379].
 - Also obtained by photo-Fries rearrangement of 4-acetoxybiphenyl with 254 nm light in benzene (61%) [3524].
 - Also obtained—via an intermolecular photo-Fries rearrangement—by irradiation of a solution of pinacolone and p-phenylphenol in benzene for 5 h (42%) [3358].
 - Preparation by catalytic hydrogenation of 2-(benzyloxy)-5-phenylacetophenone in the presence of 10% Pd/C in 95% ethanol at r.t. under 35 psi for 2 h (84%) [3379].
 - Preparation by adding an ethereal solution of methyl lithium to a solution of 5-phenylsalicylic acid in 1,2-dimethoxyethane under nitrogen and maintained at 10–12° (85%) [3379].
 - Preparation by reaction of acetic acid with 4-hydroxybiphenyl in the presence of boron trifluoride–acetic acid complex (good yield) [3521,3522].
 - Also refer to: [3532–3535].
- m.p. 61°5–62° [3530], 61–62° [1852,3528], 60–61° [3379], 59–61° [3531]; IR [3379].

1-(6-Hydroxy[1,1'-biphenyl]-3-yl)ethanone[20281-51-0] $C_{14}H_{12}O_2$ mol.wt. 212.25**Syntheses**

- Preparation by Fries rearrangement of 2-acetoxybiphenyl with aluminium chloride,
 - without solvent between 130° and 160° [3519,3520,3536], (60–62%) [3519,3520];
 - in nitrobenzene (58%) [3537] according to [2151];
 - in boiling o-dichlorobenzene for 30 min (80%) [3523].
 - Also obtained by UV light irradiation (254 nm) of 2-acetoxybiphenyl in benzene (6%) [3524].
 - Preparation by direct condensation of 2-hydroxybiphenyl with acetic acid in the presence of boron trifluoride [3538].
 - Also refer to: [2117].
- m.p. 184°1–184°4 [3523], 177° [3537], 173° [3538], 172–173° [3519], 167–168°5 [3520];
¹H NMR [3523], IR [3523]; GC-MS [3523].

1-(3,5-Dihydroxy[1,1'-biphenyl]-2-yl)ethanone[54439-83-7] $C_{14}H_{12}O_3$ mol.wt. 228.25**Synthesis**

- Obtained (by-product) from 3-methyl-3'-phenyl-5,5'-di-isoxazolyl-methane by performing hydrogenolysis and subsequent hydrolysis with hydrochloric acid (12%) [2686].
- m.p. 139° [2686]; ¹H NMR [2686], MS [2686].

1-(4,4'-Dihydroxy[1,1'-biphenyl]-3-yl)ethanone[52189-90-9] $C_{14}H_{12}O_3$ mol.wt. 228.25**Syntheses**

- Preparation by Fries rearrangement,
 - of 4-acetoxy-4'-hydroxybiphenyl with aluminium chloride without solvent for 6 h at 168–170° (57%) [3539];
 - of 4,4'-diacetoxybiphenyl with aluminium chloride in tetrachloroethane for 6 h at 160° (34%) [3539].
 - Also obtained by irradiation of 4,4'-diphenylquinone [bi(cyclohexa-2,5-dienylidene)-4,4'-dione] in acetaldehyde for 2 days (28%) [3539].
- m.p. 193° [3539]; ¹H NMR [3539], IR [3539], MS [3539].

1-(2-Hydroxy-5-phenoxyphenyl)ethanone[56926-34-2] $C_{14}H_{12}O_3$ mol.wt. 228.25

Syntheses

- Preparation by Fries rearrangement of 4-acetoxydiphenyl oxide in the presence of aluminium chloride at 120° (90%) [1852].
- Preparation by catalytic hydrogenolysis of 2-(benzyloxy)-5-phenoxyacetophenone at r.t. at 35 psi in the presence of 10% Pd/C in ethanol (85%) [3379].
- Preparation by adding an ethereal solution of methylolithium to a solution of 5-phenoxy-salicylic acid in 1,2-dimethoxyethane (79%) [3379].

m.p. 160–161° [1852], 71–73° [3379].

One of the reported melting points is obviously wrong.

 1H NMR [3379].**1-(3,6-Dihydroxy-2-phenoxyphenyl)ethanone**[52095-10-0] $C_{14}H_{12}O_4$ mol.wt. 244.25

Synthesis

- Preparation by reaction of phenol on 2-acetylquinone with pyridine in benzene (40%) [2020].

m.p. 68–70° [2020]; 1H NMR [2020], IR [2020].**1-[2-Hydroxy-4,6-bis(2-propynyloxy)phenyl]ethanone**[53771-23-6] $C_{14}H_{12}O_4$ mol.wt. 244.25

Synthesis

- Obtained by reaction of 2-propynyl bromide with phloroacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone in an atmosphere of nitrogen (12%) [3160].

m.p. 111° [3160]; IR [3160], UV [3160].

1-[2-Hydroxy-5-(phenylsulfonyl)phenyl]ethanone[146575-61-3] $C_{14}H_{12}O_4S$ mol.wt. 276.31

Synthesis

- Preparation by Fries rearrangement of 4-phenylsulfonylphenyl acetate with aluminium chloride at 190° (52%) [2478,2479].

1-[3,6-Dihydroxy-2-(phenylsulfonyl)phenyl]ethanone[145746-54-9] $C_{14}H_{12}O_5S$ mol.wt. 292.31

Synthesis

– Preparation by shaking an aqueous solution of sodium benzenesulfinate with a solution of 2-acetyl-1,4-benzoquinone and trifluoroacetic acid in methylene chloride for 4 h at r.t. (68%) [3540].

m.p. 182–183° [3540]; 1H NMR [3540], IR [3540], MS [3540].**1-[2-Hydroxy-5-[(4-hydroxyphenyl)sulfonyl]phenyl]ethanone**[147816-50-0] $C_{14}H_{12}O_5S$ mol.wt. 292.31

Syntheses

– Obtained by treatment of bisphenol-S diacetate (4,4'-diacetyldiphenyl sulfone) with aluminium chloride (10 mol) at 160° (23%) [3541].

– Also obtained by UV light irradiation (254 nm) of bisphenol-S diacetate in acetonitrile for 5.5 h (18%) [3541].

1-(3-Amino-5-hydroxy[1,1'-biphenyl]-2-yl)ethanone[54439-91-7] $C_{14}H_{13}NO_2$ mol.wt. 227.26

Synthesis

– Preparation from 5-methyl-3''-phenyl-3,5'-diisoxazolylmethane by performing hydrogenolysis and subsequent hydrolysis with hydrochloric acid (major product) [2686].

m.p. 192° [2686]; 1H NMR [2686], MS [2686].**1-(5-Amino-3-hydroxy[1,1'-biphenyl]-2-yl)ethanone**[54439-90-6] $C_{14}H_{13}NO_2$ mol.wt. 227.26

Synthesis

– Obtained (by-product) from 3'-methyl-5-phenyl-3,5'-diisoxazolylmethane by performing hydrogenolysis and subsequent hydrolysis with hydrochloric acid (4%) [2686].

m.p. 118° [2686]; 1H NMR [2686], MS [2686].

1-[4-[(1,1-Dimethyl-2-propynyl)oxy]-2-hydroxy-3-iodo-6-methoxyphenyl]ethanone

[82538-75-8]

 $C_{14}H_{15}IO_4$

mol.wt. 374.17

Synthesis

– Preparation by reaction of 3-chloro-3-methylbut-1-yne with 2,4-dihydroxy-3-iodo-6-methoxyacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone (56%) [2064].

m.p. 110–111° [2064]; 1H NMR [2064].**1-[2-Hydroxy-3,5-bis(2-propenyl)phenyl]ethanone**

[35158-35-1]

 $C_{14}H_{16}O_2$

mol.wt. 216.28

Syntheses

– Preparation by thermal Claisen rearrangement of 3-allyl-2-(allyloxy)acetophenone in *N,N*-diethylaniline for 4 h at 220° (93%) [2997].

– Preparation by reaction of ethyl acetoacetate with 2-allyl-2,6-heptadienal in the presence of pyridine and piperidine as catalysts, in benzene at 60–70° (33%). The 2-allyl-2,6-heptadienal was obtained by self condensation of 4-pentenal in the presence of 15% potassium hydroxide solution [2958–2960].

oil [2958–2960,2997];

1-[2,4-Dihydroxy-3,5-bis(2-propenyl)phenyl]ethanone

[40815-80-3]

 $C_{14}H_{16}O_3$

mol.wt. 232.28

Syntheses

– Preparation by thermal Claisen rearrangement,

- of 3-allyl-4-(allyloxy)-2-hydroxyacetophenone without solvent at 210° (20%) [3182];
- of 3'-acetyl-4',6'-bis(allyloxy)acetophenone in refluxing *N,N*-dimethylaniline (33%) [3331] or in refluxing phenyl ether (11%) [3331];
- of 5'-acetyl-2',4'-bis(allyloxy)-3'-bromoacetophenone in refluxing *N,N*-dimethylaniline (16%) [3331];
- of 3'-acetyl-2',4'-bis(allyloxy)acetophenone in refluxing *N,N*-dimethylaniline (18%) [3331];
- of 2',4'-bis(allyloxy)acetophenone in refluxing *N,N*-dimethylaniline (40%) [3331].

m.p. 90° [3331], 89–90° [3182]; 1H NMR [3331], IR [3331], UV [3331], MS [3331].

1-[2,6-Dihydroxy-3,5-bis(2-propenyl)phenyl]ethanone

[37467-66-6]

C₁₄H₁₆O₃ mol.wt. 232.28

Syntheses

- Preparation by thermal Claisen rearrangement of,
- 2',6'-bis(allyloxy)acetophenone in refluxing N,N-dimethylaniline (45%) [3542] or in N,N-diethylaniline for 4 h at 220° [2997];
 - 3'-acetyl-4',6'-bis(allyloxy)acetophenone in refluxing N,N-dimethylaniline or in phenyl ether (6–7%) [3331];
 - 3'-acetyl-2',4'-bis(allyloxy)acetophenone in refluxing N,N-dimethylaniline (6%) [3331].

m.p. 57°5–58°5 [3542], 55–56° [2997]; b.p._{0.03} 150° [3542];
¹H NMR [3331], IR [3331], UV [3331], MS [3331].

1-[2-Hydroxy-6-methoxy-3-(3-methyl-1,3-butadienyl)phenyl]ethanone (Z)

[141215-43-2]

C₁₄H₁₆O₃ mol.wt. 232.28

Synthesis

- Preparation by reaction of methylmagnesium iodide with 8-acetyl-7-methoxycoumarin in refluxing tetrahydrofuran during 1 h under nitrogen atmosphere (40%) [3543].
- m.p. 112° [3543]; ¹H NMR [3543], IR [3543], UV [3543], MS [3543].

1-[2-Hydroxy-3-(2-propenyl)-4-(2-propenyloxy)phenyl]ethanone

[40903-02-4]

C₁₄H₁₆O₃ mol.wt. 232.28

Synthesis

- Preparation by reaction of allyl bromide with 3-allyl-2,4-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone (62%) [3182].
- m.p. 34°5 [3182].

1-[2,6-Dihydroxy-3-(2-propenyl)-4-(2-propenyloxy)phenyl]ethanone

[53771-28-1]

 $C_{14}H_{16}O_4$ mol.wt. 248.28**Synthesis**

– Preparation by thermal Claisen rearrangement of 2,4-bis-(allyloxy)-6-hydroxyacetophenone in N-methylpiperazine at reflux in an atmosphere of nitrogen (53%) [3160] or without solvent in a sealed vial at 130° (33%) [3160].

m.p. 102–103°5 [3160]; UV [3160].

1-[4-[(1,1-Dimethyl-2-propynyl)oxy]-2-hydroxy-5-methoxyphenyl]ethanone

[70662-40-7]

 $C_{14}H_{16}O_4$ mol.wt. 248.28**Synthesis**

– Obtained by treatment of 2,4-dihydroxy-5-methoxyacetophenone with 3-chloro-3-methyl-1-butyne in the presence of potassium carbonate and potassium iodide in DMF for 40 h at 80–85° (15%) [3544].

Yellow oil [3544]; TLC [3544]; 1H NMR [3544], UV [3544].**1-[4-[(1,1-Dimethyl-2-propynyl)oxy]-2-hydroxy-6-methoxyphenyl]ethanone**

[31273-60-6]

 $C_{14}H_{16}O_4$ mol.wt. 248.28**Synthesis**

– Preparation by reaction of 2-methyl-2-chlorobut-3-yne on 2,4-dihydroxy-6-methoxyacetophenone with potassium carbonate and potassium iodide in refluxing acetone (80%) [3545].

m.p. 107–108° [3545].

1-[2-Hydroxy-4,6-bis(2-propenyloxy)phenyl]ethanone

[53771-27-0]

 $C_{14}H_{16}O_4$ mol.wt. 248.28**Synthesis**

– Obtained by reaction of allyl bromide with phloracetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone (10%) [3160].

m.p. 62°5 [3160]; UV [3160].

1-[2-Hydroxy-4-(oxiranylmethoxy)-3-(2-propenyl)phenyl]ethanone

[40785-92-0]

 $C_{14}H_{16}O_4$ mol.wt. 248.28

Synthesis

– Preparation by reaction of epichlorohydrin with 3-allyl-2,4-dihydroxyacetophenone in the presence of potassium hydroxide in refluxing ethanol [2270].

m.p. 67°5–68°5 [2270].

1-[2,4,6-Trihydroxy-3,5-bis(2-propenyl)phenyl]ethanone

[53771-29-2]

 $C_{14}H_{16}O_4$ mol.wt. 248.28

Synthesis

– Preparation by thermal Claisen rearrangement of 2,4-bis-(allyloxy)-6-hydroxyacetophenone in *N,N*-diethylaniline at reflux (215°) under nitrogen (87%) [3160].

m.p. 67–68° [3160]; UV [3160].

1-[2,6-Dihydroxy-3,5-bis(2-propenyloxy)phenyl]ethanone

[73331-27-8]

 $C_{14}H_{16}O_5$ mol.wt. 264.28

Synthesis

N.B.: In the paper [3542], the formula of the compound **59** displayed page 180, which is the formula of the titled compound $C_{14}H_{16}O_5$, does not fit at all with the one of the actually prepared compound. The Claisen rearrangement of 2,6-bis(allyloxy)acetophenone **58** leads to the formation of 3,5-diallyl-2,6-dihydroxyacetophenone $C_{14}H_{16}O_3$, page 183.

1-[2,4-Dihydroxy-3-iodo-6-methoxy-5-(3-methyl-2-butenyl)phenyl]ethanone

[82538-76-9]

 $C_{14}H_{17}IO_4$ mol.wt. 376.19

Synthesis

– Obtained by reaction of 2-methylbut-3-en-2-ol with 2,4-di-hydroxy-3-iodo-6-methoxyacetophenone in the presence of boron trifluoride etherate in dioxane at 35–40° (11%) [2064].

m.p. 136–137° [2064]; 1H NMR [2064].

1-(3-Cyclohexyl-4-hydroxyphenyl)ethanone[23299-00-5] $C_{14}H_{18}O_2$ mol.wt. 218.30**Synthesis**

– Preparation by Fries rearrangement of 2-cyclohexylphenyl acetate with aluminium chloride in nitrobenzene at 85° [1951,3546], (55%) [1951].

m.p. 148–149° [3546], 147–148° [1951].

1-(4-Cyclohexyl-3-hydroxyphenyl)ethanone[73898-21-2] $C_{14}H_{18}O_2$ mol.wt. 218.30**Synthesis**

– Preparation by diazotization of 3-amino-4-cyclohexylacetophenone, followed by hydrolysis of diazonium salt obtained (48%) [1951].

m.p. 171° (Sadtler), 165–167° [1951];

 1H NMR (Sadtler: standard n° 44602 M); IR (Sadtler: standard n° 71630 K).**1-(5-Cyclohexyl-2-hydroxyphenyl)ethanone**[55168-33-7] $C_{14}H_{18}O_2$ mol.wt. 218.30**Syntheses**

– Preparation by reaction of acetic acid with p-cyclohexylphenol in the presence of boron trifluoride at 75° for 24 h (91%) [3514].

– Preparation by Fries rearrangement of p-cyclohexylphenyl acetate with aluminium chloride without solvent at 140° [2899] or at 170° [3547], (47%) [2899].

Colourless oil [2899,3547]; m.p. < 50° [3514];

 1H NMR [2899].**1-(5-Cyclohexyl-2,4-dihydroxyphenyl)ethanone**[159977-36-3] $C_{14}H_{18}O_3$ mol.wt. 234.30**Synthesis**

– Preparation by reaction of acetic acid with 4-cyclohexylresorcinol in the presence of boron trifluoride etherate at 105–108° for 15 min, followed by hydrolysis of the obtained boron difluoride chelate (m.p. 207–208°) with boiling aqueous ethanol for 15–20 min (89%) [3548].

m.p. 145–146° [3548]; IR [3548], UV [3548].

1-[3-(Cyclohexyloxy)-4-hydroxyphenyl]ethanoneC₁₄H₁₈O₃ mol.wt. 234.30**Syntheses**

- Preparation by catalytic hydrogenolysis of 4-(benzyloxy)-3-cyclohexyloxyacetophenone in the presence of Pd/C in ethanol at r.t. (82%) [2248].
- Also obtained (poor yield) by reaction of cyclohexyl bromide with 3,4-dihydroxyacetophenone in the presence of sodium hydroxide in a refluxing mixture of ethanol and methanol (2%) [2248].

m.p. 88° [2248].

1-[4-(Cyclohexyloxy)-3-hydroxyphenyl]ethanoneC₁₄H₁₈O₃ mol.wt. 234.30**Synthesis**

- Obtained (poor yield) by reaction of cyclohexyl bromide with 3,4-dihydroxyacetophenone in the presence of sodium hydroxide in a refluxing mixture of ethanol and methanol (8%) [2248].

m.p. 103° [2248].

1-[2,4-Dihydroxy-3-methyl-5-(3-methyl-2-butenyl)phenyl]ethanone

[74727-08-5]

C₁₄H₁₈O₃ mol.wt. 234.30**Synthesis**

- Obtained by prenylation of 2,4-dihydroxy-3-methylacetophenone with 2-methyl-3-buten-2-ol in dioxane in the presence of boron trifluoride etherate for 1 h at r.t. (41%) [3549].

m.p. 117–118° [3549]; TLC [3549];

¹H NMR [3549], IR [3549].**1-[2,4-Dihydroxy-5-(2-propenyl)-3-propylphenyl]ethanone**

[99370-48-6]

C₁₄H₁₈O₃ mol.wt. 234.30**Synthesis**

- Preparation by thermal Claisen rearrangement of 4-(allyloxy)-2-hydroxy-3-propylacetophenone without solvent at 210° (79%) [2671].

1-[2-Hydroxy-4-methoxy-3-(3-methyl-2-butenyl)phenyl]ethanone

[52601-06-6]

C₁₄H₁₈O₃ mol.wt. 234.30

Synthesis

– Preparation by reaction of 2-methylbut-3-en-2-ol with 2-hydroxy-4-methoxyacetophenone in the presence of boron trifluoride etherate [2326].

¹H NMR [2326,2327], UV [2326].**1-[2-Hydroxy-4-methoxy-5-(3-methyl-2-butenyl)phenyl]ethanone**

[28448-83-1]

C₁₄H₁₈O₃ mol.wt. 234.30

Syntheses

– Preparation by reaction of dimethyl sulfate with 2,4-di-hydroxy-5-prenylacetophenone in the presence of potassium carbonate in refluxing acetone (89%) [3453].

– Preparation by reaction of 2-methylbut-3-en-2-ol with 2-hydroxy-4-methoxyacetophenone in the presence of boron trifluoride etherate [2326].

Isolation from natural sources

– By treatment of bavachinin with 50% potassium hydroxide aqueous solution at 180–200° (80%). The bavachinin is a flavonoid compound obtained from *Psoralea Corylifolia* Linn. [3460].

Oil [3453,3460]; ¹H NMR [2326,2327,3460], IR [3460], UV [2326,3460].**1-[4-Hydroxy-3-(3-methoxy-3-methyl-1-butenyl)phenyl]ethanone (E)**

[26931-60-2]

C₁₄H₁₈O₃ mol.wt. 234.30

Isolation from natural sources

– From the roots of *Helianthella uniflora* (tribe Heliantheae) [3433].

m.p. 124° [3433];

¹H NMR [3433], IR [3433], UV [3433], MS [3433].**1-[4-Hydroxy-3-methoxy-5-(3-methyl-2-butenyl)phenyl]ethanone**

[73869-90-6]

C₁₄H₁₈O₃ mol.wt. 234.30

Synthesis

– Obtained by Claisen rearrangement of 3-methoxy-4-(3-methyl-2-butenyloxy)acetophenone (m.p. 41°) in diethylaniline for 5 h at 170° (85%) [3434].

m.p. 65° [3434]; ¹H NMR [3434], IR [3434].

1-[2-Hydroxy-4-(2-propenyloxy)-3-propylphenyl]ethanone

[99370-47-5]

 $C_{14}H_{18}O_3$ mol.wt. 234.30

Synthesis

– Preparation by reaction of allyl bromide with 2,4-di-hydroxy-3-propylacetophenone in the presence of potassium carbonate and potassium iodide in refluxing methyl ethyl ketone (78%) [2671].

Crystalline compound [2671].

1-[3-(Acetyloxy)-5-(1,1-dimethylethyl)-2-hydroxyphenyl]ethanone

[84297-04-1]

 $C_{14}H_{18}O_4$ mol.wt. 250.29

Syntheses

– Obtained by treatment of a benzene solution of 5-tert-butyl-2,3-dihydroxyacetophenone and acetaldehyde in the presence of di-tert-butyl diperoxyoxalate at 38° (25%) [3386].
 – Also obtained by treatment of a benzene solution of 4-tert-butyl-o-benzoquinone and acetaldehyde in the presence of di-tert-butyl diperoxyoxalate at 38° (6%) [3386].

Pale yellow oil [3386]; 1H NMR [3386], IR [3386].**1-[5-(Acetyloxy)-4-(1,1-dimethylethyl)-2-hydroxyphenyl]ethanone**

[107188-26-1]

 $C_{14}H_{18}O_4$ mol.wt. 250.29

Synthesis

– Preparation by reaction of acetic anhydride with 2-tert-butylhydroquinone in the presence of boron trifluoride–acetic acid complex between 60° and 90° [3251].

m.p. 86°5–87°5 [3251].

1-[3-(2-Butenyl)-2-hydroxy-4,6-dimethoxyphenyl]ethanone $C_{14}H_{18}O_4$ mol.wt. 250.29

Synthesis

– Preparation by condensation of 2-hydroxy-4,6-di-methoxyacetophenone with 1,3-butadiene in the presence of 85% orthophosphoric acid in xylene at 30–35° (80%) [3325].

m.p. 101–103° [3325]; 1H NMR [3325].

1-[2-(Cyclohexyloxy)-3,6-dihydroxyphenyl]ethanone[33537-80-3] $C_{14}H_{18}O_4$ mol.wt. 250.29

Syntheses

- Easy preparation by reduction of 2-acetyl-3-cyclohexyloxy-1,4-benzoquinone using conventional methods [2869].
- Also obtained (low yield) by reaction of 2-acetyl-1,4-benzoquinone with an excess of cyclohexanol at r.t., with exclusion of light [2869].

m.p. 75–76° [2869]; 1H NMR [2869], IR [2869].**1-[2,4-Dihydroxy-6-methoxy-3-(3-methyl-2-butenyl)phenyl]ethanone**[30403-01-1] $C_{14}H_{18}O_4$ mol.wt. 250.29

Synthesis

- Preparation by reaction of prenyl bromide with 2,4-dihydroxy-6-methoxyacetophenone in the presence of methanolic potassium hydroxide (major product) [2834], (27%) [2835].

Isolation from natural sources

- From the rhizomes of *Remirea maritima* Aubl. (Cyperaceae) [2834,3550].

m.p. 173°–174° [3550], 173–174° [2834], 170–171° [2835]; TLC [2835]; 1H NMR [2834,2835], UV [2834,2835].**1-[4,6-Dihydroxy-2-methoxy-3-(3-methyl-2-butenyl)phenyl]ethanone***(Acronylin)*[27364-64-3] $C_{14}H_{18}O_4$ mol.wt. 250.29

Syntheses

- Preparation by prenylation of 2,4-dihydroxy-6-methoxyacetophenone with 2-methyl-3-buten-2-ol in the presence of boron trifluoride etherate [2834].
- Preparation by dehalogenation of 2,4-dihydroxy-3-iodo-6-methoxy-5-prenylacetophenone in the presence of zinc dust and concentrated hydrochloric acid in refluxing ethanol (75%) [2064].

Isolation from natural sources

- From the bark of *Acronychia laurifolia* BL (Rutaceae) [3476].

m.p. 128–129° [3476,3550], 127–128° [2834]; 1H NMR [2834,3476], IR [3476], UV [2834,3476], MS [3476].

1-[2-Hydroxy-4-methoxy-5-[(3-methyl-2-butenyl)oxy]phenyl]ethanone

[142608-87-5]

C₁₄H₁₈O₄ mol.wt. 250.29

Synthesis

– Preparation by prenylation of 2,5-dihydroxy-4-methoxy-acetophenone [3551].

**1-[2-Hydroxy-4-(oxiranylmethoxy)-3-propylphenyl]ethanone**

[57161-85-0]

C₁₄H₁₈O₄ mol.wt. 250.29

Syntheses

– Preparation by reaction of epichlorohydrin with 2,4-di-hydroxy-3-propylacetophenone in the presence of,

- potassium hydroxide in refluxing ethanol (64%) [2270];
- potassium carbonate in boiling 2-butanol for 10 h (62%) [3479].

m.p. 54–55° [2270], 52–56° [3479]; b.p._{0.5} 170–175° [2270]; GLC [3479]; ¹H NMR [3479].

1-[2,4,6-Trihydroxy-3-methyl-5-(3-methyl-2-butenyl)phenyl]ethanone

[55380-58-0]

C₁₄H₁₈O₄ mol.wt. 250.29

Synthesis

– Obtained by reaction of 2-methylbut-3-en-2-ol with methylphloracetophenone in the presence of boron trifluoride etherate in dioxane (16%) [3401].

m.p. 115–117° [2879,3401], 114–116° [3500]; ¹H NMR [2879,3401], UV [3401], MS [3401].

1-[2,6-Dihydroxy-4-methoxy-3-(tetrahydro-2H-pyran-2-yl)phenyl]ethanone

[136258-10-1]

C₁₄H₁₈O₅ mol.wt. 266.29

Synthesis

– Preparation by reaction of 3,4-dihydro-2H-pyran on 2,6-dihydroxy-4-methoxyacetophenone with p-toluene-sulfonic acid in dioxane, first at 0°, then at r.t. (29%) [2368].

m.p. 71–76° [2368]; ¹H NMR [2368], ¹³C NMR [2368].

1-[2-Hydroxy-4-methoxy-6-[(tetrahydro-2H-pyran-2-yl)oxy]phenyl]ethanone

[136258-09-8]

 $C_{14}H_{18}O_5$ mol.wt. 266.29

Synthesis

– Preparation by reaction of 3,4-dihydro-2H-pyran on 2,6-dihydroxy-4-methoxyacetophenone with p-toluene-sulfonic acid in dioxane, first at 0°, then at r.t. (29%) [2368].

m.p. 88–92° [2368]; 1H NMR [2368], ^{13}C NMR [2368].

1-[2-(β-D-Galactopyranosyloxy)-4-hydroxyphenyl]ethanone $C_{14}H_{18}O_8$ mol.wt. 314.29

Synthesis

– Preparation from 2-(2,3,4,6-tetra-O-acetyl-β-D-galactopyranosyloxy)-4-hydroxyacetophenone by boiling in 0.2 N methanolic sodium methoxide solution for 3 min (45%) [3552].

m.p. 114–115° [3552]; monohydrate [3552];
 $(\alpha)_D^{20} = -73^\circ$ (c = 1 in water) [3552].

1-[2-(β-D-Galactopyranosyloxy)-6-hydroxyphenyl]ethanone

[88087-04-1]

 $C_{14}H_{18}O_8$ mol.wt. 314.29

Synthesis

– Obtained by deprotection of 2-(2,3,4,6-tetra-O-acetyl-β-D-glucopyranosyloxy)-6-hydroxyacetophenone with 0.5 N methanolic sodium methoxide at r.t. overnight (20%) [2842].

m.p. 226–229° [2842];
 $(\alpha)_D^{20} = -4.8^\circ$ (c = 1.67 in pyridine) [2842]; 1H NMR [2842].

1-[3-(β-D-Galactopyranosyloxy)-2-hydroxyphenyl]ethanone

[88086-97-9]

 $C_{14}H_{18}O_8$ mol.wt. 314.29

Synthesis

– Obtained from 3-(2,3,4,6-tetra-O-acetyl-β-D-galactopyranosyloxy)-2-hydroxyacetophenone by treatment with 0.1 N methanolic sodium methoxide for 3 h at r.t. [2842].

m.p. 179–181° [2842]; dihydrate [2842];
 $(\alpha)_D^{20} = -7^\circ$ (c = 1 in pyridine) [2842]; 1H NMR [2842].

1-[4-(β-D-Galactopyranosyloxy)-2-hydroxyphenyl]ethanone

[54918-26-2]

C₁₄H₁₈O₈

mol.wt. 314.29

Syntheses

– Obtained from 4-(2,3,4,6-tetra-O-acetyl-β-D-galactopyranosyloxy)-2-hydroxyacetophenone by treatment with methanolic sodium methoxide at r.t. [1936,2842], (87%) (monohydrate) [1936] or in boiling methanol for 3 min [3552].

m.p. 207° [2842], 205–207° [3552], 198° [1936];

(α)_D¹⁸ = –62° (c = 2.3 in pyridine) [1936];(α)_D²² = –68°3 (c = 1 in water) (monohydrate) [3552];(α)_D²² = –73° (c = 1 in water) (anhydrous) [3552].**1-[5-(β-D-Galactopyranosyloxy)-2-hydroxyphenyl]ethanone**

[88086-99-1]

C₁₄H₁₈O₈

mol.wt. 314.29

Synthesis

– Obtained from 5-(2,3,4,6-tetra-O-acetyl-β-D-galactopyranosyloxy)-2-hydroxyacetophenone by treatment with 0.1 N methanolic sodium hydroxide solution for 2 h (22%) [2842].

m.p. 209–211° [2842]; ¹H NMR [2842].**1-[2-(β-D-Glucopyranosyloxy)-4-hydroxyphenyl]ethanone**

(Cyanoneside B; Bungeiside B)

[149561-88-6]

C₁₄H₁₈O₈

mol.wt. 314.29

Synthesis

– Preparation from 2-(2,3,4,6-tetra-O-acetyl-β-D-glucopyranosyloxy)-4-hydroxyacetophenone by boiling in 0.2 N methanolic sodium methoxide solution for 3 min (65%) [3553].

Isolation from natural sources

- From the roots of *Cynanchum bungei* DECNE (Asclepiadaceae) [3554].
- From the roots of *Cynanchum taiwanianum* (Asclepiadaceae) [3555].

Amorphous white powder [3554], Amorphous solid [3555];

m.p. 178–180° [3553];

(α)_D²⁰ = –88°5 (c = 1 in water) [3553],(α)_D²⁰ = –11°0 (c = 1 in ethanol) [3555],(α)_D = –17°3 (c = 0.7 in methanol) [3554]; TLC [3553];¹H NMR [3554,3555], ¹³C NMR [3554,3555], IR [3555], UV [3555],

Isolation from natural sources

- From the aerial parts of *Artemisia stolonifera* (Compositae) [3565].

m.p. 201–203° [3565];

¹H NMR [3565], ¹³C NMR [3565], IR [3565], UV [3565].

1-[3-(β -D-Glucopyranosyloxy)-4,5-dihydroxyphenyl]ethanone

[448949-59-5]

C₁₄H₁₈O₉ mol.wt. 330.29

Isolation from natural sources

- From dried root of *Polygonum cuspidatum* SIEB. et ZUCC. (Polygonaceae) [3566].
- Also refer to: [3565].

1-[2-(β -D-Glucopyranosyloxy)-3,4,6-trihydroxyphenyl]ethanone (*Lalioside*)

[116964-03-5]

C₁₄H₁₈O₁₀ mol.wt. 346.29

Isolation from natural sources

- From *Lawsonia inermis* [3567].
- spectroscopic data [3567].

1-[3-(β-D-Glucopyranosyloxy)-2,4,6-trihydroxyphenyl]ethanone*(Polygoacetophenoside)*

[110906-84-8]

C₁₄H₁₈O₁₀ mol.wt. 346.29

Isolation from natural sources

– From the leaves and stems of *Polygonum multiflorum* (Polygonaceae) [3309].

m.p. 214–216° [3309];

¹H NMR [3309], ¹³C NMR [3309], IR [3309];

UV [3309], MS [3309], HRMS [3309].

1-[4-[(3-Bromopropyl)thio]-2-hydroxy-3-propylphenyl]ethanone

[125617-43-8]

C₁₄H₁₉BrO₂S mol.wt. 331.27

Synthesis

– Preparation by reaction of 1,3-dibromopropane with 2-hydroxy-4-mercapto-3-propylacetophenone in the presence of potassium carbonate and potassium iodide in refluxing methyl ethyl ketone [2271].

Yellow oil [2271].

1-[4-(3-Bromopropoxy)-2-hydroxy-3-propylphenyl]ethanone

[40786-20-7]

C₁₄H₁₉BrO₃ mol.wt. 315.21

Synthesis

– Preparation by reaction of 1,3-dibromopropane with 2,4-di-hydroxy-3-propylacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone [2270].

b.p._{0.02} 172–180° [2270].**1-[5-(3-Bromopropoxy)-2-hydroxy-3-propylphenyl]ethanone**

[125617-25-6]

C₁₄H₁₉BrO₃ mol.wt. 315.21

Synthesis

– Preparation by reaction of 1,3-dibromopropane with 2,5-di-hydroxy-3-propylacetophenone in the presence of potassium carbonate and potassium iodide in refluxing methyl ethyl ketone [2271].

m.p. 69–70° [2271].

1-[4-(3-Chloropropoxy)-2-hydroxy-3-propylphenyl]ethanone

[79558-02-4]

 $C_{14}H_{19}ClO_3$ mol.wt. 270.76

Syntheses

– Preparation by reaction of 1-bromo-3-chloropropane with 2,4-dihydroxy-3-propylacetophenone in the presence of potassium carbonate in refluxing acetone for 5 h (80%) [3204], (67%) [3479].

– Also refer to: [3568].

m.p. 39–41° [3479], 37–38° [3204]; GLC [3479]; 1H NMR [3479].**1-[2-(Ethylamino)-5-[1-(ethylimino)ethyl]-4-hydroxyphenyl]ethanone**

[115349-97-8]

 $C_{14}H_{20}N_2O_2$ mol.wt. 248.33

Synthesis

– Obtained by heating a mixture of 4,6-diacetylresorcinol, aqueous ethylamine and concentrated hydrochloric acid as catalyst, in an autoclave from 8 to 72 h [3569].

m.p. 153–154° [3569]; 1H NMR [3569], MS [3569].**1-[5-Ethyl-2-hydroxy-4-methyl-3-(1-methylethyl)phenyl]ethanone** $C_{14}H_{20}O_2$ mol.wt. 220.31

Synthesis

– Preparation by chromic degradation of 5-ethyl-2,3,6-tri-methyl-7-isopropylbenzofuran (52%) [3224].

b.p.₁₆ 164–167° [3224].**1-[6-Ethyl-2-hydroxy-4-methyl-3-(1-methylethyl)phenyl]ethanone** $C_{14}H_{20}O_2$ mol.wt. 220.31

Synthesis

– Preparation by chromic degradation of 4-ethyl-2,3,6-tri-methyl-7-isopropylbenzofuran (46%) [3224].

b.p.₁₈ 165–166° [3224].

1-(5-Hexyl-2-hydroxyphenyl)ethanone[55168-32-6] $C_{14}H_{20}O_2$ mol.wt. 220.31

Synthesis

– Preparation by Fries rearrangement of p-n-hexylphenyl acetate with aluminium chloride without solvent (15%) [2899].

yellow oil [2899]; b.p._{0.7} 110° [2899]; MS [2899].

1-[2-Hydroxy-3,5-bis(1-methylethyl)phenyl]ethanone[35158-23-7] $C_{14}H_{20}O_2$ mol.wt. 220.31

Synthesis

– Preparation by reaction of ethyl acetoacetate with 5-methyl-2-isopropyl-2-hexenal in the presence of pyridine and piperidine as catalysts in refluxing benzene (40%). The 5-methyl-2-isopropyl-2-hexenal was obtained by self-condensation of isovaleraldehyde in the presence of 15% potassium hydroxide solution [2958–2960].

m.p. 37° [2958–2960]; b.p._{0.05–0.10} 70–80° [2958–2960];
¹H NMR [2958–2960], IR [2958–2960], UV [2958–2960].

1-(2-Hydroxy-3,5-dipropylphenyl)ethanone[35198-96-0] $C_{14}H_{20}O_2$ mol.wt. 220.31

Synthesis

– Preparation by reaction of ethyl acetoacetate with 2-n-propyl-2-heptenal in the presence of pyridine and piperidine as catalysts in refluxing benzene (42%).
 – The 2-n-propyl-2-heptenal was obtained by self-condensation of n-valeraldehyde in the presence of 15% potassium hydroxide solution [2958–2960].

liquid [2958–2960]; b.p._{0.075} 80–90° [2958–2960];
¹H NMR [2958–2960], IR [2958–2960], UV [2958–2960].

1-(3,4,5-Triethyl-2-hydroxyphenyl)ethanone $C_{14}H_{20}O_2$ mol.wt. 220.31

Synthesis

– Preparation by Fries rearrangement of 2,4,6-triethylphenyl acetate with aluminium chloride *via* a migration of two ethyl groups (65%) [2233].

b.p.₁₂ 153–155° [2233].

1-(2,4-Dihydroxy-3,5-dipropylphenyl)ethanone

[72018-36-1]

 $C_{14}H_{20}O_3$ mol.wt. 236.31

Syntheses

- Preparation by hydrogenation of 2,4-dihydroxy-3,5-di-propenylacetophenone in ethanol using 10% PdO/C as catalyst (98%) [3184].
- Also refer to: [2326,2327].

N.B.: Pr indicates the *propyl* group $-C_3H_7$ in Chem. Abstr., **92**, 6368x (1980) and **98**, 54239b (1983), as usual abbreviation. However, in the two references [2326,2327], Pr represented the *prenyl* group $-CH_2CH=C(CH_3)_2$. Therefore they concern the 2,4-dihydroxy-3,5-diprenylacetophenone and not the above mentioned 2,4-dihydroxy-3,5-dipropylacetophenone.

m.p. 98–99° [3184].

1-[4-Ethoxy-3-hydroxy-5-methyl-2-(1-methylethyl)phenyl]ethanone $C_{14}H_{20}O_3$ mol.wt. 236.31

Synthesis

- Preparation by diazotization of 3-amino-4-ethoxy-5-methyl-2-isopropylacetophenone, followed by hydrolysis of the diazonium salt obtained (44%) [3327].

m.p. 88° [3327].

1-(5-Hexyl-2,4-dihydroxyphenyl)ethanone

[63411-88-1]

 $C_{14}H_{20}O_3$ mol.wt. 236.31

Syntheses

- Preparation by reaction of acetonitrile on 4-n-hexyl-resorcinol (Hoesch reaction) (84%) [2676].
- Preparation from 5-hexyl-2,4-dimethoxyacetophenone by demethylation with boron tribromide in methylene chloride at r.t. (70%) [2678,2679].

m.p. 86–87° [2676].

1-[3-(Hexyloxy)-4-hydroxyphenyl]ethanone $C_{14}H_{20}O_3$ mol.wt. 236.31

Synthesis

- Preparation from 4-(benzyloxy)-3-hexyloxyacetophenone by catalytic debenylation on Pd/C (89%) [2946].

m.p. 48° [2946].

1-[4-(Hexyloxy)-2-hydroxyphenyl]ethanone

[143286-85-5]

C₁₄H₂₀O₃ mol.wt. 236.31

Synthesis

– Preparation by partial alkylation of resacetophenone with hexyl bromide in the presence of potassium carbonate in refluxing acetone for 20 h [3493].

m.p. 22° [3493].

1-[4,6-Dihydroxy-2-methoxy-3-(3-methylbutyl)phenyl]ethanone

[14764-76-2]

C₁₄H₂₀O₄ mol.wt. 252.31

Synthesis

– Preparation from acronylin (4,6-dihydroxy-2-methoxy-3-isopentenylacetophenone) by catalytic reduction with Pd/C as catalyst in ethyl acetate [3476].

m.p. 143° [3476]; ¹H NMR [3476].**1-[2-Hydroxy-4,6-bis(1-methylethoxy)phenyl]ethanone**

[93344-48-0]

C₁₄H₂₀O₄ mol.wt. 252.31

Synthesis

– Preparation by reaction of 2-bromopropane with phloracetophenone in the presence of potassium carbonate in DMF at reflux (67%) [2830].

dark red oil [2830]; ¹H NMR [2830], IR [2830], MS [2830].**1-[3-Hydroxy-4,6-dimethoxy-2-methyl-5-(1-methylethyl)phenyl]ethanone**

[159848-01-8]

C₁₄H₂₀O₄ mol.wt. 252.31

Synthesis

– Obtained by reaction of 3-chloroperbenzoic acid with 2,4-dimethoxy-6-methyl-3-isopropylacetophenone in refluxing ethylene dichloride for 48 h (34%) [3570].

m.p. 98–100° [3570]; ¹H NMR [3570].

1-[2-Hydroxy-4,6-bis(propyloxy)phenyl]ethanoneC₁₄H₂₀O₄ mol.wt. 252.31**Synthesis**

- Preparation by catalytic hydrogenation of 2-hydroxy-4,6-bis(2-propynyloxy)acetophenone in the presence of 10% Pd/C in methanol [3160].

1-[3,5-Diethyl-2,4-dihydroxy-6-(methoxymethoxy)phenyl]ethanone

[175785-90-7]

C₁₄H₂₀O₅ mol.wt. 268.31**Synthesis**

- Refer to: [3495] (Japanese patent).

1-[3,6-Dihydroxy-2,4-bis(1-methylethoxy)phenyl]ethanone

[93344-49-1]

C₁₄H₂₀O₅ mol.wt. 268.31**Synthesis**

- Preparation from 2-hydroxy-4,6-diisopropoxyacetophenone by persulfate oxidation (Elbs reaction) (12%) [2830].

oil [2830]; ¹H NMR [2830], IR [2830], MS [2830].**1-[4,6-Dihydroxy-3-(3-hydroxy-3-methylbutyl)-2-methoxyphenyl]ethanone**

[153399-41-8]

C₁₄H₂₀O₅ mol.wt. 268.31**Synthesis**

- Obtained by catalytic hydrogenation of 4,6-bis(benzyloxy)-3-(3-hydroxy-3-methylbutynyl)-2-methylacetophenone in methanol in the presence of Pd/C at 20° [3571].

m.p. 156–158° [3571]; ¹H NMR [3571].**1-(2,4-Diethoxy-6-hydroxy-3,5-dimethoxyphenyl)ethanone**C₁₄H₂₀O₆ mol.wt. 284.31**Synthesis**

- Preparation by Friedel–Crafts acylation of 1,3-diethoxy-2,4,5-trimethoxybenzene with acetyl chloride in the presence of aluminium chloride (60%) [3313].

b.p._{0.2} 119–121° [3313].

1-[2-Hydroxy-3,5,6-trimethoxy-4-(1-methylethoxy)phenyl]ethanone

[56002-87-0]

 $C_{14}H_{20}O_6$ mol.wt. 284.31

Synthesis

– Obtained (poor yield) by Friedel–Crafts acylation of 3-iso-propyloxy-2,4,5-trimethoxyphenol with acetyl chloride in ethyl ether in the presence of aluminium chloride (9%) [3317].

 1H NMR [3317].**1-[2-Hydroxy-3,4,6-tris(methoxymethoxy)phenyl]ethanone**

[53000-17-2]

 $C_{14}H_{20}O_8$ mol.wt. 316.31

Synthesis

– Obtained by reaction of chloromethyl methyl ether with 2,3,4,6-tetrahydroxyacetophenone in ethanol in the presence of sodium ethoxide under nitrogen, first at 0°, then at 40° (13%) [2882].

Yellow oil [2882]; 1H NMR [2882], IR [2882].**1-[4-[(1,1-Dimethylethyl)dimethylsilyloxy]-2,6-dihydroxyphenyl]ethanone**

[139140-13-9]

 $C_{14}H_{22}O_4Si$ mol.wt. 282.41

Synthesis

– Obtained by sonication of 2',4',6'-(tri-tert-butyl-dimethylsilyloxy)acetophenone in solution of methanol and carbon tetrachloride (1:1) at 50–55° for 12 h (85%) [3572].

Colourless oil [3572]; 1H NMR [3572], ^{13}C NMR [3572], IR [3572], MS [3572].**1-[4-(Benzoyloxy)-2-hydroxy-3,5-dinitrophenyl]ethanone** $C_{15}H_{10}N_2O_8$ mol.wt. 346.25

Synthesis

– Preparation (by-product) by reaction of concentrated nitric acid on 4-(benzoyloxy)-2-hydroxyacetophenone in acetic acid at r.t. [1808].

m.p. 171–172° [1808].

1-[4-(Benzoyloxy)-5-bromo-2-hydroxyphenyl]ethanoneC₁₅H₁₁BrO₄ mol.wt. 335.15**Synthesis**

– Preparation by bromination of 4-(benzoyloxy)-2-hydroxy-acetophenone [1808,2707].

m.p. 176° [2707], 175–177° [1808].

1-[4-(Benzoyloxy)-2-hydroxy-5-nitrophenyl]ethanoneC₁₅H₁₁NO₆ mol.wt. 301.26**Synthesis**

– Preparation by reaction of concentrated nitric acid on 4-(benzoyloxy)-2-hydroxyacetophenone in acetic acid at r.t. [1808].

m.p. 125–126° [1808].

1-[3-Bromo-2-hydroxy-5-nitro-4-(phenylmethoxy)phenyl]ethanoneC₁₅H₁₂BrNO₅ mol.wt. 366.17**Synthesis**

– Preparation by bromination of 4-(benzoyloxy)-2-hydroxy-5-nitroacetophenone in chloroform solution in the presence of iron wire [1808].

m.p. 150–151° [1808].

1-[2-[(2,4-Dichlorophenyl)methoxy]-6-hydroxyphenyl]ethanone

[63411-86-9]

C₁₅H₁₂Cl₂O₃ mol.wt. 311.16**Synthesis**

– Obtained by reaction of 2,4-dichlorobenzyl chloride with 2,6-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone (62%) [3242].

m.p. 126–127° [3242].

1-[2-[(3,4-Dichlorophenyl)methoxy]-6-hydroxyphenyl]ethanone

[63411-85-8]

 $C_{15}H_{12}Cl_2O_3$

mol.wt. 311.16

Synthesis

– Obtained by reaction of 3,4-dichlorobenzyl bromide or chloride with 2,6-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone (52%) [3242].

m.p. 175–176° [3242].

1-[4-(2,6-Difluorophenyl)methoxy-3-hydroxyphenyl]ethanone $C_{15}H_{12}F_2O_3$

mol.wt. 278.26

Synthesis

– Obtained by stirring a mixture of 3,4-dihydroxyacetophenone, lithium carbonate and α -bromo-2,6-difluorotoluene in DMF for 2 days at r.t. (38%) [3573].

Solid [3573]; 1H NMR [3573].**1-[2-(Benzoyloxy)-4-hydroxyphenyl]ethanone**

[144406-93-9]

 $C_{15}H_{12}O_4$

mol.wt. 256.26

Synthesis

– Obtained by conventional acylation of resacetophenone with benzoyl chloride [3574].

1-[2-(Benzoyloxy)-5-hydroxyphenyl]ethanone

[88087-03-0]

 $C_{15}H_{12}O_4$

mol.wt. 256.26

Synthesis

– Preparation by hydrogenolysis of 5-(benzyloxy)-2-(benzyloxy)acetophenone in ethyl acetate using 10% Pd/C as catalyst, at r.t. for 5 h (78%) [2842].

m.p. 168–169° [2842]; 1H NMR [2842].**1-[2-(Benzoyloxy)-6-hydroxyphenyl]ethanone**

[50634-01-0]

 $C_{15}H_{12}O_4$

mol.wt. 256.26

Synthesis

– Preparation by reaction of benzoyl chloride on 2,6-dihydroxyacetophenone in aqueous sodium hydroxide solution (60%) [2433].

m.p. 99–100° [2433].

1-[3-(Benzoyloxy)-4-hydroxyphenyl]ethanone[101140-07-2] $C_{15}H_{12}O_4$ mol.wt. 256.26**Synthesis**

– Preparation by reaction of benzoyl chloride with 3,4-dihydroxyacetophenone in the presence of pyridine, first at 0° for 5 min, then at r.t. for 24 h under nitrogen atmosphere (77%) [3410].

m.p. 143–156° [3410]. This gap of 13° appears in the publication.

¹H NMR [3410], IR [3410], MS [3410].

1-[4-(Benzoyloxy)-2-hydroxyphenyl]ethanone[109311-05-9] $C_{15}H_{12}O_4$ mol.wt. 256.26**Syntheses**

– Preparation by reaction of benzoyl chloride on resacetophenone [2293,2613,2707,2792],

- with aqueous sodium hydroxide (68%) [2613];
- with aqueous potassium hydroxide [2293];
- with potassium carbonate in toluene by heating on a steam bath (52%) [2613];
- with aluminium chloride in nitrobenzene by heating in a water bath (21%) [2707].

– Also refer to: [3575].

m.p. 110° [2707], 107–108° [2792], 106–107° [2613], 105–106° [2293].

1-[5-(Benzoyloxy)-2-hydroxyphenyl]ethanone $C_{15}H_{12}O_4$ mol.wt. 256.26**Synthesis**

– Obtained by reaction of aluminium chloride on 4-(benzoyloxy)phenyl acetate without solvent between 125° and 155° (13%) [2344].

m.p. 77–78° [2344].

1-[2-(Benzoyloxy)-4,6-dihydroxyphenyl]ethanone[83332-29-0] $C_{15}H_{12}O_5$ mol.wt. 272.26**Synthesis**

– Obtained by reaction of benzoyl chloride on phloracetophenone with 2% aqueous potassium hydroxide solution at 0° (6%) [3077] or with dilute aqueous sodium hydroxide solution [2827].

m.p. 186° [3077], 177–178° [2827].

1-[4-(Benzoyloxy)-2,6-dihydroxyphenyl]ethanone

[130471-75-9]

 $C_{15}H_{12}O_5$ mol.wt. 272.26

-

m.p. 210–211° [3077].

Synthesis

– Obtained by reaction of benzoyl chloride on phloroacetophenone with 2% aqueous potassium hydroxide solution at 0° (19%) [3077].

1-[3-Bromo-2-hydroxy-6-(phenylmethoxy)phenyl]ethanone $C_{15}H_{13}BrO_3$ mol.wt. 321.17

m.p. 125–126° [2523], 124° [2524]; IR [2524].

Synthesis

– Preparation by reaction of bromine on 2-(benzyloxy)-6-hydroxyacetophenone in methylene chloride (84%) [2524] or in acetic acid at r.t. (58%) [2523].

1-[5-Bromo-2-hydroxy-4-(phenylmethoxy)phenyl]ethanone $C_{15}H_{13}BrO_3$ mol.wt. 321.17

– Also obtained by bromination of 4-(benzyloxy)-2-hydroxyacetophenone with bromine in carbon disulfide in the presence of a trace of iodine [3577].

m.p. 154–155° [3576,3577].

Syntheses

– Obtained from 3,3'-diacetyl-4,4'-dihydroxy-6,6'-dibenzyl-oxydiphenyl thioether by treatment with bromine in the presence of a crystal of iodine in boiling acetic acid for 8 h then at r.t. overnight [3576].

1-[2-Hydroxy-3-iodo-4-(phenylmethoxy)phenyl]ethanone $C_{15}H_{13}IO_3$ mol.wt. 368.17

m.p. 165° [1910].

Synthesis

– Preparation by iodination of 4-(benzyloxy)-2-hydroxyacetophenone [1910].

1-[2-Hydroxy-5-iodo-4-(phenylmethoxy)phenyl]ethanoneC₁₅H₁₃IO₃ mol.wt. 368.17

Synthesis

– Obtained (by-product) during the rearrangement of 2-(benzoyloxy)-4-(benzyloxy)-3-iodoacetophenone to give 7-(benzyloxy)-8-iodoflavone [1910].

1-[2-Hydroxy-5-nitro-4-(phenylmethoxy)phenyl]ethanoneC₁₅H₁₃NO₅ mol.wt. 287.27

Synthesis

– Preparation by nitration of 4-(benzyloxy)-2-hydroxy-acetophenone in acetic acid at r.t. [1808].

m.p. 140–141° [1808].

1-(2-Hydroxy-5-methyl[1,1'-biphenyl]-3-yl)ethanone

[360791-68-0]

C₁₅H₁₄O₂ mol.wt. 226.27

Synthesis

– Obtained by successively adding an aqueous solution of sodium bicarbonate (6 mmol), then tetrakis(triphenyl-phosphine)palladium (0) (0.1 mmol) to a solution of 3-bromo-2-hydroxy-5-methylacetophenone (2 mmol) and phenylboronic acid (2 mmol) in ethylene glycol dimethyl ether (DME). After, the reaction mixture was refluxed for 10 min and then heated at 75° overnight (71% (compound **26**) [1804].

Yellow solid [1804]; ¹H NMR [1804], MS [1804].

1-(4-Hydroxy-4'-methyl[1,1'-biphenyl]-3-yl)ethanone

[229007-00-5]

C₁₅H₁₄O₂ mol.wt. 226.27

Synthesis

– Obtained by Fries rearrangement of 4'-methyl-4-biphenyl acetate (1 mol) with aluminium chloride (1.1 mol) in refluxing o-dichlorobenzene for 3 h (67%) [3578].

m.p. 82°5–83°3 [3578]; ¹H NMR [3578], IR [3578], GC-MS [3578].

1-[2-Hydroxy-5-(phenylmethyl)phenyl]ethanone[61300-15-0] $C_{15}H_{14}O_2$ mol.wt. 226.27

Synthesis

– Preparation by Fries rearrangement of 4-hydroxydiphenylmethane acetate with aluminium chloride in chlorobenzene at 130° [2270,3579], (85%) [3579].

m.p. 56° [3579], 55–56° [2270].

1-[4-Hydroxy-3-(phenylmethyl)phenyl]ethanone[95102-24-2] $C_{15}H_{14}O_2$ mol.wt. 226.27

Syntheses

– Preparation by Fries rearrangement of 2-hydroxy-diphenylmethane acetate in the presence of aluminium chloride in nitrobenzene at 50–60° (70%) [3579].

– Also refer to: [3580,3581].

m.p. 137–138° [3579].

1-[3-Hydroxy-4-(phenylmethyl)thiophenyl]ethanone $C_{15}H_{14}O_2S$ mol.wt. 258.34

Synthesis

– Obtained by reaction of benzyl bromide with 3-hydroxy-4-mercaptoacetophenone (SM) in the presence of potassium carbonate in refluxing acetone for 2 h (20%). SM was prepared by demethylation of 3-methoxy-4-mercaptoacetophenone with boron tribromide in methylene chloride for 2 h at –78° [3573].

 1H NMR [3573].**1-[2,4-Dihydroxy-3-(phenylmethyl)phenyl]ethanone**[67088-16-8] $C_{15}H_{14}O_3$ mol.wt. 242.27

Syntheses

– Preparation by reaction of boron tribromide with 3-benzyl-2,4-dimethoxyacetophenone in methylene chloride, first at –50°, then at r.t. (90%) [2464].

– Preparation by reaction of concentrated hydrochloric acid with 3-benzyl-4-(benzyloxy)-2-hydroxyacetophenone in refluxing acetic acid (69%) [3582].

- Also obtained by reacting 4-(benzyloxy)-2-hydroxyacetophenone with trifluoroacetic acid at r.t. for 70 h (17%) [2324].
 - Also obtained by reaction of benzyl alcohol with resacetophenone in the presence of boron trifluoride etherate and dioxane at 60–70° (16%) [2324].
 - Also obtained by reaction of acetonitrile on 2-benzylresorcinol (Hoesch reaction) (11%) [3582].
 - Also obtained by reaction of benzyl bromide with resacetophenone in the presence of methanolic potassium hydroxide at r.t. (18%) [3583].
 - Also obtained by catalytic reduction of 2',4'-dihydroxy-3'-[phenyl-(1-piperidyl)methyl]-acetophenone in the presence of Pd/C [2673,2674], (68%) [2674]. An alternative route of reduction consisted in heating the starting material and Pd/C in tetralin between 140° and 150° for 8 h (57%) [2674]. The starting material was obtained by treatment of resacetophenone in ethanol or benzene with benzylidene-bis-piperidine.
 - Also refer to: [3584].
- m.p. 207–208° [2673,2674], 196–198° [3583], 195–197° [3582], 195–196° [2324];
¹H NMR [2324,2464,2674], IR [2324,2674], UV [2324].

1-[2,4-Dihydroxy-5-(phenylmethyl)phenyl]ethanone

[93898-99-8]

C₁₅H₁₄O₃

mol.wt. 242.27

Syntheses

- Preparation by Fries rearrangement of 4-benzylresorcinol diacetate with aluminium chloride in the presence of 4-benzylresorcinol in nitrobenzene at 50° (85%) [3579].
 - Also obtained by reacting 2-hydroxy-4-(benzyloxy)acetophenone with trifluoroacetic acid at r.t. for 70 h (29%) [2324].
 - Also obtained by reaction of benzyl alcohol with resacetophenone in the presence of boron trifluoride etherate and dioxane at 60–70° (24%) [2324].
 - Also obtained (poor yield) by reaction of benzyl bromide with resacetophenone in the presence of methanolic potassium hydroxide at r.t. (<2%) [3583].
- m.p. 149° [3579], 140–142° [3583], 140–141° [2324]; ¹H NMR [2324], IR [2324], UV [2324].

1-(3-Hydroxy-5-methoxy[1,1'-biphenyl]-4-yl)ethanone

[32101-40-9]

C₁₅H₁₄O₃

mol.wt. 242.27

Synthesis

- Preparation by dehydrogenation of 2-acetyl-3-methoxy-5-phenyl-2-cyclohexenone in the presence of Pd black powder in refluxing cyclohexene for 6 h (70%) [3527].
- m.p. 96–97° [3527]; IR [3527], UV [3527].

1-(4-Hydroxy-4'-methoxy[1,1'-biphenyl]-3-yl)ethanone

[114412-47-4]

C₁₅H₁₄O₃ mol.wt. 242.27

Synthesis

– Obtained by Fries rearrangement of 4-acetoxy-4'-methoxydiphenyl with aluminium chloride in tetrachloroethane at 140° for 30 min [3585].

1-[2-Hydroxy-3-(phenylmethoxy)phenyl]ethanone

[30992-64-4]

C₁₅H₁₄O₃ mol.wt. 242.27

Synthesis

– Preparation by reaction of benzyl chloride with 2,3-di-hydroxyacetophenone in the presence of potassium iodide and potassium carbonate in refluxing acetone for 4 h (43%) [3586] or for 18 h (40%) [2287].

m.p. 55–56° [2287]; b.p._{0.05} 122–130° [3586]; ¹H NMR [2287], IR [2287].

1-[2-Hydroxy-4-(phenylmethoxy)phenyl]ethanone

[29682-12-0]

C₁₅H₁₄O₃ mol.wt. 242.27

Syntheses

– Preparation by reaction of resacetophenone, with benzyl chloride,

- in the presence of potassium carbonate in refluxing acetone [2417,3493], (85%) [3204], (50–52%) [2423,2529,2823].

N.B.: The butanone can also be used instead of acetone [3204]. The addition of potassium iodide improved yields [2417],

- in the presence of potassium carbonate in DMF at 150–153° (62%) [3587];
 - in the presence of potassium carbonate and potassium iodide in refluxing acetone for 4 h [3586] or for 18 h (67%) [2287];
 - in the presence of potassium hydroxide in refluxing methanol [3582].
- with benzyl bromide,
- in the presence of potassium carbonate in a methyl ethyl ketone and DMSO mixture (53%) [3588];
 - in the presence of methanolic potassium hydroxide at r.t. (10%) [3583].
- Also obtained by hydrolysis of 2-(acetyloxy)-4-(benzyloxy)acetophenone (m.p.111–112°) with 10% aqueous sodium hydroxide in boiling methanol for 5 min (76%) [2763].
- Also obtained (trace) by heating 4-acetyloxy-2-hydroxyacetophenone with benzyl chloride (<1%) [2904].
- Also refer to: [2777,3589–3596].

m.p. 111° [2423], 110° [2324], 109–110° [3583], 106–107° [3582], 105–106° [3586], 104–104.5° [2763], 104–105° [3204], 103–105° [3493], 103–104° [2823], 102–103° [2904], 101–102° [2287], 94–95° [3587];
¹H NMR [2287,2904,3587], ¹³C NMR [2328], UV [2763,2904].

1-[2-Hydroxy-4-(phenylmethoxy)phenyl]ethanone-1-¹⁴C

[71815-42-4]

C₁₅H₁₄O₃

mol.wt. 244.27

Syntheses

– Preparation by reaction of benzyl chloride with [carbonyl-¹⁴C]resacetophenone in the presence of potassium carbonate and potassium iodide in DMF at 80° for 2 h [3597], (69%) [3598] or at 50–55° for 1 h (63%) [3599].

m.p. 105.5–106.5° [3599], 103–105° [3598];
 sp. act. 6.09 × 10⁷ dpm/mM [3598]; 0.316 mCi/mM [3597].
 sp. act. 6.09 × 10⁷ dpm/mM [3598]; 0.316 mCi/mM [3597].

1-[2-Hydroxy-5-(phenylmethoxy)phenyl]ethanone

[30992-63-3]

C₁₅H₁₄O₃

mol.wt. 242.27

Syntheses

– Preparation by reaction of benzyl chloride with quinacetophenone [2226,2358,2529] in refluxing acetone in the presence of potassium carbonate,

- with potassium iodide (85%) [2226], (71%) [3586], (55%) [2287];
- without potassium iodide (31%) [2358].

m.p. 100–102° [2226], 69–70° [2358,3586], 67–68° [2287]. One of the reported melting points is obviously wrong.
¹H NMR [2226,2287], IR [2226], MS [2226].

1-[2-Hydroxy-6-(phenylmethoxy)phenyl]ethanone

[4047-24-9]

C₁₅H₁₄O₃

mol.wt. 242.27

Syntheses

– Preparation by reaction of benzyl chloride with 2,6-dihydroxyacetophenone,

- in the presence of potassium carbonate in refluxing acetone [1984,2408], (58%) [2408];
- in the presence of potassium carbonate and potassium iodide in refluxing acetone for 18 h (40%) [2287];
- in the presence of 15% aqueous sodium hydroxide, by heating in a water bath (67%) [2364].

- Preparation by reaction of benzyl bromide with 2,6-dihydroxyacetophenone monosodium salt (SM) in DMSO at r.t. for 1 h (76%). SM was prepared by reaction of sodium hydride (1 mol) with 2,6-dihydroxyacetophenone (1 mol) in DMSO at r.t. for 10 min [3600].
- Preparation by reaction of benzyl bromide with 2,6-dihydroxyacetophenone,
 - in the presence of potassium carbonate in refluxing acetone (60%) [2524];
 - in the presence of potassium carbonate and potassium iodide in refluxing acetone (about 80°) for 12 h (72%) [3601].

Monohydrate [3601];

m.p. 110–111° [3601], 109–110° [2408,3600,3602], 109° [2524], 108–109° [2287]

106–109° [1984], 106–107° [2364];

¹H NMR [2287,3600,3601], ¹³C NMR [3601], MS [3601].

1-[3-Hydroxy-4-(phenylmethoxy)phenyl]ethanone

[21092-94-4]

C₁₅H₁₄O₃ mol.wt. 242.27

Syntheses

- Preparation by reaction of benzyl chloride with 3,4-di-hydroxyacetophenone in the presence of potassium hydroxide in a refluxing mixture of ethanol, methanol and water (53%) [2248].

– Also refer to: [1828].

m.p. 118° [2248].

1-[3-Hydroxy-5-(phenylmethoxy)phenyl]ethanone

[81732-54-9]

C₁₅H₁₄O₃ mol.wt. 242.27

Synthesis

- Preparation by partial catalytic hydrogenolysis of 3,5-bis (benzyloxy)acetophenone in acetone in the presence of Pd/C (48%) [3603].

m.p. 126–128° [3603]; ¹H NMR [3603].

1-[5-Hydroxy-2-(phenylmethoxy)phenyl]ethanone

[83069-04-9]

C₁₅H₁₄O₃ mol.wt. 242.27

Synthesis

- Preparation by hydrolysis of 5-acetoxy-2-(benzyloxy)-acetophenone (m.p. 111–112°) with 5% sodium hydroxide in boiling aqueous methanol (69%) [2763].

m.p. 117° [2763]; UV [2763].

1-[2,4-Dihydroxy-3-[(2-hydroxyphenyl)methyl]phenyl]ethanone

[103633-38-1]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Synthesis

– Preparation by catalytic hydrogenolysis of 3-(*o*-benzyl-oxybenzyl)-2,4-dihydroxyacetophenone at r.t. in the presence of 10% Pd/C in ethyl acetate (67%) [2325].

m.p. 204–205° [2325]; 1H NMR [2325], IR [2325], UV [2325].

1-[2,3-Dihydroxy-4-(phenylmethoxy)phenyl]ethanone

[69114-99-4]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Synthesis

– Preparation by reaction of benzyl chloride on gallacetophenone with sodium bicarbonate and sodium iodide in refluxing acetone–ethanol mixture (33–37%) [1989,2817].

m.p. 137–138° [2817], 133–133°5 [1989]; 1H NMR [1989].

1-[2,4-Dihydroxy-6-(phenylmethoxy)phenyl]ethanone

[39548-86-2]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Syntheses

- Preparation from 2-(benzyloxy)-4,6-dihydroxyacetophenone ditosilate (SM) by hydrolysis with 5% sodium hydroxide in ethanol (72%). The starting ketone (SM) was prepared by a two-step procedure from phloracetophenone [3604].
- Also obtained (poor yield) by reaction of benzyl chloride on phloracetophenone with potassium carbonate in refluxing acetone (4%) [3605].

m.p. 239–240° [3605], 233°5 [3604]; 1H NMR [3605], UV [3605].

1-[2,5-Dihydroxy-4-(phenylmethoxy)phenyl]ethanone

[34176-17-5]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Syntheses

- Preparation by reaction of benzyl halide with 2,4,5-tri-hydroxyacetophenone in the presence of potassium carbonate in refluxing acetone (62%) [2418].
- Preparation from 4-(benzyloxy)-2-hydroxyacetophenone by persulfate oxidation (Elbs reaction) (25%) [2417,2823,2906].

m.p. 160–162° [2417], 159–160° [2823], 157–159° [2418].

1-[2,6-Dihydroxy-4-(phenylmethoxy)phenyl]ethanone

[35028-02-5]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Syntheses

- Preparation from 2,4-diacetyl-5-(benzyloxy)resorcinol by selective deacetylation by refluxing in 1 N sodium hydroxide for 1 h [2856].
- Also obtained by reaction of benzyl chloride on phloroacetophenone with potassium carbonate in refluxing acetone (13%) [2838].

m.p. 188–189° (compound **VIII**) [2838],139–140° (compound **II**, R=H; R'=PhCH₂-) [2856]; ¹H NMR [2856].**1-[3,6-Dihydroxy-2-(phenylmethoxy)phenyl]ethanone**

[33537-81-4]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Syntheses

- Preparation from 2-(benzyloxy)-6-hydroxyacetophenone by persulfate oxidation (Elbs reaction) (49%) [2408].
- Easy preparation by reduction of 2-acetyl-3-(benzyloxy)-1,4-benzoquinone using conventional methods [2869].
- Also obtained in low yield by reaction of 2-acetyl-1,4-benzoquinone with an excess of benzyl alcohol at r.t., with exclusion of light [2869].

m.p. 94° [2408], 87°5–89° [2869]; ¹H NMR [2869], IR [2869].**1-[2,3,4-Trihydroxy-5-(phenylmethyl)phenyl]ethanone**

[105485-44-7]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Syntheses

- Preparation by reaction of benzyl alcohol with galacetophenone in the presence of boron trifluoride etherate in dioxane at 60–70° (49%) [3583].
- Preparation by Claisen rearrangement of 3,4-bis-(benzyloxy)-2-hydroxyacetophenone in the presence of trifluoroacetic acid at r.t. (54%) [3583].

m.p. 127–128° [3583]; ¹H NMR [3583], IR [3583], UV [3583].**1-[2,4,6-Trihydroxy-3-(phenylmethyl)phenyl]ethanone** $C_{15}H_{14}O_4$ mol.wt. 258.27

Syntheses

- Obtained (poor yield) by reaction of a benzyl halogenide with phloroacetophenone in the presence of sodium methoxide in methanol at r.t. (8%) [2878].

- Also obtained from 3-benzyl-4,6-bis(benzyloxy)-2-hydroxyacetophenone by hydrogenolysis in the presence of 5% Pd/C in ethanol [3606].
m.p. 208° [2878], 207–208° [3606]; IR [3606], UV [3606].

1-(3,4,6-Trihydroxy-3'-methyl[1,1'-biphenyl]-2-yl)ethanone

[32541-10-9] $C_{15}H_{14}O_4$ mol.wt. 258.27

Synthesis

- Obtained by catalytic reduction of 2-acetyl-3-(4-hydroxy-3-methylphenyl)-1,4-benzoquinone (SM). SM was obtained by condensation of o-cresol with 2-acetyl-1,4-benzoquinone in ethyl ether in the presence of trifluoroacetic acid at 0° (12%) [3607].

m.p. 194° [3607].

1-[2-Hydroxy-5-(4-methylphenyl)sulfonyl]phenyl]ethanone

[147816-51-1] $C_{15}H_{14}O_4S$ mol.wt. 290.34

Syntheses

- Preparation by Fries rearrangement of 4-(p-tolylsulfonyl)-phenyl acetate with aluminium chloride (5 mol) at 160° for 1 h (58%) [3541].
– Also obtained by photo-Fries rearrangement of the same ester in acetonitrile (26%) or (40%) based on consumed starting material [3541].

m.p. 206–208° [3541]; 1H NMR [3541], UV [3541].

1-[3,6-Dihydroxy-2-(4-methoxyphenoxy)phenyl]ethanone

[52095-11-1] $C_{15}H_{14}O_5$ mol.wt. 274.27

Synthesis

- Preparation by reaction of hydroquinone monomethyl ether on 2-acetylquinone with pyridine in benzene (43%) [2020].

m.p. 74–77° [2020]; 1H NMR [2020], IR [2020].

1-(2',3,4',6-Tetrahydroxy-6'-methyl[1,1'-biphenyl]-2-yl)ethanone

[32546-66-0] $C_{15}H_{14}O_5$ mol.wt. 274.27

Synthesis

- Obtained by condensation of 2-acetyl-1,4-benzoquinone with orcinol in an acetic acid/ethyl ether solution at r.t. for 1 h (50%) [3607].

m.p. 185° [3607]; IR [3607].

1-[2,4-Dihydroxy-6-[(4-methylphenyl)sulfonyl]oxy]phenyl]ethanone

[225088-72-2]

C₁₅H₁₄O₆S mol.wt. 322.05

Synthesis

– Preparation by hydrogenolysis of 2-toluenesulfonyloxy-4,6-bis(benzyloxy)acetophenone (m.p. 122–123°) in methanol with hydrogen in the presence of 10% Pd/C at r.t. for 20 h (94%) [3608].

m.p. 150–152° [3608]; ¹H NMR [3608], IR [3608], MS [3608].

1-[2-Hydroxy-4-methyl-6-(phenylamino)phenyl]ethanone

[97066-04-1]

C₁₅H₁₅NO₂ mol.wt. 241.29

Synthesis

– Obtained by reaction of aniline with 2-acetyl-3-dimethyl-amino-5-hydroxy-5-methyl-2-cyclohexenone in refluxing ethanol (17%) [2712].

m.p. 115–117° [2712]; ¹H NMR [2712], IR [2712], UV [2712], MS [2712].

1-[4-(3-Butenyloxy)-2-hydroxy-5-(2-propenyl)phenyl]ethanone

[117690-53-6]

C₁₅H₁₈O₃ mol.wt. 246.31

Synthesis

– Preparation by reaction of 3-butenyl bromide with 5-allyl-2,4-dihydroxyacetophenone in the presence of potassium carbonate and potassium iodide at reflux (26%) [2678,2679].

m.p. <25° [2678,2679].

1-[4-(Acetyloxy)-2-hydroxy-3-(3-methyl-2-butenyl)phenyl]ethanone

[95604-05-0]

C₁₅H₁₈O₄ mol.wt. 262.31

Synthesis

– Preparation by acetylation of 3-prenylresacetophenone with acetic anhydride in the presence of boric acid, first under reflux for 5 min, then at r.t. for 24 h (60%) [3609].

m.p. 66° [3609]; ¹H NMR [3609].

1-[4-(4-Bromobutoxy)-2-hydroxy-5-(2-propenyl)phenyl]ethanone

[117706-42-0]

C₁₅H₁₉BrO₃ mol.wt. 327.22

Synthesis

– Preparation by reaction of 4-bromobutyl bromide with 5-allyl-2,4-dihydroxyacetophenone in the presence of potassium carbonate and potassium iodide at reflux (56%) [2678,2679].

m.p. <25° [2678,2679].

1-[4-(4-Azidobutoxy)-2-hydroxy-5-(2-propenyl)phenyl]ethanone

[140660-37-3]

C₁₅H₁₉N₃O₃ mol.wt. 289.33

Synthesis

– Preparation by reaction of sodium azide on 5-allyl-4-(4-bromobutoxy)-2-hydroxyacetophenone in DMF at r.t. [2671,2679].

1-[4-Butoxy-2-hydroxy-5-(2-propenyl)phenyl]ethanone

[117690-48-9]

C₁₅H₂₀O₃ mol.wt. 248.32

Synthesis

– Preparation by reaction of n-butyl bromide with 5-allyl-2,4-dihydroxyacetophenone in the presence of potassium carbonate and potassium iodide in refluxing methyl ethyl ketone (60%) [2671,2678,2679].

Oil [2671,2678,2679].

1-[3-(Cyclohexyloxy)-2-hydroxy-6-methoxyphenyl]ethanone

[126405-80-9]

C₁₅H₂₀O₄ mol.wt. 264.32

Synthesis

– Preparation by adding 2-hydroxy-3-iodo-6-methoxy-acetophenone and cuprous iodide to a solution of sodium cyclohexanolate, previously prepared from cyclohexanol and sodium hydride in DMF [2524].

Oil [2524]; ¹H NMR [2524], IR [2524].

1-[2-Hydroxy-4,6-dimethoxy-3-(3-methyl-2-butenyl)phenyl]ethanone

[33523-62-5]

C₁₅H₂₀O₄ mol.wt. 264.32

Synthesis

– Obtained by partial methylation of 2,4-dihydroxy-6-methoxy-3-prenylacetophenone [2834].

m.p. 113–114° [2834].

1-[4-Hydroxy-2,6-dimethoxy-3-(3-methyl-2-butenyl)phenyl]ethanone

[18780-96-6]

C₁₅H₂₀O₄ mol.wt. 264.32

Syntheses

– Preparation: γ,γ -dimethylallyl bromide was added to the lithium salt of 4-acetyl-3,5-dimethoxyphenol, which is easily prepared in benzene by reaction with butyl lithium (6%) [3610].

– Preparation by thermal Claisen rearrangement of 4-(γ,γ -dimethylallyloxy)-2,6-dimethoxyacetophenone in refluxing diethylaniline [3611,3612], (> 90%) [3611].

m.p. 66–68° [3610]; ¹H NMR [3610], UV [3610], MS [3610].**1-[6-Hydroxy-2,4-dimethoxy-3-(3-methyl-2-butenyl)phenyl]ethanone***(Acronlin methyl ether)*

[4683-33-4]

C₁₅H₂₀O₄ mol.wt. 264.32

Synthesis

– Obtained by reaction of dimethyl sulfate with 4,6-di-hydroxy-2-methoxy-3-prenylacetophenone (m.p. 127–128°) in the presence of potassium carbonate in refluxing acetone for 3 h (38%) [2835].

m.p. 78–79° [2835]; TLC [2835].

1-[2-Hydroxy-4-(4-hydroxybutoxy)-5-(2-propenyl)phenyl]ethanone

[117690-52-5]

C₁₅H₂₀O₄ mol.wt. 264.32

Synthesis

– Obtained by reaction of 4-hydroxybutyl bromide on 5-allyl-2,4-dihydroxyacetophenone with potassium carbonate and potassium iodide in refluxing methyl ethyl ketone (5–12%) [2671,2678,2679].

m.p. 117–119° [2671,2678,2679].

1-[2-Hydroxy-4-(methoxymethoxy)-5-(3-methyl-2-butenyl)phenyl]ethanone

[99217-72-8]

C₁₅H₂₀O₄ mol.wt. 264.32

Synthesis

– Preparation by treatment of 2,4-dihydroxy-5-prenyl-acetophenone with methoxymethyl chloride in the presence of potassium carbonate in acetone [3613], (good yield) [3614].

¹H NMR [3613], IR [3613], UV [3613].

1-[2-(β-D-Glucopyranosyloxy)-6-hydroxy-4-methoxyphenyl]ethanone

[24587-97-1]

C₁₅H₂₀O₉ mol.wt. 344.32

Isolation from natural sources

– From the leaves of *Ribes alpinum* L. (alpine currant) (Grossulariaceae) [3615].

spectral data [3616]; TLC [3615].

1-[4-(β-D-Glucopyranosyloxy)-2-hydroxy-6-methoxyphenyl]ethanone
(*Annphenone*)

[61775-18-6]

C₁₅H₂₀O₉ mol.wt. 344.32

Synthesis

– Preparation by reaction, first, of a saturated aqueous barium hydroxide solution on 2-hydroxy-6-methoxy-4-(tetraacetyl-β-D-glucoside) acetophenone, and then carbon dioxide (38%) [2828].

Isolation from natural sources

- From the aerial parts of *Artemisia iwayomogi* (Compositae) [3617].
- From the aerial parts of *Artemisia sacrorum* [3618] and from *Artemisia sacrorum* Ledeb. (Compositae) [3619].
- From the aerial parts of *Artemisia stolonifera* (Max.) Kom (Compositae) [3565].
- From the rhizomes of *Rhodiola linearifolia* Boriss [3620].
- From the aerial parts of *Artemisia annua* [3621].
- From the leaves of *Monochaetum multiflorum* (Melastomataceae) [3622].

m.p. 215° [2828], 185–188° [3619], 160–162° [3621], 156–158° [3565,3617];

1-[4-(4-Bromobutoxy)-2-hydroxy-3-propylphenyl]ethanone

[92518-06-4]

 $C_{15}H_{21}BrO_3$ mol.wt. 329.23

Synthesis

– Preparation by reaction of 1,4-dibromobutane with 2,4-dihydroxy-3-propylacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone (78%) [3181].

b.p._{0.25} 180° [3181].**1-[4-[(5-Bromopentyl)oxy]-5-ethyl-2-hydroxyphenyl]ethanone**

[117690-80-9]

 $C_{15}H_{21}BrO_3$ mol.wt. 329.23

Synthesis

– Preparation by reaction of 5-bromopentyl bromide with 2,4-dihydroxy-5-ethylacetophenone in the presence of potassium carbonate and potassium iodide at reflux (60%) [2678,2679].

m.p. 60–62° [2678,2679]; ¹H NMR [2678,2679].**1-[2,4-Dihydroxy-3-(1-methylhexyl)phenyl]ethanone**

[79557-94-1]

 $C_{15}H_{22}O_3$ mol.wt. 250.34

Synthesis

– Preparation by hydrogenation of 2,4-dihydroxy-3-(1-methyl-2-hexenyl)acetophenone in ethanol using 10% PdO/C as catalyst (54%) [3184].

m.p. 78–81° [3184].

1-(2-Heptyl-4,6-dihydroxyphenyl)ethanone

[83375-18-2]

 $C_{15}H_{22}O_3$ mol.wt. 250.34

Syntheses

– Preparation by reaction of acetonitrile with 5-heptyl-resorcinol according to Hoesch reaction (57%) [3623].

– Also refer to: [3624].

m.p. 61–62° [3623]; ¹H NMR [3623].

1-(4-Heptyl-2,6-dihydroxyphenyl)ethanone

[83375-19-3]

 $C_{15}H_{22}O_3$

mol.wt. 250.34

Synthesis

– Obtained (poor yield) by reaction of acetonitrile with 5-heptylresorcinol according to Hoesch reaction (5%) [3623].

m.p. 46–47° [3623]; 1H NMR [3623].

1-[4-(Heptyloxy)-2-hydroxyphenyl]ethanone

[219696-56-7]

 $C_{15}H_{22}O_3$

mol.wt. 250.34

Synthesis

– Preparation by reaction of 1-heptanol with resacetophenone using polymer-bound triphenylphosphine* and diethyl azodicarboxylate (DEAD) in methylene chloride at 25° for 5 h (72%) [3625].

* Polystyryl-diphenylphosphine–2% divinylbenzene.

N.B.: The polymer-bound triphenylphosphines – commercially available – are easily removed by filtration from the reaction products.

Oil [3625].

1-[6-Hydroxy-3-methoxy-2,4-bis(1-methylethyl)phenyl]ethanone

[188903-79-9]

 $C_{15}H_{22}O_3$

mol.wt. 250.34

Synthesis

– Refer to: [3626].

N.B.: this compound, that has never been prepared, is however mistakenly mentioned in Chem. Abstr., **126**, 277303r (1997). However, it is not mentioned in the original paper [3626]. In this paper, the compound is the 2-hydroxy-4,6-diisopropoxy-5-methoxyacetophenone, a ketone already obtained by [3506].

1-(2-Hydroxy-4-methoxy-3,5-dipropylphenyl)ethanone

[72018-37-2]

 $C_{15}H_{22}O_3$

mol.wt. 250.34

Synthesis not yet described

– Refer to: [2326,2327].

N.B.: Pr indicates the *propyl* group $-C_3H_7$ in Chem. Abstr., **92**, 6368x (1980) and **98**, 54239b (1983), an usual abbreviation. However, in the two references [2326,2327], Pr represented the *prenyl* group $-CH_2CH=C(CH_3)_2$. Therefore they concern the 2-hydroxy-4-methoxy-3,5-diprenylacetophenone and not the above mentioned 2-hydroxy-4-methoxy-3,5-dipropylacetophenone.

1-[6-Hydroxy-3-methoxy-2,4-bis(1-methylethoxy)phenyl]ethanone

[93344-50-4]

 $C_{15}H_{22}O_5$ mol.wt. 282.34

Syntheses

- Obtained by partial methylation of 2,5-dihydroxy-4,6-diisopropoxyacetophenone (m.p. 37°) according to [3505], (67%) (compound **14**) [3506].
- Also refer to: [3503,3627].

Pale yellow oil [3506]; 1H NMR [3506].

1-[4-[(5-Aminopentyl)oxy]-5-ethyl-2-hydroxyphenyl]ethanone

[117705-90-5]

 $C_{15}H_{23}NO_3$ mol.wt. 265.35

Synthesis

- Preparation by hydrogenation of 5-(4-acetyl-2-ethyl-5-hydroxyphenoxy)pentane nitrile in the presence of 10% Pd/C in acetic acid (>98%) [2678,2679].

m.p. 75–76° [2678,2679]; 1H NMR [2678,2679].

1-[6-(Benzoyloxy)-2,4-dihydroxy-3-methylphenyl]ethanone

 $C_{16}H_{14}O_5$ mol.wt. 286.28

Synthesis

- Obtained by reaction of benzoyl chloride on 2,4,6-tri-hydroxy-3-methylacetophenone with 2% sodium hydroxide solution at 0° (13%) [3051].

m.p. 189° [3051].

1-[2-(Benzoyloxy)-6-hydroxy-4-methoxyphenyl]ethanone

[49602-08-6]

 $C_{16}H_{14}O_5$ mol.wt. 286.28

Synthesis

- Preparation by reaction of benzoyl chloride with 2,6-di-hydroxy-4-methoxyacetophenone in the presence of 1.5 N sodium hydroxide at r.t. [2854].

Oil [2854].

1-[2-Hydroxy-4-(4-methoxybenzoyloxy)phenyl]ethanoneC₁₆H₁₄O₅ mol.wt. 286.28

Synthesis

– Preparation by reaction of p-anisoyl chloride on resacetophenone with potassium carbonate in toluene (70%) [2613] or in aqueous sodium hydroxide solution (the best way) [2613].

m.p. 151° [2613].

1-[5-[[4-(Acetyloxy)phenyl]sulfonyl]-2-hydroxyphenyl]ethanone

[147816-49-7]

C₁₆H₁₄O₆S mol.wt. 334.35

Syntheses

– Obtained by UV light irradiation (254 nm) of 0.02 M bisacetate of bisphenol-S in acetonitrile for 3.5 h (20%) [3541].
 – Also obtained by Fries rearrangement of bisacetate of bisphenol-S with aluminium chloride (3 equiv.) at 160° (17%) [3541].

m.p. 166°6 [3541]; ¹H NMR [3541], UV [3541].**1-(5-Hydroxy-3,4'-dimethyl[1,1'-biphenyl]-2-yl)ethanone**

[108909-47-3]

C₁₆H₁₆O₂ mol.wt. 240.30

Syntheses

– Obtained by aromatization of 4-acetyl-3-methyl-5-(4-methylphenyl)-2-cyclohexen-1-one (m.p. 130°) with bromine in chloroform (60%) or by heating at 170° for 3 h [3628].
 – Also obtained by deacylation of 1,1'-(3-hydroxy-4',5-di-methyl[1,1'-biphenyl]-2,6-diyl)bis-ethanone (m.p. 165°) with sodium hydroxide in refluxing dilute ethanol for 3 h (60%) [3628].
 – Also refer to: [3629].

m.p. 180° [3628]; IR [3628].

1-[2-Hydroxy-5-methyl-3-(phenylmethyl)phenyl]ethanone

[350981-92-9]

C₁₆H₁₆O₂ mol.wt. 240.30

Synthesis

– Obtained from 3-acetyl-2-hydroxy-5-methylbenzyl O,O-di-methylphosphorothionothiolate (m.p. 99°5) on treatment with aluminium chloride in refluxing benzene for 5–10 min (93%) [3630].

m.p. 84° [3630]; ¹H NMR [3630], IR [3630], MS [3630].

1-[2-Hydroxy-4-(2-phenylethyl)phenyl]ethanone

[122379-44-6]

 $C_{16}H_{16}O_2$ mol.wt. 240.30

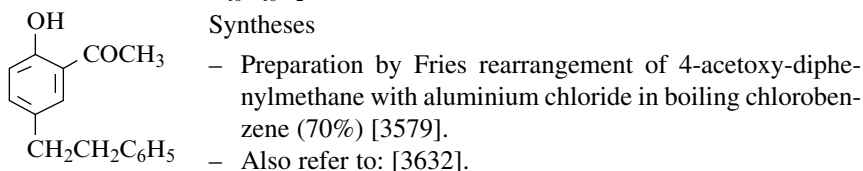

Synthesis

**1-[2-Hydroxy-5-(2-phenylethyl)phenyl]ethanone**

[136608-20-3]

 $C_{16}H_{16}O_2$ mol.wt. 240.30

Syntheses

m.p. 52° [3579]; b.p.₁₈ 250° [3579].**1-(2,2'-Dihydroxy-5,5'-dimethyl[1,1'-biphenyl]-3-yl)ethanone**

[24046-00-2]

 $C_{16}H_{16}O_3$ mol.wt. 256.30

Syntheses

– Also refer to: [3634].

m.p. 129–130° [3633]; TLC [3633];

¹H NMR [3633,3634], IR [3633,3634].**1-[2,4-Dihydroxy-5-(2-phenylethyl)phenyl]ethanone**

[60640-95-1]

 $C_{16}H_{16}O_3$ mol.wt. 256.30

Syntheses

m.p. 136° [2508].

1-[2-Hydroxy-4-methoxy-3-(phenylmethyl)phenyl]ethanone

[95832-45-4]

 $C_{16}H_{16}O_3$ mol.wt. 256.30**Synthesis**

– Preparation by partial methylation of 3-benzyl-2,4-di-hydroxyacetophenone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone (87%) [2324].

m.p. 119–120° [2324]; 1H NMR [2324].

1-[2-Hydroxy-4-methoxy-5-(phenylmethyl)phenyl]ethanone

[93434-27-6]

 $C_{16}H_{16}O_3$ mol.wt. 256.30**Synthesis**

– Preparation by partial methylation of 5-benzyl-2,4-di-hydroxyacetophenone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone (82%) [2324].

m.p. 95–96° [2324]; 1H NMR [2324].

1-[2-Hydroxy-3-methyl-4-(phenylmethoxy)phenyl]ethanone

[73640-74-1]

 $C_{16}H_{16}O_3$ mol.wt. 256.30**Syntheses**

– Preparation by reaction of benzyl chloride on 2,4-di-hydroxy-3-methylacetophenone with potassium carbonate and potassium iodide in refluxing acetone (81%) [2582].

– Also refer to: [2025,2675].

m.p. 87–88° [2582]; 1H NMR [2582], IR [2582], MS [2582].

1-[2-Hydroxy-6-methyl-4-(phenylmethoxy)phenyl]ethanone

[72545-51-8]

 $C_{16}H_{16}O_3$ mol.wt. 256.30**Synthesis**

– Preparation by partial benzylation of 2,4-dihydroxy-6-methylacetophenone [3636].

m.p. 83–84° [3636].

1-[2-Hydroxy-4-(2-phenylethoxy)phenyl]ethanone

[63359-84-2]

C₁₆H₁₆O₃ mol.wt. 256.30

Synthesis

– Obtained by reaction of 1-bromo-2-phenylethane with resacetophenone in the presence of potassium carbonate in refluxing acetone for 24 h (45%) [3204].

N.B.: the 1-chloro derivative and butanone can also be used instead of the mentioned starting materials.

m.p. 69° [3204].

1-[2-Hydroxy-5-(2-phenylethoxy)phenyl]ethanone

[63359-85-3]

C₁₆H₁₆O₃ mol.wt. 256.30

Synthesis

– Obtained by reaction of 1-bromo-2-phenylethane with quinacetophenone in the presence of potassium carbonate in refluxing acetone for 24 h (21%) [3204].

N.B.: the 1-chloro derivative and the butanone can also be used instead of the mentioned starting materials.

m.p. 36° [3204].

1-[2,4-Dihydroxy-3-methyl-6-(phenylmethoxy)phenyl]ethanone

[39548-93-1]

C₁₆H₁₆O₄ mol.wt. 272.30

Synthesis

– Obtained by reaction of benzyl chloride on the 2,4,6-tri-hydroxy-3-methylacetophenone with potassium carbonate in boiling acetone (20%) [3605], (<2%) [3043].

m.p. 212° [3043], 187–188° [3605]. One of the reported melting points is obviously wrong.

¹H NMR [3605], UV [3605].

1-[2-Hydroxy-3-methoxy-4-(phenylmethoxy)phenyl]ethanone

[52249-85-1]

C₁₆H₁₆O₄ mol.wt. 272.30

Synthesis

– Preparation by reaction of dimethyl sulfate on 4-(benzyloxy)-2,3-dihydroxyacetophenone with potassium carbonate in refluxing acetone [1989,2817,3637], (82%) [2817].

m.p. 146° [2817], 143–145° [1989]; ¹H NMR [1989].

1-[2-Hydroxy-3-methoxy-6-(phenylmethoxy)phenyl]ethanone

[126405-75-2]

 $C_{16}H_{16}O_4$ mol.wt. 272.30

Synthesis

– Preparation by adding 6-(benzyloxy)-2-hydroxy-3-iodoacetophenone and cuprous iodide to a solution of sodium methoxide, previously prepared from methyl alcohol and sodium hydride in DMF [2524].

m.p. 103° [2524]; IR [2524].

1-[2-Hydroxy-4-methoxy-5-(phenylmethoxy)phenyl]ethanone

[52249-88-4]

 $C_{16}H_{16}O_4$ mol.wt. 272.30

Synthesis

– Preparation by reaction of benzyl bromide on 2,5-di-hydroxy-4-methoxyacetophenone with potassium carbonate in boiling acetone (67%) [2849].

m.p. 151° [2849].

1-[2-Hydroxy-4-methoxy-6-(phenylmethoxy)phenyl]ethanone

[10299-59-9]

 $C_{16}H_{16}O_4$ mol.wt. 272.30

Syntheses

- Preparation by reaction of dimethyl sulfate on 2-(benzyloxy)-4,6-dihydroxyacetophenone with potassium carbonate in refluxing acetone (95%) [3605], (85%) [3604].
- Preparation by reaction of benzyl bromide with phloracetophenone 4-methyl ether in the presence of potassium carbonate in acetone at r.t. under nitrogen (82%) [2853].

m.p. 120–121° [3605], 110–113° [3604], 110–111° [2853]; ¹H NMR [2853].**1-[2-Hydroxy-5-methoxy-4-(phenylmethoxy)phenyl]ethanone**

[34176-18-6]

 $C_{16}H_{16}O_4$ mol.wt. 272.30

Synthesis

– Preparation by reaction of dimethyl sulfate on 4-(benzyloxy)-2,5-dihydroxyacetophenone with potassium carbonate in refluxing acetone [2417,2823,2824], (85–86%) [2823,2824].

m.p. 130° [2824], 128–129° [2823], 126° [2417].

1-[2-Hydroxy-6-methoxy-3-(phenylmethoxy)phenyl]ethanone

[126405-79-6]

 $C_{16}H_{16}O_4$ mol.wt. 272.30

Synthesis

– Preparation by adding 2-hydroxy-3-iodo-6-methoxyacetophenone and cuprous iodide to a solution of sodium benzyolate, previously prepared from benzyl alcohol and sodium hydride in DMF [2524].

Oil [2524]; 1H NMR [2524], IR [2524].

1-[2-Hydroxy-6-methoxy-4-(phenylmethoxy)phenyl]ethanone

[39548-89-5]

 $C_{16}H_{16}O_4$ mol.wt. 272.30

Syntheses

- Preparation by reaction of benzyl chloride on 2,4-dihydroxy-6-methoxyacetophenone with potassium carbonate in boiling acetone [2831,2838,3605], (55%) [3605].
- Preparation by reaction of dimethyl sulfate on 4-(benzyloxy)-2,6-dihydroxyacetophenone with potassium carbonate in refluxing acetone (73%) [2838].

m.p. 90–91° [3605], 73–74° [2838], 72° [2831]. A melting points is obviously wrong.

1H NMR [3605], UV [3605]; TLC [2885].

1-[3-Hydroxy-4-(4-methoxybenzyloxy)phenyl]ethanone

[187966-38-7]

 $C_{16}H_{16}O_4$ mol.wt. 272.30

Syntheses

- Preparation by reaction of p-methoxybenzyl bromide with the sodium salt of 3,4-dihydroxyacetophenone (SM) in DMF at r.t. for 24 h (75%). SM was obtained by adding a solution of 3,4-dihydroxyacetophenone in DMF to a suspension of sodium hydride (2 mol) in the same solvent [3638].
 - Also refer to: [3639].
- Crystals [3638] (m.p. not mentioned); 1H NMR [3638].

1-[2-Hydroxy-6-(2-phenoxyethoxy)phenyl]ethanone[61270-14-2] $C_{16}H_{16}O_4$ mol.wt. 272.30

Synthesis

– Preparation by reaction of 2-bromoethoxybenzene with 2,6-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone (34%) [2270].

m.p. 79–80° [2270].

1-[2,4-Dihydroxy-3-[(2-hydroxyphenyl)methyl]-6-methoxyphenyl]ethanone[102056-82-6] $C_{16}H_{16}O_5$ mol.wt. 288.30

Syntheses

- Preparation by catalytic hydrogenolysis of 3-(*o*-benzyloxybenzyl)-2,4-dihydroxy-6-methoxyacetophenone at r.t. and atmospheric pressure in the presence of 10% Pd/C in ethyl acetate (66%) [2325].
- Preparation from the 2',4'-dihydroxy-3'-[(2-hydroxyphenyl)-(1-piperidino)methyl]-6'-methoxyacetophenone, the piperidine moiety was removed by catalytic hydrogenation using 10% Pd/C as catalyst (50–60%) [2832].

m.p. 184–185° [2325]; 1H NMR [2325], IR [2325], UV [2325].**1-[2,6-Dihydroxy-3-methoxy-4-(phenylmethoxy)phenyl]ethanone**[204590-48-7] $C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

- Preparation by hydrolysis of 4-benzyloxy-6-hydroxy-3-methoxy-2-tosyloxyacetophenone with potassium carbonate in refluxing methanol for 2 h (94%) [3640].

m.p. 149–150° [3640].

1-[3,6-Dihydroxy-2-methoxy-4-(phenylmethoxy)phenyl]ethanone[25892-94-8] $C_{16}H_{16}O_5$ mol.wt. 288.30

Syntheses

- Obtained from 4-(benzyloxy)-2-hydroxy-6-methoxyacetophenone by persulfate oxidation (Elbs reaction) [3641], (23%) [2838].
- Also refer to: [3642,3643].

m.p. 161–162° [2838], 109–110° [3641]. One of the reported melting points is obviously wrong. 1H NMR [3641].

1-[3,6-Dihydroxy-4-methoxy-2-(phenylmethoxy)phenyl]ethanone

[41997-38-0]

 $C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

– Obtained from 6-(benzyloxy)-2-hydroxy-4-methoxy-acetophenone by persulfate oxidation (Elbs reaction) (17%) [3604].

m.p. 119–120° [3604]; TLC [2885].

1-[2-Hydroxy-4-methyl-6-[(phenylmethyl)amino]phenyl]ethanone

[97066-16-5]

 $C_{16}H_{17}NO_2$ mol.wt. 255.32

Synthesis

– Preparation by reaction of potassium hydroxide with 2-acetyl-3-benzylamino-5-hydroxy-5-methyl-2-cyclo-hexene-1-one in ethanol at 40° (73%) [2712].

m.p. 160° [2712]; 1H NMR [2712], IR [2712], UV [2712], MS [2712].**1-[2-(Acetyloxy)-6-hydroxy-3,5-di-2-propenylphenyl]ethanone**

[117156-76-0]

 $C_{16}H_{18}O_4$ mol.wt. 274.32

Synthesis

– Obtained (by-product) by thermal rearrangement of 3-acetyl-4,6-bis(allyloxy)acetophenone in refluxing diphenyl ether (3%) [3331].

 1H NMR [3331], IR [3331].**1-[4-(Acetyloxy)-2-hydroxy-3,5-di-2-propenylphenyl]ethanone**

[106987-29-5]

 $C_{16}H_{18}O_4$ mol.wt. 274.32

Synthesis

– Obtained (by-product) by thermal Claisen rearrangement of 3-acetyl-4,6-bis(allyloxy)acetophenone or of 3-acetyl-2,4-bis(allyloxy)acetophenone in refluxing N,N-dimethyl-aniline (5–6%) [3331].

Pale greenish yellow oil [3331]; 1H NMR [3331], IR [3331], UV [3331], MS [3331].

1-[4-[(5-Bromopentyl)oxy]-2-hydroxy-3-(2-propenyl)phenyl]ethanone

[61270-23-3]

C₁₆H₂₁BrO₃ mol.wt. 341.24**Synthesis**

– Preparation by reaction of 1,5-dibromopentane with 3-allyl-2,4-dihydroxyacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone [2270].

Oil [2270].

1-[6-[(5-Bromopentyl)oxy]-2-hydroxy-3-(2-propenyl)phenyl]ethanone

[61270-18-6]

C₁₆H₂₁BrO₃ mol.wt. 341.24**Synthesis**

– Preparation by reaction of 1,5-dibromopentane with 3-allyl-2,6-dihydroxyacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone [2270].

b.p._{0.1} 180–200° [2270].**1-[2-Hydroxy-4-(pentyloxy)-5-(2-propenyl)phenyl]ethanone**

[117690-49-0]

C₁₆H₂₂O₃ mol.wt. 262.35**Synthesis**

– Preparation by reaction of n-pentyl bromide with 5-allyl-2,4-dihydroxyacetophenone in the presence of potassium carbonate and potassium iodide in refluxing methyl ethyl ketone (43–44%) [2671,2678,2679].

Oil [2671,2678,2679].

1-[4-(Ethoxymethoxy)-2-hydroxy-5-(3-methyl-2-butenyl)phenyl]ethanone

[175546-56-2]

C₁₆H₂₂O₄ mol.wt. 278.35**Synthesis**

– Preparation by reaction of ethoxymethyl chloride with 2,4-dihydroxy-5-(3-methyl-2-butenyl)acetophenone in acetone for 10 min at 30° (66%) [3644].

¹H NMR [3644].

1-[4-(β -D-Glucopyranosyloxy)-2-hydroxy-6-methoxy-3-methylphenyl]ethanone

[145194-40-7]

 $C_{16}H_{22}O_9$ mol.wt. 358.35

Isolation from natural sources

– From the roots of *Euphorbia ebracteolata* Hayata (Euphorbiaceae) [3040].**1-[4-[(5-Bromopentyl)thio]-2-hydroxy-3-propylphenyl]ethanone**

[125617-44-9]

 $C_{16}H_{23}BrO_2S$ mol.wt. 359.33

Synthesis

– Preparation by reaction of 1,5-dibromopentane with 2-hydroxy-4-mercapto-3-propylacetophenone in the presence of potassium carbonate and potassium iodide in refluxing methyl ethyl ketone [2271].

Pale yellow oil [2271].

1-[4-[(5-Bromopentyl)oxy]-5-ethyl-2-hydroxy-3-methylphenyl]ethanone

[140660-35-1]

 $C_{16}H_{23}BrO_3$ mol.wt. 343.26

Synthesis

– Preparation by reaction of 1,5-dibromopentane with 5-ethyl-2,4-dihydroxy-3-methylacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone (76%) [2671].

oil [2671].

1-[4-[(5-Bromopentyl)oxy]-2-hydroxy-3-propylphenyl]ethanone

[99453-85-7]

 $C_{16}H_{23}BrO_3$ mol.wt. 343.26

Synthesis

– Preparation by reaction of 1,5-dibromopentane with 2,4-dihydroxy-3-propylacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone [2270,3181], (22%) [3181].

b.p._{0.02} 172–180° [2270]; MS [3181].

1-[2-Hydroxy-3-nitro-5-(1,1,3,3-tetramethylbutyl)phenyl]ethanone

[30299-56-0]

 $C_{16}H_{23}NO_4$ mol.wt. 293.36

Synthesis

– Preparation by reaction of 65% nitric acid with 2-hydroxy-5-tert-octylacetophenone in acetic acid, first at 0°, then at 20° [3645].

m.p. 86°5 [3645]; IR [3645], UV [3645].

1-[2,4-Bis(1,1-dimethylethyl)-6-hydroxyphenyl]ethanone $C_{16}H_{24}O_2$ mol.wt. 248.37

Synthesis

– Obtained by UV light irradiation of 3,5-di-tert-butylphenyl acetate in benzene at r.t. (photo-Fries rearrangement) [3646].

m.p. 198°5 [3646].

1-[3,5-Bis(1,1-dimethylethyl)-2-hydroxyphenyl]ethanone

[37456-29-4]

 $C_{16}H_{24}O_2$ mol.wt. 248.37

Syntheses

- Preparation by reaction of methylmagnesium iodide on 3,5-di-tert-butyl-2-hydroxybenzocarbonitrile in ethyl ether, first at 0° and then at r.t. (58%) [3647].
- Also obtained by reaction of sec-butyllithium on 2-bromo-4,6-di-tert-butylphenyl acetate in ethyl ether at –95° and –78°, followed by hydrolysis of mixture with saturated ammonium chloride (metal-promoted Fries rearrangement) (43–52%) [3648].
- Preparation by reaction of acetic anhydride with 2,4-di-tert-butylphenol in the presence of boron trifluoride–acetic acid complex at 100° [2997].

m.p. 45–46° [2997], 43–44°5 [3647]; b.p._{0.45} 100° [2997];¹H NMR [3647], IR [3647].**1-[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl]ethanone**

[14035-33-7]

 $C_{16}H_{24}O_2$ mol.wt. 248.37

Syntheses

– Preparation by reaction of acetic acid on 2,6-di-tert-butylphenol with trifluoroacetic anhydride at r.t. [1952,3649–3651], (78–87%) [1952,3651].

- Preparation by reaction of acetic anhydride on 2,6-di-tert-butylphenol with sulfodifluoroacetic acid in acetic acid at 20° (81%) [3652] or with boron trifluoride etherate at 5° (30%) [3653].
- Preparation by reaction of acetyl chloride on 2,6-di-tert-butylphenol with aluminium chloride at –10° (95%) [3654] and at 0° (70%) [3655].
- Also obtained by reaction of potassium ferricyanide on 2,6-di-tert-butyl-4-(1-methoxyethyl)-phenol with aqueous sodium hydroxide in benzene (20%) [3655].
- Also obtained (poor yield) by bubbling air into a cumene solution of 2,6-di-tert-butyl-4-ethylphenol in the presence of cumene hydroperoxide and cobalt phthalate between 80° and 100° (2%) [3486].

m.p. 150–151° [1952,3653], 148° [3486], 147–148° [3650,3651,3655], 146–147° [3654], 141–143° [3652];

¹H NMR [3651,3653], ¹³C NMR [3653], IR [3653], MS [3656].

1-[3-(1,1-Dimethylethyl)-2-hydroxy-6-methyl-5-(1-methylethyl)phenyl]ethanone

[129375-13-9]

C₁₆H₂₄O₂ mol.wt. 248.37

Synthesis

– Preparation by Fries rearrangement of 2-tert-butyl-5-methyl-4-isopropylphenyl acetate with titanium tetrachloride in chlorobenzene at 100° (23%) [3360].

m.p. 44° [3360];

¹H NMR [3360] (Sadtlter: standard n° 52742 M);

IR [3360] (Sadtlter: standard n° 79801 K); UV [3360], MS [3360].

1-[2-Hydroxy-3,5-bis(2-methylpropyl)phenyl]ethanone

[35158-27-1]

C₁₆H₂₄O₂ mol.wt. 248.37

Synthesis

– Preparation by reaction of ethyl acetoacetate with 2-isobutyl-6-methyl-2-heptenal in the presence of pyridine and piperidine as catalysts in refluxing benzene (29%). The 2-isobutyl-6-methyl-2-heptenal was obtained by self-condensation of isocapro-aldehyde in the presence of 15% potassium hydroxide solution (Aldol condensation) [2958–2960].

b.p.₁₋₂ 116–118° [2958,2959,2960];

IR [2958–2960], UV [2958–2960], MS [2958–2960].

1-(2-Hydroxy-5-octylphenyl)ethanone[74604-19-6] $C_{16}H_{24}O_2$ mol.wt. 248.37

Synthesis

– Preparation by reaction of acetyl chloride on 4-octylphenol with aluminium chloride in ethylene dichloride at 110–120° (58%) [2625].

b.p.₄ 168–170° [2625].**1-[2-Hydroxy-5-(1,1,3,3-tetramethylbutyl)phenyl]ethanone**[57373-80-5] $C_{16}H_{24}O_2$ mol.wt. 248.37

and

[30299-53-7] (2'-Hydroxy-5'-(1,1,3,3-tetramethylbutyl)acetophenone)

Syntheses

- Obtained by Fries rearrangement of 4-(1,1,3,3-tetramethylbutyl)phenyl acetate also called 4-tert-octylphenyl acetate with aluminium chloride [3355,3357], in 1,2,3-trichloro-propane or in tetrachloroethane at 120° under nitrogen (71–77%) [3357]; (high yield) [3355].
- Preparation by demethylation of 2-methoxy-5-tert-octyl-acetophenone with 4% hydrobromic acid in refluxing acetic acid (47–52%) [3355].
- Preparation by UV light irradiation of 4-tert-octylphenyl acetate in benzene or in ethanol solution (37%) (photo-Fries rearrangement) [3645].

¹H NMR [3645], IR [3645], UV [3645].**1-[4,6-Bis(1,1-dimethylethyl)-2,3-dihydroxyphenyl]ethanone**[84296-99-1] $C_{16}H_{24}O_3$ mol.wt. 264.37

Synthesis

– Obtained by irradiation of a benzene solution of 3,5-di-tert-butyl-o-benzoquinone in the presence of a large excess of acetaldehyde (6%) [3386].

m.p. 169–170° [3386]; ¹H NMR [3386], IR [3386].**1-(2-Heptyl-6-hydroxy-4-methoxyphenyl)ethanone**[4670-13-7] $C_{16}H_{24}O_3$ mol.wt. 264.37

Synthesis

– Preparation by partial methylation of 2,4-dihydroxy-6-heptylacetophenone in acetone with dimethyl sulfate in the presence of 10% sodium hydroxide at 45° for 4 h (70%) [3623].

Isolation from natural sources

- Obtained by alkaline degradation of various *siphulin* derivatives* with potassium hydroxide in refluxing methanol [3657]. The siphulin (an homoflavone) 7-hydroxy-5-heptyl-2-[3',5'-dihydroxy-2-carboxybenzyl]chroman-4-one (m.p. 180°) [3658] is a constituent of the North Scandinavian lichen *siphula ceratites* (Wahlenberg) Fr.
- * siphulin methyl ester trimethyl ether [3658], decarboxysiphulin trimethyl ether or a lactol.

Oil [3623,3657], liquid compound [3658];

b.p._{0,01} 110° [3658], b.p._{0,01} 120° [3657]; $n_D^{18} = 1.5372$ [3657], $n_D^{19} = 1.5339$ [3658]; ¹H NMR [3623,3657], IR [3657,3658], UV [3657,3658].

1-[2-Hydroxy-4-(isooctyloxy)phenyl]ethanone

[127313-67-1]

C₁₆H₂₄O₃ mol.wt. 264.37

Synthesis

1-[2-Hydroxy-5-(sec-octyloxy)phenyl]ethanone

[127313-62-6]

C₁₆H₂₄O₃ mol.wt. 264.37

Synthesis

– Refer to: [3659] (Chinese paper).

1-[2-Hydroxy-4,5-dimethoxy-3,6-bis(1-methylethoxy)phenyl]ethanone

[169130-25-0]

C₁₆H₂₄O₆ mol.wt. 312.36

Synthesis

– Preparation by smooth demethylation of 2,5-diiso-propyloxy-3,4,6-trimethoxyacetophenone with aluminium bromide in acetonitrile (high yield) [3320].

1-[4-(Cinnamoyloxy)-2-hydroxyphenyl]ethanoneC₁₇H₁₄O₄ mol.wt. 282.30

Synthesis

– Obtained by reaction of cinnamoyl chloride on resacetophenone with potassium carbonate in toluene (17%) [2613].

m.p. 131° [2613].

1-[2-Hydroxy-3-(2-propynyl)-4,6-bis(2-propynyloxy)phenyl]ethanone

[53771-25-8]

C₁₇H₁₄O₄ mol.wt. 282.30

Synthesis

– Obtained (poor yield) by reaction of 2-propynyl bromide with phloracetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone (4%) [3160].

m.p. 150–151° [3160]; IR [3160], UV [3160].

1-[2-Hydroxy-5-iodo-4-phenoxy-3-(2-propenyl)phenyl]ethanone

[144691-36-1]

C₁₇H₁₅IO₃ mol.wt. 394.21

Synthesis

– Obtained by reaction of iodosobenzene diacetate (DAIB) with 3-allyl-2,4-dihydroxyacetophenone in refluxing methanol (38%) [2624].

m.p. 160° [2624]; ¹H NMR [2624], IR [2624].**1-[2-Hydroxy-5-[(3-phenyl-2-propenyl)oxy]phenyl]ethanone**

[79950-56-4]

C₁₇H₁₆O₃ mol.wt. 268.31

Synthesis

– Preparation by reaction of cinnamyl bromide with quinacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone under nitrogen (90%) [2357].

m.p. 105–107° [2357]; ¹H NMR [2357], IR [2357], MS [2357].

1-[4-[(3-Chlorophenyl)methoxy]-5-ethyl-2-hydroxyphenyl]ethanone

[117706-49-7]

C₁₇H₁₇ClO₃ mol.wt. 304.77

Synthesis

– Preparation by reaction of 3-chlorobenzyl bromide with 5-ethyl-2,4-dihydroxyacetophenone in the presence of potassium carbonate and potassium iodide (47%) [2678,2679].

1-[5-Ethyl-4-[(3-fluorophenyl)methoxy]-2-hydroxyphenyl]ethanone

[117706-48-6]

C₁₇H₁₇FO₃ mol.wt. 288.32

Synthesis

– Preparation by reaction of 3-fluorobenzyl bromide with 5-ethyl-2,4-dihydroxyacetophenone in the presence of potassium carbonate and potassium iodide (18%) [2678,2679].

m.p. 104–105° [2678,2679].

1-[2-Hydroxy-5-(3-phenylpropyl)phenyl]ethanone

[61270-17-5]

C₁₇H₁₈O₂ mol.wt. 254.33

Syntheses

– Preparation by Fries rearrangement of 4'-acetoxy-1,3-diphenylpropane with aluminium chloride in boiling chlorobenzene [3579].

– Preparation by reaction of acetic anhydride with 4-(3-phenylpropyl)phenol in the presence of boron trifluoride–acetic acid complex at 100° [2270].

Oil [2270]; b.p._{18.5} 232° [3579]; ¹H NMR [2270], MS [2270].**1-[2,4-Dihydroxy-5-(3-phenylpropyl)phenyl]ethanone**C₁₇H₁₈O₃ mol.wt. 270.33

Synthesis

– Preparation by Fries rearrangement of 2',4'-diacetoxy-1,3-diphenylpropane with aluminium chloride in the presence of 2',4'-dihydroxy-1,3-diphenylpropane in nitrobenzene at 50° [3579].

m.p. 106° [3579].

1-(5-Ethoxy-3-hydroxy-2-methyl[1,1'-biphenyl]-4-yl)ethanone[138151-67-4] $C_{17}H_{18}O_3$ mol.wt. 270.33

Synthesis

- Preparation by heating at 100° for 18 h a dioxane solution of 4-chloro-2-methyl-3-phenyl-2-cyclobutenone and 4-ethoxy-4-(tri-n-butylstannyl)-3-buten-2-one (**I**) with Pd(benzonitrile)₂Cl₂ and tris(2-furyl)phosphine (50%).
- The compound (**I**) was obtained by adding a tetrahydrofuran solution of tetrabutylammonium cyanide (Bu₄NCN) to a tetrahydrofuran solution of 3-ethoxy-2-cyclobutenone and n-(C₄H₉)₃ SnSi(CH₃)₃ cooled to -22° and then the mixture was warmed at r.t. [3660].

m.p. 78–80° [3660]; ¹H NMR [3660], ¹³C NMR [3660], IR [3660].**1-(5'-Ethyl-4-hydroxy-2'-methoxy[1,1'-biphenyl]-3-yl)ethanone**[131845-25-5] $C_{17}H_{18}O_3$ mol.wt. 270.33

Synthesis

– Refer to: [3661].

1-[2-Hydroxy-5-[1-(4-hydroxyphenyl)-1-methylethyl]phenyl]ethanone[104676-26-8] $C_{17}H_{18}O_3$ mol.wt. 270.33

Synthesis

- Obtained by Fries rearrangement of 2,2-bis(acetoxy-phenyl)propane (bisphenol-A diacetate) (1 mol) with titanium tetrachloride (4 mol) in nitrobenzene, first for 24 h at r.t., then for 6 h at 55° (23%) [3662].

m.p. 139–140° [3662]; ¹H NMR [3662], ¹³C NMR [3662], IR [3662].**1-[2-Hydroxy-4-(3-phenylpropoxy)phenyl]ethanone**[63359-86-4] $C_{17}H_{18}O_3$ mol.wt. 270.33

Syntheses

- Obtained by reaction of 1-bromo-3-phenylpropane with resacetophenone in the presence of potassium carbonate in refluxing acetone for 24 h. The 1-chloro derivative and butanone can also be used instead of the mentioned starting materials (83%) [3204].
 - Also refer to: [3663].
- m.p. 75–77° [3204].

1-[2-Hydroxy-5-(3-phenylpropoxy)phenyl]ethanone[63359-87-5] $C_{17}H_{18}O_3$ mol.wt. 270.33

Syntheses

- Obtained by reaction of 1-bromo-3-phenylpropane with quinacetophenone in the presence of potassium carbonate in refluxing acetone for 24 h. The 1-chloro derivative and butanone can also be used instead of the mentioned starting material and solvent (54%) [3204].
- Also refer to: [3663].

m.p. 34–35° [3204].

1-[2-Hydroxy-6-(3-phenylpropoxy)phenyl]ethanone[69079-93-2] $C_{17}H_{18}O_3$ mol.wt. 270.33

Synthesis

- Obtained by reaction of 1-bromo-3-phenylpropane with 2,6-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone for 24 h. The 1-chloro derivative and butanone can also be used instead of the mentioned starting material and solvent (75%) [3204].

m.p. 95–96° [3204].

1-[2-Hydroxy-3,4-dimethoxy-5-(phenylmethyl)phenyl]ethanone[105485-57-2] $C_{17}H_{18}O_4$ mol.wt. 286.33

Synthesis

- Preparation by reaction of dimethyl sulfate with 5-benzyl-2,3,4-trihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone (68%) [3583].

m.p. 42–43° [3583]; 1H NMR [3583], IR [3583], UV [3583].**1-[2-Hydroxy-4-methoxy-3-(2-methoxyphenyl)methyl]phenyl]ethanone**[103633-39-2] $C_{17}H_{18}O_4$ mol.wt. 286.33

Synthesis

- Obtained by reaction of dimethyl sulfate with 2,4-di-hydroxy-3-(o-hydroxy-benzyl)acetophenone in the presence of potassium carbonate in refluxing acetone (9%) [2325].

Oil [2325]; 1H NMR [2325].

1-[2-Hydroxy-4-methoxy-3-methyl-6-(phenylmethoxy)phenyl]ethanone

m.p. 127° [3043].

 $C_{17}H_{18}O_4$ mol.wt. 286.33**Synthesis**

- Preparation by reaction of methyl iodide with 6-(benzyloxy)-2,4-dihydroxy-3-methylacetophenone in the presence of potassium carbonate in refluxing acetone (88%) [3043].

1-[6-Hydroxy-2-methoxy-3-methyl-4-(phenylmethoxy)phenyl]ethanone

m.p. 105° [3051], 103° [3043].

 $C_{17}H_{18}O_4$ mol.wt. 286.33**Syntheses**

- Preparation by reaction of benzyl bromide on 4,6-di-hydroxy-2-methoxy-3-methylacetophenone with potassium carbonate in boiling acetone (48%) [3051].
- Preparation by partial catalytic hydrogenolysis of 4,6-bis-(benzyloxy)-2-methoxy-3-methylacetophenone with $PdCl_2/C$ in methanol (86%) [3051] or by reaction of 10% ethanolic hydrochloric acid on the same starting material in refluxing dioxane (42%) [3043].

1-[2-Hydroxy-3-(3-phenoxypropoxy)phenyl]ethanone

[69079-92-1]

m.p. 56–57° [3204].

 $C_{17}H_{18}O_4$ mol.wt. 286.33**Synthesis**

- Obtained by reaction of 1-bromo-3-phenoxypropane with 2,3-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone for 24 h. The 1-chloro derivative and butanone can also be used instead of the mentioned starting material and solvent (32%) [3204].

1-[2-Hydroxy-4-[2-(phenylmethoxy)ethoxy]phenyl]ethanone

[307520-94-1]

m.p. 56–57° [3204].

 $C_{17}H_{18}O_4$ mol.wt. 286.33**Synthesis**

- Refer to: [3596] (compound **1d**).

1-[2-Hydroxy-3,6-dimethoxy-4-(phenylmethoxy)phenyl]ethanone

[3162-52-5]

 $C_{17}H_{18}O_5$ mol.wt. 302.33

Syntheses

- Preparation by reaction of benzyl chloride with 2,4-di-hydroxy-3,6-dimethoxyacetophenone in the presence of potassium carbonate [3135,3472] or potassium carbonate and potassium iodide [3130] in refluxing acetone (72%) [3472], (63%) [3130], (53%) [3135]. The same reaction using benzyl bromide instead of benzyl chloride led to an inseparable mixture (68%) of 2-benzyl- and 4-benzyl ethers (m.p. 105–107°) [3137].
 - Preparation by reaction of acetyl chloride on 2,5-dimethoxyresorcinol dibenzyl ether with aluminium chloride in benzene at 0° (35%) [3472].
 - Obtained (by-product) by reaction of acetonitrile with 2,6-bis(benzyloxy)-1,4-dimethoxybenzene (Hoesch reaction) [3135].
- m.p. 113–115° [3130], 111–111°5 [3135], 109°5–110° [3472].

1-[2-Hydroxy-4,6-dimethoxy-3-(phenylmethoxy)phenyl]ethanone

[54299-57-9]

 $C_{17}H_{18}O_5$ mol.wt. 302.33

Syntheses

- Preparation by reaction of benzyl chloride with 2,3-di-hydroxy-4,6-dimethoxyacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone (56%) [3130].
 - Preparation from 2,3-bis(benzyloxy)-4,6-dimethoxy-acetophenone. The 2-benzyloxy group was selectively split with concentrated hydrochloric acid in acetic acid at r.t. (80%) [3132].
- m.p. 95–97° [3132], 90–92° [3130].

1-[5-Hydroxy-2,4-dimethoxy-3-(phenylmethoxy)phenyl]ethanone

[65039-99-8]

 $C_{17}H_{18}O_5$ mol.wt. 302.33

Synthesis

- Obtained [3664] according to the procedure [3665].

1-[6-Hydroxy-2,3-dimethoxy-4-(phenylmethoxy)phenyl]ethanone

[25892-95-9]

 $C_{17}H_{18}O_5$ mol.wt. 302.33

Syntheses

– Obtained by partial methylation of 4-(benzyloxy)-3,6-di-hydroxy-2-methoxyacetophenone [3130,3148,3507,3641,3666–3669], with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone [3643], for 5 h (57%) [3642].

– Also refer to: [3670,3671].

m.p. 86–87° [3642], 84–85° [3641]; IR [3642].

1-[6-Hydroxy-2,4-dimethoxy-3-(phenylmethoxy)phenyl]ethanone

[52249-87-3]

 $C_{17}H_{18}O_5$ mol.wt. 302.33

Syntheses

– Preparation by reaction of benzyl chloride with 3,6-di-hydroxy-2,4-dimethoxyacetophenone,

- in the presence of potassium carbonate and sodium iodide in refluxing acetone for 10 h, then at r.t. for 6 h [3669,3672], (57%) [3665];

- in the presence of potassium carbonate in DMF [3673].

– Also refer to: [3664,3674–3678].

Oil [3665,3673]; 1H NMR [3673].

1-[6-Hydroxy-3,4-dimethoxy-2-(phenylmethoxy)phenyl]ethanone

[41997-39-1]

 $C_{17}H_{18}O_5$ mol.wt. 302.33

Synthesis

– Preparation by reaction of dimethyl sulfate on 6-(benzyloxy)-2,5-dihydroxy-4-methoxyacetophenone with potassium carbonate in refluxing acetone (57%) [3604].

m.p. 87–89° [3604].

1-(4-Hydroxy-2,2',4'-trimethoxy[1,1'-biphenyl]-3-yl)ethanone $C_{17}H_{18}O_5$ mol.wt. 302.33

Syntheses

– Obtained by alkaline degradation of 2-(2,4-di-methoxyphenyl)-1,9-di-O-methylhemiergo-flavinone ($C_{25}H_{24}O_9$) with 10% sodium hydroxide on a steam bath for 1.75 h [3679].

- Also obtained by alkaline degradation of 6-(2,4-dimethoxyphenyl)-5-methoxy-2-methylchromone (m.p. 141–142°) with 25%(w/v) aqueous sodium hydroxide during 2 h on a steam bath (72%) [2569].

m.p. 94° [3679], 93° [2569]; IR [2569].

1-[2,3,4-Trihydroxy-5-[(4-hydroxy-3,5-dimethylphenyl)methyl]phenyl]ethanone

[142045-74-7]

$C_{17}H_{18}O_5$ mol.wt. 302.33

Synthesis

- Refer to: [3680] (Japanese patent).

1-[2,5-Dihydroxy-3,6-dimethoxy-4-(phenylmethoxy)phenyl]ethanone

[3162-50-3]

$C_{17}H_{18}O_6$ mol.wt. 318.33

Syntheses

- Obtained by oxidation of 4-(benzyloxy)-2-hydroxy-3,6-di-methoxyacetophenone with potassium persulfate (Elbs reaction), (46%) [3428], (14%) [3681].

- Also refer to: [3150,3682–3684].

m.p. 60–62° [3681], 59–61° [3428];

IR [3428]; TLC [3681].

1-[4'-(Dimethylamino)-5-hydroxy-3-methyl[1,1'-biphenyl]-2-yl]ethanone

[108909-48-4]

$C_{17}H_{19}NO_2$ mol.wt. 269.34

Syntheses

- Obtained by aromatization of 4-acetyl-5-[4-(dimethyl-amino)phenyl]-3-methyl-2-cyclohexen-1-one (m.p. 162°) with bromine in chloroform (70%) or by heating at 170° for 3 h [3628].

- Also obtained by deacylation of 1,1'-[4'-(dimethylamino)-3-hydroxy-5-methyl[1,1'-biphenyl]-2,6-diyl]bis-ethanone (m.p. 153°) with sodium hydroxide in refluxing dilute ethanol for 3 h (70%) [3628].

- Also refer to: [3629].

m.p. 192° [3628].

1-[4-(5-Hexynyloxy)-2-hydroxy-5-(2-propenyl)phenyl]ethanone

[117706-50-0]

C₁₇H₂₀O₃ mol.wt. 272.34

Synthesis

– Preparation by reaction of 6-bromo-1-hexyne with 5-allyl-2,4-dihydroxyacetophenone in the presence of potassium carbonate and potassium iodide in refluxing methyl ethyl ketone (15–20%) [2671,2678,2679].

Oil [2671]; m.p. <25° [2678,2679]; ¹H NMR [2678,2679].**1-[3-(Cyclohexyloxy)-4-hydroxy-5-(2-propenyl)phenyl]ethanone**C₁₇H₂₂O₃ mol.wt. 274.36

Synthesis

– Preparation by thermal Claisen rearrangement of 4-(allyloxy)-3-cyclohexyloxyacetophenone in boiling N,N-diethylaniline (69%) [2946].

m.p. 58° [2946]; b.p._{0.6} 170–180° [2946].**1-[4-(5-Hexenyloxy)-2-hydroxy-5-(2-propenyl)phenyl]ethanone**

[117690-54-7]

C₁₇H₂₂O₃ mol.wt. 274.36

Synthesis

– Preparation by reaction of 6-bromo-1-hexene with 5-allyl-2,4-dihydroxyacetophenone in the presence of potassium carbonate and potassium iodide in refluxing methyl ethyl ketone (30%) [2671,2678,2679].

Oil [2671]; m.p. <25° [2678,2679].

1-[4-[(6-Bromohexyl)oxy]-2-hydroxy-5-(2-propenyl)phenyl]ethanone

[117706-41-9]

C₁₇H₂₃BrO₃ mol.wt. 355.27

Synthesis

– Preparation by reaction of 1,6-dibromohexane with 5-allyl-2,4-dihydroxyacetophenone in the presence of potassium carbonate and potassium iodide at reflux (42%) [2678,2679].

1-[3-(Hexyloxy)-4-hydroxy-5-(2-propenyl)phenyl]ethanoneC₁₇H₂₄O₃ mol.wt. 276.38**Synthesis**

– Preparation by thermal Claisen rearrangement of 4-(allyloxy)-3-(hexyloxy)acetophenone without solvent at 200° (47%) [2946].

m.p. 83° [2946]; b.p._{0.9} 175–180° [2946].

1-[4-(Hexyloxy)-2-hydroxy-5-(2-propenyl)phenyl]ethanone

[117690-47-8]

C₁₇H₂₄O₃ mol.wt. 276.38**Synthesis**

– Preparation by reaction of hexyl bromide with 5-allyl-2,4-dihydroxyacetophenone in the presence of potassium carbonate and potassium iodide in refluxing methyl ethyl ketone (85%) [2671], (36%) [2678,2679].

m.p. 42–44° [2671,2678,2679].

1-[2-Hydroxy-4-[(2-methoxyethoxy)methoxy]-5-(3-methyl-2-butenyl)phenyl]ethanone

[181047-51-8]

C₁₇H₂₄O₅ mol.wt. 308.37**Synthesis**

– Preparation by treatment of 4-(2-methoxy-ethoxymethoxy)-2-(3,3-dimethylallyloxy)-acetophenone in refluxing N,N-diethyl-aniline at 220° for 4 h under argon atmosphere (77%) (Claisen rearrangement) [3408].

¹H NMR [3408], ¹³C NMR [3408], MS [3408].

1-[2-Hydroxy-4,6-bis(methoxymethoxy)-3-(3-methyl-2-butenyl)phenyl]ethanone

[84092-45-5]

C₁₇H₂₄O₆ mol.wt. 324.37

Syntheses

– Obtained by reaction of prenyl bromide with 2-hydroxy-4,6-di-(methoxymethoxy)aceto-phenone in methanolic potassium hydroxide solution, first at 0°, then at r.t. for 24 h (74%) [3413].

– Also refer to: [3685].

liquid [3413]; ¹H NMR [3413], IR [3413], UV [3413].

1-[4-[(6-Bromohexyl)oxy]-2-hydroxy-3-propylphenyl]ethanone

[92518-46-2]

C₁₇H₂₅BrO₃ mol.wt. 357.29

Synthesis

– Preparation by reaction of 1,6-dibromohexane with 2,4-di-hydroxy-3-propylacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone (37%) [3181].

1-[4-[4-(Dimethylamino)butoxy]-2-hydroxy-5-(2-propenyl)phenyl]ethanone

C₁₇H₂₅NO₃ mol.wt. 291.39

Synthesis

– Preparation by reaction of dimethylamine with 5-allyl-4-(4-bromobutoxy)-2-hydroxyacetophenone during 16 h [2671].

1-[4-[4-(Dimethylamino)butoxy]-2-hydroxy-5-(2-propenyl)phenyl]ethanone (Hydrochloride)

[117706-32-8]

C₁₇H₂₅NO₃, HCl mol.wt. 327.85

Synthesis

– Obtained by reaction of hydrogen chloride with the corresponding base in ethanol, then adding ethyl ether to the mixture [2671].

m.p. 88–90° [2671].

1-[2,4-Bis(1,1-dimethylethyl)-3-hydroxy-6-methylphenyl]ethanone

[175438-44-5]

C₁₇H₂₆O₂ mol.wt. 262.39

Synthesis

– Refer to: Chem. Abstr., **124**, 260501q (1995).

N.B.: this ketone is erroneously referenced in the Chemical Abstracts (Vol. **124**, 1996, Formula Index, 2675F). The compound actually obtained by reaction between acetic anhydride and 2,6-di-tert-butyl-6-methylphenol in the presence of various metal bis(trifluoromethylsulfonyl)-amides such as a titanium and ytterbium bistriflylamides in methylene chloride or acetonitrile at r.t. is the phenolic ester, i.e. the 2,6-di-tert-butyl-6-methylphenyl acetate (90–99%), which has been unambiguously characterized [3686] (personal communication from professor Koichi Mikami).

1-(2-Hydroxy-5-nonylphenyl)ethanone

[115851-77-9]

C₁₇H₂₆O₂ mol.wt. 262.39

Synthesis

– Preparation by reaction of acetyl chloride on 4-nonylphenol with aluminium chloride in ethylene dichloride at 110–120° (63%) [2625].

b.p.₄ 178–182° [2625].**1-(2-Hydroxy-5-tert-nonylphenyl)ethanone**

[57375-45-8]

C₁₇H₂₆O₂ mol.wt. 262.39

Synthesis

– Preparation by Fries rearrangement of 4-tert-nonylphenyl acetate with aluminium chloride under nitrogen in tetra-chloroethane or in tetrachloroethylene at 120–125° (77–79%) [3357] or in refluxing chlorobenzene (46%) [3357].

1-[5-Ethyl-2-hydroxy-4-[[6-(methylthio)hexyl]oxy]phenyl]ethanone

[117706-37-3]

C₁₇H₂₆O₃S mol.wt. 310.46

Synthesis

– Preparation by adding a DMF solution of 4-(6-bromo-hexyloxy)-5-ethyl-2-hydroxy acetophenone to a DMF solution of methanethiol previously treated with sodium hydride (78%) [2671,2678,2679].

m.p. 52–53° [2678,2679], 47–48° [2671];

$^1\text{H NMR}$ [2671,2678,2679], MS [2671].

1-(3,5-Dibutyl-2,6-dihydroxy-4-methoxyphenyl)ethanone

[175785-88-3] $\text{C}_{17}\text{H}_{26}\text{O}_4$ mol.wt. 294.39

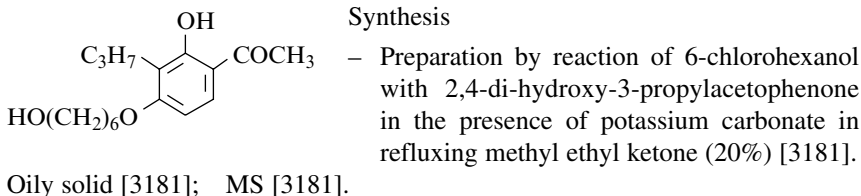

Synthesis

1-[2-Hydroxy-4-[(6-hydroxyhexyl)oxy]-3-propylphenyl]ethanone

[106627-20-7] $\text{C}_{17}\text{H}_{26}\text{O}_4$ mol.wt. 294.39

Synthesis

1-[2-Hydroxy-3-propyl-4,6-bis(propoxy)phenyl]ethanone

$\text{C}_{17}\text{H}_{26}\text{O}_4$ mol.wt. 294.39

Synthesis

m.p. 78–80° [3160].

1-[5-Ethyl-2-hydroxy-4-[[6-(methylsulfinyl)hexyl]oxy]phenyl]ethanone

[117706-38-4] $\text{C}_{17}\text{H}_{26}\text{O}_4\text{S}$ mol.wt. 326.46

Synthesis

m.p. 87–90° [2678,2679], 87–89° [2671].

1-[5-Ethyl-2-hydroxy-4-[[6-(methylsulfonyl)hexyl]oxy]phenyl]ethanone

[117690-76-3]

C₁₇H₂₆O₅S mol.wt. 342.46**Synthesis**

– Preparation by reaction of m-chloroperbenzoic acid on 5-ethyl-2-hydroxy-4-[6-(methylthio)hexyloxy]-acetophenone in methylene chloride, first at 0°, then at r.t. (70–76%) [2671,2678,2679].

m.p. 124–126° [2671,2678,2679].

1-[5-Ethyl-2-hydroxy-4-[[3-(trifluoromethyl)phenyl]methoxy]phenyl]ethanone

[117706-51-1]

C₁₈H₁₇F₃O₃ mol.wt. 338.33**Synthesis**

– Preparation by reaction of 3-(trifluoromethyl)benzyl bromide with 5-ethyl-2,4-dihydroxyacetophenone in the presence of potassium carbonate and potassium iodide (11%) [2678,2679].

1-[3-Hydroxy-6-methoxy-2-(2-propenyl)[1,1'-biphenyl]-4-yl]ethanone

[43037-65-6]

C₁₈H₁₈O₃ mol.wt. 282.34**Synthesis**

– Obtained by thermal Claisen rearrangement of 1-[2-methoxy-5-(2-propenyloxy)[1,1'-biphenyl]-4-yl]ethanone in N,N-dimethylaniline at 170° (52%) [3467].

1-[3-Hydroxy-6-methoxy-4-(2-propenyl)[1,1'-biphenyl]-2-yl]ethanone

[43037-67-8]

C₁₈H₁₈O₃ mol.wt. 282.34**Synthesis**

– Obtained by thermal Claisen rearrangement of 1-[2-methoxy-5-(2-propenyloxy)[1,1'-biphenyl]-4-yl]ethanone in N,N-dimethylaniline at 170° (33%) [3467]. The formation of this ketone is rationalised as involving a [2368,,3466] acetyl shift.

1-[2-Hydroxy-4-(phenylmethoxy)-3-(2-propenyl)phenyl]ethanone

[137170-49-1]

 $C_{18}H_{18}O_3$ mol.wt. 282.34

Syntheses

– Refer to: [3268,3687] (patents).

1-[2-Hydroxy-4-(phenylmethoxy)-5-(2-propenyl)phenyl]ethanone

[117690-55-8]

 $C_{18}H_{18}O_3$ mol.wt. 282.34

Synthesis

– Preparation by reaction of benzyl bromide on 5-allyl-2,4-dihydroxyacetophenone with potassium carbonate and potassium iodide (60%) [2678,2679].

m.p. 86° [2678,2679].

1-[3-Hydroxy-6-(phenylmethoxy)-2-(2-propenyl)phenyl]ethanone $C_{18}H_{18}O_3$ mol.wt. 282.34

Synthesis

– Obtained (by-product) by reaction of benzyl bromide with 2-allyl-3,6-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone for 5.5 h under nitrogen atmosphere (3%) [3471].

1-[6-Hydroxy-3-(phenylmethoxy)-2-(2-propenyl)phenyl]ethanone

[263138-72-3]

 $C_{18}H_{18}O_3$ mol.wt. 282.34

Synthesis

– Obtained by reaction of benzyl bromide with 2-allyl-3,6-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone for 5.5 h under nitrogen atmosphere (54%) [3471].

m.p. 92–93° [3471]; 1H NMR [3471], ^{13}C NMR [3471], IR [3471], MS [3471].**1-(2'-Acetoxy-2-hydroxy-5,5'-dimethyl[1,1'-biphenyl]-3-yl)ethanone**

[24046-01-3]

 $C_{18}H_{18}O_4$ mol.wt. 298.34

Synthesis

– Obtained by stirring a solution of 1-(2,2'-dihydroxy-5,5'-dimethyl[1,1'-biphenyl]-3-yl)ethanone in pyridine with freshly fused sodium acetate for 1 h (95%) [3633].

Pale yellow oil [3633]; b.p.₁₀⁻⁵ 120° [3633].

1-[2-Hydroxy-4-(phenylmethoxy)-6-(2-propenyloxy)phenyl]ethanone

[76609-36-4]

 $C_{18}H_{18}O_4$ mol.wt. 298.34

Synthesis

– Obtained by partial benzylation of 6-(allyloxy)-2,4-dihydroxyacetophenone [3190].

m.p. 64–65° [3190].

1-[4-Hydroxy-3-[(2-methoxy-3-methylphenyl)methyl]-5-methylphenyl]ethanone

[38778-41-5]

 $C_{18}H_{20}O_3$ mol.wt. 284.36

Synthesis

– Preparation by Fries rearrangement of 2-acetoxy-2'-methoxy-3,3'-dimethyldiphenylmethane with aluminium chloride in nitrobenzene at 40° for 3 h (50%) [3688].

m.p. 124–125° [3688];

 1H NMR [3688], IR [3688], UV [3688].**1-(3-Hydroxy-6-methoxy-2-propyl[1,1'-biphenyl]-4-yl)ethanone**

[43037-69-0]

 $C_{18}H_{20}O_3$ mol.wt. 284.36

Synthesis

– Obtained by catalytic hydrogenation of 1-[3-hydroxy-6-methoxy-2-(2-propenyl)[1,1'-biphenyl]-4-yl]ethanone or by thermal Fries rearrangement of 3-(acetyloxy)-6-methoxy-2-propyl[1,1'-biphenyl] with aluminium chloride [3467].

1-(3-Hydroxy-6-methoxy-4-propyl[1,1'-biphenyl]-2-yl)ethanone

[43037-70-3]

 $C_{18}H_{20}O_3$ mol.wt. 284.36

Synthesis

– Obtained by catalytic hydrogenation of 1-[3-hydroxy-6-methoxy-4-(2-propenyl)[1,1'-biphenyl]-2-yl]ethanone or by thermal Fries rearrangement of 5-(acetyloxy)-2-methoxy-4-propyl[1,1'-biphenyl] with aluminium chloride [3467].

1-[2-Hydroxy-4-(4-phenylbutoxy)phenyl]ethanone

[63359-88-6]

 $C_{18}H_{20}O_3$ mol.wt. 284.36

Synthesis

– Obtained by reaction of 1-bromo-4-phenylbutane with resacetophenone in the presence of potassium carbonate in refluxing acetone for 24 h. The 1-chloro derivative and the butanone can also be used instead of the mentioned starting material and solvent (59%) [3204].

– Also refer to: [3663].

m.p. 55° [3204].

1-[5-Ethyl-2-hydroxy-4-[[3-(methylthio)phenyl]methoxy]phenyl]ethanone

[117706-52-2]

 $C_{18}H_{20}O_3S$ mol.wt. 316.42

Synthesis

– Preparation by reaction of 3-methylmercapto-benzyl bromide with 2,4-dihydroxy-5-ethyl-acetophenone in the presence of potassium carbonate and potassium iodide (18%) [2678,2679].

m.p. 89° [2678,2679]; 1H NMR [2678,2679].**1-[2-Hydroxy-6-(4-phenoxybutoxy)phenyl]ethanone**

[69079-91-0]

 $C_{18}H_{20}O_4$ mol.wt. 300.35

Synthesis

– Obtained by reaction of 1-bromo-4-phenoxybutane with 2,6-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone for 24 h (91%). The 1-chloro derivative and butanone can also be used instead of the mentioned starting material and solvent [3204].

m.p. 81° [3204].

1-[4-Hydroxy-2-[(4-hydroxy-3-methoxyphenyl)methyl]-3,5-dimethoxyphenyl]ethanone

[147904-71-0]

 $C_{18}H_{20}O_6$ mol.wt. 332.35

Synthesis

– Obtained by alkaline CuO oxidation of lignin (compound Vm2Sn) named 2-vanillylacetosyringone [3689].

GC [3689], GC-MS [3689].

1-[2-Hydroxy-3,4,6-trimethoxy-5-(phenylmethoxy)phenyl]ethanone

[76844-54-7]

 $C_{18}H_{20}O_6$ mol.wt. 332.35

Syntheses

- Preparation by [3320] according to [3321] (Japanese paper).
- Also obtained by benzylation of 2,5-dihydroxy-3,4,6-tri-methoxyacetophenone with benzyl chloride [3322].

1-[2-Hydroxy-3,5,6-trimethoxy-4-(phenylmethoxy)phenyl]ethanone

[3162-49-0]

 $C_{18}H_{20}O_6$ mol.wt. 332.35

Syntheses

- Preparation by partial methylation of 4-benzyloxy-2,5-di-hydroxy-3,6-dimethoxyacetophenone with dimethyl sulfate in the presence of potassium carbonate in petroleum ether (b.p. 40–60°) (70%) [3428].
- Also refer to: [3690,3691].

m.p. 35–36° [3428]; IR [3428], UV [3428].

1-[4-Hydroxy-3,5-bis(3-methyl-2-butenyl)phenyl]ethanone

[41607-43-6]

 $C_{18}H_{24}O_2$ mol.wt. 272.39

Synthesis

- Preparation by thermal Claisen rearrangement of 3-(3,3-dimethylallyl)-4-(3,3-dimethylallyloxy)acetophenone in N,N-diethylaniline at 170–175° (84%) [2060].

Isolation from natural sources

- From the roots of several *Gerbera* species (Tribus *Arctotideae*, Fam. Compositae): *Gerbera asplenifolia* (1.5%) [3692], *Gerbera crocea* (1%) [3692] and as a trace in *Gerbera cordata* Less. (0.008%) [3693].
- From the roots of several *Ageratina* species (Compositae): *Ageratina aschenbornia* (0.017%) [3450] and *Ageratina altissima* (0.005%) [3450].

m.p. 93°6 [3692], 92°3 [2060]; 1H NMR [3692], IR [3692], UV [3692].

1-[2,4-Dihydroxy-3,5-bis-(3-methyl-2-butenyl)phenyl]ethanone

[24672-82-0]

 $C_{18}H_{24}O_3$ mol.wt. 288.39

Syntheses

– Obtained (poor yield) by reaction of 2-methyl-but-3-en-2-ol on resacetophenone with boron trifluoride etherate [2326,3453] in dioxane at r.t. (6%) [3453].

– Also obtained [3457] (poor yield) [3456] by reaction of prenyl bromide with resacetophenone in potassium hydroxide solution at r.t. (3%) [3456].

m.p. 117° [3457], 109–114° [3456], 109–110° [3453];

1H NMR [2326,2327,3456,3457], IR [3456,3457], UV [2326,3456].

1-[3-(3,7-Dimethyl-2,6-octadienyl)-2,4-dihydroxyphenyl]ethanone

[88661-97-6]

 $C_{18}H_{24}O_3$ mol.wt. 288.39

Synthesis

– Preparation by condensation of resacetophenone with 3,7-dimethyl-3-hydroxy-1,6-octadiene in the presence of boron trifluoride etherate in dioxane at r.t. (compound **14**) [3458].

1H NMR [3458], IR [3458].

1-[3-(3,7-Dimethyl-2,6-octadienyl)-2,4-dihydroxyphenyl]ethanone[18296-19-0] (*Z*) $C_{18}H_{24}O_3$ mol.wt. 288.39[20212-67-3] (*E*)

Syntheses

– Preparation by alkylation of 2,4-di-hydroxyacetophenone lithium salt with geranyl bromide in refluxing benzene (23%) [3694] (no specification).

– Also obtained by treatment of 6-acetyl-2-methyl-2-(4-methylpent-3-enyl)-3-phenylthiochroman-5-ol with potassium naphthalenide in tetrahydrofuran at -78° ; then, the mixture was allowed to warm to -30° (48%) (*2E*, *6Z*) [3459].

m.p. 120–121° [3694]; 1H NMR [3694], UV [3694] (compound **XX**); (no specification) (*E* isomer ?).

m.p. 93–96° [3459]; 1H NMR [3459], MS [3459] (compound **29**); (as a 1:1 mixture of *E* and *Z* isomers by ^{13}C NMR) [3459].

1-[5-(3,7-Dimethyl-2,6-octadienyl)-2,4-dihydroxyphenyl]ethanone

[146954-92-9]

C₁₈H₂₄O₃ mol.wt. 288.39

Synthesis

- Preparation by condensation of resaceto-phenone with 3,7-dimethyl-3-hydroxy-1,6-octadiene in the presence of boron trifluoride etherate in dioxane at r.t. (compound **15**) [3458].

1-[5-(3,7-Dimethyl-2,6-octadienyl)-2,4-dihydroxyphenyl]ethanone (*E*)

[20212-68-4]

C₁₈H₂₄O₃ mol.wt. 288.39

Synthesis

- Obtained (poor yield) by alkylation of 2,4-di-hydroxyacetophenone lithium salt with geranyl bromide in benzene (<2%) [3694].

m.p. 88° [3694];

¹H NMR [3694], UV [3694].**1-[4-Hydroxy-3-(4-hydroxy-3-methyl-2-butenyl)-5-(3-methyl-2-butenyl)phenyl]ethanone (*E*)**

[81053-02-3]

C₁₈H₂₄O₃ mol.wt. 288.39

Isolation from natural sources

- From the aerial parts of *Artemisia campestris* L. subsp. *glutinosa* (Gay ex Besser) Batt. (Compositae) (1.8%) [3441].

m.p. 83° [3441]; ¹H NMR [3441], IR [3441], UV [3441], MS [3441].**1-[4-Hydroxy-3-(4-hydroxy-3-methyl-2-butenyl)-5-(3-methyl-2-butenyl)phenyl]ethanone (*Z*)**

[77370-28-6]

C₁₈H₂₄O₃ mol.wt. 288.39

Isolation from natural sources

- From *Artemisia campestris* L. ssp. *glutinosa* (Gay ex Besser) Batt,

- compound (7) (12%) (from the aerial parts) [3441];
- compound (2) [3465].

m.p. 109–110° [3465]; ¹H NMR [3441,3465], IR [3465], UV [3465], MS [3441,3465].

1-[2,6-Dihydroxy-3-(3-methyl-2-butenyl)-4-[(3-methyl-2-butenyl)oxy]phenyl]ethanone

[158499-98-0]

C₁₈H₂₄O₄ mol.wt. 304.39

Synthesis

– Obtained by reaction of 4,6-dihydroxy-3-prenyl-2-tosyloxyacetophenone with prenyl bromide in the presence of potassium carbonate in acetone at 20° for 2 h, followed by hydrolysis of the resulting 6-hydroxy-3-prenyl-4-prenyloxy-2-tosyloxyacetophenone with 30% potassium hydroxide in refluxing ethanol under nitrogen atmosphere for 1 h [3695].

Isolation from natural sources

– From the fruit of *Evodia merrillii* [3695].

m.p. 108–110° [3695]; ¹H NMR [3695], IR [3695].

1-[4,6-Dihydroxy-3-(3-methyl-2-butenyl)-2-[(3-methyl-2-butenyl)oxy]phenyl]ethanone

[153399-38-3]

C₁₈H₂₄O₄ mol.wt. 304.39

Syntheses

– Obtained by hydrolysis of 4',6'-bis(benzyloxy)-2'-(3-methyl-2-butenyloxy)-3'-(3-methyl-2-butenyl)-acetophenone with dilute sodium hydroxide under nitrogen atmosphere at 50° [3571].

– Also refer to: [3695].

Isolation from natural sources

– From the root bark of *Euodia lunu-ankenda* (Rutaceae) [3696].

m.p. 73–75° [3696], 71–72° [3571]; TLC [3696];

¹H NMR [3571,3696], IR [3571,3696], UV [3696],

MS [3696], HRMS [3696].

N.B.: The synthetic works [3571,3695] have suggested that the prenylphenol of natural products isolated by [3696] had an incorrectly assigned structure. This compound [3696] is identical with 1-[2,6-dihydroxy-3-(3-methyl-2-butenyl)-4-[(3-methyl-2-butenyl)oxy]phenyl]ethanone [158499-98-0].

1-[3-(3,7-Dimethyl-2,6-octadienyl)-2,4,5-trihydroxyphenyl]ethanone[18296-18-9] (*Z*)C₁₈H₂₄O₄ mol.wt. 304.39[20212-66-2] (*E*)**Syntheses**

- Preparation by reaction of geraniol of 2,4,5-trihydroxyacetophenone in refluxing decalin [3694] (no specification).
 - Also obtained by reaction of potassium naphthalenide with 6-acetyl-2-methyl-2-(4-methylpent-3-enyl)-3-phenylthiochroman-5,8-diol in tetrahydrofuran at r.t. (11%) (*E*, *Z*) [3459].
- m.p. 127–130° [3694]; UV [3694]; (compound **XVIII**); (no specification) (*E* isomer ?).
 Unstable oil [3459]; ¹H NMR [3459], MS [3459]; (compound **30**); (as a 1:1 mixture of *E* and *Z* isomers by ¹³C NMR) [3459].

1-[2-[(3,7-Dimethyl-2,6-octadienyl)oxy]-4,6-dihydroxyphenyl]ethanone (*E*)

[142905-39-3]

C₁₈H₂₄O₄ mol.wt. 304.39

Isolation from natural sources

- From the fruit of *Evodia Merrillii* Kanehira & Sasaki ex Kanehira (Rutaceae) [3697].

m.p. 147–150° [3697]; column chromatography [3697];

¹H NMR [3697], ¹³C NMR [3697], IR [3697], UV [3697], MS [3697].**1-[4-[(3,7-Dimethyl-2,6-octadienyl)oxy]-2,6-dihydroxyphenyl]ethanone (*E*)**

[142905-40-6]

C₁₈H₂₄O₄ mol.wt. 304.39**Synthesis**

- Obtained by hydrolysis of 2-toluenesulfonyloxy-6-hydroxy-4-(1'-geranyloxy)-acetophenone with 30% potassium hydroxide in refluxing ethanol for 1.5 h (75%) [3608].

Isolation from natural sources

- From the fruit of *Evodia Merrillii* Kanehira & Sasaki ex Kanehira (Rutaceae) [3697].

Waxy substance [3697]; m.p. 147–148° [3608];
¹H NMR [3608,3697], ¹³C NMR [3697], IR [3608,3697], UV [3697],
 MS [3697], EIMS [3608], HREIMS [3608];
 column chromatography [3697].

1-[4-Hydroxy-3,5-bis(4-hydroxy-3-methyl-2-butenyl)phenyl]ethanone (*E,Z*)

[81053-03-4]

C₁₈H₂₄O₄ mol.wt. 304.39

Isolation from natural sources

– From the aerial parts of *Artemisia campestris* L. subsp. *glutinosa* (Gay ex Besser) Batt. (Compositae) (2%) [3441].

m.p. 97° [3441]; ¹H NMR [3441], IR [3441], UV [3441], MS [3441].

1-[4-Hydroxy-3,5-bis(4-hydroxy-3-methyl-2-butenyl)phenyl]ethanone (*Z,Z*)

[77370-30-0]

C₁₈H₂₄O₄ mol.wt. 304.39

Isolation from natural sources

– From *Artemisia campestris* L. ssp. *glutinosa* (Gay ex Besser) Batt,

- compound (10) (0.6%) (from the aerial parts) [3441];
- compound (3) (12%) [3465].

m.p. 120° [3465]; ¹H NMR [3441,3465], IR [3465], UV [3465],
 MS [3441,3465].

1-[2,4,6-Trihydroxy-3,5-bis(3-methyl-2-butenyl)phenyl]ethanone

[35458-19-6]

C₁₈H₂₄O₄ mol.wt. 304.39

Syntheses

– Preparation by reaction of 2-methylbut-3-en-2-ol with phloroacetophenone in the presence of boron trifluoride etherate in dioxane at 20° [3477,3500], (21%) [3477] or at 50° [3401].

– Also obtained by reaction of prenyl bromide with phloroacetophenone in the presence of potassium hydroxide in 80% aqueous methanol (15%) [3117].

m.p. 78–79° [3117,3401,3477,3500], 68–72° [2879]; b.p.₁ 135–140° [3117];
¹H NMR [2879]; UV [3117,3477].

1-[2,4-Dihydroxy-3-(tetrahydro-2H-pyran-2-yl)-6-[(tetrahydro-2H-pyran-2-yl)oxy]phenyl]ethanone

[136257-83-5]

 $C_{18}H_{24}O_6$ mol.wt. 336.38**Synthesis**

– Obtained (by-product) by reaction of 3,4-dihydro-2H-pyran on phloroacetophenone with p-toluenesulfonic acid in dioxane at r.t. (8%) [2368].

m.p. 118–121° [2368]; 1H NMR [2368], ^{13}C NMR [2368].**1-[2-Hydroxy-4,6-bis[(tetrahydro-2H-pyran-2-yl)oxy]phenyl]ethanone**

[130600-90-7]

 $C_{18}H_{24}O_6$ mol.wt. 336.38**Synthesis**

– Obtained (by-product) by reaction of 3,4-dihydro-2H-pyran on phloroacetophenone with p-toluenesulfonic acid in dioxane at r.t. (7%) [2368].

 1H NMR [2368], ^{13}C NMR [2368].**1-[2,4,6-Trihydroxy-3,5-bis(tetrahydro-2H-pyran-2-yl)phenyl]ethanone**

[136257-82-4]

 $C_{18}H_{24}O_6$ mol.wt. 336.38**Synthesis**

– Obtained (by-product) by reaction of 3,4-dihydro-2H-pyran on phloroacetophenone with p-toluenesulfonic acid in dioxane at r.t. (1%) [2368].

 1H NMR [2368], ^{13}C NMR [2368].**1-[4-[(7-Bromoheptyl)oxy]-2-hydroxy-5-(2-propenyl)phenyl]ethanone**

[117706-40-8]

 $C_{18}H_{25}BrO_3$ mol.wt. 369.30**Synthesis**

– Preparation by reaction of 1,7-dibromoheptane with 5-allyl-2,4-dihydroxyacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone (70%) [2671,2678,2679].

oil [2671,2678,2679].

1-[2,4-Dihydroxy-5-(3-methyl-2-butenyl)-3-(3-methylbutyl)phenyl]ethanone

[50773-38-1]

 $C_{18}H_{26}O_3$ mol.wt. 290.40**Synthesis**

– Preparation by reaction of prenyl bromide with 2,4-dihydroxy-3-isopentylacetophenone in aqueous potassium hydroxide solution at r.t. [3457].

m.p. 113°5 [3457];

 1H NMR [3457], IR [3457].**1-[4-(Heptyloxy)-2-hydroxy-5-(2-propenyl)phenyl]ethanone**

[117706-56-6]

 $C_{18}H_{26}O_3$ mol.wt. 290.40**Synthesis**

– Preparation by reaction of heptyl bromide with 5-allyl-2,4-dihydroxyacetophenone in the presence of potassium carbonate and potassium iodide in refluxing methyl ethyl ketone (77% [2671], (40%) [2678,2679].

Oil [2671,2678,2679].

1-[2-Hydroxy-4-[[6-(methylthio)hexyl]oxy]-5-(2-propenyl)phenyl]ethanone

[117706-34-0]

 $C_{18}H_{26}O_3S$ mol.wt. 322.47**Synthesis**

– Preparation by adding a DMF solution of 5-allyl-4-(6-bromohexyloxy)-2-hydroxyacetophenone to a DMF solution of methanethiol previously treated with sodium hydride (54%) [2678,2679].

m.p. 42° [2678,2679].

1-[5-(Acetyloxy)-2-hydroxy-4-(1,1,3,3-tetramethylbutyl)phenyl]ethanone

[107188-54-5]

 $C_{18}H_{26}O_4$ mol.wt. 306.40**Synthesis**

– Refer to: [3251].

1-[2,4,6-Trihydroxy-3-(3-methyl-2-butenyl)-5-(3-methylbutyl)phenyl]ethanone

[57744-70-4]

C₁₈H₂₆O₄ mol.wt. 306.40**Synthesis**

– Obtained by reaction of 2-methyl-3-buten-2-ol with isopentylphloroacetophenone in the presence of boron trifluoride etherate in dioxane at 20° (13%) [3500].

m.p. 92°5–93°5 [2879], 92–93°5 [3500];
¹H NMR [2879].

1-[2-Hydroxy-4-[[6-(methylsulfinyl)hexyl]oxy]-5-(2-propenyl)phenyl]ethanone

[117706-35-1]

C₁₈H₂₆O₄S mol.wt. 338.47**Synthesis**

– Obtained (by-product) by reaction of m-chloro-perbenzoic acid with 5-allyl-2-hydroxy-4-[6-(methyl-thio)hexyloxy]acetophenone in methylene chloride, first at 0°, then at r.t. (9%) [2678,2679].

1-[2-Hydroxy-4-[[6-(methylsulfonyl)hexyl]oxy]-5-(2-propenyl)phenyl]ethanone

[117706-36-2]

C₁₈H₂₆O₅S mol.wt. 354.47**Synthesis**

– Obtained by reaction of m-chloroperbenzoic acid with 5-allyl-2-hydroxy-4-[6-(methylthio)hexyloxy]-acetophenone in methylene chloride, first at 0°, then at r.t. (20%) [2678,2679].

1-[4-[(7-Bromoheptyl)oxy]-2-hydroxy-3-propylphenyl]ethanone

[106627-33-2]

C₁₈H₂₇BrO₃ mol.wt. 371.31**Synthesis**

– Preparation by reaction of 1,7-dibromoheptane with 2,4-di-hydroxy-3-propylacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone (21%) [3181].

1-(4-Butoxy-5-hexyl-2-hydroxyphenyl)ethanone

[101002-31-7]

 $C_{18}H_{28}O_3$ mol.wt. 292.42

Synthesis

– Obtained by partial alkylation of 2,4-dihydroxy-5-hexyl-acetophenone with butyl bromide in the presence of potassium carbonate in refluxing acetone for 20 h [3493].

m.p. 37° [3493].

1-[4-(Decyloxy)-2-hydroxyphenyl]ethanone

[143286-86-6]

 $C_{18}H_{28}O_3$ mol.wt. 292.42

Syntheses

– Preparation by partial alkylation of resacetophenone with decyl bromide in the presence of potassium carbonate in refluxing acetone for 20 h [3493].

– Also refer to: [3698].

m.p. 35° [3493,3698].

1-[2,4,6-Trihydroxy-3,5-bis(3-methylbutyl)phenyl]ethanone

[55380-57-9]

 $C_{18}H_{28}O_4$ mol.wt. 308.42

Synthesis

– Preparation by catalytic hydrogenation of deoxyacetohumulone [2,4,6-trihydroxy-3,5-(dimethylallyl)acetophenone] in the presence of 10% Pd/C in ethanol [3401].

 1H NMR [3401], UV [3401], MS [3401].**1-[4-[[4-(Bromomethyl)phenyl]methoxy]-2-hydroxy-5-(2-propenyl)phenyl]ethanone**

[117706-46-4]

 $C_{19}H_{19}BrO_3$ mol.wt. 375.26

Synthesis

– Preparation by reaction of 4-(bromomethyl)benzyl bromide with 5-allyl-2,4-dihydroxyacetophenone in the presence of potassium carbonate and potassium iodide (18%) [2678,2679].

Oil [2678,2679].

1-[2-Hydroxy-4-[(3-methylphenyl)methoxy]-5-(2-propenyl)phenyl]ethanone

[117706-45-3]

 $C_{19}H_{20}O_3$ mol.wt. 296.37

Synthesis

– Preparation by reaction of 3-methylbenzyl bromide on 5-allyl-2,4-dihydroxyacetophenone with potassium carbonate and potassium iodide (50%) [2678,2679].

m.p. 87–88° [2678,2679].

1-[3-Hydroxy-4-methoxy-6-(phenylmethoxy)-2-(2-propenyl)phenyl]ethanone $C_{19}H_{20}O_4$ mol.wt. 312.37

Synthesis

– Preparation by thermal Claisen rearrangement of 3-(allyloxy)-6-(benzyloxy)-4-methoxyacetophenone in boiling carbitol (diethylene glycol monoethyl ether) (89%) [2849].

m.p. 116° [2849].

1-[4-Hydroxy-2-methyl-5-(1-methylethyl)-3-(phenylmethyl)phenyl]ethanone $C_{19}H_{22}O_2$ mol.wt. 282.38

Synthesis

– Obtained (poor yield) by reaction of benzyl chloride with 4-hydroxy-2-methyl-5-isopropylacetophenone in the presence of zinc chloride in boiling chloroform (4%) [3699].

m.p. 88° [3699]; b.p.₁₄ 243–245° [3699].**1-[4-Hydroxy-3-[(2-methoxy-3,5-dimethylphenyl)methyl]-5-methylphenyl]ethanone**

[38778-48-2]

 $C_{19}H_{22}O_3$ mol.wt. 298.38

Synthesis

– Obtained by Fries rearrangement of 2-acetoxy-2'-methoxy-3,3',5-trimethyldiphenylmethane with aluminium chloride in nitrobenzene at 55° for 3 h (23%) [3688].

m.p. 128° [3688];

¹H NMR [3688], IR [3688], UV [3688].

1-[6-Hydroxy-3-methoxy-2-(1-methylethoxy)-4-(phenylmethoxy)phenyl]ethanone

[188927-31-3]

C₁₉H₂₂O₅ mol.wt. 330.38

Synthesis

– Preparation by treatment of 4-(benzyloxy)-3,6-di-methoxy-2-isopropoxyacetophenone (m.p. 74–75°) with aluminium bromide in acetonitrile at 0° for 10–15 min (75%) [3507].

m.p. 69–70° [3507].

1-[4-Hydroxy-2-[(4-hydroxy-3,5-dimethoxyphenyl)methyl]-3,5-dimethoxyphenyl]ethanone

[147904-74-3]

C₁₉H₂₂O₇ mol.wt. 362.38

Synthesis

– Obtained by upon alkaline CuO oxidation of lignin (compound Sm2Sn) named 2-syringylaceto-syringone [3689].

GC [3689], GC-MS [3689].

1-[2-(3,7-Dimethyl-2,6-octadienyl)-4-hydroxy-6-methoxyphenyl]ethanone

[121379-44-0]

C₁₉H₂₆O₃ mol.wt. 302.41

Isolation from natural sources

– From the bulbs of *Dioscorea bulbifera* [3404].

1-[2-Hydroxy-4-methoxy-3-(3,7-dimethyl-2,6-octadienyl)phenyl]ethanone (E)

C₁₉H₂₆O₃ mol.wt. 302.41

Synthesis

– Preparation by reaction of dimethyl sulfate on 3-geranyl-2,4-di-hydroxyacetophenone with potassium carbonate in refluxing acetone [3694].

¹H NMR [3694]; UV [3694].

1-[2-Hydroxy-4-methoxy-3,5-bis(3-methyl-2-butenyl)phenyl]ethanone

[50773-40-5]

 $C_{19}H_{26}O_3$ mol.wt. 302.41

Syntheses

– Preparation by reaction of 2-methylbut-3-en-2-ol with 2-hydroxy-4-methoxyacetophenone in the presence of boron trifluoride etherate [2326].

– Preparation by reaction of dimethyl sulfate with 2,4-dihydroxy-3,5-(dimethylallyl)acetophenone in the presence of potassium carbonate in refluxing acetone [3457].

1H NMR [2326,2327,3457], UV [2326].

1-[2,4-Dihydroxy-6-methoxy-3,5-bis(3-methyl-2-butenyl)phenyl]ethanone

[123999-38-2]

 $C_{19}H_{26}O_4$ mol.wt. 318.41

Isolation from natural sources

– From *Euodia lunu-ankenda* root bark (Rutaceae) [3696].

– From *Acronychia pedunculata* root bark (Rutaceae) [3700].

Yellow oil [3696,3700];

TLC [3700]; HPLC [3696]; 1H NMR [3700], IR [3700], HRMS [3700], MS [3700].

1-[2,4-Dihydroxy-5-methoxy-3-(3,7-dimethyl-2,6-octadienyl)phenyl]ethanone (E)

[20212-64-0]

 $C_{19}H_{26}O_4$ mol.wt. 318.41

Synthesis

– Obtained by alkylation of 2,4-di-hydroxy-5-methoxyacetophenone lithium salt with geranyl bromide in benzene (7%) [3610,3694].

Isolation from natural sources

– Also obtained on barium hydroxide degradation of homoflemingin, a chalcone isolated from the seed pods of *Flemingia rhodocarpa* Baker (Leguminosae) [3610,3694].

m.p. 107° [3694]; 1H NMR [3694], UV [3694], MS [3694].

1-[2,5-Dihydroxy-4-methoxy-3-(3,7-dimethyl-2,6-octadienyl)phenyl]ethanone (E)

[20180-88-5]

C₁₉H₂₆O₄ mol.wt. 318.41

Synthesis

– Obtained by Elbs persulfate oxidation of 3-geranyl-2-hydroxy-4-methoxyacetophenone (10%) [3694].

m.p. 69–70° [3694]; ¹H NMR [3694], UV [3694].

1-[2-Hydroxy-4-[(6-O-β-D-xylopyranosyl-β-D-glucopyranosyl)oxy]phenyl]ethanone (Bungeiside D)

[149475-54-7]

C₁₉H₂₆O₁₂ mol.wt. 446.41

Isolation from natural sources

R = β-D-xyl (1→6) β-D-glc

Colourless needles [3554]; m.p. 238–240° [3554];
 (α)_D = –68°3 (c = 0.5, methanol) [3554]; MS [3554],
¹H NMR [3554], ¹³C NMR [3554], IR [3554].

– From the roots of *Cynanchum bungei* DECNE (Asclepiadaceae) [3554].

1-[2-Hydroxy-4-(octyloxy)-5-(2-propenyl)phenyl]ethanone

[117690-46-7]

C₁₉H₂₈O₃ mol.wt. 304.43

Synthesis

– Preparation by reaction of n-octyl bromide with 5-allyl-2,4-dihydroxyacetophenone in the presence of potassium carbonate and potassium iodide (21%) [2678,2679].

Oil [2678,2679].

1-[2-Hydroxy-4-[(6-hydroxy-6-methylheptyl)oxy]-5-(2-propenyl)phenyl]ethanone

[117706-02-2]

C₁₉H₂₈O₄ mol.wt. 320.43

Synthesis

– Obtained by reaction of 7-(4-acetyl-2-allyl-5-hydroxy-phenoxy)heptanoyl chloride on methyl lithium in ether at –98°; the reaction mixture was allowed to warm up to –50° and then poured into dilute hydrochloric acid (8%) [2671].

Oil [2671].

1-[4-[(8-Bromooctyl)oxy]-2-hydroxy-3-propylphenyl]ethanone

[106627-34-3]

 $C_{19}H_{29}BrO_3$ mol.wt. 343.26**Synthesis**

– Preparation by reaction of 1,8-dibromooctane with 2,4-di-hydroxy-3-propylacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone (63%) [3181].

pale green oil [3181]; 1H NMR [3181].

1-[2,6-Bis(acetyloxy)-4-hydroxy-3-[(4-methoxyphenyl)methyl]phenyl]ethanone

[145747-40-6]

 $C_{20}H_{20}O_7$ mol.wt. 372.37**Synthesis**

– Obtained by enzymatic hydrolysis of 2,4,6-tri-acetoxy-3-(4-methoxy)benzylacetophenone in the presence of porcine pancreas lipase in tetrahydrofuran at 42–45° (65%) [2388].

1-[2-Hydroxy-3-(3-methyl-2-butenyl)-4-(phenylmethoxy)phenyl]ethanone $C_{20}H_{22}O_3$ mol.wt. 310.39**Synthesis**

– Obtained by reaction of benzyl bromide with 3-prenylresacetophenone in the presence of potassium carbonate in refluxing acetone for 8 h (64%) [3701].

m.p. 70–71° [3701]; 1H NMR [3701], IR [3701].

1-[4,6-Dihydroxy-3-(3-methyl-2-butenyl)-2-[[4-(methylphenyl)sulfonyl]oxy]phenyl]ethanone

[158499-95-7]

 $C_{20}H_{22}O_6S$ mol.wt. 390.46**Synthesis**

– Obtained by hydrolysis of 4,6-bis(benzyloxy)-3-prenyl-2-(tosyloxy)acetophenone with aqueous methanolic sodium hydroxide solution under nitrogen at 50° [3695].

Paste [3695].

1-[2-Hydroxy-4-(3-phenylpropoxy)-5-propylphenyl]ethanone

[117706-47-5]

 $C_{20}H_{24}O_3$ mol.wt. 312.41**Synthesis**

– Preparation by reaction of 3-phenylpropyl bromide on 2,4-dihydroxy-5-propylacetophenone with potassium carbonate and potassium iodide (26%) [2678,2679].

m.p. 60° [2678,2679].

1-[2-Hydroxy-4,5-dimethoxy-6-(1-methylethoxy)-3-(phenylmethoxy)phenyl]ethanone

[169130-27-2]

 $C_{20}H_{24}O_6$ mol.wt. 360.41**Synthesis**

– Obtained by selective demethylation of 3-benzyloxy-6-isopropoxy-2,4,5-trimethoxyacetophenone with aluminium bromide in acetonitrile, first at 0° for 15 min, then at 50–60° for 15–20 min after dilution with ca. 3% hydrochloric acid (68%) [3320].

m.p. 76–77° [3320]; 1H NMR [3320].**1-[2-Hydroxy-4,5-dimethoxy-3-(3,7-dimethyl-2,6-octadienyl)phenyl]ethanone (*E*)**

[20212-65-1]

 $C_{20}H_{28}O_4$ mol.wt. 332.44**Synthesis**

– Preparation by methylation of 3-geranyl-2,4-dihydroxy-5-methoxyacetophenone or of 3-geranyl-2,4,5-trihydroxyacetophenone with diazomethane [3694].

Oil [3694]; 1H NMR [3694], IR [3694], UV [3694].

1-[2-Hydroxy-4-(methoxymethoxy)-3,5-bis(3-methyl-2-butenyl)phenyl] ethanone

[217442-59-6]

 $C_{20}H_{28}O_4$ mol.wt. 332.44**Synthesis**

- Obtained by reaction of chloromethyl methyl ether with 3,5-diprenylresacetophenone in acetone in the presence of potassium carbonate [3614] at r.t. for 3 h (83%) [3702].

m.p. 67–68° [3702]; 1H NMR [3702].**1-[2-[(4-O- β -D-Galactopyranosyl- β -D-glucopyranosyl)oxy]-4-hydroxyphenyl] ethanone** $C_{20}H_{28}O_{13}$

mol.wt. 476.41

Synthesis

- Preparation by reaction of 0.2 M sodium methoxide with 4-acetylresacetophenone-2-heptaacetyl- β -D-lactosid in boiling methanol for 3 min (40%) [3552].

Lact = β -D-Lactosid rest

Monohydrate [3552]; m.p. 165–168° [3552];

 $(\alpha)_D^{21} = -45^\circ$ (c = 1, water) [3552].**1-[4-[(4-O- β -D-Galactopyranosyl- β -D-glucopyranosyl)oxy]-2-hydroxyphenyl] ethanone** $C_{20}H_{28}O_{13}$

mol.wt. 476.43

Synthesis

- Preparation by reaction of 0.2 M sodium methoxide with resacetophenone-4-heptaacetyl- β -D-lactosid in boiling methanol for 3 min (50%) [3552].

Lact = β -D-Lactosid rest

m.p. 255–258° [3552];

 $(\alpha)_D^{21} = -62^\circ 6'$ (c = 1, water) [3552].

1-[4-[(4-O-β-D-Glucopyranosyl-β-D-glucopyranosyl)oxy]-2-hydroxyphenyl]ethanone

[54918-30-8]

C₂₀H₂₈O₁₃

mol.wt. 476.43

Synthesis

– Preparation by reaction of sodium on 2',4'-dihydroxy-acetophenone-4-β-hepta-O-acetyl-D-cellobioside in methanol (67%) [1936].

m.p. 212° [1936];

(α)_D¹⁷ = -60° (pyridine) [1936].

1-[2,4-Bis-(β-D-galactopyranosyloxy)-6-hydroxyphenyl]ethanone

[88087-01-8]

C₂₀H₂₈O₁₄

mol.wt. 492.43

Synthesis

– Preparation by deacetylation of phloracetophenone 2,4-di-O-(2,3,4,6-tetra-O-acetyl)-β-D-galactopyranoside with 0.1 N methanolic sodium methoxide (87%) [2842].

m.p. 183–185° [2842]; ¹H NMR [2842].

1-[4-[(9-Bromononyl)oxy]-2-hydroxy-3-propylphenyl]ethanone

[79557-82-7]

C₂₀H₃₁BrO₃

mol.wt. 399.37

Synthesis

– Preparation by reaction of 1,9-dibromononane with 2,4-dihydroxy-3-propylacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone (63%) [3181].

1-(5-Dodecyl-2-hydroxyphenyl)ethanone

[84744-37-6]

C₂₀H₃₂O₂

mol.wt. 304.47

Synthesis

– Preparation by reaction of acetyl chloride on 4-dodecylphenol with aluminium chloride in ethylene dichloride at 110–120° (46%) [2625].

b.p.₄ 198–203° [2625].

1-[4-(Dodecyloxy)-2-hydroxyphenyl]ethanone

[52122-72-2]

 $C_{20}H_{32}O_3$ mol.wt. 318.37

Syntheses

- Preparation by partial alkylation of resacetophenone with dodecyl bromide in the presence of potassium carbonate in refluxing acetone for 20 h [3493].
- Also refer to: [3698].

m.p. 51° [3493,3698].

1-[3-(Diphenylmethyl)-2,4-dihydroxyphenyl]ethanone

[107114-32-9]

 $C_{21}H_{18}O_3$ mol.wt. 318.37

Synthesis

- Obtained by reaction of resacetophenone with diphenylcarbinol in the presence of boron trifluoride etherate in dioxane at r.t. (21%) [3703].

m.p. 203–204° [3703];

 1H NMR [3703], IR [3703], UV [3703].**1-[5-(Diphenylmethyl)-2,4-dihydroxyphenyl]ethanone**

[107114-35-2]

 $C_{21}H_{18}O_3$ mol.wt. 318.37

Synthesis

- Preparation by reaction of resacetophenone with diphenylcarbinol in the presence of boron trifluoride etherate in dioxane at r.t. (39%) [3703].

m.p. 179–180° [3703];

 1H NMR [3703], IR [3703], UV [3703].**1-[4-[(10-Bromodecyl)oxy]-2-hydroxy-5-(2-propenyl)phenyl]ethanone**

[117706-39-5]

 $C_{21}H_{31}BrO_3$ mol.wt. 411.38

Synthesis

- Preparation by reaction of 1,10-dibromodecane with 5-allyl-2,4-dihydroxyacetophenone in the presence of potassium carbonate and potassium iodide (18%) [2678,2679].

m.p. < 25° [2678,2679]; 1H NMR [2678,2679].

1-[4-[(10-Bromodecyl)oxy]-2-hydroxy-3-propylphenyl]ethanone

[106627-35-4]

 $C_{21}H_{33}BrO_3$ mol.wt. 413.40**Synthesis**

– Preparation by reaction of 1,10-dibromodecane with 2,4-di-hydroxy-3-propylacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone (60%) [3181].

1-[2,4,6-Trihydroxy-3,5-bis[(pentadecafluoroheptyl)thio]phenyl]ethanone $C_{22}H_6F_{30}O_4S_2$ mol.wt. 968.37**Synthesis**

– Preparation by reaction of perfluoroheptanesulfonyl chloride with phloracetophenone in chloroform in the presence of a slight excess of pyridine and a little quantity of iron powder, first at -40° , then at 60° for 3 h (39%) [2480].

m.p. $106-108^\circ$ [2480]; 1H NMR [2480], IR [2480].

1-[2,4-Bis(benzoyloxy)-6-hydroxyphenyl]ethanone $C_{22}H_{16}O_6$ mol.wt. 376.37**Synthesis**

– Preparation by reaction of benzoyl chloride on phloracetophenone in dilute aqueous sodium hydroxide [2827].

m.p. $109-110^\circ$ [2827].

1-[3,4-Bis(benzoyloxy)-2-hydroxyphenyl]ethanone

[27865-59-4]

 $C_{22}H_{16}O_6$ mol.wt. 367.37**Synthesis**

– Preparation by partial esterification of gallacetophenone with benzoyl chloride in pyridine at 100° (21%) [2403].

m.p. $108-109^\circ$ [2403]; 1H NMR [2403], IR [2403].

1-[2-Hydroxy-3-iodo-4,6-bis(phenylmethoxy)phenyl]ethanone

[95165-66-5]

 $C_{22}H_{19}IO_4$ mol.wt. 474.29

Syntheses

– Obtained by reaction of 2-hydroxy-4,6-bis(benzyloxy)-acetophenone with iodine in the presence of silver trifluoroacetate in chloroform at r.t. (83%) [3571].

– Also refer to: [3695].

m.p. 204–206° [3571]; 1H NMR [3571].**1-[2-Hydroxy-6-methyl-3-phenyl-4-(phenylmethyl)phenyl]ethanone**

[64648-09-5]

 $C_{22}H_{20}O_2$ mol.wt. 316.40

Synthesis

– Obtained by a potassium fluoride catalyzed self-condensation of 1-phenyl-2,4-pentanedione in DMF solution [2648,2976], (52%) [2976]; also refer to: “erratum” [2647].

m.p. 124° [2647,2976];

 1H NMR [2647,2648,2976], ^{13}C NMR [2647,2976], IR [2647,2976], MS [2647,2976].**1-[2,4-Dihydroxy-3,5-bis(phenylmethyl)phenyl]ethanone**

[95832-44-3]

 $C_{22}H_{20}O_3$ mol.wt. 332.40

Syntheses

– Obtained by reaction of benzyl alcohol with resacetophenone in the presence of boron trifluoride etherate and dioxane at 60–70° (9%) [2324].

– Also obtained (poor yield) by reaction of benzyl bromide with resacetophenone in the presence of potassium hydroxide in methanol at r.t. (<2%) [3583].

m.p. 159–160° [3583], 157–158° [2324]; 1H NMR [2324], IR [2324], UV [2324].**1-[3-(Diphenylmethyl)-2-hydroxy-4-methoxyphenyl]ethanone**

[107114-34-1]

 $C_{22}H_{20}O_3$ mol.wt. 332.40

Synthesis

– Preparation by partial methylation of 3-(diphenylmethyl)resacetophenone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone (90%) [3703].

m.p. 161–162° [3703]; 1H NMR [3703].

1-[5-(Diphenylmethyl)-2-hydroxy-4-methoxyphenyl]ethanone[107114-37-4] $C_{22}H_{20}O_3$ mol.wt. 332.40**Synthesis**

– Preparation by partial methylation of 5-(diphenylmethyl)resacetophenone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone (90%) [3703].

m.p. 145–146° [3703]; 1H NMR [3703].**1-[2-Hydroxy-4-(phenylmethoxy)-3-(phenylmethyl)phenyl]ethanone**[105485-45-8] $C_{22}H_{20}O_3$ mol.wt. 332.40**Synthesis**

– Obtained by reaction of benzyl chloride [3582] or benzyl bromide [3583] with resacetophenone in the presence of potassium hydroxide in refluxing methanol (10%) [3582], (<1%) [3583].

m.p. 120–121° [3582], 118–120° [3583]; 1H NMR [3583], IR [3583], UV [3583].**1-[2-Hydroxy-4-(phenylmethoxy)-5-(phenylmethyl)phenyl]ethanone**[105485-48-1] $C_{22}H_{20}O_3$ mol.wt. 332.40**Synthesis**

– Preparation by reaction of benzyl chloride with 5-benzyl-2,4-dihydroxyacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone [3583].

m.p. 100–102° [3583]; 1H NMR [3583], UV [3583].**1-[2,4-Dihydroxy-6-(phenylmethoxy)-3-(phenylmethyl)phenyl]ethanone**[39548-85-1] $C_{22}H_{20}O_4$ mol.wt. 348.40**Synthesis**

– Obtained (poor yield) by reaction of benzyl chloride with phloroacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone (6%) [3605].

m.p. 166–167° [3605]; UV [3605].

1-[2,4-Dihydroxy-3-[[2-(phenylmethoxy)phenyl]methyl]phenyl]ethanone

[103633-36-9]

 $C_{22}H_{20}O_4$ mol.wt. 348.40

Syntheses

- Obtained by reaction of o-benzyloxybenzyl alcohol with resacetophenone in dioxane in the presence of boron trifluoride etherate at 60–70° for 3 h (10%) [2325].
- Also obtained by reaction of o-benzyloxybenzyl bromide with resacetophenone in methanol in the presence of potassium hydroxide at r.t. for 24 h (14%) [2325].

m.p. 155–156° [2325]; 1H NMR [2325], IR [2325], UV [2325].**1-[2,4-Dihydroxy-5-[[2-(phenylmethoxy)phenyl]methyl]phenyl]ethanone**

[103633-37-0]

 $C_{22}H_{20}O_4$ mol.wt. 348.40

Syntheses

- Obtained by reaction of o-benzyloxybenzyl alcohol with resacetophenone in dioxane in the presence of boron trifluoride etherate at 60–70° for 3 h (18%) [2325].
- Also obtained by reaction of o-benzyloxybenzyl bromide with resacetophenone in methanol in the presence of potassium hydroxide at r.t. for 24 h (7%) [2325].

m.p. 127–128° [2325]; 1H NMR [2325], IR [2325], UV [2325].**1-[3-(Diphenylmethyl)-2,4-dihydroxy-6-methoxyphenyl]ethanone**

[101161-94-8]

 $C_{22}H_{20}O_4$ mol.wt. 348.40

Synthesis

- Obtained by reaction of diphenylcarbinol with 2,4-dihydroxy-6-methoxyacetophenone in the presence of boron trifluoride etherate in dioxane at r.t. (15%) [2432].

m.p. 150–151° [2432]; 1H NMR [2432], IR [2432], UV [2432].**1-[3-(Diphenylmethyl)-4,6-dihydroxy-2-methoxyphenyl]ethanone**

[101161-95-9]

 $C_{22}H_{20}O_4$ mol.wt. 348.40

Synthesis

- Obtained by reaction of diphenylcarbinol with 2,4-dihydroxy-6-methoxyacetophenone in the presence of boron trifluoride etherate in dioxane at r.t. (20%) [2432].

m.p. 148–149° [2432]; 1H NMR [2432], IR [2432], UV [2432].

1-[2-Hydroxy-3,4-bis(phenylmethoxy)phenyl]ethanone

[2652-27-9]

 $C_{22}H_{20}O_4$ mol.wt. 348.40

Syntheses

– Obtained by reaction of benzyl chloride with gallacetophenone in the presence of sodium bicarbonate and sodium iodide in refluxing mixture of acetone and ethanol [2403,2817,3637], (48%) [2403], (<2%) [2817].

– Also refer to: [3704].

m.p. 114–115° [2403], 113–114° [2817]; 1H NMR [2403], IR [2403].

1-[2-Hydroxy-4,5-bis(phenylmethoxy)phenyl]ethanone

[7298-39-7]

 $C_{22}H_{20}O_4$ mol.wt. 348.40

Syntheses

– Preparation by reaction of benzyl halide with 2,4,5-tri-hydroxyacetophenone in the presence of potassium carbonate in refluxing acetone (69%) [2418].

– Preparation by reaction of benzyl chloride with 5-acetoxy-2,4-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone (52%) [2906].

m.p. 96–97° [2906], 94–95° [2418]; 1H NMR [2906], IR [2906].

1-[2-Hydroxy-4,6-bis(phenylmethoxy)phenyl]ethanone

[18065-05-9]

 $C_{22}H_{20}O_4$ mol.wt. 348.40

Synthesis

– Preparation by reaction of benzyl chloride on phloracetophenone with potassium carbonate in refluxing acetone (29%) [2838], (20%) [3605], in DMF at 100° (54%) [2830] and at 150–153° (26%) [3705] or in HMPA at 90–93° (80%) [2829].

m.p. 119–120° [2830], 101–102° [3605], 100–102° [2829], 98–100° [2838], 96–98° [3705]. One of the reported melting points is obviously wrong.

1H NMR [2830], IR [2830], UV [3605], MS [2830].

1-[2-Hydroxy-4,6-bis(phenylmethoxy)phenyl]ethanone-*I*-¹³C

[332900-03-5]

C₂₂H₂₀O₄ mol.wt. 349.40

Syntheses

- Preparation by selective deprotection of tri-*O*-benzyl-phloroacetophenone labelled at the carbonyl group with titanium tetrachloride in methylene chloride for 160 min at 0° (80%) [3706].
- Also refer to: [3707,3708].

m.p. 104° [3706], 103° [3707];

¹H NMR [3706], ¹³C NMR [3706], IR [3706], UV [3706], MS [3706].**1-[4-Hydroxy-2,6-bis(phenylmethoxy)phenyl]ethanone**

[76799-38-7]

C₂₂H₂₀O₄ mol.wt. 348.40

Synthesis

- Refer to: [3198] (compound **7**) (45%).

1-[6-Hydroxy-2,3-bis(phenylmethoxy)phenyl]ethanoneC₂₂H₂₀O₄

mol.wt. 348.40

Synthesis

- Preparation by reaction of benzyl chloride 2-(benzyloxy)-3,6-dihydroxyacetophenone with potassium carbonate in refluxing acetone (10%) [2358].

m.p. 57°5 [2358].

1-[2,5-Dihydroxy-3,4-bis(phenylmethoxy)phenyl]ethanone

[151148-87-9]

C₂₂H₂₀O₅

mol.wt. 364.40

Synthesis

- Obtained by persulfate oxidation of 3,4-bis(benzyloxy)-2-hydroxyacetophenone (Elbs reaction) (10%) [3709].

m.p. 121° [3709];

¹H NMR [3709], UV [3709]; TLC [3709].

1-[2-Hydroxy-3-[(2,3,4,6-tetra-O-acetyl-β-D-galactopyranosyl)oxy]phenyl]ethanone

[88086-96-8]

C₂₂H₂₆O₁₂

mol.wt. 482.44

Syntheses

– Obtained by reaction of acetobromo- α -D-galactose with 2,3-dihydroxyacetophenone,

- in the presence of silver carbonate in quinoline at r.t., according to the Koenigs–Knorr method [2842];
- in the presence of 10% aqueous potassium hydroxide in acetone at r.t. for 24 h, according to the Fischer method (14%) [2842].

m.p. 152–153° [2842];

 $(\alpha)_{\text{D}}^{20} = -47^{\circ}$ (c = 1 in chloroform) [2842];¹H NMR [2842].

1-[2-Hydroxy-4-[(2,3,4,6-tetra-O-acetyl-β-D-galactopyranosyl)oxy]phenyl]ethanone

[54918-27-3]

C₂₂H₂₆O₁₂

mol.wt. 482.44

Syntheses

– Preparation by reaction of acetobromo- α -D-galactose (m.p. 79–81°) with resacetophenone,

- in the presence of silver oxide in quinoline at r.t. for 2 h (30%) [3552];
- in the presence of 10% aqueous potassium hydroxide in acetone at r.t. for 24 h (12%) [2842].

m.p. 115–117° [3552], 115° [2842];

 $(\alpha)_{\text{D}}^{22} = -2^{\circ}6$ (c = 4 in chloroform) [3552].

1-[2-Hydroxy-5-[(2,3,4,6-tetra-O-acetyl-β-D-galactopyranosyl)oxy]phenyl]ethanone

[88086-98-0]

C₂₂H₂₆O₁₂

mol.wt. 482.44

Syntheses

– Preparation by reaction of acetobromo- α -D-galactose,

- with 2-benzoyloxy-5-hydroxyacetophenone in the presence of silver carbonate in dry quinoline at r.t. for 3 h according to the Koenigs–Knorr method (quantitative yield) [2842];
- with quinacetophenone in the presence of 10% aqueous sodium hydroxide in acetone at r.t. for 24 h according to the Fischer method (14%) [2842].

m.p. 69–73° [2842]; ¹H NMR [2842].

1-[2-Hydroxy-6-[(2,3,4,6-tetra-O-acetyl-β-D-galactopyranosyl)oxy]phenyl]ethanoneC₂₂H₂₆O₁₂ mol.wt. 482.44**Synthesis**

- Preparation by reaction of acetobromo-α-D-galactose with 2,6-dihydroxyacetophenone in the presence of silver carbonate in quinoline at r.t. for 3 h [2842], according to Koenigs–Knorr method [3710].

1-[2-Hydroxy-4-[(2,3,4,6-tetra-O-acetyl-β-D-glucopyranosyl)oxy]phenyl]ethanoneC₂₂H₂₆O₁₂ mol.wt. 482.44**Syntheses**

- Obtained by reaction of acetobromo-α-D-glucose with resacetophenone,
 - in acetone in the presence of 10% sodium hydroxide at r.t. for 4 days (30%) [3563];
 - in acetone in the presence of aqueous potassium hydroxide solution at r.t. for 24–40 h (20–45%) [2528];
 - in quinoline in the presence of silver oxide during 15 min (11%) [2736].
- m.p. 131–132° [2736], 130–131° [3563];
 (α)_D²⁰ = –29°7 (in acetone) [3563].

1-[2-Hydroxy-6-[(2,3,4,6-tetra-O-acetyl-β-D-glucopyranosyl)oxy]phenyl]ethanone

[23141-00-6]

C₂₂H₂₆O₁₂ mol.wt. 482.44**Syntheses**

- Preparation by glycosation of 2,6-dihydroxyacetophenone with acetobromo-α-D-glucose,
 - in the presence of cadmium carbonate in refluxing toluene for 20 h, with removal of generated water (71%) [3711], according to Dick's method [3712];
- in the presence of benzyltributylammonium chloride and potassium carbonate in chloroform at r.t. for 24 h (93%) [3713];
- in the presence of potassium hydroxide in aqueous acetone (38%) [3711], (32%) [3714].

m.p. 201–203° [3714], 200°5–201°5 [3711], 197–200° [3713];

¹H NMR [3711,3713], IR [3711,3713], MS [3711], FAB-MS [3713].

1-[4-Hydroxy-3-[(2,3,4,6-tetra-O-acetyl-β-D-glucopyranosyl)oxy]phenyl]ethanone (*Tetraacetylpingenin*)

[101140-11-8]

C₂₂H₂₆O₁₂

mol.wt. 482.44

Synthesis

– Preparation by treatment of 3-(β-tetraacetylglucopyranosyl-oxy)-4-(2-methoxyethoxy)methoxyacetophenone (SM) with zinc bromide in methylene chloride at r.t. under nitrogen atmosphere (76%). SM was obtained by action of acetobromo-α-D-glucose with 3-hydroxy-4-(2-methoxy-ethoxy)-methoxyacetophenone in the presence of silver oxide in dry quinoline at r.t. under nitrogen atmosphere [3410].

m.p. 106–112° [3410]; ¹H NMR [3410], IR [3410], MS [3410].

1-[2,6-Dihydroxy-4-[(2,3,4,6-tetra-O-acetyl-β-D-glucopyranosyl)oxy]phenyl]ethanone

C₂₂H₂₆O₁₃

mol.wt. 498.42

Synthesis

– Obtained by reaction of acetobromo-α-D-glucose with phloracetophenone in the presence of 2.25 N aqueous sodium hydroxide in acetone at 0° (9–12%) [3715].

m.p. 215–216° [3715];
(α)_D²⁰ = –52°7 (pyridine) [3715].

1-[2-Heptyl-6-hydroxy-4-(phenylmethoxy)phenyl]ethanone

[96864-14-1]

C₂₂H₂₈O₃

mol.wt. 340.46

Synthesis

– Preparation by reaction of benzyl bromide with 2,4-dihydroxy-6-heptylacetophenone in the presence of potassium carbonate in refluxing acetone for 1.5 h (42%) [3624].

m.p. 45° [3624]; ¹H NMR [3624], MS [3624].

1-[2-Hydroxy-4,6-bis(methoxymethoxy)-3,5-bis(3-methyl-2-butenyl)phenyl]ethanone

[131303-37-2]

C₂₂H₃₂O₆

mol.wt. 392.49

Syntheses

– Obtained by reaction of methoxymethyl chloride with 3,5-diprenyl-2,4,6-trihydroxyacetophenone (57%) [3716].

– Also refer to: [3419,3717,3718].

1-(2-Hydroxy-5-tetradecylphenyl)ethanone[118469-76-4] $C_{22}H_{36}O_2$ mol.wt. 332.53**Synthesis**

– Preparation by Fries rearrangement of 4-tetradecylphenyl acetate with aluminium chloride without solvent at 120° (94%) [3719].

m.p. 39–40° [3719]; 1H NMR [3719], IR [3719].**1-[3-(Dodecyloxy)-2-hydroxy-4,6-dimethoxyphenyl]ethanone**[103777-47-5] $C_{22}H_{36}O_5$ mol.wt. 380.52**Synthesis**

– Preparation by partial demethylation of 3-(dodecyloxy)-2,4,6-trimethoxyacetophenone (SM) with aluminium chloride in acetonitrile at 60° for 1.5 h (83%). SM was obtained by alkylation of 3-hydroxy-2,4,6-trimethoxyacetophenone with dodecyl iodide in the presence of potassium carbonate in refluxing acetone for 12 h [3148].

m.p. 53–54° [3148].

1-[4-(Dodecyloxy)-2-hydroxy-3,6-dimethoxyphenyl]ethanone[103777-44-2] $C_{22}H_{36}O_5$ mol.wt. 380.52**Synthesis**

– Preparation by partial alkylation of 4,6-dihydroxy-2,5-dimethoxyacetophenone with dodecyl iodide (92%) [3148].

m.p. 55–56° [3148].

1-[4-(Dodecyloxy)-6-hydroxy-2,3-dimethoxyphenyl]ethanone[103777-43-1] $C_{22}H_{36}O_5$ mol.wt. 380.52**Synthesis**

– Preparation by partial alkylation of 4,6-dihydroxy-2,3-dimethoxyacetophenone with dodecyl iodide [3148].

Oil [3148].

1-[4,6-Bis(benzoyloxy)-2-hydroxy-3-methylphenyl]ethanone $C_{23}H_{18}O_6$ mol.wt. 390.39

Synthesis

– Obtained by reaction of benzoyl chloride on 2,4,6-tri-hydroxy-3-methylacetophenone with 2% sodium hydroxide solution at 0° (9–12%) [3051].

m.p. 149° [3051].

1-[2-(Acetyloxy)-3-(diphenylmethyl)-4-hydroxyphenyl]ethanone[145747-37-1] $C_{23}H_{20}O_4$ mol.wt. 360.41

Synthesis

– Obtained by enzymatic hydrolysis of 2,4-diacetoxy-3-(diphenylmethyl)acetophenone in the presence of porcine pancreas lipase in tetrahydrofuran at 42–45° (70%) [2388].

1-[2-(Acetyloxy)-5-(diphenylmethyl)-4-hydroxyphenyl]ethanone[145747-38-2] $C_{23}H_{20}O_4$ mol.wt. 360.41

Synthesis

– Obtained by enzymatic hydrolysis of 2,4-diacetoxy-5-(diphenylmethyl)acetophenone in the presence of porcine pancreas lipase in tetrahydrofuran at 42–45° (68%) [2388].

1-[2-Hydroxy-4-methoxy-3,5-bis(phenylmethyl)phenyl]ethanone[95832-46-5] $C_{23}H_{22}O_3$ mol.wt. 346.43

Synthesis

– Preparation by reaction of dimethyl sulfate with 3,5-di-benzyl-2,4-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone (90%) [3703].

Oil [3703]; 1H NMR [3703].**1-[3-(Diphenylmethyl)-2-hydroxy-4,6-dimethoxyphenyl]ethanone**[101161-96-0] $C_{23}H_{22}O_4$ mol.wt. 362.42

Synthesis

– Preparation by reaction of dimethyl sulfate with 2,4-di-hydroxy-6-methoxy-3-(diphenylmethyl)acetophenone in the presence of potassium carbonate in refluxing acetone (82%) [2432].

m.p. 173–174° [2432]; 1H NMR [2432], UV [2432].

1-[3-(Diphenylmethyl)-6-hydroxy-2,4-dimethoxyphenyl]ethanone

[101161-97-1]

 $C_{23}H_{22}O_4$

mol.wt. 362.42

Synthesis

– Preparation by reaction of dimethyl sulfate with 2,4-di-hydroxy-6-methoxy-5-(diphenylmethyl)acetophenone in the presence of potassium carbonate in refluxing acetone (69%) [2432].

m.p. 167–168° [2432]; 1H NMR [2432], UV [2432].

1-[2-Hydroxy-3-methyl-4,6-bis(phenylmethoxy)phenyl]ethanone

[39548-92-0]

 $C_{23}H_{22}O_4$

mol.wt. 362.42

Syntheses

– Preparation by reaction of benzyl chloride on 3-methylphloracetophenone with potassium carbonate in refluxing acetone (27–31%) [3043,3051], (18%) [3605].

– Also refer to: [3054].

m.p. 145° [3051,3605,3720], 142° [3043].

1-[2,4-Dihydroxy-6-methoxy-3-[[2-(phenylmethoxy)phenyl]methyl]phenyl]ethanone

[103633-31-4]

 $C_{23}H_{22}O_5$

mol.wt. 378.42

Syntheses

– Obtained by reaction of o-(benzyloxy)benzyl bromide with 2,4-dihydroxy-6-methoxyacetophenone in the presence of potassium hydroxide in methanol at r.t. for 24 h (18%) [2325].

– Also obtained by reaction of o-(benzyloxy)benzyl alcohol with 2,4-dihydroxy-6-methoxyacetophenone in the presence of boron trifluoride etherate in dioxane (7%) [2325].

m.p. 152–153° [2325]; TLC [2325];

1H NMR [2325], IR [2325], UV [2325].

1-[4,6-Dihydroxy-2-methoxy-3-[[2-(phenylmethoxy)phenyl]methyl]phenyl]ethanone

[103633-32-5]

C₂₃H₂₂O₅ mol.wt. 378.42

Syntheses

- Obtained by reaction of o-(benzyloxy)benzyl alcohol with 2,4-dihydroxy-6-methoxyacetophenone in the presence of boron trifluoride etherate in dioxane at 60–70° for 3 h (<15%) [2325].
- Also obtained by reaction of o-(benzyloxy)benzyl bromide with 2,4-dihydroxy-6-methoxyacetophenone in the presence of potassium hydroxide in methanol at r.t. for 24 h (7%) [2325].

m.p. 145–146° [2325]; TLC [2325]; ¹H NMR [2325], IR [2325], UV [2325].

1-[2-Hydroxy-3-[(2-hydroxyphenyl)methyl]-6-methoxy-4-(phenylmethoxy)-phenyl]ethanone

1-[2,4-Dihydroxy-3-[(2-hydroxyphenyl)methyl]-6-methoxyphenyl]ethanone, monoether with benzenemethanol

[102056-83-7]

C₂₃H₂₂O₅ mol.wt. 378.42

Synthesis

- Obtained by reaction of benzyl chloride with 2',4'-di-hydroxy-3'-(2-hydroxybenzyl)-6'-methoxy-acetophenone in the presence of potassium carbonate in refluxing acetone (10%) [2832].

1-[2-Hydroxy-3-methoxy-4,6-bis(phenylmethoxy)phenyl]ethanone

[24126-73-6]

C₂₃H₂₂O₅ mol.wt. 378.42

Syntheses

- Preparation by selective cleavage of 2-benzyloxy group of 2,4,6-tris(benzyloxy)-3-methoxyacetophenone (SM) with concentrated hydrochloric acid in acetic acid at r.t. for 50 min (82%). SM (oily material) was obtained by reaction of benzyl chloride with 4-benzyloxy-2,6-di-hydroxy-3-methoxyacetophenone in the presence of potassium carbonate in DMF at 150–160° for 10 min [3640].
- Also obtained by partial benzylation of 3-methoxy-2,4,6-trihydroxyacetophenone [3721], with benzyl chloride in the presence of potassium carbonate in refluxing acetone for 16 h (6%) [3722].

m.p. 140–141° [3721,3722], 137–138° [3640]; ¹H NMR [3721]; UV [3721,3722].

1-[2-Hydroxy-5-methoxy-3,4-bis(phenylmethoxy)phenyl]ethanone

[158148-88-0]

 $C_{23}H_{22}O_5$ mol.wt. 378.42

Synthesis

– Preparation by reaction of dimethyl sulfate with 3,4-bis(benzyloxy)-2,5-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone for 8 h (79%) [3709].

m.p. 131° [3709]; TLC [3709];
 1H NMR [3709], IR [3709], UV [3709].

1-[6-Hydroxy-2-methoxy-3,4-bis(phenylmethoxy)phenyl]ethanone

[73239-53-9]

 $C_{23}H_{22}O_5$ mol.wt. 378.42

Synthesis not yet described

– Refer to: [2885].
 TLC [2885].

1-[6-Hydroxy-3-methoxy-2,4-bis(phenylmethoxy)phenyl]ethanone $C_{23}H_{22}O_5$ mol.wt. 378.42

Syntheses

– Obtained by partial benzylation of 3-methoxy-2,4,6-tri-hydroxyacetophenone [3721], with benzyl chloride in the presence of potassium carbonate in refluxing acetone for 16 h (31%) [3722].

– Also refer to: [3507,3723].

Oil [3722]; m.p. 70–71° [3721]; 1H NMR [3721].

1-[6-Hydroxy-4-methoxy-2,3-bis(phenylmethoxy)phenyl]ethanone

[54299-56-8]

 $C_{23}H_{22}O_5$ mol.wt. 378.42

Synthesis

– Preparation by reaction of benzyl chloride with 6-(benzyloxy)-2,5-dihydroxy-4-methoxyacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone (71%) [3130].

m.p. 95–97° [3130].

1-[6-Hydroxy-3-methoxy-2-[[4-(4-methylphenyl)sulfonyl]oxy]-4-(phenylmethoxy)phenyl]ethanone

[188927-30-2]

C₂₃H₂₂O₇S mol.wt. 442.49

Synthesis

– Preparation by treatment of 4-(benzyloxy)-3,6-dimethoxy-2-(tosyloxy)acetophenone (m.p. 106–108°) with aluminium bromide in acetonitrile at 0° for 1 h (quantitative yield) [3507].

m.p. 94–95° [3507].

1-[2-Hydroxy-6-methoxy-4-[(2,3,4,6-tetra-O-acetyl-β-D-glucopyranosyl)oxy]phenyl]ethanone

[139545-92-9]

C₂₃H₂₈O₁₃ mol.wt. 512.47

Syntheses

– Obtained by treatment of 2,4-dihydroxy-6-methoxy-acetophenone with aceto-bromo-α-D-glucose,

- in acetone in the presence of 10% aqueous sodium hydroxide at r.t. for 4.5 h (48%) [3619];
- in quinoline or in acetone in the presence of silver oxide at r.t. for 20 min (22% and 30% yields, respectively) [3724].

m.p. 169–171° [3619], 168° [3724];

(α)_D²⁵ = –39°7 to –42°3 (pyridine) [3724];¹H NMR [3619], IR [3619], MS [3619]; TLC [3619].

1-[2,4-Dihydroxy-6-[(3,7,11-trimethyl-2,6,10-dodecatrienyl)oxy]phenyl]ethanone (E,E)

[200129-18-6]

C₂₃H₃₂O₄

mol.wt. 372.50

Synthesis

– Refer to: [3725] (Chinese paper).

1-[2,6-Dihydroxy-4-[(3,7,11-trimethyl-2,6,10-dodecatrienyl)oxy]phenyl]ethanone[156499-52-4] $C_{23}H_{32}O_4$ mol.wt. 372.50

Isolation from natural sources

- From the aerial parts of *Boronia Ramosa* (Rutaceae) [3726].
Gum [3726];
 1H NMR [3726], ^{13}C NMR [3726], IR [3726], UV [3726], MS [3726].

1-[2,6-Dihydroxy-4-[(3,7,11-trimethyl-2,6,10-dodecatrienyl)oxy]phenyl]ethanone (*E,E*)[183143-91-1] $C_{23}H_{32}O_4$ mol.wt. 372.50

Syntheses

- Preparation by hydrolysis of 2-p-toluenesulfonyloxy-6-hydroxy-4-(1'-farnesyloxy)acetophenone with 30% potassium hydroxide in refluxing ethanol for 1.5 h (89%) [3608].
- Obtained (poor yield) by reaction of farnesyl bromide with phloroacetophenone in the presence of potassium carbonate in refluxing acetone for 4 h (7%) [3725,3727].

Isolation from natural sources

- From the aerial parts of *Boronia ramosa* in Australian genus *Boronia* (Rutaceae) [3725,3726].
White gum [3608,3726];
 1H NMR [3608,3726], ^{13}C NMR [3726], IR [3608,3726], UV [3726], EIMS [3608,3726].

1-[2-[(3,7-Dimethyl-2,6-octadienyl)oxy]-4,6-dihydroxy-3-(3-methyl-2-butenyl)phenyl]ethanone (E)

[126259-76-5]

C₂₃H₃₂O₄

mol.wt. 372.50

Synthesis

– Obtained by hydrolysis of 4',6'-bis(benzyloxy)-2'-geranyloxy-3'-prenylacetophenone with dilute sodium hydroxide under nitrogen atmosphere at 50° (good yield) [3571].

Isolation from natural sources

– From the *Euodia Lunu-Ankenda* root bark (Rutaceae) [3696].

N.B.: The synthetic works [3571,3695] have suggested that the natural product ketone isolated by [3696] had an incorrectly assigned structure. This compound [3696] will be identical with 1-[4-[(3,7-dimethyl-2,6-octadienyl)oxy]-2,6-dihydro-3-(3-methyl-2-butenyl)phenyl]ethanone [142905-38-2].

m.p. 88–90° [3696], 71–73° [3571]. One of the reported melting points is obviously wrong.

¹H NMR [3571,3696], IR [3696][3571], UV [3696], MS [3696], HRMS [3696]; TLC [3696];

1-[4-[(3,7-Dimethyl-2,6-octadienyl)oxy]-2,6-dihydroxy-3-(3-methyl-2-butenyl)phenyl]ethanone (E)

[142905-38-2]

C₂₃H₃₂O₄

mol.wt. 372.50

Synthesis

– Obtained via a nine-step synthesis from the 4',6'-bis(benzyloxy)-2'-hydroxyacetophenone [3695].

Isolation from natural sources

– From the fruit of *Evodia Merrillii* Kanehira and Sasaki ex Kanehira (Rutaceae) [3697,3728].

m.p. 98–101° [3697,3728], 98–100° [3695]; column chromatography [3697];

1-[4-[(12-Bromododecyl)oxy]-2-hydroxy-3-propylphenyl]ethanone

[106627-36-5]

 $C_{23}H_{37}BrO_3$ mol.wt. 441.45

Synthesis

– Preparation by reaction of 1,12-dibromododecane with 2,4-dihydroxy-3-propylacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone (45%) [3181].

1-(2-Hydroxy-4-pentadecylphenyl)ethanone

[52122-69-7]

 $C_{23}H_{38}O_2$ mol.wt. 346.55

Synthesis

– Preparation by Fries rearrangement of 3-pentadecylphenyl acetate with aluminium chloride without solvent at 140–150° [2601].

m.p. 50° [2601]; b.p.₂ 212–214° [2601].**1-(2,4-Dihydroxy-6-pentadecylphenyl)ethanone** $C_{23}H_{38}O_3$ mol.wt. 362.55

Synthesis

– Preparation by reaction of acetic acid on 5-pentadecyl-resorcinol with boron trifluoride and hydrofluoric acid in xylene at 50–60° (75%) [3729].

m.p. 63° [3729].

1-[2-Hydroxy-3,5-dimethoxy-4,6-bis(phenylmethoxy)phenyl]ethanone

[3162-54-7]

 $C_{24}H_{24}O_6$ mol.wt. 408.45

Synthesis

– Obtained by alkaline degradation of *Lucidin dibenzyl ether* by refluxing with 10% aqueous ethanolic potassium hydroxide under nitrogen atmosphere for 17 h [3428].

b.p._{0.2} 160–180° [3428]; m.p. 86–87° [3428].**1-[4-(Hexadecyloxy)-2-hydroxyphenyl]ethanone**

[143286-87-7]

 $C_{24}H_{40}O_3$ mol.wt. 376.58

Synthesis

– Preparation by partial alkylation of resacetophenone with hexadecyl bromide in the presence of potassium carbonate in refluxing acetone for 20 h [3493].

m.p. 56° [3493].

1-[4-[(2E)-3,7-Dimethyl-2,6-octadienyl]oxy]-2-hydroxy-6-[(4-methylphenyl)sulfonyl]oxy]phenyl]ethanone[225088-73-3] $C_{25}H_{30}O_6S$ mol.wt. 458.58**Synthesis**

- Preparation by treatment of 2-toluenesulfonyl-oxy-4,6-dihydroxy-acetophenone with geranyl bromide in acetone in the presence of potassium carbonate at r.t. for 2 h (84%) [3608].

Colourless gum [3608];

[107114-31-8]

 $C_{35}H_{30}O_3$ mol.wt. 498.62

Synthesis

– Preparation by reaction of dimethyl sulfate with 3,5-bis-(diphenylmethyl)-2,4-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone (81%) [3703].

m.p. 152–153° [3703]; 1H NMR [3703].

1-[3,5-Bis(diphenylmethyl)-2,4-dihydroxy-6-methoxyphenyl]ethanone

[101161-93-7]

 $C_{35}H_{30}O_4$ mol.wt. 514.62

Synthesis

– Obtained (poor yield) by reaction of diphenylcarbinol with 2,4-dihydroxy-6-methoxyacetophenone in dioxane at r.t. in the presence of boron trifluoride etherate (7%) [2432].

m.p. 122–123° [2432]; 1H NMR [2432], IR [2432], UV [2432].

1-[2-(Acetyloxy)-3,5-bis(diphenylmethyl)-4-hydroxyphenyl]ethanone

[145747-39-3]

 $C_{36}H_{30}O_4$ mol.wt. 526.63

Synthesis

– Obtained by partial deacylation of 2,4-diacetoxy-3,5-bis-(diphenylmethyl)acetophenone by porcine pancreatic lipase in tetrahydrofuran at 42–45° (63%) [2388,2389].

1-[2-Hydroxy-4-[[2-(phenylmethoxy)phenyl]methoxy]-3-[[2-(phenylmethoxy)phenyl]methyl]phenyl]ethanone

[103633-46-1]

 $C_{36}H_{32}O_5$ mol.wt. 544.65

Synthesis

– Obtained (poor yield) by reaction of *o*-benzyloxy-benzyl bromide with resacetophenone in methanol in the presence of potassium hydroxide at r.t. for 24 h (<2%) [2325].

m.p. 135–136° [2325]; TLC [2325]; 1H NMR [2325], IR [2325], UV [2325].

1-[2-Hydroxy-4,6-bis[(2,3,4,6-tetra-O-acetyl- β -D-galactopyranosyl)oxy]phenyl]ethanone

[88087-00-7]

 $C_{36}H_{44}O_{22}$ mol.wt. 828.73**Synthesis**

– Obtained by reaction of 2,3,4,6-tetra-O-acetyl- α -D-galactopyranosyl bromide with phloracetophenone in the presence of 30% aqueous sodium hydroxide in acetone (17%) [2842], according to Zemplen's procedure [3715].

m.p. 184–186° [2842]; 1H NMR [2842].

1-[2-Hydroxy-4,6-dimethoxy-3-[2,3,4,6-tetrakis-O-(phenylmethyl)- β -D-glucopyranosyl]phenyl]ethanone[115130-46-6] $C_{44}H_{46}O_9$ mol.wt. 718.84**and****1-[6-Hydroxy-2,4-dimethoxy-3-[2,3,4,6-tetrakis-O-(phenylmethyl)- β -D-glucopyranosyl]phenyl]ethanone**

[169566-54-5]

 $C_{44}H_{46}O_9$ mol.wt. 718.84**Synthesis**

– Obtained (via O C glycoside rearrangement) by adding boron trifluoride etherate to a mixture of 2-hydroxy-4,6-dimethoxyacetophenone, 2,3,4,6-tetra-O-benzyl- α -D-glucopyranosyl fluoride (R) and powdered molecular sieves 4 Å in methylene chloride and stirring at -78° for 2 h under an argon atmosphere; after the disappearance of R on TLC, the reaction temperature was raised from -78° to r.t. and the mixture stirred for 45 min (92%) [3198].

N.B.: The *3-isomer* was obtained by selective glycosylation of 2-hydroxy-4,6-dimethoxyacetophenone with O-(2,3,4,6-tetra-O-benzyl- α -D-glucopyranosyl) trichloroacetimidate and trimethylsilyl triflate as promoter in methylene chloride first at -25° , then heating up to r.t. [3732,3733].

1H NMR [3198], IR [3198], MS [3198].

1-[2-Hydroxy-4-methoxy-6-(phenylmethoxy)-3-[2,3,4,6-tetrakis-O-(phenylmethyl)- β -D-glucopyranosyl]phenyl]ethanone

[169566-44-3] $C_{50}H_{50}O_9$ mol.wt. 794.94

and

1-[6-Hydroxy-4-methoxy-2-(phenylmethoxy)-3-[2,3,4,6-tetrakis-O-(phenylmethyl)- β -D-glucopyranosyl]phenyl]ethanone

[169566-55-6] $C_{50}H_{50}O_9$ mol.wt. 794.94

Synthesis

– Obtained (via O fi C glycoside rearrangement) by adding boron trifluoride etherate to a mixture of

2-(benzyloxy)-6-hydroxy-4-methoxy-acetophenone, 2,3,4,6-tetra-O-benzyl- α -D-glucopyranosyl fluoride (R) and powdered molecular sieves 4 Å in methylene chloride and stirring at -78° for 2 h under an argon atmosphere; after the disappearance of (R) on TLC, the reaction temperature was raised from -78° to r.t. and the mixture stirred for 45 min (78%) [3198].

1H NMR [3198], IR [3198], MS [3198].

1-[2-Hydroxy-4,6-bis(phenylmethoxy)-3-[2,3,4,6-tetrakis-O-(phenylmethyl)- β -D-glucopyranosyl]phenyl]ethanone

[169566-46-5] $C_{56}H_{54}O_9$ mol.wt. 871.04

and

1-[6-Hydroxy-2,4-bis(phenylmethoxy)-3-[2,3,4,6-tetrakis-O-(phenylmethyl)- β -D-glucopyranosyl]phenyl]ethanone

[169566-56-7] $C_{56}H_{54}O_9$ mol.wt. 871.04

Synthesis

– Obtained (via O fi C glycoside rearrangement) by adding boron trifluoride etherate to a mixture of 2-acetylphloroglucinol 3,5-bis-(benzyl ether), 2,3,4,6-tetra-O-benzyl- α -D-glucopyranosyl fluoride (R) and powdered molecular sieves 4 Å in methylene chloride and stirring at -20° for 2 h under an argon atmosphere; after the disappearance of (R) on TLC, the reaction temperature was raised from -20° to r.t. and the mixture stirred for 45 min (92%) [3198].

Colourless syrup [3198]; 1H NMR [3198], IR [3198], MS [3198].

Part VI
Addendum to Volume 2

Chapter 10

Addendum 2005–2008

Monoketones Unsubstituted on the Acetyl Groups

Chapter 9. Compounds Derived from Acetic Acid [3734] p. 659–1092

1-(2,4-Dihydroxy-3,5,6-trinitrophenyl)ethanone

$C_8H_5N_3O_9$ mol.wt. 287.14

New compound

Syntheses

- Obtained by reaction of nitric acid with 3,5-bis(5-acetyl-2-benzoyloxy-4-hydroxyphenyl)sulfide in acetic acid [3735,3736].

m.p. 174–175° [3735,3736].

1-(3-Bromo-5-chloro-2-hydroxyphenyl)ethanone

[59443-15-1]

$C_8H_6BrClO_2$ mol.wt. 249.49

Described [3734] p. 662

Syntheses

- Also refer to: [3737–3741].

1-(5-Bromo-3-chloro-2-hydroxyphenyl)ethanone

[331821-10-4]

$C_8H_6BrClO_2$ mol.wt. 249.49

New compound

Synthesis

- Refer to: [3742].

1H NMR [3742], IR [3742], UV [3742].

1-(3-Bromo-2-hydroxy-5-nitrophenyl)ethanone[90004-97-0] $C_8H_6BrNO_4$ mol.wt. 260.04**Described** [3734] p. 663

Synthesis

– Also refer to: [3739].

1-(5-Bromo-2-hydroxy-3-nitrophenyl)ethanone[70978-54-0] $C_8H_6BrNO_4$ mol.wt. 260.04**Described** [3734] p. 663

Syntheses

– Also refer to: [3743,3744].

1-(3,5-Dibromo-2-hydroxyphenyl)ethanone[22362-66-9] $C_8H_6Br_2O_2$ mol.wt. 293.94**Described** [3734] p. 665

Syntheses

– Also refer to: [3740,3742].

1-(3,5-Dibromo-4-hydroxyphenyl)ethanone[2887-72-1] $C_8H_6Br_2O_2$ mol.wt. 293.94**Described** [3734] p. 665

Syntheses

– Also obtained by adding HMTAB (hexamethylene tetramine–bromine complex) to 4-hydroxyacetophenone in methylene chloride at r.t. for 5 min (44%) [3745].

– Also refer to: [3737,3738,3746–3748].

m.p. 180–183° [3745].

Methyl ether [79324-79-1] $C_9H_8Br_2O_2$ mol.wt. 307.97

– Preparation by reaction of dimethyl sulfate with 3,5-dibromo-4-hydroxyacetophenone in the presence of sodium hydroxide [3749,3750].

– Also refer to: [3751–3758].

m.p. 78° [3750]; 1H NMR [3753,3756], ^{13}C NMR [3751,3754], UV [3757].

1-(4-Chloro-3-fluoro-2-hydroxyphenyl)ethanone[949900-54-3] $C_8H_6ClFO_2$ mol.wt. 188.59**New compound**

Syntheses

– Refer to: [3759,3760].

1-(4-Chloro-5-fluoro-2-hydroxyphenyl)ethanone[105533-69-5] $C_8H_6ClFO_2$ mol.wt. 188.59**Described [3734] p. 668**

Syntheses

– Also refer to: [3761,3762].

1-(5-Chloro-4-fluoro-2-hydroxyphenyl)ethanone[865451-01-0] $C_8H_6ClFO_2$ mol.wt. 188.59**New compound**

Synthesis

– Obtained by reaction of acetyl chloride with 4-chloro-3-fluorophenol in the presence of aluminium chloride in toluene, first at 40° for 1 h, then at 80° for 3 h (61%) [3762].

 1H NMR [3762].**1-(5-Chloro-2-hydroxy-3-nitrophenyl)ethanone**[84942-40-5] $C_8H_6ClNO_4$ mol.wt. 215.59**Described [3734] p. 670**

Syntheses

– Also refer to: [3763,3764].

1-(2,4-Dichloro-6-hydroxyphenyl)ethanone[57051-50-0] $C_8H_6Cl_2O_2$ mol.wt. 205.04**Described [3734] p. 671**

Syntheses

– Also obtained by heating its methyl ether with pyridinium chloride for 30 min (70%) [3765].

– Also obtained by Fries rearrangement of 3,5-dichlorophenyl acetate [3766] according to [3767].

Methyl ether [41068-37-5] $C_9H_8Cl_2O_2$ mol.wt. 219.07 [3765]

Benzyl ether [1023279-01-7] $C_{15}H_{12}Cl_2O_2$ mol.wt. 295.16

- Obtained by reaction of benzyl chloride with 2,4-dichloro-6-hydroxyacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone for 16 h (92%) [3766].

m.p. 87–88° [3766]; 1H NMR [3766], ^{13}C NMR [3766], MS [3766].

2,4-Dichlorobenzoate [1023278-90-1] $C_{15}H_8Cl_4O_3$ mol.wt. 378.04

- Obtained by reaction of 2,4-dichloro-6-hydroxyacetophenone with 2,4-dichlorobenzoic acid in the presence of N,N-dicyclohexylcarbodiimide and 4-pyrrolidinopyridine in methylene chloride under nitrogen at r.t. for 24 h (98%) [3766].

m.p. 112–113° [3766]; 1H NMR [3766], ^{13}C NMR [3766], MS [3766].

1-(2,6-Dichloro-4-hydroxyphenyl)ethanone

$C_8H_6Cl_2O_2$ mol.wt. 205.04

Described [3734] p. 671

Synthesis

- Also obtained by reaction of acetyl chloride with 3,5-dichloroanisole in the presence of aluminium chloride in carbon disulfide [3768].

m.p. 117–119° [3768].

Methyl ether [157487-30-4] $C_9H_8Cl_2O_2$ mol.wt. 219.07

- Obtained by heating a mixture of 1-(2,6-dichloro-4-methoxyphenyl)ethan-1-ol and manganese (IV) oxide in benzene for 15 h (87%) [3769].
- Also refer to: [3770].

b.p._{0.6} 125–128° [3769]; 1H NMR [3769], IR [3769].

1-(3,5-Dichloro-2-hydroxyphenyl)ethanone

[3321-92-4] $C_8H_6Cl_2O_2$ mol.wt. 205.04

Described [3734] p. 672

Syntheses

- Also refer to: [3737,3738,3740,3742,3771–3776].

1-(3,5-Dichloro-4-hydroxyphenyl)ethanone

[17044-70-1] $C_8H_6Cl_2O_2$ mol.wt. 205.04

Described [3734] p. 672

Methyl ether [41727-59-7] $C_9H_8Cl_2O_2$ mol.wt. 219.07

– Obtained by oxychlorination of 4-methoxyacetophenone (2 mol) with ammonium chloride (2.2 mol) and oxone (2.2 mol) in acetonitrile at r.t. for 24 h (14%) [3777].

– Also refer to: [3751–3757,3778–3780].

1H NMR [3753,3756,3777],

^{13}C NMR [3751,3754], IR [3779,3780], UV [3757], MS [3777].

1-(2,4-Difluoro-3-hydroxyphenyl)ethanone

[951163-65-8] $C_8H_6F_2O_2$ mol.wt. 172.13

New compound

Syntheses

– Refer to: [3781–3786].

Methyl ether [373603-19-1] $C_9H_8F_2O_2$ mol.wt. 186.16 [3782,3784,3785]

1-(3,5-Difluoro-2-hydroxyphenyl)ethanone

[140675-42-9] $C_8H_6F_2O_2$ mol.wt. 172.13

Described [3734] p. 674

Syntheses

– Also refer to: [3771,3787].

1-(3,5-Difluoro-4-hydroxyphenyl)ethanone

[133186-55-7] $C_8H_6F_2O_2$ mol.wt. 172.13

Described [3734] p. 675

Syntheses

– Also refer to: [3771,3788].

Methyl ether [170570-79-3] $C_9H_8F_2O_2$ mol.wt. 186.16

– Obtained by fluorination of 4-methoxyacetophenone with manganese (IV) tetrafluoride formed in situ using manganese (IV) dioxide and pyridinium polyhydrogenofluoride under very mild conditions [3789].

– Also refer to: [3778,3788].

MS [3789].

1-(2-Hydroxy-3,5-diiodophenyl)ethanone[7191-46-0] $C_8H_6I_2O_2$ mol.wt. 387.94**Described** [3734] p. 676

Syntheses

– Also refer to: [3740,3742,3747].

1-(4-Hydroxy-3,5-diiodophenyl)ethanone[7191-55-1] $C_8H_6I_2O_2$ mol.wt. 387.94**Described** [3734] p. 676

Synthesis

– Also refer to: [3747].

Methyl ether [31827-84-6] $C_9H_8I_2O_2$ mol.wt. 401.97

- Preparation by reaction of methyl iodide with 4-hydroxy-3,5-diiodoacetophenone in the presence of sodium hydroxide [3790].
- Obtained from the potassium salt [3791,3792].
- Also refer to: [3752–3755,3757,3793].

m.p. 107° [3790], 97–98° [3791,3792]; 1H NMR [3753], ^{13}C NMR [3754], UV [3757].**1-(2-Hydroxy-3,5-dinitrophenyl)ethanone**[69027-37-8] $C_8H_6N_2O_6$ mol.wt. 226.15**Described** [3734] p. 677

Synthesis

– Also refer to: [3739].

1-(2-Bromo-4-hydroxyphenyl)ethanone[61791-99-9] $C_8H_7BrO_2$ mol.wt. 215.05**Described** [3734] p. 679

Methyl ether [89691-67-8] $C_9H_9BrO_2$ mol.wt. 229.07

- Obtained by reaction of acetyl chloride with 3-bromoanisole in the presence of aluminium chloride [3794], (59%) [3795].
- Obtained by reaction of acetic anhydride with 3-bromoanisole in the presence of aluminium chloride in carbon disulfide at r.t., then at 30–35° until no more hydrochloric acid is evolved [3796,3797].
- Also obtained by reaction of acetic anhydride with m-bromoanisole in the presence of lithium perchlorate at 100° for 5 h (60%) [3798].
- Also refer to: [3770,3799,3800].

b.p.₈ 149–151° [3795], b.p.₁₅ 163–166° [3795];

m.p. 69–71° [3800], 23° [3795]. One of the reported melting points is obviously wrong.

¹H NMR [3796,3797,3799], ¹³C NMR [3799], IR [3796,3797,3799].

2,4-Dinitrophenylhydrazone (of the methyl ether) $C_{15}H_{13}BrN_4O_5$ mol.wt. 409.20

m.p. 193–194° [3795].

1-(2-Bromo-5-hydroxyphenyl)ethanone

$C_8H_7BrO_2$ mol.wt. 215.05

New compound

Syntheses

- Refer to: [3801,3802].

Methyl ether [6342-63-8] $C_9H_9BrO_2$ mol.wt. 229.07

- Obtained by action of pyridinium chlorochromate with 1-(2-bromo-5-methoxy) ethanol [3803].
- Also obtained by bromination of 3-methoxyacetophenone with N-bromosuccinimide in dilute sulfuric acid at 60° for 5 h (94%) [3804].
- Also obtained from 3-methoxyacetophenone by reaction of hypobromous acid, generated in situ, in aqueous acetic acid containing perchloric acid as a catalyst at r.t. [3805].
- Also refer to: [3801,3806].

b.p._{0.4} 102° [3803], b.p._{0.7} 105° [3801], b.p._{1.5} 115–125° [3805], b.p.₁₃ 157–158° [3807];

¹H NMR [3807], IR [3807], UV [3801].

Oxime (of the methyl ether) $C_9H_{10}BrNO_2$ mol.wt. 244.09

m.p. 131–132° [3801], 125–126° [3805].

1-(3-Bromo-4-hydroxyphenyl)ethanone[1836-06-2] $C_8H_7BrO_2$ mol.wt. 215.05**Described** [3734] p. 680

Synthesis

– Also obtained by adding HMTAB (hexamethylene tetramine–bromine complex) to 4-hydroxyacetophenone in methylene chloride at r.t. for 5 min (56%) or at -5° for 150 min (88%) [3745].

m.p. 108–110° [3745].

Methyl ether [35310-75-9] $C_9H_9BrO_2$ mol.wt. 229.07

– Obtained by reaction of acetic anhydride with o-bromoanisole in the presence of lithium perchlorate at 100° for 5 h (99%) [3744,3798,3808].

 ^{13}C NMR [3751,3754].**1-(4-Bromo-2-hydroxyphenyl)ethanone**[30186-18-6] $C_8H_7BrO_2$ mol.wt. 215.05**Described** [3734] p. 680

Syntheses

– Also refer to: [3809–3814].

Methyl ether [89368-12-7] $C_9H_9BrO_2$ mol.wt. 229.07

– Obtained by reaction of acetic anhydride with m-bromoanisole in the presence of lithium perchlorate at 100° for 5 h (40%) [3798].

– Also refer to: [3815,3816].

1-(5-Bromo-2-hydroxyphenyl)ethanone[1450-75-5] $C_8H_7BrO_2$ mol.wt. 215.05**Described** [3734] p. 681

Syntheses

– Also refer to: [3738,3744,3773,3809,3817–3826].

UV [3801].

Methyl ether [16740-73-1] $C_9H_9BrO_2$ mol.wt. 229.07

– Preparation by reaction of methyl iodide with 5-bromo-2-hydroxyacetophenone in the presence of potassium carbonate in refluxing acetone for 3 h (86%) [3820].

– Obtained from 2-methoxyacetophenone by reaction of hypobromous acid, generated in situ, in aqueous acetic acid containing perchloric acid as a catalyst at r.t. (34%) [3805].

– Also refer to: [3827].

b.p._{1,5} 120° [3805]; white solid [3820]; 1H NMR [3805,3820], ^{13}C NMR [3820], UV [3801], MS [3820].

1-(3-Bromo-2,4-dihydroxyphenyl)ethanone[60990-39-8] $C_8H_7BrO_3$ mol.wt. 231.05**Described [3734] p. 682**

Synthesis

– Also refer to: [3739].

1-(3-Bromo-2,5-dihydroxyphenyl)ethanone[33857-20-4] $C_8H_7BrO_3$ mol.wt. 231.05**Described [3734] p. 682**

Synthesis

– Also refer to: [3739].

1-(5-Bromo-2,4-dihydroxyphenyl)ethanone[60965-25-5] $C_8H_7BrO_3$ mol.wt. 231.05**Described [3734] p. 683**

Synthesis

– Also refer to: [3828].

Dibenzyl ether [747413-68-9] $C_{22}H_{19}BrO_3$ mol.wt. 411.30

– Obtained by reaction of N-bromosuccinimide with 2,4-Bis(benzyloxy)acetophenone in DMF at r.t. for 3 h (97%) [3829].

White powder [3829]; 1H NMR [3829], MS [3829].**Dimethyl ether** [182056-48-0] $C_{10}H_{11}BrO_3$ mol.wt. 259.10

– Obtained by reaction of acetic anhydride with 1-bromo-2,4-dimethoxybenzene in the presence of boron trifluoride etherate in methylene chloride first at 0°, then at r.t. for 24 h (85%) [3830].

m.p. 149–150° [3830];

 1H NMR [3830], ^{13}C NMR [3830], MS [3830].**1-(5-Bromo-2,3,4-trihydroxyphenyl)ethanone**[870652-37-2] $C_8H_7BrO_4$ mol.wt. 247.05**Described [3734] p. 684**

Syntheses

– Also refer to: [3831,3832].

Trimethyl ether [23030-56-0] $C_{11}H_{13}BrO_4$ mol.wt. 289.13

- Obtained by treatment of 5-bromogallacetophenone with dimethyl sulfate in the presence of sodium hydroxide [3833].
- Also obtained by Friedel–Crafts acetylation of 4-bromopyrogallol trimethyl ether with acetyl chloride in the presence of aluminium chloride in carbon disulfide, then treatment of the compound obtained (partly demethylated) with dimethyl sulfate in the presence of sodium hydroxide [3833].
- Also obtained by reaction of N-bromosuccinimide (NBS) with 2,3,4-trimethoxyacetophenone in acetic acid/acetic anhydride mixture under reflux for 1 h (54%) [3834].
- Also refer to: [3835].

b.p._{0.3} 112–115° [3834], b.p._{0.3} 134–135° [3833], b.p.₁₃ 174–176° [3835];

m.p. 52.5–53° [3834];

¹H NMR [3834], IR [3833].

m.p. 137–139° [3833,3835]; IR [3833,3835].

1-(2-Chloro-3-hydroxyphenyl)ethanone

[69240-96-6] $C_8H_7ClO_2$ mol.wt. 170.60

Described [3734] **p. 684**

Syntheses

- Also refer to: [3836,3837].

1-(2-Chloro-4-hydroxyphenyl)ethanone

[68301-59-7] $C_8H_7ClO_2$ mol.wt. 170.60

Described [3734] **p. 684**

Syntheses

- Also obtained by heating its methyl ether with pyridinium chloride for 15 min (36%) [3765].
- Also refer to: [3838].

Methyl ether [41068-36-4] $C_9H_9ClO_2$ mol.wt. 184.62

- Obtained by reaction of acetyl chloride with 3-chloroanisole in the presence of aluminium chloride (55%) [3839], in carbon disulfide (62%) [3795] or in 1,2-dichloroethane (81%) [3840].
- Also obtained by reaction of acetic anhydride with 3-chloroanisole,
 - in the presence of aluminium chloride [3796,3797], (58%) [3841];
 - in the presence of ferric chloride (50%) [3839].
- Also refer to: [3765,3770,3819,3842–3846].

2,4-Dinitrophenylhydrazone (of the methyl ether) C₁₅H₁₃ClN₄O₅ mol.wt. 364.78
 m.p. 181–183° [3795].

Oxime (of the methyl ether) C₉H₁₀ClNO₂ mol.wt. 199.64
 m.p. 97–98° [3770].

1-(2-Chloro-5-hydroxyphenyl)ethanone

[58020-38-5] C₈H₇ClO₂ mol.wt. 170.60

Described [3734] p. 684

Methyl ether [77344-69-5] C₉H₉ClO₂ mol.wt. 184.52

- Obtained by reaction of dimethylcadmium with 2-chloro-5-methoxybenzoyl chloride [3847].
- Also obtained by reduction of 1-(2-chloro-5-methoxyphenyl)-2-diazoethanone with hydrogen iodide [3847].
- Also refer to: [3801,3848–3850].

b.p.₃ 116° [3801], b.p.₅ 122° [3847];
 UV [3801,3850].

1-(2-Chloro-6-hydroxyphenyl)ethanone

[55736-04-4] C₈H₇ClO₂ mol.wt. 170.60

Described [3734] p. 685

Synthesis

- Also refer to: [3851].

1-(3-Chloro-2-hydroxyphenyl)ethanone

[3226-34-4] C₈H₇ClO₂ mol.wt. 170.60

Described [3734] p. 685

Syntheses

- Also refer to: [3852,3853].

1-(3-Chloro-4-hydroxyphenyl)ethanone[2892-29-7] $C_8H_7ClO_2$ mol.wt. 170.60**Described** [3734] p. 685

Syntheses

- Also obtained by heating its methyl ether with pyridinium chloride for 30 min (54%) [3765].
- Also refer to: [3852,3854].

Methyl ether [37612-52-5] $C_9H_9ClO_2$ mol.wt. 184.62

- Obtained by oxychlorination of 4-methoxyacetophenone (2 mol) with ammonium chloride (2 mol) and oxone (2 mol) in acetonitrile at r.t. for 24 h (68%) [3777].
- Also obtained by heating for 4 h a mixture of 2-chloroanisole,
 - and acetic anhydride in the presence of ferric chloride (40%) [3839];
 - and acetyl chloride in the presence of aluminium chloride (52%) [3839].
- Also refer to: [3744,3765,3808,3855].

b.p.₁₂ 148° [3839]; 1H NMR [3777], ^{13}C NMR [3751,3754], MS [3777].**1-(4-Chloro-2-hydroxyphenyl)ethanone**[6921-66-0] $C_8H_7ClO_2$ mol.wt. 170.60**Described** [3734] p. 686

Syntheses

- Also obtained by Fries rearrangement of 3-chlorophenyl acetate [3766] according to [3767].
- Also refer to: [3762,3766,3856,3857].

Methyl ether [60207-19-4] $C_9H_9ClO_2$ mol.wt. 184.62

- Refer to: [3858,3859]; ^{13}C NMR [3858].

Benzyl ether $C_{15}H_{13}ClO_2$ mol.wt. 260.72

- Obtained by reaction of benzyl chloride with 4-chloro-2-hydroxyacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone for 16 h (59%) [3766].

m.p. 58–59° [3766]; 1H NMR [3766], ^{13}C NMR [3766], MS [3766].**2,4-Dichlorobenzoate** [1023278-89-8] $C_{15}H_9Cl_3O_3$ mol.wt. 343.59

- Obtained by reaction of 4-chloro-2-hydroxyacetophenone with 2,4-dichlorobenzoic acid in the presence of N,N-dicyclohexylcarbodiimide and 4-pyrrolidinopyridine in methylene chloride under nitrogen at r.t. for 24 h (81%) [3766].

m.p. 81–82° [3766]; 1H NMR [3766], ^{13}C NMR [3766], MS [3766].**Oxime** [56484-63-0] $C_8H_8ClNO_2$ mol.wt. 185.62 [3856].

1-(4-Chloro-3-hydroxyphenyl)ethanone[61124-56-9] $C_8H_7ClO_2$ mol.wt. 170.60**Described [3734] p. 687****Methyl ether** [78898-63-2] $C_9H_9ClO_2$ mol.wt. 184.62 [3860]**1-(5-Chloro-2-hydroxyphenyl)ethanone**[1450-74-4] $C_8H_7ClO_2$ mol.wt. 170.60**Described [3734] p. 687**

Syntheses

– Also refer to: [3738,3761,3762,3771,3773,3774,3817,3823,3861], UV [3801].

Methyl ether [6342-64-9] $C_9H_9ClO_2$ mol.wt. 184.62 [3862]

- Obtained by reaction of methylmagnesium bromide with 5-chloro-2-methoxybenzoyl chloride in the presence of bis[2-(N,N-dimethylamino)ethyl] ether in THF at -5° to 0° (69%) [3863].
- Also obtained by heating for 4 h a mixture of acetic anhydride and 4-chloroanisole in the presence of ferric chloride (40%) [3839].
- Also obtained by heating for 4 h a mixture of acetyl chloride and 4-chloroanisole in the presence of aluminium chloride (52%) [3839].
- Also obtained by reaction of methyl iodide with 5-chloro-2-hydroxyacetophenone in the presence of potassium carbonate in acetone at r.t. for 15 h under nitrogen (97%) [3864].
- Also refer to: [3801,3858,3864–3868].

Syntheses

– Also obtained by reaction of acetic acid with 4-chlororesorcinol in the presence of boron trifluoride etherate at 90° for 3.5 h under nitrogen (58%) [3829].

– Also refer to: [3869].

 1H NMR [3829], ^{13}C NMR [3829], MS [3829]; TLC [3829].

Dibenzyl ether [705963-54-8] $C_{22}H_{19}ClO_3$ mol.wt. 366.84

– Obtained by reaction of benzyl bromide with 5-chloro-2,4-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetonitrile for 6 h (90%) [3829].

– Also refer to: [3870–3874].

Off-white solid [3829];

1H NMR [3829], MS [3829]; TLC [3829].

1-(2-Fluoro-4-hydroxyphenyl)ethanone

[98619-07-9] $C_8H_7FO_2$ mol.wt. 154.14

Described [3734] p. 691

Syntheses

– Also refer to: [3788,3862,3875,3876].

Methyl ether [74457-86-6] $C_9H_9FO_2$ mol.wt. 168.17

– Obtained by reaction of acetic anhydride with 3-fluoroanisole in the presence of aluminium chloride in carbon disulfide at r.t., then at 30–35° until no more hydrochloric acid is evolved [3797], (61%) [3796].

– Also obtained by reaction of acetyl chloride with 3-fluoroanisole in the presence of aluminium chloride in 1,2-dichloroethane at 0–5°, then at r.t. for 2 h [3840].

– Also obtained by reaction of acetic anhydride with m-fluoroanisole in the presence of lithium perchlorate at 100° for 1 h (70%) [3798].

– Also refer to: [3770,3862,3877–3881].

Colourless crystals [3796]; m.p. 53–54° [3796];

1H NMR [3796,3797], IR [3796,3797].

1-(2-Fluoro-6-hydroxyphenyl)ethanone

[93339-98-1] $C_8H_7FO_2$ mol.wt. 154.14

Described [3734] p. 691

Syntheses

– Also refer to: [3787,3851,3882–3884].

1-(3-Fluoro-2-hydroxyphenyl)ethanone

[699-92-3] $C_8H_7FO_2$ mol.wt. 154.14

Described [3734] p. 691

Synthesis

– Also refer to: [3851].

Methyl ether [295779-86-1] $C_9H_9FO_2$ mol.wt. 168.17

- Obtained by reaction of 1-fluoro-4-hydroxy-1,4-diazoniabicyclo[2.2.2]octane bis(tetrafluoro-borate) with 2-methoxyacetophenone in refluxing acetonitrile for 0.5–4 h [3885].

1-(3-Fluoro-4-hydroxyphenyl)ethanone

[403-14-5] $C_8H_7FO_2$ mol.wt. 154.14

Described [3734] p. 692

Synthesis

- Also obtained by reaction of 1-fluoro-4-hydroxy-1,4-diazoniabicyclo[2.2.2]octane bis(tetrafluoroborate) with 4-hydroxyacetophenone in refluxing acetonitrile for 0.5–4 h [3885].

Methyl ether [455-91-4] $C_9H_9FO_2$ mol.wt. 168.17

- Obtained by fluorination of 4-methoxyacetophenone with manganese (IV) tetrafluoride formed in situ using manganese (IV) dioxide and pyridinium polyhydrogenofluoride under very mild conditions [3789].
- Also obtained by reaction of 1-fluoro-4-hydroxy-1,4-diazoniabicyclo[2.2.2]octane bis(tetrafluoroborate) with 4-methoxyacetophenone in refluxing acetonitrile for 0.5–4 h [3885].
- Also refer to: [3744,3886–3888].
 ^{13}C NMR [3754], MS [3789].

1-(4-Fluoro-2-hydroxyphenyl)ethanone

[1481-27-2] $C_8H_7FO_2$ mol.wt. 154.14

Described [3734] p. 692

Syntheses

- Also obtained by Friedel–Crafts acylation of m-fluorophenol with acetic acid in a mixture of graphite and methanesulfonic acid at 120° for 4 h (60%) [3889].
- Also obtained by Fries rearrangement of 3-fluorophenyl acetate in the presence of aluminium chloride (88%) [3890], at 140° for 2 h (48%) [3891].
- Also refer to: [3741,3892–3897].

1H NMR [3889,3891,3898], ^{13}C NMR [3889], ^{19}F NMR [3899], IR [3889,3891,3900].

BIOLOGICAL DATA: Cytotoxicity [3891]; anticoagulant [3891]; antithrombotic [3901].

Methyl ether [51788-80-8] $C_9H_9FO_2$ mol.wt. 168.17

- Preparation by reaction of methyl iodide with 4-fluoro-2-hydroxyacetophenone in the presence of potassium carbonate,
 - in DMSO at r.t. for 1 h (100%) [3902];
 - in acetone (97%) [3890].

- Preparation by reaction of methyl iodide on the Na salt of 4-fluoro-2-hydroxyacetophenone obtained by treatment with sodium hydride in DMF at 0° for 1 h (92%) [3903].
- Preparation by reaction of dimethyl sulfate with 4-fluoro-2-hydroxyacetophenone in the presence of aqueous sodium hydroxide [3899].
- Also obtained by reaction of acetic anhydride with m-fluoroanisole in the presence of lithium perchlorate at 100° for 1 h (30%) [3798].
- Also refer to: [3904].

White solid; m.p. 50–51.5° [3902];

¹H NMR [3902], ¹⁹F NMR [3899], MS [3902].

1-(4-Fluoro-3-hydroxyphenyl)ethanone

[949159-95-9] C₈H₇FO₂ mol.wt. 154.14

New compound

Synthesis

– Refer to: [3905].

Methyl ether [64287-19-0] C₉H₉FO₂ mol.wt. 168.17 [3905,3906]

1-(5-Fluoro-2-hydroxyphenyl)ethanone

[394-32-1] C₈H₇FO₂ mol.wt. 154.14

Described [3734] p. 692

Syntheses

- Also obtained by reaction of acetyl chloride with 4-fluorophenol in the presence of aluminium chloride, first at r.t. for 30 min, then at 130° for 2 h (89%) [3907].
- Also refer to: [3741,3773,3861,3908–3910].

m.p. 53–54° [3907]; UV [3801].

Methyl ether [455-82-9] C₉H₉FO₂ mol.wt. 168.17

- Also obtained by reaction of 1-fluoro-4-hydroxy-1,4-diazoniabicyclo[2.2.2]octane bis(tetra-fluoroborate) with 2-methoxyacetophenone in refluxing acetonitrile for 0.5–4 h [3885].

UV [3801].

1-(2-Hydroxy-4-iodophenyl)ethanone

[39730-66-0] C₈H₇IO₂ mol.wt. 262.05

Described [3734] p. 694

Syntheses

- Also obtained by Fries rearrangement of 3-iodophenyl acetate (m.p. 32.4–34.6°) with aluminium chloride in chlorobenzene at 140° for 90 h (69%) [3911].

– Also refer to: [3912].

brown solid [3911]; m.p. 51.5–52° [3911];

¹H NMR [3911], ¹³C NMR [3911], IR [3911], MS [3911].

1-(2-Hydroxy-5-iodophenyl)ethanone

[7191-41-5] C₈H₇IO₂ mol.wt. 262.05

Described [3734] p. 694

Synthesis

– Also obtained by diazotization of 5-amino-2-hydroxyacetophenone and replacement of the diazonium salt by iodine (39%) [3911].

Purple oil [3911].

1-(3-Hydroxy-2-iodophenyl)ethanone

[348616-32-0] C₈H₇IO₂ mol.wt. 262.05

Described [3734] p. 694

Methyl ether [110718-83-7] C₉H₉IO₂ mol.wt. 276.07

– Refer to: [3913–3916], (61%) [3917].

Pale yellow oil [3917];

¹H NMR [3914,3917], ¹³C NMR [3914,3917], IR [3917], MS [3917].

1-(4-Hydroxy-2-iodophenyl)ethanone

[89942-32-5] C₈H₇IO₂ mol.wt. 262.05

Described [3734] p. 695

Synthesis

– Obtained by Fries rearrangement of 3-iodophenyl acetate in the presence of aluminium chloride in nitrobenzene [3918].

m.p. 128–136° [3918].

Methyl ether [90347-63-0] C₉H₉IO₂ mol.wt. 276.07

– Obtained by reaction of acetyl chloride with 3-iodoanisole in the presence of aluminium chloride in carbon disulfide [3919], (55%) [3795].

– Also refer to: [3807,3915], (37%) [3917].

b.p._{0.01} 107–109° [3807], b.p.₃ 139–140° [3919], b.p.₆ 158–159° [3795], b.p._{9.5} 168–170° [3795];

m.p. 68–70° [3795], 45–47° [3919]. One of the reported melting points is obviously wrong.

¹H NMR [3807,3917], ¹³C NMR [3917], IR [3807,3917], MS [3917].

2,4-Dinitrophenylhydrazone (of the methyl ether) C₁₅H₁₃IN₄O₅ mol.wt. 456.20

m.p. 137–140° [3919], 108.5–109° [3795].

1-(4-Hydroxy-3-iodophenyl)ethanone

[62615-24-1] C₈H₇IO₂ mol.wt. 262.05

Described [3734] p. 695

Syntheses

- Also obtained by adding iodine to a solution of 4-hydroxyacetophenone in dilute THF in the presence of sodium bicarbonate and stirring at r.t. for 3 h (47%) [3920].
- Also obtained by adding rapidly a solution of potassium iodide and iodine in water to a solution of 4-hydroxyacetophenone in concentrated ammonium hydroxide. After overnight stirring at r.t., the mixture was filtered through Celite and the filtrate acidified to pH 1 (56%) [3921].
- Also refer to: [3922,3923].

m.p. 154–156° [3921], 152–154° [3920];

¹H NMR [3920], MS [3920].

Methyl ether [79324-77-9] C₉H₉IO₂ mol.wt. 276.07 [3924]

¹³C NMR [3754].

1-(2-Hydroxy-3-nitrophenyl)ethanone

[28177-69-7] C₈H₇NO₄ mol.wt. 181.15

Described [3734] p. 697

Synthesis

- Also refer to: [3744].

1-(2-Hydroxy-5-nitrophenyl)ethanone

[1450-76-6] C₈H₇NO₄ mol.wt. 181.15

Described [3734] p. 698

Syntheses

- Also refer to: [3892,3908].

1-(3-Hydroxy-2-nitrophenyl)ethanone[53967-72-9] $C_8H_7NO_4$ mol.wt. 181.15**Described** [3734] p. 698

Synthesis

- Obtained by nitration of 3-hydroxyacetophenone with cupric nitrate in acetic acid–acetic anhydride mixture, at 10–15° for 7–8 h (25%) [3925].

Yellow solid; m.p. 134–136° [3925];
 1H NMR [3925], ^{13}C NMR [3925], IR [3925].

Methyl ether [33852-43-6] $C_9H_9NO_4$ mol.wt. 195.17 [3926]**1-(3-Hydroxy-4-nitrophenyl)ethanone**[89942-63-2] $C_8H_7NO_4$ mol.wt. 181.15**Described** [3734] p. 699

Synthesis

- Also refer to: [3927].

Methyl ether [22106-39-4] $C_9H_9NO_4$ mol.wt. 195.17

- Refer to: [3928].

1-(4-Hydroxy-3-nitrophenyl)ethanone[6322-56-1] $C_8H_7NO_4$ mol.wt. 181.15**Described** [3734] p. 699

Syntheses

- Also obtained by nitration of 4-hydroxyacetophenone with zirconyl nitrate in acetone at 50° for 5 h (84%) [3929].
- Also refer to: [3930–3932].

Methyl ether [6277-38-9] $C_9H_9NO_4$ mol.wt. 195.17

- Preparation by reaction of acetyl chloride with 2-nitroanisole in the presence of aluminium chloride,
 - in nitrobenzene at 0° [3933,3934];
 - in carbon disulfide [3935].
- Also obtained by reaction of dimethyl sulfate with 4-hydroxy-3-nitroacetophenone in the presence of lithium hydroxide hydrate in THF at 70° for 1.5 h (72%) [3936].
- Also obtained by treatment of 4-chloro-3-nitroacetophenone with sodium methoxide in methanol [3937].
- Also obtained by reaction of diazomethane with 4-hydroxy-3-nitroacetophenone in ethyl ether [3938].

- Also obtained by treatment of 4-methoxyacetophenone,
 - with nitric acid in sulfuric acid at 0° [3939];
 - with lithium nitrate in the presence of scandium triflate in acetic anhydride and acetonitrile mixture at 20° for 5 h (67%) [3940].
- Also refer to: [3754,3941–3947], (14%) [3948].
 m.p. 99.5° [3935], 98° [3943,3945], 97–99° [3937], 92–94° [3940].
¹H NMR [3940], ¹³C NMR [3754,3938], IR [3940,3942], UV [3757].

1-(5-Hydroxy-2-nitrophenyl)ethanone

[30879-49-3] C₈H₇NO₄ mol.wt. 181.15

Described [3734] p. 700

Methyl ether [42887-67-2] C₉H₉NO₄ mol.wt. 195.17

– Refer to: [3949].

1-(2,4-Dihydroxy-5-nitrophenyl)ethanone

[3328-77-6] C₈H₇NO₅ mol.wt. 197.15

Described [3734] p. 701

Synthesis

- Also obtained by nitration of resacetophenone with zirconyl nitrate in acetone at 50° for 5 h (98%) [3929].

1-(3,4-Dihydroxy-2-nitrophenyl)ethanone

[383382-42-1] C₈H₇NO₅ mol.wt. 197.15

New compound

Synthesis

- Obtained from 4-hydroxy-3-methoxy-2-nitroacetophenone by ether cleavage with aluminium chloride in a pyridine/1, 2-dichloroethane mixture [3950].

1-(3,4-Dihydroxy-5-nitrophenyl)ethanone

[116313-84-9] C₈H₇NO₅ mol.wt. 197.15

Described [3734] p. 703

Synthesis

- Also refer to: [3951].

1-(3-Amino-5-bromo-2-hydroxyphenyl)ethanone[70977-85-4] $C_8H_8BrNO_2$ mol.wt. 230.06**Described** [3734] p. 703

Synthesis

– Also refer to: [3952].

1-(2-Hydroxyphenyl)ethanone[118-93-4] $C_8H_8O_2$ mol.wt. 136.15**Described** [3734] p. 706

Syntheses

– Also obtained by heating its methyl ether with pyridinium chloride for 15 min (52%) [3765].

– Also obtained by reaction of acetyl chloride with phenol in the presence of aluminium chloride at 120° [3953].

Oil [3953]; IR [3954], UV [3801,3955,3956].

Methyl ether [579-74-8] $C_9H_{10}O_2$ mol.wt. 150.18

– Preparation by reaction of dimethyl sulfate with o-hydroxyacetophenone in the presence of sodium hydroxide [3953].

– Also refer to: [3859,3957], (2%) [3765,3917].

Oil; b.p.₁₀ 117–119° [3953].¹H NMR [3917], ¹³C NMR [3858,3917], IR [3917,3954], UV [3801,3955,3956].**Oxime** (of the methyl ether) [22233-79-0] $C_9H_{11}NO_2$ mol.wt. 165.19 [3958]**Acetate** $C_{10}H_{10}O_3$ mol.wt. 178.19

– Preparation by reaction of acetic anhydride with o-hydroxyacetophenone [3953].

m.p. 89° [3953]; IR [3954].

Benzoate $C_{15}H_{12}O_3$ mol.wt. 240.26

– Obtained by reaction of benzoyl chloride with o-hydroxyacetophenone in suspension of 2 N sodium hydroxide solution at r.t. for 20 min (80%) [3959].

m.p. 87–88° [3959]; IR [3954].

Benzyl ether [31165-67-0] $C_{15}H_{14}O_2$ mol.wt. 226.27 [3960]

1-(3-Hydroxyphenyl)ethanone[121-71-1] $C_8H_8O_2$ mol.wt. 136.15**Described** [3734] **p. 709**

Syntheses

- Obtained by bioconversion of acetophenone through the living cells of *Escherichia coli* carrying plasmid pKF6256 expressing *todCI-bphA2A3A4* (6.1%) [3961].
- Also obtained by heating its methyl ether with pyridinium chloride for 30 min (19%) [3765].
- Also obtained by diazotization of 3-aminoacetophenone, followed by hydrolysis of the diazonium salt obtained [3953].
- Also refer to: [3957,3962].

m.p. 96° [3953];

 1H NMR [3961], ^{13}C NMR [3961], UV [3801,3956,3963], MS [3961].**Methyl ether** [586-37-8] $C_9H_{10}O_2$ mol.wt. 150.18

- Refer to: [3808,3957], (84%) [3765,3917].

Colourless oil [3917];

 1H NMR [3917], ^{13}C NMR [3917], IR [3917], UV [3801,3955,3956].**Oxime** (of the methyl ether) [122806-25-1] $C_9H_{11}NO_2$ mol.wt. 165.19 [3958]**Acetate** $C_{10}H_{10}O_3$ mol.wt. 178.19

- Obtained by reaction of acetic anhydride with 3-hydroxyacetophenone in the presence of pyridine [3953].

1-(4-Hydroxyphenyl)ethanone[99-93-4] $C_8H_8O_2$ mol.wt. 136.15**Described** [3734] **p. 710**

Syntheses

- Also obtained by heating its methyl ether with pyridinium chloride for 60 min (54%) [3765].
- Also obtained by reaction of acetyl chloride with phenol in the presence of aluminium chloride at 120° [3953].
- Also refer to: [3954,3957,3964].

m.p. 107° [3953]; IR [3954], UV [3801,3956].

Methyl ether [100-06-1] $C_9H_{10}O_2$ mol.wt. 150.18

- Preparation by reaction of acetic acid with anisole in the presence of trifluoromethyl sulfonic anhydride (Tf_2O) for <1 min at r.t. (91%) [3965].
- Also obtained by reaction of acetic anhydride with anisole in the presence of aluminium chloride in carbon disulfide (94–96%) [3966], at r.t., then at 30–35° until no more hydrochloric acid [3796,3797].

- Preparation by reaction of dimethyl sulfate with p-hydroxyacetophenone in the presence of sodium hydroxide [3953].
- Also refer to: [3808,3957,3967,3968], (37%) [3765,3917].
b.p.₁₅ 139° [3966]; m.p. 36–37.5° [3966], 35° [3953];

UV [3801,3956].

Oxime (of the methyl ether) [2475-92-5] C₉H₁₁NO₂ mol.wt. 165.19
[3958,3969]

Acetate [13031-43-1] C₁₀H₁₀O₃ mol.wt. 178.19

- Preparation by acetylation of 4-hydroxyacetophenone with acetic anhydride,
 - in the presence of aluminium triflate for 10 min at r.t. (98%) [3964];
 - in the presence of sodium acetate [3953].
- Also refer to: [3954,3962].
b.p.₁₉ 165–170° [3970];
m.p. 54° [3953], 52–54° [3971], 52° [3972];
¹H NMR [3973,3974], ¹³C NMR [3973], IR [3954,3973], UV [3975],
MS [3976].
Ecotoxicology: [3977].

Benzyl ether [54696-05-8] C₁₅H₁₄O₂ mol.wt. 226.27 [3960]

- Obtained by reaction of benzyl chloride with 4-hydroxyacetophenone in the presence of KOH in acetonitrile. Then, the mixture was refluxed for 3 h [3978].
- Also refer to: [3960].

1-(2,3-Dihydroxyphenyl)ethanone

[13494-10-5] C₈H₈O₃ mol.wt. 152.15

Described [3734] **p. 713**

Syntheses

- Also obtained by bioconversion of acetophenone through the living cells of *Escherichia coli* carrying plasmid pUC6256B expressing *todCI-bphA2A3A4* and *bphB* (39.2%) [3961].
- Also refer to: [3895].
¹H NMR [3961], ¹³C NMR [3961], UV [3956], MS [3961].

Diacetate C₁₂H₁₂O₅ mol.wt. 236.22

- Obtained by heating 2,3-dihydroxyacetophenone with acetic anhydride and sodium acetate at reflux for 5 min (50%) [3979].
m.p. 109° [3979].

Dimethyl ether [38480-94-3] $C_{10}H_{12}O_3$ mol.wt. 180.20

- Obtained by heating its oxime with pyridinium chloride containing 5% of water (35%) [3980].
- Also obtained by reaction of methylmagnesium iodide with 2,3-dimethoxybenzonitrile [3981], (57%) [3982].
- Also obtained from 2,3-dimethoxybenzaldehyde (multi-step reaction) [3983].
- Also obtained from diethyl malonate and 2,3-dimethoxybenzoyl chloride [3984].
- Also obtained by treatment of ethyl 3-(2,3-dimethoxyphenyl)-3-oxopropionate with sulfuric acid [3985].
- Also obtained by oxidation of 1-hydroxy-1-(2,3-dimethoxyphenyl)ethane with Jones' reagent in acetone (61%) [3986].
- Also obtained from acetyl chloride and veratrole by the procedure [3987], (71%) [3988].
- Also obtained by adding an acidic dichromate solution to 2,3-dimethoxyphenyl-methylcarbinol in 67% aqueous acetone below 10° (65%) [3989].
- Also refer to: [3990,3991].

b.p.₁₄ 146–147° [3955], b.p.₂₀ 150° [3980], b.p.₂₀ 150–153° [3984];
¹H NMR [3982,3983], IR [3982,3986], UV [3955,3956,3963].

Oxime [870-70-1] $C_8H_9NO_3$ mol.wt. 167.16 [3737]

1-(2,4-Dihydroxyphenyl)ethanone

[89-84-9] $C_8H_8O_3$ mol.wt. 152.15

Described [3734] p. 714

Syntheses

- Also obtained by heating its dimethyl ether with pyridinium chloride for 30 min (80%) [3765].
 - Also refer to: [3954].
- IR [3954], UV [3956,3963].

Dimethyl ether [829-20-9] $C_{10}H_{12}O_3$ mol.wt. 180.20

- Obtained by reaction of dimethyl sulfate with resacetophenone in the presence of 10% aqueous sodium hydroxide (61%) [3953].
- Also obtained by reaction of acetic anhydride with resorcinol dimethyl ether in the presence of aluminium chloride in carbon disulfide (77–80%) [3966], at r.t., then at 30–35° until no more hydrochloric acid [3796,3797].
- Also refer to: [3765,3859,3962,3992–3995].

b.p.₇ 157.5° [3966];

m.p. 40° [3953], 39–40° [3966], 37–41.5° [3984];

¹H NMR [3796,3797], ¹³C NMR [3858], IR [3796,3797,3954], UV [3801,3956,3963].

Diacetate $C_{12}H_{12}O_5$ mol.wt. 236.22 IR [3954].

Dibenzyl ether [22877-01-6] $C_{22}H_{20}O_3$ mol.wt. 332.40

- Obtained by reaction of benzyl bromide with resacetophenone in the presence of potassium carbonate in refluxing acetonitrile for 18 h (97%) [3829].
- Also refer to: [3870–3874].

White powder [3829]; 1H NMR [3829], MS [3829].

Oxime [6134-79-8] $C_8H_9NO_3$ mol.wt. 167.16 [3737]

1-(2,5-Dihydroxyphenyl)ethanone

[490-78-8] $C_8H_8O_3$ mol.wt. 152.15

Described [3734] p. 716

Syntheses

- Also obtained by action of aluminium chloride with a mixture of hydroquinone dimethyl ether and 3,3-dimethylacryloyl chloride in boiling benzene for 3 h [3996].
- Also obtained by treatment of 2',5'-dihydroxy-3,3-dimethylacrylophenone with aluminium chloride in boiling benzene for 2 h (56%) [3996].
- Also obtained by heating its methyl ether with pyridinium chloride for 30 min (96%) [3765].
- Also obtained by reaction of acetic acid with hydroquinone in the presence of zinc chloride at 140–150° [3953].
- Also refer to: [3895,3997–3999].

m.p. 202–204° [3996]; UV [3801,3956,3963].

Dibenzoate $C_{22}H_{16}O_5$ mol.wt. 360.37

m.p. 114° [3996].

Dimethyl ether [1201-38-3] $C_{10}H_{12}O_3$ mol.wt. 180.20

- Obtained by reaction of dimethyl sulfate with quinacetophenone in the presence of 10% aqueous sodium hydroxide [3953].
- Also refer to: [3765,3993,3995,4000–4002].

b.p.₈ 149–154° [3984], b.p.₁₃ 159–162° [3953];
UV [3955,3956].

Oxime [24558-42-7] $C_8H_9NO_3$ mol.wt. 167.16

- Refer to: [3737,3996].

m.p. 152° [3996].

1-(2,6-Dihydroxyphenyl)ethanone[699-83-2] $C_8H_8O_3$ mol.wt. 152.15**Described** [3734] p. 718

Syntheses

– Also refer to: [3822,3931,3997,4003–4013].

UV [3956,3963].

Dimethyl ether [2040-04-2] $C_{10}H_{12}O_3$ mol.wt. 180.20 [3992,3993]

UV [3956,3963].

Dibenzyl ether $C_{22}H_{20}O_3$ mol.wt. 332.40

- Preparation by reaction of benzyl bromide with 2,6-dihydroxyacetophenone in the presence of potassium carbonate and sodium iodide in refluxing acetone for 18 h (46%) [4006].

1-(3,4-Dihydroxyphenyl)ethanone[1197-09-7] $C_8H_8O_3$ mol.wt. 152.15**Described** [3734] p. 718

Synthesis

– Also refer to: [3738]; UV [3956].

Dimethyl ether [1131-62-0] $C_{10}H_{12}O_3$ mol.wt. 180.20*(Acetoveratrone)*

- Obtained by reaction of dimethyl sulfate with acetoguaiacone [4014] in the presence of sodium hydroxide in ethanol, first at 50°, then at reflux for 1 h (78%) [4015].
- Using tungstophosphoric acid supported over zirconia in mesoporous channels of MCM-41 as catalyst in veratrole acetylation [4016].
- Preparation by reaction of acetic acid with veratrole in the presence of trifluoromethyl sulfonic anhydride (Tf_2O) for 3 min at r.t. (95%) [3965].
- Also refer to: [3738,3808,3967,4017–4024].

Isolation from natural sources

- Recovery of residual plant components after distillation of essential oils (*Mentha longifolia*) [4025].
- From the fresh *Iris* rhizomes (0.47%) [4026].

b.p._{2,3} 135–136° [4014], b.p._{7,5} 160–164° [3984];m.p. 50–51° [4015]; ¹H NMR [4014], UV [3801,3956,4015].

Diacetate $C_{12}H_{12}O_5$ mol.wt. 236.22

- Obtained by reaction of acetic anhydride with pyrocatechol (40%) [4027].
m.p. 87.8–88.2° [4027].

1-(3,5-Dihydroxyphenyl)ethanone

[51863-60-6] $C_8H_8O_3$ mol.wt. 152.15

Described [3734] p. 720

Syntheses

- Also refer to: [3738,3964,3991,4011,4028–4032].
UV [3956].

Hydrate (1:1) [957864-27-6] $C_8H_8O_3, H_2O$ mol.wt. 170.17

- Refer to: [4033].

Diacetate [35086-59-0] $C_{12}H_{12}O_5$ mol.wt. 236.22

- Preparation by acetylation of 3,5-dihydroxyacetophenone with acetic anhydride in the presence of aluminium triflate for 20 min at r.t. (96%) [3964].
- Also obtained by reaction of dimethylcadmium with 3,5-diacetoxybenzoyl chloride in benzene [4034].
- Also refer to: [3954,4035–4038].
b.p._{0.6} 165–168° [4034]; m.p. 93° [4034], 91–92° [4038].

^{14}C -3,5-(Diacetoxyphenyl)ethanone [62492-84-6] $C_{11}^{(14)}CH_{12}O_5$ mol.wt. 238.21

- Obtained by reaction of acetyl chloride with ^{14}C -3,5-dihydroxyacetophenone [4039].
m.p. 91–93° [4039].

Dimethyl ether [39151-19-4] $C_{10}H_{12}O_3$ mol.wt. 180.20

- Obtained by reaction of acetyl chloride with 3,5-dimethoxybenzene according to [3987], (84%) [3988].
- Also refer to: [3991,4040,4041].
UV [3956].

1-(2,3,4-Trihydroxyphenyl)ethanone (*Gallacetophenone*)

[528-21-2] $C_8H_8O_4$ mol.wt. 168.15

Described [3734] p. 720

Syntheses

- Obtained by reaction of acetic acid with pyrogallol in the presence of zinc chloride at 145–150° [3953].
- Also refer to: [3814,4042].

Trimethyl ether [13909-73-4] $C_{11}H_{14}O_4$ mol.wt. 210.23

- Obtained by reaction of dimethyl sulfate with gallacetophenone in methanol in the presence of potassium hydroxide [3953].
- Also refer to: [4043].

Isolation from natural sources

- From the essential oil in buds of *Syringa oblata* Lindl (lilac) [4044].
Oil [3953];
b.p.₁₄ 172–172.5° [3953], b.p.₁₇ 170–178° [3984]; GC-MS [4044].

1-(2,3,5-Trihydroxyphenyl)ethanone

[316819-88-2] $C_8H_8O_4$ mol.wt. 168.15

New compound

Syntheses

- Refer to: in 2006 [3737,3738].

N.B.: The compound previously obtained in 1983 actually was 2,4,5-trihydroxyacetophenone [4045,4046].

1-(2,3,6-Trihydroxyphenyl)ethanone

[85918-30-5] $C_8H_8O_4$ mol.wt. 168.15

Described [3734] p. 721

Syntheses

- Also refer to: [3737,3738].

1-(2,4,5-Trihydroxyphenyl)ethanone

[1818-27-5] $C_8H_8O_4$ mol.wt. 168.15

Described [3734] p. 721

Synthesis

- Also refer to: [3738].

UV [3963].

Trimethyl ether [1818-28-6] $C_{11}H_{14}O_4$ mol.wt. 210.23

- Preparation by reaction of acetyl chloride with hydroxyhydroquinone trimethyl ether in the presence of aluminium chloride [4047], (quantitative yield) [3953].
- Also obtained by reaction of acetic anhydride with 1,2,4-trimethoxybenzene in the presence of iodine on heating for 18 h (88%) [4048].

- Also obtained by reaction of dimethyl sulfate,
 - with 2,4,5-triacetoxyacetophenone in the presence of sodium methoxide in methanol [4047,4049];
 - with 2,4,5-trihydroxyacetophenone in the presence of sodium hydroxide in dilute ethanol [4046,4050] or sodium methoxide in methanol [4047,4049];
 - with 2,5-dihydroxy-4-methoxyacetophenone in the presence of sodium methoxide in methanol [4051];
 - with 2-hydroxy-4,5-dimethoxyacetophenone in the presence of sodium methoxide in methanol [4051] or in the presence of potassium hydroxide [4052].
- Also obtained by treatment of 2',4',5,5',6,7,8-heptamethoxyflavone with 50% potassium hydroxide in methanol [4053].
- Also obtained by irradiation of 2,3-bis(2,4,5-trimethoxyphenyl)-2,3-butanediol in the presence of carbon tetrachloride in acetonitrile [4054].
- Also refer to: [4055–4057].

b.p.₃₃ 285–290° [4047,4049];

m.p. 102–103° [4046,4056], 102° [3953,4047,4055], 101° [4050], 99° [4052], 98–98.5° [4048], 96–100° [3984], 95–96° [4057];

¹H NMR [4048,4053,4058], ¹³C NMR [4048,4058], IR [4053,4057,4058], UV [3801],

MS [4053,4058].

BIOLOGICAL ACTIVITY: Toxicity [4058,4059]; hypolipaemic [4058]; activity on second instar larvae of the cotton bug, *Dysdercus cingulatus* [4059].

1-(2,4,6-Trihydroxyphenyl)ethanone

[480-66-0]

C₈H₈O₄ mol.wt. 168.15

Described [3734] p. 722

Syntheses

- Also obtained by heating its trimethyl ether with pyridinium chloride for 15 min (53%) [3765].
 - Also obtained by reaction of acetyl chloride with phloroglucinol in the presence of aluminium chloride at 50° (70%) [4060].
- UV [3963].

Tribenzoate C₂₉H₂₀O₇ mol.wt. 480.47

¹H NMR [4008], ¹³C NMR [4008], MS [4008].

Trimethyl ether [832-58-6] C₁₁H₁₄O₄ mol.wt. 210.23

- Preparation by reaction of dimethyl sulfate with phloroacetophenone [3953].
 - Also obtained by reaction of acetic acid with phloroglucinol trimethyl ether in the presence of PPA on a boiling water bath for 5–20 min (76%) [4061].
 - Also refer to: [3765,3825,3931].
- m.p. 102° [4061], 93.5–104° [3984], 91° [3953]; UV [3963].

1-(3,4,5-Trihydroxyphenyl)ethanone[33709-29-4] $C_8H_8O_4$ mol.wt. 168.15**Described** [3734] p. 723

Synthesis

– Also refer to: [3738].

Trimethyl ether [1136-86-3] $C_{11}H_{14}O_4$ mol.wt. 210.23

- Obtained by treatment of a mixture of methyl 3,4,5-trimethoxybenzoate (m.p. 82°) and ethyl acetate with sodium on a water boiler for 8 h, then with 25% sulfuric acid [3953].
- Also refer to: [3825,3931,3967,4021,4022,4062].

b.p.₅ 160° [3953];

m.p. 78–81.5° [3984], 72° [3953]; GC-MS [3967].

1-(2,3,4,6-Tetrahydroxyphenyl)ethanone[63635-39-2] $C_8H_8O_5$ mol.wt. 184.15**Described** [3734] p. 724

Synthesis

– Also refer to: [4063].

Tetramethyl ether [7508-05-6] $C_{12}H_{16}O_5$ mol.wt. 240.26

- Preparation by reaction of acetyl chloride with 1,2,3,5-tetramethoxybenzene (m.p. 47°) [3953], in the presence of aluminium chloride [4064–4066], (quantitative yield) [3953].
- Also obtained by treatment of 1,2,3,5-tetramethoxybenzene with acetic anhydride in the presence of $In(CF_3SO_3)_3$ on microwave irradiation at 85–95° for 3 min (87%) [4067] or 6 min at 75–90° (53%) [4068].
- Also obtained by treatment of 2-hydroxy-3,4,6-trimethoxyacetophenone with dimethyl sulfate in ethyl acetate/chloroform mixture [4069] or in the presence of potassium carbonate in boiling acetone for 10 h [4070].
- Also obtained by reaction of excess dimethyl sulfate with 3,6-dihydroxy-2,4-dimethoxy-acetophenone in the presence of potassium carbonate in refluxing acetone for 24 h [4071].
- Also obtained by treatment of (*E*)-1-(2,3,4,6-tetramethoxyphenyl)-2-buten-1-one with 15% potassium hydroxide in boiling dilute ethanol for 7 h [4070].
- Also obtained by reaction of methyl acetate with 1,2,3,5-tetramethoxybenzene in the presence of PPA [4072].
- Also obtained by treatment of sinensetin with potassium hydroxide in dilute ethanol, followed by methylation of the product so obtained [4073].

Isolation from natural sources

- From liverwort *Adelanthus decipiens* [4074].

b.p._{0,2} 116–118° [4075], 310° [4064,4076];
 crystals [4071];
 m.p. 55–56° [4077], 54° [3953], 53–54° [4065,4066],
 53° [4073], 49.5–51° [4067], 48–50° [4076];
¹H NMR [4070,4074,4075], IR [4070,4075].

1-(Pentahydroxyphenyl)ethanone

[881672-75-9] C₈H₈O₆ mol.wt. 200.15

New compound

Synthesis

– Refer to: [3737].

1-(2-Amino-3-hydroxyphenyl)ethanone

[4502-10-7] C₈H₉NO₂ mol.wt. 151.17

Described [3734] p. 724

Synthesis

– Also obtained by bioconversion of nitro precursor using recombinant *Escherichia coli* strains [4078].

1-(2-Amino-4-hydroxyphenyl)ethanone

[90033-64-0] C₈H₉NO₂ mol.wt. 151.17

Described [3734] p. 725

Methyl ether (Hydrochloride) [335104-63-7] C₉H₁₁NO₂, HCl mol.wt. 201.65

– Refer to: [4079].

1-(3-Amino-2-hydroxyphenyl)ethanone

[70977-72-9] C₈H₉NO₂ mol.wt. 151.17

Described [3734] p. 726

Syntheses

– Also obtained by bioconversion of nitro precursor using recombinant *Escherichia coli* strains [4078].

– Also refer to: [4080].

1-(3-Amino-4-hydroxyphenyl)ethanone[54255-50-4] $C_8H_9NO_2$ mol.wt. 151.17**Described** [3734] p. 727

Syntheses

- Also obtained by reduction of 4-hydroxy-3-nitro-acetophenone by catalytic hydrogenation with hydrogen in the presence of,
 - Pd/C in ethanol [3932];
 - Pt on carbon disulfide in ethanol [3932].

– Also refer to: [4081,4082].

1-(4-Amino-2-hydroxyphenyl)ethanone[2476-29-1] $C_8H_9NO_2$ mol.wt. 151.17**Described** [3734] p. 728

Synthesis

- Also refer to: [3809].

1-(5-Amino-2-hydroxyphenyl)ethanone[50-80-6] $C_8H_9NO_2$ mol.wt. 151.17**Described** [3734] p. 728

Syntheses

- Also obtained by refluxing a suspension of N-(3-acetyl-4-hydroxyphenyl)acetamide in 15% hydrochloric acid for 40 min (84%) [3911].
- Also refer to: [3809].

Green solid [3911]; 1H NMR [3911], ^{13}C NMR [3911], MS [3911].**Methyl ether** [85276-70-6] $C_9H_{11}NO_2$ mol.wt. 201.65

- Obtained by treatment of 2-methoxy-5-nitroacetophenone in ethanol and granulated tin with hydrochloric acid ($d = 1.18$) at 25° for 16 h (65%) [4085].
- Also obtained by Fries rearrangement of 4-(N-acetylamino)anisole in the presence of lithium perchlorate and ytterbium triflate in nitromethane at 100° for 8 h [4086].
- Also refer to: [3858,4087].

b.p._{0.25} 125 – 127° [4085]; m.p. 91° [4086]; 1H NMR [4086], ^{13}C NMR [3858], IR [4086].

Hydrochloride (of the methyl ether) $C_9H_{11}NO_2$, HCl mol.wt. 201.65 m.p. 186° (d) [4085]

1-(3-Amino-2,4-dihydroxyphenyl)ethanone

[909255-13-6] $C_8H_9NO_3$ mol.wt. 167.16

New compound

Syntheses

– Refer to: [4082,4088].

m.p. 216–218° [4088]; 1H NMR [4088], MS [4088].

1-[2-Hydroxy-6-(trifluoromethyl)phenyl]ethanone

[1024605-96-6] $C_9H_7F_3O_2$ mol.wt. 204.15

New compound

Synthesis

– Refer to: [3851].

1-[4-Hydroxy-3-(trifluoromethyl)phenyl]ethanone

[149105-11-3] $C_9H_7F_3O_2$ mol.wt. 204.15

Described [3734] p. 730

Synthesis

– Also refer to: [4089].

Methyl ether [149105-10-2] $C_{10}H_9F_3O_2$ mol.wt. 218.18

– Refer to: [4089].

3-Acetyl-4-hydroxybenzonitrile

[35794-84-4] $C_9H_7NO_2$ mol.wt. 161.16

New compound

Syntheses

– Obtained by heating a mixture of 4-cyanophenyl acetate and aluminium chloride at 180–185° for 2 h (58%) [4090].

– Also refer to: [4091].

m.p. 103° [4091], 100–101° [4090]; 1H NMR [4090], IR [4090], UV [4090].

1-(2,6-Dibromo-3-methoxyphenyl)ethanone $C_9H_8Br_2O_2$ mol.wt. 307.97**New compound****Synthesis**

- Obtained from 3-methoxyacetophenone by reaction of hypobromous acid, generated in situ, in aqueous acetic acid containing perchloric acid catalyst at r.t. (14–15%) [3805].

 1H NMR [3805].**Oxime** $C_9H_9Br_2NO_2$ mol.wt. 322.98 [3805]**1-(4,6-Dibromo-3-methoxyphenyl)ethanone** $C_9H_8Br_2O_2$ mol.wt. 307.97**New compound****Synthesis**

- Obtained from 3-methoxyacetophenone by reaction of hypobromous acid, generated in situ, in aqueous acetic acid containing perchloric acid catalyst at r.t. (2–3%) [3805].

 1H NMR [3805].**Oxime** $C_9H_9Br_2NO_2$ mol.wt. 322.98 [3805]**1-(2,6-Dichloro-3-methoxyphenyl)ethanone**[157487-31-5] $C_9H_8Cl_2O_2$ mol.wt. 219.07**New compound****Syntheses**

- Obtained by heating a mixture of 1-(2,6-dichloro-3-methoxyphenyl)ethan-1-ol and manganese (IV) oxide in benzene for 15 h (74%) [3769].
- Also refer to: [3770].

b.p._{0.5} 121–122° [3769]; m.p. 38–40° [3769]; 1H NMR [3769], IR [3769].**1-(2,5-Difluoro-4-methoxyphenyl)ethanone**[1010800-85-7] $C_9H_8F_2O_2$ mol.wt. 186.16**New compound****Synthesis**

- Refer to: [3887].

3-Acetyl-4-hydroxybenzoic acid[16357-40-7] $C_9H_8O_4$ mol.wt. 180.16**New compound****Synthesis**

- Obtained by Fries rearrangement of 4-acetoxybenzoic acid (1 mol) with aluminium chloride (3.3 mol) at 150–155° for 1 h (24%) [4092].

m.p. 244–246° [4093], 240–241° [4092], 237–239° [4094]; IR [4093].

Methyl ether [103203-97-0] $C_{10}H_{10}O_4$ mol.wt. 194.19

- Obtained by treatment of 4-(2-methoxy-5-methylphenyl)-4-methyl-2,5-cyclohexadienone with $Zn(MnO_4)_2$ in acetone [3941].
- Also obtained by reaction of dimethyl sulfate with 3-acetyl-4-hydroxybenzoic acid [3941].
- Also refer to: [4095].

m.p. 225–226° [3941].

Methyl ester [57009-12-8] $C_{10}H_{10}O_4$ mol.wt. 194.19

- Refer to: [4096].

m.p. 91–92° [4096].

Ethyl ester [57009-53-7] $C_{11}H_{12}O_4$ mol.wt. 208.21

- Prepared by refluxing the acid and ethyl alcohol in the presence of a few drops of concentrated sulfuric acid [4092].
- Also refer to: [4090].

m.p. 90–92° [4097], 71° [4092]. One of the reported melting points is obviously wrong.

 1H NMR [4097,4098], UV [4098].**5-Acetyl-2-hydroxybenzoic acid**[13110-96-8] $C_9H_8O_4$ mol.wt. 180.16**New compound****Syntheses**

- Obtained by Fries rearrangement of 2-(acetyloxy)-benzoic acid (Aspirin) (1 mol) in the presence of aluminium chloride (3.3 mol),
 - in nitrobenzene at r.t. for 1 h (36%) [4092];
 - without solvent at 120–125° for 1 h (19%) [4092].
- Also obtained by treatment of 2-(acetyloxy)benzoic acid with aluminium chloride in nitrobenzene at 60° [4099].

- Also obtained by reaction of acetyl chloride with 2-hydroxybenzoic acid in the presence of ferric chloride at 110–115° [4100].
- Also obtained by treatment of phenyl o-acetoxybenzoate with aluminium chloride in carbon disulfide [4101].
- Also obtained by treatment of methyl o-(acetyloxy)salicylate with aluminium chloride in nitrobenzene [4102].
- Also obtained by reaction of acetyl chloride with 2-hydroxybenzoic acid in the presence of aluminium chloride in nitrobenzene [4103].
m.p. 217° [4103], 216–217° [4092], 209–210° [4104].
BIOLOGICAL ACTIVITY: Inhibition of cyclooxygenase [4105].

Methyl ether $C_{10}H_{10}O_4$ mol.wt. 194.19

- Obtained by reaction of dimethyl sulfate with 5-Acetyl-2-hydroxybenzoic acid in the presence of aqueous sodium hydroxide solution [4100].

Methyl ester [16475-90-4] $C_{10}H_{10}O_4$ mol.wt. 194.19

- Obtained by heating a solution of 5-acetyl-2-hydroxybenzoic acid and sulfuric acid in methanol for 24 h (82%) [4106].
- Also obtained by reaction of acetyl chloride with methyl 2-methoxybenzoate in the presence of aluminium chloride at r.t. for 12 h (60%) [3934].
- Also refer to: [4107–4109].
b.p.₁₅ 162° [4109];
m.p. 62° [3934], 60–62° [4108], 58–61° [4106];
¹H NMR [4107], ¹³C NMR [4107], IR [4107].

1-(3-Bromo-2-hydroxy-5-methylphenyl)ethanone

[56609-15-5] $C_9H_9BrO_2$ mol.wt. 229.07

Described [3734] **p. 737**

Syntheses

- Also refer to: [4110,4111].

1-(3-Bromo-2-hydroxy-5-methoxyphenyl)ethanone

[37113-61-4] $C_9H_9BrO_3$ mol.wt. 245.07

Described [3734] **p. 739**

Synthesis

- Also obtained by reaction of bromine with 2-hydroxy-5-methoxyacetophenone in acetic acid in the presence of sodium acetate at r.t. for 48 h (87%) [4112].

Green/yellow needles; m.p. 74–77° [4112];
¹H NMR [4112].

Methyl ether [286931-60-0] $C_{10}H_{11}BrO_3$ mol.wt. 259.10

- Obtained by reaction of dimethyl sulfate with 3-bromo-2-hydroxy-5-methoxyacetophenone in the presence of potassium carbonate in refluxing acetone for 24 h (82%) [4112].

b.p._{0.5} 110–114° [4112]; m.p. 41–42° [4112];

¹H NMR [4112], MS [4112].

1-(5-Bromo-2-hydroxy-3-methoxyphenyl)ethanone

$C_9H_9BrO_3$ mol.wt. 245.07

Described [3734] p. 740

Syntheses

- Also obtained by reaction of bromine with 2-hydroxy-3-methoxyphenylacetophenone in the presence of sodium bromide in dilute ethanol at 25° [3955].
- Also obtained by treatment of its methyl ether with hydrogen bromide in acetic acid for 4.5 h (36%) [3955].

Yellow crystals; m.p. 108–109° [3955]; UV [3955].

Methyl ether [7507-91-7] $C_{10}H_{11}BrO_3$ mol.wt. 250.10

- Obtained from 5-bromo-2,3-dimethoxybenzoic acid (m.p. 121–124°) (49.5%) [3955].
- Also obtained by treatment of 1-(5-bromo-2,3-dimethoxyphenyl)ethanol with chromium trioxide in the presence of pyridine in methylene chloride for 0.25 h (86%) [4113].

m.p. 65–66° [4113], 63.7–64.9° [3955];

¹H NMR [4113], IR [4113], UV [3955,4113].

1-(5-Bromo-2-hydroxy-4-methoxyphenyl)ethanone

[39503-61-2] $C_9H_9BrO_3$ mol.wt. 245.07

Described [3734] p. 740

Synthesis

- Also refer to: [4114].

1-(3-Chloro-2-hydroxy-5-methylphenyl)ethanone

[7507-88-2] $C_9H_9ClO_2$ mol.wt. 184.62

Described [3734] p. 741

Syntheses

- Also refer to: [4111,4115].

1-(3-Chloro-4-hydroxy-5-methylphenyl)ethanone[54556-95-5] $C_9H_9ClO_2$ mol.wt. 184.62**Described [3734] p. 742****Methyl ether** [56755-88-5] $C_{10}H_{11}ClO_2$ mol.wt. 198.65

- Obtained by reaction of dimethyl sulfate with 3-chloro-4-hydroxy-5-methylacetophenone in the presence of sodium ethoxide and sodium iodide in boiling ethanol [4116].
- Also refer to: [3778].

b.p._{0.05} 95–100° [4116];
 $n_D^{20} = 1.5502$ [4116].

1-(5-Chloro-2-hydroxy-4-methylphenyl)ethanone[28480-70-8] $C_9H_9ClO_2$ mol.wt. 184.62**Described [3734] p. 743**

Syntheses

- Also refer to: [3773,3775,3857,4117–4119].

1-[3-(Chloromethyl)-4-hydroxyphenyl]ethanone[24085-05-0] $C_9H_9ClO_2$ mol.wt. 184.62**Described [3734] p. 744**

Synthesis

- Also obtained by chloromethylation of 4-hydroxyacetophenone by the method of Trave [4120,4121].

m.p. 160° (d) [4121];
 1H NMR [4121], IR [4121], MS [4121].

1-[5-(Chloromethyl)-2-hydroxyphenyl]ethanone[30787-43-0] $C_9H_9ClO_2$ mol.wt. 184.62**Described [3734] p. 744**

Synthesis

- Also refer to: [3744].

1-(3-Chloro-2-hydroxy-5-methoxyphenyl)ethanone[286931-53-1] $C_9H_9ClO_3$ mol.wt. 200.62**Described** [3734] p. 746

Synthesis

– Also obtained by reaction of N-chlorosuccinimide with 2-hydroxy-5-methoxyacetophenone in acetic acid in the presence of magnesium acetate at r.t. for 24 h (80%) [4112].

Green-yellow needles; m.p. 78–79° [4112];

 1H NMR [4112], MS [4112].**Methyl ether** [286931-54-2] $C_{10}H_{11}ClO_3$ mol.wt. 214.65

– Obtained by reaction of dimethyl sulfate with 3-chloro-2-hydroxy-5-methoxyacetophenone in the presence of potassium carbonate in refluxing acetone for 24 h [4112].

Clear oil; b.p._{0.1} 91° [4112]; 1H NMR [4112], MS [4112].**1-(2-Fluoro-4-hydroxy-3-methylphenyl)ethanone**[872415-45-7] $C_9H_9FO_2$ mol.wt. 168.17**New compound**

Synthesis

– Refer to: [3862].

Methyl ether [872415-44-6] $C_{10}H_{11}FO_2$ mol.wt. 182.19 [3862]**1-(3-Fluoro-2-hydroxy-4-methoxyphenyl)ethanone**[1018451-08-5] $C_9H_9FO_3$ mol.wt. 184.17**New compound**

Synthesis

– Preparation by treatment of 2-fluoro-1,3-dimethoxybenzene with boron trifluoride–acetic acid complex at 80° for 4 h (98%) [4122].

Light yellow solid; m.p. 103° [4122];

 1H NMR [4122], ^{19}F NMR [4122], MS [4122].**Methyl ether** [1018451-09-6] $C_{10}H_{11}FO_3$ mol.wt. 198.07

– Obtained by treatment of 3-fluoro-2-hydroxy-4-methoxyacetophenone with methyl iodide in the presence of potassium carbonate in refluxing acetone for 1.5 h (93%) [4122].

m.p. 65° [4122];

 1H NMR [4122], ^{19}F NMR [4122], IR [4122], MS [4122].

1-(2-Hydroxy-3-iodo-5-methylphenyl)ethanone[175655-10-4] $C_9H_9IO_2$ mol.wt. 276.07**Described** [3734] p. 749

Syntheses

– Also refer to: [3740,4111,4115].

1-(2-Iodo-5-methoxyphenyl)ethanone[110718-87-1] $C_9H_9IO_2$ mol.wt. 276.07**New compound**

Syntheses

- Obtained from 4-bromoanisole (multi-step reaction) (37%) [3917].
- Also obtained from 2-bromoanisole (multi-step reaction) (73%) [3913].
- Also obtained from 2-amino-5-methoxyacetophenone [3915,4123].
- Also obtained by reaction of equimolar amounts of 3-methoxyacetophenone, iodine and silver trifluoroacetate [4124].
- Also refer to: [4125,4126].

Golden oil [3913];

 1H NMR [3917], ^{13}C NMR [3917], IR [3917], MS [3917].**1-(2-Hydroxy-5-methyl-3-nitrophenyl)ethanone**[66108-30-3] $C_9H_9NO_4$ mol.wt. 195.17**Described** [3734] p. 752

Syntheses

– Also refer to: [3764,4110,4127–4129].

IR [4127].

1-(2-Hydroxy-3-methoxy-5-nitrophenyl)ethanone $C_9H_9NO_5$ mol.wt. 211.17**New compound**

Synthesis

- Preparation by reaction of 70% nitric acid with 2-hydroxy-3-methoxyacetophenone in acetic acid at 25° (95%) [3955].

m.p. 148.1–149.5° [3955]; UV [3955].

Methyl ether [102652-91-5] $C_{10}H_{11}NO_5$ mol.wt. 225.20

– Obtained by methylation of 2-hydroxy-3-methoxy-5-nitroacetophenone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 4 h (53%) [3955].

m.p. 81.2–83.2° [3955]; UV [3955].

Acetate $C_{11}H_{11}NO_6$ mol.wt. 253.21

m.p. 125.2–126.8° [3955].

1-(4-Hydroxy-3-methoxy-2-nitrophenyl)ethanone

$C_9H_9NO_5$ mol.wt. 211.17

New compound

Synthesis

– Obtained by hydrolysis of 4-acetoxy-3-methoxy-2-nitroacetophenone with 3 N sodium hydroxide in dilute methanol at r.t. [3950].

1-(4-Hydroxy-5-methoxy-2-nitrophenyl)ethanone

[418759-58-7] $C_9H_9NO_5$ mol.wt. 211.17

Described [3734] p. 756

Syntheses

– Also refer to: [4130,4131].

Benzyl ether [75665-88-2] $C_{16}H_{15}NO_5$ mol.wt. 301.30 [4131]

1-(2-Hydroxy-3-methylphenyl)ethanone

[699-91-2] $C_9H_{10}O_2$ mol.wt. 150.18

Described [3734] p. 757

Syntheses

– Also refer to: [3773,3853,3892].

UV [3955].

Methyl ether [6342-75-2] $C_{10}H_{12}O_2$ mol.wt. 164.20

– Preparation by reaction of dimethyl sulfate with 2-hydroxy-3-methylacetophenone in the presence of sodium hydroxide solution [4132].

– Also obtained by reaction of methyl iodide with 2-hydroxy-3-methylacetophenone in the presence of sodium ethoxide in ethanol on a water bath for 3 h [3865].

– Also refer to: [3955,4133].

colourless oil [3865];

b.p.₁₂ 115° [4132], b.p.₁₄ 116–117° [3955], b.p.₃ 120° [3865],

b.p.₁₅ 125–128° [4133], b.p.₇₆₀ 240° [4132];

UV [3955].

Benzoate C₁₆H₁₄O₃ mol.wt. 254.29

– Obtained by reaction of benzoyl chloride with 2-hydroxy-3-methylacetophenone in suspension of 2 N sodium hydroxide solution at r.t. for 20 min (75%) [3959].

m.p. 102–103° [3959].

1-(2-Hydroxy-4-methylphenyl)ethanone

[6921-64-8]

C₉H₁₀O₂ mol.wt. 150.18

Described [3734] p. 758

Syntheses

- Also obtained by Fries rearrangement of 3-methylphenyl acetate in the presence of zirconium chloride with ultrasound irradiation in DCM at r.t. for 24 h (93%) [4134].
- Also obtained by heating its methyl ether with pyridinium chloride for 15 min (66%) [3765].
- Also obtained by Friedel–Crafts acylation of m-cresol with acetic acid in a mixture of graphite and methanesulfonic acid at 120° for 2 h (80%) [3889].
- Also refer to: [3773,3959,4018,4135,4136].

¹H NMR [3889], ¹³C NMR [3889].

Methyl ether [35633-35-3] C₁₀H₁₂O₂ mol.wt. 164.20

- Obtained by reaction of dimethyl sulfate with 2-hydroxy-4-methylacetophenone in the presence of potassium hydroxide in acetone at r.t. for 15 h (97%) [4134].
- Also obtained by reaction of acetic anhydride with 3-methylanisole in the presence of lithium perchlorate at 60° for 2 h (30%) [3798].
- Also refer to: [3765,4137].

¹³C NMR [3858].

Benzyl ether [58110-89-7] C₁₆H₁₆O₂ mol.wt. 240.30 Refer to: [4136].

Benzoate [5177-98-0] C₁₆H₁₄O₃ mol.wt. 254.29

- Obtained by reaction of benzoyl chloride with 2-hydroxy-4-methylacetophenone in suspension in 2 N sodium hydroxide solution at r.t. for 20 min (78%) [3959].
- Also refer to: [4138–4140].

b.p._{0,02} 150–165° [4138]; m.p. 98–99° [3959].

1-(2-Hydroxy-5-methylphenyl)ethanone[1450-72-2] $C_9H_{10}O_2$ mol.wt. 150.18**Described** [3734] **p. 760**

Syntheses

- Also obtained by treatment of 2'-hydroxy-5'-methyl-3,3-dimethylacrylophenone with aluminium chloride in boiling benzene for 7 h [3996].
 - Also obtained by treatment of 2-hydroxy-5-methyl- α -chloroacetophenone with zinc powder and hydrochloric acid [4141].
 - Also obtained by treatment of its methyl ether with hydrogen bromide in acetic acid (6.6%) [3955].
 - Also refer to: [3773,3959,3967,3991,4018,4110,4142].
- m.p. 50–50.5° [4141], 50° [3996], 47–48° [4142], 46–47.5° [3955];
UV [3801,3955].

Methyl ether [20628-07-3] $C_{10}H_{12}O_2$ mol.wt. 164.20

- Preparation by reaction of acetic acid with 4-methylanisole in the presence of trifluoromethyl-sulfonic anhydride (Tf_2O) for 3 min at r.t. (97%) [3965].
 - Also obtained by reaction of acetic acid with p-cresyl methyl ether in the presence of PPA (74%) [3955].
 - Also obtained by reaction of acetic anhydride with 4-methylanisole,
 - in the presence of aluminium chloride in carbon disulfide (64–70%) [3966];
 - in the presence of lithium perchlorate at 100° for 3 h (99%) [3798].
 - Also refer to: [4142], (42%) [3917].
- b.p.₇ 120.5° [3966], b.p.₇ 121–123° [3955];
¹H NMR [3917], ¹³C NMR [3917], UV [3801,3955].

Benzyl ether [36808-17-0] $C_{16}H_{16}O_2$ mol.wt. 240.30

- Obtained by reaction of benzyl chloride with 2-hydroxy-5-methylacetophenone in the presence of KOH in acetonitrile. Then, the mixture was refluxed for 3 h (89%) [3978].
- m.p. 81° [3978];
¹H NMR [3978], ¹³C NMR [3978], IR [3978], MS [3978].

Benzoate $C_{16}H_{14}O_3$ mol.wt. 254.29

- Obtained by reaction of benzoyl chloride with 2-hydroxy-5-methylacetophenone in suspension in 2 N sodium hydroxide solution at r.t. for 20 min (76%) [3959].
- m.p. 96–97° [3959].

1-(4-Hydroxy-2-methylphenyl)ethanone[875-59-2] C₉H₁₀O₂ mol.wt. 150.18**Described** [3734] p. 765**Syntheses**

- Also obtained from pyrolysis behaviour of 4-oxo-β-damascone by on-line pyrolysis gas chromatography–mass spectrometry [4143].
- Also obtained by heating its methyl ether with pyridinium chloride for 7.5 min (56%) [3765].
- Also refer to: [3765,4018,4144,4145].

Methyl ether [24826-74-2] C₁₀H₁₂O₂ mol.wt. 164.20

- Obtained by reaction of acetic anhydride with 3-methylanisole in the presence of aluminium chloride in carbon disulfide (87%) [3966], at r.t., then at 30–35° until no more hydrochloric acid is evolved [3796,3797].
- Also obtained by reaction of acetic anhydride with 3-methylanisole in the presence of lithium perchlorate at 60° for 2 h (70%) [3798].
- Also refer to: [3765].

b.p.₃ 116.5° [3966], b.p.₇₃₅ 267° [3966];
¹H NMR [3796,3797], ¹³C NMR [3858], IR [3796,3797].

1-(4-Hydroxy-3-methylphenyl)ethanone[876-02-8] C₉H₁₀O₂ mol.wt. 150.18**Described** [3734] p. 766**Syntheses**

- Also obtained by heating its methyl ether with pyridinium chloride for 15 min (53%) [3765].
- Also refer to: [3743,4146–4148].

Methyl ether [10024-90-5] C₁₀H₁₂O₂ mol.wt. 164.20

- Preparation by reaction of acetic anhydride with 2-methylanisole in the presence of lithium perchlorate at 60° for 1.5 h (99%) [3798].
- Also obtained by Friedel–Crafts acetylation of o-methoxytoluene (73%) [3966], (21%) [4149].
- Refer to: [3765,3778,4150].

b.p.₃ 116° [3966]; m.p. 26–26.5° [3966], 24.5–25° [4149];
¹³C NMR [3751,3754].

Benzyl ether [56443-69-7] C₁₆H₁₆O₂ mol.wt. 240.30

- Obtained by reaction of benzyl chloride with 4-hydroxy-3-methylacetophenone in the presence of KOH in acetonitrile. Then, the mixture was refluxed for 3 h [3978].

1-(5-Hydroxy-2-methylphenyl)ethanone[40180-70-9] $C_9H_{10}O_2$ mol.wt. 150.18**Described** [3734] p. 767**Methyl ether** [110743-57-2] $C_{10}H_{12}O_2$ mol.wt. 164.20

– Refer to: [4151], (5%) [3917].

b.p., 118–121° [4151];

 1H NMR [3917], ^{13}C NMR [3917], IR [3917].**1-(2,4-Dihydroxy-3-methylphenyl)ethanone**[10139-84-1] $C_9H_{10}O_3$ mol.wt. 166.18**Described** [3734] p. 768

Syntheses

– Also refer to: [4152].[3999,4011,4153–4156]

Isolation from natural sources

– From the volatile oil of *Dendrobium nobile* Lind [4157].– From the volatile oil of *Dendrobium Ioddigesii* Rolfe [4157].

MS [4157]; GC-MS [4157].

1-(2,4-Dihydroxy-5-methylphenyl)ethanone[93578-16-6] $C_9H_{10}O_3$ mol.wt. 166.18**Described to:** [3734] p. 769

Synthesis

– Also obtained by heating its methylether with pyridinium chloride for 15 min (67%) [3765].

Dimethyl ether $C_{11}H_{14}O_3$ mol.wt. 194.23 [3765].**1-(2,4-Dihydroxy-6-methylphenyl)ethanone**[703-29-7] $C_9H_{10}O_3$ mol.wt. 166.18**Described** [3734] p. 769

Dimethyl ether [6110-38-9] $C_{11}H_{14}O_3$ mol.wt. 194.23

- Obtained by reaction of acetyl chloride with orcinol dimethyl ether [4158],
 - in the presence of aluminium chloride [3953];
 - in the presence of stannic chloride [4159].
- Also obtained by reaction of dimethyl sulfate with 2,4-dihydroxy-6-methylacetophenone in the presence of sodium hydroxide in dilute methanol [4160].
- Also refer to: [4161].

b.p._{0.2} 98.5–99.5° [4159]; b.p.₁₅ 150–165° [3953];

m.p. 85° [3953], 48° [4160], 41–42° [4158,4162].

One of the reported melting points is obviously wrong.

¹H NMR [4158,4162,4163], ¹³C NMR [4164],

IR [4162,4163], UV [4158,4159,4162], MS [4158].

1-(2,5-Dihydroxy-4-methylphenyl)ethanone

[54698-17-8] $C_9H_{10}O_3$ mol.wt. 166.18

Described [3734] p. 771

Syntheses

- Obtained by hydrolysis of 5-acetoxy-2-hydroxy-4-methylacetophenone with concentrated hydrochloric acid in methanol at r.t. for 1 h (27%) [4165].
- Also obtained by Fries rearrangement of 2,5-diacetytoluene,
 - in the presence of boron trifluoride dihydrate for 4 h at 130° (quantitative yield) [4166];
 - in the presence of aluminium chloride at 125–130° (41%) [4167].

Isolation from natural sources

- From the root bark of *Paeonia suffruticosa* Andrews (Paeoniaceae) [4168].

m.p. 146–147° [4167], 146° [4165];

¹H NMR [4166], ¹³C NMR [4166], IR [4166], UV [4166], MS [4166].

Dimethyl ether [13720-58-6] $C_{11}H_{14}O_3$ mol.wt. 194.23

- Obtained by action of dimethyl sulfate with 2,5-dihydroxy-4-methylacetophenone in the presence of potassium carbonate in refluxing acetone for 7 h (50%) [4165].
 - Also refer to: [4137].
- m.p. 76° [4165].

Dibenzyl ether $C_{23}H_{22}O_3$ mol.wt. 346.43

- To a solution of 2,5-dihydroxy-4-methylacetophenone in dimethoxyethane was added potassium carbonate, under nitrogen and the solution was stirred to 80° in nitrogen atmosphere. Then, benzyl bromide and N,N-dimethylformamide were added (95%) [4166].

¹H NMR [4166], ¹³C NMR [4166], IR [4166], UV [4166], MS [4166].

1-(3,4-Dihydroxy-2-methylphenyl)ethanone[18087-17-7] $C_9H_{10}O_3$ mol.wt. 166.18**Described** [3734] p. 774**Dimethyl ether** [24186-66-1] $C_{11}H_{14}O_3$ mol.wt. 194.23

- Obtained from 4-methylveratrole by reaction,
 - with acetyl chloride in the presence of aluminium chloride in carbon disulfide [4169,4170];
 - with acetic anhydride in the presence of aluminium chloride [4171] in tetrachloroethane [4172].
- Also obtained by treatment of ω -chloro-4,5-dimethoxyacetophenone with zinc in acetic acid [4173].
- Also refer to: [4174–4176].
- b.p.₁₅ 175° [4170], b.p.₇₀ 204° [4169];
- m.p. 76–77° [4170], 76° [4176], 75–76° [4175], 73–75° [4171,4172], 68° [4169,4173];
- ¹H NMR [4171], IR [4171], UV [4171].

1-[4-Hydroxy-3-(hydroxymethyl)phenyl]ethanone[39235-58-0] $C_9H_{10}O_3$ mol.wt. 166.18**New compound****Syntheses**

- Obtained by refluxing 3-chloromethyl-4-hydroxyacetophenone with water for 3 h (70%) [4120].
- Also obtained by heating 6-acetyl-1,3-benzo(4*H*)dioxine with hydrochloric acid for 2 h (80%) [4177].
- Also obtained by treatment of 4-hydroxyacetophenone with poly(oxyethylene) (37%) [4177].
- Also refer to: [3978,4178–4180].
- m.p. 124–125° [4181], 120.5–121.5° [4180], 116–118° [4178,4179], 116° [4120]; ¹H NMR [4120], IR [4120], MS [4120].

4-Benzyl ether [39235-59-1] $C_{16}H_{16}O_3$ mol.wt. 256.30 [3978]

- Obtained by reaction of benzyl chloride with 4-hydroxy-3-hydroxymethylacetophenone in the presence of potassium hydroxide and tetraethylammonium iodide in refluxing acetonitrile for 3 h (88%) [3978,4177].
- Preparation by reaction of benzyl bromide with the potassium salt of 5-acetyl-2-hydroxybenzyl alcohol [4180].

m.p. 125° [3978], 124–125° [4180], 122.5–124° [4177];
¹H NMR [3978,4177], ¹³C NMR [3978,4177], IR [3978,4177], MS [3978].

1-(2-Hydroxy-3-methoxyphenyl)ethanone

[703-98-0] C₉H₁₀O₃ mol.wt. 166.18

Described [3734] p. 775

Syntheses

- Also obtained by action of hydrogen bromide with 2,3-dimethoxyacetophenone in acetic acid at 30° for 25 min (92%) [3989] or at r.t. (70%) [3984].
- Also refer to: [3744,3810].

m.p. 53–54° [3989,4182], 49–51.5° [3984];
 UV [3955,3956].

Acetate C₁₁H₁₂O₄ mol.wt. 208.21 (m.p. 44.5–46.5°) [3984]

1-(2-Hydroxy-4-methoxyphenyl)ethanone (*Paeonol*)

[552-41-0] C₉H₁₀O₃ mol.wt. 166.18

Described [3734] p. 775

Synthesis

- Also obtained by action of hydrogen bromide with 2,4-dimethoxyacetophenone in acetic acid at r.t. (9%) [3984].
- m.p. 41–50° [3984]; IR [3954], UV [3956,3963].

Acetate C₁₁H₁₂O₄ mol.wt. 208.21 m.p. 43–46° [3984].

Oxime [51864-08-5] C₉H₁₁NO₃ mol.wt. 181.19 [3737,3738]

1-(2-Hydroxy-5-methoxyphenyl)ethanone

[705-15-7] C₉H₁₀O₃ mol.wt. 166.18

Described [3734] p. 777

Syntheses

- Obtained by heating 2,5-dimethoxyacetophenone oxime with pyridinium chloride containing 10% of water (11%) [3980].
- Also obtained by action of hydrogen bromide with 2,5-diimethoxyacetophenone in acetic acid at r.t. (6%) [3984].
- Also refer to: [3744,3892,3997,3998,4011,4183].
- b.p.₁₇ 145° [3980]; m.p. 46–47° [3984]; UV [3955,3963].
- USE: Ultraviolet absorbers [4183].

Acetate C₁₁H₁₂O₄ mol.wt. 208.21 m.p. 60–62° [3984].

Benzyl ether $C_{16}H_{16}O_3$ mol.wt. 256.30 [4184]

Oxime $C_9H_{11}NO_3$ mol.wt. 181.19 m.p. 113° [3980].

1-(2-Hydroxy-6-methoxyphenyl)ethanone

[703-23-1] $C_9H_{10}O_3$ mol.wt. 166.18

Described [3734] **p. 778**

Syntheses

– Also refer to: [3787,3892,4042].

UV [3956,3963].

1-(3-Hydroxy-4-methoxyphenyl)ethanone (*Isoacetovanillone*)

[6100-74-9] $C_9H_{10}O_3$ mol.wt. 166.18

Described [3734] **p. 779**

Synthesis

– Also refer to: [3738]; UV [3956].

Benzyl ether $C_{16}H_{16}O_3$ mol.wt. 256.30 [3947]

1-(3-Hydroxy-5-methoxyphenyl)ethanone

[35999-23-6] $C_9H_{10}O_3$ mol.wt. 166.18

Described [3734] **p. 780**

UV [3956].

1-(4-Hydroxy-2-methoxyphenyl)ethanone (*Isopaenol*)

[493-33-4] $C_9H_{10}O_3$ mol.wt. 166.18

Described [3734] **p. 780**

Synthesis

– Also refer to: [3788].

UV [3956].

1-(4-Hydroxy-3-methoxyphenyl)ethanone (*Acetoguaiacone, Acetovanillone*)

[498-02-2] $C_9H_{10}O_3$ mol.wt. 166.18

Described [3734] **p. 781**

Syntheses

– Also obtained by Fries rearrangement of guaiacol acetate in the presence of zinc chloride [3953].

– Also refer to: [4015].

m.p. 116° [3953]; UV [3956,3963,4015].

Isolation from natural sources

- From the fresh Iris rhizomes (2.69%) [4026].

Benzoate $C_{16}H_{14}O_4$ mol.wt. 270.28

- Obtained by reaction of benzoyl chloride with acetoguaiacone in the presence of pyridine (90%) [4015].

m.p. 108–109° [4015].

Acetate [54771-60-7] $C_{11}H_{12}O_4$ mol.wt. 208.21

- Refer to: [4185].

1-(5-Hydroxy-2-methoxyphenyl)ethanone

[31405-60-4] $C_9H_{10}O_3$ mol.wt. 166.18

Described [3734] p. 782

Synthesis

- Also prepared by treatment of 5-(pivaloyloxy)-2-methoxyacetophenone in DMF with a 2 M sodium hydroxide aqueous solution at 100° for 12 h (83%) [3818].

Yellow oil [3818];

1H NMR [3818], ^{13}C NMR [3818], UV [3956], MS [3818].

1-(2,3-Dihydroxy-4-methoxyphenyl)ethanone

[708-53-2] $C_9H_{10}O_4$ mol.wt. 182.18

Described [3734] p. 783

Syntheses

- Also obtained by Fries rearrangement of 2,3-dihydroxy-3-methoxyphenyl diacetate with boron trifluoride etherate at 70° for 1 h, then hydrolyse with concentrated HCl at 60° for 2 h (75%) [4186].

- Also refer to: [4187].

1-(2,4-Dihydroxy-6-methoxyphenyl)ethanone

[3602-54-8] $C_9H_{10}O_4$ mol.wt. 182.18

Described [3734] p. 785

Synthesis

- Also obtained by reaction of dimethyl sulfate with phloracetophenone in the presence of potassium carbonate in refluxing acetone for 5 h (14%) [4188].

Isolation from natural sources

- From the aerial parts of *Artemisia scoparia* [4189].
m.p. 204–206° [4188].

1-(2,6-Dihydroxy-4-methoxyphenyl)ethanone

[7507-89-3] $C_9H_{10}O_4$ mol.wt. 182.18

Described [3734] p. 787

Syntheses

- Also obtained by reaction of dimethyl sulfate with phloroacetophenone in the presence of potassium carbonate in refluxing acetone for 5 h (21%) [4188].
- Also refer to: [4190,4191].
m.p. 140–141° [4188].

1-(3,6-Dihydroxy-2-methoxyphenyl)ethanone

[33539-20-7] $C_9H_{10}O_4$ mol.wt. 182.18

Described [3734] p. 789

Synthesis

- Also refer to: [4042].

1-(2,4,6-Trihydroxy-3-methylphenyl)ethanone

[2657-28-5] $C_9H_{10}O_4$ mol.wt. 182.18

Described [3734] p. 790

Syntheses

- Also obtained by treatment of its trimethyl ether with boron tribromide in methylene chloride at -78° , then at r.t. for 24–48 h (80%) [4192].
- Also refer to: [4193,4194].
 1H NMR [4192], ^{13}C NMR [4192], UV [4194], MS [4192].

Trimethyl ether [39701-13-8] $C_{12}H_{16}O_4$ mol.wt. 224.26

- Obtained by reaction of dimethyl sulfate with 4,6-dihydroxy-2-methoxy-3-methylacetophenone in the presence of potassium carbonate in boiling acetone for 2 h (quantitative yield) [4195].
- Also obtained by reaction of dimethyl sulfate with 2-hydroxy-4,6-dimethoxy-3-methyl-acetophenone,
 - in the presence of potassium carbonate in boiling acetone for 48 h (90%) [4195];
 - in the presence of 2 N sodium hydroxide at 100° for 30 min [4196].

- Also obtained by reaction of methyl iodide with 2,4,6-trihydroxy-3-methylacetophenone in the presence of potassium carbonate in DMF for 5 h [4197].
- Also obtained by reaction of dimethyl sulfate with 2,4,6-trihydroxy-3-methylacetophenone in the presence of potassium carbonate in boiling acetone for 3 h [4198].
- Also obtained by reaction of acetyl chloride with 2,4,6-trimethoxytoluene in methylene chloride in the presence of stannic chloride at -10° for 2–3 h (77%) [4192].
- Also refer to: [4193].

Isolation from natural sources

- From *Euphorbia portulacoides* [4199].

Colourless oil [4195,4196]; b.p.₁₂ 203–204° [4196];

m.p. 44–45° [4196], 44° [4195];

1-(3-Aminomethyl-4-hydroxyphenyl)ethanone

$C_9H_{11}NO_2$ mol.wt. 165.19

New compound

Synthesis

- Obtained by treatment of N-(5-acetyl-2-hydroxy-benzyl)phthalimide (m.p. 207°) with boiling 7% aqueous sodium hydroxide for 7 min [4201].

m.p. 202° (d) [4201].

Hydrochloride [109314-50-3] $C_9H_{11}NO_2, HCl$ mol.wt. 201.65 (m.p. 253°) [4201]

1-[2-Hydroxy-4,6-bis(trifluoromethyl)phenyl]ethanone

[884851-57-4] $C_{10}H_6F_6O_2$ mol.wt. 272.15

New compound

Synthesis

- To a CH_2Cl_2 solution of 1,3-bis-silyl enol ether ($R^3 = CH_3$) and 1,1,1,5,5,5-hexafluoro-4-silyloxy-3-penten-2-one was added $TiCl_4$ at -78° under argon atmosphere. The temperature of the reaction mixture was allowed to rise to 20° during 14 h and, subsequently, a saturated aqueous solution of $NaHCO_3$ was added (35%) [4202].

¹H NMR [4202], ¹³C NMR [4202], ¹⁹F NMR [4202]; TLC [4202].

1-(3-Ethynyl-4-hydroxyphenyl)ethanone[370565-08-5] $C_{10}H_8O_2$ mol.wt. 160.17**New compound****Synthesis**

- Preparation from p-acetyl-o-[(trimethylsilyl)-ethynyl] phenol (m.p. 127–129°) via a Sonogashira coupling followed by desilylation [3920].

m.p. 100–102° [3920];

 1H NMR [3920], ^{13}C NMR [3920], MS [3920].**1-[2-Hydroxy-4-methyl-6-(trifluoromethyl)phenyl]ethanone**[884851-54-1] $C_{10}H_9F_3O_2$ mol.wt. 218.18**New compound****Synthesis**

- To a CH_2Cl_2 solution of 1,3-bis-silyl enol ether ($R^3 = CH_3$) and 1,1,1-trifluoro-4-silyloxy-3-penten-2-one was added $TiCl_4$ at -78° under argon atmosphere. The temperature of the reaction mixture was allowed to rise to 20° during 14 h and, subsequently, a saturated aqueous solution of $NaHCO_3$ was added (61%) [4202].

 1H NMR [4202], ^{13}C NMR [4202], ^{19}F NMR [4202]; TLC [4202].**1-[6-Hydroxy-3-methyl-2-(trifluoromethyl)phenyl]ethanone**[884851-62-1] $C_{10}H_9F_3O_2$ mol.wt. 218.18**New compound****Synthesis**

- To a CH_2Cl_2 solution of 1,3-bis-silyl enol ether ($R^3 = CH_3$) and 4-ethoxy-1,1,1-trifluoro-3-methyl-3-buten-2-one was added $TiCl_4$ at -78° under argon atmosphere. The temperature of the reaction mixture was allowed to rise to 20° during 14 h and, subsequently, an aqueous solution of 10% HCl was added (60%) [4202].

 1H NMR [4202], ^{13}C NMR [4202], ^{19}F NMR [4202], IR [4202]; TLC [4202].**1-(7-Methoxy-1,3-benzodioxol-5-yl)ethanone**[66922-69-8] $C_{10}H_{10}O_4$ mol.wt. 194.19**New compound****Synthesis**

- Refer to: [4203].

1-(5-Bromo-4-ethyl-2-hydroxyphenyl)ethanone[649551-87-1] $C_{10}H_{11}BrO_2$ mol.wt. 243.10**New compound**

Synthesis

– Preparation by reaction of bromine with 4-ethyl-2-hydroxyacetophenone in chloroform at -12° for 50 min (76%) [3911].

Brown solid [3911]; MS [3911].

1-(3-Bromo-4-methoxy-2-methylphenyl)ethanone[898538-41-5] $C_{10}H_{11}BrO_2$ mol.wt. 243.10**New compound**

Synthesis

– Refer to: [4204].

1-(5-Bromo-4-methoxy-2-methylphenyl)ethanone[898538-40-4] $C_{10}H_{11}BrO_2$ mol.wt. 243.10**New compound**

Synthesis

– Refer to: [4204].

1-(3-Bromo-2-hydroxy-4,6-dimethoxyphenyl)ethanone[18064-89-6] $C_{10}H_{11}BrO_4$ mol.wt. 275.10**Described [3734] p. 804**

Synthesis

– Also refer to: [4205].

1-(5-Bromo-2,4-dihydroxy-3,6-dimethoxyphenyl)ethanone $C_{10}H_{11}BrO_5$ mol.wt. 291.10**New compound**

Synthesis

– Obtained by halogenation of 2,4-dihydroxy-3,6-dimethoxyacetophenone with N-bromosuccinimide [4206].

1-(3-Chloro-6-hydroxy-2,4-dimethylphenyl)ethanone

[50343-13-0]

 $C_{10}H_{11}ClO_2$ mol.wt. 198.65**Described** [3734] **p. 806**

Syntheses

- Also obtained by [3 + 3] cyclisation of 2-chloro-3-(silyl-oxy)alk-2-en-1-one (**3a**) with 1,3-bis-silyl enol ether (**4b**) in the presence of titanium tetrachloride in methylene chloride, first at -78° , then to 20° for 20 h (50%) [4207], (49%) [4208].

3a = 3-chloro-4-(trimethylsilyloxy)-3-penten-2-one.**4b** = 2,4-bis(trimethylsilyloxy)-2-pentene.m.p. 99° [4208]; 1H NMR [4208], ^{13}C NMR [4208], IR [4208], MS [4208].**1-(2-Chloro-4-methoxy-5-methylphenyl)ethanone**

[412021-93-3]

 $C_{10}H_{11}ClO_2$ mol.wt. 198.65**New compound**

Synthesis

- Refer to: [4209].

USE: For preparation of phenylmethylbicyclohexanecarboxamide derivatives as VR1 receptor inhibitors [4209].

1-(5-Chloro-4-methoxy-2-methylphenyl)ethanone

[103039-12-9]

 $C_{10}H_{11}ClO_2$ mol.wt. 198.65**New compound**

Synthesis

- Refer to: [4210].

1-[2-(2-Chloroethoxy)-6-hydroxyphenyl]ethanone[870652-73-6] $C_{10}H_{11}ClO_3$ mol.wt. 214.65**New compound**

Synthesis

– Refer to: [4211].

1-[4-(2-Chloroethoxy)-2-hydroxyphenyl]ethanone[109661-96-3] $C_{10}H_{11}ClO_3$ mol.wt. 214.65**Described [3734] p. 807**

Syntheses

– Also obtained by reaction of 1-bromo-2-chloroethane with resacetophenone in the presence of potassium carbonate in boiling acetone for 24 h (50%) [4212].

– Also refer to: [4211].

m.p. 96–98° [4212]; 1H NMR [4212].**1-(2-Fluoro-3,4-dimethoxyphenyl)ethanone**[158641-45-3] $C_{10}H_{11}FO_3$ mol.wt. 198.19**New compound**

Synthesis

– Refer to: [3879].

1-[2,4-Dihydroxy-3-iodo-6-(methoxymethoxy)phenyl]ethanone[321569-79-3] $C_{10}H_{11}IO_5$ mol.wt. 338.10**New compound**

Synthesis

– Obtained by reaction of iodine and periodic acid mixture with 2,4-dihydroxy-6-methoxymethoxyacetophenone in dilute ethanol for 1 h at 40° (94%) [4213].

m.p. 162–164° [4213]; 1H NMR [4213].**N-(3-Acetyl-4-hydroxyphenyl)acetamide**[7298-67-1] $C_{10}H_{11}NO_3$ mol.wt. 193.20**New compound**

Synthesis

– Obtained by adding aluminium chloride to a suspension of N-(4-methoxyphenyl)acetamide and acetyl chloride then refluxing for 4.5 h (87%) [3911].

Pale green solid [3911];
 ^1H NMR [3911], ^{13}C NMR [3911], MS [3911].

1-(4,5-Dimethoxy-2-nitrophenyl)ethanone

[4101-32-0] $\text{C}_{10}\text{H}_{11}\text{NO}_5$ mol.wt. 225.20

New compound

Synthesis

– Refer to: [4019].

1-(2-Ethyl-4-hydroxyphenyl)ethanone

[103323-98-4] $\text{C}_{10}\text{H}_{12}\text{O}_2$ mol.wt. 164.20

Described [3734] p. 812

Syntheses

- Also obtained by heating its methyl ether with pyridinium chloride for 15 min (61%) [3765].
- Also obtained by Fries rearrangement of 3-ethylphenyl acetate with aluminium chloride at 140° for 30 min (14%) [4214].

b.p.₁₁ 182–184° [4214]; m.p. 109–110° [4214].

2,4-Dinitrophenylhydrazone $\text{C}_{16}\text{H}_{16}\text{N}_4\text{O}_5$ mol.wt. 344.33

m.p. 206–207° [4214].

Methyl ether [41068-29-5] $\text{C}_{11}\text{H}_{14}\text{O}_2$ mol.wt. 178.23

- Obtained by reaction of acetic anhydride with 3-ethylanisole in the presence of aluminium chloride in carbon disulfide at r.t., then at 30–35° until no more hydrochloric acid is evolved [3796,3797].
- Also refer to: [3765].

^1H NMR [3796,3797], IR [3796,3797].

1-(3-Ethyl-4-hydroxyphenyl)ethanone

[22934-47-0] $\text{C}_{10}\text{H}_{12}\text{O}_2$ mol.wt. 164.20

Described [3734] p. 813

Methyl ether [29643-34-3] $C_{11}H_{14}O_2$ mol.wt. 178.23

- Obtained by reaction of acetyl chloride with 2-ethylanisole in the presence of aluminium chloride in carbon disulfide at r.t. overnight (45%) [4215].
- Also obtained by reaction of dimethyl sulfate with 3-ethyl-4-hydroxyacetophenone in the presence of aqueous sodium hydroxide [4216].
- Also obtained by Fries rearrangement of 2-ethylphenyl acetate in the presence of aluminium chloride in nitrobenzene [4216].
- Also refer to: [3778,4217,4218].

b.p._{0.5} 99–101° [4216], b.p.₁ 120° [4215], b.p.₂₅ 156–158° [4217];
IR [4217], UV [4217].

1-(4-Ethyl-2-hydroxyphenyl)ethanone

[5896-50-4] $C_{10}H_{12}O_2$ mol.wt. 164.20

Described [3734] p. 813

Syntheses

- Also obtained by Fries rearrangement of 3-ethylphenyl acetate (b.p.₂₁ 116–118°) with aluminium chloride at 140° for 30 min (77%) [4214] or at 130° for 2 h 30 min (97%) [3911].
- Also obtained by Friedel–Crafts acylation of m-ethylphenol with acetic acid in a mixture of graphite and methanesulfonic acid at 120° for 2.5 h (73%) [3889].
- Also refer to: [3912,4219,4220].

Brown oil [3911]; b.p.₁₃ 128–130° [4214];

¹H NMR [3889,3911], ¹³C NMR [3889,3911], IR [3889], MS [3911].

Methyl ether $C_{11}H_{14}O_2$ mol.wt. 178.23

- Preparation by reaction of dimethyl sulfate with 4-ethyl-2-hydroxyacetophenone in the presence of aqueous sodium hydroxide solution (92%) [4221].

b.p.₁₅ 160° [4221].

2,4-Dinitrophenylhydrazone $C_{16}H_{16}N_4O_5$ mol.wt. 344.33

m.p. 211–212° [4214].

1-(4-Ethyl-3-hydroxyphenyl)ethanone

[73898-20-1] $C_{10}H_{12}O_2$ mol.wt. 164.20

Described [3734] p. 814

Synthesis

- Also refer to: [3905].

Methyl ether [947691-65-8] $C_{11}H_{14}O_2$ mol.wt. 178.23 [3905]

1-(5-Ethyl-2-hydroxyphenyl)ethanone[24539-92-2] $C_{10}H_{12}O_2$ mol.wt. 164.20**Described** [3734] **p. 814**

Syntheses

– Also refer to: [3773,3887,4222].

1-(2-Hydroxy-3,5-dimethylphenyl)ethanone[1198-66-9] $C_{10}H_{12}O_2$ mol.wt. 164.20**Described** [3734] **p. 814**

Synthesis

– Also refer to: [3773].

1-(2-Hydroxy-4,5-dimethylphenyl)ethanone[36436-65-4] $C_{10}H_{12}O_2$ mol.wt. 164.20**Described** [3734] **p. 815**

Synthesis

– Also refer to: [4223].

1-(2-Hydroxy-4,6-dimethylphenyl)ethanone[16108-50-2] $C_{10}H_{12}O_2$ mol.wt. 164.20**Described** [3734] **p. 816**

Synthesis

– Also obtained by heating its methyl ether with pyridinium chloride for 15 min (51%) [3765].

Methyl ether [21009-92-7] $C_{11}H_{14}O_2$ mol.wt. 178.23

- Obtained by reaction of acetyl chloride with 3,5-dimethylanisole in the presence of aluminium chloride in carbon disulfide at 25° [4224].
- Also obtained by reaction of dimethyl sulfate with 2-hydroxy-4,6-dimethylacetophenone in the presence of sodium hydroxide at 50° (60%) [4225].
- Also obtained by reaction of acetic anhydride with 3,5-dimethylanisole in the presence of aluminium chloride in carbon disulfide [4226].
- Also refer to: [3765,4227–4229].

b.p.₁₄ 135° [4224], b.p.₁₈ 140–144° [4226];

m.p. 48–49° [4224,4227];

¹H NMR [4225,4228,4229], IR [4225].

1-(4-Hydroxy-2,3-dimethylphenyl)ethanone[5384-57-6] $C_{10}H_{12}O_2$ mol.wt. 164.20**Described** [3734] p. 818

Syntheses

- Also obtained by heating its methyl ether with pyridinium chloride for 15 min (70%) [3765].
- Also refer to: [4230].

Methyl ether $C_{11}H_{14}O_2$ mol.wt. 178.23 [3765]**1-(4-Hydroxy-2,6-dimethylphenyl)ethanone**[91060-92-3] $C_{10}H_{12}O_2$ mol.wt. 164.20**Described** [3734] p. 818**Methyl ether** [60999-76-0] $C_{11}H_{14}O_2$ mol.wt. 178.23

- Obtained by treatment of 2,6-dimethyl-4-methoxybenzoyl chloride,
 - with dimethylcadmium in benzene [4231];
 - with methylmagnesium iodide [4231].
- Also obtained by treatment of 2-(1-ethoxyvinyl)-5-methoxy-1,3-dimethylbenzene with 50% sulfuric acid in dilute THF at r.t. [4232].
- Also obtained by reaction of dimethyl sulfate with 4-hydroxy-2,6-dimethylacetophenone in the presence of aqueous sodium hydroxide (84%) [4225].
- Also refer to: [4233,4234].

b.p._{0,08} 85–92° [4231]; m.p. 47° [4231], 46–48° [4234];¹H NMR [4225,4234], ¹³C NMR [3858], IR [4225,4234].**1-(4-Hydroxy-3,5-dimethylphenyl)ethanone**[5325-04-2] $C_{10}H_{12}O_2$ mol.wt. 164.20**Described** [3734] p. 818

Methyl ether [60609-65-6] $C_{11}H_{14}O_2$ mol.wt. 178.23

- Obtained by reaction of dimethyl sulfate with 3,5-dimethyl-4-hydroxyacetophenone in aqueous sodium hydroxide solution [4235].
- Also obtained by reaction of acetyl chloride,
 - with 2-methoxy-1,3-dimethylbenzene in the presence of aluminium chloride in benzene [4236];
 - with 1-methoxy-2,6-dimethyl-4-tert-butylbenzene in the presence of aluminium chloride in nitromethane/methylene chloride mixture at r.t. for 12 h (80%) [4237].
- Preparation by the method of [4235], (77%) [4149].
- Also refer to: [3751–3756,4233,4238–4241].

b.p.₁ 105–110° [4241];

m.p. 47–48° [4235], 39.5–40.5° [4149], 39–40° [4236];

¹H NMR [3753,3756,4233,4241], ¹³C NMR [3751,3754,4239], IR [4149,4240], UV [4240].

1-(2,4-Dihydroxy-3,5-dimethylphenyl)ethanone

[577-45-7] $C_{10}H_{12}O_3$ mol.wt. 180.20

Described [3734] p. 820

Synthesis

- Also refer to: [4242].

1-(2-Ethyl-4,5-dihydroxyphenyl)ethanone

[267008-03-7] $C_{10}H_{12}O_3$ mol.wt. 180.20

New compound

Synthesis

- Obtained by treatment of 4,5-dimethoxy-2-ethyl-acetophenone with boron tribromide in methylene chloride at r.t. for 12 h (97%) [4243].

¹H NMR [4243], IR [4243].

Dimethyl ether [105401-93-2] $C_{12}H_{16}O_3$ mol.wt. 208.26

- Obtained from 4-ethyl-1,2-dimethoxybenzene by treatment with,
 - acetyl chloride in the presence of ferric chloride in carbon disulfide [4244];
 - acetic anhydride in the presence of titanium tetrachloride (66%) [4243].
- Also refer to: [4174,4245,4246].

b.p.₁₀ 104–108° [4243];

m.p. 63° [4244], 62–63° [4245], 62° [4246]; ¹H NMR [4243], IR [4243].

1-(3-Ethyl-2,6-dihydroxyphenyl)ethanone[54337-59-6] $C_{10}H_{12}O_3$ mol.wt. 180.20**Described** [3734] p. 824

Syntheses

– Also refer to: [3822,4033].

1-(5-Ethyl-2,4-dihydroxyphenyl)ethanone[4460-42-8] $C_{10}H_{12}O_3$ mol.wt. 180.20**Described** [3734] p. 825

Syntheses

– Also obtained by reaction of acetic acid with 4-ethyl-resorcinol in the presence of boron trifluoride etherate at 90° for 12 h under nitrogen (69%) [3829].

– Also refer to: [4247–4249].

Light-pink crystalline solid [3829]; m.p. 112° [4249];

 1H NMR [3829], MS [3829]; TLC [3829].

USE: Stabilization of PVC [4249].

Dibenzyl ether [1001385-69-8] $C_{24}H_{24}O_3$ mol.wt. 360.45

– Obtained by reaction of benzyl bromide with 5-ethyl-2,4-dihydroxyacetophenone in the presence of potassium carbonate in DMF at r.t. for 3 h (70%) [3829].

Colourless solid [3829];

 1H NMR [3829], ^{13}C NMR [3829], MS [3829].**1-(2-Hydroxy-4-methoxy-5-methylphenyl)ethanone**[81511-52-6] $C_{10}H_{12}O_3$ mol.wt. 180.20**Described** [3734] p. 827

Synthesis

– Also obtained by reaction of acetic anhydride with N-(2,4-dimethoxybenzyl)-N-ethylethanamine in the presence of boron trifluoride etherate in methylene chloride (52%) [3830].

m.p. 64–65° [3830];

 1H NMR [3830], ^{13}C NMR [3830], MS [3830].**1-(2-Hydroxy-5-methoxy-4-methylphenyl)ethanone**[4223-84-1] $C_{10}H_{12}O_3$ mol.wt. 180.20**Described** [3734] p. 828

Synthesis

– Also refer to: [4250].

1-(3-Hydroxy-4-methoxy-5-methylphenyl)ethanone[741264-99-3] $C_{10}H_{12}O_3$ mol.wt. 180.20**New compound**

Synthesis

– Refer to: [3737].

1-(4-Hydroxy-2-methoxy-5-methylphenyl)ethanone[868702-20-9] $C_{10}H_{12}O_3$ mol.wt. 180.20**New compound**

Synthesis

– Refer to: [3862].

1-[2-Hydroxy-5-(methoxymethyl)phenyl]ethanone[60402-33-7] $C_{10}H_{12}O_3$ mol.wt. 180.20**New compound**

Synthesis

– Refer to: [3744].

1-[4-Hydroxy-3-(methoxymethyl)phenyl]ethanone[65033-20-7] $C_{10}H_{12}O_3$ mol.wt. 180.20**New compound**

Syntheses

– Refer to: [4011,4251].

1-(2,4-Dihydroxy-6-methoxy-3-methylphenyl)ethanone[83459-37-4] $C_{10}H_{12}O_4$ mol.wt. 196.20**Described [3734] p. 831**

Syntheses

– Also refer to: [4193,4252].

Isolation from natural sources

- From *Euphorbia ebracteolata* (Euphorbiaceae) [4253,4254].
- From the roots of *Euphorbia kansui* (Euphorbiaceae) [4255].
- From *Stellera chamaejasme* [4253].

 1H NMR [4193,4255], ^{13}C NMR [4193,4255],

UV [4253], MS [4253]; HPLC [4253], LC [4253].

1-(4,6-Dihydroxy-2-methoxy-3-methylphenyl)ethanone

[52200-61-0]

 $C_{10}H_{12}O_4$ mol.wt. 196.20**Described** [3734] **p. 832**

Isolation from natural sources

– From the Lichen *Psoroma leprolomum* (compound **8**) [4193].

1-(2-Hydroxy-3,4-dimethoxyphenyl)ethanone

[5396-18-9]

 $C_{10}H_{12}O_4$ mol.wt. 196.20**Described** [3734] **p. 834**

Syntheses

– Also obtained by action of hydrogen bromide with 2,3,4-trimethoxyacetophenone in acetic acid at r.t. (71%) [3984].

– Also refer to: [3810,4011,4042].

m.p. 65.5–71.5° [3984].

1-(2-Hydroxy-4,6-dimethoxyphenyl)ethanone

[90-24-4]

 $C_{10}H_{12}O_4$ mol.wt. 196.20**Described** [3734] **p. 837**

Syntheses

– Also obtained by reaction of dimethyl sulfate with phloracetophenone in the presence of potassiumcarbonate in refluxing acetone (97%) [4071] for 5 h (36%) [4188].

– Also obtained by action of hydrogen bromide with 2,4,6-trimethoxyacetophenone in acetic acid at r.t. (27%) [3984].

– Also refer to: [4205,4256,4257].

m.p. 80–82° [4188], 79–82° [3984], 78° [4071].

Acetate $C_{12}H_{14}O_5$ mol.wt. 238.24

m.p. 105–108° [3984].

1-(6-Hydroxy-2,3-dimethoxyphenyl)ethanone

[22248-13-1]

 $C_{10}H_{12}O_4$ mol.wt. 196.20**Described** [3734] **p. 841**

Synthesis

– Also refer to: [4042].

1-[2-Hydroxy-4-(2-hydroxyethoxy)phenyl]ethanone

[17086-21-4]

 $C_{10}H_{12}O_4$ mol.wt. 196.20**New compound**

Synthesis

– Refer to: [4258].

1-[2-Hydroxy-4-(methoxymethoxy)phenyl]ethanone

[65490-08-6]

 $C_{10}H_{12}O_4$ mol.wt. 196.20**Described [3734] p. 842**

Syntheses

– Also obtained by reaction of methoxymethyl chloride with resacetophenone in the presence of potassium carbonate in acetone at r.t. for 24 h (87%) [4259].

– Also refer to: [4260].

m.p. 38–39° [4259];

 1H NMR [4259], ^{13}C NMR [4259], IR [4259], MS [4259].**1-[2-Hydroxy-5-(methoxymethoxy)phenyl]ethanone**

[31405-69-3]

 $C_{10}H_{12}O_4$ mol.wt. 196.20**New compound**

Synthesis

– Refer to: [4261].

1-(2,4,6-Trihydroxy-3,5-dimethylphenyl)ethanone

[13383-63-6]

 $C_{10}H_{12}O_4$ mol.wt. 196.20**Described [3734] p. 843**

Synthesis

– Also refer to: [4194].

UV [4194].

1-(2,4-Dihydroxy-3,6-dimethoxyphenyl)ethanone

[7499-99-2]

 $C_{10}H_{12}O_5$ mol.wt. 212.20**Described [3734] p. 844**

Syntheses

– Also refer to: [4262,4263].

1-(3,6-Dihydroxy-2,4-dimethoxyphenyl)ethanone

[6962-57-8]

 $C_{10}H_{12}O_5$ mol.wt. 212.20**Described** [3734] p. 845

Syntheses

- Obtained by treatment of 2-hydroxy-4,6-dimethoxyacetophenone with an aqueous solution of potassium persulfate in 10% sodium hydroxide (58%) [4071].

– Also refer to: [4264].

m.p. 164° [4071].

1-[2,4-Dihydroxy-6-(methoxymethoxy)phenyl]ethanone

[71386-98-6]

 $C_{10}H_{12}O_5$ mol.wt. 212.20**New compound**

Synthesis

- Obtained from palladium-carbon-catalyzed hydrogenolysis of 2,4-bis(benzyloxy)-6-methoxymethoxyacetophenone in a mixture of methanol and ethyl acetate at 20° (95%) [4213].

m.p. 117–119° [4213]; 1H NMR [4213].**1-[5-(Dimethylamino)-2-hydroxyphenyl]ethanone**

[49619-68-3]

 $C_{10}H_{13}NO_2$ mol.wt. 179.22**Described** [3734] p. 847**Methyl ether** $C_{11}H_{15}NO_2$ mol.wt. 193.25– Refer to: [3858]; ^{13}C NMR [3858].**1-(2-Amino-4,5-dimethoxyphenyl)ethanone**

[4101-30-8]

 $C_{10}H_{13}NO_3$ mol.wt. 195.25**New compound**

Syntheses

- Refer to: [4019,4265].

Ethyl 3-acetyl-2-deuterio-4-hydroxybenzoate[78515-06-7] $C_{11}H_{11}DO_4$ mol.wt. 209.21**New compound****Synthesis**

- Obtained by reaction of 5-formyl-1,3-dimethyluracil-d1 with 2,4-pentanedione in the presence of sodium ethoxide in ethanol on heating for 3 h [4098].

m.p. 65–67° [4098]; 1H NMR [4098], UV [4098].**1-[3-Ethyl-6-hydroxy-2-(trifluoromethyl)phenyl]ethanone**[884851-64-3] $C_{11}H_{11}F_3O_2$ mol.wt. 232.20**New compound****Synthesis**

- To a CH_2Cl_2 solution of 1,3-bis-silyl enol ether ($R^3 = CH_3$) and 4-ethoxy-3-ethyl-1,1,1-trifluoro-3-buten-2-one was added $TiCl_4$ at -78° under argon atmosphere.

The temperature of the reaction mixture was allowed to rise to 20° during 14 h and, subsequently, an aqueous solution of 10% HCl was added (40%) [4202].

1H NMR [4202], ^{13}C NMR [4202], ^{19}F NMR [4202], IR [4202]; TLC [4202].

1-[2-Hydroxy-3-(2-propen-1-yl)phenyl]ethanone[58621-39-9] $C_{11}H_{12}O_2$ mol.wt. 176.22**Described [3734] p. 850****Syntheses**

- Also obtained by thermal Claisen rearrangement of 2-(allyloxy)acetophenone,
- by heating at 200° for 44 h (quantitative yield) [3911];
- by irradiation in a microwave set at 230 W and 210° for 1 h with simultaneous air cooling (quantitative yield) [3911].

1H NMR [3911], ^{13}C NMR [3911], MS [3911].

1-[2,4-Dihydroxy-3-(2-propen-1-yl)phenyl]ethanone[38987-00-7] $C_{11}H_{12}O_3$ mol.wt. 192.21**Described [3734] p. 852****Syntheses**

- Also refer to: [4155,4266].

1-[2,5-Dihydroxy-3-(2-propen-1-yl)phenyl]ethanone

[956525-45-4]

 $C_{11}H_{12}O_3$ mol.wt. 192.21**New compound**

Synthesis

– Refer to: [3895].

Oxime [956525-49-8] $C_{11}H_{14}NO_4$ mol.wt. 224.24 [3895]**1-[5-Hydroxy-2-(2-propen-1-yloxy)phenyl]ethanone**

[956525-48-7]

 $C_{11}H_{12}O_3$ mol.wt. 192.21**New compound**

Synthesis

– Refer to: [3895].

1-[5-(Acetyloxy)-2-hydroxy-4-methylphenyl]ethanone

[126570-32-9]

 $C_{11}H_{12}O_4$ mol.wt. 208.21**Described [3734] p. 854**

Synthesis

– Also obtained by Fries rearrangement of 2-methylhydroquinone diacetate with aluminium chloride at 120° for 15 min [4165].

m.p. 108° [4165].

1-(2,3-Dihydro-6-hydroxy-7-methoxy-5-benzofuranyl)ethanone

[88897-94-3]

 $C_{11}H_{12}O_4$ mol.wt. 208.21**New compound**

Synthesis

– Refer to: [4267].

1-[2-Hydroxy-5-(1-oxopropoxy)phenyl]ethanone

[1004985-99-2]

 $C_{11}H_{12}O_4$ mol.wt. 208.21**New compound**

Synthesis

– Obtained by direct acylation of quinacetophenone with vinyl propionate in the presence of *Candida antarctica* lipase B (CAL-B) in diisopropyl ether at 45° for 1 day (73%) [4268]. 1H NMR [4268], ^{13}C NMR [4268].

1-[5-Hydroxy-2-(1-oxopropoxy)phenyl]ethanone[1004986-06-4] $C_{11}H_{12}O_4$ mol.wt. 208.21**New compound****Synthesis**

- Obtained by direct acylation of quinacetophenone with vinyl propionate in the presence of *Candida antarctica* lipase B (CAL-B) in diisopropyl ether at 45° for 1 day (8%) [4268].

 1H NMR [4268], ^{13}C NMR [4268].**1-(5-Bromo-2-hydroxy-3,4,6-trimethoxyphenyl)ethanone** $C_{11}H_{13}BrO_5$ mol.wt. 305.13**New compound****Synthesis**

- Obtained by bromination of 2-hydroxy-3,4,6-trimethoxyacetophenone with N-bromosuccinimide [4206].

m.p. 83° [4206].

Methyl ether [92905-07-2] $C_{12}H_{15}BrO_5$ mol.wt. 397.13

- Obtained by treatment of 2-hydroxy-3,4,6-trimethoxyacetophenone with dimethyl sulfate in the presence of potassium carbonate in boiling acetone [4206].
- Also obtained by treatment of 2,4-dihydroxy-3,6-dimethoxyacetophenone with dimethyl sulfate in the presence of potassium carbonate in boiling acetone [4206].

m.p. 51° [4206].

1-[2-(2-Chloroethyl)-4-methoxyphenyl]ethanone[960592-54-5] $C_{11}H_{13}ClO_2$ mol.wt. 198.65**New compound****Synthesis**

- Refer to: [4269].

1-(4-Ethyl-5-methoxy-2-nitrophenyl)ethanone[947691-66-9] $C_{11}H_{13}NO_4$ mol.wt. 223.23**New compound****Synthesis**

- Refer to: [3905].

1-[4-Hydroxy-3-(1-methylethyl)phenyl]ethanone[1632-59-3] $C_{11}H_{14}O_2$ mol.wt. 178.23**Described** [3734] p. 867

Synthesis

– Also obtained by heating its methyl ether with pyridinium chloride for 15 min (67%) [3765].

Methyl ether [1634-64-6] $C_{12}H_{16}O_2$ mol.wt. 192.26

- Obtained by reaction of acetyl chloride with 2-isopropylanisole in the presence of aluminium chloride in carbon disulfide [4270], (64%) [4184].
- Also obtained by using the method [4271], (66%) [4272].
- Also refer to: [3765,4273].

b.p._{0.2} 108° [4184], b.p.₂₁ 165–166° [4270], b.p.₃₇ 170–178° [4272]; $n_D^{23} = 1.5385$ [4270]; m.p. 50–51° [4184].**1-(2-Hydroxy-4-propylphenyl)ethanone**[104175-20-4] $C_{11}H_{14}O_2$ mol.wt. 178.23**Described** [3734] p. 868

Synthesis

– Also obtained by Fries rearrangement of 3-propylphenyl acetate (b.p.₁₆ 128–129°) with aluminium chloride at 130–135° for 90 min (78%) [4214].b.p.₁₈ 145–146° [4214].**2,4-Dinitrophenylhydrazone** $C_{17}H_{18}N_4O_5$ mol.wt. 358.35

Synthesis

– Also obtained by Fries rearrangement of 3-propylphenyl acetate (b.p.₁₆ 128–129°) with aluminium chloride at 130–135° for 90 min (2%) [4214].b.p.₇₆₀ 332–334° [4214]; m.p. 75–76° [4214].

2,4-Dinitrophenylhydrazone $C_{17}H_{18}N_4O_5$ mol.wt. 358.35

m.p. 163–164° [4214].

1-[2,4-Dihydroxy-5-(1-methylethyl)phenyl]ethanone

[747414-17-1] $C_{11}H_{14}O_3$ mol.wt. 194.23

New compound

Syntheses

- Obtained by reaction of acetic acid with 4-isopropyl-resorcinol in the presence of boron trifluoride etherate at 90° for 16 h (88%) [3829].
- Also refer to: [3870–3874].

Off-white solid [3829]; 1H NMR [3829], MS [3829].

Dibenzyl ether [747414-18-2] $C_{25}H_{26}O_3$ mol.wt. 374.48

- Obtained by reaction of benzyl bromide with 5-isopropylresacetophenone in the presence of potassium carbonate in DMF at 150° for 16 h under nitrogen (88%) [3829].
- Also refer to: [3870–3874].

Colourless solid [3829]; 1H NMR [3829], MS [3829].

1-[2-Hydroxy-3-methyl-4-[(methylthio)methoxy]phenyl]ethanone

[942133-87-1] $C_{11}H_{14}O_3S$ mol.wt. 226.30

New compound

Synthesis

- Obtained by treatment of 2,4-dihydroxy-3-methyl-acetophenone with chloromethyl methyl sulfide in the presence of KOH/ K_2CO_3 mixture in boiling 2-butanone [4274].

1-[2-Hydroxy-4-(methoxymethoxy)-3-methylphenyl]ethanone

[942133-85-9] $C_{11}H_{14}O_4$ mol.wt. 210.23

New compound

Synthesis

- Obtained by treatment of 2,4-dihydroxy-3-methyl-acetophenone with chloromethyl methyl ether in the presence of KOH/ K_2CO_3 mixture in boiling 2-butanone [4274].

1-(2,4,6-Trihydroxy-3-propylphenyl)ethanone[96756-28-4] $C_{11}H_{14}O_4$ mol.wt. 210.23**New compound****Synthesis**

- Obtained by treatment of its trimethyl ether with boron tribromide in methylene chloride at -78° , then at r.t. for 24–48 h (77%) [4192].

 1H NMR [4192], ^{13}C NMR [4192], MS [4192].**Trimethyl ether** [916916-57-9] $C_{14}H_{20}O_4$ mol.wt. 252.31

- Obtained by reaction of acetyl chloride with 2,4,6-trimethoxy-n-propylbenzene in methylene chloride in the presence of stannic chloride at -10° for 2–3 h (80%) [4192].

 1H NMR [4192], ^{13}C NMR [4192], MS [4192].**1-(2-Hydroxy-3,4,5-trimethoxyphenyl)ethanone**[30225-96-8] $C_{11}H_{14}O_5$ mol.wt. 226.23**Described [3734] p. 888****Synthesis**

- Also obtained by Friedel–Crafts reaction of 3,4,5-trimethoxy-phenol and acetic anhydride using zinc chloride in nitromethane (91%) [4275].

1-(2-Hydroxy-3,4,6-trimethoxyphenyl)ethanone[7507-98-4] $C_{11}H_{14}O_5$ mol.wt. 226.23**Described [3734] p. 888****Syntheses**

- Also obtained by reaction of acetyl chloride with 1,2,3,5-tetra-methoxybenzene in the presence of aluminium chloride in ethyl ether (55%) [4071] under argon, at 0° for 3 h, then at r.t. overnight (56%) [4276].

Isolation from natural sources

- From liverwort *Adelanthus decipiens* [4074].
- From liverwort *Plagiochila fasciculata* Lindenb. [4277].

m.p. 114–115° [4276], 112–113° [4071];

 ^{13}C NMR [4276,4278], NOE [4074].

1-(6-Hydroxy-2,3,4-trimethoxyphenyl)ethanone

[22248-14-2]

C₁₁H₁₄O₅ mol.wt. 226.23**Described** [3734] p. 891

Syntheses

– Also obtained by reaction of dimethyl sulfate with 2,3,4,6-tetrahydroxyacetophenone in the presence of potassium carbonate in refluxing acetone for 3 h (41%) [4063].

– Also refer to: [4071].

m.p. 76° [4063];

¹H NMR [4063], ¹³C NMR [4063], IR [4063], UV [4063], MS [4063]; TLC [4063].

1-(2-Amino-4-ethyl-5-methoxyphenyl)ethanone

[947691-67-0]

C₁₁H₁₅NO₂ mol.wt. 193.25**New compound**

Syntheses

– Refer to: [3905,4279].

1-(2-Amino-5-ethyl-4-methoxyphenyl)ethanone

[947691-62-5]

C₁₁H₁₅NO₂ mol.wt. 193.25**New compound**

Syntheses

– Refer to: [3905,4279].

1-[3-[(Dimethylamino)methyl]-4-hydroxyphenyl]ethanone

[73096-98-7]

C₁₁H₁₅NO₂ mol.wt. 193.25**New compound**

Syntheses

– Obtained by adding dimethylamine to a solution of 3-chloromethyl-4-hydroxyacetophenone in benzene in the cold. Stirring was continued for 4–5 h, then treatment of the hydrochloride so obtained with sodium bicarbonate (60%) [4120].

– Also obtained by adding an aqueous solution of 37% formaldehyde to 4-hydroxyacetophenone and dimethylamine in dilute ethanol, then refluxing for 22 h (72%) [4280].

– Also obtained from 4-hydroxyacetophenone using Mannich reaction (55%) [4281].

- Also obtained by reaction of dimethylmethyliminium iodide with 4-hydroxyacetophenone in the presence of,
 - potassium carbonate in methylene chloride at r.t. for 7 h (85%) [4282];
 - carbonate exchange resin in methylene chloride at r.t. for 16 h (97%) [4283].
 - Also refer to: (55%) [4281].
- m.p. 74° [4282], 73° [4281], 72° [4120], 68° [4280];
¹H NMR [4120,4281,4282], IR [4120], MS [4120,4282]; pK_a [4284].
 BIOLOGICAL ACTIVITY: Insecticide [4120,4154].

Hydrochloride [91246-57-0] C₁₁H₁₅NO₂, HCl mol.wt. 229.71
 m.p. 174–175° [4281], 170° [4280].

Methyl ether C₁₂H₁₇NO₂ mol.wt. 207.27

- A solution of (5-bromo-2-methoxybenzyl)dimethylamine, butoxyethene, palladium diacetate, 1,3-bis(diphenylphosphino)propane and potassium carbonate in dimethylformamide under argon was heated at 80° overnight. The mixture was poured into a solution of 2 N aqueous hydrochloric acid and stirred for 1 h. The solution was adjusted to basic pH using a solution of 2 N aqueous sodium hydroxide (42%) [4285].
- Orange oil [4285]; ¹H NMR [4285]; GC-MS [4285].

8-Acetyl-5,7-dihydroxy-3-iodo-6-methoxy-4H-1-benzopyran-4-one

[870480-53-8] C₁₂H₉IO₆ mol.wt. 376.10

New compound

Synthesis

- Obtained by treatment of its dimethyl ether with titanium tetrachloride in toluene, first at r.t., then at 100° for 1 h (73%) [4275].

Colourless crystals; m.p. 224–226° [4275];
¹H NMR [4275], MS [4275].

Dimethyl ether [870480-17-4] C₁₄H₁₃IO₆ mol.wt. 404.16

- Obtained by treatment of (*E*)-3'-acetyl-3-(dimethylamino)-2'-hydroxy-4',5',6'-trimethoxy-acrylophenone (m.p. 113–114°) with iodine in methylene chloride at r.t. for 2 h (83%) [4275].
- m.p. 139–140° [4275]; ¹H NMR [4275], MS [4275].

1-(5-Hydroxy-2,3-dimethyl-6-benzofuranyl)ethanone

C₁₂H₁₂O₃ mol.wt. 204.23

New compound

Synthesis

- Also obtained by heating its methyl ether with pyridinium chloride for 30 min (71%) [3765].

Methyl ether [4223-70-5] $C_{13}H_{14}O_3$ mol.wt. 218.25.

- Refer to: [3765,4286].

b.p.₁₂ 191–192° [4286]; m.p. 114° [4286].

1-(4,7-Dimethoxy-5-benzofuranyl)ethanone

[1025008-58-5] $C_{12}H_{12}O_4$ mol.wt. 220.22

New compound

Synthesis

- Obtained from 5-acetyl-4,7-dimethoxy-6-benzofuranyl 1,1,1-trifluoromethanesulfonate [1025008-57-4], (89%) [4267].

1-(6-Hydroxy-7-methoxy-4-methyl-5-benzofuranyl)ethanone

[1017961-46-4] $C_{12}H_{12}O_4$ mol.wt. 220.22

New compound

Synthesis

- Refer to: [4287].

USE: As potassium channel blockers [4287].

1-(6-Hydroxy-4,7-dimethoxy-5-benzofuranyl)ethanone (*Khellinone*)

[484-51-5] $C_{12}H_{12}O_5$ mol.wt. 236.22

New compound

Syntheses

- Obtained by slowly adding 3 M sodium hydroxide to a solution of 4,9-dimethoxy-7-methylfuro[3,2-g]chromen-5-one in refluxing dilute ethanol, then the resulting solution was stirred at 70° for 3 h [4288].
- Also obtained by treatment of 5-(β-dimethylaminocrotonyl)-4,7-dimethoxy-6-hydroxycoumarone with 3% sodium hydroxide for 30 min at r.t. [4289].
- Also refer to: [4287], 7 [4267].

m.p. 98–99° [4289].

USE: As potassium channel blockers [4287].

Phenylhydrazone $C_{18}H_{18}N_2O_4$ mol.wt. 326.35

m.p. 167–168° [4289].

1-[(2-Cyclopropylmethoxy)-6-hydroxyphenyl]ethanone[405239-70-5] $C_{12}H_{14}O_3$ mol.wt. 206.24**New compound****Synthesis**

- Preparation by reaction of (bromomethyl)cyclopropane with 2,6-dihydroxyacetophenone in the presence of potassium carbonate in acetone at 50° for 2 days (83%) [4006].

1-[4-Hydroxy-3-(1-hydroxy-3-buten-1-yl)phenyl]ethanone[1000781-23-6] $C_{12}H_{14}O_3$ mol.wt. 206.24**New compound****Synthesis**

- Refer to: [4290].

1-[3-(Acetyloxy)-6-hydroxy-2,4-dimethylphenyl]ethanone[334868-41-6] $C_{12}H_{14}O_4$ mol.wt. 222.24**New compound****Syntheses**

- Obtained by [3+3] cyclisation of 2-acetoxy-3-(silyloxy) alk-2-en-1-one (**4a**) with 1,3-bis-silyl enol ether (**5b**) in

the presence of titanium tetrachloride in methylene chloride, first at -78° , then to 20° for 20 h (55%) [4207], (42%) [4291].

Yellow crystals [4291];

1H NMR [4291], ^{13}C NMR [4291], IR [4291], MS [4291].

4a = 3-(acetyloxy)-4-(trimethylsilyloxy)-3-penten-2-one.

5b = 2,4-bis(trimethylsilyloxy)-2-pentene.

1-(2,3-Dihydro-6-hydroxy-4,7-dimethoxy-5-benzofuranyl)ethanone[6938-22-3] $C_{12}H_{14}O_5$ mol.wt. 238.24**New compound****Synthesis**

– Obtained by treatment of Khellinone in methanol with hydrogen in the presence of 10% Pd/C (86%) [4267].

1-[3-(2-Chloroethyl)-2,4-dimethyl-6-hydroxyphenyl]ethanone $C_{12}H_{15}ClO_2$ mol.wt. 226.70**New compound****Syntheses**

– Preparation by adding titanium tetrachloride in methylene chloride to a methylene chloride solution of 1,1-diacetyl-cyclopropane and 1-methyl-1, 3-bis(trimethylsilyloxy)-1,3-butadiene at -78° under argon atmosphere in the presence of molecular sieves (4 \AA). The temperature of the reaction mixture was allowed to rise to 20° over 6 h, and stirred for an additional 6 h at 20° (68%) [4292], (82%) [4293].

$^1\text{H NMR}$ [4293], $^{13}\text{C NMR}$ [4293], IR [4293], MS [4293]; TLC [4293].

1-(2-Butyl-4-hydroxyphenyl)ethanone[105337-80-2] $C_{12}H_{16}O_2$ mol.wt. 192.26**New compound****Synthesis**

– Obtained by Fries rearrangement of 3-butylphenyl acetate (b.p.₁₂ $130\text{--}131^\circ$) with aluminium chloride at $130\text{--}135^\circ$ for 60 min (9%) [4214].

b.p.₃₄ $226\text{--}230^\circ$ [4214]; m.p. $61\text{--}62^\circ$ [4214].

1-(4-Butyl-2-hydroxyphenyl)ethanone[105337-19-7] $C_{12}H_{16}O_2$ mol.wt. 192.26**New compound****Synthesis**

– Obtained by Fries rearrangement of 3-butylphenyl acetate (b.p.₁₂ $130\text{--}131^\circ$) with aluminium chloride at $130\text{--}135^\circ$ for 60 min (73%) [4214].

b.p.₃₄ $180\text{--}182^\circ$ [4214].

2,4-Dinitrophenylhydrazone $C_{18}H_{20}N_4O_5$ mol.wt. 372.38
m.p. 187–188° [4214].

1-(5-Butyl-2-hydroxyphenyl)ethanone

[50743-14-1] $C_{12}H_{16}O_2$ mol.wt. 192.26

Described [3734] p. 910

Methyl ether [784177-14-6] $C_{13}H_{18}O_2$ mol.wt. 206.28 Refer to: [4294].

1-(3,4-Diethyl-2,5-dihydroxyphenyl)ethanone

[873222-91-4] $C_{12}H_{16}O_3$ mol.wt. 208.26

New compound

Synthesis

- Obtained by $[Cp^*RuCl_2]_2$ -catalyzed cocyclisation of 3-hexyne (1,2-diethylacetylene), 3-buten-2-one and carbon monoxide in DMF at 140° for 20 h (60%) [4295].

1-(2,5-Dihydroxy-3-methyl-4-propylphenyl)ethanone

[873222-93-6] $C_{12}H_{16}O_3$ mol.wt. 208.26

New compound

Synthesis

- Obtained by $[Cp^*RuCl_2]_2$ -catalyzed cocyclisation of 2-hexyne, 3-buten-2-one and carbon monoxide in DMF at 140° for 20 h (27%) [4295].

1H NMR [4295].

1-(2,5-Dihydroxy-4-methyl-3-propylphenyl)ethanone

[873222-92-5] $C_{12}H_{16}O_3$ mol.wt. 208.26

New compound

Synthesis

- Obtained by $[Cp^*RuCl_2]_2$ -catalyzed cocyclisation of 2-hexyne, 3-buten-2-one and carbon monoxide in DMF at 140° for 20 h (35%) [4295].

1H NMR [4295].

1-[2,4-Dihydroxy-5-(2-methylpropyl)phenyl]ethanone (*6-Acetyl-4-isobutylresorcinol*)C₁₂H₁₆O₃ mol.wt. 208.26**New compound****Synthesis**

- Obtained by reaction of acetic acid with 4-isobutylresorcinol in the presence of boron trifluoride etherate at 90° for 16 h [3829].

Dibenzyl ether C₂₆H₂₈O₃ mol.wt. 388.51

- Obtained by reaction of benzyl bromide with 5-isobutylresacetophenone in the presence of potassium carbonate in DMF under nitrogen at 150° for 16 h (25%) [3829].

Colourless crystals [3829]; ¹H NMR [3829], MS [3829].**1-[5-(1,1-Dimethylethyl)-2,4-dihydroxyphenyl]ethanone**[140660-31-7] C₁₂H₁₆O₃ mol.wt. 208.26**Described [3734] p. 924****Synthesis**

- Also obtained by adding sulfuric acid to a suspension of resacetophenone in a mixture of 2-methyl-2-propanol and trifluoroacetic acid under nitrogen.

The resulting suspension was heated at 75° for 3 h (92%) [3829].

Pale orange powder [3829]; ¹H NMR [3829], MS [3829].**Dibenzyl ether** [747414-06-8] C₂₆H₂₈O₃ mol.wt. 388.51

- Obtained by treatment of 5-tert-butylresacetophenone with benzyl bromide in the presence of potassium carbonate in DMF at r.t. for 4 h (36%) [3829].
- Also refer to: [3870–3874].

Pale-pink powder [3829]; ¹H NMR [3829], MS [3829].**1-[2-Hydroxy-3-methyl-4-[2-(methylthio)ethoxy]phenyl]ethanone**[942133-89-3] C₁₂H₁₆O₃S mol.wt. 240.32**New compound****Synthesis**

- Obtained by treatment of 2,4-dihydroxy-3-methyl-acetophenone with 2-chloroethyl methyl sulfide in the presence of KOH/K₂CO₃ mixture in boiling 2-butanone [4274].

1-[2,3-Dimethoxy-5-(methoxymethyl)phenyl]ethanone[1004984-76-2] $C_{12}H_{16}O_4$ mol.wt. 224.26**New compound****Synthesis**

- Obtained by adding a solution of 1-(2,3-dimethoxy-5-methoxymethylphenyl)ethanol in methylene chloride to a suspension of PCC and silica gel in methylene chloride and stirring for 2 h at r.t. (98%) [4296].

Oil [4296];

 1H NMR [4296], ^{13}C NMR [4296], IR [4296], MS [4296].**1-[4-(Ethoxymethoxy)-2-hydroxy-3-methylphenyl]ethanone**[942133-88-2] $C_{12}H_{16}O_4$ mol.wt. 224.26**New compound****Synthesis**

- Obtained by treatment of 2,4-dihydroxy-3-methyl-acetophenone with 2-chloroethyl methyl ether in the presence of KOH/ K_2CO_3 mixture in boiling 2-butanone [4274].

1-(3-Ethyl-4-hydroxy-2,6-dimethoxyphenyl)ethanone $C_{12}H_{16}O_4$ mol.wt. 224.26**Described [3734] p. 929****Acetate** $C_{14}H_{18}O_5$ mol.wt. 266.29

- Obtained by reaction of acetic anhydride with 3-ethyl-4-hydroxy-2,6-dimethoxyacetophenone (80%) [4297].

b.p._{0.005} 180–200° [4297]; m.p. 59–60° [4297].**1-[4-(Ethoxymethoxy)-2-hydroxy-6-methoxyphenyl]ethanone**[158017-91-5] $C_{12}H_{16}O_5$ mol.wt. 240.26**New compound****Synthesis**

- Obtained by reaction of ethoxymethyl chloride with 2,4-dihydroxy-6-methoxyacetophenone in the presence of potassium carbonate in acetone for 5–10 min [4298].

m.p. 95° [4298];
¹H NMR [4298], IR [4298], UV [4298]; LC [4298].

Methyl ether [158017-92-6] C₁₃H₁₈O₅ mol.wt. 254.28

- Obtained by reaction of dimethyl sulfate with 4-ethoxymethoxy-2-hydroxy-6-methoxy-acetophenone in the presence of potassium carbonate in refluxing acetone for 8 h (79%) [4298].
 Colourless oil [4298];
¹H NMR [4298], IR [4298]; TLC [4298].

1-[2-Hydroxy-4,6-bis(methoxymethoxy)phenyl]ethanone

[65490-09-7] C₁₂H₁₆O₆ mol.wt. 256.26

Described [3734] p. 935

Synthesis

- Also obtained by reaction of chloromethyl methyl ether with phloracetophenone monohydrate in the presence of potassium carbonate in refluxing acetone for 90 min (50%) [4299] according to [4300].

White solid [4299]; ¹H NMR [4299], ¹³C NMR [4299].

1-[3-[(Dimethylamino)methyl]-2-hydroxy-5-methylphenyl]ethanone

[93201-29-7] C₁₂H₁₇NO₂ mol.wt. 207.27

New compound

Synthesis

- Obtained by adding N,N-dimethylamine gas into a solution of 3-chloromethyl-2-hydroxy-5-methylacetophenone in cold benzene and stirring for 4–5 h. The solution of the hydrochloride obtained was neutralized with sodium bicarbonate solution to pH 7.0 (74%) [4154].

Oil [4154]; ¹H NMR [4154], UV [4154].
 BIOLOGICAL ACTIVITY: Insecticide [4154].

1-[6-Hydroxy-2-(1-methylethenyl)-5-benzofuranyl]ethanone (*Euparin*)

[532-48-9] C₁₃H₁₂O₃ mol.wt. 216.24

New compound

Isolation from natural sources

- From the roots of *Ligularia stenocephala* MATSUM. et KOIDZ. (Compositae) [4301].
- From brittle bush (*Encelia farinosa* Gray) [4302].

Yellow needles [4302]; m.p. 117–118° [4303], 116° [4302];

m.p. 80° [4304], 78–79° [4302].

1-[6-Hydroxy-2-(1-methylethenyl)-7-benzofuranyl]ethanone

[55682-75-2] C₁₃H₁₂O₃ mol.wt. 216.24

New compound

Synthesis

- Refer to: [4305] (Chinese paper).

1-[(2*R*)-2,3-Dihydro-6-hydroxy-2-(1-methylethenyl)-5-benzofuranyl]ethanone (*R*)-(-)-Hydroxytremetone

[21491-62-3] C₁₃H₁₄O₃ mol.wt. 218.25

New compound

Isolation from natural sources

- From the roots of *Ligularia stenocephala* MATSUM. et KOIDZ. (Compositae) [4301].
- From the white snakeroot plant (*Eupatorium urticaefolium*) [4306].
- From the rayless goldenrod plant (*Aploppapus heterophyllus*) [4306].

1-(7-Hydroxy-2,2-dimethyl-2*H*-1-benzopyran-6-yl)ethanone (*Eupatoriochromene A*)

[19013-03-7] C₁₃H₁₄O₃ mol.wt. 218.25

New compound

Synthesis

- Obtained by dehydrogenation of 6-acetyl-7-hydroxy-2,2-dimethylchroman with DDQ in refluxing benzene for 1.5 h [4302].

m.p. 76–77° [4302], 76° [4307];

¹H NMR [4302,4307], IR [4302], MS [4302].

Isolation from natural sources

- From the genus of *Eupatorium riparium* Regel and *Eupatorium glandulosum* H.B. & K. (syn. *Eupatorium adenophorum* Spr.) (Eupatorieae) [4307].

Acetate C₁₅H₁₆O₄ mol.wt. 260.29

m.p. 75.5–76.5° [4302].

Methyl ether [20628-09-5] $C_{14}H_{16}O_3$ mol.wt. 232.28

(*Encecalin*)

- Obtained by treatment of eupatoriochromene A with dimethyl sulfate in the presence of potassium carbonate [4307].
- Also obtained by oxidation of encecalol [6-(1-hydroxyethyl)-7-methoxy-2,2-dimethylchromene] (encecalol) with manganese oxide in petroleum ether suspension for 2 h at r.t. (84%) [4302].

Isolation from the natural sources

- From the genus of *Eupatorium riparium* Regel and *Eupatorium glandulosum* H.B. & K. (syn. *Eupatorium adenophorum* Spr.) (Eupatorieae) [4307].
- From *Encelia californica* Nutt (tribe Heliantheae) [4084].
- From brittle bush (*Encelia farinosa* Gray) [4302].

Yellow viscous oil [4302], oil [4307];

Oxime (of the methyl ether) [23840-18-8] $C_{14}H_{17}NO_3$ mol.wt. 247.29

m.p. 140° [4084,4308], 136–137° [4302]; ¹H NMR [4084].

1-[6-Hydroxy-2-(1-methylethyl)-5-benzofuranyl]ethanone (*Isodihydroeuparin*)

[5207-55-6]

$C_{13}H_{14}O_3$ mol.wt. 218.25

New compound

Syntheses

- Obtained by hydrogenation (1 atm) of euparin in ethanol in the presence of Raney nickel [4309].

- Also refer to: [4310].

Isolation from natural sources

- From brittle bush (*Encelia farinosa* Gray) [4302].
- From the aerial parts of *Senecio graveolens* Wedd [4311].

m.p. 188–120° [4302], 62° [4309], 57–58.5° [4312].

One of the reported melting points is obviously wrong.

¹H NMR [4302,4309], UV [4302].

1-(4-Ethoxy-6-hydroxy-7-methoxy-5-benzofuranyl)ethanone

[75884-10-5]

$C_{13}H_{14}O_5$ mol.wt. 250.25

New compound

Syntheses

- Obtained by slowly adding 3 M sodium hydroxide to a solution of 4-ethoxy-9-methoxy-7-methylfuro[3,2-g]-chromen-5-one (m.p. 104–106°) in refluxing dilute ethanol, then the resulting solution was stirred at 70° for 3 h (75%) [4288].

- Also obtained by treatment of 5-(β -ethylaminocrotonyl)-4-ethoxy-6-hydroxy-7-methoxy-coumarone with 3% potassium hydroxide for 30 min at r.t. [4289].
 m.p. 94–95° [4288], 93–95° [4289];
 ^1H NMR [4288], ^{13}C NMR [4288], MS [4288].

Benzoate $\text{C}_{20}\text{H}_{18}\text{O}_6$ mol.wt. 354.36 m.p. 83–85° [4289].

1-(7-Ethoxy-6-hydroxy-4-methoxy-5-benzofuranyl)ethanone

[88897-98-7] $\text{C}_{13}\text{H}_{14}\text{O}_5$ mol.wt. 250.25

New compound

Synthesis

- Obtained by slowly adding 3 M sodium hydroxide to a solution of 9-ethoxy-4-methoxy-7-methylfuro[3,2-g]-chromen-5-one in refluxing dilute ethanol, then the resulting solution was stirred at 70° for 3 h [4288].

1-[3-(1,1-Dimethyl-2-propenyl)-2-hydroxyphenyl]ethanone

[873211-43-9] $\text{C}_{13}\text{H}_{16}\text{O}_2$ mol.wt. 204.27

New compound

Synthesis

- Refer to: [4313].

BIOLOGICAL ACTIVITY: Antiproliferative and antimicrobial agent [4313].

1-[2-Hydroxy-5-(3-methyl-2-butenyl)phenyl]ethanone

[873211-41-7] $\text{C}_{13}\text{H}_{16}\text{O}_2$ mol.wt. 204.27

New compound

Synthesis

- Refer to: [4313].

BIOLOGICAL ACTIVITY: Antiproliferative and antimicrobial agent [4313].

1-[4-Hydroxy-3-[(2E)-2-methyl-2-butenyl]phenyl]ethanone

[603110-50-5] $\text{C}_{13}\text{H}_{16}\text{O}_2$ mol.wt. 204.27

New compound

Synthesis

- Refer to: [4314].

1-[4-Hydroxy-3-(3-methyl-2-butenyl)phenyl]ethanone

[26932-05-8]

 $C_{13}H_{16}O_2$ mol.wt. 204.27**Described** [3734] p. 939

Synthesis

– Also refer to: [4313].

BIOLOGICAL ACTIVITY: Antiproliferative and antimicrobial agent [4313].

1-(3,4-Dihydro-7-hydroxy-2,2-dimethyl-2H-1-benzopyran-6-yl)ethanone

[31273-58-2]

 $C_{13}H_{16}O_3$ mol.wt. 220.27**New compound**

Syntheses

– Obtained by cyclization of 2,4-dihydroxy-5-prenyl-acetophenone with concentrated hydrochloric acid in refluxing ethanol for 3 h (87%) [4302].

– Also refer to: [4315].

m.p. 119° [4316], 117–118° [4302];

 1H NMR [4302], IR [4302].**1-[2,4-Dihydroxy-3-(3-methyl-2-butenyl)phenyl]ethanone**

[19825-40-2]

 $C_{13}H_{16}O_3$ mol.wt. 220.27**Described** [3734] p. 941

Synthesis

– Also refer to: [4155].

1-[2,4-Dihydroxy-5-(3-methyl-2-butenyl)phenyl]ethanone

[28437-37-8]

 $C_{13}H_{16}O_3$ mol.wt. 220.27**Described** [3734] p. 942

Syntheses

– Also obtained by adding 2-methyl-3-buten-2-ol over 30 min to a solution of resacetophenone in 80% formic acid at 50° (7%) [4302].

– Also obtained by reaction of prenyl bromide with resacetophenone in potassium hydroxide solution between 0° and 25° for 13 h (23%) [4317].

– Also refer to: [4155,4318–4320].

m.p. 144–145° [4302], 144° [4316], 139–141° [4320], 124–125° [4318].

One of the reported melting points is obviously wrong.

 1H NMR [4302,4317–4319], ^{13}C NMR [4318], IR [4302,4318,4319], UV [4155,4319].

1-[3-(Acetyloxy)-6-hydroxy-2,4,5-trimethylphenyl]ethanone[66901-79-9] $C_{13}H_{16}O_4$ mol.wt. 236.27**New compound****Synthesis**

- Readily obtained from TMHQ (trimethylhydroquinone) by treatment with BF_3 -acetic acid complex [4321].

Isopropyl ether $C_{16}H_{22}O_4$ mol.wt. 278.35

- Preparation by reaction of isopropyl bromide with 1-(2,5-dihydroxy-3,4,6-trimethylphenyl)ethanone in the presence of potassium carbonate and potassium iodide in acetone at r.t. for 24 h [4321].

1-[2-Hydroxy-5-(2,2-dimethylpropanoyloxy)phenyl]ethanone*2,2-Dimethylpropionic acid 3-acetyl-4-hydroxyphenyl ester* $C_{13}H_{16}O_4$ mol.wt. 236.27**New compound****Synthesis**

- Obtained by reaction of pivaloyl chloride with quinacetophenone in the presence of pyridine at r.t. for 1 h (79%) [3818].

Colourless oil [3818]; 1H NMR [3818], ^{13}C NMR [3818], MS [3818].**Methyl ether** $C_{14}H_{18}O_4$ mol.wt. 250.29

- Obtained by reaction of methyl iodide with the ketone above mentioned in the presence of lithium carbonate in DMF at 120° for 4 h (82%) [3818].

Colourless oil [3818]; 1H NMR [3818], ^{13}C NMR [3818], MS [3818].**1-[2-Hydroxy-6-[(tetrahydro-2H-pyran)-2-yl]phenyl]ethanone**[63854-17-1] $C_{13}H_{16}O_4$ mol.wt. 236.27**Described [3734] p. 947****Synthesis**

- Also obtained by reaction of 3,4-dihydro-2H-pyran with 2,6-dihydroxyacetophenone in the presence of p-toluenesulfonic acid in THF. The mixture was stirred under argon atmosphere overnight (55%) [4276].

Pale yellow crystals (unstable) [4276];

 1H NMR [4276], ^{13}C NMR [4276].

1-[2,4,6-Trihydroxy-3-(3-methyl-2-butenyl)phenyl]ethanone (*6-Demethylacronylin*)

[27364-71-2]

C₁₃H₁₆O₄ mol.wt. 236.27**Described** [3734] **p. 947****Synthesis**

- Also obtained by reaction of 3-methyl-2-butenyl bromide with phloracetophenone in the presence of aqueous potassium hydroxide at r.t. for 24 h (29%) [4322].

Isolation from natural sources.

- From the root bark of *Acronychia laurifolia* B1 (Rutaceae) [4323].

m.p. 173–174° [4322], 154° (d) [4323]. One of the reported melting points is obviously wrong.

¹H NMR [4323], IR [4323], UV [4323], MS [4323].

1-[2-Hydroxy-4-[(2-methoxyethoxy)methoxy]-3-methylphenyl]ethanone

[886999-22-0]

C₁₃H₁₈O₅ mol.wt. 254.28**New compound****Synthesis**

- Obtained by reaction of 2-methoxyethoxymethyl chloride with 2,4-dihydroxy-3-methyl acetophenone in the presence of DIEA in methylene chloride [4152].

m.p. 57–59° [4152];

¹H NMR [4152], IR [4152], MS [4152]; TLC [4152].

1-[2-Hydroxy-4,6-bis(methoxymethoxy)-3-methylphenyl]ethanone

[106929-57-1]

C₁₃H₁₈O₆ mol.wt. 270.28**Described** [3734] **p. 965****Synthesis**

- Also obtained by reaction of chloromethyl methyl ether with 2,4,6-trihydroxy-3-methylacetophenone in the presence of potassium carbonate in refluxing acetone for 1 h (64%) [4192].

¹H NMR [4192], ¹³C NMR [4192], MS [4192].

1-[4-[2-(Dimethylamino)ethoxy]-2-hydroxy-3-methylphenyl]ethanone

[942133-91-7]

C₁₃H₁₉NO₃ mol.wt. 237.30**New compound****Synthesis**

– Obtained by treatment of 2,4-dihydroxy-3-methyl-acetophenone with dimethylaminoethyl chloride in the presence of KOH/K₂CO₃ mixture in boiling 2-butanone [4274].

Hydrochloride (1:1)

[942134-13-6]

C₁₃H₁₉NO₃, HCl

mol.wt. 273.76 [4274]

1-[2-Hydroxy-5-(4-nitrophenoxy)phenyl]ethanone

[1006063-13-3]

C₁₄H₁₁NO₅

mol.wt. 273.35

**New compound****Synthesis**

– Obtained by adding quinacetophenone to a mixture of 5 N sodium hydroxide and DMSO; then after 40 min, adding 4-fluoronitrobenzene and stirring the solution obtained at 50° for 5 h (20%) [4324].

Oil [4324]; ¹³C NMR [4324], MS [4324].

[1006063-14-4]

C₁₄H₁₁NO₅

mol.wt. 273.35

**New compound****Synthesis**

– Obtained by adding quinacetophenone to a mixture of 5 N sodium hydroxide and DMSO; then after 40 min, 4-fluoronitrobenzene and stirring the solution obtained at 50° for 5 h (<1%) [4324].

Oil [4324]; ¹³C NMR [4324], MS [4324].

1-[2,4-Dihydroxy-5-(phenylazo)phenyl]ethanone (E)

[120196-22-7]

C₁₄H₁₂N₂O₃

mol.wt. 256.26

**New compound****Syntheses**

– Obtained by coupling resacetophenone with benzenediazonium chloride [4325,4326].

m.p. 198° [4326], 192° [4325].

DiacetateC₁₈H₁₆N₂O₅

mol.wt. 340.34 (m.p. 106–107°) [4325].

1-[2,6-Dihydroxy-3-(phenylazo)phenyl]ethanoneC₁₄H₁₂N₂O₃ mol.wt. 256.26**New compound****Synthesis**

- Obtained by coupling 2-acetylresorcinol with benzenediazonium chloride [4325].

m.p. 150–151° [4325].

1-(6-Hydroxy[1,1'-biphenyl]-3-yl)ethanone[20281-51-0] C₁₄H₁₂O₂ mol.wt. 212.25**Described [3734] p. 972****Benzyl ether** C₂₁H₁₈O₂ mol.wt. 302.37

- Obtained by reaction of benzyl chloride with 4-hydroxy-3-phenylacetophenone in the presence of potassium hydroxide in refluxing methanol (88%) [4184].

m.p. 87–89° [4184].

1-(7-Hydroxy-8-methoxy-2,2-dimethyl-2H-1-benzopyran-6-yl)ethanone
(*Ripariochromen A*)[20770-16-5] C₁₄H₁₆O₄ mol.wt. 248.28**New compound****Syntheses**

- Obtained by treatment of 6-acetyl-7-hydroxy-8-methoxy-2,2-dimethyl-3,4-dihydro-2H-1-benzopyran with DDQ in boiling benzene for 8 h [4327,4328].
- Also prepared from 2-methyl-1,3-butadiene (multi-step reaction) [4327].
- Also prepared from gallocetophenone (multi-step reaction) [4327].

Isolation from natural sources

- From the roots of *Eupatorium riparium* Regel [4329].
- From the roots of *Ageratina riparia* [4083].

m.p. 90–91° [4330], 89.5–90.5° [4328,4331];

¹H NMR [4327,4328,4331], IR [4328,4330,4331], UV [4328,4330,4331].

BIOLOGICAL DATA: Antifungal activity [4329].

1-(4,7-Diethoxy-6-hydroxy-5-benzofuranyl)ethanone[88349-53-5] $C_{14}H_{16}O_5$ mol.wt. 264.28**New compound****Synthesis**

– Obtained by slowly adding 3 M sodium hydroxide to a solution of 4,9-diethoxy-7-methylfuro[3,2-g]chromen-5-one (m.p. 90°) in refluxing dilute ethanol, then the resulting solution was stirred at 70° for 3 h (55%) [4288].

m.p. 72–74° [4288]; 1H NMR [4288], ^{13}C NMR [4288], MS [4288].

1-(6-Hydroxy-4-methoxy-7-propoxy-5-benzofuranyl)ethanone[880479-07-2] $C_{14}H_{16}O_5$ mol.wt. 264.28**New compound****Synthesis**

– Obtained by slowly adding 3 M sodium hydroxide to a solution of 4-methoxy-7-methyl-9-propoxyfuro[3,2-g]-chromen-5-one in refluxing dilute ethanol, then the resulting solution was stirred at 70° for 3 h [4288].

1-(6-Hydroxy-7-methoxy-4-propoxy-5-benzofuranyl)ethanone $C_{14}H_{16}O_5$ mol.wt. 264.28**New compound****Synthesis**

– Obtained by slowly adding 3 M sodium hydroxide to a solution of 9-methoxy-7-methyl-4-propoxyfuro[3,2-g]-chromen-5-one in refluxing dilute ethanol, then the resulting solution was stirred at 70° for 3 h [4288].

5-Acetyl-2,4,6-trihydroxyphenyl-1,3-dicarboxylic acid diethyl ester $C_{14}H_{16}O_8$ mol.wt. 312.28**New compound****Syntheses**

– Obtained by reaction of acetonitrile with 2,4,6-trihydroxy-phenyl-1,3-dicarboxylic acid diethyl ester in the presence of aluminium chloride and hydrogen chloride in ethyl ether (9%) [4297].

– Also refer to: [4332,4333].

m.p. 129° [4332,4333], 128–130° [4297].

1-[3-(Cyclopentyloxy)-2-hydroxy-4-methoxyphenyl]ethanone

[1001056-78-5]

C₁₄H₁₈O₄ mol.wt. 250.29**New compound**

Synthesis

– Refer to: [4334].

1-[2,4-Dihydroxy-6-methoxy-3-(3-methyl-2-butenyl)phenyl]ethanone

[30403-01-1]

C₁₄H₁₈O₄ mol.wt. 250.29**Described [3734] p. 983**

Syntheses

– Also obtained by reaction of diazomethane with 2,4,6-trihydroxy-3-(3-methyl-2-butenyl)-acetophenone in ethyl ether (19%) [4322].

– Also refer to: [4155,4335,4336].

m.p. 169–170° [4322], 164° [4335].

1-[2,6-Dihydroxy-4-methoxy-3-(3-methyl-2-butenyl)phenyl]ethanone

[77179-30-7]

C₁₄H₁₈O₄ mol.wt. 250.29**New compound**

Syntheses

– Obtained by reaction of 4-bromo-2-methyl-2-butene with 2,6-dihydroxy-4-methoxyacetophenone in the presence of potassium hydroxide,

- in methanol at 20° for 40 h (13%) [4337];

- in ethanol at r.t. for 24 h [4338].

– Also obtained by reaction of α,α -dimethylallyl alcohol with 2,6-dihydroxy-4-methoxy-acetophenone in the presence of boron trifluoride etherate in dioxane for 2 h [4339].

– Also refer to: [4335,4336].

m.p. 164° [4335], 125–126° [4338], 43° [4337].

One of the reported melting points is obviously wrong.

¹H NMR [4337,4338], IR [4337,4338], UV [4337,4338].**N.B.:**

– In the paper [4337], the “isomers” 3-C-prenyl (compound **C**, m.p. 43°) and 5-C-prenyl (compound **D**, m.p. 36°) are a single and same compound.

– The constitution of the title compound previously suggested by [4335] is incorrect [4336].

1-[4,6-Dihydroxy-2-methoxy-3-(3-methyl-2-butenyl)phenyl]ethanone (*Acronylin*)

[27364-64-3]

C₁₄H₁₈O₄ mol.wt. 250.29**Described** [3734] p. 983

Syntheses

– Also refer to: [4155,4340].

Isolation from natural sources

- From *Acronychia pedunculata* (Rutaceae) [4341].
- From the stem bark of *Acronychia laurifolia* (Rutaceae) [4342] also named *Acronychia pedunculata* [4323,4343].
- From the stem bark and Leaves of *Melicope stipitata* (Rutaceae) [4344].

[200726-78-9]

C₁₄H₁₈O₄ mol.wt. 250.29**New compound**

Synthesis

- Obtained by reaction of 2,3-dihydropyran with 2,4-dihydroxy-3-methylacetophenone in the presence of p-toluenesulfonic acid in ethyl ether at r.t. (83%) [4346].

1-[3-[2-(Acetyloxy)ethyl]-4-ethyl-2,5-dihydroxyphenyl]ethanone

[873222-94-7]

C₁₄H₁₈O₅ mol.wt. 266.29**New compound**

Synthesis

- Obtained by [Cp*₂RuCl₂]-catalyzed cycloaddition of 1-acetoxy-3-hexyne, 3-buten-2-one and carbon monoxide in DMF at 140° for 20 h (45%) [4295].

¹H NMR [4295].

1-[4-[2-(Acetyloxy)ethyl]-3-ethyl-2,5-dihydroxyphenyl]ethanone

[873222-95-8]

 $C_{14}H_{18}O_5$ mol.wt. 266.29**New compound****Synthesis**

- Obtained by $[Cp^*RuCl_2]_2$ -catalyzed cocyclisation of 1-acetoxy-3-hexyne, 3-buten-2-one and carbon monoxide in DMF at 140° for 20 h (30%) [4295].

 1H NMR [4295].**1-[3-Allyl-5-(dimethylaminomethyl)-4-hydroxyphenyl]ethanone** $C_{14}H_{19}NO_2$ mol.wt. 233.31**New compound****Synthesis**

- Obtained by reaction of dimethylmethyliminium iodide with 3-allyl-4-hydroxyacetophenone in the presence of carbonate exchange resin in methylene chloride at r.t. for 16 h (87%) [4283].

1-[4-Hydroxy-3,5-bis(1-methylethyl)phenyl]ethanone

[720-19-4]

 $C_{14}H_{20}O_2$ mol.wt. 220.31**New compound****Synthesis**

- Refer to: [4347].

Ethyl ether [1023740-57-9] $C_{16}H_{24}O_2$ mol.wt. 248.37

– Refer to: [4348].

1-(2,5-Dihydroxy-3,4-dipropylphenyl)ethanone

[873222-85-6]

 $C_{14}H_{20}O_3$ mol.wt. 236.21**New compound****Synthesis**

- Obtained by $[Cp^*RuCl_2]_2$ -catalyzed cocyclisation of 4-octyne (1,2-dipropylacetylene), 3-buten-2-one and carbon monoxide in DMF at 140° for 20 h (79%) [4295].

1-(6-Chloro-3-hydroxy-5-methyl[1,1'-biphenyl]-2-yl)ethanone[1001025-04-2] $C_{15}H_{13}ClO_2$ mol.wt. 260.72**New compound****Synthesis**

– Obtained by reaction of 3-chloro-4-phenyl-4-(trimethyl-silyloxy)-3-buten-2-one with 2,4-bis-(trimethylsilyloxy)-1,3-pentadiene in the presence of titanium tetrachloride (43%) [4208].

Yellow crystals; m.p. 68° [4208];

1H NMR [4208], ^{13}C NMR [4208], IR [4208], MS [4208].

1-(4'-Chloro-4-methoxy[1,1'-biphenyl]-2-yl)ethanone[841298-81-5] $C_{15}H_{13}ClO_2$ mol.wt. 260.72**New compound****Syntheses**

– Refer to: [4349,4350].

1-[2-Hydroxy-6-(phenylmethyl)phenyl]ethanone $C_{15}H_{14}O_2$ mol.wt. 226.27**New compound****Synthesis**

– Obtained by reaction of benzyl bromide with 2,6-dihydroxy-acetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone overnight under nitrogen (78%) [4010].

m.p. 109–111° [4010];

1H NMR [4010], ^{13}C NMR [4010]; TLC [4010].

1-[2,4-Dihydroxy-3-(phenylmethyl)phenyl]ethanone[67088-16-8] $C_{15}H_{14}O_3$ mol.wt. 242.27**Described [3734] p. 1001****Synthesis**

– Also refer to: [4155].

1-[2-Hydroxy-4-(phenylmethoxy)phenyl]ethanone

[29682-12-0]

 $C_{15}H_{14}O_3$ mol.wt. 242.27**Described** [3734] p. 1003

Syntheses

- Also obtained by reaction of benzyl bromide with resacetophenone in the presence of potassium carbonate in refluxing acetone for 18 h (87%) [3911].

- Also refer to: [4211].

Pink solid [3911]; 1H NMR [3911], ^{13}C NMR [3911], MS [3911].**1-[2-Hydroxy-5-(phenylmethoxy)phenyl]ethanone**

[30992-63-3]

 $C_{15}H_{14}O_3$ mol.wt. 242.27**Described** [3734] p. 1004

Synthesis

- Also refer to: [3908].

1-[2-Hydroxy-6-(phenylmethoxy)phenyl]ethanone

[4047-24-9]

 $C_{15}H_{14}O_3$ mol.wt. 242.27**Described** [3734] p. 1004

Synthesis

- Preparation by reaction of benzyl bromide with 2,6-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone for 12 h (82%) [4351].

m.p. 189° [4351].

1-(5,7-Dimethoxy-2,2-dimethyl-2H-1-benzopyran-6-yl)ethanone

[18780-97-7]

 $C_{15}H_{18}O_4$ mol.wt. 262.3**New compound**

Syntheses

- Obtained by treatment of 6-acetyl-7-hydroxy-5-methoxy-2,2-dimethylchromene with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 12 h [4352,4353].
- Also obtained from 2,4-dihydroxy-5-prenyl-6-methoxyacetophenone (multi-step reaction) [4352].
- Also obtained from 2,4-dihydroxy-3-iodo-6-methoxyacetophenone (multi-step reaction) [4352].

- Also obtained from 2-hydroxy-3-iodo-4-O-(1,1-dimethylpropargyl)-6-methoxyacetophenone (multi-step reaction) [4352].
- From α,α -dimethylallyl alcohol (multi-step reaction) [4352].
- Also refer to: [4354,4355].

Isolation from natural sources

1-[2-Hydroxy-4,6-dimethoxy-3-(3-methyl-2-butenyl)phenyl]ethanone

[33523-62-5]

C₁₅H₂₀O₄ mol.wt. 264.32

Described [3734] **p. 1011**

Syntheses

- Obtained by reaction of diazomethane with 2,4,6-trihydroxy-3-(3-methyl-2-butenyl)-acetophenone in ethyl ether [4335], (90%) [4359], (20%) [4322].
- Also obtained by reaction of prenyl bromide with 2-hydroxy-4,6-dimethoxyacetophenone in the presence of potassium carbonate in refluxing acetone for 8 h [4360,4361].
- Also obtained by reaction of 4-bromo-2-methyl-2-butene with xanthoxyline in the presence of potassium carbonate in boiling acetone for 8 h [4360].
- Also obtained by reaction of 50% potassium hydroxide with 7,7-methylglabranin in boiling methanol for 6 h [4362].
- Also obtained by refluxing 2,4-dimethoxy-6-(3,3-dimethylallyloxy)acetophenone with N,N-dimethylaniline for 5 h (3%) [4363].
- Also refer to: [4155,4298,4340].

m.p. 114° [4335], 113–114° [4345,4359,4361,4364], 113° [4322], 112–113° [4362], 109–110° [4360], 103–104° [4363];
¹H NMR [4359–4364], IR [4361,4363], UV [4361–4363].

Methyl ether [101253-53-6] C₁₆H₂₂O₄ mol.wt. 278.35

- Obtained by reaction of dimethyl sulfate with 4,6-dimethoxy-3-(3,3-dimethylallyl)-phloroacetophenone in the presence of potassium carbonate in boiling acetone [4335].
- m.p. 50–51° [4335].

Benzoate [42344-99-0] $C_{22}H_{24}O_5$ mol.wt. 368.53

- Obtained by reaction of benzoyl chloride with 4,6-dimethoxy-2-hydroxy-3-(3-methyl-2-butenyl)-acetophenone in the presence of potassium carbonate in refluxing acetone for 6 h (90%) [4359].

m.p. 81–83° [4359], 81–82° [4335].

1-[6-Hydroxy-2,4-dimethoxy-3-(3-methyl-2-butenyl)phenyl]ethanone

[4683-33-4] $C_{15}H_{20}O_4$ mol.wt. 264.32

Described [3734] p. 1011

Syntheses

- Also obtained by refluxing 2,4-dimethoxy-6-(3,3-dimethyl-allyloxy)acetophenone with N,N-dimethylaniline for 5 h (3%) [4363].
- Also obtained by reaction of diazomethane with 2,4-dihydroxy-6-methoxy-5-prenylacetophenone in ethyl ether [4340].
- Also refer to: [4155].

m.p. 102–104° [4363];

1H NMR [4340,4363], IR [4340,4363], UV [4155,4340,4363].

1-(4-Heptyl-2,5-dihydroxyphenyl)ethanone

$C_{15}H_{22}O_3$ mol.wt. 250.34

New compound

Syntheses

- Obtained by treatment of 4'-heptyl-2',5'-dihydroxy-3,3-dimethylacrylophenone with aluminium chloride in refluxing benzene for 3 h [3996].
- Also obtained by reaction of acetyl chloride with 2-heptylhydroquinone dimethyl ether in the presence of aluminium chloride in carbon disulfide [3996].

b.p._{0.1} 143–147° [3996], b.p.₇ 170–180° [3996].

1-[2-Hydroxy-4,6-bis(methoxymethoxy)-3-propylphenyl]ethanone

[916916-81-9] $C_{15}H_{22}O_6$ mol.wt. 298.34

New compound

Synthesis

- Obtained by reaction of chloromethyl methyl ether with 2,4,6-trihydroxy-3-propylacetophenone in the presence of potassium carbonate in refluxing acetone for 1 h (68%) [4192].

1H NMR [4192], ^{13}C NMR [4192], MS [4192].

1-[4-[2-(Diethylamino)ethoxy]-2-hydroxy-3-methylphenyl]ethanone

[942133-92-8]

 $C_{15}H_{23}NO_3$ mol.wt. 265.35 $(C_2H_5)_2NCH_2CH_2O$ **New compound****Synthesis**

- Obtained by treatment of 2,4-dihydroxy-3-methyl-acetophenone with diethylaminoethyl chloride in the presence of KOH/ K_2CO_3 mixture in boiling 2-butanone [4274].

Hydrochloride (1:1)

[942134-14-7]

 $C_{15}H_{23}NO_3, HCl$

mol.wt. 301.81 [4274]

1-(2,4'-Dimethoxy[1,1'-biphenyl]-4-yl)ethanone

[178055-99-7]

 $C_{16}H_{16}O_3$ mol.wt. 256.30**New compound****Synthesis**

- Obtained by Suzuki coupling: p-chloroacetophenone (1 equiv), 2,4-dimethoxyphenylboronic acid (1.5 equiv) and sodium hydroxide (4 equiv) was added in water (20 ml). Then, Pd/PANI (1 mol%) was added to the solution at 100° and stirred at this temperature for 6–8 h (70%) [4365].

 1H NMR [4365].**1-[2-Hydroxy-3-methyl-4-(phenylmethoxy)phenyl]ethanone**

[73640-74-1]

 $C_{16}H_{16}O_3$ mol.wt. 256.30 $C_6H_5CH_2O$ **Described [3734] p. 1018****Syntheses**

- Preparation by reaction of benzyl chloride with 2,4-dihydroxy-3-methylacetophenone in the presence of potassium carbonate and potassium iodide in acetone at 56° (88%) [4154].
- Also refer to: [4153].

1-[6-Hydroxy-4-methoxy-7-(pentyloxy)-5-benzofuranyl]ethanone

[880479-08-3]

 $C_{16}H_{20}O_5$ mol.wt. 292.92**New compound****Synthesis**

- Obtained by slowly adding 3 M sodium hydroxide to a solution of 4-methoxy-7-methyl-9-pentyloxyfuro[3,2-g]-chromen-5-one in refluxing dilute ethanol, then the resulting solution was stirred at 70° for 3 h [4288].

1-[6-Hydroxy-7-methoxy-4-(pentylloxy)-5-benzofuranyl]ethanone[880479-11-8] $C_{16}H_{20}O_5$ mol.wt. 292.92**New compound****Synthesis**

– Obtained by slowly adding 3 M sodium hydroxide to a solution of 9-methoxy-7-methyl-4-pentyloxyfuro[3,2-g]-chromen-5-one in refluxing dilute ethanol, then the resulting solution was stirred at 70° for 3 h [4288].

1-(3-Acetyl-2-hydroxy-4,5,6-trimethoxyphenyl)-3-(dimethylamino) (2E)-2-propen-1-one[870480-50-5] $C_{16}H_{21}NO_6$ mol.wt. 323.34**New compound****Synthesis**

– Obtained by reaction of 2,6-diacetyl-3,4,5-trimethoxyphenol with N,N-dimethyl-formamide dimethyl acetal in DMF at 100° for 6 h (67%) [4275].

Yellow crystals; m.p. 113–114° [4275];
 1H NMR [4275], MS [4275].

Compounds Derived from Halogenoacetic Acids

11.1 Compounds Derived from Bromoacetic Acids

11.1.1 From Monobromoacetic Acid

2-Bromo-1-(2-hydroxy-3,5-diiodophenyl)ethanone

[32559-04-9] $C_8H_5BrI_2O_2$ mol.wt. 466.84

Synthesis

– Preparation by bromination of 2-hydroxy-3,5-diiodoacetophenone in acetic acid at 70–80°, under light irradiation (84%) [4378].

m.p. 150–151° [4378].

2-Bromo-1-(4-hydroxy-3,5-diiodophenyl)ethanone

[31827-97-1] $C_8H_5BrI_2O_2$ mol.wt. 466.84

Synthesis

– Preparation by reaction of bromine on 4-hydroxy-3,5-di-iodoacetophenone in boiling chloroform under light irradiation (81–83%) [4379,4380].

m.p. 171–172° [4379,4380]; UV [4379].

2-Bromo-1-(4-hydroxy-3,5-dinitrophenyl)ethanone

[120388-18-3] $C_8H_5BrN_2O_6$ mol.wt. 305.04

Synthesis

– Preparation by bromination of 4-hydroxy-3,5-dinitroacetophenone with cupric bromide in refluxing ethyl acetate (60%) [4381].

m.p. 92–94° [4381]; Crystal Data [4381].

2-Bromo-1-(3,5-dibromo-2-hydroxyphenyl)ethanone[194226-52-3] $C_8H_5Br_3O_2$ mol.wt. 372.84

Syntheses

- Preparation by action of bromine with 3,5-dibromo-2-hydroxy-acetophenone in refluxing acetic acid for 2.5 h (55%) [4382].
- Also obtained by reaction of bromine with 2-hydroxyacetophenone in chloroform in an ice bath for 2 h [4383].

m.p. 107–108° [4382]; 1H NMR [4382], IR [4382].**2-Bromo-1-(3,5-dibromo-4-hydroxyphenyl)ethanone**[34969-79-4] $C_8H_5Br_3O_2$ mol.wt. 372.84

Synthesis

- Preparation by bromination of 3,5-dibromo-4-hydroxy-acetophenone in chloroform [4384–4386], (79%) [4386].

m.p. 137° [4386], 128° [4384,4385].

2-Bromo-1-(3,5-dibromo-2,4-dihydroxyphenyl)ethanone $C_8H_5Br_3O_3$ mol.wt. 388.84

Synthesis

- Preparation by bromination of resacetophenone in acetic acid [4387].

m.p. 112–113° [4387].

2-Bromo-1-(3,5-dibromo-2,6-dihydroxyphenyl)ethanone[74815-26-2] $C_8H_5Br_3O_3$ mol.wt. 388.84

Synthesis

- Preparation by bromination of 2,6-dihydroxyacetophenone with cupric bromide in refluxing chloroform-ethyl acetate mixture [4388].

m.p. 150° [4388].

2-Bromo-1-(3-chloro-4-hydroxyphenyl)ethanone[41877-19-4] $C_8H_6BrClO_2$ mol.wt. 249.49

Syntheses

- Preparation by selective bromination of 3-chloro-4-hydroxy-acetophenone with dioxane dibromide in dioxane-ethyl ether mixture at r.t. (85%) [4389].

- Preparation by selective bromination of 3-chloro-4-hydroxy-acetophenone with cupric bromide in refluxing chloroform-ethyl acetate mixture [4390], (100%) [4391].

m.p. 128–130° [4389]; ¹H NMR [4389].

2-Bromo-1-(4-chloro-2-hydroxyphenyl)ethanone

[157068-00-3] C₈H₆BrClO₂ mol.wt. 249.49

Synthesis

- Obtained by reaction of bromoacetyl bromide on 3-chloroanisole with aluminium chloride in carbon tetrachloride, first at 0°, then at r.t. (16%) [4392].

2-Bromo-1-(4-chloro-3-hydroxyphenyl)ethanone

[73898-34-7] C₈H₆BrClO₂ mol.wt. 249.49

Synthesis

- Preparation by reaction of dioxane dibromide on 4-chloro-3-hydroxyacetophenone in dioxane-ethyl ether mixture at r.t. (84%) [4393].

2-Bromo-1-(5-chloro-2-hydroxyphenyl)ethanone

[52727-99-8] C₈H₆BrClO₂ mol.wt. 249.49

Syntheses

- Preparation by bromination of 5-chloro-2-hydroxyacetophenone with cupric bromide in refluxing chloroform-ethyl acetate mixture (73%) [4394].
- Also refer to: [4395] (compound 1b).

m.p. 64–65° [4394]; ¹H NMR [4394].

2-Bromo-1-(2-fluoro-4-hydroxyphenyl)ethanone

[220131-30-6] C₈H₆BrFO₂ mol.wt. 233.04

Synthesis

- Refer to: [4396].

2-Bromo-1-(5-fluoro-2-hydroxyphenyl)ethanone

[126581-65-5] C₈H₆BrFO₂ mol.wt. 233.04

Synthesis

- Preparation by reaction of bromine on 5-fluoro-2-hydroxyacetophenone in dioxane-ethyl ether mixture (80%) [4397,4398].

m.p. 86–87° [4397,4398]; ¹H NMR [4398].

2-Bromo-1-(3-hydroxy-4-iodophenyl)ethanone

[73898-36-9]

 $C_8H_6BrIO_2$ mol.wt. 340.94

Synthesis

- Preparation by reaction of dioxane dibromide on 3-hydroxy-4-iodoacetophenone in dioxane-ethyl ether mixture at r.t. (75%) [4393].

2-Bromo-1-(4-hydroxy-3-iodophenyl)ethanone

[73898-29-0]

 $C_8H_6BrIO_2$ mol.wt. 340.94

Synthesis

- Preparation by reaction of dioxane dibromide on 4-hydroxy-3-iodoacetophenone in dioxane-ethyl ether mixture at r.t. (87%) [4393].

2-Bromo-1-(2-hydroxy-4-nitrophenyl)ethanone

m.p. 112° [4399].

 $C_8H_6BrNO_4$ mol.wt. 260.04

Synthesis

- Preparation by reaction of bromine on 2-hydroxy-4-nitroacetophenone in refluxing acetic acid (63%) [4399].

2-Bromo-1-(2-hydroxy-5-nitrophenyl)ethanone

[5037-70-7]

 $C_8H_6BrNO_4$ mol.wt. 260.04

m.p. 127° [4399].

Synthesis

- Preparation by bromination of 2-hydroxy-5-nitroacetophenone in acetic acid (60%) [4399].

2-Bromo-1-(4-hydroxy-3-nitrophenyl)ethanone

[5029-61-8]

 $C_8H_6BrNO_4$ mol.wt. 260.04m.p. 93° [4399,4401], 91°5–92° [4400], 80–82° [4389]; b.p._{0.2} 150–155° [4401].

Syntheses

- Preparation by bromination of 4-hydroxy-3-nitroacetophenone in chloroform (74%) [4400], (71%) [4399] or in acetic acid (58%) [4401].
- Preparation by selective bromination of 4-hydroxy-3-nitroacetophenone with dioxane dibromide in dioxane-ethyl ether mixture at r.t. (94%) [4389].

2-Bromo-1-(5-hydroxy-2-nitrophenyl)ethanone

[50695-17-5]

 $C_8H_6BrNO_4$ mol.wt. 260.04

Synthesis

- Obtained by bromination of 5-hydroxy-2-nitroacetophenone in chloroform-carbon tetrachloride-ethyl acetate mixture at 61° (15%) [4400].

m.p. 112°5–113° [4400].

2-Bromo-1-(3,4-dihydroxy-5-nitrophenyl)ethanone

[134610-95-0]

 $C_8H_6BrNO_5$ mol.wt. 276.04

Synthesis

- Preparation by reaction of boron tribromide on 4-hydroxy-3-methoxy-5-nitro- α -bromoacetophenone in methylene chloride [4402].

m.p. 138–140° [4402].

2-Bromo-1-(3-bromo-4-hydroxyphenyl)ethanone

[41877-18-3]

 $C_8H_6Br_2O_2$ mol.wt. 293.94

Syntheses

- Preparation by reaction of dioxane dibromide on 3-bromo-4-hydroxyacetophenone in dioxane-ethyl ether mixture at r.t. (82–85%) [4389,4393].
- Preparation by reaction of bromine on 4-hydroxyacetophenone in acetic acid at r.t. (37%) [4386].
- Preparation by reaction of phenyltrimethylammonium tribromide on 4-hydroxy- α -bromoacetophenone [4403].
- Also refer to: [4404].

m.p. 143° [4386], 142–144° [4389], 140–142° [4405]; 1H NMR [4389].**2-Bromo-1-(4-bromo-3-hydroxyphenyl)ethanone**

[73898-35-8]

 $C_8H_6Br_2O_2$ mol.wt. 293.94

Synthesis

- Preparation by selective bromination of 4-bromo-3-hydroxyacetophenone with dioxane dibromide in dioxane-ethyl ether mixture at r.t. (79%) [4393].

2-Bromo-1-(5-bromo-2-hydroxyphenyl)ethanone

[67029-74-7]

 $C_8H_6Br_2O_2$ mol.wt. 293.94

Syntheses

- Claimed to be prepared from 2-hydroxyacetophenone or 5-bromo-2-hydroxyacetophenone by reaction of bromine in glacial acetic acid and from 2-hydroxy- α -bromo-acetophenone by reaction of bromine in 50% aqueous acetic acid (quantitative yields) (m.p. 107°) [4406]. No proof of structure was provided [4407]. Actually, it probably concerns 3,5-dibromo-2-hydroxyacetophenone (m.p. 108° [4408], 108–109° [4386]), as the use of acetic acid as solvent favours the aromatic ring bromination.
- Preparation by bromination of 5-bromo-2-hydroxyacetophenone with cupric bromide in refluxing chloroform-ethyl acetate mixture [4390,4407], (50%) [4407].

m.p. 107° [4406], 69° [4407].

One of the reported melting points is obviously wrong.

 1H NMR [4407], IR [4407].**2-Bromo-1-(5-bromo-2,4-dihydroxyphenyl)ethanone**

[99657-26-8]

 $C_8H_6Br_2O_3$ mol.wt. 309.94

Synthesis

- Preparation by bromination of 5-bromo-2,4-dihydroxyacetophenone with cupric bromide in refluxing chloroform-ethyl acetate mixture [4390,4409].

2-Bromo-1-(2-hydroxyphenyl)ethanone

[2491-36-3]

 $C_8H_7BrO_2$ mol.wt. 215.05

Syntheses

- Preparation by bromination of 2-hydroxyacetophenone with cupric bromide in refluxing chloroform-ethyl acetate mixture [4390,4391,4409–4413], (100%) [4390,4410], (56%) [4391], (36%) [4411].
- Preparation by reaction of bromine on 2-hydroxyacetophenone in acetic acid at r.t. (47%) [4406] or in a mixture of ethyl ether and chloroform [4413] according to [4414].
- Preparation by Fries rearrangement of phenyl bromoacetate with aluminium chloride without solvent at 120–140° (45–50%) [4415,4416].

m.p. 70–71° [4416], 45° [4406], 44–45° [4391], 41–43° [4412], 40° [4390], 39–41° [4411].

One of the reported melting points is obviously wrong.

b.p.₇₋₁₀ 120–125° [4415], b.p.₁₈ 152–158° [4406];
¹H NMR [4411], UV [4417].

2-Bromo-1-(3-hydroxyphenyl)ethanone

[2491-37-4] C₈H₇BrO₂ mol.wt. 215.05

Syntheses

- Preparation by bromination of 3-hydroxyacetophenone,
 - with cupric bromide in refluxing chloroform-ethyl acetate mixture [4390,4391,4410,4412,4418], (quantitative yield) [4390,4391,4410];

- with dioxane dibromide in dioxane-ethyl ether mixture at r.t. (91%) [4389];
- in using silica gel coated with cupric bromide in refluxing ethyl acetate (94%) [4419];
- with bromine in chloroform at 2° (96%) [4420].

m.p. 74–75° [4389], 70–72° [4420]; amorphous [4419];
¹H NMR [4389,4419], IR [4419,4420], UV [4420], MS [4419].

2-Bromo-1-(4-hydroxyphenyl)ethanone

[2491-38-5] C₈H₇BrO₂ mol.wt. 215.05

Syntheses

- Preparation by bromination of 4-hydroxyacetophenone with cupric bromide in refluxing chloroform-ethyl acetate mixture [4390,4391,4410–4413,4418,4421], (quantitative yield) [4390,4391,4410], (34–38%) [4411,4418], (15%) [4421].

- Preparation by reaction of dioxane dibromide on 4-hydroxyacetophenone in dioxane-ethyl ether mixture at r.t. (86%) [4389].
- Preparation by bromination of 4-hydroxyacetophenone in acetic acid (63%) [4422] or in a mixture of ethyl ether and chloroform [4413] according to [4414].
- Preparation by Fries rearrangement of phenyl bromoacetate with aluminium chloride without solvent between 120° and 140° (40%) [4415], (30%) [4416].
- Preparation by reaction of tetrabutylammonium tribromide, benzyltrimethylammonium tribromide or phenyltrimethylammonium tribromide on 4-hydroxyacetophenone in tetrahydrofuran [4403].
- Preparation by reaction of ammonium tribromide on 4-hydroxyacetophenone in methylene chloride-methanol mixture [4403].
- Preparation by reaction of silica gel coated with cupric bromide on 4-hydroxyacetophenone in refluxing ethyl acetate (95%) [4419].
- Preparation by sonochemical bromination of 4-hydroxyacetophenone using p-toluenesulfonic acid/N-bromosuccinimide in methanol for 6 h at 35–37° (97%) [4423].

N.B.: In the absence of ultrasound the reaction takes place at the boiling point of methanol (65°) for 24 h (58%) [4423].

- Also refer to: [4424–4428].

m.p. 146° [4416], 132–133° [4429], 130–131° [4411], 130° [4422], 129–131° [4418], 128–130° [4403], 128–129° [4415], 126–127° [4421], 125–129° [4423], 124–126° [4389,4390], 121–122° [4419], 105–108° [4430];
¹H NMR [4389,4411,4419,4421,4423,4429], IR [4419,4423], UV [4421], MS [4419,4429].

2-Bromo-1-(2,3-dihydroxyphenyl)ethanone

[19278-79-6] $C_8H_7BrO_3$ mol.wt. 231.05

Synthesis

– Obtained by reaction of hydrobromic acid on 2,3-diacetoxy- α -bromoacetophenone in refluxing ethanol [4431].

m.p. 75–76° [4431]; UV [4417].

2-Bromo-1-(2,4-dihydroxyphenyl)ethanone

[2491-39-6] $C_8H_7BrO_3$ mol.wt. 231.05

Syntheses

- Preparation by bromination of resacetophenone with cupric bromide in refluxing chloroform-ethyl acetate mixture (quantitative yield) [4390,4410], (3%) [4411].
- Also obtained by reaction of bromoacetonitrile on resorcinol with zinc chloride and hydrobromic acid in ethyl ether (Hoesch reaction) [4432,4433].
- Also obtained by reaction of bromoacetyl chloride on resorcinol with aluminium bromide or aluminium chloride in carbon disulfide [4421,4434], (80%) [4434], (12%) [4421].
- Also obtained (poor yield) by reaction of bromoacetic acid on resorcinol with zinc chloride or phosphorous oxychloride [4435,4436].

m.p. 144–145° [4390], 127° [4432,4433], 126–128° [4421], 118–119° [4411].

There is discrepancy between the different melting points.

¹H NMR [4411,4421], UV [4421].

2-Bromo-1-(2,5-dihydroxyphenyl)ethanone

[25015-91-2] $C_8H_7BrO_3$ mol.wt. 231.05

Syntheses

- Preparation by bromination of 2,5-dihydroxyacetophenone,
 - with cupric bromide in refluxing chloroform-ethylacetate mixture (74–87%) [4390,4410,4437], (70%) [4438], (37%) [4411];
 - with bromine in acetic acid at 55–58° (16%) [4439].
- Preparation by reaction of hydrobromic acid on 5- α -bromoacetoxy-2-hydroxy- α -bromoacetophenone in methanol at r.t. (87%) [4440].

- Preparation by reaction of aluminium bromide on 2-hydroxy-5-methoxy- α -bromo-acetophenone in carbon disulfide at r.t. (87%) [4440].
 - Also obtained by action of acetic acid saturated with hydrobromic acid (10 min, r.t.) on 2,5-di-acetoxy- α -diazoacetophenone, reduced pressure elimination of acetic acid, then action (overnight, r.t.) of a methanolic solution of hydrobromic acid (59%) [4440].
 - Also obtained by reaction of aluminium bromide on 2,5-dimethoxy- α -chloroacetophenone in refluxing carbon disulfide (28%) [4440].
 - Also obtained by reaction of bromoacetyl bromide on 1,4-dimethoxybenzene with aluminium bromide at r.t. (11%) [4421], (2%) [4440].
 - Also obtained by reaction of phenyltrimethylammonium bromide tribromide with 2,5-dihydroxy-acetophenone in THF at r.t. overnight (63%) [4441], according to [4442].
- m.p. 120–121° [4439], 117°5–119° [4440], 117–119° [4421], 114–116° [4438], 113–115° [4411,4437], 112–113° [4390];
 TLC [4441]; flash chromatography [4441];
¹H NMR [4411,4421,4438–4441], IR [4438,4441],
 UV [4417,4421,4439,4441], MS [4438,4441].

2-Bromo-1-(2,6-dihydroxyphenyl)ethanone

[2491-40-9] C₈H₇BrO₃ mol.wt. 231.05

Syntheses

- Preparation by bromination of 2,6-dihydroxyacetophenone with cupric bromide in refluxing ethyl acetate (quantitative yield) [4391].
 - Preparation by reaction of 40% hydrobromic acid on 2,6-diacetoxy- α -bromoacetophenone in refluxing 60% ethanol (73%) [4443].
 - Refer to: [4444] (Japanese patent).
- m.p. 143° [4443]; UV [4417].

2-Bromo-1-(3,4-dihydroxyphenyl)ethanone

[40131-99-5] C₈H₇BrO₃ mol.wt. 231.05

Syntheses

- Preparation by reaction of bromoacetic acid on pyrocatechol with phosphorous oxychloride [4445].
 - Preparation by reaction of bromoacetyl bromide on pyrocatechol with aluminium bromide in carbon disulfide at r.t. (63%) [4446].
 - Preparation by reaction of bromine on 3,4-dihydroxyacetophenone in chloroform at r.t. [4447,4448].
 - Also refer to: [4404,4449–4453], and [4454] (Japanese patent).
- m.p. 167° [4445], 61° [4446]. One of the reported melting points is obviously wrong.
¹H NMR [4446], IR [4446], UV [4446], MS [4446].

2-Bromo-1-(3,5-dihydroxyphenyl)ethanone[62932-92-7] $C_8H_7BrO_3$ mol.wt. 231.05

Syntheses

- Preparation by reaction of bromine on 3,5-dihydroxy-acetophenone in chloroform at r.t. [4447].
- Also refer to: [4404,4450].

2-Bromo-1-(2,3,4-trihydroxyphenyl)ethanone[105190-52-1] $C_8H_7BrO_4$ mol.wt. 247.05

Syntheses

- Preparation by reaction of bromoacetyl bromide on pyrogallol with aluminium bromide in carbon disulfide at r.t. (42%) [4446].
- Also obtained by reaction of bromoacetic acid on pyrogallol with phosphorous oxychloride [4455], (poor yield) [4435,4436] or with zinc chloride (poor yield) [4435,4436].

m.p. 159° [4455], 138° [4446]. One of the reported melting points is obviously wrong.

¹H NMR [4446], IR [4446], UV [4446], MS [4446].

2-Bromo-1-(3,4,5-trihydroxyphenyl)ethanone[111011-09-7] $C_8H_7BrO_4$ mol.wt. 247.05

Synthesis

- Refer to: [4456].

2-Bromo-1-(3,4,5-tribromo-2-hydroxy-6-methoxyphenyl)ethanone[98592-28-0] $C_9H_6Br_4O_3$ mol.wt. 481.76

Synthesis not yet described

- Only one reference dealing with 2,3',4',5'-tetrabromo-2'-hydroxy-6'-methoxyacetophenone does exist. This reference [Chem. Abstr., Formula Index, page 112F, **52**, 2796h (1958)] is obviously erroneous. The described product is actually 2,2,3',5'-tetrabromo-2'-hydroxy-6'-methoxyacetophenone, since in the original paper [4457] it is specified that two labile bromine atoms are present in the molecule.

2-Bromo-1-[3-bromo-5-(chloromethyl)-4-hydroxyphenyl]ethanone

[107700-04-9]

 $C_9H_7Br_2ClO_2$

mol.wt. 342.41

Synthesis

- Preparation by adding a methylene chloride solution of bromine to a methanol/methylene chloride solution of 3-(chloromethyl)-4-hydroxyacetophenone at r.t. (80%) [4458].

m.p. 95° [4458]; 1H NMR [4458], IR [4458], MS [4458].**2-Bromo-1-(3,5-dibromo-2-hydroxy-4-methylphenyl)ethanone**

[260435-53-8]

 $C_9H_7Br_3O_2$

mol.wt. 386.87

Syntheses

- Preparation by reaction of bromine with 2-hydroxy-4-methylacetophenone in chloroform/ethylene dichloride mixture, first in an ice-water bath, then for 2 h at r.t. (50%) [4459].
- Preparation by reaction of bromine with 3,5-dibromo-2-hydroxy-4-methylacetophenone in acetic acid first at r.t., then at reflux to discolouration (72%) [4460].

m.p. 139–140° [4459], 136–137° [4460];

 1H NMR [4459,4460], IR [4459,4460].**2-Bromo-1-(2-hydroxy-3-iodo-5-methylphenyl)ethanone**

[194226-48-7]

 $C_9H_8BrIO_2$

mol.wt. 354.97

Synthesis

- Preparation [4461] (compound 1a) according to described procedure [4462] (Romanian patent).

2-Bromo-1-(4-hydroxy-3-iodo-5-methoxyphenyl)ethanone

[144978-69-8]

 $C_9H_8BrIO_3$

mol.wt. 370.97

Syntheses

- Preparation by reaction of bromine with 5-iodoaceto-vanillone in chloroform (quantitative yield) [4463].
- Preparation from 4-hydroxy-3-methoxy- α -bromoacetophenone by the oxidative procedure using chloramine T and sodium iodide in DMF, DMSO or acetonitrile [4463,4464].

 1H NMR [4463], ^{13}C NMR [4463], MS [4463].

2-Bromo-1-(4-hydroxy-3-methoxy-5-nitrophenyl)ethanone

[125629-36-9]

 $C_9H_8BrNO_5$ mol.wt. 290.07

Synthesis

- Preparation by reaction of 96% nitric acid on 4-hydroxy-3-methoxy- α -bromoacetophenone in acetic acid at 20–25° [4402,4465], (72%) [4465].

m.p. 147–149° [4402,4465]; 1H NMR [4465].**2-Bromo-1-(3-bromo-2-hydroxy-5-methylphenyl)ethanone**

[194226-50-1]

 $C_9H_8Br_2O_2$ mol.wt. 307.97

Syntheses

- Preparation by reaction of bromine on 2-hydroxy-5-methyl- α -bromoacetophenone in 50% aqueous acetic acid at 60° (75%) [4406].
- Also obtained by reaction of bromine with 2-hydroxy-5-methylacetophenone in chloroform in an ice bath for 2 h [4383].

m.p. 106° [4406].

2-Bromo-1-(5-bromo-2-hydroxy-3-methylphenyl)ethanone

[194226-51-2]

 $C_9H_8Br_2O_2$ mol.wt. 307.97

Synthesis

- Preparation by reaction of bromine (1 mol) with 5-bromo-2-hydroxy-3-methylacetophenone (1 mol) in acetic acid on a water bath for 20 min (47%) [4466].

m.p. 72–73° [4466]; 1H NMR [4466], IR [4466].**2-Bromo-1-(5-bromo-2-hydroxy-4-methylphenyl)ethanone**

[194226-49-8]

 $C_9H_8Br_2O_2$ mol.wt. 307.97

Synthesis

- Obtained by reaction of bromine with 2-hydroxy-4-methyl-acetophenone in chloroform in an ice bath for 2 h [4383].

2-Bromo-1-(5-bromo-2-hydroxy-4-methoxyphenyl)ethanone $C_9H_8Br_2O_3$ mol.wt. 323.97

Syntheses

- Obtained by reaction of bromine with 3,3'-diacetyl-4,4'-di-hydroxy-6,6'-dimethoxydiphenyl ether in acetic acid in the presence of a crystal of iodine, first at 90°, then at r.t. overnight [4467].

- Also obtained (by-product) by reaction of bromine on 5-bromo-2-hydroxy-4-methoxyacetophenone in acetic acid [4468].

m.p. 178–180° [4468], 72–73° [4467]. One of the reported melting points is obviously wrong.

2-Bromo-1-(2-hydroxy-4-methylphenyl)ethanone

[144219-74-9] $C_9H_9BrO_2$ mol.wt. 229.07

Synthesis

- Preparation by reaction of bromine with 2-acetoxy-4-methylacetophenone in refluxing chloroform (44%) [4469].

colourless oil [4469];

1H NMR [4469], IR [4469], MS [4469].

2-Bromo-1-(2-hydroxy-5-methylphenyl)ethanone

[51317-87-4] $C_9H_9BrO_2$ mol.wt. 229.07

Syntheses

- Preparation by reaction of bromoacetic acid on p-cresol with boron trifluoride into an autoclave at 70° (90%) [4470].
 - Preparation by Fries rearrangement of p-cresyl bromoacetate with aluminium chloride without solvent at 125° (47%) [4471].
 - Preparation by reaction of bromine on 2-hydroxy-5-methylacetophenone in acetic acid at r.t. (39%) [4406].
- m.p. 45°5–46°5 [4471], 44–45° [4470].

2-Bromo-1-(3-hydroxy-4-methylphenyl)ethanone

[73898-30-3] $C_9H_9BrO_2$ mol.wt. 229.07

Synthesis

- Preparation by selective bromination of 3-hydroxy-4-methylacetophenone with dioxane dibromide in dioxane-ethyl ether mixture at r.t. (42%) [4393].

2-Bromo-1-(4-hydroxy-2-methylphenyl)ethanone

[41877-16-1] $C_9H_9BrO_2$ mol.wt. 229.07

Synthesis

- Preparation by selective bromination of 4-hydroxy-2-methylacetophenone with dioxane dibromide in dioxane-ethyl ether mixture at r.t. (86%) [4389].

m.p. 122–124° [4389];

1H NMR [4389].

2-Bromo-1-(4-hydroxy-3-methylphenyl)ethanone[41877-17-2] $C_9H_9BrO_2$ mol.wt. 229.07

Syntheses

- Preparation by selective bromination of 4-hydroxy-3-methylacetophenone with dioxane dibromide in dioxane-ethyl ether mixture at r t. (98%) [4389], (78%) [4393].
- Preparation by selective bromination of 4-hydroxy-3-methyl-acetophenone with cupric bromide in refluxing chloroform-ethyl acetate mixture (quantitative yield) [4391].

m.p. 124–125° [4389]; 1H NMR [4389].**2-Bromo-1-[4-hydroxy-3-(methylthio)phenyl]ethanone**[66265-63-2] $C_9H_9BrO_2S$ mol.wt. 261.14

Synthesis

- Preparation by reaction of dioxane dibromide on 4-hydroxy-3-(methylthio)acetophenone in dioxane-ethyl ether mixture (75%) [4472,4473].

solid [4472].

2-Bromo-1-[4-hydroxy-3-(hydroxymethyl)phenyl]ethanone[62932-94-9] $C_9H_9BrO_3$ mol.wt. 245.07

Syntheses

- Refer to: [4474–4482].

2-Bromo-1-(2-hydroxy-4-methoxyphenyl)ethanone[60965-24-4] $C_9H_9BrO_3$ mol.wt. 245.07

Syntheses

- Obtained by reaction of cupric bromide with 2-hydroxy-4-methoxyacetophenone, in refluxing chloroform-ethyl acetate mixture [4391,4413], (quantitative yield) [4391] according to [4390], (62%) [4483] or in refluxing dioxane (44%) [4484], (10%) [4411].
- Preparation by reaction of bromine with 2-hydroxy-4-methoxyacetophenone in a mixture of ethyl ether and chloroform [4413] according to [4414].
- Preparation from resorcinol dimethyl ether,
 - by reaction of bromoacetyl bromide with aluminium bromide at r.t. [4485];
 - by reaction of bromoacetyl chloride with aluminium chloride in carbon disulfide [4484,4486], (23%) [4484].

- Preparation by reaction of bromoacetonitrile on resorcinol dimethyl ether with hydrobromic acid gas in ethyl ether [4433].

m.p. 161° [4484], 92° [4485], 90–92° [4411], 70–72° [4483].

There is discrepancy between the different melting points.

¹H NMR [4411,4483], IR [4483], MS [4483].

2-Bromo-1-(2-hydroxy-5-methoxyphenyl)ethanone

[203524-87-2] C₉H₉BrO₃ mol.wt. 245.07

Syntheses

– Preparation by reaction of bromoacetyl bromide on 1,4-dimethoxybenzene with aluminium bromide at r.t. (18%) [4440].

– Also refer to: [4487].

m.p. 65–66° [4440].

2-Bromo-1-(2-hydroxy-6-methoxyphenyl)ethanone

[50879-47-5] C₉H₉BrO₃ mol.wt. 245.07

Synthesis

– Claimed to be prepared by bromination of 2-hydroxy-6-methoxyacetophenone in glacial acetic acid [4488].

N.B.: It has been observed that glacial acetic acid promotes side chain bromination of 2-hydroxyacetophenones [4422].

However, actually, 3-bromo-2-hydroxy-6-methoxyacetophenone was obtained by bromination of 2-hydroxy-6-methoxyacetophenone in glacial acetic acid, dilute acetic acid (80%) or acetic anhydride [4489,4490].

m.p. 106° [4488,4490].

2-Bromo-1-(3-hydroxy-4-methoxyphenyl)ethanone

[90971-90-7] C₉H₉BrO₃ mol.wt. 245.07

Synthesis

– Preparation by reaction of cupric bromide on 3-hydroxy-4-methoxyacetophenone in refluxing dioxane (80%) [4391].

2-Bromo-1-(4-hydroxy-3-methoxyphenyl)ethanone

[69638-06-8] C₉H₉BrO₃ mol.wt. 245.07

Syntheses

– Preparation by reaction of cupric bromide on 4-hydroxy-3-methoxyacetophenone in refluxing chloroform-ethyl acetate mixture (quantitative yield) [4391].

– Preparation by reaction of bromoacetyl bromide on guaiacol with aluminium chloride in carbon disulfide (75%) [4491].

- Preparation by reaction of bromine with 4-hydroxy-3-methoxyacetophenone [4429,4492] in ice cooled solution of ethyl ether and dioxane (quantitative yield) [4492].

m.p. 78–79° [4491]; ¹H NMR [4492], IR [4492], MS [4492].

2-Bromo-1-(2,3-dihydroxy-4-methoxyphenyl)ethanone

[204648-67-9] $C_9H_9BrO_4$ mol.wt. 261.07

Synthesis

– Refer to: [4493] (Japanese patent).

2-Bromo-1-(2,6-dihydroxy-4-methoxyphenyl)ethanone

$C_9H_9BrO_4$

mol.wt. 261.07

Synthesis

– Preparation by hydrolysis of 2,6-dihydroxy-4-methoxy- α -bromoacetophenone with 16% hydrobromic acid in refluxing ethanol (94%) [4494].

m.p. 139°5–140°5 (d) [4494].

2-Bromo-1-[4-hydroxy-3-(methylsulfonyl)phenyl]ethanone

[66264-67-3] $C_9H_9BrO_4S$ mol.wt. 293.14

Synthesis

– Preparation by reaction of aluminium chloride on 4-methoxy-3-(methylsulfonyl)- α -bromoacetophenone in refluxing chlorobenzene (70%) [4473].
crystalline solid [4473].

2-Bromo-1-[5-(2-bromoacetyloxy)-2-hydroxyphenyl]ethanone

$C_{10}H_8Br_2O_4$

mol.wt. 352.00

Synthesis

– Preparation by reaction of bromoacetyl bromide on hydroquinone dimethyl ether with aluminium bromide (13–16%) [4421,4440].

m.p. 106–107° [4440], 105–107° [4421].

1-[5-(Acetyloxy)-2-hydroxyphenyl]-2-bromoethanone

$C_{10}H_9BrO_4$

mol.wt. 273.08

Synthesis

– Preparation from 2,5-dihydroxy- α -bromoacetophenone on heating with acetyl bromide (62%) [4440].

m.p. 143°5–144° [4440].

2-Bromo-1-(3-bromo-2-hydroxy-4,5-dimethylphenyl)ethanone[319923-52-9] $C_{10}H_{10}Br_2O_2$ mol.wt. 322.00

Synthesis

– Preparation by reaction of bromine with 3-bromo-2-hydroxy-4,5-dimethylacetophenone in acetic acid first at r.t., then at reflux to discolouration (2 min) (80%) [4495].

m.p. 109–110° [4495]; 1H NMR [4495], IR [4495].**2-Bromo-1-(5-bromo-2-hydroxy-3,4-dimethylphenyl)ethanone**[260430-25-9] $C_{10}H_{10}Br_2O_2$ mol.wt. 322.00

Syntheses

– Preparation by reaction of bromine with 2-hydroxy-3,4-dimethylacetophenone,

- in chloroform/ethylene dichloride mixture, first in an ice-water bath, then for 1 h at r.t. (68%) [4459];

- in chloroform in an ice-water bath for 2 h [4383].

– Preparation by reaction of bromine with 5-bromo-2-hydroxy-3,4-dimethylacetophenone in acetic acid first at r.t., then at reflux to discolouration (2 min) (68%) [4495].

m.p. 97–98° [4459,4495]; 1H NMR [4459,4495], IR [4459,4495].**2-Bromo-1-(3-bromo-2-hydroxy-4,6-dimethoxyphenyl)ethanone**[29784-35-8] $C_{10}H_{10}Br_2O_4$ mol.wt. 354.00

Synthesis

– Obtained by reaction of bromine on 2-hydroxy-4,6-di-methoxyacetophenone in chloroform (22%) [4489].

m.p. 194–195° [4489]; 1H NMR [4489].**2-Bromo-1-(3-ethyl-4-hydroxyphenyl)ethanone**[73898-24-5] $C_{10}H_{11}BrO_2$ mol.wt. 243.10

Syntheses

– Preparation by reaction of dioxane dibromide on 3-ethyl-4-hydroxyacetophenone in dioxane-ethyl ether mixture at r.t. (63%) [4393].

– Also refer to: [4496].

2-Bromo-1-(4-ethyl-3-hydroxyphenyl)ethanone

[73898-31-4]

C₁₀H₁₁BrO₂ mol.wt. 243.10

Synthesis

- Preparation by reaction of dioxane dibromide on 4-ethyl-3-hydroxyacetophenone in dioxane-ethyl ether mixture at r.t. (67%) [4393].

2-Bromo-1-(5-ethyl-2-hydroxyphenyl)ethanone

[180154-50-1]

C₁₀H₁₁BrO₂ mol.wt. 243.10

Synthesis

- Refer to: [4497].

2-Bromo-1-(2-hydroxy-4,6-dimethylphenyl)ethanone

[67029-80-5]

C₁₀H₁₁BrO₂ mol.wt. 243.10

Synthesis

- Preparation by reaction of cupric bromide on 2-hydroxy-4,6-dimethylacetophenone in refluxing chloroform-ethyl acetate mixture [4407].

2-Bromo-1-(4-hydroxy-2,5-dimethylphenyl)ethanone

[107584-78-1]

C₁₀H₁₁BrO₂ mol.wt. 243.10

Synthesis

- Preparation from 4-hydroxy-2,5-dimethylacetophenone by standard bromination procedure according to [4492], (62%) [4429].

m.p. 129–131° [4429]; ¹H NMR [4429], MS [4429].

2-Bromo-1-(4-hydroxy-3,5-dimethylphenyl)ethanone

[157014-27-2]

C₁₀H₁₁BrO₂ mol.wt. 243.10

Syntheses

- Preparation by reaction of 4-hydroxy-3,5-dimethyl- α -chloroacetophenone in boiling methylene chloride with 46–48% aqueous hydrobromic acid in the presence of tetrabutylammonium bromide (0.3 M relative to the ketone) for 24 h, (87% yield) [4498].

- Also obtained from 4-(benzyloxy)-3,5-dimethyl- α -bromoacetophenone by the former treatment (83%) [4499].

– Also refer to: [4500].

m.p. 131° [4498], 130°6 [4499]; ¹H NMR [4498,4499], IR [4499], MS [4498,4499].

2-Bromo-1-[4-hydroxy-3-(ethylthio)phenyl]ethanone

$C_{10}H_{11}BrO_2S$ mol.wt. 275.17

Synthesis

– Preparation by reaction of bromine on 3-(ethylthio)-4-hydroxyacetophenone in chloroform, in the presence of calcium carbonate at 25° [4435,4473].

2-Bromo-1-[4-hydroxy-3-(2-hydroxyethyl)phenyl]ethanone

[101386-50-9]

$C_{10}H_{11}BrO_3$ mol.wt. 259.10

Syntheses

– Refer to: [4501,4502].

2-Bromo-1-[4-hydroxy-3-(methoxymethyl)phenyl]ethanone

[91363-39-2]

$C_{10}H_{11}BrO_3$ mol.wt. 259.10

Synthesis

– Refer to: [4503].

2-Bromo-1-(2-hydroxy-3,4-dimethoxyphenyl)ethanone

[18064-92-1]

$C_{10}H_{11}BrO_4$ mol.wt. 275.10

Syntheses

- Preparation by reaction of cupric bromide on 2-hydroxy-3,4-dimethoxyacetophenone [4504] or 2,3,4-trimethoxyacetophenone [4505] in refluxing chloroform-ethyl acetate mixture (47% [4504], (26%) [4505].
- Preparation by reaction of bromine on 2-hydroxy-3,4-dimethoxyacetophenone in chloroform-ethyl ether solution (44%) [4414].
- Preparation by reaction of bromoacetyl chloride with 1,2,3-trimethoxybenzene in the presence of aluminium chloride in methylene chloride at 20° (42%) [4506].

m.p. 144–145° [4414], 142° [4506], 140–142°5 [4505], 140–141° [4504];

¹H NMR [4414,4504,4505], IR [4414,4506,4507].

2-Bromo-1-(2-hydroxy-3,5-dimethoxyphenyl)ethanone[204648-51-1] $C_{10}H_{11}BrO_4$ mol.wt. 275.10

Synthesis

– Refer to: [4493] (Japanese patent).

2-Bromo-1-(2-hydroxy-4,6-dimethoxyphenyl)ethanone[18064-88-5] $C_{10}H_{11}BrO_4$ mol.wt. 275.10

Syntheses

- Preparation by reaction of aluminium bromide with 2,4,6-trimethoxy- α -bromoacetophenone at 120° [4508].
- Preparation by reaction of bromoacetyl bromide with phloroglucinol trimethyl ether according to [4509], but using aluminium bromide instead of aluminium chloride in carbon disulfide at r.t. [4508].
- Also obtained by reaction of cupric bromide on 2-hydroxy-4,6-dimethoxyacetophenone in refluxing chloroform-ethyl acetate mixture [4410,4505], (2%) [4505].

m.p. 130–131° [4508], 125–126° [4505]; 1H NMR [4410,4505], MS [4410].**2-Bromo-1-(4-hydroxy-3,5-dimethoxyphenyl)ethanone**[51149-28-1] $C_{10}H_{11}BrO_4$ mol.wt. 275.10

Syntheses

- Preparation by bromination of 4-hydroxy-3,5-dimethoxy-acetophenone with,
 - bromine in chloroform [4463,4510–4512], (90%) [4511], (27%) [4512];
 - cupric bromide in a refluxing mixture of ethyl acetate and chloroform [4513].
- Also refer to: [4514].

m.p. 130° [4511], 118–120° [4512]; 1H NMR [4511,4512], IR [4512], MS [4513].**2-Bromo-1-(2,4-dihydroxy-3,6-dimethoxyphenyl)ethanone** $C_{10}H_{11}BrO_5$ mol.wt. 291.10

Synthesis

- Preparation by reaction of NBS on 2,4-dihydroxy-3,6-dimethoxyacetophenone in refluxing carbon tetrachloride (64%) [4515].

m.p. 159–160° [4515].

2-Bromo-1-(2,5-dihydroxy-3,4-dimethoxyphenyl)ethanone

[204648-54-4]

 $C_{10}H_{11}BrO_5$ mol.wt. 291.10

Synthesis

– Refer to: [4493] (Japanese paper).

2-Bromo-1-(3,6-dihydroxy-2,4-dimethoxyphenyl)ethanone

[204648-57-7]

 $C_{10}H_{11}BrO_5$ mol.wt. 291.10

Synthesis

– Refer to: [4493] (Japanese paper).

2-Bromo-1-[3-hydroxy-4-(1-methylethyl)phenyl]ethanone

[73898-32-5]

 $C_{11}H_{13}BrO_2$ mol.wt. 257.13

Synthesis

– Preparation by bromination of 3-hydroxy-4-isopropyl-acetophenone with dioxane dibromide in dioxane-ethyl ether mixture at r.t. (78%) [4393].

2-Bromo-1-[4-hydroxy-3-(1-methylethyl)phenyl]ethanone

[73898-25-6]

 $C_{11}H_{13}BrO_2$ mol.wt. 257.13

Synthesis

– Preparation by bromination of 4-hydroxy-3-isopropyl-acetophenone with dioxane dibromide in dioxane-ethyl ether mixture at r.t. (55%) [4393].

2-Bromo-1-(4-ethyl-2-hydroxy-5-methoxyphenyl)ethanone $C_{11}H_{13}BrO_3$ mol.wt. 273.13

Synthesis

– Preparation by reaction of bromine on 4-ethyl-2-hydroxy-5-methoxyacetophenone in acetic acid at r.t. (59%) [4516].

m.p. 75–76° [4516].

2-Bromo-1-[3-bromo-5-(1,1-dimethylethyl)-4-hydroxyphenyl]ethanone

[153355-99-8]

 $C_{12}H_{14}Br_2O_2$ mol.wt. 350.05

Synthesis

– Refer to: [4517] (Japanese patent).

**2-Bromo-1-[3-(1,1-dimethylethyl)-4-hydroxyphenyl]ethanone**

[118788-50-4]

 $C_{12}H_{15}BrO_2$ mol.wt. 271.15

Synthesis

– Refer to: [4518].

**2-Bromo-1-[4-hydroxy-2-methyl-5-(1-methylethyl)phenyl]ethanone**

[205655-36-3]

 $C_{12}H_{15}BrO_2$ mol.wt. 271.15

Synthesis

– Refer to: [4519].

N.B.: All reagents and starting materials were from commercial sources. This compound was called 4-hydroxy-3-isopropyl-6-methyl phenacyl bromide (p. 185).

2-Bromo-1-[3-(1,1-dimethylethyl)-4-hydroxy-5-methylphenyl]ethanone

[18611-32-0]

 $C_{13}H_{17}BrO_2$ mol.wt. 285.18

Syntheses

– Preparation by bromination of 3-tert-butyl-4-hydroxy-5-methylacetophenone in usual manner in benzene or chloroform [4520].

– Preparation by reaction of cupric bromide with 3-tert-butyl-4-hydroxy-5-methylacetophenone in refluxing ethyl acetate (72%) [4518].

m.p. 95–97° [4520], 90–92° [4518].

2-Bromo-1-(2-hydroxy-4-pentylphenyl)ethanone

[133301-45-8]

 $C_{13}H_{17}BrO_2$ mol.wt. 285.18

Synthesis

– Obtained by reaction of cupric bromide with 2-hydroxy-4-pentylacetophenone in refluxing ethyl acetate/chloroform mixture (1:1) for 4 h (18%) [4521].

1H NMR [4521], IR [4521]; TLC [4521].

2-Bromo-1-(3-cyclohexyl-4-hydroxyphenyl)ethanone

[73898-26-7]

 $C_{14}H_{17}BrO_2$ mol.wt. 297.19

Synthesis

- Preparation by reaction of dioxane dibromide on 3-cyclohexyl-4-hydroxyacetophenone in dioxane and ethyl ether mixture at r.t. (95%) [4393].

2-Bromo-1-(4-cyclohexyl-3-hydroxyphenyl)ethanone

[73898-33-6]

 $C_{14}H_{17}BrO_2$ mol.wt. 297.19

Synthesis

- Preparation by reaction of dioxane dibromide on 4-cyclohexyl-3-hydroxyacetophenone in dioxane and ethyl ether mixture at r.t. (51%) [4393].

2-Bromo-1-(5-cyclohexyl-2-hydroxyphenyl)ethanone

[74815-30-8]

 $C_{14}H_{17}BrO_2$ mol.wt. 297.19

Synthesis

- Preparation by reaction of cupric bromide on 5-cyclohexyl-2-hydroxyacetophenone in refluxing ethyl acetate [4388].
- yellow oil [4388].

2-Bromo-1-[4-hydroxy-3,5-bis(1-methylethyl)phenyl]ethanone

[157014-26-1]

 $C_{14}H_{19}BrO_2$ mol.wt. 299.21

Synthesis

- Preparation by a Friedel–Crafts acylation of propofol (2,6-diisopropylphenol) using aluminium chloride and bromoacetyl bromide in methylene chloride (compound 6) [4522].

1-[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl]-2-bromoethanone

[14386-64-2]

 $C_{16}H_{23}BrO_2$ mol.wt. 327.26

Synthesis

- Preparation by reaction of bromine with 3,5-di-tert-butyl-4-hydroxyacetophenone in ethanol under nitrogen bubbling for 2.5 h (73%) [4523] or in refluxing methylene chloride (67%) [4518].

m.p. 107°5–108°5 [4523], 105–108° [4518]; 1H NMR [4523].

11.1.2 From Dibromoacetic Acid

2,2-Dibromo-1-(4-hydroxy-3,5-diiodophenyl)ethanone

$C_8H_4Br_2I_2O_2$ mol.wt. 545.74

Synthesis

- Obtained by reaction of bromine on 4-hydroxy-3,5-diiodo-acetophenone with sunlight in chloroform at 50–60° (83%) [4524].

m.p. 132–133° [4524].

2,2-Dibromo-1-(4-hydroxy-3,5-dinitrophenyl)ethanone

[120388-19-4]

$C_8H_4Br_2N_2O_6$ mol.wt. 383.94

Synthesis

- Preparation by bromination of 4-hydroxy-3,5-dinitro-acetophenone with excess cupric bromide in refluxing ethyl acetate (66%) [4381].

m.p. 93–95° [4381].

2,2-Dibromo-1-(3-bromo-4-hydroxy-5-nitrophenyl)ethanone

[35928-54-2]

$C_8H_4Br_3NO_4$ mol.wt. 417.84

Synthesis

- Preparation by bromination of 3-bromo-4-hydroxy-5-nitro-acetophenone in acetic acid-sulfuric acid solution at 25° (78%) [4525].

m.p. 121° [4525]; 1H NMR [4525].

2,2-Dibromo-1-(3,5-dibromo-2-hydroxyphenyl)ethanone

[49619-83-2]

$C_8H_4Br_4O_2$ mol.wt. 451.73

Syntheses

- Preparation by reaction of bromine on 2-hydroxy-acetophenone in acetic acid [4386,4526], (62%) [4386].
- Also obtained by reaction of aqueous sodium hypobromite on chromone-3-carboxaldehyde in acetic acid (24–30%) [4527,4528].
- Also obtained by reaction of sodium sulfite on 3,5-dibromo-2-hydroxy- α,α,α -tribromo-acetophenone, in boiling acetic acid [4529].

- Also obtained by reaction of bromine on 3,3'-diacetyl-4,4'-dihydroxydiphenyl thioether [4530].

m.p. 124–125° [4527], 122–123° [4529], 121–122° [4528], 120–121° [4386,4526,4530];

¹H NMR [4527,4528], IR [4527,4528], UV [4527], MS [4527,4528].

2,2-Dibromo-1-(3,5-dibromo-4-hydroxyphenyl)ethanone

$C_8H_4Br_4O_2$ mol.wt. 451.73

Syntheses

- Preparation by reaction of bromine on 3,5-dibromo-4-hydroxyacetophenone [4385,4386].
- Preparation by reaction of bromine on 4-hydroxyacetophenone in acetic acid (60%) [4386].

m.p. 105–106° [4386], 105° [4385].

2,2-Dibromo-1-(3,5-dibromo-2,4-dihydroxyphenyl)ethanone

$C_8H_4Br_4O_3$ mol.wt. 467.73

Synthesis

- Preparation by reaction of bromine on resacetophenone in acetic acid [4531].

m.p. 110–110°5 [4531].

2,2-Dibromo-1-(4-hydroxy-3-nitrophenyl)ethanone

[35928-53-1] $C_8H_5Br_2NO_4$ mol.wt. 338.94

Syntheses

- Preparation by bromination of 4-hydroxy-3-nitroacetophenone with excess cupric bromide in refluxing ethyl acetate (56–82%) [4381].
- Preparation by bromination of 4-hydroxy-3-nitroacetophenone in acetic acid-sulfuric acid mixture at 25° (49%) [4525].

m.p. 63° [4525]; ¹H NMR [4525].

2,2-Dibromo-1-(3-bromo-4-hydroxyphenyl)ethanone

$C_8H_5Br_3O_2$ mol.wt. 372.84

Synthesis

- Preparation by reaction of bromine on 4-hydroxyacetophenone in acetic acid or chloroform (65%) [4386].

m.p. 139° [4386].

2,2-Dibromo-1-(5-bromo-2-hydroxyphenyl)ethanoneC₈H₅Br₃O₂ mol.wt. 372.84

Synthesis

– Preparation by reaction of bromine on 2-hydroxy-acetophenone in chloroform or acetic acid (quantitative yield) [4386].

m.p. 103–104° [4386].

2,2-Dibromo-1-(2-hydroxyphenyl)ethanone[54735-43-2] C₈H₆Br₂O₂ mol.wt. 293.94

Syntheses

– Obtained by transformation of 4-hydroxycoumarin with tetrabutylammonium bromide promoted by hydrogen peroxide and vanadium pentoxide at 5° for 1 h (55%) [4532].

– Also refer to: [4533].

¹H NMR [4532], ¹³C NMR [4532], UV [4533]; TLC [4532], GC [4532].

2,2-Dibromo-1-(4-hydroxyphenyl)ethanone[92596-96-8] C₈H₆Br₂O₂ mol.wt. 293.94

Syntheses

– Preparation by bromination of 4-hydroxyacetophenone with excess cupric bromide in refluxing ethyl acetate (56–82%) [4381].

– Also obtained (by-product) by reaction of bromine with p-hydroxyacetophenone in dioxane at r.t. for 40 min (<6%) [4534].

m.p. 121–122° [4534]; ¹H NMR [4534], IR [4534].**1-(3-Amino-4-hydroxyphenyl)-2,2-dibromoethanone (Hydrobromide)**C₈H₇Br₂NO₂, HBr mol.wt. 389.87

Synthesis

– Preparation by reaction of bromine on 3-amino-4-hydroxyacetophenone hydrobromide in acetic acid at 65° (60%) [4401].

m.p. 215° [4401].

2,2-Dibromo-1-[3-bromo-5-(chloromethyl)-4-hydroxyphenyl]ethanone

[107700-05-0]

 $C_9H_6Br_3ClO_2$ mol.wt. 421.31

Synthesis

– Preparation by adding a methylene chloride solution of bromine to a methanol/methylene chloride solution of 3-(chloromethyl)-4-hydroxyacetophenone at r.t. (82%) [4458].

m.p. 140° [4458]; 1H NMR [4458], IR [4458], MS [4458].**2,2-Dibromo-1-(3,5-dibromo-2-hydroxy-6-methoxyphenyl)ethanone** $C_9H_6Br_4O_3$ mol.wt. 481.76

Synthesis

– Obtained by reaction of bromine on 3,3'-diacetyl-2,2'-dihydroxy-4,4'-dimethoxydiphenylsulfide in acetic acid, heated in a boiling water bath [4457].

m.p. 101–102° [4457].

2,2-Dibromo-1-(3-bromo-5-ethyl-2,4-dihydroxyphenyl)ethanone $C_{10}H_9Br_3O_3$ mol.wt. 416.89

Synthesis

– Preparation by reaction of 5-ethyl-2,4-dihydroxyacetophenone with an excess of bromine in chloroform [4535].

m.p. 144–145° [4535].

2,2-Dibromo-1-(3-bromo-2-hydroxy-4,6-dimethoxyphenyl)ethanone

[88503-19-9]

 $C_{10}H_9Br_3O_4$ mol.wt. 432.89

Synthesis

– Preparation by heating for 7 h on a steam bath a mixture of 2-hydroxy-3-iodo-4,6-dimethoxyacetophenone and bromine in acetic acid (67%) [4536].

m.p. 167–168° [4536].

2,2-Dibromo-1-[4-hydroxy-2-methyl-5-(1-methylethyl)phenyl]ethanone

[72235-94-0]

 $C_{12}H_{14}Br_2O_2$ mol.wt. 350.05

Synthesis

– Preparation by reaction of bromine on 4-hydroxy-2-methyl-5-isopropylacetophenone in acetic acid at 18° (45%) [4408].

m.p. 111° [4408].

1-[4-(Benzoyloxy)-3,5-dibromo-2-hydroxyphenyl]-2,2-dibromoethanoneC₁₅H₈Br₄O₄ mol.wt. 571.84**Synthesis**

– Preparation by bromination of 4-(benzoyloxy)-2-hydroxy-acetophenone at r.t. [4537].

m.p. 69–70° [4537].

11.1.3 From Tribromoacetic Acid**2,2,2-Tribromo-1-(3,5-dibromo-2-hydroxyphenyl)ethanone**

[98436-51-2]

C₈H₃Br₅O₂ mol.wt. 530.63**Synthesis**

– Obtained by reaction of bromine on 4-hydroxycoumarin (benzotetronic acid) in methanol or acetic acid at r.t. [4529].

m.p. 125–126° [4529].

2,2,2-Tribromo-1-(2-hydroxyphenyl)ethanone

[101495-49-2]

C₈H₅Br₃O₂ mol.wt. 372.84**Synthesis**

– Obtained by reaction of bromine on 4-hydroxycoumarin (benzotetronic acid) in acetic acid–dioxane mixture at r.t. [4529].

m.p. 87° [4529].

2,2,2-Tribromo-1-(5-bromo-2-hydroxy-4-methoxyphenyl)ethanoneC₉H₆Br₄O₃ mol.wt. 481.76**Synthesis**

– Preparation by reaction of bromine on bromopaenonol (5-bromo-2-hydroxy-4-methoxyacetophenone) in the presence of a crystal of iodine at r.t. [4538].

m.p. 123–124° [4538].

2,2,2-Tribromo-1-[4-hydroxy-2-methyl-5-(1-methylethyl)phenyl]ethanone

$C_{12}H_{13}Br_3O_2$ mol.wt. 428.95

Synthesis

- Preparation by reaction of bromine on 4-hydroxy-2-methyl-5-isopropylacetophenone in acetic acid at 18° (90%) [4408].

m.p. 69° [4408].

11.2 Compounds Derived from Chloroacetic Acids**11.2.1 From Monochloroacetic Acid****2-Chloro-1-(3-chloro-5-fluoro-2-hydroxyphenyl)ethanone**

$C_8H_5Cl_2FO_2$ mol.wt. 223.03

Synthesis

- Preparation by Fries rearrangement of 2-chloro-4-fluoro-phenyl chloroacetate with aluminium chloride without solvent at 130–140° (63%) [4539].

b.p.₂ 116° [4539].

2-Chloro-1-(3,5-dichloro-2-hydroxyphenyl)ethanone

[79214-30-5]

$C_8H_5Cl_3O_2$ mol.wt. 239.48

**Syntheses**

- Preparation by Fries rearrangement of 2,4-dichlorophenyl chloroacetate with aluminium chloride without solvent at 135–145° [4412,4540], (56%) [4540].
- Preparation by reaction of chloroacetyl chloride on 2,4-dichloroanisole with aluminium chloride in refluxing carbon disulfide (45%) [4405].

m.p. 136–136°8 [4540], 133° [4405], 132–134° [4412].

2-Chloro-1-(3,5-dichloro-4-hydroxyphenyl)ethanone

[220291-97-4]

$C_8H_5Cl_3O_2$ mol.wt. 239.48

**Syntheses**

- Preparation by Fries rearrangement of 2,6-dichlorophenyl chloroacetate with aluminium chloride without solvent at 112–114° (77%) [4541].
- Also refer to: [4542] (Japanese patent).

m.p. 120–121° [4541].

1-(5-Bromo-2-hydroxyphenyl)-2-chloroethanone[100959-21-5] $C_8H_6BrClO_2$ mol.wt. 249.49

Synthesis

– Preparation by reaction of chloroacetyl chloride with 4-bromophenol in the presence of aluminium chloride at 40° (66%) [4543].

m.p. 73–74° [4543].

1-(3-Bromo-4,5-dihydroxyphenyl)-2-chloroethanone $C_8H_6BrClO_3$ mol.wt. 265.50

Synthesis

– Preparation by bromination of 3,4-dihydroxy- α -chloroacetophenone with bromine in the presence of quinoline sulfate while cooling (60%) [4544] according to the method [4545].

m.p. 137° [4544].

2-Chloro-1-(3-fluoro-4-hydroxyphenyl)ethanone $C_8H_6ClFO_2$ mol.wt. 188.59

Synthesis

– Preparation by Fries rearrangement of 2-fluorophenyl chloroacetate with aluminium chloride without solvent at 135–140° (27–40%) [4546].

m.p. 101–102° [4546].

2-Chloro-1-(5-fluoro-2-hydroxyphenyl)ethanone[2002-75-7] $C_8H_6ClFO_2$ mol.wt. 188.59

Synthesis

– Preparation by Fries rearrangement of 4-fluorophenyl chloroacetate with aluminium chloride without solvent at 130° (50%) [4547].

b.p.₁₀ 177° [4547].**2-Chloro-1-(2-hydroxy-5-nitrophenyl)ethanone** $C_8H_6ClNO_4$ mol.wt. 215.59

Synthesis

– Obtained by nitration of 2-hydroxy- α -chloroacetophenone in acetic acid [4548].

m.p. 163–164° [4548].

2-Chloro-1-(4-hydroxy-3-nitrophenyl)ethanone

$C_8H_6ClNO_4$ mol.wt. 215.59

Syntheses

- Preparation by reaction of chlorine on 4-hydroxy-3-nitroacetophenone in acetic acid (45%) [4401].
- Also obtained by reaction of chloroacetyl chloride on 2-nitrophenol with aluminium chloride in nitrobenzene at 50–60° (19%) [4401].

m.p. 88° [4401]; b.p._{0.1} 135–140° [4401], b.p._{0.4} 140–145° [4401].

2-Chloro-1-(3-chloro-2-hydroxyphenyl)ethanone

[75717-49-6] $C_8H_6Cl_2O_2$ mol.wt. 205.04

Synthesis

- Obtained by reaction of chloroacetonitrile on 2-chloro-phenol with aluminium chloride and boron trichloride mixture in ethylene dichloride at r.t. (21%) [4549,4550].

m.p. 72–73° [4549,4550]; ¹H NMR [4550].

2-Chloro-1-(3-chloro-4-hydroxyphenyl)ethanone

[39066-18-7] $C_8H_6Cl_2O_2$ mol.wt. 205.04

Synthesis

- Preparation by Fries rearrangement of 2-chlorophenyl chloroacetate with aluminium chloride without solvent at 135–140° (39–59%) [4546,4551,4552].

m.p. 141–142° [4546].

2-Chloro-1-(4-chloro-2-hydroxyphenyl)ethanone

[75717-50-9] $C_8H_6Cl_2O_2$ mol.wt. 205.04

Synthesis

- Preparation by reaction of chloroacetonitrile on 3-chloro-phenol with aluminium chloride and boron trichloride mixture in refluxing ethylene dichloride (51%) [4549,4550].

m.p. 75–76° [4549,4550]; ¹H NMR [4550].

2-Chloro-1-(5-chloro-2-hydroxyphenyl)ethanone

[24483-75-8]

 $C_8H_6Cl_2O_2$ mol.wt. 205.04

Syntheses

- Preparation by Fries rearrangement of 4-chlorophenyl chloroacetate with aluminium chloride without solvent at 140–150° [4412,4553,4554], (30%) [4554].
 - Also obtained by reaction of chloroacetonitrile on 4-chlorophenol with aluminium chloride and boron trichloride mixture in ethylene dichloride [4549,4550], (18%) [4549].
- m.p. 107–110° [4412], 65–66° [4549,4550], 65° [4553,4554]. One of the reported melting points is obviously wrong. ¹H NMR [4550].

1-(5-Amino-2-hydroxy-4-nitrophenyl)-2-chloroethanone $C_8H_7ClN_2O_4$ mol.wt. 230.61

Synthesis

- Preparation by treatment of 5-acetamido-2-hydroxy-4-nitro- α -chloroacetophenone with boiling 25% aqueous hydrochloric acid solution [4555].

m.p. 145° (d) [4555].

1-(5-Amino-2-hydroxy-4-nitrophenyl)-2-chloroethanone (Hydrochloride) $C_8H_7ClN_2O_4, HCl$ mol.wt. 267.07

Synthesis

- Preparation from 5-amino-2-hydroxy-4-nitro- α -chloroacetophenone [4555] (see above).

m.p. 210° (d) [4555].

2-Chloro-1-(2-hydroxyphenyl)ethanone

[53074-73-0]

 $C_8H_7ClO_2$ mol.wt. 170.60

Syntheses

- Preparation by reaction of acetonitrile on phenol with aluminium chloride and boron trichloride in refluxing ethylene dichloride (78%) [4549] or in methylene chloride at r.t. (85%) [4550].
- Preparation by halogenation of o-hydroxyacetophenone,
 - using EGDMA crosslinked polystyrene based benzyltriethylammonium dichloroiodate or tetrachloroiodate reagents in chloroform for 7–11 h at 30° (80%) [4556];

- using 5% N,N'-MBA crosslinked polyacrylamide-based dichloroiodate or tetrachloroiodate reagents in chloroform at 30° for 8 h (77–79%) [4557];
 - with benzyltrimethylammonium dichloroiodate in refluxing methylene chloride/methanol mixture for 10 h (73%) [4558].
- Preparation by reaction of hexachloro-2,4-cyclohexadienone on 2-hydroxyacetophenone in refluxing ethanol (66%) [4559].
- Preparation by Fries rearrangement of phenyl monochloroacetate,
- with aluminium chloride(50%) [4560], without solvent at 120° (50%) [4561] or at 140° (by-product) [4562];
 - with beryllium chloride without solvent at 130–140° (30%) [4563].
- Also obtained by reaction of chloroacetyl chloride on bromomagnesium phenolate in toluene at r.t. (17%) [4564].
- Also obtained by reaction of aluminium chloride on 2-chloroacetylanisole in refluxing carbon disulfide [4565,4566].
- Also obtained (by-product) by reaction of chloroacetyl chloride on phenol with aluminium chloride at 140° [4562].
- Also obtained (by-product) by treatment of anisole with chloroacetyl chloride in the presence of aluminium chloride in tetrachloroethane in a boiling water bath for 2–3 h [4567,4568].
- Also refer to: [4569–4577].
- m.p. 101° [4566], 74–75° [4564], 74° [4557,4560–4562], 73–74° [4565], 73° [4558,4559,4563,4566–4568], 72–73° [4550], 72° [4556], 71–71°5 [4573];

One of the reported melting points is obviously wrong.

¹H NMR [4558,4559,4564], IR [4558,4559].

2-Chloro-1-(3-hydroxyphenyl)ethanone

[62932-90-5] C₈H₇ClO₂ mol.wt. 170.60

Synthesis

- Preparation by reaction of hexachloro-2,4-cyclohexadienone on 3-hydroxyacetophenone in refluxing ethanol (50%) [4559].

m.p. 93° [4559]; ¹H NMR [4559], IR [4559].

2-Chloro-1-(4-hydroxyphenyl)ethanone

[6305-04-0] C₈H₇ClO₂ mol.wt. 170.60

Syntheses

- Preparation by reaction of p-hydroxyacetophenone with benzyltrimethylammonium dichloroiodate in refluxing methylene chloride/methanol mixture for 10 h (95%) [4558] or for 12 h (92%) [4578].

- Preparation by reaction of chloroacetyl chloride,
 - with anisole in the presence of aluminium chloride in ligroin (44%) [4579], for 1 h in a water bath (50–55°) (32%) [4580], for 4 h (36%) [4581] or for 3 h (41–42%) [4582];
 - with anisole in the presence of aluminium chloride without solvent [4583], in carbon disulfide [4584] or in tetrachloroethane in a boiling water bath for 2–3 h [4567], (53%) [4568];
 - with phenol in the presence of aluminium chloride without solvent at 140° (71%) [4562] or in tetrachloroethane, first at 70° for 5 h, then at r.t. for 10 h [4585].
 - Also obtained by Fries rearrangement of phenyl chloroacetate,
 - with aluminium chloride without solvent at 120–140° [4561,4562], (65%) [4562];
 - with beryllium chloride without solvent at 130–140° (23%) [4563].
 - Preparation by reaction of hexachloro-2,4-cyclohexadienone on 4-hydroxyacetophenone in refluxing ethanol (77%) [4559].
 - Also refer to: [4586–4588].
- m.p. 151–152° [4573], 150–151° [4578], 150° [4558], 148° [4562,4579,4582–4584], 147–148° (d) [4580], 147°5 [4581], 147° [4567,4568], 145–146° [4563], 142° [4559];
¹H NMR [4558,4559,4578], IR [4558,4559].

2-Chloro-1-(2,3-dihydroxyphenyl)ethanone

[63704-55-2]

C₈H₇ClO₃

mol.wt. 186.59

Synthesis

– Refer to: [4589] (Japanese patent).

2-Chloro-1-(2,4-dihydroxyphenyl)ethanone

[25015-92-3]

C₈H₇ClO₃

mol.wt. 186.59

Syntheses

- Preparation by reaction of chloroacetonitrile on resorcinol with zinc chloride (Hoesch reaction) (90%) [4590], (82%) [4591] or with triflic acid (trifluoromethanesulfonic acid) (23%) [4592].
 - Also obtained by reaction of chloroacetic acid on resorcinol with boron trifluoride (30%) [4593] or with zinc chloride or phosphorous oxychloride (poor yield) [4435,4436].
- m.p. 132° [4593], 131° [4590], 130–132° [4592], 130° [4591];
¹H NMR [4592], IR [4592], UV [4417].

2-Chloro-1-(2,5-dihydroxyphenyl)ethanone[60912-82-5] $C_8H_7ClO_3$ mol.wt. 186.59

Syntheses

- Obtained by reaction of hydrochloric acid on 2,5-diacetoxy- α -chloroacetophenone in methanol at r.t. (85%) [4440].
 - Preparation by reaction of aluminium bromide on 2,5-dimethoxy- α -chloroacetophenone in carbon disulfide at r.t. (72%) [4440].
 - Also obtained by action of acetic acid saturated with hydrochloric acid (10 min, r.t.) on 2,5-di-acetoxy- α -diazoacetophenone, reduced pressure elimination of acetic acid, then action (overnight, r.t.) of a methanolic solution of hydrochloric acid (53%) [4440].
 - Also obtained by reaction of sulfur dioxide on 2-chloroacetyl-1,4-benzoquinone in water [4440].
- m.p. 132–133° [4440].

2-Chloro-1-(3,4-dihydroxyphenyl)ethanone[99-40-1] $C_8H_7ClO_3$ mol.wt. 186.59

Syntheses

- Preparation by Fries rearrangement of pyrocatechol mono-chloroacetate with aluminium chloride in nitrobenzene at 100° (60%) [4594] or without solvent at 100° (25%) [4595].
 - Preparation by reaction of chloroacetic acid on pyrocatechol with boron trifluoride in tetrachloroethane or in carbon tetrachloride at 65–85° (95–98%) [4593] or with phosphorus oxychloride [4445,4596–4599], (80%) [4445], (35–58%) [4596,4597,4599].
 - Preparation by reaction of chloroacetyl chloride on pyrocatechol [4445].
 - Preparation by reaction of chloroacetyl chloride on veratrole with aluminium chloride in nitrobenzene at 40° (82%) [4600].
- m.p. 173° [4445,4593,4594,4596,4597,4600], 172° [4599,4601], 171° [4595], 169–170° [4437]; b.p.₁₂ 190° [4600].

2-Chloro-1-(3,5-dihydroxyphenyl)ethanone[39878-43-8] $C_8H_7ClO_3$ mol.wt. 186.59

Synthesis

- Preparation by reaction of hydrochloric acid on 3,5-di-acetoxy- α -diazoacetophenone in aqueous methanol at reflux (97%) [4602].
- m.p. 117° [4602].

2-Chloro-1-(2,3,4-trihydroxyphenyl)ethanone[17345-68-5] $C_8H_7ClO_4$ mol.wt. 202.59

Syntheses

- Preparation by Fries rearrangement of 2,6-dimethoxyphenyl chloroacetate with aluminium chloride without solvent at 100° [4603].
 - Preparation by reaction of chloroacetyl chloride on pyrogallol [4445].
 - Preparation by reaction of chloroacetic acid on pyrogallol with phosphorous oxychloride [4435,4436,4455,4590,4598,4599,4604,4605], (55%) [4605], (40–41%) [4599,4604], with boron trifluoride [4593,4606] or with zinc chloride (poor yield) [4435,4436].
 - Preparation by reaction of chloroacetic anhydride with pyrogallol in the presence of boron trifluoride in ethyl ether [4607].
- m.p. 169° [4604], 167–168° [4455], 167° [4593], 166° [4599], 163–165° [4437].

2-Chloro-1-(2,4,5-trihydroxyphenyl)ethanone[14771-02-9] $C_8H_7ClO_4$ mol.wt. 202.59

Synthesis

- Preparation by reaction of chloroacetonitrile on 1,2,4-benzenetriol (hydroxyhydroquinone) with zinc chloride in ethyl ether (Hoesch reaction) [4431,4608,4609].

m.p. 182° [4431], 139–140° [4609]. One of the reported melting points is obviously wrong.
¹H NMR [4431], IR [4431,4609], UV [4431,4609].

2-Chloro-1-(2,4,6-trihydroxyphenyl)ethanone[110865-03-7] $C_8H_7ClO_4$ mol.wt. 202.59

Syntheses

- Preparation by reaction of chloroacetyl chloride on phloroglucinol with aluminium chloride in nitromethane (86%) [4606].
 - Preparation by reaction of chloroacetonitrile on phloro-glucinol (Hoesch reaction) (88%) [4610], (68%) [4611].
 - Also refer to: [4612] (compound **1**).
- m.p. 190° [4606], 188–191° [4610,4611]; ¹H NMR [4611], IR [4611], MS [4611].

1-(3-Amino-4-hydroxyphenyl)-2-chloroethanone[108708-12-9] $C_8H_8ClNO_2$ mol.wt. 185.61

Synthesis

– Preparation by Friedel–Crafts chloroacetylation of N-acetyl-o-anisidine followed by hydrolysis with concentrated hydrochloric acid in ethanol [4613].

m.p. 113° [4613].

1-(4-Amino-2-hydroxyphenyl)-2-chloroethanone[108708-13-0] $C_8H_8ClNO_2$ mol.wt. 185.61

Synthesis

– Preparation by Friedel–Crafts chloroacetylation of N-acetyl-m-anisidine followed by hydrolysis with concentrated hydrochloric acid in ethanol [4613].

m.p. 214° (d) [4613].

1-(5-Amino-2-hydroxyphenyl)-2-chloroethanone[108708-11-8] $C_8H_8ClNO_2$ mol.wt. 185.61

Synthesis

– Preparation by Friedel–Crafts chloroacetylation of N-acetyl-p-anisidine followed by hydrolysis with concentrated hydrochloric acid in ethanol [4555,4613,4614].

m.p. 135° [4555,4614], 128° [4613].

1-(5-Amino-2-hydroxyphenyl)-2-chloroethanone (Hydrochloride) $C_8H_8ClNO_2, HCl$ mol.wt. 222.07

Synthesis

– Obtained by reaction of gaseous hydrochloric acid on 5-amino-2-hydroxy- α -chloroacetophenone in ethyl ether [4555].

m.p. 210° (d) [4555].

2-Chloro-1-(3-chloro-4-hydroxy-5-methylphenyl)ethanone $C_9H_8Cl_2O_2$ mol.wt. 219.07

Synthesis

– Preparation by Fries rearrangement of 2-chloro-6-methylphenyl chloroacetate with aluminium chloride at 140° [4615].

m.p. 98°5–99°5 [4615]; b.p.₁₂ 172–180° [4615].

2-Chloro-1-(4-chloro-2-hydroxy-5-methylphenyl)ethanone

[22307-95-5]

 $C_9H_8Cl_2O_2$ mol.wt. 219.07

Synthesis not yet described

- See [4616]; this reference mentioned in the Chem. Abstr., **70**, 11442s (1969) is erroneous. Actually, the ketone described here as the 2,4'-dichloro-2'-hydroxy-5'-methylacetophenone should be the 2,5'-dichloro-2'-hydroxy-4'-methyl-acetophenone. In fact, on one hand, it is obtained by Fries rearrangement of 4-chloro-3-methylphenyl chloroacetate and on the other hand, it provides the 5-chloro-6-methyl-3-[2*H*]-benzofuranone by cyclisation (see below).

2-Chloro-1-(5-chloro-2-hydroxy-4-methylphenyl)ethanone $C_9H_8Cl_2O_2$ mol.wt. 219.07

Synthesis

- Preparation by Fries rearrangement of 4-chloro-3-methyl-phenyl chloroacetate with aluminium chloride without solvent at 150° [4616].

m.p. 111° [4616]; ¹H NMR [4616], IR [4616].**2-Chloro-1-(3-chloro-4-hydroxy-5-methoxyphenyl)ethanone**

[160925-81-5]

 $C_9H_8Cl_2O_3$ mol.wt. 235.07

Syntheses

- Preparation by chlorination of acetoguaiacone (4-hydroxy-3-methoxyacetophenone) in dioxane with 2.5 mol equiv chlorine in acetic acid (67%) [4617].

– Also refer to: [4618].

m.p. 149–150° [4617]; ¹H NMR [4617], ¹³C NMR [4617], MS [4617].**2-Chloro-1-(5-chloro-2-hydroxy-4-methoxyphenyl)ethanone** $C_9H_8Cl_2O_3$ mol.wt. 235.07

Syntheses

- Preparation by reaction of chloroacetyl chloride on 4-chlororesorcinol dimethyl ether with aluminium chloride in carbon disulfide (66%) [4486].
- Preparation by reaction of chlorine on 2-hydroxy-4-methoxy- α -chloroacetophenone in chloroform (40–45%) [4486].

m.p. 178°5–180° [4486].

2-Chloro-1-(2-hydroxy-3-methylphenyl)ethanone

[75717-51-0]

 $C_9H_9ClO_2$ mol.wt. 184.62**Syntheses**

- Preparation by reaction of chloroacetonitrile on o-cresol with aluminium chloride and boron trichloride mixture in ethylene dichloride at r.t. (75%) [4549,4550] or with only boron trichloride in methylene chloride at r.t. under nitrogen (18%) [4619].
 - Preparation by Fries rearrangement of 2-methylphenyl chloroacetate with aluminium chloride without solvent at 140° (50%) [4620], (20%) [4621].
- m.p. 67° [4621], 66–67° [4620], 65–66° [4549,4550], 63–64° [4619];
¹H NMR [4550,4619], IR [4619], UV [4619], MS [4619].

2-Chloro-1-(2-hydroxy-4-methylphenyl)ethanone

[20834-75-7]

 $C_9H_9ClO_2$ mol.wt. 184.62**Syntheses**

- Preparation by Fries rearrangement of 3-methylphenyl chloroacetate with aluminium chloride without solvent between 140° and 150° [4616,4620,4622–4624], (70%) [4620], (50%) [4623,4624], (12%) [4622].
 - Preparation by reaction of chloroacetonitrile on m-cresol with boron trichloride and aluminium chloride in refluxing ethylene dichloride (quantitative yield) [4549].
 - Also refer to: [4388,4575].
- m.p. 102–102.5 [4620], 102° [4616], 101° [4623], 100° [4622], 95–96° [4549];
¹H NMR [4616], IR [4616].

2-Chloro-1-(2-hydroxy-5-methylphenyl)ethanone

[22307-94-4]

 $C_9H_9ClO_2$ mol.wt. 184.62**Syntheses**

- Preparation by Fries rearrangement of p-tolyl chloroacetate with aluminium chloride without solvent at 140° [4412,4562,4620,4623], (90–93%) [4620,4623], (37%) [4562].
 - Preparation by reaction of chloroacetic acid on p-cresol with boron trifluoride etherate (66%) or boron trifluoride (46%) in an autoclave at 70° [4470].
 - Preparation by reaction of chloroacetyl chloride on 4-methylanisole with aluminium chloride in refluxing carbon disulfide (50–60%) [4625].
 - Preparation by reaction of chloroacetyl chloride on p-cresol with aluminium chloride without solvent at 140° (31%) [4562].
- m.p. 65° [4562,4623], 63° [4625], 62–63° [4412,4620], 62° [4470].

2-Chloro-1-(2-hydroxy-6-methylphenyl)ethanone[73331-41-6] $C_9H_9ClO_2$ mol.wt. 184.62

Synthesis

– Refer to: [4626].

2-Chloro-1-(4-hydroxy-2-methylphenyl)ethanone[37904-71-5] $C_9H_9ClO_2$ mol.wt. 184.62

Synthesis

– Preparation by Fries rearrangement of 3-methylphenyl chloroacetate with aluminium chloride without solvent at 140° [4620,4622], (30%) [4620].

m.p. 148°5–149° [4620], 147°5 [4622].

2-Chloro-1-(4-hydroxy-3-methylphenyl)ethanone[40943-24-6] $C_9H_9ClO_2$ mol.wt. 184.62

Synthesis

– Preparation by Fries rearrangement of 2-methylphenyl chloroacetate with aluminium chloride without solvent at 140° [4620,4621], (50%) [4620].

m.p. 144–145° [4621], 144–144°5 [4620].

2-Chloro-1-(5-hydroxy-2-methylphenyl)ethanone
 $C_9H_9ClO_2$ mol.wt. 184.62

Synthesis

– Obtained (by-product) by Fries rearrangement of 4-methylphenyl chloroacetate with aluminium chloride without solvent at 140° (7%) [4620].

m.p. 155°5–156° [4620].

2-Chloro-1-[3-hydroxy-4-(methylthio)phenyl]ethanone[151792-80-2] $C_9H_9ClO_2S$ mol.wt. 216.69

Synthesis

– Preparation by hydrolysis of 3-hydroxy-4-methylthio- α -chloroacetophenone chloroacetate with 1 N sodium hydroxide in methanol at r.t. (94%) [4627].m.p. 140° [4627]; 1H NMR [4627], IR [4627], MS [4627].

2-Chloro-1-(2,4-dihydroxy-3-methylphenyl)ethanone[21861-21-2] $C_9H_9ClO_3$ mol.wt. 200.62

Synthesis

– Preparation by reaction of chloroacetonitrile with 2-methyl-resorcinol (72%) (Hoesch reaction) [4628].

m.p. 155° [4628].

2-Chloro-1-(2,4-dihydroxy-5-methylphenyl)ethanone $C_9H_9ClO_3$ mol.wt. 200.62

Syntheses

– Preparation by reaction of chloroacetonitrile with 4-methyl-resorcinol (Hoesch reaction) [4629].

– Also obtained by Friedel–Crafts acylation of 4-methyl-resorcinol with chloroacetyl chloride in the presence of aluminium chloride in nitrobenzene [4630].

m.p. 157° [4630], 156° [4629].

2-Chloro-1-(2,4-dihydroxy-6-methylphenyl)ethanone[22670-61-7] $C_9H_9ClO_3$ mol.wt. 200.62

Synthesis

– Preparation by reaction of chloroacetonitrile with orcinol (68%) (Hoesch reaction) [4628].

m.p. 151° [4628].

2-Chloro-1-(3,4-dihydroxy-2-methylphenyl)ethanone $C_9H_9ClO_3$ mol.wt. 200.62

Synthesis

– Preparation by reaction of chloroacetyl chloride on 3-methylpyrocatechol with aluminium chloride in refluxing carbon disulfide (59%) [4631].

m.p. 178° [4631]; 1H NMR [4631], IR [4631].**2-Chloro-1-(3,4-dihydroxy-5-methylphenyl)ethanone** $C_9H_9ClO_3$ mol.wt. 200.62

Synthesis

– Preparation by reaction of chloroacetic acid on 3-methylpyrocatechol with phosphorous oxychloride in refluxing benzene (28%) [4631].

m.p. 180° [4631]; 1H NMR [4631], IR [4631].

2-Chloro-1-(4,5-dihydroxy-2-methylphenyl)ethanoneC₉H₉ClO₃ mol.wt. 200.62

Syntheses

– Preparation by reaction of chloroacetyl chloride on homoveratrole (3,4-dimethoxytoluene) with aluminium chloride in carbon disulfide or nitrobenzene at 40° (82%) [4600].

– Also obtained (very low yield) by Fries rearrangement of creosol chloroacetate with aluminium chloride at 100° [4595].

m.p. 130° [4595], 128° [4600]; b.p.₁₄ 187° [4600].

2-Chloro-1-(2-hydroxy-3-methoxyphenyl)ethanone

[75717-52-1]

C₉H₉ClO₃ mol.wt. 200.62

Synthesis

– Preparation by reaction of chloroacetonitrile on guaiacol with aluminium chloride and boron trichloride in refluxing ethylene dichloride (42%) [4549,4553].

m.p. 113–114° [4549,4550]; ¹H NMR [4550].

2-Chloro-1-(2-hydroxy-4-methoxyphenyl)ethanone

[60965-23-3]

C₉H₉ClO₃ mol.wt. 200.62

Syntheses

– Preparation by reaction of diazomethane on 2,4-dihydroxy- α -chloroacetophenone in ethyl ether (60%) [4590].

– Preparation by reaction of chloroacetyl chloride on 2,4-dimethoxybenzene with aluminium chloride in refluxing carbon disulfide (86%) [4486], (55%) [4632] or in ethyl ether at r.t. (57%) [4411].

– Preparation by reaction of chloroacetyl chloride on bromomagnesium 3-methoxyphenolate in toluene at r.t. (84%) [4564].

– Preparation by reaction of chloroacetonitrile on 3-methoxyphenol with aluminium chloride and boron trichloride in methylene chloride at r.t. (81%) [4549,4550] or with zinc chloride and hydrochloric acid in ethyl ether (by-product) [4433].

– Also refer to: [4575].

m.p. 117–118° [4549,4550], 116° [4411,4486], 115–117° [4564], 115–116° [4632], 114° [4590];

¹H NMR [4411,4564], MS [4564].

2-Chloro-1-(2-hydroxy-5-methoxyphenyl)ethanone[75717-53-2] $C_9H_9ClO_3$ mol.wt. 200.62

Syntheses

- Preparation by reaction of chloroacetyl chloride on hydroquinone dimethyl ether with aluminium chloride in refluxing carbon disulfide (65%) [4486].
- Preparation by reaction of chloroacetonitrile on hydroquinone monomethyl ether with boron trichloride and aluminium chloride in ethylene dichloride (67%) [4549,4553].
- Also refer to: [4575].
- m.p. 83–84° [4549,4550], 81–81°5 [4486]; 1H NMR [4550].

2-Chloro-1-(2-hydroxy-6-methoxyphenyl)ethanone[75717-59-8] $C_9H_9ClO_3$ mol.wt. 200.62

Syntheses

- Obtained (by-product) by reaction of chloroacetyl chloride on bromomagnesium 3-methoxyphenolate in toluene at r.t. (10%) [4564].
- Also obtained (by-product) by reaction of chloroacetonitrile on 3-methoxyphenol with aluminium chloride and boron trichloride mixture in ethylene dichloride at r.t. (5%) [4550].
- m.p. 105–109° [4564]; 1H NMR [4564], IR [4564].

2-Chloro-1-(3-hydroxy-4-methoxyphenyl)ethanone[55761-46-1] $C_9H_9ClO_3$ mol.wt. 200.62

Syntheses

- Preparation by Fries rearrangement of guaiacol chloroacetate with aluminium chloride in refluxing carbon disulfide (63%) [4633], (49%) [4634,4635].
- Also obtained by reaction of 5 N sodium hydroxide with 5-chloroacetylguaiacol chloroacetate in dioxane, the mixture being gently warmed [4636].
- m.p. 122–123° [4635], 121–122° [4636], 116–118° [4633].

2-Chloro-1-(4-hydroxy-2-methoxyphenyl)ethanone[104691-67-0] $C_9H_9ClO_3$ mol.wt. 200.62

Synthesis

- Preparation by reaction of chloroacetonitrile on resorcinol monomethyl ether (Hoesch reaction) (major product, good yield) [4433].
- m.p. 173–174° [4433].

2-Chloro-1-(4-hydroxy-3-methoxyphenyl)ethanone[6344-28-1] $C_9H_9ClO_3$ mol.wt. 200.62**Syntheses**

- Preparation by reaction of chloroacetyl chloride on veratrole with aluminium chloride in carbon disulfide (72%) [4637].
- Preparation by reaction of chloroacetyl chloride with guaiacol in the presence of aluminium chloride in boiling carbon disulfide (56%) [4638]; the same yield was obtained using tetrachloroethane as solvent [4638].
- Preparation by chlorination of the acetate of acetoguaiacone (4-acetoxy-3-methoxyacetophenone) with 1.1 mol equiv chlorine in chloroform and subsequent hydrolysis (67%) [4617].

m.p. 102–104° [4636], 102° [4637], 100–102° [4617,4638];

 1H NMR [4617], ^{13}C NMR [4617], MS [4381].**2-Chloro-1-(2,3-dihydroxy-4-methoxyphenyl)ethanone** $C_9H_9ClO_4$ mol.wt. 216.62**Synthesis**

- Preparation from 2,3-dihydroxyanisole by Hoesch acylation by means of chloroacetonitrile (70%) [4607].

2-Chloro-1-(2,4-dihydroxy-3-methoxyphenyl)ethanone[69151-93-5] $C_9H_9ClO_4$ mol.wt. 216.62**Synthesis**

- Preparation by reaction of chloroacetonitrile with 2,6-di-hydroxyanisole (Hoesch reaction) [4639].

m.p. 71–72° [4639].

2-Chloro-1-(2,4-dihydroxy-6-methoxyphenyl)ethanone[70651-70-6] $C_9H_9ClO_4$ mol.wt. 216.62**Syntheses**

- Obtained by treatment of 2-hydroxy-4,6-dimethoxy- α -chloroacetophenone with aluminium chloride in refluxing chlorobenzene for 1 h (85%) [4640].
- Preparation by reaction of chloroacetonitrile with phloroglucinol monomethyl ether (Hoesch reaction) (41%) [4641].
- Also refer to: [4642,4643].

m.p. 184–186° (d) [4641], 174–175° [4640].

One of the reported melting points is obviously wrong.

2-Chloro-1-(2,5-dihydroxy-4-methoxyphenyl)ethanone[163980-43-6] $C_9H_9ClO_4$ mol.wt. 216.62

Synthesis

– Preparation by reaction of chloroacetonitrile with methoxy-hydroquinone (Hoesch reaction) (84%) [4644].

light brown crystals [4644]; 1H NMR [4644], MS [4644].**1-[5-(Acetyloxy)-2-hydroxyphenyl]-2-chloroethanone** $C_{10}H_9ClO_4$ mol.wt. 228.63

Syntheses

– 12 Preparation by reaction of acetyl chloride on 2,5-dihydroxy- α -chloroacetophenone at reflux (73%) [4440].
 – Also obtained (by-product) by reaction of 2,5-diacetoxy- α -chloroacetophenone with sodium acetate (7%) [4440].

m.p. 151–152° [4440].

2-Chloro-1-(3-chloro-2-hydroxy-4,6-dimethoxyphenyl)ethanone[72565-72-1] $C_{10}H_9Cl_2O_4$ mol.wt. 265.09

Synthesis

– Preparation by reaction of chloroacetyl chloride with 2-chloro-3,5-dimethoxyphenol in the presence of aluminium chloride in nitrobenzene at r.t. [4645,4646,4647], (88%) [4647], (70%) [4646].

m.p. 211° (d) [4646]; 1H NMR [4647], IR [4646].**2-Chloro-1-(3-ethyl-2-hydroxyphenyl)ethanone** $C_{10}H_{11}ClO_2$ mol.wt. 198.65

Synthesis

– Preparation by Fries rearrangement of 2-ethylphenyl chloroacetate with aluminium chloride without solvent at 140° (39%) [4648].

oil [4648].

2-Chloro-1-(3-ethyl-4-hydroxyphenyl)ethanone[145736-97-6] $C_{10}H_{11}ClO_2$ mol.wt. 198.65

Synthesis

– Refer to: [4649].

2-Chloro-1-(4-ethyl-2-hydroxyphenyl)ethanoneC₁₀H₁₁ClO₂ mol.wt. 198.65

Syntheses

– Preparation by Fries rearrangement of 3-ethylphenyl chloroacetate with aluminium chloride without solvent at 140° (49%) [4648].

– Also obtained also by Fries rearrangement of 4-ethylphenylchloroacetate with aluminium chloride without solvent at 140°, on account of a migration of the ethyl group (46%) [4648].

m.p. 69–70° [4648].

2-Chloro-1-(5-ethyl-2-hydroxyphenyl)ethanoneC₁₀H₁₁ClO₂ mol.wt. 198.65

Synthesis

– Preparation by reaction of chloroacetyl chloride on 4-ethylanisole with aluminium chloride in carbon disulfide (32%) [4648].

m.p. 50–52° [4648].

2-Chloro-1-(2-hydroxy-3,4-dimethylphenyl)ethanoneC₁₀H₁₁ClO₂ mol.wt. 198.65

Synthesis

– Preparation by reaction of chloroacetonitrile on 2,3-di-methylphenol with aluminium chloride and boron trifluoride in refluxing ethylene dichloride (quantitative yield) [4550].

m.p. 95–96° [4550].

2-Chloro-1-(2-hydroxy-3,5-dimethylphenyl)ethanoneC₁₀H₁₁ClO₂ mol.wt. 198.65

Synthesis

– Preparation by reaction of chloroacetyl chloride on 2,4-dimethylanisole with aluminium chloride in carbon disulfide (20%) [4650].

2-Chloro-1-(2-hydroxy-4,5-dimethylphenyl)ethanone

[22307-96-6]

 $C_{10}H_{11}ClO_2$ mol.wt. 198.65**Synthesis**

– Preparation by Fries rearrangement of 3,4-dimethylphenyl chloroacetate with aluminium chloride without solvent at 150° [4616].

m.p. 101° [4616]; 1H NMR [4616], IR [4616].

2-Chloro-1-(2-hydroxy-4,6-dimethylphenyl)ethanone $C_{10}H_{11}ClO_2$ mol.wt. 198.65**Synthesis**

– Preparation by Fries rearrangement of 3,5-dimethylphenyl chloroacetate with aluminium chloride without solvent at 135–140° [4621,4623], (good yield) [4623].

m.p. 92° [4623].

2-Chloro-1-(4-hydroxy-3,5-dimethylphenyl)ethanone

[40943-25-7]

 $C_{10}H_{11}ClO_2$ mol.wt. 198.65**Syntheses**

– Preparation by reaction of chloroacetyl chloride with 2,6-di-methylphenol in the presence of aluminium chloride in nitrobenzene at 60° (43%) [4498].

– Also obtained (poor yield) by reaction of aluminium chloride on 2,6-dimethyl-4-ethylphenyl chloroacetate without solvent at 150° [4615].

m.p. 107° [4498]; 1H NMR [4498], IR [4498], MS [4498].

2-Chloro-1-(5-hydroxy-2,4-dimethylphenyl)ethanone $C_{10}H_{11}ClO_2$ mol.wt. 198.65**Synthesis**

– Preparation (by-product) by reaction of chloroacetyl chloride on 2,4-dimethylanisole with aluminium chloride in carbon disulfide (10%) [4650].

m.p. 107–107° [4650].

2-Chloro-1-(2,4-dihydroxy-3,5-dimethylphenyl)ethanoneC₁₀H₁₁ClO₃ mol.wt. 214.65

Synthesis

– Preparation by reaction of acetonitrile on 2,4-dimethyl-resorcinol (Hoesch reaction) (93%) [4632].

m.p. 126–127° [4632].

2-Chloro-1-(5-ethyl-2,4-dihydroxyphenyl)ethanoneC₁₀H₁₁ClO₃ mol.wt. 214.65

Syntheses

– Preparation by reaction of 4-ethylresorcinol with chloro-acetonitrile (Hoesch reaction) [4629], (95%) [4651], (88%) [4652].

– Preparation by Friedel–Crafts acylation of 4-ethyl-resorcinol with chloroacetyl chloride in nitrobenzene in the presence of aluminium chloride for 24 h at r.t. (70%) [4630].

m.p. 163–165° [4630], 161–161°5 [4651], 161° [4629,4652].

2-Chloro-1-(5-ethyl-2,3,4-trihydroxyphenyl)ethanoneC₁₀H₁₁ClO₄ mol.wt. 230.65

Synthesis

– Preparation by reaction of chloroacetonitrile with 4-ethyl-pyrogallol (m.p. 105–106°) (Hoesch reaction) (60%) [4652].

m.p. 131–132°5 [4652].

2-Chloro-1-(2-hydroxy-3,4-dimethoxyphenyl)ethanone

[7507-92-8]

C₁₀H₁₁ClO₄ mol.wt. 230.65

Synthesis

– Preparation by reaction of chloroacetyl chloride with 1,2,3-trimethoxybenzene in the presence of aluminium chloride in ethylene dichloride first at 0°, then at r.t. (70%) [4653] or without solvent at 100° (16%) [4654].

m.p. 161°5 [4654], 160–162° [4653]; ¹H NMR [4653], MS [4653].

2-Chloro-1-(2-hydroxy-4,5-dimethoxyphenyl)ethanoneC₁₀H₁₁ClO₄ mol.wt. 230.65

Synthesis

– Preparation by reaction of chloroacetonitrile on 3,4-di-methoxyphenol (Hoesch reaction) (47%) [4655].

m.p. 154–155° [4655].

2-Chloro-1-(2-hydroxy-4,6-dimethoxyphenyl)ethanone

[103040-51-3]

C₁₀H₁₁ClO₄ mol.wt. 230.65

Syntheses

– Preparation by reaction of chloroacetonitrile on phloroglucinol dimethyl ether (Hoesch reaction) [4611].

– Preparation by reaction of chloroacetyl chloride on phloroglucinol trimethyl ether with aluminium chloride in boiling ligroin [4656].

– Preparation by partial demethylation of 2,4,6-trimethoxy- α -chloroacetophenone by heating with aluminium chloride without solvent at 120° (89%) [4508].

m.p. 144–146° [4508], 142–144° [4656], 136–140° [4611];

¹H NMR [4611], IR [4611], MS [4611].**2-Chloro-1-(4-hydroxy-3,5-dimethoxyphenyl)ethanone**

[59719-58-3]

C₁₀H₁₁ClO₄ mol.wt. 230.65

Synthesis

– Preparation by chlorination of 4-(benzyloxy)-3,5-di-methoxybenzoylacetic acid methyl ester with sulfuryl chloride in acetic acid at r.t., and subsequent hydrolysis of the keto ester so obtained by refluxing in hydrochloric acid (90%) [4657].

2-Chloro-1-(2,4-dihydroxy-3,6-dimethoxyphenyl)ethanoneC₁₀H₁₁ClO₅ mol.wt. 246.65

Synthesis

– Preparation by reaction of chloroacetonitrile on 2,5-dimethoxyresorcinol (Hoesch reaction) (52%) [4515], (25%) [4658].

m.p. 150–151° [4658], 148–149° [4515].

2-Chloro-1-(3,6-dihydroxy-2,4-dimethoxyphenyl)ethanoneC₁₀H₁₁ClO₅ mol.wt. 246.65

Synthesis

– Obtained by reaction of chloroacetyl chloride with 1,4-di-hydroxy-2,6-dimethoxybenzene in ethyl ether in the presence of aluminium chloride, cooling in ice and standing overnight (45%) [4659].

m.p. 154° [4659].

2-Chloro-1-[4-(dimethylamino)-2-hydroxyphenyl]ethanone[127354-36-3] C₁₀H₁₂ClNO₂ mol.wt. 213.66

Synthesis

– Preparation by reaction of chloroacetyl chloride on bromomagnesium 3-(N,N-dimethylamino)phenolate in toluene at r.t. (92%) [4564].

m.p. 96–98° (d) [4564]; ¹H NMR [4564], IR [4564], MS [4564].**2-Chloro-1-(3-chloro-2-hydroxy-4,6-dimethoxy-5-methylphenyl)ethanone**[201288-73-5] C₁₁H₁₂Cl₂O₄ mol.wt. 279.12

Synthesis

– Preparation by reaction of chloroacetyl chloride with 2-chloro-3,5-dimethoxy-4-methylphenol in ethyl ether in the presence of aluminium chloride, first at 0° under an argon atmosphere, then at r.t. for 0.5 h and at reflux for 3 h (90%) [4660].

m.p. 144–146° [4660]; ¹H NMR [4660], IR [4660], MS [4660].**2-Chloro-1-[5-(chloromethyl)-2-hydroxy-3,4-dimethoxyphenyl]ethanone**[76439-46-8] C₁₁H₁₂Cl₂O₄ mol.wt. 279.12

Synthesis

– Preparation by reaction of paraformaldehyde with 2-hydroxy-3,4-dimethoxy- α -chloroacetophenone in the presence of hydrochloric acid gas in acetic acid between 60° and 70° (77%) [4653].

m.p. 130–131° [4653]; ¹H NMR [4653], MS [4653].

2-Chloro-1-(2,4-dihydroxy-5-propylphenyl)ethanone

m.p. 156–157° [4629].

 $C_{11}H_{13}ClO_3$ mol.wt. 228.68**Synthesis**

- Preparation by reaction of chloroacetonitrile with 4-propyl-resorcinol (Hoesch reaction) [4629].

2-Chloro-1-(2-hydroxy-4-methoxy-3,5-dimethylphenyl)ethanone

m.p. 158–160° [4632].

 $C_{11}H_{13}ClO_3$ mol.wt. 228.68**Synthesis**

- Preparation by reaction of chloroacetyl chloride on 2,4-dimethylresorcinol dimethyl ether with aluminium chloride in refluxing carbon disulfide (42%) [4632].

2-Chloro-1-(6-hydroxy-2,3,4-trimethoxyphenyl)ethanone

m.p. 107–107°5 [4658].

 $C_{11}H_{13}ClO_5$ mol.wt. 260.67**Synthesis**

- Preparation by reaction of chloroacetonitrile on 3,4,5-trimethoxyphenol (antiarol) (Hoesch reaction) (42%) [4658].

2-Chloro-1-[3-(1,1-dimethylethyl)-2-hydroxyphenyl]ethanone

[127354-33-0]

m.p. 52–53° [4564]; 1H NMR [4564], IR [4564], MS [4564]. $C_{12}H_{15}ClO_2$ mol.wt. 226.70**Synthesis**

- Preparation by reaction of chloroacetyl chloride with aluminium or titanium 2-tert-butylphenolate in toluene at r.t. (98% and 70% yields, respectively) [4564].

2-Chloro-1-[3-(1,1-dimethylethyl)-4-hydroxyphenyl]ethanone

[127354-34-1]

 $C_{12}H_{15}ClO_2$ mol.wt. 226.70**Synthesis**

- Obtained by reaction of chloroacetyl chloride with dichloroaluminium 2-tert-butylphenolate or with trichloro (2-tert-butylphenoxy)titanium in toluene at r.t. (50% and 52% yields, respectively) [4564].

2-Chloro-1-[5-(1,1-dimethylethyl)-2-hydroxyphenyl]ethanone

[75060-43-4]

 $C_{12}H_{15}ClO_2$ mol.wt. 226.70**Synthesis**

- Obtained by reaction of chloroacetyl chloride on 4-tert-butylanisole with aluminium chloride in methylene chloride at r.t. (10%) [4661].

m.p. 51–52° [4661]; ¹H NMR [4661], IR [4661].**2-Chloro-1-[4-hydroxy-2-methyl-5-(1-methylethyl)phenyl]ethanone**

[72235-89-3]

 $C_{12}H_{15}ClO_2$ mol.wt. 226.70**Syntheses**

- Obtained by reaction of chloroacetyl chloride on thymol with aluminium chloride in nitrobenzene at 50° (21%) [4662].
- Also obtained by Fries rearrangement of thymyl chloroacetate with aluminium chloride in nitrobenzene at r.t. (15%) [4408].

m.p. 133° [4662], 132° [4408]; b.p._{0.0018} 175–178° [4662].**2-Chloro-1-[6-hydroxy-2-methyl-3-(1-methylethyl)phenyl]ethanone**

[23053-74-9]

 $C_{12}H_{15}ClO_2$ mol.wt. 226.70**Synthesis**

- Obtained by reaction of chloroacetyl chloride on 3-methyl-4-isopropylanisole (p-thymol methyl ether) with aluminium chloride in carbon disulfide [4663].

m.p. 68°5 [4663].

1-(5-Butyl-2,4-dihydroxyphenyl)-2-chloroethanone

$C_{12}H_{15}ClO_3$ mol.wt. 242.70

Synthesis

– Preparation by reaction of chloroacetonitrile with 4-butyl-resorcinol (Hoesch reaction) [4629].

m.p. 155–156° [4629].

2-Chloro-1-(2,4-dihydroxy-5-pentylphenyl)ethanone

$C_{13}H_{17}ClO_3$ mol.wt. 256.73

Synthesis

– Preparation by reaction of chloroacetonitrile with 4-pentyl-resorcinol (Hoesch reaction) [4629].

m.p. 148–149° [4629].

1-[3-(Aminomethyl)-5-(1,1-dimethylethyl)-2-hydroxyphenyl]-2-chloroethanone

[75060-96-7]

$C_{13}H_{18}ClNO_2$ mol.wt. 255.74

**Synthesis**

– From the corresponding hydrochloride (see below) [4661].

1-[3-(Aminomethyl)-5-(1,1-dimethylethyl)-2-hydroxyphenyl]-2-chloroethanone (Hydrochloride)

[75060-68-3]

$C_{13}H_{18}ClNO_2 \cdot HCl$ mol.wt. 292.20

**Synthesis**

– Preparation by reaction of concentrated hydrochloric acid on 2-chloroacetyl-4-tert-butyl-6-(N-chloro-acetylaminoethyl)phenol in refluxing ethanol (64%) [4661].

m.p. 160° (d) [4661]; 1H NMR [4661], IR [4661].

2-Chloro-1-[2-hydroxy-5-(1-triazene-3-phenyl)phenyl]ethanone

m.p. 127° [4555].

 $C_{14}H_{12}ClN_3O_2$ mol.wt. 289.72**Synthesis**

- Obtained by reaction of benzenediazonium chloride on 5-amino-2-hydroxy- α -chloroacetophenone in the presence of an aqueous sodium acetate solution [4555].

2-Chloro-1-(5-hexyl-2,4-dihydroxyphenyl)ethanone

m.p. 145° [4629].

 $C_{14}H_{19}ClO_3$ mol.wt. 270.76**Synthesis**

- Preparation by reaction of chloroacetonitrile with 4-hexyl-resorcinol (Hoesch reaction) [4629].

2-Chloro-1-(5'-ethyl-4-hydroxy-2'-methoxy[1,1'-biphenyl]-3-yl)ethanone

[131845-71-1]

 $C_{17}H_{17}ClO_3$ mol.wt. 304.77**Synthesis**

- Refer to: [4664].

11.2.2 From Dichloroacetic Acid**2,2-Dichloro-1-(4-hydroxy-3,5-dinitrophenyl)ethanone**

[52129-63-2]

 $C_8H_4Cl_2N_2O_6$ mol.wt. 295.04**Synthesis**

- Preparation by reaction of chlorine on 4-hydroxy-3,5-dinitroacetophenone in methylene chloride-ethanol mixture (93%) [4665,4666].

2,2-Dichloro-1-(3-chloro-4-hydroxy-5-nitrophenyl)ethanone

[52501-35-6]

 $C_8H_4Cl_3NO_4$ mol.wt. 284.48

Synthesis

- Preparation by reaction of chlorine on 4-hydroxy-3-nitroacetophenone with ferric chloride in methylene chloride-ethanol mixture (94%) [4665,4666].

2,2-Dichloro-1-(3,5-dichloro-2-hydroxyphenyl)ethanone $C_8H_4Cl_4O_2$ mol.wt. 273.93

Syntheses

- Preparation by Fries rearrangement of 2,4-dichlorophenyl dichloroacetate with aluminium chloride without solvent at 120° (50%) [4667].
- Also obtained when 4-hydroxycoumarin in acetic acid was treated with an excess of gaseous chlorine at 10–15° and the polychlorinated product so formed hydrolyzed [4668,4669].

m.p. 90° [4667], 70° [4668,4669].

2,2-Dichloro-1-(3,5-dichloro-4-hydroxyphenyl)ethanone $C_8H_4Cl_4O_2$ mol.wt. 273.93

Synthesis

- Obtained (by-product) by Fries rearrangement of 2,6-di-chlorophenyl dichloroacetate with aluminium chloride without solvent at 135° (9%) [4541].

m.p. 92°5–94°5 [4541].

2,2-Dichloro-1-(3-chloro-2-hydroxyphenyl)ethanone $C_8H_5Cl_3O_2$ mol.wt. 239.48

Synthesis

- Preparation by Fries rearrangement of 2-chlorophenyl dichloroacetate with aluminium chloride without solvent at 120° (76%) [4667].

b.p.₈ 173° [4667].**2,2-Dichloro-1-(2-hydroxyphenyl)ethanone**

[29003-58-5]

 $C_8H_6Cl_2O_2$ mol.wt. 205.04

Synthesis

- Preparation by Fries rearrangement of phenyl dichloroacetate with aluminium chloride without solvent at 120° (50%) [4670].

b.p._{0,1} 65–72° [4670].

2,2-Dichloro-1-(3-hydroxyphenyl)ethanone

[85299-04-3]

 $C_8H_6Cl_2O_2$ mol.wt. 205.04

Synthesis

- Preparation by reaction of hexachloro-2,4-cyclohexadienone on 3-hydroxyacetophenone in refluxing ethanol (34%) [4559].

pale yellow oil [4559]; 1H NMR [4559], IR [4559].**2,2-Dichloro-1-(4-hydroxyphenyl)ethanone** $C_8H_6Cl_2O_2$ mol.wt. 205.04

Synthesis

- Preparation by reaction of dichloroacetyl chloride on anisole with aluminium chloride in carbon disulfide at 25–30° (34%) [4671].

m.p. 98° [4671].

2,2-Dichloro-1-(2,4-dihydroxyphenyl)ethanone

[29003-59-6]

 $C_8H_6Cl_2O_3$ mol.wt. 221.04

Synthesis

- Refer to: [4672].

2,2-Dichloro-1-(2-hydroxy-3-methylphenyl)ethanone

[145818-23-1]

 $C_9H_8Cl_2O_2$ mol.wt. 219.07

Synthesis

- Preparation by reaction of dichloroacetonitrile on o-cresol (Hoesch reaction) (25%) [4619].

m.p. 33.5° [4619]; 1H NMR [4619], IR [4619], UV [4619], MS [4619].**2,2-Dichloro-1-(2-hydroxy-4-methylphenyl)ethanone**

[116046-02-7]

 $C_9H_8Cl_2O_2$ mol.wt. 219.07

Synthesis

- Preparation by reaction of dichloroacetyl chloride with 3-methylanisole in the presence of aluminium chloride at 80° (30%) [4673].

m.p. 125–126° [4673]; 1H NMR [4673], IR [4673], MS [4673].

2,2-Dichloro-1-(2-hydroxy-4-methoxyphenyl)ethanone

[95235-25-9]

 $C_9H_8Cl_2O_3$ mol.wt. 235.07

Syntheses

- Preparation by Fries rearrangement of 3-methoxyphenyl dichloroacetate with aluminium chloride without solvent at 120° (42%) [4667].
 - Also obtained (by-product) by reaction of dichloroacetyl chloride with resorcinol dimethyl ether in the presence of aluminium chloride at 0–10° (9%) [4673].
- m.p. 86° [4673], 84° [4667].

2,2-Dichloro-1-(5-ethyl-2-hydroxyphenyl)ethanone $C_{10}H_{10}Cl_2O_2$ mol.wt. 233.09

Synthesis

- Preparation by Fries rearrangement of 4-ethylphenyl dichloroacetate with aluminium chloride without solvent at 120° (53%) [4667].
- b.p.₈ 110° [4667].

2,2-Dichloro-1-(2-hydroxy-4,6-dimethylphenyl)ethanone $C_{10}H_{10}Cl_2O_2$ mol.wt. 233.09

Synthesis

b.p.₄ 150° [4667].

- Preparation by Fries rearrangement of 3,5-dimethylphenyl dichloroacetate with aluminium chloride without solvent at 120° (58%) [4667].

2,2-Dichloro-1-(2,4-dihydroxy-3,5-dimethylphenyl)ethanone $C_{10}H_{10}Cl_2O_3$ mol.wt. 249.09

Synthesis

- Preparation by reaction of dichloroacetonitrile on 2,4-di-methylresorcinol (Hoesch reaction) [4632].
- m.p. 123° [4632]; b.p._{0.001} 150° [4632].

2,2-Dichloro-1-[3-chloro-5-(1,1-dimethylethyl)-2-hydroxyphenyl]ethanone $C_{12}H_{13}Cl_3O_2$ mol.wt. 295.59

Synthesis

- Preparation by Fries rearrangement of 4-tert-butyl-2-chlorophenyl dichloroacetate with aluminium chloride at 120° (79%) [4667].
- b.p.₂₀ 175° [4667].

2,2-Dichloro-1-[3-(1,1-dimethylethyl)-2-hydroxyphenyl]ethanone

[127354-38-5]

 $C_{12}H_{14}Cl_2O_2$

mol.wt. 261.15

Synthesis

– Preparation by reaction of dichloroacetyl chloride on bromomagnesium 2-tert-butylphenolate in toluene at r.t. (58%) [4564]. yellow oil [4564];

1H NMR [4564], IR [4564], MS [4564].

2,2-Dichloro-1-[5-(1,1-dimethylethyl)-2-hydroxyphenyl]ethanone $C_{12}H_{14}Cl_2O_2$

mol.wt. 261.15

Synthesis

– Preparation by Fries rearrangement of 4-tert-butylphenyl dichloroacetate with aluminium chloride at 120° (86%) [4667].

b.p.₁₀ 120° [4667].

2,2-Dichloro-1-[4-hydroxy-2-methyl-5-(1-methylethyl)phenyl]ethanone

[72235-91-7]

 $C_{12}H_{14}Cl_2O_2$

mol.wt. 261.15

Synthesis

– Preparation by reaction of dichloroacetyl chloride on thymol with aluminium chloride in nitrobenzene at r.t., via a Fries rearrangement (20%) [4408].

m.p. 110° [4408].

2,2-Dichloro-1-[3-(1,1-dimethylethyl)-2-hydroxy-5-methylphenyl]ethanone

[127354-45-4]

 $C_{13}H_{16}Cl_2O_2$

mol.wt. 275.17

Syntheses

– Preparation by reaction of dichloroacetyl chloride,

- on aluminium tri 2-tert-butyl-4-methylphenolate in toluene at r.t. (98%) [4564];
- on bromomagnesium 2-tert-butyl-4-methylphenolate in toluene at r.t. (78%) [4564].

m.p. 55–59° [4564]; 1H NMR [4564], IR [4564], MS [4564].

2,2-Dichloro-1-[3-(1,1-dimethylethyl)-2-hydroxy-6-methylphenyl]ethanone $C_{13}H_{16}Cl_2O_2$

mol.wt. 275.17

Synthesis

– Preparation by Fries rearrangement of 2-tert-butyl-5-methyl-phenyl dichloroacetate without solvent at 120° (60%) [4667].

b.p.₆ 88° [4667].

2,2-Dichloro-1-[5-(1,1-dimethylpropyl)-2-hydroxyphenyl]ethanone
 $C_{13}H_{16}Cl_2O_2$ mol.wt. 275.17
Synthesis

– Preparation by Fries rearrangement of 4-tert-pentylphenyl dichloroacetate with aluminium chloride without solvent at 120° (54%) [4667].

b.p.₂ 122° [4667].

2,2-Dichloro-1-[2-hydroxy-5-(1-methylbutyl)phenyl]ethanone
 $C_{13}H_{16}Cl_2O_2$ mol.wt. 275.17
Synthesis

– Preparation by Fries rearrangement of 5-sec-pentylphenyl dichloroacetate with aluminium chloride without solvent at 120° (43%) [4667].

b.p.₁₀ 125° [4667].

11.2.3 From Trichloroacetic Acid**2,2,2-Trichloro-1-(5-chloro-2-hydroxyphenyl)ethanone**

[145818-26-4]

 $C_8H_4Cl_4O_2$ mol.wt. 273.93
Syntheses

– Preparation by Fries rearrangement of 4-chlorophenyl trichloroacetate with aluminium chloride without solvent at 125–130° (25%) [4674,4675].

– Preparation by reaction of trichloroacetonitrile on 4-chlorophenol (Hoesch reaction) [4619].

b.p.₄₄ 129–132° [4619,4674,4675]; ¹H NMR [4619], IR [4619], UV [4619], MS [4619].

2,2,2-Trichloro-1-(2-hydroxyphenyl)ethanone

[75717-55-4]

 $C_8H_5Cl_3O_2$ mol.wt. 239.48
Syntheses

– Preparation by reaction of trichloroacetonitrile on phenol with aluminium chloride and boron trichloride mixture in refluxing methylene chloride (92%) [4549,4550].

– Preparation by reaction of trichloroacetonitrile on phenol (Hoesch reaction) (64%) [4619].

m.p. 53–54° [4619]; ¹H NMR [4550,4619], IR [4619], UV [4619], MS [4619].

2,2,2-Trichloro-1-(4-hydroxyphenyl)ethanone[131170-16-6] $C_8H_5Cl_3O_2$ mol.wt. 239.48

Synthesis

– Preparation by reaction of trichloroacetonitrile on phenol (Hoesch reaction) (95%) [4665,4666,4676,4677], (30%) [4619].

m.p. 99–99°5 [4619,4676,4677]; b.p._{0.5} 170° [4676,4677];

¹H NMR [4619], IR [4619], UV [4619], MS [4619].

2,2,2-Trichloro-1-(2,4-dihydroxyphenyl)ethanone[76569-42-1] $C_8H_5Cl_3O_3$ mol.wt. 255.48

Synthesis

– Preparation by reaction of trichloroacetonitrile with resorcinol in the presence of triflic acid (52%) [4592] or zinc chloride (55%) [4678].

m.p. 142°5 [4678], 138–141° [4592];

¹H NMR [4592], IR [4592], UV [4592], MS [4592].

2,2,2-Trichloro-1-(2,5-dihydroxyphenyl)ethanone[145818-27-5] $C_8H_5Cl_3O_3$ mol.wt. 255.48

Synthesis

– Preparation by reaction of trichloroacetonitrile on hydroquinone (Hoesch reaction) (40%) [4619].

m.p. 123–124° [4619];

¹H NMR [4619], IR [4619], UV [4619], MS [4619].

2,2,2-Trichloro-1-(2-hydroxy-3-methylphenyl)ethanone[145818-22-0] $C_9H_7Cl_3O_2$ mol.wt. 253.51

Synthesis

– Preparation by reaction of trichloroacetonitrile on o-cresol (Hoesch reaction) (70%) [4619].

oil [4619]; ¹H NMR [4619], IR [4619], UV [4619], MS [4619].

2,2,2-Trichloro-1-(2-hydroxy-4-methylphenyl)ethanone $C_9H_7Cl_3O_2$ mol.wt. 253.51

Synthesis

– Preparation by reaction of trichloroacetonitrile on m-cresol with aluminium chloride and gaseous hydrochloric acid in chlorobenzene at r.t. (37%) [4677].

b.p.₁₇ 162–163° [4677].

2,2,2-Trichloro-1-(2-hydroxy-5-methylphenyl)ethanone $C_9H_7Cl_3O_2$ mol.wt. 253.51

Synthesis

– Obtained by reaction of trichloroacetonitrile on p-cresol with aluminium chloride and gaseous hydrochloric acid in chlorobenzene at 50–60° (11%) [4677].

2,2,2-Trichloro-1-(4-hydroxy-2-methylphenyl)ethanone $C_9H_7Cl_3O_2$ mol.wt. 253.51

Synthesis

– Preparation by reaction of trichloroacetonitrile on m-cresol with aluminium chloride and gaseous hydrochloric acid in chlorobenzene at r.t. (36%) [4677].

m.p. 84–87° [4677].

2,2,2-Trichloro-1-(4-hydroxy-3-methylphenyl)ethanone $C_9H_7Cl_3O_2$ mol.wt. 253.51

Synthesis

– Preparation by reaction of trichloroacetonitrile on o-cresol with aluminium chloride and gaseous hydrochloric acid in chlorobenzene at 60° (90%) [4677].

m.p. 90–91° [4677].

2,2,2-Trichloro-1-(2-hydroxy-5-methoxyphenyl)ethanone

[145818-25-3]

 $C_9H_7Cl_3O_3$ mol.wt. 269.51

Synthesis

– Preparation by reaction of trichloroacetonitrile on 4-methoxyphenol (Hoesch reaction) (73%) [4619].

m.p. 65–66° [4619];

¹H NMR [4619], IR [4619], UV [4619], MS [4619].

2,2,2-Trichloro-1-(4-hydroxy-2-methoxyphenyl)ethanone

m.p. 144° [4679].

$C_9H_7Cl_3O_3$ mol.wt. 269.51

Synthesis

- Preparation by reaction of trichloroacetonitrile on 3-methoxyphenol with zinc chloride and gaseous hydrochloric acid in ethyl ether at 0° (Hoesch reaction) (34%) [4679].

2,2,2-Trichloro-1-(2,4-dihydroxy-6-methoxyphenyl)ethanone

m.p. 152° [4679].

$C_9H_7Cl_3O_4$ mol.wt. 285.51

Synthesis

- Preparation by reaction of trichloroacetonitrile on phloroglucinol monomethyl ether with zinc chloride and gaseous hydrochloric acid in ethyl ether at 0° (Hoesch reaction) (39–49%) [4679].

2,2,2-Trichloro-1-(4-hydroxy-2,5-dimethylphenyl)ethanone

m.p. 85–86° [4676].

$C_{10}H_9Cl_3O_2$ mol.wt. 267.54

Synthesis

- Preparation by reaction of trichloroacetonitrile on 2,5-dimethylphenol with aluminium chloride and gaseous hydrochloric acid in chlorobenzene at r.t. (70%) [4676].

2,2,2-Trichloro-1-(5-ethyl-2,4-dihydroxyphenyl)ethanone

m.p. 138° [4678].

$C_{10}H_9Cl_3O_3$ mol.wt. 283.54

Synthesis

- Preparation by reaction of trichloroacetonitrile on 4-ethylresorcinol (Hoesch reaction) (52%) [4678].

2,2,2-Trichloro-1-(2-hydroxy-4,5-dimethoxyphenyl)ethanone

m.p. 107° [4679].

C₁₀H₉Cl₃O₄ mol.wt. 299.54**Synthesis**

– Preparation by reaction of trichloroacetonitrile on 3,4-di-methoxyphenol (Hoesch reaction) (26%) [4679].

2,2,2-Trichloro-1-(4-hydroxy-2,6-dimethoxyphenyl)ethanone

m.p. 117° [4680].

C₁₀H₉Cl₃O₄ mol.wt. 299.54**Synthesis**

– Preparation by reaction of trichloroacetonitrile on phloroglucinol dimethyl ether (Hoesch reaction) (38%) [4680].

2,2,2-Trichloro-1-[3-(1,1-dimethylethyl)-2-hydroxyphenyl]ethanone

[111422-36-7]

m.p. 54–58° [4564]; ¹H NMR [4564], IR [4564], MS [4564].C₁₂H₁₃Cl₃O₂ mol.wt. 295.59**Synthesis**

– Preparation by reaction of trichloroacetyl chloride on bromomagnesium 2-tert-butylphenolate in toluene at r.t. (65%) [4564].

2,2,2-Trichloro-1-[4-(1,1-dimethylethyl)-2-hydroxyphenyl]ethanone

[145818-24-2]

m.p. 46–47°5 [4619]; ¹H NMR [4619], IR [4619], UV [4619], MS [4619].C₁₂H₁₃Cl₃O₂ mol.wt. 295.59**Synthesis**

– Preparation by reaction of trichloroacetonitrile on 3-tert-butylphenol (Hoesch reaction) (74%) [4619].

2,2,2-Trichloro-1-[4-hydroxy-2-methyl-5-(1-methylethyl)phenyl]ethanone

m.p. 99–100° [4681].

C₁₂H₁₃Cl₃O₂ mol.wt. 295.59**Synthesis**

– Preparation by reaction of trichloroacetonitrile on thymol (Hoesch reaction) (73%) [4681].

2,2,2-Trichloro-1-[4-hydroxy-5-methyl-2-(1-methylethyl)phenyl]ethanone
 $C_{12}H_{13}Cl_3O_2$ mol.wt. 295.59
Synthesis

- Preparation by reaction of trichloroacetonitrile on carvacrol (Hoesch reaction) (75%) [4681]. oil [4681].

1-(5-Butyl-2,4-dihydroxyphenyl)-2,2,2-trichloroethanone
 $C_{12}H_{13}Cl_3O_3$ mol.wt. 311.59
Synthesis

- Preparation by reaction of trichloroacetonitrile on 4-n-butylresorcinol (Hoesch reaction) (57%) [4678].

m.p. 95–98° [4678].

2,2,2-Trichloro-1-(5-hexyl-2,4-dihydroxyphenyl)ethanone
 $C_{14}H_{17}Cl_3O_3$ mol.wt. 339.65
Synthesis

- Preparation by reaction of trichloroacetonitrile on 4-n-hexylresorcinol (Hoesch reaction) (56%) [4678].

m.p. 71–73° [4678].

11.3 Compounds Derived from Fluoroacetic Acids**11.3.1 From Monofluoroacetic Acid****2-Fluoro-1-(2-hydroxyphenyl)ethanone**

[83505-27-5]

 $C_8H_7FO_2$ mol.wt. 154.14
**Synthesis**

- When refluxed with water, 3-fluoro-4-hydroxycoumarin, undergoes hydrolytic ring opening and decarboxylation to give 2-fluoro-2'-hydroxyacetophenone (32%) [4682].

 m.p. 67–69° [4682]; 1H NMR [4682], ^{19}F NMR [4682], IR [4682], MS [4682].

2-Fluoro-1-(4-hydroxyphenyl)ethanone[295779-85-0] C₈H₇FO₂ mol.wt. 154.14**Synthesis**

– Preparation by fluorination of p-hydroxyacetophenone (2 mmol) with 1-fluoro-4-hydroxy-1,4-diazoniabicyclo-[2.2.2]octane bis(tetrafluoroborate)(Accufluor™ NFTh) (2.1 mmol of active compound) in refluxing methanol for 0.5–4 h until potassium iodide starch paper showed the consumption of the fluorinating reagent. Then, hydrolysis of the dimethylketal formed with 10% hydrochloric acid solution in acetonitrile (75–85%) [4683].

N.B.: Accufluor™ NFTh is commercially available as 50% w/w on alumina.

m.p. 180–183°5 [4684];

¹H NMR [4684], ¹³C NMR [4684], ¹⁹F NMR [4684], IR [4684], MS [4684].

1-(2,4-Dihydroxyphenyl)-2-fluoroethanone[147220-82-4] C₈H₇FO₃ mol.wt. 170.14**Synthesis**

– Refer to: [4685] (compound Io).

2-Fluoro-1-(3-hydroxy-4-methoxyphenyl)ethanone[85465-61-8] C₉H₉FO₃ mol.wt. 184.17**Synthesis**

– Preparation by heating a mixture of 3-acetoxy-4-methoxy- α -bromoacetophenone and potassium hydrogen fluoride in diethylene glycol for 8 h at 100° (61%) [4686,4687].

m.p. 70–71° [4686,4687].

11.3.2 From Difluoroacetic Acid

There is no hydroxyketone derived from difluoroacetic acid such as described up to December 2003. Only, a methyl ether, the α,α -difluoro-4-methoxyacetophenone [4688] (compound 1G), is mentioned in 1988.

2,2-Difluoro-1-(4-methoxyphenyl)ethanone

[114829-07-1]

 $C_9H_8F_2O_2$ mol.wt. 186.16

Synthesis

– Preparation by reaction of difluoroacetyl chloride with anisole in the presence of aluminium chloride in methylene chloride, first at 4°, then at 20° (56%) [4688].

m.p. 39–40° [4688]; b.p.₂₅ 134–135° [4688];
¹H NMR [4688].

11.3.3 From Trifluoroacetic Acid**1-(3,5-Dibromo-2,4-dihydroxyphenyl)-2,2,2-trifluoroethanone**

[65240-11-1]

 $C_8H_3Br_2F_3O_3$ mol.wt. 363.91

Synthesis

– Preparation by reaction of bromine on 2,4-dihydroxy- α,α,α -trifluoroacetophenone in acetic acid at r.t. (49%) [4689].

m.p. 81° [4689].

1-(3,5-Dichloro-2,4-dihydroxyphenyl)-2,2,2-trifluoroethanone

[65240-09-7]

 $C_8H_3Cl_2F_3O_3$ mol.wt. 275.01

Synthesis

– Preparation by reaction of sulfuryl chloride on 2,4-dihydroxy- α,α,α -trifluoroacetophenone at r.t. [4689].

m.p. 101° [4689].

1-(2,4-Dihydroxy-3,5-dinitrophenyl)-2,2,2-trifluoroethanone

[65240-17-7]

 $C_8H_3F_3N_2O_7$ mol.wt. 296.12

Synthesis

– Preparation by reaction of 65% nitric acid on 2,4-dihydroxy- α,α,α -trifluoroacetophenone in concentrated sulfuric acid [4689].

m.p. 68° [4689].

1-(3-Bromo-4-hydroxyphenyl)-2,2,2-trifluoroethanone

[303143-05-7]

 $C_8H_4BrF_3O_2$ mol.wt. 269.02

Synthesis

- Obtained by demethylation of 3-bromo-4-methoxy- α,α,α -trifluoroacetophenone with lithium chloride in refluxing DMF for 2 h (93%) [4690].

1-(5-Bromo-2,4-dihydroxyphenyl)-2,2,2-trifluoroethanone

[65239-86-3]

 $C_8H_4BrF_3O_3$ mol.wt. 285.02

Synthesis

- Preparation by reaction of trifluoroacetic anhydride on 4-bromoresorcinol with aluminium chloride in ethylene dichloride at r.t. (88%) [4689].

m.p. 81° [4689].

1-(3-Chloro-2,4-dihydroxyphenyl)-2,2,2-trifluoroethanone

[65239-93-2]

 $C_8H_4ClF_3O_3$ mol.wt. 240.57

Synthesis

- Preparation by reaction of trifluoroacetic anhydride on 2-chlororesorcinol with aluminium chloride in ethylene dichloride at r.t. (83%) [4689].

m.p. 113° [4689].

1-(5-Chloro-2,4-dihydroxyphenyl)-2,2,2-trifluoroethanone

[65233-63-8]

 $C_8H_4ClF_3O_3$ mol.wt. 240.57

Synthesis

- Preparation by reaction of trifluoroacetic anhydride on 4-chlororesorcinol with aluminium chloride in ethylene dichloride at r.t. (90%) [4689].

m.p. 110° [4689].

2,2,2-Trifluoro-1-(4-hydroxy-3-iodophenyl)ethanone

[303143-06-8]

 $C_8H_4F_3IO_2$ mol.wt. 316.02

Synthesis

- Obtained by demethylation of 3-iodo-4-methoxy- α,α,α -tri-fluoroacetophenone with lithium chloride in refluxing DMF for 2 h (87%) [4690].

1-(2,4-Dihydroxy-5-nitrophenyl)-2,2,2-trifluoroethanone[65240-16-6] $C_8H_4F_3NO_5$ mol.wt. 251.12

Synthesis

– Preparation by reaction of 26% nitric acid on 2,4-dihydroxy- α,α,α -trifluoroacetophenone in acetic acid at 0° [4689].

m.p. 81° [4689].

2,2,2-Trifluoro-1-(2-hydroxyphenyl)ethanone[25666-51-7] $C_8H_5F_3O_2$ mol.wt. 190.12

Synthesis

– Preparation by Fries rearrangement of phenyl trifluoroacetate with aluminium chloride without solvent at 90° (42%) [4691].

b.p.₅₅ 92° [4691]; 1H NMR [4691], IR [4691].**2,2,2-Trifluoro-1-(4-hydroxyphenyl)ethanone**[1823-63-8] $C_8H_5F_3O_2$ mol.wt. 190.12

Syntheses

– Preparation by reaction of trifluoroacetic acid with phenol in hydrofluoric acid at 100° (75%) [4692].
 – Obtained in small amount by Fries rearrangement of phenyl trifluoroacetate with aluminium chloride without solvent at 90° [4691].

m.p. 105°5–106° [4691]; 1H NMR [4692], ^{19}F NMR [4692], IR [4691,4692].**1-(2,4-Dihydroxyphenyl)-2,2,2-trifluoroethanone**[315-44-6] $C_8H_5F_3O_3$ mol.wt. 206.12

Syntheses

– Preparation by reaction of trifluoroacetonitrile on resorcinol (Hoesch reaction) (62%) [4679,4693,4694].
 – Preparation by reaction of trifluoroacetic anhydride on resorcinol with aluminium chloride in ethylene dichloride at r.t. (73–83%) [4695].

m.p. 106–108° [4695], 103° [4679,4693].

1-(2,6-Dihydroxyphenyl)-2,2,2-trifluoroethanone[70211-42-6] $C_8H_5F_3O_3$ mol.wt. 206.12

Syntheses

- Obtained by total demethylation of 2,6-dimethoxy- α,α,α -trifluoroacetophenone with boron tribromide in methylene chloride, first at 0° for 15 min, then at r.t. overnight (22%) [4696].
- Also refer to: [4697].

N.B.: There is also an erroneous reference. It concerns the 2',6'-dihydroxytrifluoroacetanilide [4698].

1H NMR [4696], MS [4696].

2,2,2-Trifluoro-1-(2,3,4-trihydroxyphenyl)ethanone[65239-87-4] $C_8H_5F_3O_4$ mol.wt. 222.12

Synthesis

- Preparation by reaction of trifluoroacetic anhydride on pyrogallol with aluminium chloride in ethylene dichloride at r.t. (75%) [4689].

m.p. 134° [4689].

2,2,2-Trifluoro-1-(2,4,6-trihydroxyphenyl)ethanone[13340-79-9] $C_8H_5F_3O_4$ mol.wt. 222.12

Synthesis

- Preparation by reaction of trifluoroacetic anhydride on phloroglucinol with aluminium chloride in ethylene dichloride at r.t. (40%) [4695].

m.p. 174–177° [4695]; 1H NMR [4695], ^{19}F NMR [4695], IR [4695].

1-(5-Chloro-2,4-dihydroxy-3-methylphenyl)-2,2,2-trifluoroethanone[65240-08-6] $C_9H_6ClF_3O_3$ mol.wt. 254.59

Synthesis

- Preparation by reaction of sulfonyl chloride on 2,4-dihydroxy-3-methyl- α,α,α -trifluoroacetophenone in ethylene dichloride at r.t. (76%) [4689].

m.p. 96° [4689].

2,2,2-Trifluoro-1-(2-hydroxy-5-methyl-3-nitrophenyl)ethanone[70978-48-2] $C_9H_6F_3NO_4$ mol.wt. 249.15

Synthesis

– Preparation by reaction of fuming nitric acid ($d = 1.5$) on 2-hydroxy-5-methyl- α,α,α -trifluoroacetophenone in acetic acid-methylene chloride mixture at r.t. [4699,4700], (44%) [4699].

m.p. 94–96° [4699], 49–50° [4700]. One of the reported melting points is obviously wrong.

1-(2,4-Dihydroxy-3-methyl-5-nitrophenyl)-2,2,2-trifluoroethanone[65240-15-5] $C_9H_6F_3NO_5$ mol.wt. 265.15

Synthesis

– Obtained by reaction of 26% nitric acid on 2,4-dihydroxy-3-methyl- α,α,α -trifluoroacetophenone in acetic acid at 0° (21%) [4689].

m.p. 104° [4689].

2,2,2-Trifluoro-1-(2-hydroxy-5-methylphenyl)ethanone[70978-57-3] $C_9H_7F_3O_2$ mol.wt. 204.15

Synthesis

– Preparation by Fries rearrangement of 4-methylphenyl trifluoroacetate with aluminium chloride without solvent at 115° (25%) [4700].

m.p. 40°5–42° [4700].

1-(2,4-Dihydroxy-3-methylphenyl)-2,2,2-trifluoroethanone[65233-60-5] $C_9H_7F_3O_3$ mol.wt. 220.15

Syntheses

- Preparation by reaction of trifluoroacetic anhydride on 2-methylresorcinol with aluminium chloride in ethylene dichloride at r.t. (90%) [4689].
- Preparation by Fries rearrangement of 2-methylresorcinol monotrifluoroacetate with aluminium chloride in nitrobenzene or without solvent at 120° [4689].

m.p. 101° [4689].

2,2,2-Trifluoro-1-(2-hydroxy-4-methoxyphenyl)ethanone[123716-19-8] $C_9H_7F_3O_3$ mol.wt. 220.15

Synthesis

– Obtained by refluxing α -(difluoronitromethyl)-2-hydroxy-4-methoxy- α -(trifluoromethyl)benzenemethanol (SM) in hexane for 6 h in the presence of activated charcoal (91%). SM was prepared by reaction of NPFA with resorcinol monomethyl ether in carbon tetrachloride or nitromethane for 12 h at 20° (99%, m.p. 67–69°) [4701].

m.p. 62–64° [4701];

 1H NMR [4701], ^{13}C NMR [4701], ^{19}F NMR [4701]; TLC [4701].**2,2,2-Trifluoro-1-(2-hydroxy-6-methoxyphenyl)ethanone**[193738-66-8] $C_9H_7F_3O_3$ mol.wt. 220.15

Synthesis

– Obtained by partial demethylation of 2,6-dimethoxy- α,α,α -trifluoroacetophenone with boron tribromide in methylene chloride, first at 0° for 15 min, then at r.t. overnight (17%) [4696].

yellow oil [4696]; 1H NMR [4696], MS [4696].**2,2,2-Trifluoro-1-(4-hydroxy-3-methoxyphenyl)ethanone**[188194-66-3] $C_9H_7F_3O_3$ mol.wt. 220.15

Synthesis

– This compound (**6**) [4702] was synthesized according to Dudley [4703].

1-[2,4-Dihydroxy-5-(methylthio)phenyl]-2,2,2-trifluoroethanone[65239-90-9] $C_9H_7F_3O_3S$ mol.wt. 252.21

Synthesis

– Preparation by reaction of trifluoroacetic anhydride on 4-methylthioresorcinol with aluminium chloride in ethylene dichloride at r.t. (68%) [4689].

m.p. 57° [4689].

1-(2,4-Dihydroxy-3-methoxyphenyl)-2,2,2-trifluoroethanone

[65239-88-5]

 $C_9H_7F_3O_4$ mol.wt. 236.15

Synthesis

– Preparation by reaction of trifluoroacetic anhydride on 2-methoxyresorcinol with aluminium chloride in ethylene dichloride at r.t. (78%) [4689].

m.p. 79° [4689].

1-(2,4-Dihydroxy-6-methoxyphenyl)-2,2,2-trifluoroethanone $C_9H_7F_3O_4$ mol.wt. 236.15

Synthesis

– Preparation by reaction of trifluoroacetonitrile on phloroglucinol monomethyl ether with zinc chloride and gaseous hydrochloric acid in ethyl ether at 0° (Hoesch reaction) (33%) [4679].

m.p. 154° [4679].

1-(3-Amino-2-hydroxy-5-methylphenyl)-2,2,2-trifluoroethanone

[70977-83-2]

 $C_9H_8F_3NO_2$ mol.wt. 219.16

Synthesis

– Preparation by catalytic hydrogenation of 2-hydroxy-5-methyl-3-nitro- α,α,α -trifluoroacetophenone in the presence of 5% Pt/C in ethanol at 25° [4699,4700], (57%) [4699].

m.p. 87–88° [4699,4700].

1-[2-(Acetyloxy)-5-chloro-4-hydroxyphenyl]-2,2,2-trifluoroethanone

or

1-[4-(Acetyloxy)-5-chloro-2-hydroxyphenyl]-2,2,2-trifluoroethanone

[65233-64-9]

 $C_{10}H_6ClF_3O_4$
mol.wt. 282.60

or

(I)

(II)

Synthesis

– Preparation by reaction of acetylchloride on 5-chloro-2,4-dihydroxy- α,α,α -trifluoroacetophenone with pyridine in benzene at r.t. (72%) [4689].

m.p. 80–83° [4689].

N.B.: The 4-(Acetyloxy)-5-chloro-2-hydroxy- α,α,α -trifluoroacetophenone (**II**) is the most likely formula, for two reasons: On the one hand, there is a strong chelation between hydroxyl and keto groups in the raw material and, on the other hand, the esterification was carried out at r.t.

1-(3-Ethyl-2,4-dihydroxyphenyl)-2,2,2-trifluoroethanone

[577-54-8] $C_{10}H_9F_3O_3$ mol.wt. 234.17

Synthesis

– Preparation by reaction of trifluoroacetonitrile on 2-ethyl-resorcinol (Hoesch reaction) (74%) [4679].

m.p. 139° [4679].

1-(5-Ethyl-2,4-dihydroxyphenyl)-2,2,2-trifluoroethanone

[584-41-8] $C_{10}H_9F_3O_3$ mol.wt. 234.17

Synthesis

– Preparation by reaction of trifluoroacetonitrile on 4-ethyl-resorcinol (Hoesch reaction) (71%) [4679].

m.p. 99° [4679].

1-(2,6-Dihydroxy-4-methoxy-3-methylphenyl)-2,2,2-trifluoroethanone

$C_{10}H_9F_3O_4$ mol.wt. 250.17

Synthesis

– Preparation by reaction of trifluoroacetonitrile on 1,3-dihydroxy-5-methoxy-4-methylbenzene (Hoesch reaction) (22%) [4680].

m.p. 145° [4680].

1-(5-Ethyl-2,3,4-trihydroxyphenyl)-2,2,2-trifluoroethanone

[65239-92-1] $C_{10}H_9F_3O_4$ mol.wt. 250.17

Synthesis

– Preparation by reaction of trifluoroacetic anhydride on 4-ethylpyrogallol with aluminium chloride in ethylene dichloride at r.t. (80%) [4689].

m.p. 82° [4689].

2,2,2-Trifluoro-1-(2-hydroxy-4,5-dimethoxyphenyl)ethanone
 $C_{10}H_9F_3O_4$ mol.wt. 250.17

Synthesis

– Preparation by reaction of trifluoroacetonitrile on 3,4-di-methoxyphenol (Hoesch reaction) (62%) [4679].

m.p. 82° [4679].

2,2,2-Trifluoro-1-(2-hydroxy-4,6-dimethoxyphenyl)ethanone
 $C_{10}H_9F_3O_4$ mol.wt. 250.17

Synthesis

– Obtained (by-product) by reaction of trifluoroacetonitrile on phloroglucinol dimethyl ether (Hoesch reaction) (5%) [4680].

m.p. 87° [4680].

2,2,2-Trifluoro-1-(4-hydroxy-2,6-dimethoxyphenyl)ethanone
 $C_{10}H_9F_3O_4$ mol.wt. 250.17

Synthesis

– Preparation by reaction of trifluoroacetonitrile on phloroglucinol dimethyl ether (Hoesch reaction) (25%) [4680].

m.p. 155° [4680].

2,2,2-Trifluoro-1-(4-hydroxy-3,5-dimethoxyphenyl)ethanone

[188194-67-4]

 $C_{10}H_9F_3O_4$ mol.wt. 250.17

Synthesis

– This compound (7) [4702] was synthesized according to Dudley [4703].

1-[2-(Acetyloxy)-4-hydroxy-3-methylphenyl]-2,2,2-trifluoroethanone

or

1-[4-(Acetyloxy)-2-hydroxy-3-methylphenyl]-2,2,2-trifluoroethanone

[65233-62-7]

 $C_{11}H_9F_3O_4$

mol.wt. 262.19

(I)

(II)

Synthesis

– Preparation by reaction of acetyl chloride on 2,4-dihydroxy-3-methyl- α,α,α -trifluoroacetophenone with pyridine in benzene at r.t. (87%) [4689].

m.p. 49–50° [4689].

N.B.: The 1-[4-(Acetyloxy)-2-hydroxy-3-methylphenyl]-2,2,2-trifluoroethanone (II) is the most likely formula. This hypothesis is supported by the fact that, considering the precursor (2,4-dihydroxy-3-methyl- α,α,α -trifluoroacetophenone), the hydroxy group in the 4-position is less hindered than the hydroxyl substituent in the 2-position which is furthermore chelated with the vicinal carbonyl group. In addition, the reported melting point (49–50°) is in good agreement with those generally measured for o-hydroxyketones (below 80°) compared to those of p-hydroxy-ketones which are considerably higher (usually 120–200°).

1-[4-(3-Bromopropoxy)-2-hydroxyphenyl]-2,2,2-trifluoroethanone

[125617-37-0]

 $C_{11}H_{10}BrF_3O_3$

mol.wt.327.10

Synthesis

– Preparation by reaction of 1,3-dibromopropane with 2,4-dihydroxy- α,α,α -trifluoroacetophenone in the presence of potassium carbonate and potassium iodide in refluxing methyl ethyl ketone [4704].

pale yellow oil [4704]; IR [4704].

1-[2,4-Dihydroxy-3-(1-methylethyl)phenyl]-2,2,2-trifluoroethanone

[65239-70-5]

 $C_{11}H_{11}F_3O_3$

mol.wt. 248.20

Syntheses

– Preparation by reaction of trifluoroacetic anhydride on 2-isopropylresorcinol with aluminium chloride in ethylene dichloride at r.t. (85%) [4689].

- Preparation by reaction of isopropanol on 2,4-dihydroxy- α,α,α -trifluoroacetophenone with polyphosphoric acid at 80° (30%) [4689].
 - Preparation by reaction of propylene on 2,4-dihydroxy- α,α,α -trifluoroacetophenone with phosphorous oxychloride and phosphoric anhydride at 50° [4689].
 - Preparation by Fries rearrangement of 2-isopropylresorcinol trifluoroacetate with aluminium chloride without solvent or in nitrobenzene at 120° [4689].
- m.p. 145° [4689].

1-[2,4-Dihydroxy-5-(1-methylethyl)phenyl]-2,2,2-trifluoroethanone

[65239-68-1] $C_{11}H_{11}F_3O_3$ mol.wt. 248.20

Synthesis

- Preparation by reaction of trifluoroacetic anhydride on 4-isopropylresorcinol with aluminium chloride in chloroform at r.t. (70%) [4689].
- m.p. 97° [4689].

1-(2,4-Dihydroxy-3-propylphenyl)-2,2,2-trifluoroethanone

[65239-69-2] $C_{11}H_{11}F_3O_3$ mol.wt. 248.20

Syntheses

- Preparation by reaction of trifluoroacetic anhydride on 2-propylresorcinol with aluminium chloride in ethylene dichloride at r.t. (88%) [4689].
- Preparation by reaction of trifluoroacetonitrile on 2-propylresorcinol (Hoesch reaction) (66%) [4705].

m.p. 114° [4689], 110–112° [4705]; 1H NMR [4705].

1-(2,4-Dihydroxy-5-propylphenyl)-2,2,2-trifluoroethanone

[65239-67-0] $C_{11}H_{11}F_3O_3$ mol.wt. 248.20

Synthesis

- Preparation by reaction of trifluoroacetic anhydride on 4-propylresorcinol with aluminium chloride in ethylene dichloride at r.t. (87%) [4689].

m.p. 95° [4689].

2,2,2-Trifluoro-1-(2-hydroxy-4,6-dimethoxy-3-methylphenyl)ethanone

$C_{11}H_{11}F_3O_4$ mol.wt. 264.20

Synthesis

- Preparation by reaction of trifluoroacetonitrile on 3,5-dimethoxy-2-methylphenol (Hoesch reaction) (43%) [4680].

m.p. 100° [4680].

1-[3-(1,1-Dimethylethyl)-2-hydroxyphenyl]-2,2,2-trifluoroethanone

[111422-37-8]

 $C_{12}H_{13}F_3O_2$

mol.wt. 246.23

Synthesis

– Preparation by reaction of trifluoroacetyl chloride on bromomagnesium 2-tert-butylphenolate in toluene at r.t. (74%) [4564].

yellow oil [4564]; 1H NMR [4564], IR [4564], MS [4564].

1-[5-(1,1-Dimethylethyl)-2-hydroxyphenyl]-2,2,2-trifluoroethanone

[75060-56-9]

 $C_{12}H_{13}F_3O_2$

mol.wt. 246.23

Synthesis

– Preparation by demethylation of 5-tert-butyl-2-methoxy- α,α,α -trifluoroacetophenone with 47% hydrobromic acid and 57% hydriodic acid in refluxing acetic acid (70%) [4661].

1H NMR [4661], IR [4661], MS [4661].

1-(4-Butoxy-2-hydroxyphenyl)-2,2,2-trifluoroethanone

[65240-27-9]

 $C_{12}H_{13}F_3O_3$

mol.wt. 262.23

Synthesis

– Obtained by reaction of butyl iodide on 2,4-dihydroxy- α,α,α -trifluoroacetophenone with potassium carbonate in refluxing acetone (29%) [4689].

m.p. 66° [4689].

1-(5-Butyl-2,4-dihydroxyphenyl)-2,2,2-trifluoroethanone

[65239-71-6]

 $C_{12}H_{13}F_3O_3$

mol.wt. 262.23

Synthesis

– Preparation by reaction of trifluoroacetic anhydride on 4-butylresorcinol with aluminium chloride in ethylene dichloride at r.t. (82%) [4689].

m.p. 96° [4689].

1-[2,4-Dihydroxy-3-(2-methylpropyl)phenyl]-2,2,2-trifluoroethanone

[65239-73-8]

 $C_{12}H_{13}F_3O_3$

mol.wt. 262.23

Syntheses

– Preparation by reaction of trifluoroacetic anhydride on 2-isobutylresorcinol with aluminium chloride in ethylene dichloride at r.t. (78%) [4689].

- Preparation by Fries rearrangement of 2-isobutylresorcinol monotrifluoroacetate with aluminium chloride in nitro-benzene at 120° [4689].
- Preparation by reaction of isobutyl alcohol on 2,4-dihydroxy- α,α,α -trifluoroacetophenone with polyphosphoric acid at 80° [4689].
- Preparation by reaction of isobutylene on 2,4-dihydroxy- α,α,α -trifluoroacetophenone with phosphorous pentoxide and phosphorous oxychloride at 50° [4689].
m.p. 114° [4689].

1-[2,4-Dihydroxy-5-(2-methylpropyl)phenyl]-2,2,2-trifluoroethanone

[65239-72-7] $C_{12}H_{13}F_3O_3$ mol.wt. 262.23

Syntheses

- Preparation by reaction of trifluoroacetic anhydride on 4-isobutylresorcinol with aluminium chloride in ethylene dichloride at r.t. (78–84%) [4689].
- Preparation by reaction of isobutyl alcohol on 2,4-di-hydroxy- α,α,α -trifluoroacetophenone with polyphosphoric acid at 80° [4689].

m.p. 90° [4689]; b.p._{0,1} 90° [4689].

1-[5-(1,1-Dimethylethyl)-2,4-dihydroxyphenyl]-2,2,2-trifluoroethanone

[65239-74-9] $C_{12}H_{13}F_3O_3$ mol.wt. 262.23

Syntheses

- Preparation by reaction of trifluoroacetic anhydride on 4-tert-butylresorcinol with aluminium chloride in ethylene dichloride at r.t. (80%) [4689].
- Preparation by reaction of tert-butyl alcohol on 2,4-dihydroxy- α,α,α -trifluoroacetophenone with polyphosphoric acid at 80° [4689].

m.p. 159° [4689].

1-(3-Cyclopentyl-2,4-dihydroxyphenyl)-2,2,2-trifluoroethanone

[65240-20-2] $C_{13}H_{13}F_3O_3$ mol.wt. 274.24

Synthesis

- Preparation by reaction of cyclopentene on 2,4-dihydroxy- α,α,α -trifluoroacetophenone with phosphorous oxychloride-phosphorous pentoxide mixture at 50° [4689].

m.p. 166° [4689].

1-(5-Cyclopentyl-2,4-dihydroxyphenyl)-2,2,2-trifluoroethanone

[65239-76-1]

 $C_{13}H_{15}F_3O_3$ mol.wt. 274.24**Synthesis**

- Preparation by reaction of trifluoroacetic anhydride on 4-cyclopentylresorcinol with aluminium chloride in ethylene dichloride at r.t. (75%) [4689].
- m.p. 94° [4689].

1-[2,4-Dihydroxy-3-(3-methylbutyl)phenyl]-2,2,2-trifluoroethanone

[65239-77-2]

 $C_{13}H_{15}F_3O_3$ mol.wt. 276.26**Synthesis**

- Preparation by reaction of trifluoroacetic anhydride on 2-isopentylresorcinol with aluminium chloride in ethylene dichloride at r.t. (84%) [4689].

m.p. 101° [4689].

1-(2,4-Dihydroxy-3-pentylphenyl)-2,2,2-trifluoroethanone

[65239-78-3]

 $C_{13}H_{15}F_3O_3$ mol.wt. 276.26**Synthesis**

- Preparation by reaction of trifluoroacetic anhydride on 2-pentylresorcinol with aluminium chloride in ethylene dichloride at r.t. (87%) [4689].

m.p. 105° [4689].

1-(2,4-Dihydroxy-5-pentylphenyl)-2,2,2-trifluoroethanone

[65239-75-0]

 $C_{13}H_{15}F_3O_3$ mol.wt. 276.26**Synthesis**

- Preparation by reaction of trifluoroacetic anhydride on 4-pentylresorcinol with aluminium chloride in ethylene dichloride at r.t. (86%) [4689].

m.p. 97° [4689].

1-[3-(Aminomethyl)-5-(1,1-dimethylethyl)-2-hydroxyphenyl]-2,2,2-trifluoroethanone

[75060-97-8]

 $C_{13}H_{16}F_3NO_2$ mol.wt. 275.27**Synthesis**

- Preparation from the corresponding hydrochloride (see below) [4661].

1-[3-(Aminomethyl)-5-(1,1-dimethylethyl)-2-hydroxyphenyl]-2,2,2-trifluoroethanone (Hydrochloride)

[75060-74-1]

C₁₃H₁₆F₃NO₂, HCl mol.wt. 311.73

Synthesis

– Preparation by reaction of concentrated hydrochloric acid on 4-tert-butyl-6-(N-chloroacetylaminomethyl)-2-(trifluoroacetyl)phenol in refluxing ethanol (83%) [4661].

m.p. 180–186° [4661]; ¹H NMR [4661], IR [4661].

1-(5-Cyclohexyl-2,4-dihydroxyphenyl)-2,2,2-trifluoroethanone

[65239-79-4]

C₁₄H₁₅F₃O₃ mol.wt. 288.27

Synthesis

– Preparation by reaction of trifluoroacetic anhydride with 4-cyclohexylresorcinol in the presence of aluminium chloride in ethylene dichloride at r.t. (78%) [4689].

m.p. 80° [4689].

1-(5-Cyclohexyl-2,3,4-trihydroxyphenyl)-2,2,2-trifluoroethanone

[65239-91-0]

C₁₄H₁₅F₃O₄ mol.wt. 304.27

Synthesis

– Preparation by reaction of trifluoroacetic anhydride with 4-cyclohexylpyrogallol in the presence of aluminium chloride in ethylene dichloride at r.t. (78%) [4689].

m.p. 128° [4689].

1-(3-Bromo-5-hexyl-2,4-dihydroxyphenyl)-2,2,2-trifluoroethanone

[65240-12-2]

C₁₄H₁₆BrF₃O₃ mol.wt. 369.18

Synthesis

– Preparation by reaction of bromine on 5-n-hexyl-2,4-dihydroxy- α,α,α -trifluoroacetophenone in acetic acid at r.t. (43%) [4689].

m.p. 39° [4689].

1-[4-(3-Bromopropoxy)-2-hydroxy-3-propylphenyl]-2,2,2-trifluoroethanone

[125617-40-5]

 $C_{14}H_{16}BrF_3O_3$ mol.wt. 369.18**Synthesis**

– Preparation by reaction of 1,3-dibromopropane with 2,4-dihydroxy-3-propyl- α,α,α -trifluoroacetophenone in the presence of potassium carbonate and potassium iodide in refluxing methyl ethyl ketone [4704].

yellow oil [4704]; IR [4704].

1-(3-Chloro-5-hexyl-2,4-dihydroxyphenyl)-2,2,2-trifluoroethanone

[65240-10-0]

 $C_{14}H_{16}ClF_3O_3$ mol.wt. 324.73**Synthesis**

– Preparation by reaction of suluryl chloride on 5-n-hexyl-2,4-dihydroxy- α,α,α -trifluoroacetophenone at r.t. [4689].

m.p. 40° [4689].

1-[2,4-Dihydroxy-3-(1-methylpentyl)phenyl]-2,2,2-trifluoroethanone

[65240-18-8]

 $C_{14}H_{17}F_3O_3$ mol.wt. 290.28**Synthesis**

– Preparation by reaction of 1-hexene on 2,4-dihydroxy- α,α,α -trifluoroacetophenone with phosphorous oxychloride and phosphorous pentoxide at 50° (30%) [4689].

m.p. 97° [4689].

1-[2,4-Dihydroxy-3-(4-methylpentyl)phenyl]-2,2,2-trifluoroethanone

[65240-07-5]

 $C_{14}H_{17}F_3O_3$ mol.wt. 290.28**Synthesis**

– Preparation by Fries rearrangement of 2-iso-hexyl-3-hydroxyphenyl trifluoroacetate with aluminium chloride in nitrobenzene or without solvent at 120° [4689].

m.p. 97° [4689].

2,2,2-Trifluoro-1-(5-hexyl-2,4-dihydroxyphenyl)ethanone

[65233-68-3]

C₁₄H₁₇F₃O₃

mol.wt. 290.28

**Syntheses**

- Preparation by Fries rearrangement of 4-hexyl-3-hydroxyphenyl trifluoroacetate with aluminium chloride at 120°, in nitrobenzene (47%) or without solvent (38%) [4689].
- Preparation by reaction of trifluoroacetamide on 4-hexyl-resorcinol at reflux, with boron trifluoride etherate (55%) or with p-toluenesulfonic acid (20%) [4689].
- Preparation by reaction of trifluoroacetonitrile on 4-hexylresorcinol, in the presence of hydrochloric acid,
 - with zinc chloride in ethyl ether at 0° (Hoesch reaction) (69%) [4689];
 - with aluminium chloride (Houben reaction), in ethylene dichloride (60%), in phosphorous oxychloride (55%), in toluene (20%) or in nitrobenzene (15%) [4689].
- Preparation by reaction of trifluoroacetyl chloride on 4-hexylresorcinol at r.t. [4689],
 - with aluminium chloride in ethylene dichloride (92%) or in phosphorous oxychloride (20%);
 - with boron trifluoride etherate in ethylene dichloride (40%);
 - with zinc chloride in ethylene dichloride (30%).
- Preparation by reaction of trifluoroacetic acid on 4-hexylresorcinol in ethylene dichloride [4689],
 - with phosphorous pentachloride (54%) or p-toluenesulfonic acid (30%) at r.t.;
 - with boron trifluoride etherate at reflux (40%).
- Also obtained by reaction of ethyl trifluoroacetate on 4-hexylresorcinol with p-toluenesulfonic acid at reflux (25%) [4689].
- Preparation by reaction of trifluoroacetic anhydride on 4-hexylresorcinol at r.t. (see table below) [4689].

Catalyst	Solvent	Yield (%)
AlCl ₃	POCl ₃	80
	C ₆ H ₅ CH ₃	10

m.p. 90° [4689].

1-[2,4-Dihydroxy-5-(phenylmethyl)phenyl]-2,2,2-trifluoroethanone

[65239-81-8]

C₁₅H₁₁F₃O₃

mol.wt. 296.25

Synthesis

– Preparation by reaction of trifluoroacetic anhydride on 4-benzylresorcinol with aluminium chloride in ethylene dichloride at r.t. (80%) [4689].

m.p. 114° [4689].

1-[2,4-Dihydroxy-3-[(4-methylphenyl)sulfonyl]phenyl]-2,2,2-trifluoroethanone

[65240-14-4]

C₁₅H₁₁F₃O₅S

mol.wt. 360.31

Synthesis

– Obtained by reaction of p-toluenesulfonyl chloride on 2,4-dihydroxy- α,α,α -trifluoroacetophenone with aluminium chloride in phosphorous oxychloride (22%) [4689].

m.p. 127° [4689].

1-[2,4-Dihydroxy-5-[(4-methylphenyl)sulfonyl]phenyl]-2,2,2-trifluoroethanone

[65240-13-3]

 $C_{15}H_{11}F_3O_5S$ mol.wt. 360.31

m.p. 145° [4689].

Synthesis

- Preparation by reaction of p-toluenesulfonyl chloride on 2,4-dihydroxy- α,α,α -trifluoroacetophenone with ferric chloride in phosphorous oxychloride at 120° (40%) [4689].

1-(3-Cycloheptyl-2,4-dihydroxyphenyl)-2,2,2-trifluoroethanone

[65240-21-3]

 $C_{15}H_{17}F_3O_3$ mol.wt. 302.29

m.p. 174° [4689].

Synthesis

- Preparation by reaction of cycloheptene on 2,4-dihydroxy- α,α,α -trifluoroacetophenone with phosphorous trichloride and phosphorous pentoxide at 50° [4689].

1-[2,4-Dihydroxy-3-(4-methylcyclohexyl)phenyl]-2,2,2-trifluoroethanone

[65239-82-9]

 $C_{15}H_{17}F_3O_3$ mol.wt. 302.29

m.p. 143° [4689].

Syntheses

- Preparation by reaction of trifluoroacetic anhydride on 2-(4-methylcyclohexyl)resorcinol with aluminium chloride in ethylene dichloride at r.t. (76%) [4689].
- Preparation by Fries rearrangement of 3-hydroxy-2-(4-methylcyclohexyl)phenyl trifluoroacetate with aluminium chloride in nitrobenzene or without solvent at 120° [4689].

2,2,2-Trifluoro-1-(5-heptyl-2,4-dihydroxyphenyl)ethanone

[65239-80-7]

 $C_{15}H_{19}F_3O_3$ mol.wt. 304.31

m.p. 85° [4689].

Syntheses

- Preparation by reaction of trifluoroacetic anhydride on 4-heptylresorcinol with aluminium chloride in ethylene dichloride at r.t. (79%) [4689].
- Preparation by Fries rearrangement of 4-heptyl-3-hydroxy-phenyl- α,α,α -trifluoroacetate with aluminium chloride in nitrobenzene or without solvent at 120° [4689].

1-[5-(3,5-Dimethylcyclohexyl)-2,4-dihydroxyphenyl]-2,2,2-trifluoroethanone

[65239-83-0]

 $C_{16}H_{19}F_3O_3$

mol.wt. 304.31

Synthesis

– Preparation by acylation of 4-(3,5-dimethylcyclohexyl)-resorcinol (1 mol) with trifluoroacetic anhydride (1.2 mol) in the presence of aluminium chloride (2 mol) in ethylene dichloride at r.t. (79%) [4689].

m.p. 126° [4689].

1-[2 (or 4)-(Acetyloxy)-5-hexyl-4 (or 2)-hydroxyphenyl]-2,2,2-trifluoroethanone

[65233-69-4]

 $C_{16}H_{19}F_3O_4$

mol.wt. 332.32

Synthesis

– Preparation by reaction of acetyl chloride on 5-hexyl-2,4-dihydroxy- α,α,α -trifluoroacetophenone with pyridine in benzene at r.t. (83%) [4689].

m.p. 30° [4689].

N.B.: The 1-[4-(acetyloxy)-5-hexyl-2-hydroxyphenyl]-2,2,2-trifluoroethanone (**II**) is the most likely formula. This hypothesis is supported by the fact that, considering the precursor (5-hexyl-2,4-dihydroxy- α,α,α -trifluoroacetophenone), the hydroxy group in the 2-position is chelated with the carbonyl group. In addition, the reported melting point (30°) is in good agreement with those generally measured for o-hydroxyketones (below 80°) compared to those of p-hydroxyketones which are considerably higher (usually 120–200°).

1-[2,4-Dihydroxy-3-(1-methylheptyl)phenyl]-2,2,2-trifluoroethanone

[65240-22-4]

 $C_{16}H_{21}F_3O_3$

mol.wt. 318.34

Synthesis

– Refer to: [4689].

1-(2,4-Dihydroxy-5-octylphenyl)-2,2,2-trifluoroethanone

[65239-94-3]

 $C_{16}H_{21}F_3O_3$

mol.wt. 318.34

Synthesis

– Preparation by reaction of trifluoroacetic anhydride on 4-octylresorcinol with aluminium chloride in ethylene dichloride at r.t. (74%) [4689].

m.p. 87° [4689].

1-(2,4-Dihydroxy-5-nonylphenyl)-2,2,2-trifluoroethanone

[65239-84-1]

 $C_{17}H_{23}F_3O_3$ mol.wt. 332.36**Synthesis**

– Preparation by reaction of trifluoroacetic anhydride with 4-nonylresorcinol in the presence of aluminium chloride in ethylene dichloride at r.t. (85%) [4689].

m.p. 87° [4689].

1-[4-(Decyloxy)-2-hydroxyphenyl]-2,2,2-trifluoroethanone

[65240-25-7]

 $C_{18}H_{25}F_3O_3$ mol.wt. 346.39**Synthesis**

– Preparation by reaction of decyl iodide on 2,4-dihydroxy- α,α,α -trifluoroacetophenone with potassium carbonate in refluxing acetone (53%) [4689].

m.p. 27–28° [4689]; b.p._{0,1} 150° [4689].**1-[2,4-Dihydroxy-3-(1-methylnonyl)phenyl]-2,2,2-trifluoroethanone**

[65134-36-3]

 $C_{18}H_{25}F_3O_3$ mol.wt. 346.39**Synthesis**

– Preparation by reaction of 1-decene on 2,4-dihydroxy- α,α,α -trifluoroacetophenone with phosphorous oxychloride and phosphorous pentoxide at 50° [4689].

m.p. 98° [4689].

1-[5-Chloro-2-hydroxy-4-(10-undecenyloxy)phenyl]-2,2,2-trifluoroethanone*10-Undecenoic acid, 2 (or 4)-Chloro-5-hydroxy-4 (or 2)-(trifluoroacetyl)phenyl ester*

[65233-67-2]

 $C_{19}H_{22}ClF_3O_4$ mol.wt. 406.83**Synthesis**

– Preparation by reaction of 10-undecenoyl chloride on 5-chloro-2,4-dihydroxy- α,α,α -trifluoroacetophenone with pyridine in benzene at r.t. (65%) [4689].

b.p._{0,07} 168° [4689].

1-[2-Hydroxy-3-methyl-4-(10-undecenoyloxy)phenyl]-2,2,2-trifluoroethanone
10-Undecenoic acid, 3-Hydroxy-2-methyl-4 (or 6)-(trifluoroacetyl)phenyl ester

[65233-66-1]

C₂₀H₂₅F₃O₄ mol.wt. 386.41

Synthesis

– Preparation by reaction of 10-undecenoyl chloride on 2,4-dihydroxy-3-methyl- α,α,α -trifluoro-acetophenone with pyridine in benzene at r.t. (64%) [4689].

b.p._{0.07} 165° [4689].

1-(3-Cyclododecyl-2,4-dihydroxyphenyl)-2,2,2-trifluoroethanone

[65240-19-9]

C₂₀H₂₇F₃O₃ mol.wt. 372.43

Synthesis

– Preparation by reaction of cyclododecene on 2,4-di-hydroxy- α,α,α -trifluoroacetophenone with phosphorous oxychloride and phosphorous pentoxide at 50° [4689].

m.p. 166° [4689].

[65134-37-4]

C₂₀H₂₉F₃O₃ mol.wt. 374.44

Synthesis

– Preparation by reaction of 1-dodecene on 2,4-di-hydroxy- α,α,α -trifluoroacetophenone with phosphorous oxychloride and phosphorous pentoxide at 50° [4689].

m.p. 96° [4689].

1-(5-Dodecyl-2,4-dihydroxyphenyl)-2,2,2-trifluoroethanone

[65239-85-2]

C₂₀H₂₉F₃O₃ mol.wt. 374.44

Synthesis

– Preparation by reaction of trifluoroacetic anhydride on 4-dodecylresorcinol with aluminium chloride in ethylene dichloride at r.t. (84%) [4689].

m.p. 92° [4689].

1-[5-Chloro-2 (or 4)-hydroxy-4 (or 2)-(octadecanoyloxy)phenyl]-2,2,2-trifluoroethanone

[65233-65-0]

 $C_{26}H_{38}ClF_3O_4$ mol.wt. 507.03

Synthesis

– Preparation by reaction of stearoyl chloride on 5-chloro-2,4-dihydroxy- α,α,α -trifluoroacetophenone with pyridine in benzene at r.t. (40%) [4689].

m.p. 51° [4689].

N.B.: The 1-[5-Chloro-2-hydroxy-4-(octadecanoyloxy)phenyl]-2,2,2-trifluoroethanone (II) is the most likely formula.

1-[2,4-Dihydroxy-3-(1-methylheptadecyl)phenyl]-2,2,2-trifluoroethanone
 $C_{26}H_{41}F_3O_3$ mol.wt. 458.60

Synthesis

– Preparation by reaction of 1-octadecene on 2,4-dihydroxy- α,α,α -trifluoroacetophenone with phosphorous oxychloride and phosphorous pentoxide at 50° [4689].

m.p. 98° [4689].

11.4 Compounds Derived from Iodoacetic Acids
11.4.1 From Monoiodoacetic Acid
1-(3-Bromo-5-chloro-2-hydroxyphenyl)-2-iodoethanone
 $C_8H_5BrClIO_2$ mol.wt. 375.39

Synthesis

– Obtained by reaction of iodine monochloride with 3-bromo-5-chloro-2-hydroxyacetophenone in boiling acetic acid [4706].

1-(5-Chloro-2-hydroxy-3-nitrophenyl)-2-iodoethanone
 $C_8H_5ClINO_4$ mol.wt. 309.49

Synthesis

– Obtained by reaction of iodine monochloride with 5-chloro-2-hydroxy-3-nitroacetophenone in boiling acetic acid [4706].

1-(5-Chloro-2-hydroxyphenyl)-2-iodoethanone[438625-16-2] $C_8H_6ClIO_2$ mol.wt. 296.49

Synthesis

– Obtained by reaction of iodine monochloride with 5-chloro-2-hydroxyacetophenone in boiling acetic acid [4706].

1-(2-Hydroxyphenyl)-2-iodoethanone[99233-30-4] $C_8H_7IO_2$ mol.wt. 262.05

Syntheses

– Refer to: [4567,4568,4707–4709].

N.B.: The iodination kinetics of o-hydroxy-acetophenone have been investigated at 25° in aqueous buffer solutions.

The foregoing analysis assumes that only one mol of iodine reacts with each mol of o-hydroxyacetophenone, which may be incorrect. The title substance does not appear to have been isolated [4569].

m.p. 65° [4567,4568].

1-(4-Hydroxyphenyl)-2-iodoethanone[99233-31-5] $C_8H_7IO_2$ mol.wt. 262.05

Syntheses

– Obtained by reaction of iodine with p-hydroxyacetophenone in the presence of 1-fluoro-4-chloromethyl-1,4-diazonia-bicyclo[2.2.2]octane bis(tetrafluoroborate)* in methanol for 19 h at r.t. (64%) [4708].

• This reagent is known under the commercial name of Selectfluor™ F-TEDA-BF₄.

– Also refer to: [4567,4568,4707,4710].

m.p. 130° [4567,4568]; 126–128° [4708]; TLC [4708]; Crystal data [4567,4568];

¹H NMR [4708], IR [4708], MS [4708].

1-(2,4-Dihydroxyphenyl)-2-iodoethanone $C_8H_7IO_3$ mol.wt. 278.05

Synthesis

– Preparation by reaction of sodium iodide on 2,4-dihydroxy- α -chloroacetophenone in acetone at r.t. (70%) [4432].

m.p. 141° [4432].

1-(3,4-Dihydroxyphenyl)-2-iodoethanone[105174-59-2] $C_8H_7IO_3$ mol.wt. 278.05

Syntheses

- Preparation by reaction of sodium iodide on 3,4-dihydroxy- α -chloroacetophenone in acetone at r.t. (34%) [4446].
- Also refer to: [4711].

no m.p.: This compound progressively decomposed from 140° and gave a black residue at 162–163° [4446];

¹H NMR [4446], IR [4446], UV [4446], MS [4446].

2-Iodo-1-(2,3,4-trihydroxyphenyl)ethanone[105174-62-7] $C_8H_7IO_4$ mol.wt. 294.05

Synthesis

- Preparation by reaction of sodium iodide on 2,3,4-trihydroxy- α -chloroacetophenone in acetone at r.t. (63%) [4446].

m.p. 144–145° [4446]; ¹H NMR [4446], IR [4446], UV [4446], MS [4446].

1-(3,4-Dihydroxy-2-methylphenyl)-2-iodoethanone $C_9H_9IO_3$ mol.wt. 292.07

Synthesis

- Preparation by reaction of sodium iodide on 3,4-dihydroxy-2-methyl- α -chloroacetophenone in acetone at r.t. (62%) [4631].

m.p. 171–172° [4631].

1-(3,4-Dihydroxy-5-methylphenyl)-2-iodoethanone $C_9H_9IO_3$ mol.wt. 292.07

Synthesis

- Preparation by reaction of sodium iodide on 2,4-dihydroxy-5-methyl- α -chloroacetophenone in acetone [4631].

m.p. 177° [4631].

1-(2-Hydroxy-4-methoxyphenyl)-2-iodoethanone $C_9H_9IO_3$ mol.wt. 292.07

Synthesis

- Preparation by heating 2-hydroxy-4-methoxy- α -bromoacetophenone with concentrated aqueous potassium iodide solution [4485].

m.p. 102° [4485].

1-(4-Hydroxy-2-methoxyphenyl)-2-iodoethanone $C_9H_9IO_3$ mol.wt. 292.07

Synthesis

– Preparation by reaction of sodium iodide on 4-hydroxy-2-methoxy- α -chloroacetophenone in acetone at r.t. [4432].

m.p. 128° [4432].

1-(4-Hydroxy-3-methoxyphenyl)-2-iodoethanone[105174-52-5] $C_9H_9IO_3$ mol.wt. 292.07

Synthesis

– Preparation by reaction of sodium iodide on 4-hydroxy-3-methoxy- α -bromoacetophenone in acetone at r.t. (52%) [4446].

m.p. 103° [4446]; 1H NMR [4446], IR [4446], UV [4446], MS [4446].

11.4.2 From Diiodoacetic Acid**2,2-Diiodo-1-(2-hydroxyphenyl)ethanone** $C_8H_6I_2O_2$ mol.wt. 387.94

Synthesis not yet described

**N.B.:** Not obtained.

– The iodination kinetics of o-hydroxyacetophenone have been investigated at 25° in aqueous buffer solutions. The foregoing analysis assumes that only 1 mol of iodine reacts with each mol of o-hydroxyacetophenone, which may be incorrect. Cyclisation probably predominates over the introduction of a second iodine atom into o-hydroxyacetophenone, at least in the early stages of the reaction. There is formation of 3-coumaranone [4569].

11.4.3 From Triiodoacetic Acid

There is no hydroxyketone derived from triiodoacetic acid such as described up to December 2003.

Chapter 12

Compounds Derived from Aminoacetic Acids

12.1 Compounds Derived from Aminoacetic Acid

2-Amino-1-(2-hydroxyphenyl)ethanone

[72481-17-5]

$C_8H_9NO_2$ mol.wt. 151.17

Syntheses

- Obtained by treatment of 3-nitro-4-hydroxycoumarin—m.p. 177° (d)—with refluxing in a mixture of 58% hydriodic acid solution and acetic acid for 15 min. The iodine produced during the reaction was reduced with hypophosphorous acid [4712].
- Also refer to: [4713,4714].

2-Amino-1-(2-hydroxyphenyl)ethanone (*Hydrochloride*)

$C_8H_9NO_2 \cdot HCl$ mol.wt. 187.63

Synthesis

- Preparation by treatment of 3-nitro-4-hydroxycoumarin—m.p. 177° (d)—with refluxing in a mixture of 58% hydriodic acid solution and acetic acid for 15 min. The iodine produced during the reaction was reduced with hypophosphorous acid. Then, recrystallisation of the obtained base from concentrated hydrochloric acid (66%) [4712].

m.p. 229–230° [4712].

2-Amino-1-(3-hydroxyphenyl)ethanone

[90005-54-2]

$C_8H_9NO_2$ mol.wt. 151.17

Syntheses

- Obtained by adding ammonia to an aqueous solution of its hydrochloride (63%) [4715].
- Also refer to: [4713,4716–4719].

m.p. 217–220° [4717], 215–235° [4715].

2-Amino-1-(3-hydroxyphenyl)ethanone (Hydrochloride)

[14665-75-9]

 $C_8H_9NO_2$, HCl

mol.wt. 187.63

Syntheses

– Preparation by hydrolysis of *m*-(benzoyloxy)- α -amino-acetophenone hydrochloride (SM) (m.p. 202–205°) [4717], (m.p. 206°) [4715],

- with refluxing 10% hydrochloric acid (quantitative yield) [4715], for 2 h (80%) [4717];
- with 37% hydrochloric acid in chlorobenzene at 90° for 3 h (90%) [4718]. SM was obtained by reaction of hexamethylenetetramine with *m*-(benzoyloxy)- α -bromoacetophenone (m.p. 162°) in ethanol in the presence of 37% hydrochloric acid for 6 h at r.t. (75%) [4718].

– Also obtained by hydrolysis of 3,6-bis(3-hydroxyphenyl)-2,5-dihydropyrazine in aqueous suspension with hydrochloric acid at r.t. [4720].

– Also obtained by reaction of 3-acetoxy- α -bromoacetophenone (m.p. 71–72°) with hexamethylenetetramine in chloroform, followed by acetoxy group elimination in the obtained compound with hydrochloric acid [4721].

– Also obtained by reaction of 3-hydroxy- α -iodoacetophenone with hexamethylenetetramine, followed by transformation of the obtained iodo derivative (m.p. 138–139°) into hydrochloride salt [4722].

– Also refer to: [4716].

m.p. 221–222° [4720–4722], 219–220° [4715], 218–220° (d) [4718], 217–220° [4717].

2-Amino-1-(4-hydroxyphenyl)ethanone

[77369-38-1]

 $C_8H_9NO_2$

mol.wt. 151.17

Syntheses

– Obtained by oxidation of the biogenic amine 1-(4-hydroxy-phenyl)-2-aminoethanol at high pH [4723].

– Also obtained by hydrogenation of *p*-hydroxy- α -nitroso-acetophenone—so called *p*-hydroxy- α -(hydroximino)-acetophenone—over Pd/C in acetic acid at a temperature <60° (91%) [4717].

– Also obtained from the corresponding hydrochloride aqueous solution with ammonia [4597].

– Also refer to: [4713,4724–4728].

N.B.: For the acetate [172417-70-8], refer to: [4728,4729]; pK_B [4730].

2-Amino-1-(4-hydroxyphenyl)ethanone (Hydrochloride)[19745-72-3] $C_8H_9NO_2, HCl$ mol.wt. 187.63

Syntheses

- Preparation by treatment of α -amino-p-hydroxy-acetophenone with hydrogen chloride in DMF (70%) [4714].
 - Preparation by hydrogenation of p-hydroxy- α -(hydroximino)acetophenone (SM) over Pd/C in DMF (70%).
- SM was obtained by adding tert-butyl nitrite to a mixture of p-hydroxyacetophenone, hydrogen chloride and DMF at 40–45° [4731].
- Preparation from α -amino-p-benzoyloxyacetophenone hydrochloride with refluxing 20% hydrochloric acid solution for 7 h (80%) [4724].
 - Preparation by condensation of phenol with aminoacetonitrile hydrochloride (Houben–Hoesch reaction) (51%) [4732].
 - Also obtained by demethylation of α -amino-p-methoxyacetophenone (m.p. 197°) with 38% hydrochloric acid at 160–170° for 2 h [4597].
 - Also refer to: [4733].
- m.p. 249–251° [4732], 242° [4597], 241–245° (d) [4724].

2-Amino-1-(2,4-dihydroxyphenyl)ethanone $C_8H_9NO_3$ mol.wt. 167.16

Syntheses

- Obtained from its hydriodide (m.p. 258°) or its hydrochloride (m.p. 280°) by addition of a hot concentrated solution of sodium carbonate [4566].
 - Also refer to: [4734,4735].
- m.p. 310° (d) [4566].

2-Amino-1-(2,4-dihydroxyphenyl)ethanone (Hydrochloride) $C_8H_9NO_3, HCl$ mol.wt. 203.61

Syntheses

- Obtained by refluxing a mixture of 2,4-dihydroxy- α -[(ethoxycarbonyl)amino]acetophenone (m.p. 156–157°) and hydrochloric acid (1:1) for 2 h [4432].
 - Also obtained by addition of concentrated hydrochloric acid to an alcoholic solution of the corresponding hydriodide (SM). SM—m.p. 128° (d)—was prepared from 2,4-dimethoxy- α -phthaliminoacetophenone (m.p. 188°) with boiling concentrated hydriodic acid containing some acetic acid [4566].
 - Also obtained by treatment of 3-acetamido-4,7-dihydroxycoumarin (m.p. 268°) with 10% hydrochloric acid for 1 h [4734].
 - Also refer to: [4735].
- m.p. 280° (d) [4566], 271° [4734], 257° [4432].
One of the reported melting points is obviously wrong.

2-Amino-1-(3,4-dihydroxyphenyl)ethanone (Arterenone; Noradrenalone; ART)[499-61-6] $C_8H_9NO_3$ mol.wt. 167.16COCH₂NH₂**Syntheses**

- Preparation by reaction of 35% aqueous ammonia with 3,4-dihydroxy- α -chloroacetophenone in methanol or in ethanol [4736], (71–73%) [4737], (67%) [4738].
- Also obtained by adding ammonia to an aqueous solution of the corresponding hydrochloride [4730,4739], (60–75%) [4597].
- Also obtained by adding sodium carbonate to an aqueous solution of its hydride (m.p. 247–248°) (SM). SM was prepared from m,m',p,p'-tetramethoxy-2,5-diphenylpyrazine by boiling for 2 h with a mixture of acetic acid and concentrated hydriodic acid [4566].
- Preparation by hydrogenolysis of α -dibenzylamino-3,4-dihydroxyacetophenone hydrochloride in water in the presence of Pd/C under hydrogen atmosphere for 5 h. Then, treatment of the concentrated solution with 28% ammonia (85%) [4580].
- Also refer to: [4713,4720,4740,4741].

Isolation from natural sources

- From insect cuticle [4742,4743].
- Also obtained by mild acid hydrolysis of sclerotized cuticles from locusts (*Schistocerca gregaria*) and beetles (*Pachynoda sinuata*) [4744].
- From acid hydrolysates of insect sclerotized cuticle in refluxing 1 N formic acid for 1 h or in boiling methanolic hydrochloric acid. The cuticle used was obtained from the desert locust *Schistocerca gregaria* [4745].
- Also obtained by hydrolysis of 2-(3',4'-dihydroxyphenyl)-3-acetylamino-6 (or 7)-(N-acetyl-2''-aminoethyl)-2,3-dihydro-1,4-benzodioxin (SM) with 6 N hydrochloric acid at 110° for 3 h. SM was formed by incubation of N-acetyldopamine with locust cuticle [4746].
- ART was the major identified catechol recovered from strong acid hydrolysates of tanning pharate pupae cuticle from *Manduca sexta* [4747].

m.p. 300° (d) [4738], 235° (d) [4566,4580], >200° (d) (not melted) [4597,4739];

One note a very large dispersion of the various melting points.

¹H NMR [4746], UV [4744,4745], MS [4744,4748]; HPLC [4747]; pK_b [4730]; column chromatography [4744]; TLC [4744].

2-Amino-1-(3,4-dihydroxyphenyl)ethanone (Hydrochloride)[5090-29-9] $C_8H_9NO_3, HCl$ mol.wt. 203.61COCH₂NH₂,HCl**Syntheses**

- Preparation by demethylation of α -amino-3,4-dimethoxy-acetophenone on heating with 37% hydrochloric acid for 2.5 h at 160–165° under carbon dioxide (85%) [4739].

- Preparation by dissolving the corresponding base in a mixture of concentrated hydrochloric acid/methanol and allowing to stand several hours at -10° (82%) [4736].
 - Also obtained by hydrogenation of 3,4-dihydroxy- α -azidoacetophenone (m.p. 132°) in an ethanol and concentrated hydrochloric acid solution under hydrogen in the presence of 4% Pd/C for 7 h (65%) [4715].
 - Also obtained from the addition compound (SM) of 3,4-diacetoxy- α -chloroacetophenone and hexamethylene tetramine in chloroform at r.t. for 24 h (40%). SM in ethanolic solution was treated with 38% hydrochloric acid at r.t. for 3 days [4597].
 - Also obtained from hydrolysis of 3,6-bis(3,4-dihydroxyphenyl)-2,5-dihydropyrazine –m.p. 250° (d)—in aqueous suspension with hydrochloric acid at r.t. [4720].
 - Also refer to: [4737].
- m.p. 270° [4720], 260° [4738], 259° [4730], 256° (d) [4715,4739], 255° [4736], 252° [4597].

One note a very large dispersion of the various melting points.

2-Amino-1-(2-hydroxy-5-methylphenyl)ethanone

$C_9H_{11}NO_2$ mol.wt. 165.19

Synthesis

- Obtained by hydrogenation of the complex formed by addition of 2-(benzyloxy)-5-methyl- α -bromoacetophenone and hexamethylenetetramine in ethanol in the presence of Pd/C [4749].

2-Amino-1-(2-hydroxy-5-methylphenyl)ethanone (*Hydrochloride*)

$C_9H_{11}NO_2, HCl$ mol.wt. 201.66

Synthesis

- Obtained by hydrogenolysis of 2-(benzyloxy)-5-methyl- α -aminoacetophenone hydrochloride (m.p. $191-192^{\circ}$) (SM) with hydrogen in the presence of Pd/C in 95% ethanol.
 - SM was prepared by reaction of 2-(benzyloxy)-5-methyl- α -bromoacetophenone with hexamethylene-tetramine, followed by treatment with ethanolic hydrogen chloride [4749].
- m.p. $222-225^{\circ}$ (d) [4749].

12.2 Compounds Derived from Substituted Aminoacetic Acids

2-Diazo-1-(4-hydroxy-3-methoxyphenyl)ethanone

$C_9H_9N_2O_3$ mol.wt. 193.28

Synthesis

- Preparation by reaction of potassium hydroxide with 4-acetoxy-3-methoxy- α -diazoacetophenone (m.p. 92–93°) in methanol at 20° for 15 h (quantitative yield) [4750].
- amorphous solid [4750].

2-Azido-1-(4-hydroxy-3-methoxyphenyl)ethanone

$C_9H_9N_3O_3$ mol.wt. 207.19

Synthesis

- Obtained by reaction of 4-hydroxy-3-methoxy- α -chloroacetophenone with an alkali metal azide in dilute alcohols (C_1 – C_3) [4751].

1-(3-Hydroxyphenyl)-2-(methylamino)ethanone (*Phenylephrone*)

[52093-42-2]

$C_9H_{11}NO_2$ mol.wt. 165.19

Syntheses

- Preparation by reductive condensation of m-hydroxyphenyl-glyoxal with methylamine in ethanol under saturated hydrogen atmosphere in the presence of Raney nickel at 45° (55%) [4752].
 - Also obtained by action of potassium N-methyl-p-toluene sulfonamide with m-acetoxy- α -bromoacetophenone in acetone during some hours. Then, the resulting intermediate compound (m.p. 120–121°) was treated with boiling 55% aqueous hydriodic acid for 1 h [4753–4755].
 - Also obtained by reaction of methylamine with α -bromo-m-benzoyloxyacetophenone in isopropanol, and subsequent treatment with aqueous hydrochloric acid [4756].
 - Also obtained by reaction of methylamine with α -bromo-m-hydroxyacetophenone in dilute ethanol [4757,4758].
 - Also refer to: [4713,4719,4759,4760].
- m.p. 135° [4753–4755], 128° [4752].

1-(3-Hydroxyphenyl)-2-(methylamino)ethanone (*Hydrochloride*)

[94240-17-2]

$C_9H_{11}NO_2, HCl$ mol.wt. 201.65

Syntheses

- Preparation by conversion of the base with 35% ethanolic hydrogen chloride [4752].

- Also obtained by hydrogenolysis of 2-(benzyl-methyl-amino)-1-(3-hydroxyphenyl) ethanone hydrochloride with hydrogen in the presence of Pd-black in ethanol [4759].
- Also refer to: [4753,4761].
m.p. 238° [4757,4758], 234° [4752–4755]; IR [4759].

1-(4-Hydroxyphenyl)-2-(methylamino)ethanone

[21213-89-8] C₉H₁₁NO₂ mol.wt. 165.19

COCH₂NHCH₃

Syntheses

- Preparation by reductive condensation of p-hydroxyphenyl-glyoxal with methylamine in ethanol under saturated hydrogen atmosphere in the presence of Raney nickel at 45° [4752].
- Also obtained by reductive condensation of p-hydroxy-phenylglyoxal potassium bisulfite (C₈H₇O₆SK, preparation given) with methylamine in dilute ethanol under saturated hydrogen atmosphere and cooling with ice (71%) [4752].
- Also obtained by reduction of potassium 2-(4-hydroxyphenyl)-2-oxo-1-methylaminoethane sulfonate (C₉H₁₀NO₅SK, preparation given) in dilute ethanol with hydrogen in the presence of Raney nickel (65%) [4752].
- Also obtained by reaction of potassium N-methyl-p-toluenesulfonamide with p-acetoxy- α -bromoacetophenone in acetone during some hours. Then, the resulting intermediate compound was treated with boiling 55% aqueous hydriodic acid for 1 h [4753].
- Also obtained by degradation of p-toluenesulfonamide (prepared from α -methylamino-p-methoxy-acetophenone) on heating with 37% hydrochloric acid for 2 h at 150° under carbon dioxide [4739].
- Also obtained by treatment of p-hydroxy- α -bromoacetophenone in ethanol with a 40% methylamine solution, first in an ice bath, then at r.t. overnight [4762].
- Also obtained by reaction of methylaminoacetonitrile with phenol (Houben-Hoesch reaction) (75%) [4732].
- Also refer to: [4713,4724,4761].
m.p. 148° [4753], 147–148° [4762], 147° [4739,4752], 142–144° (d) [4732];
pK_b [4730].

1-(4-Hydroxyphenyl)-2-(methylamino)ethanone (*Hydrochloride*)

[67828-68-6] C₉H₁₁NO₂, HCl mol.wt. 201.65

COCH₂NHCH₃,HCl

Syntheses

- Obtained by reaction of hydrochloric acid with the corresponding base [4739], (83%) [4732], (50%) [4724].
- Also obtained by treatment of its oxalate (m.p. 166°) with ethanolic hydrogen chloride (72%) [4752].

- Also obtained by reaction of methylaminoacetonitrile hydrochloride with phenol (Hoesch reaction) (88%) [4763].
- Also refer to: [4753,4764–4766].
- m.p. 261–263° (d) (pure) [4724], 244–246° [4763], 242–244° (d) [4732], 242° (d) [4739], 241–243° (d) [4724], 239–240° [4762], 238–240° [4753], 238–239° [4752].

1-(2,4-Dihydroxyphenyl)-2-(methylamino)ethanone (*Hydrochloride*)

$C_9H_{11}NO_3$, HCl mol.wt. 217.65

Synthesis

- Preparation by successively adding methylamino-acetonitrile hydrochloride and resorcinol to a solution of aluminium chloride in nitrobenzene, then bubbling hydrogen chloride for 6–8 h through the reaction mixture at 20–30° (73%) [4763].

m.p. 265–267° [4763].

1-(3,4-Dihydroxyphenyl)-2-(methylamino)ethanone (*Adrenalone*)

[99-45-6]

$C_9H_{11}NO_3$

mol.wt. 181.19

Syntheses

- Preparation by reaction of excess 33% aqueous methylamine with 3,4-dihydroxy- α -chloroacetophenone [4767].
- Preparation by adding an aqueous solution of 40% methylamine to an ethanolic solution of 3,4-dihydroxy- α -chloroacetophenone. Then, adding of ammonia to a solution of recrystallized hydrochloride so formed, (71–73%) [4737], (62%) [4738].
- Preparation by reductive condensation of 3,4-dihydroxyphenylglyoxal with methylamine in ethanol under hydrogen atmosphere in the presence of 14% Pd/C [4752].
- Also obtained by degradation of p-toluenesulfonamide, prepared from 3,4-dimethoxy- α -methylaminoacetophenone, with refluxing 37% hydrochloric acid (150–160°) for 2 h under carbon dioxide [4739].
- Also obtained by treatment of 3,4-diacetoxy- α -chloroacetophenone (m.p. 110°) with 30% methylamine solution (good yield, not specified) [4768].
- Also refer to: [4713,4719,4740,4769–4774].
- m.p. 232° [4767], 230° [4738], 229° (d) [4739], 215° (d) [4775]; UV [4776,4777]; pK_b [4730,4778]; micellar liquid chromatography [4779–4781]; electrophoresis [4782].

1-(3,4-Dihydroxyphenyl)-2-(methylamino)ethanone (Hydrochloride) (Stryphnon)

[62-13-5]

 $C_9H_{11}NO_3$, HCl mol.wt. 217.65COCH₂NHCH₃, HCl

Syntheses

- Obtained by action of hydrochloric acid on 3,4-dihydroxy- α -methylaminoacetophenone (65%) [4737], in methanol [4738,4739].
- Also obtained (poor yield) from the base by saturation of its aqueous solution with hydrogen chloride (7%) [4752].

– Also refer to: [4761,4765–4767].

m.p. 248° [4730], 241° (d) [4739,4752], 240° (d) [4738], 237–243° (d) [4775];
UV [4773].

2-(Dimethylamino)-1-(2-hydroxyphenyl)ethanone $C_{10}H_{13}NO_2$ mol.wt. 179.22

Synthesis

- Obtained by adding a solution of dimethylamine (2 mol) in ethyl ether to a cold solution of o-hydroxy- α -chloro-acetophenone (m.p. 71–71°5) (1 mol) and sodium iodide (1 mol) in acetone. The mixture was then allowed to stand for 14 h at 0° [4573].

2-(Dimethylamino)-1-(2-hydroxyphenyl)ethanone (Hydrochloride) $C_{10}H_{13}NO_2$, HCl mol.wt. 215.69COCH₂N(CH₃)₂, HCl

Synthesis

- Obtained by adding of ethanolic hydrochloric acid to a solution of the corresponding base in acetone (61%) [4573].

m.p. 105–107° [4573].

2-(Dimethylamino)-1-(4-hydroxyphenyl)ethanone $C_{10}H_{13}NO_2$ mol.wt. 179.22COCH₂N(CH₃)₂

Syntheses

- Obtained by adding a solution of dimethylamine (2 mol) in ethyl ether to a cold solution of p-hydroxy- α -chloro-acetophenone (m.p. 151–152°) (1 mol) and sodium iodide (1 mol) in acetone. The mixture was then allowed to stand for 14 h at 0° [4573].

– Also obtained by hydrolysis of 1-[4-(benzoyloxy)phenyl]-2-dimethylaminoethanone with aqueous hydrochloric acid [4783].

- Also obtained by reaction of dimethylamine with p-(benzoyloxy)- α -bromoacetophenone in isopropanol [4724].
 - Also refer to: [4566].
- m.p. 142° [4566].

2-(Dimethylamino)-1-(4-hydroxyphenyl)ethanone (*Hydrochloride*)

[2970-79-8]

C₁₀H₁₃NO₂, HCl mol.wt. 215.69COCH₂N(CH₃)₂,HCl

Syntheses

- Obtained by reaction of dimethylamine with p-acetoxy- α -bromoacetophenone in benzene, followed by treatment with dilute hydrochloric acid [4784].
 - Also obtained by reaction of dimethylamine with p-benzoyl-oxy- α -bromoacetophenone in isopropanol [4724] or in benzene [4783] and subsequent treatment with hydrochloric acid (88%) [4783], (47%) [4724].
 - Also obtained by adding ethanolic hydrochloric acid to a solution of the corresponding base in acetone (43%) [4573].
 - Also refer to: [4785].
- m.p. 242–243° [4573], 235° [4784], 234–237° [4783], 233–235° [4724].

2-(Ethylamino)-1-(3-hydroxyphenyl)ethanone

[22510-12-9]

C₁₀H₁₃NO₂ mol.wt. 179.22COCH₂NHC₂H₅

Syntheses

- Preparation by reductive condensation of 3-hydroxyphenyl-glyoxal with ethylamine in ethanol under saturated hydrogen atmosphere in the presence of Raney nickel at 45° (49%) [4752].
 - Also obtained by reaction of ethylamine with 1-(3-acetoxy-phenyl)-2-bromoethanone in aqueous isopropanol [4786].
- m.p. 203–205° [4752].

2-(Ethylamino)-1-(3-hydroxyphenyl)ethanone (*Hydrochloride*)

[22510-04-9]

C₁₀H₁₃NO₂, HCl mol.wt. 215.69COCH₂NHC₂H₅,HCl

Syntheses

- Preparation by crystallization of the base in 2 N hydrochloric acid [4752].
 - Also obtained by reaction of 40% ethylamine solution with m-acetoxy- α -bromoacetophenone in isopropanol, first at 0°, then at 40° for 10 min, followed by treatment with hydrochloric acid [4786].
- m.p. 221–222° [4752], 212–215° (d) [4786].

2-(Ethylamino)-1-(4-hydroxyphenyl)ethanone

[99075-26-0]

 $C_{10}H_{13}NO_2$ mol.wt. 179.22

Syntheses

COCH₂NHC₂H₅

- Preparation by reductive condensation of 4-hydroxyphenyl-glyoxal with ethylamine in ethanol under saturated hydrogen atmosphere in the presence of Raney nickel at 45° [4752].
 - Also obtained by reductive condensation of 4-hydroxy-phenylglyoxal potassium bisulfite ($C_8H_7O_6SK$, preparation given) with ethylamine [4752].
 - Also obtained by reaction of ethylamine with 1-[4-(benzoyloxy)phenyl]-2-bromoethanone in isopropanol [4724].
- $pK_B = 6.23$ [4730].

2-(Ethylamino)-1-(4-hydroxyphenyl)ethanone (Hydrochloride)

[74730-79-3]

 $C_{10}H_{13}NO_2, HCl$ mol.wt. 215.69

Syntheses

COCH₂NHC₂H₅,HCl

- Preparation by treatment of the oxalate with 28% ethanolic hydrogen chloride (65%) [4752].
 - Also obtained by reaction of α -bromo-p-benzoyloxy-acetophenone with ethylamine in isopropanol and subsequent treatment with hydrochloric acid (51%) [4724].
- m.p. 228–231° (d) [4724], 221° [4752].

1-(2-Hydroxy-5-methylphenyl)-2-(methylamino)ethanone $C_{10}H_{13}NO_2$ mol.wt. 179.22

Synthesis

COCH₂NHCH₃CH₃

- Preparation by hydrogenolysis of 2-(benzylmethylamino)-1-(2-hydroxy-5-methylphenyl)ethanone with hydrogen in the presence of Pd/C as catalyst [4749].

1-(2-Hydroxy-5-methylphenyl)-2-(methylamino)ethanone (Hydrochloride) $C_{10}H_{13}NO_2, HCl$ mol.wt. 215.69

Synthesis

COCH₂NHCH₃,HClCH₃

- Obtained by hydrogenolysis of 2-(benzyloxy)-5-methyl-N-benzylmethylaminoacetophenone hydrochloride or of 2-hydroxy-5-methyl-N-benzylmethylaminoacetophenone hydrochloride with hydrogen in the presence of Pd/C in 95% ethanol [4749].

m.p. 204–206° [4749].

1-(4-Hydroxy-3-methylphenyl)-2-(methylamino)ethanone (Hydrochloride)C₁₀H₁₃NO₂, HCl mol.wt. 215.69

Synthesis

COCH₂NHCH₃, HCl

- Preparation by successively adding methylaminoacetonitrile hydrochloride and o-cresol to a solution of aluminium chloride in nitrobenzene, then bubbling hydrogen chloride for 6–8 h through the reaction mixture at 20–30° (90%) [4763].

m.p. 237–238° [4763].

1-(3,4-Dihydroxyphenyl)-2-(dimethylamino)ethanone

[150-10-7]

C₁₀H₁₃NO₃ mol.wt. 195.22

Syntheses

COCH₂N(CH₃)₂

- Preparation by reaction of 3,4-dihydroxy- α -chloroacetophenone with dimethylamine [4787,4788], in ethanol at 40° for 75 min [4789,4790] or at 60° for 5 h [4791].
- Also obtained by action of sodium ethoxide with N-methyl-adrenalone hydrochloride in boiling ethanol (72–74%) [4737].
- Also obtained by demethylation of 2-dimethylamino-1-(3-hydroxy-4-methoxyphenyl)ethanone with concentrated aqueous hydrochloric acid at 130° [4792].
- Also obtained by reaction of dimethylamine with α -chloro-3-acetoxy-4-hydroxyacetophenone in aqueous ethanol [4793].

m.p. >130° (d) [4737].

1-(3,4-Dihydroxyphenyl)-2-(dimethylamino)ethanone (Hydrochloride)

[16899-83-5]

C₁₀H₁₃NO₃, HCl mol.wt. 231.69

Syntheses

COCH₂N(CH₃)₂, HCl

- Preparation by reaction of the corresponding base (SM) with hydrogen chloride in ethanol, [4787], (66%) [4791], (62%) [4771], (54%) [4792], (50%) [4789,4790]. SM was obtained by reaction of 3,4-dihydroxy- α -chloroacetophenone with concentrated aqueous dimethylamine.
- Direct preparation by reaction of 3,4-dihydroxy- α -chloroacetophenone with dimethylamine in methanol for 20–30 min at <5° (73–76%) [4737] or in absolute ethanol for 2 h at 60° (45%) [4788].
- Also obtained by treatment of 3,4-dimethoxy- α -dimethylaminoacetophenone (SM) with concentrated hydrochloric acid for 2.5 h at 150–160° in a sealed tube (41%) [4794] or for 2 h at 130° (25%) [4792]. SM was prepared by reaction of 3,4-dimethoxy- α -chloroacetophenone with dimethylamine in benzene at r.t. overnight (91%, b.p.₆ 155–157°) [4794].

- Also obtained by treatment of 3-hydroxy-4-methoxy- α -dimethylaminoacetophenone with concentrated hydrochloric acid for 2 h at 130°, (65%) [4792].
 - Also refer to: [4761].
- m.p. 236–237° (d) [4789,4790], 234–236° (d) [4737,4771], 232° (d) [4794], 231–232° (d) [4792], 225–227° (d) [4787,4788], 213–214° [4791].
- One note a very large dispersion of the various melting points. ¹H NMR [4788], IR [4788].

1-(3,4-Dihydroxyphenyl)-2-(ethylamino)ethanone

$C_{10}H_{13}NO_3$ mol.wt. 195.22

Syntheses

- Obtained by adding an aqueous solution of 40% ethylamine to an ethanolic solution of α -chloro-3,4-dihydroxyacetophenone, then adding ammonia in a solution of the recrystallized hydrochloride so formed (50%) [4738].
- Also refer to: [4740].

m.p. 185° [4738]; pK_b [4730].

1-(3,4-Dihydroxyphenyl)-2-(ethylamino)ethanone (*Hydrochloride*)

$C_{10}H_{13}NO_3, HCl$ mol.wt. 231.69

Syntheses

- Obtained by condensation of 3,4-dihydroxy- α -chloroacetophenone with ethylamine in ethanol or isopropanol at 60–80°. The amino ketone base which separated was treated with concentrated hydrochloric acid [4795].
 - Also obtained by total demethylation of 1-(3,4-dimethoxyphenyl)-2-(ethylamino)ethanone hydrochloride (m.p. 190–192°), (71%) [4773] according to [4763].
- m.p. 260° (d) [4738], 255–257° (d) [4773], 240–242° (d) [4795].
- One of the reported melting points is obviously wrong.

1-(3-Hydroxy-4-methoxyphenyl)-2-(methylamino)ethanone (*Hydrochloride*)

$C_{10}H_{13}NO_3, HCl$ mol.wt. 231.69

Synthesis

- Preparation by successively adding methylamino-acetonitrile hydrochloride and guaiacol to a solution of aluminium chloride in nitrobenzene, then bubbling hydrogen chloride for 6–8 h through the reaction mixture at 20–30° (25%) [4763].

m.p. 230–230°5 [4763].

2-(Cyclopropylamino)-1-(3,4-dihydroxyphenyl)ethanone (Hydrochloride)C₁₁H₁₃NO₃, HCl mol.wt. 243.69

Synthesis

m.p. 200–204° [4796].

- Obtained (poor yield) by treatment of cyclopropylamine salt of 4-chloroacetylcatechol (m.p. 95–97°) in refluxing isopropanol under nitrogen for 3 h. The formed free base in methanol was treated with ethanolic hydrochloric acid [4796].

1-(3-Hydroxyphenyl)-2-[(1-methylethyl)amino]ethanoneC₁₁H₁₅NO₂ mol.wt. 193.25

Syntheses

- Also obtained by reaction of isopropylamine with α -bromo-m-hydroxyacetophenone in ethanol [4797].

- Preparation by reductive condensation of 3-hydroxyphenyl-glyoxal with isopropylamine in ethanol under saturated hydrogen atmosphere in the presence of Raney nickel at 45° [4752].

1-(3-Hydroxyphenyl)-2-[(1-methylethyl)amino]ethanone (Hydrochloride)

[101241-90-1]

C₁₁H₁₅NO₂, HCl mol.wt. 229.71

Syntheses

m.p. 226–227° [4752], 213–216° [4797].

One of the reported melting points is obviously wrong.

- Preparation by conversion of the oxalate in 28% ethanolic hydrogen chloride (35%) [4752].
- Also obtained by [4797] according to [4724,4795].

1-(4-Hydroxyphenyl)-2-[(1-methylethyl)amino]ethanone

[99985-57-6]

C₁₁H₁₅NO₂ mol.wt. 193.25

Syntheses

- Also obtained by reductive condensation of 4-hydroxyphenylglyoxal potassium bisulfite (C₈H₇O₆SK, preparation given) with isopropylamine [4752].

- Preparation by reductive condensation of 4-hydroxyphenyl-glyoxal with isopropylamine in ethanol under saturated hydrogen atmosphere in the presence of Raney nickel at 45° (86%) [4752].

- Also obtained by reaction of isopropylaminoacetonitrile with benzyl phenyl ether (m.p. 39–41°) [4763] or with phenol [4732] in the presence of aluminium chloride and hydrogen chloride in nitrobenzene.
 - Also obtained by reaction of isopropylamine with α -bromo-4-benzoyloxyacetophenone in isopropanol [4724].
 - Also refer to: [4798].
- m.p. 120–121° [4752]; pK_B [4730,4799].

1-(4-Hydroxyphenyl)-2-[(1-methylethyl)amino]ethanone (*Hydrochloride*)

[69716-74-1]

C₁₁H₁₅NO₂, HCl mol.wt. 229.71COCH₂NHCH(CH₃)₂, HCl

Syntheses

- Preparation from the base with aqueous hydrochloric acid (84%) [4752].
 - Also obtained by reaction of α -bromo-p-benzoyloxy-acetophenone with isopropylamine in isopropanol between 20° and 30° for 2 h, then treatment of the formed base with refluxing 15% hydrochloric acid solution (64%) [4724].
- Also obtained by reaction of isopropylaminoacetonitrile hydrochloride (m.p. 166–167°),
- with phenol (Houben–Hoesch reaction) (61%) [4732], (42%) [4798];
 - with phenyl benzyl ether in the presence of aluminium chloride in nitrobenzene at 20–30°, then bubbling hydrogen chloride for 6 h (39%) [4763].
- m.p. 272–273° (d) [4763], 263° (d) [4798], 258–260° (d) [4732], 250–252° [4724], 248–249° [4752]. One note a very large dispersion of the various melting points.

1-(3,4-Dihydroxyphenyl)-2-[(1-methylethyl)amino]ethanone (*Isoproterenone*)

[121-28-8]

C₁₁H₁₅NO₃ mol.wt. 209.25COCH₂NHCH(CH₃)₂

Syntheses

- Obtained by reductive condensation of 3,4-dihydroxy-phenylglyoxal with isopropylamine in ethanol under hydrogen atmosphere in the presence of 14% Pd/C [4752].
- N.B.:** In the same manner, the substance can also be obtained from 3,4-bis(benzyloxy)phenylglyoxal [4800].
- Also obtained by reaction of 3,4-dihydroxy- α -chloroacetophenone with excess isopropylamine in refluxing ethanol for 2.5 h (76%) [4801].
 - Also obtained from the corresponding sulfate by action of a hot sodium bicarbonate aqueous solution (60°) (80%) [4761].
 - Also obtained by treatment of the corresponding hydrochloride in concentrated aqueous solution at 0° with ammonia [4802].

m.p. 173° [4761], 168–169° [4801], 96° [4802]. One of the reported melting points is obviously wrong. pK_b [4730]; 1H NMR [4801], IR [4801], UV [4801].

1-(3,4-Dihydroxyphenyl)-2-[(1-methylethyl)amino]ethanone (*Hydrochloride*)

[16899-81-3]

 $C_{11}H_{15}NO_3$, HCl mol.wt. 245.71COCH₂NHCH(CH₃)₂, HCl

Syntheses

- Obtained by condensation of α -chloro-3,4-dihydroxy-acetophenone with isopropylamine [4803] in isopropanol at 65–70°. The amino ketone which separated was treated with concentrated hydrochloric acid (54%) [4795], (46%) [4804].
- Also obtained by demethylation of 3-methoxy-4-hydroxy- α -isopropylaminoacetophenone hydrochloride with concentrated hydrochloric acid at 140° for 6 h in a sealed tube (73%) [4802].
- Also refer to: [4763,4805–4807].

m.p. 257–259° [4763], 255–257° [4802], 239–242° (d) [4795,4804].

One of the reported melting points is obviously wrong.

1H NMR [4804], ^{13}C NMR [4804], UV [4773].

1-(3,4-Dihydroxyphenyl)-2-[(1-methylethyl)amino]ethanone (*Sulfate*)

[27693-62-5]

 $C_{11}H_{15}NO_3$, 1/2 H₂SO₄ mol.wt. 258.28COCH₂NHCH(CH₃)₂, 1/2 H₂SO₄

Synthesis

- Preparation by reaction of 5 N ethanolic sulfuric acid with the crude base (58%) [4752].

m.p. 243° [4752].

1-(3,4-Dihydroxyphenyl)-2-(propylamino)ethanone

 $C_{11}H_{15}NO_3$ mol.wt. 209.25COCH₂NHC₃H₇

Syntheses

- Obtained by condensation of α -chloro-3,4-dihydroxyacetophenone with propylamine in ethanol or isopropanol at 60–80° [4795].
- Also obtained by treatment of 1-(3,4-dimethoxyphenyl)-2-(propylamino)ethanone with aqueous hydrobromic acid [4773].

$pK = 6.2$ [4730].

1-(3,4-Dihydroxyphenyl)-2-(propylamino)ethanone (Hydrochloride)

COCH₂NHC₃H₇, HCl

C₁₁H₁₅NO₃, HCl mol.wt. 245.71

Syntheses

- Obtained by condensation of α -chloro-3,4-dihydroxyacetophenone with propylamine in ethanol or isopropanol at 60–80°. The amino base which separated was treated with concentrated hydrochloric acid [4795].
 - Also obtained by total demethylation of 1-(3,4-dimethoxyphenyl)-2-(propylamino)ethanone hydrochloride (m.p. 193–194°), (82%) [4773] according to [4763].
- m.p. 240–241° (d) [4773], 234–236° (d) [4795].

2-(Dimethylamino)-1-(3-hydroxy-4-methoxyphenyl)ethanone

[55761-48-3]

C₁₁H₁₅NO₃ mol.wt. 209.25

**Synthesis**

- Obtained by reaction of dimethylamine with α -chloro-3-hydroxy-4-methoxyacetophenone in benzene [4792].

2-(Dimethylamino)-1-(3-hydroxy-4-methoxyphenyl)ethanone (Hydrochloride)

C₁₁H₁₅NO₃, HCl mol.wt. 245.71

Synthesis

- Obtained by reaction of α -chloro-3-hydroxy-4-methoxyacetophenone with dimethylamine in benzene, first at r.t. overnight, then at 50–60° for 1 h, followed by treatment of the isolated base with hydrochloric acid in ethyl ether (41%) [4792].

m.p. 220–221° (d) [4792].

2-(Cyclobutylamino)-1-(3,4-dihydroxyphenyl)ethanone (Hydrochloride)

COCH₂NH-, HCl

C₁₂H₁₅NO₃, HCl mol.wt. 257.72

Synthesis

- Obtained by treatment of 4-chloroacetyl catechol cyclobutylamine salt (m.p. 100–104°) in refluxing isopropanol for 3 h (21%) or in a sealed tube at 100° for 1.5 h (28%) [4796].
- m.p. 225–228° [4796]; IR [4796], UV [4796].

2-[(1,1-Dimethylethyl)amino]-1-(4-hydroxy-3-nitrophenyl)ethanone
 $C_{12}H_{16}N_2O_4$ mol.wt. 252.27
Synthesis

- Obtained by reaction of aqueous nitric acid with α -tert-butylamino-p-hydroxyacetophenone [4808].

2-(Butylamino)-1-(4-hydroxyphenyl)ethanone

[18986-11-3]

 $C_{12}H_{17}NO_2$ mol.wt. 207.27
**Syntheses**

- Preparation by reductive condensation of 4-hydroxyphenyl-glyoxal with n-butylamine in ethanol under saturated hydrogen chloride atmosphere in the presence of Raney nickel at 45° (75%) [4752].
 - Also obtained by reductive condensation of 4-hydroxy-phenylglyoxal potassium bisulfite ($C_8H_7O_6SK$, preparation given) with n-butylamine (85%) [4752].
 - Also obtained by reaction of n-butylamine with α -bromo-p-benzoyloxyacetophenone in isopropanol [4724].
 - Also obtained by reaction of n-butylaminoacetonitrile with phenol in the presence of aluminium chloride and hydrogen chloride in nitrobenzene [4763,4809].
 - Also obtained from the corresponding hydrochloride with ammonia [4809].
- m.p. 119–120° [4752,4809]; $pK_B = 5.45$ [4730].

2-(Butylamino)-1-(4-hydroxyphenyl)ethanone (Hydrochloride)

[28836-20-6]

 $C_{12}H_{17}NO_2, HCl$ mol.wt. 243.73
**Syntheses**

- Preparation from the base with hydrochloric acid (92%) [4752].
 - Preparation by reaction of n-butylaminoacetonitrile hydrochloride (m.p. 101–102°) [4763], (m.p. 95–96°) [4809] with phenol in nitrobenzene in the presence of hydrogen chloride and aluminium chloride as catalyst (Houben–Hoesch reaction), (78%) [4763], (66%) [4809].
 - Also obtained by reaction of α -bromo-p-benzoyloxyacetophenone with n-butylamine in isopropanol and subsequent treatment with hydrochloric acid (44%) [4724].
- m.p. 231° [4752,4809], 228–230° [4763], 228–229° [4724].

2-[(1,1-Dimethylethyl)amino]-1-(4-hydroxyphenyl)ethanone

[60853-18-1]

 $C_{12}H_{17}NO_2$ mol.wt. 207.27

Syntheses

- Obtained by reaction of tert-butylamine with α -bromo-p-benzoyloxyacetophenone in isopropanol [4724].
- Also obtained by reaction of tert-butylaminoacetonitrile hydrochloride with phenol in the presence of aluminium chloride and hydrogen chloride in nitrobenzene (modified Hoesch reaction) [4763,4798].

- Also refer to: [4810].

 $pK_B = 6.1$ [4730].**2-[(1,1-Dimethylethyl)amino]-1-(4-hydroxyphenyl)ethanone (Hydrochloride)**

[41489-87-6]

 $C_{12}H_{17}NO_2, HCl$ mol.wt. 243.73

Syntheses

- Preparation by successively adding tert-butylamino-acetonitrile hydrochloride and phenol to a solution of aluminium chloride in nitrobenzene, then bubbling hydrogen chloride for 6–8 h through the reaction mixture at 20–30° (75%) [4763], (63%) [4798].
- Also obtained by reaction of α -bromo-p-benzoyloxyacetophenone with tert-butylamine in isopropanol and subsequent treatment with hydrochloric acid to complete hydrolysis (25%) [4724].
- Also refer to: [4810].

m.p. 268–270° (d) [4763,4810], 254–257° (d) [4724], 253–255° [4798].

One of the reported melting points is obviously wrong.

2-(Butylamino)-1-(3,4-dihydroxyphenyl)ethanone

[33406-44-9]

 $C_{12}H_{17}NO_3$ mol.wt. 223.27

Synthesis

- Obtained by condensation of α -chloro-3,4-dihydroxyacetophenone with butylamine in ethanol or isopropanol at 60–80° [4795].

 pK_B [4730].**2-(Butylamino)-1-(3,4-dihydroxyphenyl)ethanone (Hydrochloride)** $C_{12}H_{17}NO_3, HCl$ mol.wt. 259.73

Synthesis

- Obtained by condensation of α -chloro-3,4-dihydroxyacetophenone with butylamine in ethanol or isopropanol at 60–80°. The amino base which separated was treated with concentrated hydrochloric acid [4795].

m.p. 206–208° (d) [4795].

$\text{C}_{12}\text{H}_{17}\text{NO}_3, \text{HCl}$ mol.wt. 259.73

Synthesis

- Obtained by condensation of α -chloro-3,4-dihydroxy-acetophenone with isobutylamine in ethanol or isopropanol at 60–80°. The amino ketone base which separated was treated with concentrated hydrochloric acid [4795].

1-(4-Hydroxy-3-methoxyphenyl)-2-[(1-methylethyl)amino]ethanone (Hydrochloride)

and isopropylamine solution in dilute ethanol to a suspension of Raney nickel in 84% ethanol maintained at 45° under excess hydrogen. Then, after catalyst elimination, addition of oxalic acid to the obtained solution [4802].

m.p. 236° (d) [4802].

$\text{C}_{12}\text{H}_{17}\text{NO}_3, \text{HCl}$ mol.wt. 259.73

Synthesis

- Preparation by treatment of the corresponding oxalate (SM) with 26% ethanolic hydrogen chloride (61% yield). SM was obtained in two steps. First, gradual addition of a 3-methoxy-4-hydroxyphenylglyoxal potassium bisulfite

2-(Cyclopentylamino)-1-(3,4-dihydroxyphenyl)ethanone

[16149-16-9]

$\text{C}_{13}\text{H}_{17}\text{NO}_3$ mol.wt. 235.28

**Synthesis**

- Obtained by condensation of α -chloro-3,4-dihydroxy-acetophenone with cyclopentylamine in ethanol or isopropanol at 60–80° [4795] or in boiling isopropanol for 30 min (98%) [4796].

hemihydrate: m.p. 182° [4796]; UV [4796].

2-(Cyclopentylamino)-1-(3,4-dihydroxyphenyl)ethanone (Hydrochloride)

[16149-17-0]

$\text{C}_{13}\text{H}_{17}\text{NO}_3, \text{HCl}$ mol.wt. 271.74

**Syntheses**

- Obtained by condensation of α -chloro-3,4-dihydroxy-acetophenone with cyclopentylamine in ethanol or isopropanol at 60–80°. The amino ketone base which separated was treated with concentrated hydrochloric acid [4795].

- Obtained by reaction of N-cycloptylnoradrenalone with hydrochloric acid (44%) [4796].

m.p. 213–214° (d) [4795], 205–207° [4796].

1-(3,4-Dihydroxyphenyl)-2-(1,2-dimethylpropylamino)ethanone (*Hydrochloride*)

$\text{C}_{13}\text{H}_{19}\text{NO}_3, \text{HCl}$ mol.wt. 273.76

Synthesis

- Obtained by condensation of α -chloro-3,4-di-hydroxyacetophenone with 1,2-dimethylpropylamine in ethanol or isopropanol at 60–80°. The amino ketone base which separated was treated with concentrated hydrochloric acid [4795].

m.p. 231–233° [4795].

1-(3,4-Dihydroxyphenyl)-2-(1-ethylpropylamino)ethanone (*Hydrochloride*)

$\text{C}_{13}\text{H}_{19}\text{NO}_3, \text{HCl}$ mol.wt. 273.76

Synthesis

- Obtained by condensation of α -chloro-3,4-dihydroxy-acetophenone with 1-ethylpropylamine in methanol or isopropanol at 60–80°. The amino ketone base which separated was treated with concentrated hydrochloric acid [4795].

m.p. 198–201° [4795].

1-(3,4-Dihydroxyphenyl)-2-(pentylamino)ethanone (*Hydrochloride*)

$\text{C}_{13}\text{H}_{19}\text{NO}_3, \text{HCl}$ mol.wt. 273.76

Synthesis

- Obtained by condensation of α -chloro-3,4-dihydroxy-acetophenone with pentylamine in ethanol or isopropanol at 60–80°. The amino ketone base which separated was treated with concentrated hydrochloric acid [4795].

m.p. 201–202° (d) [4795].

1-(4-Hydroxyphenyl)-2-(phenylamino)ethanone

[100866-41-9]

$\text{C}_{14}\text{H}_{13}\text{NO}_2$ mol.wt. 227.26

Syntheses

- Preparation by adding aniline (0.1 ml) and rhodium (II) acetate dimer (2 mg) to a suspension of resin **6** (52 mg)

in benzene and the mixture stirred at 85° for 2 h. The compound was isolated and purified by preparative TLC (51%) [4814].

N.B.: Resin **6** (resin-bound α -TMS diazoketone **6**) (preparation given).

– Also refer to: [4815].

¹H NMR [4814], ¹³C NMR [4814], IR [4814], MS [4814].

2-(Cyclohexylamino)-1-(3,4-dihydroxyphenyl)ethanone

[16149-18-1]

C₁₄H₁₉NO₃ mol.wt. 249.31

Syntheses

– Obtained by condensation of α -chloro-3,4-dihydroxy-acetophenone with cyclohexylamine in ethanol or isopropanol at 60–80° [4795] or in boiling isopropanol for 30 min [4796].

– Also obtained by reaction of 3,4-diacetoxy- α -iodo-acetophenone with cyclohexylamine in the presence of potassium carbonate in boiling acetone for 4 h (24%) [4796].

hemihydrate [4796]; m.p. 187–188° [4796]; IR [4796], UV [4796].

2-(Cyclohexylamino)-1-(3,4-dihydroxyphenyl)ethanone (*Hydrochloride*)

[16149-19-2]

C₁₄H₁₉NO₃, HCl mol.wt. 285.77

Synthesis

– Obtained by condensation of α -chloro-3,4-dihydroxy-acetophenone with cyclohexylamine in ethanol or isopropanol at 60–80°. The amino ketone base which separated was treated with concentrated hydrochloric acid [4795,4796].

m.p. 256–258° (d) [4795], 242–245° [4796].

2-(Cyclohexylamino)-1-(3,5-dihydroxyphenyl)ethanone

[161040-30-8]

C₁₄H₁₉NO₃ mol.wt. 249.31

Synthesis

– Obtained by treatment of 3,5-diacetoxy- α -bromo-acetophenone with cyclohexylamine in ethyl acetate and then refluxing with hydrochloric acid [4816].

1-(4-Hydroxy-3-methoxyphenyl)-2-(1-methyl-2-pyrrolidinyl)ethanone (-)
(Phyllostone)

[126262-24-6] $C_{14}H_{19}NO_3$ mol.wt. 249.31

Isolation from natural sources

– From the New Caledonian lauraceous plant *Cryptocarya phyllostemon* [4817].

Gum [4817]; $(\alpha)_D = -5^\circ$ (ethanol);

1H NMR [4817], IR [4817], UV [4817], MS [4817].

1-(4-Hydroxyphenyl)-2-[(phenylmethyl)amino]ethanone

$C_{15}H_{15}NO_2$ mol.wt. 241.29

Synthesis

– Obtained by adding ammonia to an aqueous solution of its hydrochloride [4818].

m.p. $132-133^\circ$ [4818].

1-(4-Hydroxyphenyl)-2-[(phenylmethyl)amino]ethanone (Hydrochloride)

$C_{15}H_{15}NO_2, HCl$ mol.wt. 277.75

Synthesis

– Obtained by reductive condensation of p-hydroxyphenyl-glyoxal hydrate and benzylamine under hydrogen in the presence of Raney nickel in ethanol at 40° . Then, treatment of the mixture with 6 N ethanolic hydrogen chloride (82%) [4818].

N.B.: The same reaction from p-hydroxyphenylglyoxal-potassium bisulfite at 45° gave a 79% yield [4818].

m.p. 240° [4818].

1-(3,4-Dihydroxyphenyl)-2-[(phenylmethyl)amino]ethanone

$C_{15}H_{15}NO_3$ mol.wt. 257.29

Syntheses

– Obtained by reaction of α -chloro-3,4-dihydroxyacetophenone with benzylamine [4740].

– Also obtained by adding ammonia to an aqueous solution of its hydrochloride [4818].

m.p. $147-148^\circ$ [4818].

1-(3,4-Dihydroxyphenyl)-2-[(phenylmethyl)amino]ethanone (Hydrochloride)

COCH₂NHCH₂C₆H₅, HCl

C₁₅H₁₅NO₃, HCl mol.wt. 293.75

Synthesis

– Obtained by reductive condensation of 3,4-dihydroxyphenyl-glyoxal and benzylamine under hydrogen in the presence of Raney nickel in ethanol at 45°. Then, treatment of the mixture with ethanolic hydrogen chloride (73%) [4818].

m.p. 220–221° [4818].

1-(3,4-Dihydroxyphenyl)-2-(heptylamino)ethanone

COCH₂NHC₇H₁₅

C₁₅H₂₃NO₃ mol.wt. 265.35

Synthesis

– Preparation by reaction of excess heptylamine with α-chloro-3,4-diacetoxyacetophenone [4740].

m.p. 125° [4740].

1-(3,4-Dihydroxyphenyl)-2-[2-(phenylethyl)amino]ethanone (Hydrochloride)

COCH₂NHCH₂CH₂C₆H₅, HCl

C₁₆H₁₇NO₃, HCl mol.wt. 307.78

Synthesis

– Obtained by total demethylation of 1-(3,4-dimethoxyphenyl)-2-[(phenylethyl)amino]ethanone hydrochloride (m.p. 219–222°), (79%) [4773] according to [4763].

monohydrate [4773]; m.p. 220–222° (d) [4773].

1-(3-Hydroxy-4-methoxyphenyl)-2-[(phenylmethyl)amino]ethanone (Hydrochloride)

COCH₂NHCH₂C₆H₅, HCl

C₁₆H₁₇NO₃, HCl mol.wt. 307.78

Synthesis

– Obtained by reductive condensation of 3-hydroxy-4-methoxyphenylglyoxal and benzylamine under hydrogen in the presence

of Raney nickel in ethanol at 45° for 45 min. Then, elimination of the catalyst and acidification of the mixture with hydrochloric acid (54%) [4818].

m.p. 226° [4818].

1-(4-Hydroxy-3-methoxyphenyl)-2-[(phenylmethyl)amino]ethanone
(*Hydrochloride*)

COCH₂NHCH₂C₆H₅, HCl

C₁₆H₁₇NO₃, HCl mol.wt. 307.78

Synthesis

– Preparation by reductive condensation of 4-hydroxy-3-methoxyphenylglyoxal-potassium-bisulfite and benzylamine under hydrogen in the presence of Raney nickel in dilute ethanol at 45° for 1.75 h. Then, elimination of the catalyst and acidification of the mixture with hydrochloric acid (76%) [4818].

m.p. 230° [4818].

2-(Benzyl-methyl-amino)-1-(2-hydroxy-5-methylphenyl)ethanone

C₁₇H₁₉NO₂ mol.wt. 269.34

Synthesis

– Obtained by condensation of 2-hydroxy-5-methyl- α -bromoacetophenone with benzyl methyl amine in ethyl ether at r.t. for 24–72 h [4749].

2-(Benzyl-methyl-amino)-1-(2-hydroxy-5-methylphenyl)ethanone (*Hydrochloride*)

C₁₇H₁₉NO₂, HCl mol.wt. 305.80

Synthesis

– Obtained by reaction of 2-hydroxy-5-methyl- α -bromoacetophenone with N-benzylmethylamine in ethyl ether at r.t. for 24–72 h, followed by treatment with hydrochloric acid [4749].

m.p. 86°5–187° [4749].

2-[Bis(phenylmethyl)amino]-1-(4-hydroxyphenyl)ethanone

[88693-95-2]

COCH₂N(CH₂C₆H₅)₂

C₂₂H₂₁NO₂ mol.wt. 331.41

Synthesis

– Preparation by reaction of p-hydroxyphenacyl chloride (1 mol) with dibenzylamine (2 mol) in refluxing ethanol for 4 h [4580].
uncrystallizable oil [4580].

2-[Bis(phenylmethyl)amino]-1-(4-hydroxyphenyl)ethanone (Hydrochloride) $C_{22}H_{21}NO_2, HCl$ mol.wt. 367.87**Synthesis**

- Preparation by adding a solution of ethanolic hydrogen chloride to a solution of α -dibenzylamino-p-hydroxy-acetophenone in chloroform (77%) [4580].

 $COCH_2N(CH_2C_6H_5)_2, HCl$

m. p. 239–241° (d) [4580].

Chapter 13

Compounds Derived from Alkoxyacetic Acids

13.1 Compounds Derived from Methoxyacetic Acids

1-(2,4-Dihydroxy-3-iodophenyl)-2-methoxyethanone

[72511-78-5]

$C_9H_9IO_4$ mol.wt. 308.07

Synthesis

– Obtained by iodination of 2,4-dihydroxy- α -methoxy-acetophenone with iodine and periodic acid in ethanol for 2 h at r.t. (74%) [4819].

m.p. 157–158° [4819].

1-(2-Hydroxyphenyl)-2-methoxyethanone

[138206-45-8]

$C_9H_{10}O_3$ mol.wt. 166.18

Syntheses

– Preparation by hydrogenolysis of 2-(benzyloxy)- α -methoxyacetophenone (SM) in the presence of Pd/C in ethanol for 1 h in hydrogen atmosphere (96%). SM was obtained by treatment of 2-(benzyloxy)phenylmagnesium bromide with methoxyacetonitrile in THF, first in an ice bath, then stirred for 2 h at r.t. (56%, colourless oil) [4395].

– Also obtained by decomposition of 1-(2-acetoxyphenyl)-2-diazoethanone in methanol with copper bronze (54%). The diazoketone (deep red thick oil) was prepared by reaction of diazomethane with 2-acetoxybenzoyl chloride in ethyl ether [4820].

colourless oil [4395], pale yellow liquid [4820]; b.p._{0.6–0.8} 76–77° [4820];

¹H NMR [4395], IR [4395], MS [4395].

1-(3-Hydroxyphenyl)-2-methoxyethanone

[54794-31-9]

 $C_9H_{10}O_3$ mol.wt. 166.18

Syntheses

– Refer to: [4821] and [4822] (Polish patent).

N.B.: K salt [4823].**1-(4-Hydroxyphenyl)-2-methoxyethanone**

[32136-81-5]

 $C_9H_{10}O_3$ mol.wt. 166.18

Syntheses

– Obtained by scission of 5-hydroxy-4-(4-hydroxyphenyl) 5*H*-furan-2-one with potassium hydroxide in methanol at 20° for 24 h (85%) [4824].

– Also obtained by catalytic debenzoylation of 1-(4-benzoyloxyphenyl)-2-methoxyethanone in methanol under hydrogen (five bars) in the presence of 5% Pd/C for 24 h (81%) [4824].

– Also obtained by methoxylation of the trimethylsilyl enol ether of 4-acetoxyacetophenone (SM) according to the procedure [4825], iodosobenzenediacetate replaced iodosobenzene, followed by hydrolysis of the ester complex formed (40%). SM was prepared in two steps from *p*-hydroxyacetophenone, namely acetylation, then trimethylsilylation (80%) [4826].

– Also obtained by reaction of 2-chloro-1-(4-hydroxyphenyl)ethanone (m.p. 151°) with methanolic sodium methoxide at r.t. for 24 h (90%) [4827].

– Also refer to: [4828–4833].

m.p. 133–135° [4827], 128–130° [4824];

¹H NMR [4824,4827], ¹³C NMR [4824], IR [4824,4827],

MS [4824,4827].

1-(2,4-Dihydroxyphenyl)-2-methoxyethanone

[57280-75-8]

 $C_9H_{10}O_4$ mol.wt. 182.18

Syntheses

– Obtained by reaction of methoxyacetonitrile with resorcinol and subsequent hydrolysis of the ketimine hydrochloride (m.p. 205–207°) formed (Hoesch reaction) [4834–4837].

– Also obtained by decomposition of 1-(2,4-diacetoxyphenyl)-2-diazoethanone in methanol with copper bronze (43%). The diazoketone (brownish yellow glassy solid) was prepared by reaction of diazomethane with 2,4-diacetoxybenzoyl chloride in ethyl ether [4820].

– Also obtained by alkaline degradation of 7-acetoxy-3,4-dimethoxycoumarin (m.p. 123–124°) with sodium hydroxide or sodium carbonate [4838].

– Also refer to: [4640,4819,4839–4848].

m.p. 138–139° [4836], 136–138° [4820], 136° [4837];

¹H NMR [4836], ¹³C NMR [4836], MS [4836].

1-(2,6-Dihydroxyphenyl)-2-methoxyethanoneC₉H₁₀O₄ mol.wt. 182.18

Synthesis

– Obtained by Fries rearrangement of 4-methylumbelliferone methoxyacetate, followed by alkaline hydrolysis of the resulting 8-(2-methoxyacetyl)-4-methylumbelliferone [4849].

1-(3,4-Dihydroxyphenyl)-2-methoxyethanone

[64349-40-2]

C₉H₁₀O₄ mol.wt. 182.18

Syntheses

– Obtained by methoxylation of the trimethylsilyl enol ether of 3,4-diacetoxyacetophenone (SM) according to the procedure [4825], iodosobenzenediacetate replaced iodosobenzene, followed by hydrolysis of the ester

- complex formed (40%). SM was prepared in two steps from 3,4-dihydroxy-acetophenone, namely acetylation (70%), then trimethyl-silylation (88%) [4850].
- Also refer to: [4828,4851].

2-Methoxy-1-(2,4,6-trihydroxyphenyl)ethanone

[55317-02-7]

C₉H₁₀O₅ mol.wt. 198.18

Syntheses

- Preparation by reaction of methoxyacetonitrile with phloro-glucinol (Hoesch reaction) [4834, 4837,4852–4856], (80%) [4857], (79%) [4858], (77%) [4836], (75–80%) [4859], (50%) [4860].
 - Also refer to: [4839,4840,4842–4844,4861–4878].
- monohydrate [328074-83-5]: [4837,4856]; Crystal data [4856];
 m.p. 195–196° [4854], 192–194° [4836,4857], 192° [4837,4879],
 191–194° [4860];
¹H NMR [4836,4857], ¹³C NMR [4836,4857,4880], MS [4836,4857].

1-(2,4-Dihydroxy-3-iodo-6-methoxyphenyl)-2-methoxyethanone

[74047-42-0]

C₁₀H₁₁IO₅ mol.wt. 338.10

Synthesis

– Preparation by iodination of 2,4-dihydroxy-6, α-dimethoxy-acetophenone with iodine and periodic acid in dilute ethanol for 2 h at 60–70° (78%) [4881].

m.p. 191–193° [4881];

N.B.: This ketone was characterized by its corresponding diacetate: m.p. 112–114° and ¹H NMR [4881].

1-(2-Hydroxy-6-methylphenyl)-2-methoxyethanone

[75278-05-6]

 $C_{10}H_{12}O_3$ mol.wt. 180.20

Synthesis

– Obtained by fission of 3-methoxy-5-methylflavone (m.p. 113–115°) with ethanolic potash (50%) [4882].

N.B.: This compound could not be prepared by Hoesch condensation of m-cresol with methoxyacetonitrile [4882].

oil [4882]; 1H NMR [4882].

1-(2,4-Dihydroxy-6-methylphenyl)-2-methoxyethanone

[75278-00-1]

 $C_{10}H_{12}O_4$ mol.wt. 196.20

Syntheses

– Preparation by Hoesch condensation of orcinol with methoxyacetonitrile (53%) [4882].

– Also refer to: [4863].

m.p. 182–183° [4882]; 1H NMR [4882].

1-(2-Hydroxy-4-methoxyphenyl)-2-methoxyethanone (*Fisetol dimethyl ether*)

[4940-44-7]

 $C_{10}H_{12}O_4$ mol.wt. 196.20

Syntheses

– Preparation by reaction of methoxyacetonitrile with resorcinol monomethyl ether (Hoesch reaction) [4837], (80%) [4883].

– Also obtained by decomposition of 1-(2-acetoxy-4-methoxyphenyl)-2-diazoethanone in methanol with copper bronze for 30 min at 50–55°, followed by hydrolysis of the acetyl derivative (57%). The diazoketone (m.p. 102–105°) was prepared by reaction of diazomethane with 2-acetoxy-4-methoxybenzoyl chloride in ethyl ether for 12 h at –5° [4820].

– Obtained by alkaline degradation of different polymethoxyflavones with potassium hydroxide,

- From *fisetin tetramethyl ether* (3,7,3',4'-tetramethoxyflavone) [4837,4884–4890];
- From 3,7,3',4',5'-pentamethoxyflavone (SM) (m.p. 149°) [4891], (81%) [4890]. SM was prepared by methylation of 3,7,3',4',5'-pentahydroxyflavone, itself isolated from *Robinia pseudacacia* [4890];
- From *kanugin* (3,7,3'-trimethoxy-4',5'-methylenedioxyflavone) (m.p. 203–205°), isolated from the root bark of *Pongamia glabra* [4892];
- From *demethoxykanugin* (3,7-dimethoxy-3',4'-methylenedioxyflavone) (SM) (m.p. 142°), [4893], (86%) [4894]. SM was isolated from the seed oil of *karanja* (*Pongamia glabra*) [4894] or from fresh root bark and the stem bark of *Pongamia glabra* [4893].

- Also obtained by alkaline degradation of 3,7-dimethoxychromone with sodium ethoxide [4895].
- Also obtained by alkaline degradation of 3,4,7-trimethoxycoumarin (m.p. 113–115°) with refluxing 5% aqueous sodium hydroxide for 1 h (60%) [4838].
- Also obtained by partial methylation of α -methoxyresacetophenone with dimethyl sulfate,
 - in the presence of potassium carbonate in refluxing benzene for 12 h (83%) [4848] or for 10 h (78%) [4846];
 - in 5% aqueous sodium hydroxide [4837,4896], (70%) [4835].
- Also refer to: [4640,4842,4897].

m.p. 132° [4883], 69–70° [4820,4848], 68–69° [4893], 67–68° [4838], 67° [4890,4894], 66° [4837,4846,4891], 65–67° [4892], 65–66° [4835]. One of the reported melting points is obviously wrong.
¹H NMR [4883]; TLC [4838].

1-(2-Hydroxy-5-methoxyphenyl)-2-methoxyethanone

[103323-12-2] $C_{10}H_{12}O_4$ mol.wt. 196.20

Synthesis

- Obtained by decomposition of 1-(2-acetoxy-5-methoxy-phenyl)-2-diazoethanone in methanol with copper bronze (57%). The diazoketone (dark reddish liquid) was prepared by reaction of diazomethane with 2-acetoxy-5-methoxy-benzoyl chloride in ethyl ether [4820].

reddish liquid [4820]; b.p._{0.3-0.4} 98–100° [4820].

1-(4-Hydroxy-3-methoxyphenyl)-2-methoxyethanone

[64349-38-8] $C_{10}H_{12}O_4$ mol.wt. 196.20

Synthesis

- Refer to: [4828] (Japanese paper).

1-(2-Hydroxyphenyl)-2,2-dimethoxyethanone

[127255-97-4] $C_{10}H_{12}O_4$ mol.wt. 196.20

Synthesis

- Preparation by reaction of o-hydroxyacetophenone with catalytic amounts of diphenyl diselenide and excess of ammonium peroxydisulfate in refluxing methanol for 1.5 h (72%) [4898].

oil [4898]; TLC [4898]; GLC [4898];
¹H NMR [4898], ¹³C NMR [4898], MS [4898].

1-(4-Hydroxyphenyl)-2,2-dimethoxyethanone

[144757-78-8]

 $C_{10}H_{12}O_4$ mol.wt. 196.20

Syntheses

- Obtained by oxidation of p-hydroxyacetophenone with methyl nitrite gas in methanolic hydrogen chloride [4899], at 0–5° over 4 h (57%) [4900].

N.B.: The reaction involves oxidation with a source of nitrosonium ion (NO^+) in the presence of an alcohol and a source of H^+ to give a phenylglyoxal acetal.

Experimental procedure: Preparation by reaction of methyl nitrite with p-hydroxyacetophenone in 1.25 N methanolic hydrogen chloride between 0° and 5° for 4 h (72%). The methyl nitrite source was supplied by adding gradually 33% aqueous sulfuric acid to a sodium nitrite solution in aqueous methanol (1:1) under nitrogen.

N.B.: During the course of the reaction, the bath was maintained at about –20°. The methyl nitrite generator was not cooled [4901].

- Also obtained from electrosynthesis by a selenium catalyzed transformation of p-hydroxy-acetophenone in methanol at r.t. (22%) [4902].
- Also refer to: [4899,4903].

white solid [4903];

 1H NMR [4901,4902], ^{13}C NMR [4901], MS [4901,4902].**1-(2,4-Dihydroxy-6-methoxyphenyl)-2-methoxyethanone**

[62330-14-7]

 $C_{10}H_{12}O_5$ mol.wt. 212.20

Syntheses

- Preparation by condensation of methoxyacetone nitrile with phloroglucinol monomethyl ether (Hoesch reaction) (60%) [4879].
 - Preparation by a three-step synthesis: first, tosylation of α -methoxyphloroacetophenone with p-toluenesulfonyl chloride in the presence of potassium carbonate in refluxing acetone for 4 h. Dimethyl sulfate and potassium carbonate were then added and the mixture refluxed for 36 h more. Finally, saponification of the residue isolated by distillation with refluxing 5% methanolic potassium hydroxide for 4 h (42%) [4861].
 - Also refer to: [4839,4840,4881,4904].
- m.p. 208° [4879], 190–192° [4861].

1-(2,5-Dihydroxy-4-methoxyphenyl)-2-methoxyethanone

[35930-51-9]

C₁₀H₁₂O₅ mol.wt. 212.20

Syntheses

- Obtained on oxidation of 2-hydroxy-4, α -dimethoxy-acetophenone with potassium persulfate in aqueous sodium hydroxide at 30–40° for 90 min and at r.t. for 36 h [4905] (18%) [4848] (Elbs reaction).
- Also obtained by reaction of methoxyacetonitrile with 1,4-di-hydroxy-2-methoxybenzene (Hoesch reaction) (13%) [4906].
- Also refer to: [4907,4908].

trihydrate [4848];

m.p. 150° [4906], 148–149° [4905], 145–146° [4848].

1-(2,6-Dihydroxy-4-methoxyphenyl)-2-methoxyethanone

[70390-87-3]

C₁₀H₁₂O₅ mol.wt. 212.20

Syntheses

- Obtained by alkaline degradation of quercetin 3,7,3',4'-tetra-methyl ether (m.p. 159–160°) (5-hydroxy-3,7,3',4'-tetra-methoxyflavone) (SM) with potassium hydroxide. SM was isolated from *citrus reticulata* Blanco (Rutaceae) [4909].
 - Also obtained by partial methylation of α -methoxy-phloroacetophenone with diazomethane in a methanol/ethyl ether mixture at 0° for 2 h (<8%) [4879].
 - Also refer to: [4871,4910,4911].
- m.p. 161–162° [4879]; MS [4909].

2-Methoxy-1-(2,4,6-trihydroxy-3-methylphenyl)ethanone

[110333-13-6]

C₁₀H₁₂O₅ mol.wt. 212.20

Syntheses

- Preparation by condensation of 2-methylphloroglucinol with methoxyacetic acid-boron trifluoride complex at 28–30° for 24 h (50%) [4912].
 - Preparation by reaction of methoxyacetonitrile with 2-methylphloroglucinol (28%) (Hoesch reaction) [4913].
 - Also refer to: [4914].
- m.p. 207° [4912], 206–207° [4913]; sesquihydrate [4913].

2-Methoxy-1-(6-methoxy-2,4,5-trihydroxyphenyl)ethanone

[65039-95-4]

C₁₀H₁₂O₆ mol.wt. 228.20

Syntheses

– Obtained by reaction of potassium persulfate with 2,4-di-hydroxy-6,α-dimethoxyacetophenone in aqueous sodium hydroxide at r.t. under nitrogen for 38 h (11%) [4904] (Elbs reaction).

– Also refer to: [4915,4916].

m.p. 163° [4904]; IR [4904], UV [4904].

2-Methoxy-1-(2,4,6-trihydroxy-3-methoxyphenyl)ethanone

[16297-02-2]

C₁₀H₁₂O₆ mol.wt. 228.20

Synthesis

– Preparation by reaction of methoxyacetonitrile with iretol (Hoesch reaction) [4917], (59%) [4918].

m.p. 157–158° (anhydrous) [4917,4918], 82–84° [4919], 79–80° (dihydrate) [4918].

1-[6-Hydroxy-2-methoxy-3,4-(methylenedioxy)phenyl]-2-methoxyethanone

[91144-13-7]

C₁₁H₁₂O₆ mol.wt. 240.21

Syntheses

– Obtained by reaction of methoxyacetonitrile with 3-methoxy-4,5-(methylenedioxy)phenol (Hoesch reaction) [4905], (41%) [4920], (29%) [4904].

– Also obtained (trace) by reaction of methylene iodide with 3,4,6-trihydroxy-2,α-dimethoxyacetophenone in the presence of potassium carbonate in refluxing acetone for 30 h (1%) [4904].

– Also obtained by alkaline degradation of *meliternatin* with boiling alcoholic potassium hydroxide [4862], for 7 h (65%) [4921]. *Meliternatin*—3,5-dimethoxy-6,7,3',4'-bis(methylenedioxy)flavone—(m.p. 198–198°5) was first isolated from *Melicope ternata* (Rutaceae) [4921], then from *Melicope mantelli* Buch [4922].

m.p. 142–144° [4862,4921], 140–142° [4904,4920]; IR [4904,4920].

2-Chloro-1-(2-hydroxy-4,6-dimethoxyphenyl)-2-methoxyethanone

[88092-53-9]

 $C_{11}H_{13}ClO_5$

mol.wt. 260.67

Synthesis

– Obtained (by-product) by reaction of 1-(2-hydroxy-4,6-dimethoxyphenyl)-2-methoxyethanone with iron complex $[Fe(DMF)_3Cl_2]$ $[FeCl_4]$ in refluxing dilute methanol for 4 h (<3%) [4923].

semi-solid [4923]; column chromatography [4923];

1H NMR [4923], UV [4923].

1-(4,6-Dihydroxy-2,3-dimethylphenyl)-2-methoxyethanone

[132020-84-9]

 $C_{11}H_{14}O_4$

mol.wt. 210.23

Syntheses

– Preparation by reaction of methoxyacetone nitrile with 1,3-di-hydroxy-4,5-dimethylbenzene (Hoesch reaction) (71%) [4858].

– Also refer to: [4863,4864].

1-(2-Hydroxy-3,4-dimethoxyphenyl)-2-methoxyethanone

[21417-76-5]

 $C_{11}H_{14}O_5$

mol.wt. 226.23

Syntheses

– Obtained by alkaline hydrolysis of 3,7,8,3',4'-pentamethoxy-flavone (m.p. 153°) with 10% potassium hydroxide solution in boiling ethanol for 4 h (58%) [4924].

– Also obtained by alkaline hydrolysis of O-pentamethyl-dihydromelanoxetin (3,7,8,3',4'-pentamethoxyflavanone) (m.p. 146–148°) with 8% potassium hydroxide solution in refluxing ethanol for 30 min [4925].

m.p. 85–86° [4924], 82–84° [4925]; 1H NMR [4924].

1-(2-Hydroxy-4,5-dimethoxyphenyl)-2-methoxyethanone $C_{11}H_{14}O_5$

mol.wt. 226.23

Synthesis

– Preparation by partial methylation of 4, α -dimethoxy-2,5-dihydroxyacetophenone with dimethyl sulfate in the presence of potassium carbonate in refluxing benzene for 12 h (38%) [4848].

m.p. 90–91° [4848].

1-(2-Hydroxy-4,6-dimethoxyphenyl)-2-methoxyethanone

[17874-42-9]

C₁₁H₁₄O₅

mol.wt. 226.23

Syntheses

– Preparation by partial methylation of α -methoxyphloro-acetophenone [4874],

- with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone/benzene mixture for 12 h (60%) [4876], (38%) [4871];
 - with methyl iodide in the presence of potassium carbonate in refluxing acetone for 3 h [4913];
 - with diazomethane (1 mol) in a methanol/ethyl ether mixture at 0° for 2 h [4879].
 - Also obtained by condensation of phloroglucinol dimethyl ether with methoxyacetonitrile (Hoesch reaction) (45%) [4858], (25%) [4876].
 - Also obtained by alkaline degradation of various polymethoxyflavones,
 - From *izalpinin* dimethyl ether (m.p. 194°) (3,5,7-trimethoxyflavone) on boiling with 10% ethanolic potassium hydroxide for 3 h (52%) [4926];
 - From *kaempferide* trimethyl ether (m.p. 153–154°) (SM) (3,5,7,4'-tetramethoxyflavone) with potassium hydroxide. SM was isolated from *Citrus reticulata* Blanco (Rutaceae) [4909];
 - From *populnetin* tetramethyl ether, so called *kaempferol* tetramethyl ether (m.p. 165–166°) (3,5,7,4'-tetramethoxyflavone) by refluxing with 8% ethanolic potassium hydroxide for 6 h [4874];
 - From *morin* pentamethyl ether (m.p. 154–157°) (3,5,7,2',4'-pentamethoxyflavone) by heating at reflux with 20% ethanolic potassium hydroxide for 8–10 h [4884];
 - From *quercetin* pentamethyl ether (m.p. 148–150°) (3,5,7,3',4'-pentamethoxyflavone) with ethanolic potassium hydroxide [4884,4889] or with boiling dilute ethanolic sodium hydroxide (54%) [4927];
 - From *oxyayanin-A* trimethyl ether (m.p. 190–193°) (3,5,7,2',4',5'-hexamethoxyflavone) [4928], with potassium hydroxide in boiling ethanol for 8 h (57%) [4868];
 - From *myricetin* hexamethyl ether (m.p. 153°) (3,5,7,3',4',5'-hexamethoxyflavone) with boiling 10% ethanolic potassium hydroxide [4889,4929].
 - Also obtained by alkaline degradation of 3,4,5,7-tetramethoxycoumarin with refluxing 5% aqueous sodium hydroxide for 1 h [4838].
 - Also refer to: [4640,4837,4842,4862,4865,4872,4923,4930–4935].
- m.p. 104–106° [4874], 104–105° [4913], 103–104° [4868,4876], 102–104° [4838,4884,4889,4928], 102° [4926,4927,4929], 98–100° [4871], 98° [4879];
- ¹H NMR [4871], ¹³C NMR [4880], IR [4871,4927], MS [4909];
- TLC [4838]; GLC [4936].

1-(4-Hydroxy-2,6-dimethoxyphenyl)-2-methoxyethanoneC₁₁H₁₄O₅ mol.wt. 226.23

Synthesis

m.p. 259–260° [4876].

- Obtained (by-product) by condensation of phloroglucinol dimethyl ether with methoxyacetonitrile (Hoesch reaction) (<2%) [4876].

1-(2,4-Dihydroxy-3,6-dimethoxyphenyl)-2-methoxyethanone

[42923-40-0]

C₁₁H₁₄O₆ mol.wt. 242.23

Syntheses

- Obtained by reaction of methoxyacetonitrile with 2,5-di-methoxyresorcinol (Hoesch reaction) [4937], (82%) [4938], (62%) [4939,4940].
 - Also obtained by debenzoylation of 4-benzyloxy-2-hydroxy-3,6,α-trimethoxyacetophenone in acetic acid in the presence of hydrochloric acid (d = 1.16) on a boiling water bath for 1 h [4941].
 - Also refer to: [4942–4944].
- m.p. 150–151° [4938–4940], 149–150° [4941].

1-(2,5-Dihydroxy-3,6-dimethoxyphenyl)-2-methoxyethanoneC₁₁H₁₄O₆ mol.wt. 242.23

Synthesis

m.p. 175–177° [4945].

- Obtained by reduction of 2-(2-methoxyacetyl)-3,6-di-methoxy-1,4-benzoquinone (m.p. 222–224°) with sulfur dioxide in ethanol (40%). This quinone was prepared by oxidation of 2-hydroxy-3,5,6,α-tetramethoxyacetophenone with fuming nitric acid in ethyl ether [4945].

1-(2,6-Dihydroxy-3,4-dimethoxyphenyl)-2-methoxyethanone

[100059-77-6]

C₁₁H₁₄O₆ mol.wt. 242.23

Synthesis

- Preparation by reaction of methoxyacetonitrile with 4,5-di-methoxyresorcinol (Hoesch reaction) [4938,4946,4947].

Isolation from natural sources

- Preparation by hydrolysis of *Casticin* (m.p. 186–187°) (5,3'-dihydroxy-3,6,7,4'-tetramethoxy-flavone) with potassium hydroxide in refluxing ethanol for 4 h under nitrogen (66%) [4948].
 - Also by degradation of *Gnaphaliin* monomethyl ether (SM) (m.p. 176–178°) (5-hydroxy-3,7,8-trimethoxyflavone) with 10% ethanolic potassium hydroxide for 2 h under nitrogen. SM was prepared by partial methylation of *Gnaphaliin* (m.p. 174–175°) (3,5-dihydroxy-7,8-dimethoxy-flavone), itself isolated from the aerial parts of *Gnaphalium obtusifolium* [4949].
 - Also refer to: [4876].
- m.p. 129–130° [4946,4948].

1-(3,6-Dihydroxy-2,4-dimethoxyphenyl)-2-methoxyethanone

[14639-73-7]

C₁₁H₁₄O₆ mol.wt. 242.23

Syntheses

- Preparation from 2-hydroxy-4,6,α-trimethoxyacetophenone by Elbs reaction (22%) [4858],
 - with sodium persulfate in aqueous sodium hydroxide at 15–20° for 23 h [4868,4950], (23%) [4876], (32%) [4877];
 - with potassium persulfate in aqueous sodium hydroxide at 15–20° for 20 h (26%) [4928].
 - Also refer to: [4872,4907,4908,4915,4916,4951–4954].
- m.p. 139–140° [4877], 135–136° [4876,4928];
sublimation at 115–130°/0.2 mm [4877]; ¹H NMR [4950], ¹³C NMR [4880].

1-(4,6-Dihydroxy-2,3-dimethoxyphenyl)-2-methoxyethanoneC₁₁H₁₄O₆ mol.wt. 242.23

Synthesis

- Preparation by reaction of methoxyacetonitrile with 4,5-di-methoxyresorcinol, according to the Hoesch method [4946].
- m.p. 129–130° [4946].

2-Methoxy-1-(2,4,6-trihydroxy-3,5-dimethoxyphenyl)ethanone

[85950-49-8]

C₁₁H₁₄O₇ mol.wt. 258.23

Synthesis

- Obtained by condensation of methoxyacetonitrile with 1,3,5-trihydroxy-2,4-dimethoxybenzene (m.p. 98°) (Hoesch reaction) [4955], (85%) [4956].
- m.p. 152–153° [4955]; IR [4956], UV [4956], MS [4956].

1-[2-Hydroxy-3-iodo-4-(2-propenyloxy)phenyl]-2-methoxyethanone

[72511-79-6]

 $C_{12}H_{13}IO_4$ mol.wt. 348.14

Synthesis

– Obtained by allylation of 2,4-dihydroxy-3-iodo- α -methoxyacetophenone with allyl bromide in

the presence of potassium carbonate in refluxing acetone for 4–5 h (53%) [4819].

m.p. 88–90° [4819]; 1H NMR [4819].

1-[2,4-Dihydroxy-3-(2-propenyl)phenyl]-2-methoxyethanone $C_{12}H_{14}O_4$ mol.wt. 222.24

Synthesis

– Obtained by Claisen rearrangement of 2-hydroxy-4-allyloxy- α -methoxyacetophenone by heating for 2 h at 190–195° under reduced pressure (67%) [4957].

m.p. 139–139°5 [4957].

1-[2-Hydroxy-4-(2-propenyloxy)phenyl]-2-methoxyethanone

[57280-73-6]

 $C_{12}H_{14}O_4$ mol.wt. 222.24

Syntheses

– Obtained by reaction of allyl bromide with α -methoxyresacetophenone in the presence of potassium carbonate in refluxing acetone for 5 h (52%) [4957].

– Also refer to: [4838].

pale yellow viscous liquid [4957].

1-[2,4-Dihydroxy-6-(2-propenyloxy)phenyl]-2-methoxyethanone

[62330-10-3]

 $C_{12}H_{14}O_5$ mol.wt. 238.24

Synthesis

– Preparation by a three-step synthesis: first, tosylation of α -methoxyphloroacetophenone with p-toluenesulfonyl chloride in the presence of

potassium carbonate in refluxing acetone for 4 h. Allyl bromide and potassium carbonate were then added to the reaction mixture and refluxed for 30 h. Finally, saponification of the residue, isolated by distillation, with refluxing 5% methanolic potassium hydroxide for 4 h (38%) [4861].

m.p. 184–186° [4861].

1-(2-Ethoxy-6-hydroxy-4-methoxyphenyl)-2-methoxyethanone

[21587-55-3]

 $C_{12}H_{16}O_5$

mol.wt. 240.26

Syntheses

- Obtained by alkaline degradation of various flavones,
 - with *potassium hydroxide* in boiling ethanol for 8 h,
 - From 5-ethoxy-3,7,3',4'-tetramethoxyflavone (20%) [4927];
 - From 5-ethoxy-3,7,2',4',5'-pentamethoxyflavone [4928];
 - From 5,2'-diethoxy-3,7,4',5'-tetramethoxyflavone [4928];
 - From 5,2',5'-triethoxy-3,7,4'-trimethoxyflavone (*oxyyanin-A triethyl ether*) (57%) [4868];
 - with *sodium hydroxide* in boiling ethanol for 1 h,
 - From 5,3',5'-triethoxy-3,7,4'-trimethoxyflavone (33%) [4958]. This flavone (m.p. 139°) was prepared from *myricetin*, first by selective methylation, then ethylation of the obtained *myricetin 3,7,4'-trimethyl ether* (m.p. 207–208°) [4958];
 - From 5,3'-diethoxy-3,7,4'-trimethoxyflavone. This flavone was prepared from *quercetin*, first by selective methylation, then ethylation of the obtained *quercetin 3,7,4'-trimethyl ether* (m.p. 174°) [4958].
- m.p. 110° [4928], 109–110° [4868], 106–107° [4927], 95° [4958];
¹H NMR [4958], MS [4958].

1-(4-Ethoxy-2-hydroxy-6-methoxyphenyl)-2-methoxyethanone

[91555-84-9]

 $C_{12}H_{16}O_5$

mol.wt. 240.26

Syntheses

- Obtained by alkaline degradation of various polysubstituted flavones with potassium hydroxide in refluxing ethanol,
 - From 7-ethoxy-3,5-dimethoxyflavone (m.p. 128–129°) (81%) [4959];
 - From 7-ethoxy-3,5,4'-trimethoxyflavone [4874];
 - From 7-ethoxy-3,5,3',4'-tetramethoxyflavone (m.p. 158–160°) (81%) [4959].
- m.p. 108–110° [4874], 105–106° [4959].

1-(2-Hydroxy-4,6-dimethoxy-3-methylphenyl)-2-methoxyethanone $C_{12}H_{16}O_5$

mol.wt. 240.26

Syntheses

- Obtained by treatment of α -methoxyphloracetophenone with methyl iodide in the presence of potassium carbonate in refluxing acetone for 3 h [4913,4960], (18%) [4961].

- Also obtained by condensation of methoxyacetonitrile with 2-hydroxy-4,6-dimethoxytoluene (Hoesch reaction) [4961].
 - Also obtained (by-product) by treatment of α -methoxyphloracetophenone with dimethyl sulfate in the presence of potassium carbonate by refluxing in an acetone and benzene mixture (1:3, v/v) for 12 h (<3%) [4871].
 - Also obtained by alkaline degradation of 8-methylquercetin pentamethyl ether (m.p. 213–215°) with boiling ethanolic potash [4962].
 - Also refer to: [4914].
- m.p. 176–177° [4913,4960] (anhydrous); 148–149° [4961,4962], 141–142° [4913,4960], 140–142° [4871] (hydrate);
¹H NMR [4871], IR [4871].

1-(4-Ethoxy-3,6-dihydroxy-2-methoxyphenyl)-2-methoxyethanone

C₁₂H₁₆O₆ mol.wt. 256.26

Synthesis

- Obtained by reaction of potassium persulfate with 4-ethoxy-2-hydroxy-6, α -dimethoxyacetophenone in aqueous sodium hydroxide at r.t. for 24 h (23%) (Elbs reaction) [4959].

1-(2-Hydroxy-3,4,6-trimethoxyphenyl)-2-methoxyethanone (*Gossypetol tetramethyl ether*)

[7741-43-7]

C₁₂H₁₆O₆ mol.wt. 256.26

Syntheses

- Preparation by partial methylation of 2,4-dihydroxy-3,6, α -trimethoxyacetophenone,

- with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 12 h (63%) [4939];
- with diazomethane in acetone (82%) [4942].

Isolation from natural sources

- Also obtained by alkaline degradation of various polymethoxyflavones with potassium hydroxide,
 - From *chlorflavonin dimethyl ether* (3'-chloro-3,5,7,8,2'-pentamethoxyflavone) (m.p. 114–115°) (SM), (35%). SM was obtained by methylation of *chlorflavonin* (3'-chloro-5,2'-dihydroxy-3,7,8-trimethoxyflavone) (m.p. 212°), itself isolated from cultures of *Aspergillus candidus* [4963];
 - From *Herbacetin pentamethyl ether* (3,5,7,8,4'-pentamethoxyflavone) (m.p. 156–158°) [4937];
 - From *Gossypetin hexamethyl ether* (3,5,7,8,3',4'-hexamethoxyflavone) (m.p. 170–172°) [4964]; [4842,4939], (85%) [4965], (63%) [4939];

- From 3,5,7,8,3',4',5'-heptamethoxyflavone (m.p. 194–194°5) (SM), (51%) [4966]. SM was prepared according to different methods:
 - by methylation of 5,7,3'-trihydroxy-3,8,4',5'-tetramethoxyflavone (m.p. 214–216°), itself isolated from *Beyeria brevifolia* (Muell. Arg.) Benth. [4967];
 - by methylation of 5,7-dihydroxy-3,8,3',4',5'-pentamethoxyflavone (m.p. 204–205°), itself isolated from the whole plant of *Conyza stricta* Willd. (Compositae) [4966];
 - from *hibiscetin heptamethyl ether* (m.p. 194–196°). *Hibiscetin* is an aglycone of *Hibiscitrin* (3,5,7,8,3',4',5'-heptahydroxyflavone). It was isolated from the flowers of *Hibiscus sabdariffa* [4968].
 - Also refer to: [4855].
- m.p. 116–118° [4939], 115–116° [4937,4942,4963,4965–4968];
UV [4942]; GLC [4936].

1-(2-Hydroxy-3,5,6-trimethoxyphenyl)-2-methoxyethanone

[62953-05-3]

C₁₂H₁₆O₆

mol.wt. 256.26

Syntheses

- Preparation in numerous steps starting from 2,6-dihydroxy- α -methoxyacetophenone. No data [4849].
 - Also obtained by alkaline degradation of some flavones with refluxing ethanolic potassium hydroxide,
 - From 3,5,6,8,4'-pentamethoxyflavone (m.p. 158–159°) (SM). SM was prepared by methylation of 5,6-dihydroxy-3,8,4'-trimethoxyflavone (m.p. 178–179°), itself isolated from the whole plant of *Conyza stricta* Willd. (Compositae) [4966];
 - From *methyl gardenin* (3,5,6,8,3',4',5'-heptamethoxyflavone) (m.p. 116–117°) (SM) [4842], (84%) [4945]. SM was prepared by methylation of *gardenin* (m.p. 163–164°), itself isolated from Dikamali gum (gum of *Gardenia lucida*) [4945].
- m.p. 110–112° [4966], 88–89° [4945]. One of the reported melting points is obviously wrong.

1-(6-Hydroxy-2,3,4-trimethoxyphenyl)-2-methoxyethanone (*Quercetagetol tetramethyl ether*)

[14290-59-6]

C₁₂H₁₆O₆

mol.wt. 256.26

Syntheses

- Obtained by partial methylation of 2,5-dihydroxy- α ,4,6-tri-methoxyacetophenone with dimethyl sulfate [4950], in the presence of potassium carbonate,
- in boiling acetone/benzene (1:1) for 8.5 h (53%) [4877];
- in refluxing benzene for 10 h (47%) [4876].

- Also obtained by alkaline degradation of various polymethoxyflavones,
 - From *mikanin dimethyl ether* so-called *Tangeretin* [4969] (3,5,6,7,4'-pentamethoxyflavone) (SM) (m.p. 157–158°) [4867], (m.p. 155–156°) [4970] with potassium hydroxide in refluxing ethanol for 6.5 h (29%) [4867] or for 8 h [4970]; SM was isolated from oil of the bark of bitter orange [4970];
 - From *alnusin trimethyl ether* (3,5,6,7-tetramethoxyflavone) (m.p. 112–112°5) (SM) refluxing in a mixture of 50% potassium hydroxide solution and ethanol for 20 h under nitrogen (50%). SM was prepared by methylation of *alnusin* (6-methoxy-3,5,7-trihydroxyflavone) (m.p. 239–241°). *Alnusin* was the main flavonoid isolated from *Alnus sieboldiana* (Betulaceae) [4971];
 - From *vogeletin tetramethyl ether* with potassium hydroxide in refluxing ethanol for 6 h (81%) [4972], (98%) [4973];

N.B.: The *mikanin dimethyl ether* is identical with *penduletin dimethyl ether* and *vogeletin tetramethyl ether*.

- From *apulein* (2',5'-dihydroxy-3,5,6,7,4'-pentamethoxyflavone) (m.p. 211–213°) with 20% sodium hydroxide in refluxing dilute methanol (1:1) for 4 h [4974]. The *apulein* was isolated from the wood of *Apuleia leiocarpa* (Vog.) Macbr. (= *Apuleia praecox* Mart.) (Leguminosae, subfamily Caesalpinioideae);
- From *apulein diethyl ether* (2',5'-diethoxy-3,5,6,7,4'-pentamethoxyflavone) (m.p. 129–131°) with 10% ethanolic potassium hydroxide at reflux for 10 h under nitrogen [4974];
- From *quercetagetin hexamethyl ether* (3,5,6,7,3',4'-hexamethoxyflavone) (m.p. 141–142°) [4876];
- From *patuletin hexamethyl ether* (3,5,6,7,3',4'-hexamethoxyflavone) (m.p. 141–142°) [4975],
 - with refluxing (150–155°) 50% aqueous potash for 8 h (21%);
 - with refluxing 7% ethanolic potash for 6 h (94%);
- From methyl 3,5,6,7,3',4'-hexamethoxyflavone-2'-carboxylate (m.p. 151–152°) (SM1) with potassium hydroxide in refluxing dilute ethanol for 8 h (78%) [4844]. SM1 was obtained by prolonged methylation of *distemonanthin*, itself isolated from the wood of *distemonanthus benthamianus*;
- From (3,5,6,7,2',3',4'-heptamethoxyflavone) (m.p. 191–192°) [4928];
- From *apulein dimethyl ether* (3,5,6,7,2',4',5'-heptamethoxyflavone) (m.p. 159–160°) with 50% aqueous potassium hydroxide in refluxing ethanol for 8 h [4974];
- From 3,5,6,7,3',4',5'-heptamethoxyflavone (m.p. 155–156°) (SM2) with potassium hydroxide in boiling ethanol for 7 h, under nitrogen [4866]. SM2 was isolated from *Eremophila fraseri* F. Muell. oil [4970];
m.p. 77–78° [4876], 75–76° [4928,4975], 72–73° [4973], 71–72° [4844,4877,4972,4976], 70–71° [4866,4867], 69–71° [4971,4974];
¹H NMR [4950,4971], IR [4877,4971,4974], UV [4971,4974], MS [4974];
TLC [4974]; GLC [4936].

1-(2,5-Dihydroxy-3,4,6-trimethoxyphenyl)-2-methoxyethanone

$C_{12}H_{16}O_7$ mol.wt. 272.25

Syntheses

- Obtained by oxidation of 2-hydroxy-3,4,6, α -tetramethoxy-acetophenone with alkali persulfate (Elbs reaction) (14%) [4939].

– Also refer to: [4977,4978].

m.p. 102–103° [4939].

1-[2-Hydroxy-3-iodo-6-methoxy-4-(2-propenyloxy)phenyl]-2-methoxyethanone

[74047-41-9]

$C_{13}H_{15}IO_5$ mol.wt. 378.16

Synthesis

- Obtained by treatment of 2,4-dihydroxy-3-iodo-6, α -dimethoxyacetophenone with allyl bromide in the presence of potassium carbonate in refluxing acetone for 4–5 h (54%) [4881].

m.p. 167–168° [4881]; 1H NMR [4881].

1-[2-Hydroxy-6-methoxy-4-(2-propenyloxy)phenyl]-2-methoxyethanone

[62330-15-8]

$C_{13}H_{16}O_5$ mol.wt. 238.24

Synthesis

- Preparation by partial alkylation of 2,4-dihydroxy-6, α -dimethoxyacetophenone with allyl bromide in the presence of potassium carbonate in refluxing acetone for 4 h (80%) [4861].

m.p. 87–89° [4861].

1-(2,4-Diethoxy-6-hydroxyphenyl)-2-methoxyethanone

[2495-77-4]

$C_{13}H_{18}O_5$ mol.wt. 254.28

Syntheses

- Obtained by partial ethylation of 2,4,6-trihydroxy- α -methoxyacetophenone,
 - with diethyl sulfate in the presence of potassium carbonate in boiling acetone for 5 h (78%) [4867] or for 16 h [4854];
 - with ethyl iodide in the presence of potassium carbonate in refluxing acetone for 6 h [4874].

- Also obtained by alkaline degradation of some polysubstituted flavones with potassium hydroxide,
 - From 3,4'-dimethoxy-5,7,3'-triethoxyflavone (m.p. 108–109°) (SM). SM was prepared by total ethylation of 3,4'-dimethoxy-5,7,3'-trihydroxyflavone (m.p. 235–236°), itself isolated from *Baccharis sarothroides* A. Gray (Compositae) [4979];
 - From 3-methoxy-5,7,3',4'-tetraethoxyflavone (m.p. 146–148°) (SM) in boiling ethanol for 6 h (35%). SM was prepared by total ethylation of *quercetin 3-methyl ether* (m.p. 261–263°), itself obtained by hydrolysis of its glycoside (m.p. 165–167°). This one (*stizoloside*) was isolated from the aerial parts of *Stizolophus balsamita* (Lam.) A. Takht, so-called *Centaurea balsamita* Lam. (Compositae) [4980].
- m.p. 111–112° [4867], 110–112° [4874], 110–111° [4980], 109–111° [4854], 109–110° [4979];
¹H NMR [4979], IR [4979], UV [4979].

1-(2,4-Diethoxy-3,6-dihydroxyphenyl)-2-methoxyethanone

[4324-58-7]

C₁₃H₁₈O₆ mol.wt. 270.28

Synthesis

– Obtained by reaction of potassium persulfate with 2,4-di-ethoxy-6-hydroxy- α -methoxyacetophenone in the presence of aqueous sodium hydroxide (Elbs reaction), (33%) [4867], (25%) [4854].

m.p. 102–103° [4854], 101–103° [4867]; ¹H NMR [4854].

1-(2-Ethoxy-6-hydroxy-3,4-dimethoxyphenyl)-2-methoxyethanone

[14965-23-2]

C₁₃H₁₈O₆ mol.wt. 270.28

Syntheses

– Obtained by alkaline degradation of two flavones with potassium hydroxide in refluxing ethanol for 12 h under nitrogen,

- From 5,3',4'-triethoxy-3,6,7-trimethoxyflavone (m.p. 96–97°) (98%) [4981];
 - From 5,3',5'-triethoxy-3,6,7,4'-tetramethoxyflavone (m.p. 120–121°) [4866].
- m.p. 82–83° [4866,4981].

1-(3-Ethoxy-6-hydroxy-2,4-dimethoxyphenyl)-2-methoxyethanone

C₁₃H₁₈O₆ mol.wt. 270.28

Syntheses

– Obtained by alkaline degradation of two flavones with potassium hydroxide in boiling ethanol for 7 h,

- From 6,3'-diethoxy-3,5,7,4'-tetramethoxyflavone (di-O-ethyl-O-methyl oxyanin-B) (73%) [4868];
 - From 6,2'-diethoxy-3,5,7,4',5'-pentamethoxyflavone (m.p. 136–137°) [4928].
- Also obtained by reaction of ethyl iodide with 3,6-dihydroxy-2,4-dimethoxy- α -methoxy-acetophenone in the presence of potassium carbonate in refluxing acetone for 18 h [4868].

m.p. 78–79° [4868], 78° [4928].

1-(2-Hydroxy-3,4,5,6-tetramethoxyphenyl)-2-methoxyethanone (*Calycopterol pentamethyl ether*)

[5071-47-6]

C₁₃H₁₈O₇

mol.wt. 286.28

Syntheses

- Obtained by alkaline degradation of *Calycopteris dimethyl ether* or *Thapsin dimethyl ether* (SM) both 3,5,6,7,8,4'-hexa-methoxyflavone (m.p. 133–134°) [4842,4982], (89%) [4983], (54%) [4984]. SM was prepared by total methylation of *Thapsin*, itself isolated from *Digitalis Thapsi*, L. [4983].
- Also obtained by alkaline degradation of *purpurascenin* (3,5,6,7,8,2',4',5'-octamethoxyflavone) (m.p. 132–133°) with refluxing ethanolic potassium hydroxide for 15 h (24%) [4985]. *Purpurascenin* was isolated from the roots, stem, leaves and flowers of *Pogostemon purpurascens* (Labiatae).
- Also obtained by alkaline degradation of *Digicitrine dimethyl ether* (3,5,6,7,8,3',4',5'-octamethoxyflavone) (m.p. 126°) with potassium hydroxide in refluxing 80% ethanol for 4 h (ca. 115°) (75%) [4986]. The *Digicitrine dimethyl ether* was prepared by methylation of *Digicitrine* (5,3'-dihydroxy-3,6,7,8,4',5'-hexamethoxyflavone) (m.p. 178–179°), itself isolated from the leaves of *Digitalis purpurea* L.
- Also obtained by alkaline degradation of *Melibentin* with potassium hydroxide in refluxing dilute ethanol for 5 h (73%) [4987]. *Melibentin* (3,5,6,7,8-pentamethoxy-3',4'-methylenedioxyflavone) (m.p. 134–135°) was isolated from the bark and the wood of *Melicope broadbentiana* F. M. Bail (Rutaceae).
- Also obtained by alkaline degradation of *Natsudaidain methyl ether* (3,5,6,7,8,3',4'-heptamethoxyflavone) (SM) (m.p. 130–131°) [4970], (m.p. 128°) [4988] with potassium hydroxide in refluxing ethanol [4970], (75%) [4988]. SM was isolated from oil of the bark of bitter orange [4970] or was prepared by methylation of *Natsudaidain* (3-hydroxy-5,6,7,8,3',4'-hexamethoxyflavone) (m.p. 146°), itself isolated from the peel oil of *Citrus natsudaidai* HAYATA [4988].
- Also obtained by partial methylation of 2,5-dihydroxy-3,4,6, α -tetramethoxyacetophenone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 1 h [4978,4989], (29%) [4977].
- Also refer to: [4990–4992].

gum [4985]; sublimation at 40°/0.01 mm [4986];
 m.p. 85–87° [4987], 66–67° [4983], 65–67° [4984], 65–66° [4986], 64–66° [4970], 64° [4988], 62–64° [4977]. One of the described melting points is obviously wrong.

GLC [4936]; TLC [4985,4986].

¹H NMR [4985,4987], IR [4987], UV [4986,4987], MS [4985].

1-(2,3-Diethoxy-6-hydroxy-4-methoxyphenyl)-2-methoxyethanone

$C_{14}H_{20}O_6$ mol.wt. 284.31

Syntheses

– Obtained by alkaline degradation of various polyalkylated flavones with potassium hydroxide in refluxing ethanol,

- From (5,6,3'-triethoxy-3,7,4'-trimethoxyflavone) oxyyanin-B triethyl ether (72%) [4868];
- From 5,6-diethoxy-3,7,3',4'-tetramethoxyflavone (SM). SM was prepared by ethylation of 5,6-dihydroxy-3,7,3',4'-tetra-methoxyflavone (m.p. 211–213°), itself isolated from the heartwood of *Distemonanthus benthamianus* Baillon [4928];
- From 5,6-diethoxy-3,7,2',4',5'-pentamethoxyflavone (m.p. 97–99°) (SM1). SM1 was prepared by ethylation of 5,6-dihydroxy-3,7,2',4',5'-pentamethoxyflavone (m.p. 142–145°), itself isolated from the heartwood of *Distemonanthus benthamianus* (Leguminosae) [4993].

m.p. 80° [4928], 79–80° [4868,4993]; ¹H NMR [4993].

1-(2,4-Diethoxy-6-hydroxy-3-methoxyphenyl)-2-methoxyethanone

[4324-59-8]

$C_{14}H_{20}O_6$ mol.wt. 284.31

Syntheses

– Obtained by reaction of dimethyl sulfate with 2,4-diethoxy-3,6-dihydroxy- α -methoxyacetophenone in the presence of potassium carbonate in refluxing acetone for 2.5 h [4993], (27%) [4867] or for 12 h [4854].

- Preparation by Friedel–Crafts acylation of 3,5-diethoxy-4-methoxyphenol with methoxyacetyl chloride in ethyl ether in the presence of aluminium chloride, first at 10°, then at 20° for 3 h (72%) [4918].
- Also obtained by reaction of methoxyacetonitrile with 3,5-diethoxy-4-methoxyphenol (Hoesch reaction) [4917], (7%) [4918].
- Also obtained by alkaline degradation of 5,7-diethoxy-3,6,4'-trimethoxyflavone (SM) (m.p. 123–124°) with sodium hydroxide in refluxing dilute ethanol for

20 h under nitrogen (71%). SM was prepared by ethylation of 5,7-dihydroxy-3,6,4'-trimethoxyflavone (m.p. 164–165°), itself isolated from the leaves and terminal branches of *Dodonaea attenuata* var. *linearis* [4994].

m.p. 65–66° [4994], 60–62° [4854], 57–58° [4867], 56–57° [4993];
b.p._{0.2} 145–146° [4918,4917]; ¹H NMR [4854,4993], IR [4918].

1-(4,6-Diethoxy-2-hydroxy-3-methoxyphenyl)-2-methoxyethanone

[5128-46-1]

C₁₄H₂₀O₆ mol.wt. 284.31

Syntheses

– Obtained by alkaline degradation of some polyalkoxy-flavones with potassium hydroxide,

- From 5,7-dieethoxy-3,8,4'-trimethoxyflavone (m.p. 106–108°) (SM) (91%). SM was obtained by ethylation of 5,7-dihydroxy-3,8,4'-trimethoxyflavone (m.p. 173–175°), itself isolated from *Beyeria* sp [4854];
- From 5,7,3'-triethoxy-3,8,4',5'-tetramethoxyflavone (m.p. 138–139°) (89%) [4967];
- From 5,7,4'-triethoxy-3,8-dimethoxyflavone (m.p. 128–129°) (71%) [4981];
- From 5,7,4'-triethoxy-3,8,3'-trimethoxyflavone (m.p. 110–111°) (23%) [4981].

m.p. 125–126° [4981], 124–125° [4854,4967]; ¹H NMR [4854].

1-(2-Ethoxy-6-hydroxy-3,4,5-trimethoxyphenyl)-2-methoxyethanone

C₁₄H₂₀O₇ mol.wt. 300.31

Synthesis

– Obtained by alkaline degradation of *Calycopteris diethyl ether* (m.p. 131–132°) [4982], so called *Thapsin diethyl ether* (m.p. 130°) [4983] (5,4'-dieethoxy-3,6,7,8-tetramethoxyflavone) with refluxing ethanolic potash [4982], (86%) [4983].

m.p. 75–77° [4982], 63–64° [4983].

1-[(4-Benzoyloxy)-2-hydroxyphenyl]-2-methoxyethanone

C₁₆H₁₄O₅ mol.wt. 286.28

Synthesis

– Formed (by-product) by simple hydrolysis of 2,4-di-benzoyloxy- α -methoxyacetophenone with potassium ethoxide in pyridine at r.t. for 1 min (11%) [4846].

m.p. 122° [4846].

1-[2-Hydroxy-4-(phenylmethoxy)phenyl]-2-methoxyethanone

[62952-90-3]

 $C_{16}H_{16}O_4$ mol.wt. 272.30**Synthesis**

– Obtained by partial benzylation of α -methoxy-resacetophenone with benzyl chloride in the presence of potassium carbonate and potassium iodide in refluxing acetone for 5 h (47%) [4839].

m.p. 67–68° [4839].

1-[2,4-Dihydroxy-(6-phenylmethoxy)phenyl]-2-methoxyethanone

[62952-93-6]

 $C_{16}H_{16}O_5$ mol.wt. 288.30**Synthesis**

– Preparation in one pot by tosylation of α -methoxy-phloracetophenone with 2 mol of p-toluenesulfonyl chloride, subsequent benzylation and final detosylation (35%) [4839].

m.p. 227–228° [4839].

1-[2,4,6-Trihydroxy-3-(phenylmethyl)phenyl]-2-methoxyethanone $C_{16}H_{16}O_5$ mol.wt. 288.30**Synthesis**

– Obtained by total hydrogenolysis of 1-[2-hydroxy-4,6-bis(phenylmethoxy)-3-(phenylmethyl)phenyl]-2-methoxyethanone in methanol in the presence of Pd/C under hydrogen atmosphere [4995].

m.p. 98° (monohydrate) [4995]; IR [4995], UV [4995].

1-[2-Hydroxy-4-methoxy-6-(phenylmethoxy)phenyl]-2-methoxyethanone

[62952-92-5]

 $C_{17}H_{18}O_5$ mol.wt. 302.33**Synthesis**

– Preparation by partial methylation of 6-(benzyloxy)-2,4-dihydroxy- α -methoxyacetophenone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 4 h (86%) [4839].

m.p. 22–124° [4839].

1-[2-Hydroxy-6-methoxy-4-(phenylmethoxy)phenyl]-2-methoxyethanone

[62952-91-4]

C₁₇H₁₈O₅ mol.wt. 302.33**Synthesis**

– Obtained by reaction of benzyl chloride with 2,4-di-hydroxy-6,α-dimethoxyacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone for 5 h [4839].

m.p. 101–102° [4839].

1-[2-Hydroxy-3,6-dimethoxy-4-(phenylmethoxy)phenyl]-2-methoxyethanoneC₁₈H₂₀O₆ mol.wt. 332.35**Syntheses**

– Obtained (by-product) during the condensation of methoxyacetonitrile with 1,3-bis(benzyloxy)-2,5-di-methoxybenzene (Hoesch reaction) (32%) [4941].

– Also refer to: [4865,4942,4996].

m.p. 109–110° [4941].

1-[2,5-Dihydroxy-3,6-dimethoxy-4-(phenylmethoxy)phenyl]-2-methoxyethanoneC₁₈H₂₀O₇ mol.wt. 348.35**Syntheses**

– Obtained by oxidation of 4-(benzyloxy)-2-hydroxy-3,6,α-trimethoxyacetophenone in alkaline solution with potassium persulfate (Elbs reaction) (10%) [4941].

– Also refer to: [4997].

deep yellow viscous oil [4941].

1-[2-Hydroxy-6-(phenylmethoxy)-3,4,5-trimethoxyphenyl]-2-methoxyethanone

[94385-86-1]

C₁₉H₂₂O₇ mol.wt. 362.38**Synthesis**

– Obtained by alkaline degradation of *Digicitrine dibenzylether*[5,3'-bis(benzyloxy)-3,6,7,8,4',5'-hexamethoxyflavone] (m.p. 75–76°) with potassium hydroxide in refluxing 80% ethanol for 3 h (85%) [4986].

m.p. 64°5–65° [4986]; UV [4986].

1-[2,6-Dihydroxy-4-(phenylmethoxy)-3-(phenylmethyl)phenyl]-2-methoxyethanone

[18074-51-6]

 $C_{23}H_{22}O_5$ mol.wt. 378.42**Synthesis**

– Obtained from 1-[2-hydroxy-4,6-bis(phenylmethoxy)-3-(phenylmethyl)phenyl]-2-methoxyethanone by partial hydrogenolysis in methanol in the presence of Pd/C [4995].

m.p. 203–205° [4995]; IR [4995], UV [4995].

1-[2-Hydroxy-4,6-bis(phenylmethoxy)phenyl]-2-methoxyethanone

[18074-53-8]

 $C_{23}H_{22}O_5$ mol.wt. 378.42**Synthesis**

– Obtained (poor yield) by reaction of benzyl chloride with α -methoxyphloracetophenone in the presence of potassium carbonate in refluxing acetone (5%) [4995].

m.p. 124° [4995]; IR [4995], UV [4995].

1-[2-Hydroxy-4,6-bis(phenylmethoxy)-3-(phenylmethyl)phenyl]-2-methoxyethanone $C_{30}H_{28}O_5$ mol.wt. 468.55**Synthesis**

– Preparation by benzylation of α -methoxyphloracetophenone with benzyl chloride in the presence of sodium iodide and potassium carbonate in boiling acetone for 3 h (34%) [4995].

m.p. 147–148° [4995]; IR [4995], UV [4995].

13.2 Compounds Derived from Phenylmethoxyacetic Acids**2-(Phenylmethoxy)-1-(2,4,6-trihydroxyphenyl)ethanone**

[322405-72-1]

 $C_{15}H_{14}O_5$ mol.wt. 274.27**Synthesis**

– Preparation by reaction of benzyloxyacetonitrile with phloroglucinol (Hoesch reaction) (91%) [4998].

1-(2,4-Dihydroxy-3,6-dimethoxyphenyl)-2-(phenylmethoxy)ethanoneC₁₇H₁₈O₆ mol.wt. 318.33**Synthesis**

– Obtained by hydrogenation of 2-(benzyloxy)-1-[4-(benzyloxy)-2-hydroxy-3,6-dimethoxy-phenyl]ethanone in ethyl acetate over Pd/C [4942].

m.p. 175–176° [4942].

1-(2-Hydroxy-3,4,6-trimethoxyphenyl)-2-(phenylmethoxy)ethanoneC₁₈H₂₀O₆ mol.wt. 332.35**Synthesis**

– Obtained by partial methylation of 2-(benzyloxy)-1-(2,4-dihydroxy-3,6-dimethoxyphenyl)ethanone with diazomethane [4942].

m.p. 172–174° [4942].

1-[2-Hydroxy-3,6-dimethoxy-4-(phenylmethoxy)phenyl]-2-(phenylmethoxy)ethanoneC₂₄H₂₄O₆ mol.wt. 408.45**Synthesis**

– Obtained by reaction of (benzyloxy)-acetonitrile with 2,5-dimethoxyresorcinol dibenzyl ether (Hoesch reaction) (33%) [4942].

m.p. 150–151° [4942].

13.3 Compounds Derived from Ethoxyacetic Acids**2-Ethoxy-1-(4-hydroxyphenyl)ethanone**

[91061-33-5]

C₁₀H₁₂O₃ mol.wt. 180.20**Synthesis**

– Obtained by adding ethanol (0.1 ml) and boron trifluoride etherate to a suspension of resin **6** (52 mg) in methylene chloride, and stirring the mixture at r.t. for 1 h. The compound was isolated by usual method and purified by preparative TLC (52%) [4814].

N.B.: Resin **6** (resin-bound α -TMS diazoketone **6**) (preparation given).

$^1\text{H NMR}$ [4814], $^{13}\text{C NMR}$ [4814], IR [4814], MS [4814].

1-(2,4-Dihydroxyphenyl)-2-ethoxyethanone

$\text{C}_{10}\text{H}_{12}\text{O}_4$ mol.wt. 196.20

Synthesis

– Obtained by reaction of ethoxyacetonitrile with resorcinol [4999], (97%) [4433], (28%) (Hoesch reaction) [5000].

m.p. 136–137° [4433], 135–136° [5000], 132–133° [4999];

b.p.₁₀ 195–200° [5000].

2-Ethoxy-1-(2,4,6-trihydroxyphenyl)ethanone

$\text{C}_{10}\text{H}_{12}\text{O}_5$ mol.wt. 212.201

Syntheses

– Preparation by reaction of ethoxyacetonitrile with phloroglucinol (Hoesch reaction) (64%) [5001].

– Also refer to: [5000,5002].

m.p. 197–198° [5001].

2-Ethoxy-1-(2-hydroxy-4-methoxyphenyl)ethanone

[34811-99-9]

$\text{C}_{11}\text{H}_{14}\text{O}_4$ mol.wt. 210.23

Synthesis

– Obtained by partial methylation of α -ethoxy-2,4-dihydroxy-acetophenone (SM) with diazomethane in ethyl ether [5003], (18%) [4999]. SM was prepared by reaction of ethoxyacetonitrile with resorcinol (Hoesch reaction) [5003].

oil [5003]; m.p. 30–31° [4999]; b.p._{0.02} 80–85° [4999]; $^1\text{H NMR}$ [4999], IR [4999].

2,2-Diethoxy-1-(4-hydroxyphenyl)ethanone

[200420-28-6]

$\text{C}_{12}\text{H}_{16}\text{O}_4$ mol.wt. 224.26

Synthesis

– Refer to: [5004] (Japanese patent).

2-Ethoxy-1-(4-ethoxy-2-hydroxyphenyl)ethanoneC₁₂H₁₆O₄ mol.wt. 224.26**Synthesis**

– Obtained by treatment of *fisetin* tetraethyl ether (3,7,3',4'-tetraethoxyflavone) with boiling alcoholic potassium hydroxide solution [4837,4885,4886,4888].

m.p. 42–44° [4886].

2-Ethoxy-1-(2-hydroxy-4,6-dimethoxyphenyl)ethanone

[21587-57-5]

C₁₂H₁₆O₅ mol.wt. 240.26**Syntheses**

– Obtained by partial methylation of α -ethoxyphloro-acetophenone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 12 h (62%) [5000].

– Also obtained by degradation of 3-ethoxy-5,7,3',4'-tetramethoxyflavone with sodium hydroxide in boiling dilute ethanol for 16 h (9%) [4927].

m.p. 103–104° [5000], 99–100° [4927].

2-Ethoxy-1-(2-ethoxy-6-hydroxy-4-methoxyphenyl)ethanone

[21587-58-6]

C₁₃H₁₈O₅ mol.wt. 254.28**Synthesis**

– Obtained (poor yield) by degradation of 3,5-diethoxy-7,3',4'-trimethoxyflavone (m.p. 164–165°) with sodium hydroxide in refluxing ethanol (3%) [4927].

m.p. 82–83° [4927]; IR [4927].

2-Ethoxy-1-(6-hydroxy-2,3,4-trimethoxyphenyl)ethanone

[19598-24-4]

C₁₃H₁₈O₆ mol.wt. 270.28**Synthesis**

– Obtained by alkaline degradation of *Eupatoretin* diethyl ether (m.p. 119–120°) (3,3'-diethoxy-5,6,7,4'-tetramethoxy-flavone) with potassium hydroxide in refluxing ethanol under nitrogen for 17 h (46%) [5005].

m.p. 60–61° [5005]; ¹H NMR [5005], IR [5005], UV [5005], MS [5005].

1-(2,4-Diethoxy-6-hydroxyphenyl)-2-ethoxyethanone

[64184-96-9]

C₁₄H₂₀O₅ mol.wt. 268.31**Syntheses**

– Obtained by partial ethylation of α -ethoxyphloro-acetophenone with ethyl iodide in the presence of potassium carbonate in refluxing acetone for 12 h (53%) [5001].

– Also obtained by degradation of various polyethoxyflavones with boiling ethanolic potash,

- From 3,5,7,3'-tetraethoxy-4'-methoxyflavone (m.p. 136–137°) (8% potassium hydroxide, reflux 6 h) [5002];
- From 3,5,7,3',4'-pentaethoxyflavone (*quercetin* pentaethyl ether) (7% potassium hydroxide, reflux 6 h) (good yield) [5001];
- From 3,5,7,3',5'-pentaethoxy-4'-methoxyflavone (m.p. 160°) (*4'-methylmyricetin pentaethyl ether*) (SM). SM was obtained by total ethylation of *4'-methylmyricetin*, itself isolated from the leaves of *Elaeocarpus lanceofolius* Roxb. (Elaeocarpaceae) [5006,5007];
- From 3,5,7,3',4',5'-hexaethoxyflavone (m.p. 149–151°) (*myricetin* hexaethyl ether) [4889,5006]. *Myricetin* is the 3,5,7,3',4',5'-hexahydroxyflavone.

N.B.: Na salt [5001].

m.p. 97–98° [5002], 96–97° [4889,5001], 96° [5006];

¹H NMR [5006], UV [5006], MS [5006].

1-(2,4-Diethoxy-3,6-dihydroxyphenyl)-2-ethoxyethanoneC₁₄H₂₀O₆ mol.wt. 284.31**Synthesis**

– Obtained by reaction of potassium persulfate with 2-hydroxy-4,6, α -triethoxyacetophenone in 5% aqueous sodium hydroxide, first at 15°, then at r.t. for 20 h (30%) (Elbs reaction) [5001].

m.p. 103–104° [5001].

2-Ethoxy-1-(2-ethoxy-6-hydroxy-3,4-dimethoxyphenyl)ethanone

[4324-56-5]

C₁₄H₂₀O₆ mol.wt. 284.31**Syntheses**

– Obtained by alkaline degradation of various substituted flavones with potassium hydroxide in refluxing ethanol,

- From *Mikanin* diethyl ether (m.p. 94–95°) (3,5-diethoxy-6,7,4'-trimethoxyflavone) [4867];
- From *Eupatin* triethyl ether (m.p. 105–106°) (3,5,3'-tri-ethoxy-6,7,4'-trimethoxyflavone) (26%) [5005];
- From *Eupalitin* triethyl ether (m.p. 80–81°) (3,5,4'-triethoxy-6,7-dimethoxyflavone) (88%) [5008];
- From *Eupatolitin* tetraethyl ether (m.p. 120–121°) (3,5,3',4'-tetraethoxy-6,7-dimethoxyflavone) (97%) [5008].

m.p. 61–62° [4867], 59–60° [5005,5008];

¹H NMR [5005], IR [5008], UV [5005], MS [5005,5008].

2-Ethoxy-1-(2-hydroxy-3,4,5,6-tetramethoxyphenyl)ethanone

C₁₄H₂₀O₇ mol.wt. 300.31

Synthesis

- Obtained by alkaline degradation of *Natsudaidain ethyl ether* (3-ethoxy-5,6,7,8,3',4'-hexamethoxyflavone) (m.p. 118°) with potassium hydroxide in refluxing ethanol [4988].

m.p. 47° [4988]; ¹H NMR [4988], IR [4988], MS [4988].

2-Ethoxy-1-(2,3-diethoxy-6-hydroxy-4-methoxyphenyl)ethanone

C₁₅H₂₂O₆ mol.wt. 298.34

Synthesis

- Refer to: [5001].

2-Ethoxy-1-(2,4-diethoxy-6-hydroxy-3-methoxyphenyl)ethanone

C₁₅H₂₂O₆ mol.wt. 298.34

Syntheses

- Obtained from methyl 3,5,7,3',4'-pentaethoxy-6-methoxyflavone-2'-carboxylate (m.p. 111–112°) (SM) by hydrolysis with 20% ethanolic potassium hydroxide at reflux for 8 h (73%). SM was obtained by ethylation of *distemonanthin*, itself isolated from the wood of *distemonanthus benthamianus* [4844].
- Also obtained by alkaline degradation of *patuletin* pentaethyl ether (3,5,7,3',4'-pentaethoxy-6-methoxyflavone) (m.p. 127–128°) with refluxing 7% ethanolic potash on a water bath for 6 h (40%) [5001].

- Also obtained by partial methylation of $\alpha,4,6$ -triethoxy-2,5-dihydroxyacetophenone with dimethyl sulfate in the presence of potassium carbonate in refluxing benzene for 12 h (38%) [5001].

m.p. 88–89° [4844], 86–87° [5001].

2-Ethoxy-1-(2-hydroxy-3,4,6-triethoxyphenyl)ethanone (*Gossypitol tetraethyl ether*)

$C_{16}H_{24}O_6$ mol.wt. 312.36

Synthesis

- Obtained by alkaline degradation of *Gossypetin* hexaethyl ether (m.p. 144–146°) (3,5,7,8,3',4'-hexaethoxyflavone) with potassium hydroxide in refluxing dilute ethanol for 6 h (84%) [4964].

m.p. 110–111° [4964].

13.4 Miscellaneous

2-(β -D-Glucopyranosyloxy)-1-(4-hydroxyphenyl)ethanone

[167638-61-1]

$C_{14}H_{18}O_8$ mol.wt. 314.29

COCH₂O- β -D-Glc

Isolation from natural sources

- From the fresh root bark of *Picea abies* (Pinaceae) (compound 4) [5009].

$(\alpha)_D = -33^\circ$ (c = 0.2 methanol) [5009];

¹H NMR [5009], ¹³C NMR [5009], UV [5009].

1-(4-Hydroxyphenyl)-2,2-bis(1-methylethoxy)ethanone

[144757-80-2]

$C_{14}H_{20}O_4$ mol.wt. 252.31

COCH(OCH(CH₃)₂)₂

Syntheses

- Obtained by gradually adding a 33% hydrogen chloride solution in isopropanol to a solution of p-hydroxyphenyl-glyoxal and isopropyl nitrite in isopropanol cooled to 0°. Hydrogen chloride solution was added at such a speed to maintain a temperature of less than 25° [4901].

- Also refer to: [4900].

solid [4901]; ¹H NMR [4901], ¹³C NMR [4901], MS [4901].

2-(β -D-Glucopyranosyloxy)-1-(4-hydroxy-3-methoxyphenyl)ethanone

[178959-37-0]

 $C_{15}H_{20}O_9$ mol.wt. 344.32

Isolation from natural sources

– From inner bark of *Pinus sylvestris* (compound 4) [5010].

1-(4-Hydroxyphenyl)-2,2-bis(3-methylbutoxy)ethanone

[144757-79-9]

 $C_{18}H_{28}O_4$ mol.wt. 308.42

Syntheses

– Obtained by slowly adding isoamyl nitrite to a solution of p-hydroxyacetophenone in isoamyl alcohol acidified with anhydrous hydrogen chloride at temperature $<25^\circ$ (62%) [4901].

– Also refer to: [4900].

1H NMR [4901], ^{13}C NMR [4901], MS [4901].

Chapter 14

Compounds Derived from Aryloxyacetic Acids

14.1 Compounds Derived from Phenoxyacetic Acid

1-(2-Hydroxyphenyl)-2-phenoxyethanone

[73014-18-3]

$C_{14}H_{12}O_3$ mol.wt. 228.25

Syntheses

- Preparation by hydrogenolysis of 2-benzyloxy- α -phenoxyacetophenone in ethanol/dioxane (1:1) in the presence of Pd/C under hydrogen (85%) [5011].
 - Also obtained by acidic hydrolysis of 4-hydroxy-3-phenoxy coumarin (m.p. 216°) [5012] according to [5013].
 - Also prepared by reaction of phenoxyacetonitrile with phenol (Hoesch reaction) [5014].
 - Also refer to: [5015].
- m.p. 115–115.5 [5011], 115° [5012]; UV [5011].

1-(4-Hydroxyphenyl)-2-phenoxyethanone

[41978-29-4]

$C_{14}H_{12}O_3$ mol.wt. 228.25

Synthesis

- Refer to: [5016,5017] (Japanese papers).

m.p. 159–160° [5017]; b.p.₂ 212–220° [5017].

1-(2,4-Dihydroxyphenyl)-2-phenoxyethanone

[73014-19-4]

$C_{14}H_{12}O_4$ mol.wt. 244.25

Syntheses

- Obtained by reaction of phenoxyacetonitrile with resorcinol (Hoesch reaction) [4433,5018–5020], (88%) [5021], (82%) [5011].

– Also refer to: [5022,5023].

m.p. 209°5–210° [5011], 207–208° [5021], 204–205° [4433];

¹H NMR [5021], UV [5011].

2-Phenoxy-1-(2,4,6-trihydroxyphenyl)ethanone

[72023-07-1]

C₁₄H₁₂O₅ mol.wt. 260.25

Syntheses

– Preparation by reaction of phenoxyacetonitrile with phloroglucinol (Hoesch reaction), (84%) [5011], (80%) [5024], (48%) [5025].

– Also refer to: [5026–5028].

m.p. 275° (d) [5025], 244–245° [5011], 234° [5024].

One note a very large dispersion of the various melting points.

¹H NMR [5024], UV [5011].

1-(2-Hydroxy-4-methoxyphenyl)-2-phenoxyethanone

[73023-08-2]

C₁₅H₁₄O₄ mol.wt. 258.27

Syntheses

– Obtained by partial methylation of 2,4-dihydroxy- α -phenoxyacetophenone with dimethyl sulfate in the presence of potassium carbonate in boiling acetone for 2.5 h (83%) [5011].

– Also refer to: [5019].

m.p. 86°5–87° [5011]; UV [5011].

1-(2-Hydroxy-5-methoxyphenyl)-2-phenoxyethanone

[137612-24-9]

C₁₅H₁₄O₄ mol.wt. 258.27

Syntheses

– Obtained by acylation of hydroquinone monomethyl ether with phenoxyacetonitrile in the presence of boron trichloride and aluminium chloride in ethylene dichloride (44%) [5029].

– Also refer to: [5014].

1-(4-Hydroxy-3-methoxyphenyl)-2-phenoxyethanone

[41978-28-3]

C₁₅H₁₄O₄ mol.wt. 258.27

Syntheses

– Obtained (by-product, unusual result) by methylation of 2-(3-chlorophenoxy)-1-(4-hydroxy-3-methoxyphenyl)-ethanone [4429].

– Also refer to: [5017] (Japanese paper).

m.p. 94°5–95° [5017]; b.p.₂ 218–225° [5017].

1-(5-Ethyl-2,4-dihydroxyphenyl)-2-phenoxyethanone

[243465-56-7]

 $C_{16}H_{16}O_4$ mol.wt. 272.30

Synthesis

– Obtained [5022] by previously described methods [5026].

**1-(2-Hydroxy-4,6-dimethoxyphenyl)-2-phenoxyethanone**

[73023-09-3]

 $C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

– Obtained by partial methylation of 2,4,6-trihydroxy- α -phenoxyacetophenone with dimethyl sulfate in the presence of potassium carbonate in boiling acetone for 8 h (63%) [5011].

m.p. 122–123° [5011]; UV [5011].

1-[3,5-Bis-(1,1-dimethylethyl)-4-hydroxyphenyl]-2-phenoxyethanone

[41978-27-2]

 $C_{22}H_{28}O_3$ mol.wt. 340.46

Synthesis

– Refer to: [5017] (Japanese paper).

m.p. 111°5–112° [5017].

14.2 Compounds Derived from Substituted Phenoxyacetic Acids**2-(2,4-Dichlorophenoxy)-1-(2,4-dihydroxyphenyl)ethanone**

[137987-83-8]

 $C_{14}H_{10}Cl_2O_4$ mol.wt. 313.14

Synthesis

– Obtained by reaction of 2,4-dichlorophenoxy-acetonitrile with resorcinol (Hoesch reaction) (85%) [5021].

m.p. 192° [5021]; 1H NMR [5021].

2-(4-Bromophenoxy)-1-(2,4-dihydroxyphenyl)ethanone

[243465-55-6]

 $C_{14}H_{11}BrO_4$ mol.wt. 323.14

Synthesis

– Obtained [5022] by previously described method [5026].

2-(4-Bromophenoxy)-1-(2,4,6-trihydroxyphenyl)ethanone

[243657-60-5]

 $C_{14}H_{11}BrO_5$ mol.wt. 339.14

Synthesis

– Preparation by Hoesch condensation of p-bromo-phenoxyacetonitrile with phloroglucinol in benzene/ ethyl ether in the presence of zinc chloride and hydrogen chloride at 0° (82%) [5024].

m.p. 256° [5024]; 1H NMR [5024].

2-(4-Chlorophenoxy)-1-(2,4-dihydroxyphenyl)ethanone

[115781-11-8]

 $C_{14}H_{11}ClO_4$ mol.wt. 278.69

Syntheses

– Obtained by reaction of 4-chlorophenoxyacetonitrile with resorcinol (Hoesch reaction) (84%) [5021].

– Also refer to: [5030] (Japanese patent).

m.p. 187°5 [5021]; 1H NMR [5021].

2-(4-Chlorophenoxy)-1-(2,4,6-trihydroxyphenyl)ethanone

[243657-59-2]

 $C_{14}H_{11}ClO_5$ mol.wt. 294.69

Synthesis

– Preparation by Hoesch condensation of p-chloro-phenoxyacetonitrile with phloroglucinol in benzene/ethyl ether in the presence of zinc chloride and hydrogen chloride at 0° (85%) [5024].

m.p. 251° [5024]; 1H NMR [5024].

2-(4-Fluorophenoxy)-1-(2-hydroxyphenyl)ethanone

[137612-30-7]

 $C_{14}H_{11}FO_3$ mol.wt. 246.24

Syntheses

– Obtained by reaction of p-fluorophenoxyacetonitrile with phenol (Hoesch reaction) [5014].

– Also refer to: [5029].

1-(2,4-Dihydroxyphenyl)-2-(2-fluorophenoxy)ethanone

[137987-82-7]

 $C_{14}H_{11}FO_4$

mol.wt. 262.24

Synthesis

- Obtained by reaction of 2-fluorophenoxyacetonitrile with resorcinol (Hoesch reaction) (87%) [5021].

m.p. 163° [5021]; 1H NMR [5021].**1-(2,4-Dihydroxyphenyl)-2-(4-fluorophenoxy)ethanone**

[121361-56-6]

 $C_{14}H_{11}FO_4$

mol.wt. 262.24

Syntheses

- Obtained by reaction of p-fluorophenoxyacetonitrile with resorcinol (Hoesch reaction), (86%) [5021], (63%) [5031].
- Also refer to: [5020,5022].

m.p. 165° [5021,5031]; 1H NMR [5021,5031], IR [5031].**2-(4-Fluorophenoxy)-1-(2,4,6-trihydroxyphenyl)ethanone**

[127526-42-5]

 $C_{14}H_{11}FO_5$

mol.wt. 278.24

Synthesis

- Preparation by Hoesch condensation of p-fluoro-phenoxyacetonitrile with phloroglucinol in benzene/ethyl ether in the presence of zinc chloride and hydrogen chloride at 0° (81%) [5024].

m.p. 242° [5024]; 1H NMR [5024].**2-(4-Iodophenoxy)-1-(2,4,6-trihydroxyphenyl)ethanone**

[243657-61-6]

 $C_{14}H_{11}IO_5$

mol.wt. 386.14

Synthesis

- Preparation by Hoesch condensation of p-iodophenoxy-acetonitrile with phloroglucinol in benzene/ethyl ether in the presence of zinc chloride and hydrogen chloride at 0° (80%) [5024].

m.p. 269° [5024]; 1H NMR [5024].**1-(2,4-Dihydroxyphenyl)-2-(2-nitrophenoxy)ethanone**

[137987-91-8]

 $C_{14}H_{11}NO_6$

mol.wt. 289.24

Synthesis

- Obtained by reaction of o-nitrophenoxyacetonitrile with resorcinol (Hoesch reaction) (84%) [5021].

m.p. 287° [5021]; 1H NMR [5021].

1-(2,4-Dihydroxyphenyl)-2-(3-nitrophenoxy)ethanone

[137987-90-7]

C₁₄H₁₁NO₆ mol.wt. 289.24

Synthesis

– Obtained by reaction of m-nitrophenoxyacetonitrile with resorcinol (Hoesch reaction) (81%) [5021].

m.p. 275° [5021]; ¹H NMR [5021].**1-(2,4-Dihydroxyphenyl)-2-(4-nitrophenoxy)ethanone**

[137987-89-4]

C₁₄H₁₁NO₆ mol.wt. 289.24

Synthesis

– Obtained by reaction of p-nitrophenoxyacetonitrile with resorcinol (Hoesch reaction) (86%) [5021].

m.p. 281° [5021]; ¹H NMR [5021].**2-(4-Nitrophenoxy)-1-(2,4,6-trihydroxyphenyl)ethanone**

[243657-68-3]

C₁₄H₁₁NO₇ mol.wt. 305.24

Synthesis

– Preparation by Hoesch condensation of p-nitro-phenoxyacetonitrile with phloroglucinol in benzene/ethyl ether in the presence of zinc chloride and hydrogen chloride at 0° (87%) [5024].

m.p. 295° [5024]; ¹H NMR [5024].**2-(4-Cyanophenoxy)-1-(2-hydroxyphenyl)ethanone**

[243657-68-3]

C₁₅H₁₁NO₃ mol.wt. 253.26

Syntheses

– Refer to: [5032,5033].

2-(3-Chlorophenoxy)-1-(4-hydroxy-3-methoxyphenyl)ethanone

[107602-85-7]

C₁₅H₁₃ClO₄ mol.wt. 292.72

Synthesis

– Obtained by saponification of 1-(4-acetoxy-3-methoxyphenyl)-2-(3-chlorophenoxy)ethanone with sodium methoxide in refluxing methanol for 2.5 h (82%) [4429].

m.p. 118–119° [4429];

¹H NMR [4429], IR [4429], MS [4429].

2-(4-Fluorophenoxy)-1-(4-hydroxy-3-methoxyphenyl)ethanone

[104972-13-6]

 $C_{15}H_{13}FO_4$ mol.wt. 276.26**Synthesis**

- Preparation by treatment of 1-(4-isopropoxy-3-methoxy-phenyl)-2-(4-fluorophenoxy)ethanone (viscous liquid) (1 mol) with aluminium chloride (4 mol) in benzene for 2 h at r.t. (95%) [5034].

 1H NMR [5034], ^{13}C NMR [5034], ^{19}F NMR [5034], IR [5034]; TLC [5034].**1-(4-Hydroxy-3-methoxyphenyl)-2-(3-nitrophenoxy)ethanone**

[107584-70-3]

 $C_{15}H_{13}NO_6$ mol.wt. 303.27**Synthesis**

- Obtained by saponification of 1-(4-acetoxy-3-methoxy-phenyl)-2-(3-nitrophenoxy)ethanone (m.p. 130–133°) with sodium methoxide in refluxing methanol for 2.5 h (65%) [4429].

m.p. 187°5–189°5 [4429];

 1H NMR [4429], IR [4429], MS [4429].**1-(4-Hydroxyphenyl)-2-(3-methylphenoxy)ethanone**

[107584-64-5]

 $C_{15}H_{14}O_3$ mol.wt. 242.27**Synthesis**

- Obtained by coupling 4-hydroxy- α -bromoacetophenone with m-cresol (44%) [4429].

m.p. 170°5–172°5 [4429];

 1H NMR [4429], IR [4429], MS [4429].**1-(2,4-Dihydroxyphenyl)-2-(2-methylphenoxy)ethanone**

[137987-86-1]

 $C_{15}H_{14}O_4$ mol.wt. 258.27**Synthesis**

- Obtained by reaction of o-methylphenoxyacetonitrile with resorcinol (Hoesch reaction) (82%) [5021].

m.p. 182° [5021]; 1H NMR [5021].

1-(2,4-Dihydroxyphenyl)-2-(3-methylphenoxy)ethanone

[137987-85-0]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Synthesis

– Obtained by reaction of 3-methylphenoxyacetonitrile with resorcinol (Hoesch reaction) (82%) [5021].

m.p. 162° [5021]; 1H NMR [5021].**1-(2,4-Dihydroxyphenyl)-2-(4-methylphenoxy)ethanone**

[137987-84-9]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Synthesis

– Obtained by condensation of (p-methylphenoxy)-acetonitrile with resorcinol in ethyl ether/benzene in the presence of zinc chloride according to Houben–Hoesch method (95%) [5018], (87%) [5021].

m.p. 171–172° [5018], 167° [5021];
 1H NMR [5018,5021].**1-(2-Hydroxyphenyl)-2-(4-methoxyphenoxy)ethanone** $C_{15}H_{14}O_4$ mol.wt. 258.27

Syntheses

– Refer to: [5032] (compound **1d**) and [5033].

1-(4-Hydroxyphenyl)-2-(2-methoxyphenoxy)ethanone

[143486-72-0]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Synthesis

– Preparation by saponification of 1-(4-acetoxyphenyl)-2-(2-methoxyphenoxy)ethanone (SM) with potassium hydroxide in ethanol for 3 h at temperature <30° under nitrogen (90%) [5035]. SM was obtained by alkylation of sodium 2-methoxyphenoxide with p-acetoxy- α -bromo-acetophenone (Williamson synthesis) (96%, m.p. 67°5–68°5).

m.p. 159–160° [5035]; 1H NMR [5035].

1-(2,4-Dihydroxyphenyl)-2-(2-methoxyphenoxy)ethanone

[137987-88-3]

m.p. 193° [5021]; ¹H NMR [5021].C₁₅H₁₄O₅ mol.wt. 274.27

Synthesis

- Obtained by reaction of o-methoxyphenoxyacetonitrile with resorcinol (Hoesch reaction) (87%) [5021].

1-(2,4-Dihydroxyphenyl)-2-(3-methoxyphenoxy)ethanone

[137987-87-2]

m.p. 145° [5021]; ¹H NMR [5021].C₁₅H₁₄O₅ mol.wt. 274.27

Synthesis

- Obtained by reaction of m-methoxyphenoxy-acetonitrile with resorcinol (Hoesch reaction) (85%) [5021].

1-(2,4-Dihydroxyphenyl)-2-(4-methoxyphenoxy)ethanone

[121361-55-5]

m.p. 179° [4685,5031], 175° [5021];
¹H NMR [4685,5021,5031], IR [4685,5031].C₁₅H₁₄O₅ mol.wt. 274.27

Syntheses

- Obtained by reaction of p-methoxyphenoxy-acetonitrile with resorcinol (Hoesch reaction) (89%) [5021], (73%) [5031].
- Also refer to: [4685].

1-(3-Hydroxy-4-methoxyphenyl)-2-(2-hydroxyphenoxy)ethanone

[99783-86-5]

– Also refer to: [5037].

m.p. 154° [4634]; ¹H NMR [4634], MS [4634].C₁₅H₁₄O₅ mol.wt. 274.27

Syntheses

- Preparation by reaction of 3-hydroxy-4-methoxy- α -chloroacetophenone,

- with pyrocatechol monosodium salt in DMF at r.t. for 3 h (51%) [4634];
- with pyrocatechol in the presence of potassium carbonate in 2-butanone [5036].

1-(4-Hydroxy-3-methoxyphenyl)-2-(3-hydroxyphenoxy)ethanone

[107584-71-4]

 $C_{15}H_{14}O_5$ mol.wt. 274.27

Syntheses

- Obtained by saponification of 1-(4-acetoxy-3-methoxyphenyl)-2-(3-hydroxyphenoxy)ethanone with sodium methoxide in refluxing methanol for 2.5 h [4429].
- Also obtained by coupling reaction of 4-hydroxy-3-methoxy- α -bromoacetophenone with sodium m-acetoxyphenolate [4429].

m.p. 145–146° [4429]; 1H NMR [4429], IR [4429], MS [4429].**2-(4-Methoxyphenoxy)-1-(2,4,6-trihydroxyphenyl)ethanone**

[243657-65-0]

 $C_{15}H_{14}O_6$ mol.wt. 290.27

Synthesis

- Preparation by Hoesch condensation of p-methoxy-phenoxyacetonitrile with phloroglucinol in benzene/ethyl ether in the presence of zinc chloride and hydrogen chloride at 0° (78%) [5024].

m.p. 259° [5024]; 1H NMR [5024].**1-(4-Hydroxy-3-methoxyphenyl)-2-[3-(trifluoromethyl)phenoxy]ethanone**

[107584-69-0]

 $C_{16}H_{13}F_3O_4$ mol.wt. 326.27

Synthesis

- Obtained by saponification of 1-(4-acetoxy-3-methoxyphenyl)-2-[3-(trifluoromethyl)phenoxy]ethanone with sodium methoxide in refluxing methanol for 2.5 h (88%) [4429].

m.p. 107°5–108°5 [4429]; 1H NMR [4429], IR [4429], MS [4429].**2-(4-Acetoxyphenoxy)-1-(2,4-dihydroxyphenyl)ethanone**

[137987-93-0]

 $C_{16}H_{14}O_6$ mol.wt. 302.28

Synthesis

- Refer to: [5021].

1-(2,4-Dihydroxyphenyl)-2-(4-ethylphenoxy)ethanone

[201284-76-6]

 $C_{16}H_{16}O_4$ mol.wt. 272.30

Synthesis

– Obtained by condensation of (p-ethylphenoxy)-acetonitrile with resorcinol in ethyl ether/benzene in the presence of zinc chloride according to Houben–Hoesch method (84%) [5018].

m.p. 147–148° [5018]; 1H NMR [5018].

1-(4-Hydroxy-3-methoxyphenyl)-2-(3-methylphenoxy)ethanone

[107584-67-8]

 $C_{16}H_{16}O_4$ mol.wt. 272.30

Synthesis

– Obtained by saponification of 1-(4-acetoxy-3-methoxy-phenyl)-2-(3-methylphenoxy)ethanone with sodium methoxide in refluxing methanol for 2.5 h (53%) [4429].

m.p. 170°5–172°5 [4429];
 1H NMR [4429], IR [4429], MS [4429].

2-(4-Ethylphenoxy)-1-(2,4,6-trihydroxyphenyl)ethanone

[243657-62-7]

 $C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

– Preparation by Hoesch condensation of p-ethyl-phenoxyacetonitrile with phloroglucinol in ethyl ether/benzene in the presence of zinc chloride and hydrogen chloride at 0° (88%) [5024].

m.p. 247° [5024]; 1H NMR [5024].

1-(4-Hydroxy-3-methoxyphenyl)-2-(2-methoxyphenoxy)ethanone

[22317-35-7]

 $C_{16}H_{16}O_5$ mol.wt. 288.30

Syntheses

– Preparation by treatment of 1-(4-acetoxy-3-methoxy-phenyl)-2-(2-methoxyphenoxy)ethanone in chloroform solution with sodium methoxide in methanol, followed by acidification with dilute sulfuric acid (92%) [5038].

– Also obtained by hydrogenolysis of 1-[4-(benzyloxy)-3-methoxyphenyl]-2-(2-methoxyphenoxy)ethanone in methanol in the presence of 5% Pd on barium sulfate under hydrogen pressure (72%) [5039].

- Preparation by treatment of 1-(4-isopropoxy-3-methoxyphenyl)-2-(2-methoxyphenoxy)ethanone (m.p. 70°) (1 mol) with aluminium chloride (4 mol) in benzene for 2 h at r.t. (95%) [5034].
- Also obtained by oxidative degradation with 3% peracetic acid of 1-(4-hydroxy-3-methoxyphenyl)-2-(2-methoxyphenoxy)ethanol and 1-(3,4-dimethoxyphenyl)-2-(2-methoxyphenoxy)ethanol (used as softwood lignin model compounds) in 10% acetic acid or 50% ethanol for 48 h at 30° [5040].
- Also obtained by degradation of 1-(4-benzyloxy-3-methoxyphenyl)-2-(2-methoxyphenoxy)ethanol in the presence of *Aspergillus flavus*. Initial reactions in the degradation of this compound were oxidation of the α -hydroxy group to the corresponding ketone and debenzylation of the benzyloxy group [5041].
- Formation from kraft lignin in sulfate cooking [5042,5043].
- Also obtained from the cleavage of the β -ether bond in the guaiacylglycol- β -guaiacyl ether (SM) with the water solution of phthalocyanine complex trisodium tetra-4-sulfonatophthalocyanine-iron (III) (Fe(TSPc)). Fe(TSPc) catalyzed formation of oxidized products in the absence of oxygen. The radical derived from SM then undergoes further single electron oxidation and deprotonation to give the titled compound [5044].
- Also refer to: [5045–5051].

m.p. 94–95° [5039], 93° [5038], 65–67° [5043].

One the reported melting points is obviously wrong.

¹H NMR [5034,5039,5041], ¹³C NMR [5034], IR [5034,5041], UV [5039], MS [5039,5041]; TLC [5034,5041]; GC [5041].

1-(4-Hydroxy-3-methoxyphenyl)-2-(3-methoxyphenoxy)ethanone

[107584-68-9]

C₁₆H₁₆O₅ mol.wt. 288.30

Synthesis

- Obtained by saponification of 1-(4-acetoxy-3-methoxyphenyl)-2-(3-methoxyphenoxy)ethanone with sodium methoxide in refluxing methanol for 2.5 h (75%) [4429].

m.p. 109–110° [4429];

¹H NMR [4429], IR [4429], MS [4429].

2-(4-Ethoxyphenoxy)-1-(2,4,6-trihydroxyphenyl)ethanone

[243657-66-1]

C₁₆H₁₆O₆ mol.wt. 304.30

Synthesis

- Preparation by Hoesch condensation of p-ethoxyphenoxyacetonitrile with phloro-glucinol in benzene/ethyl ether in the presence of zinc chloride and hydrogen chloride at 0° (81%) [5024].

m.p. 223° [5024]; ¹H NMR [5024].

2-(2,4-Dimethoxyphenoxy)-1-(2,4,6-trihydroxyphenyl)ethanone

[149312-75-4]

 $C_{16}H_{16}O_7$ mol.wt. 320.30

Synthesis

– Obtained by reaction of 2,4-dimethoxyphenoxy-acetonitrile with phloroglucinol in THF in the presence of zinc chloride and hydrogen chloride in an ice bath for 4 h (53%) (Hoesch reaction) [5025].

m.p. 105–107° [5025]; monohydrate [5025];

 1H NMR [5025], ^{13}C NMR [5025], IR [5025], UV [5025], MS [5025].**1-(4-Hydroxy-2,5-dimethylphenyl)-2-[3-(trifluoromethyl)phenoxy]ethanone**

[107584-80-5]

 $C_{17}H_{15}F_3O_3$ mol.wt. 324.30

Synthesis

– Obtained by coupling 2,5-dimethyl-4-hydroxy- α -bromo-acetophenone with m-(trifluoromethyl)phenol (87%) [4429].

m.p. 191–194° [4429];

 1H NMR [4429], IR [4429], MS [4429].**1-(4-Hydroxy-2,5-dimethylphenyl)-2-(3-methylphenoxy)ethanone**

[107584-79-2]

 $C_{17}H_{18}O_3$ mol.wt. 270.33

Synthesis

– Obtained by coupling 2,5-dimethyl-4-hydroxy- α -bromo-acetophenone with m-cresol (54%) [4429].

m.p. 188°5–190°5 [4429];

 1H NMR [4429], IR [4429], MS [4429].**1-(2,4-Dihydroxyphenyl)-2-[4-(1-methylethyl)phenoxy]ethanone**

[201284-86-8]

 $C_{17}H_{18}O_4$ mol.wt. 286.33

Synthesis

– Obtained by condensation of (p-isopropyl-phenoxy)acetonitrile with resorcinol in ethyl ether/benzene in the presence of zinc chloride according to Houben–Hoesch method (90%) [5018].

m.p. 167° [5018]; 1H NMR [5018].

1-(2,4-Dihydroxyphenyl)-2-(4-propylphenoxy)ethanone

[201283-81-3]

C₁₇H₁₈O₄ mol.wt. 286.33

Synthesis

– Obtained by condensation of (p-propylphenoxy)-acetonitrile with resorcinol in ethyl ether/benzene in the presence of zinc chloride according to Houben–Hoesch method (88%) [5018].

m.p. 149–150° [5018]; ¹H NMR [5018].

1-(4-Hydroxy-3-methoxyphenyl)-2-(2-methoxy-4-methylphenoxy)ethanone

[152306-57-5]

C₁₇H₁₈O₅ mol.wt. 302.33

Synthesis

– Obtained by coupling α -bromoacetoguaiacone (1 equiv) with sodium creosolate (8 equiv) (compound 8) (19%) [5052].

m.p. 109–111° [5052];

¹H NMR [5052], ¹³C NMR [5052], IR [5052], MS [5052].

1-(4-Hydroxy-3,5-dimethoxyphenyl)-2-(2-methoxyphenoxy)ethanone

[18167-90-3]

C₁₇H₁₈O₆ mol.wt. 318.33

Syntheses

– Preparation by reaction of α -bromoacetosyringone (m.p. 130°) with guaiacol in the presence of sodium hydroxide in refluxing ethanol for 3 h (64%) [4511].

– From degradation of the lignin model compound syringylglycol β -guaiacyl ether (m.p. 70–71°) (SM) by *Polyporus versicolor* and *Stereum frustulatum* [4511].

SM was obtained by reduction of α -guaiacoxyacetosyringone in ethyl acetate with hydrogen over 10% Pd/C or with sodium borohydride in isopropanol (almost quantitative yield).

m.p. 85–86° [4511].

2-(2,6-Dimethoxy-4-methylphenoxy)-1-(4-hydroxy-3-methoxyphenyl)ethanone

[105153-11-5]

Chapter 15

Compounds Derived from Hydroxyacetic Acids

1-(3,5-Dichloro-2-hydroxyphenyl)-2-hydroxyethanone

[58483-53-7] $C_8H_6Cl_2O_3$ mol.wt. 221.04

Synthesis

– Refer to: [5055] (Romanian patent).

1-(5-Chloro-2-hydroxyphenyl)-2-hydroxyethanone

[52728-05-9] $C_8H_7ClO_3$ mol.wt. 186.59

Synthesis

– Obtained by oxidative rearrangement of 5-chloro-2-hydroxy- α -bromoacetophenone in moist DMSO for 16 h at 20° (56%) [4394].

m.p. 98–99° [4394]; 1H NMR [4394].

1-(3,4-Dihydroxy-5-nitrophenyl)-2-hydroxyethanone

[134612-56-9] $C_8H_7NO_6$ mol.wt. 213.15

Synthesis

– Refer to: [4402].

2-Hydroxy-1-(2-hydroxyphenyl)ethanone[17375-96-1] $C_8H_8O_3$ mol.wt. 152.15**Syntheses**

- Preparation by treatment of 2-hydroxy- α -bromo-acetophenone with refluxing water for 16 h (88%) [5056].
- Also obtained by hydrolysis of 2-hydroxy- α -(benzoyloxy)-acetophenone with 50% aqueous potassium hydroxide in refluxing ethanol for 34 h (73%) [4394].
- Also obtained by oxidative rearrangement of 2-hydroxy- α -bromoacetophenone in moist DMSO for 16 h at 20° (31%) [4394].
- Also obtained by action of hot aqueous sodium carbonate on 2,3-dihydro-2-hydroxybenzo[b]furan-3-one (m.p. 108°) (SM) at 100° for 1 h (33%). SM was obtained by oxidation of 2-hydroxyacetophenone with selenium dioxide [5057].
- Also obtained by hypervalent iodine oxidation of 1-(trimethylsilyloxy)-1-[2-(trimethylsilyloxy)-phenyl]ethene with iodosobenzene, boron trifluoride etherate and water. The mixture was stirred at -40° for 1 h, then the temperature was slowly (1 h) raised to r.t. and stirring was continued for 30 min (25%) [5058].
- Also obtained by a selective one-step synthesis from phenoxymagnesium bromide (1 mol) and anhydrous monomeric glyoxal (1 mol) in boiling benzene for 20 h (24%) [5059].
- Also obtained from α -chloro-o-hydroxyacetophenone by hydrolysis with boiling water for 15–20 h (20%) [4577].
- Also refer to: [4483,4879,5060–5064].

m.p. 66–67° [5057], 65° [4577,5059], 64–65° [4394,5056,5058];

 1H NMR [4394,5057,5059], IR [5059], UV [5059].**2-Hydroxy-1-(3-hydroxyphenyl)ethanone**[131341-58-7] $C_8H_8O_3$ mol.wt. 152.15**Synthesis**

- Refer to: [5065].

2-Hydroxy-1-(4-hydroxyphenyl)ethanone[5706-85-4] $C_8H_8O_3$ mol.wt. 152.15**Syntheses**

- Preparation by reaction of p-hydroxy-a-bromoacetophenone with formic acid in the presence of DBU,
 - in benzene at 0°, followed by saponification of the intermediate formate ester with sodium hydroxide in methanol (99%) [5066];
 - in methylene chloride, with the same treatment (49%) [5067].

- Preparation by demethylation of α -acetoxy-p-methoxyacetophenone (SM) with aluminium chloride in refluxing benzene for 3 h (80%). In the reaction, deacetylation takes place simultaneously. SM was obtained by treatment of α -chloro-p-methoxyacetophenone with potassium acetate in ethanol [5068].
- Preparation by action of boron trifluoride etherate with p-hydroxyphenyl diazomethyl ketone (SM1) in nitromethane under nitrogen at 22° for 15 min (81%). SM1, preparation given, melted at 145–150° (d) [5069].
- Preparation from α -acetoxy-4-hydroxyacetophenone (m.p. 133°),
 - by heating with 16% aqueous sodium hydroxide for 15 min on a steam bath (quantitative yield) [5070];
 - in methanolic solution by treatment with 0.5 N aqueous sodium hydroxide at r.t. for 15 min (67%) [4523].
- Preparation by adding excess of concentrated hydrochloric acid to a warm concentrated aqueous solution of the potassium salt and cooling the solution [5071].
- Preparation by treatment of the sodium salt with aqueous hydrochloric acid [5072].
- Also obtained from p-acetoxybenzoylcarbinol (SM2) by heating with 4% ethanolic potassium hydroxide for 45 min on a water bath (20%). SM2 was prepared from p-acetoxyphenyl diazomethyl ketone (m.p. 109–110°) after treatment in dioxane with 2 N sulfuric acid at r.t. for 20 min, then at 40° until no more nitrogen evolved [5073].
- Also obtained by condensation of glyoxal with phenol,
 - in the presence of butylamine at 33° for 3 h (29%) [5074];
 - in the presence of aqueous sodium hydroxide at 33° for 6 h (25%) [5075];
 - in the presence of hydrogen chloride at 80° for 4 h (<5%) [5076].
- Also obtained by reductive condensation of p-hydroxyphenylglyoxal potassium bisulfite with diethylamine under hydrogen in the presence of Raney nickel in dilute ethanol for 1.5 h at 45° [4818].
- Also obtained from bisphenol A which is metabolized by a Gram-negative aerobic bacterium via a novel pathway involving oxidative skeletal rearrangement of the bisphenol A [5077].
- Also obtained by peroxidatic degradation of 7,4'-dihydroxyflavanone or 7,4'-dihydroxy-3'-methoxyflavanone [5078].
- Also refer to: [5064,5079].

N.B.: Na salt [5070,5072], K salt [5071].

m.p. 177–178° [5068,5071], 173–174° [5073], 173° [4523], 170–177° [4818],
170–172° [5072], 170–171° [5069], 165–167° [5066,5067];

¹H NMR [5066,5069], IR [5066,5069], MS [5066].

2,2-Dihydroxy-1-(4-hydroxyphenyl)ethanone

[197447-05-5]

 $C_8H_8O_4$ mol.wt. 168.15

Syntheses

- Obtained by oxidation of p-hydroxyacetophenone with selenium oxide [5080].
- Also refer to: [5081] (compound 1d) and [5082,5083].

1-(2,3-Dihydroxyphenyl)-2-hydroxyethanone

[58483-49-1]

 $C_8H_8O_4$ mol.wt. 168.15

Synthesis

- Refer to: [5084].

1-(2,4-Dihydroxyphenyl)-2-hydroxyethanone (*Fisetol*)

[487-47-8]

 $C_8H_8O_4$ mol.wt. 168.15

Syntheses

- Obtained by hydrolysis of α -acetoxyresacetophenone (m.p. 164°) [5085],
 - with 5% aqueous sodium carbonate on a steam bath for 3 h (35%) [5085];
 - with 10% aqueous sodium hydroxide for 2 h at r.t. (38%) [5085].
 - Also obtained by hydrolysis of 2,4, α -triacetoxyacetophenone (m.p. 94°) [5085],
 - with 2 N sodium hydroxide [5085];
 - with 5 N methanolic ammonia for 8 days in the cold [5086].
 - Also obtained by demethylation of α -methoxyresacetophenone with 40% hydrobromic acid for 3 h on a boiling water bath (16%) [4640].
 - Also obtained by treatment of α -[(methoxycarbonyl)oxy]resacetophenone (m.p. 157–158°) or α -[(ethoxycarbonyl)oxy]resacetophenone (m.p. 107°) with 2 N sodium hydroxide for 2 h at r.t. [4432].
 - Also obtained by reaction of hydroxyacetonitrile with resorcinol [4845], (41%) (Hoesch reaction) [5087].
 - Also obtained by a selective one-step synthesis from 3-hydroxyphenoxymagnesium bromide (0.1 mol) and anhydrous monomeric glyoxal (0.1 mol) in boiling benzene for 20 h (35%) [5059].
 - Also obtained by treatment of *Fisetin* (3,7,3',4'-tetrahydroxyflavone)—m.p. 330° (d)—with boiling ethanolic potassium hydroxide [4885].
 - Also refer to: [4467,4835,4837,5088,5089].
- m.p. 191° [4845], 189° [4432,5085–5087], 187–188° [4640], 185–186° [5059];
¹H NMR [5059], IR [5059], UV [4640,5059,5090].

1-(3,4-Dihydroxyphenyl)-2-hydroxyethanone (DOPKET)[29477-54-1] $C_8H_8O_4$ mol.wt. 168.15**Syntheses**

- Obtained by saponification of its triacetate (SM) (m.p. 94°) with sodium hydroxide (or sodium ethoxide) in ethanol in a water bath for 20 min (33%). SM was prepared by treatment of 3,4-dihydroxy- α -chloroacetophenone with potassium acetate in refluxing acetic anhydride for 15 min (quantitative yield) [4768].
- Also obtained by heating N-acetyldopamine with 1 N hydrochloric acid [5091].
- Also obtained by hydrolysis of 2-(3',4'-dihydroxyphenyl)-3-acetylamino-6 (or 7)-(N-acetyl-2''-aminoethyl)-2,3-dihydro-1,4-benzodioxine (SM) with refluxing 1 N hydrochloric acid for 3 h. SM was formed by incubation of N-acetyldopamine with locust cuticle [4746].
- Also obtained from the quinone of 3,4-dihydroxyphenylglycol by attack with isomerase (SM). This enzyme (SM) has been purified from the hemolymph of *Sarcophaga bullata* [5092].

Isolation from natural sources

- From sclerotization of the adult cuticle (*Leucophaea maderae*) [5093].
- Also obtained by mild acid hydrolysis of sclerotized cuticles from locusts (*Schistocerca gregaria*) and beetles (*Pachynoda sinuata*) [4744].
- From acid hydrolysates of insect hard cuticle [5094].
- From acid hydrolysates of insect sclerotized cuticle in refluxing 1 N formic acid for 1 h. The cuticle used was obtained from the desert locust (*Schistocerca gregaria*) [4745].
- By acid hydrolysis from exuviae of last instar larvae of the cicada *Tibicen pruinosa* [5095].
- From the seed coat tamarind (*Tamarindus indica* L.) [5096].
- From the skins of tamarind seeds [5097].
- From mild acid hydrolysates of tanning pharate pupae cuticle from *Manduca Sexta* [4747].
- In hydrolysates of the wing-scales of butterfly (*Eurema hecabe*) in 1 N hydrochloric acid. This compound was also present in the hydrolyzate of wing-scales of *Catopsilia crocale*, *Appias indra* and *Morpho rhetenor* [5098].
- In aqueous extracts from cockroach and locust exuviae of various **Orthoptera** in refluxing water for 1 h (*Periplaneta americana*, *Periplaneta brunnea*, *Chortoicetes terminifera* and *Austracris guttulosa*) [5099].
- in acidic extracts of insect cuticles (exuviae) in refluxing 1 N hydrochloric acid for 1.5 h, i.e.:
 - **Orthoptera** (*Periplaneta americana*, *Periplaneta brunnea*, *Blattella germanica*, *Nauphoeta cinerea*, *Chortoicetes terminifera* and *Austracris guttulosa*) [5099];

- **Hemiptera** (*Nezara viridula*) [5099];
 - **Lepidoptera** (*Papilio aegaeus* and *Antheraea helena*) [5099];
 - **Coleoptera** (*Anthrenus australis*) [5099].
- in acidic extracts of insect cuticles (preparia) in refluxing 1 N hydrochloric acid for 1.5 h, i.e.:
- **Diptera** (*Lucilia cuprina*) [5099].
- in acid extracts of insect cuticles (prepal cuticles):
- **Lepidoptera** (*Papilio aegaeus*) [5099].
- Also refer to: [5100–5105].
- m.p. 195° [4768]; UV [4744,5094], MS [4744,4748,5094]; electrophoresis [5093]; column chromatography [4744]; TLC [4744,5093,5094]; LCEC chromatography [5093]; GC [5099]; HPLC [4747,5092]; HPLC-MS [5091].

2-Hydroxy-1-(2,4,6-trihydroxyphenyl)ethanone

[55313-03-6]

C₈H₈O₅ mol.wt. 184.15

Syntheses

- Preparation according to Hoesch reaction from phloroglucinol,
- with acetoxyacetonitrile (81%) [5106];
 - with hydroxyacetonitrile (63%) [5090].
- Also obtained from dihydrokaempferol (3,5,7,4'-tetrahydroxyflavanone) (*Aromadendrin*) by basic hydrolysis and subsequent oxidation [5107].
- Dihydrokaempferol yields kaempferol (3,5,7,4'-tetrahydroxyflavone) with peroxides and alkaline conditions; subsequent thermolysis produces the titled ketone [5107].
- Quercetin (3,5,7,3',4'-pentahydroxyflavone) yields the same product under alkaline thermolysis (80°) [5107].
- Also refer to: [4868].
- m.p. 226° [5090], 224° [5106]; UV [5090]; GC-MS [5107].

2-Hydroxy-1-(2-hydroxy-4-methylphenyl)ethanone

[55960-03-7]

C₉H₁₀O₃ mol.wt. 166.18

Syntheses

- Obtained by a selective one-step synthesis from 3-methyl-phenoxy magnesium bromide (1 mol) and anhydrous monomeric glyoxal (1 mol) in boiling benzene for 20 h (48%) [5059].
- Also refer to: [5084].
- m.p. 68–69° [5059]; ¹H NMR [5059], IR [5059], UV [5059].

2-Hydroxy-1-(2-hydroxy-5-methylphenyl)ethanone

$C_9H_{10}O_3$ mol.wt. 166.18
Synthesis

- Obtained by hydrolysis of 2-hydroxy-5-methyl- α -chloro-acetophenone with boiling water for 15–20 h (40%) [4577].

m.p. 76–77° [4577].

1-(4,5-Dihydroxy-2-methylphenyl)-2-hydroxyethanone

[61407-16-7]

$C_9H_{10}O_4$ mol.wt. 182.18
Synthesis

- Obtained (trace amounts) by heating D-fructose or D-glucose in 0.3 M acetate buffer of pH 4.5 at 96° for 48 h under nitrogen or D-fructose in 0.3 M acetate buffer of pH 4.5 in a stainless autoclave at 160° for 4 h [5108].

amorphous [5108]; 1H NMR [5108], MS [5108].

2-Hydroxy-1-(2-hydroxy-4-methoxyphenyl)ethanone

[55960-07-1]

$C_9H_{10}O_4$ mol.wt. 182.18
Syntheses

- Preparation from 2-hydroxy-4-methoxy- α -bromo-acetophenone with refluxing water for 20 h (76%) [4483].
- Also obtained from fisetol 4-monomethyl ether diacetate (m.p. 86°) by heating with ethanolic potassium hydroxide [4485].
- Also obtained by a selective one-step synthesis from 3-methoxyphenoxy magnesium bromide (1 mol) and anhydrous monomeric glyoxal (1 mol) in boiling benzene for 20 h (45%) [5059].
- Also obtained by action of 40% aqueous hydrobromic acid with 2-hydroxy-4, α -dimethoxy-acetophenone in acetic acid on a boiling water bath for 3 h (22%) [4640].
- Also refer to: [4433,4835,4837,5060,5088,5109].

m.p. 128° [4485], 127° [4640], 126–128° [4483], 126–127° [5059];

1H NMR [4483,5059], IR [4483,5059], UV [4640,5059], MS [4483].

2-Hydroxy-1-(3-hydroxy-4-methoxyphenyl)ethanone

[90536-46-2]

C₉H₁₀O₄ mol.wt. 182.18

Syntheses

– Preparation by total hydrolysis of 4-methoxy-3,α-diacetoxy-acetophenone (m.p. 82–83°) [4638], (m.p. 81–82°) [4750] in methanol with concentrated hydrochloric acid,

- for 4–5 h at r.t. (75%) [4638];
- for 30 min at reflux (56%) [4750].

m.p. 177–178° [4750], 176–177° [4638]; IR [4750], UV [4750].

2-Hydroxy-1-(4-hydroxy-3-methoxyphenyl)ethanone

[18256-48-9]

C₉H₁₀O₄ mol.wt. 182.18

Syntheses

– Preparation by total hydrolysis of 3-methoxy-4,α-diacetoxy-acetophenone (m.p. 77–78°) [4638], (m.p. 75–76°) [4750] in methanol with concentrated hydrochloric acid,

- for 4–5 h at r.t. (78%) [4638], (25%) [5039];
- during 14 h at 20°, then for 30 min at reflux (67%) [4750].

- Obtained by photorelease of l-glutamic acid from 5-[2-(4-hydroxy-3-methoxyphenyl)-2-oxoethyl] l-glutamate, mono(trifluoroacetate) [284043-07-8] with either 300 or 350 nm lamps in water or in deuterium oxide [5110].
- Also obtained by photorelease of γ-aminobutyric acid from 2-(4-hydroxy-3-methoxyphenyl)-2-oxoethyl γ-aminobutyrate [284043-11-4] with either 300 or 350 nm lamps in water or in deuterium oxide [5110].

N.B.: Details of the synthesis and ¹H NMR, ¹³C NMR, IR, UV and HRMS data are available free of charge via the Internet at <http://pubs.acs.org>. Complete experimental details are provided in the full paper [5110].

- Also obtained by treatment of 2-(acetoxy)-1-(4-hydroxy-3-methoxyphenyl)ethanone,
 - with boiling aqueous barium carbonate for 2 h [4637];
 - with 16% aqueous sodium hydroxide on the steam bath. The obtained sodium salt was treated with 2 N acetic acid (62%) [5111].

N.B.: Na salt sesquihydrate (70%) [5111].

- Also refer to: [5112].

Isolation from natural sources

- From cell cultures of *Solanum khasianum* (Solanaceae) [5113,5114].

N.B.: Microsomal preparations from heterotropic cell cultures of *Solanum khasianum* catalyse the hydroxylation of the α-methyl group of acetovanillone. The reaction requires both oxygen and NADPH [5113].

- From the Namibian shrub *Salsola tuberculatifomis* [5115].
- From the suprarenal capsules [4750].
- Also refer to: [5116].

m.p. 160–161° [4750,5039], 159–160° [4638], 158–160° (anhydrous) [5111];
¹H NMR [5039,5114], ¹³C NMR [5114], IR [4750,5039],
 UV [4750,5114], MS [5039,5114,5116];
 fluorescence spectroscopy [5117]; HPLC [5114]; GC/MS [5114,5116].

2-Hydroxy-1-(2-hydroxy-3,5-dimethylphenyl)ethanone

[55960-05-9]

C₁₀H₁₂O₃ mol.wt. 180.20

Synthesis

- Obtained by a selective one-step synthesis for 2,4-dimethyl-phenoxy magnesium bromide (1 mol) and anhydrous monomeric glyoxal (1 mol) in boiling benzene for 20 h (35%) [5059].

m.p. 100–101° [5059];

¹H NMR [5059], IR [5059], UV [5059].

2-Hydroxy-1-(2-hydroxy-4,6-dimethoxyphenyl)ethanone

[83768-75-6]

C₁₀H₁₂O₅ mol.wt. 212.20

Syntheses

- Preparation by hydrolysis of 2-(2-hydroxy-4,6-dimethoxy-phenyl)-2-oxoethyl benzoate in pyridine with aqueous sodium hydroxide under nitrogen atmosphere at r.t. for 1 h (80%) [5118].
- Also obtained by degradation of 2-[2-(2-hydroxy-4,6-dimethoxyphenyl)-2-oxoethoxy]-2-methyl-propionic acid in refluxing mixture of concentrated hydrochloric acid/methanol (1 vol/5 vol) for 1 h (42%) [5119].
- Also obtained by action of 40% hydrobromic acid with 2-hydroxy- α ,4,6-trimethoxyacetophenone in acetic acid by heating on a boiling water bath for 3 h (32%) [4640].
- Also refer to: [5088].

m.p. 140–142° [5119], 139–140° [4640], 131–132° [5118]; TLC [5118];

¹H NMR [5118,5119], IR [5118], UV [4640], MS [5118].

2-Hydroxy-1-(4-hydroxy-3,5-dimethoxyphenyl)ethanone (*Danielone*)

[90426-22-5]

C₁₀H₁₂O₅ mol.wt. 212.20

Syntheses

- Preparation by an efficient simple three-step synthesis:
- First, slowly adding a methanolic 3,5-dimethoxy-4-(methoxymethoxy)acetophenone to a cooled

methanolic potassium hydroxide solution. Then iodosobenzene diacetate was added and the reaction mixture stirred at r.t. overnight, cooled in an ice bath and 6% hydrochloric acid was added. After refluxing at 60° for 1 h, the reaction mixture was cooled at r.t. and water was added (60%) [5120].

- Obtained by hydrolysis of its diacetate (SM) with 5% hydrochloric acid in 70% dilute ethanol at 80° for 1.5 h [5121]. SM was prepared according to [5122].
- Also obtained by photorelease of l-glutamic acid from 5-[2-(4-hydroxy-3,5-dimethoxyphenyl)-2-oxoethyl] l-glutamate, mono(trifluoroacetate) [284043-10-3] with either 300 or 350 nm lamps in water or in deuterium oxide [5110].
- Also obtained by photorelease of γ -aminobutyric acid from 2-(4-hydroxy-3,5-dimethoxyphenyl)-2-oxoethyl γ -aminobutyrate [284043-12-5] with either 300 or 350 nm lamps, in water or in deuterium oxide [5110].

N.B.: Details of the synthesis and ¹H NMR, ¹³C NMR, IR, UV and HRMS data are available free of charge via the Internet at <http://pubs.acs.org>. Complete experimental details are provided in the full paper [5110].

- Also obtained from 1,2-bis(4-hydroxy-3,5-dimethoxyphenyl)-propane-1,3-diol, a β -1-lignin substructure model compound, by degradation with laccase of *Coriolus versicolor* (Fr.) Quel. [5123].
- Also refer to: [5124–5126].

Isolation from natural sources

- From *Nicotiana tabacum* [5121,5127] and *Atropa belladonna* root cultures [5121].
- From cell. suspension cultures of *Hyoscyamus albus* [5128].
- From *Carica papaya* fruit slices (Caricaceae) [5129].
- Isolated as virulence gene inducing compounds of *Agrobacterium* from the hairy root cultures of belladonna [5130].
- Also refer to: [5116].

m.p. 145° [5129], 109–110° [5121]. One of the reported melting points is obviously wrong.

TLC [5129]; GC/MS [5116,5127];

¹H NMR [5121,5129], ¹³C NMR [5121,5129], IR [5120,5129],

UV [5121,5127,5129], MS [5116,5120,5121,5127,5129].

1-(2,6-Dihydroxy-3,4-dimethoxyphenyl)-2-hydroxyethanone (*Methyldegeranylmelicopol*)

C₁₀H₁₂O₆ mol.wt. 228.20

Synthesis

- Obtained by degradation of *methylmelicopol* (VII) (SM) with refluxing 2 N hydrochloric acid for 5 min in an atmosphere of nitrogen (16%) [4987]. SM was isolated from the leaves of *Melicope broadbentiana* F. M. Bail (Rutaceae) [4987,5131].

N.B.: In the paper [4987], the formulas (VII) as well as (XI) representing the titled compound were erroneous [5131].

m.p. 181–183° [4987];

¹H NMR [4987], IR [4987], UV [4987].

2-Hydroxy-1-(4-hydroxy-3-propylphenyl)ethanone

[178978-33-1]

C₁₁H₁₄O₃ mol.wt. 194.23

Synthesis

– Refer to: [5132].

2-Hydroxy-1-(2-hydroxy-4,6-dimethoxy-3-methylphenyl)ethanone

[184706-61-4]

C₁₁H₁₄O₅ mol.wt. 226.23

Isolation from natural sources

– From the stem wood of *Euphorbia quinque-costata* Volk. (Euphorbiaceae) [5133].

m.p. 164–166° [5133];

¹H NMR [5133], ¹³C NMR [5133], IR [5133], UV [5133], MS [5133].

2-Hydroxy-1-(6-hydroxy-2,3,4-trimethoxyphenyl)ethanone (*Dimethyldegeranylmelicopol*)

[51117-08-9]

C₁₁H₁₄O₆ mol.wt. 242.23

Syntheses

– Preparation by reaction of acetoxyacetonitrile with antiarol (Hoesch reaction), followed by heating the isolated intermediate compound in refluxing dilute ethanol for 8 h (32%) [5131].

– Also obtained by hydrogenolysis of *dimethylmelicopol* (VIII) (SM) [4987]. SM was obtained by partial methylation of *methylmelicopol* (VII) [4987], itself isolated from the leaves of *Melicope broadbentiana* F. M. Bail. (Rutaceae) [4987,5131]. In the paper [4987], the formulas (VII) and (VIII), as well as (XIX) representing the titled compound were erroneous [5131].

m.p. 87° [4987], 86–87° [5131];

¹H NMR [4987], IR [4987], UV [4987].

1-[3-(Dimethylethyl)-2-hydroxyphenyl]-2-hydroxyethanone

[55960-04-8]

 $C_{12}H_{16}O_3$ mol.wt. 208.26

Synthesis

- Obtained by a selective one-step synthesis from 2-tert-butylphenoxymagnesium bromide (1 mol) and anhydrous monomeric glyoxal (1 mol) in boiling benzene for 20 h (45%) [5059].

oil [5059]; 1H NMR [5059], IR [5059], UV [5059].**1-[3-(Dimethylethyl)-2-hydroxy-6-methylphenyl]-2-hydroxyethanone**

[55960-06-0]

 $C_{13}H_{18}O_3$ mol.wt. 222.28

Synthesis

- Obtained by a selective one-step synthesis from 2-tert-butyl-5-methylphenoxymagnesium bromide (1 mol) and anhydrous monomeric glyoxal (1 mol) in boiling benzene for 20 h (25%) [5059].

m.p. 76–77° [5059]; 1H NMR [5059], IR [5059], UV [5059].**1-[4-(β-D-Glucopyranosyloxy)-2-hydroxyphenyl]-2-hydroxyethanone** $C_{14}H_{18}O_9$ mol.wt. 330.29

Chapter 16

Compounds Derived from Acyloxy- and Aroyloxyacetic Acids

16.1 Compounds Derived from Acetoxyacetic Acids

2-(Acetyloxy)-1-(2-hydroxyphenyl)ethanone

[40231-09-2] $C_{10}H_{10}O_4$ mol.wt. 194.19

Syntheses

- Preparation by hydrolysis of o-acetoxy- α -acetoxyacetophenone (SM) with aqueous potassium hydroxide solution by gently warming for 10–15 min on a water bath maintained at 80° (71%). SM was obtained by cupric chloride-catalyzed decomposition of o-acetoxy- α -diazoacetophenone in dioxane solution in the presence of acetic acid (65%, m.p. 161–162°) [5137].
- Also obtained by oxidative rearrangement of 2-acetoxy- α -bromoacetophenone in moist DMSO for 28 h at 20° (49%) [4394].
- Also obtained by reaction of potassium acetate with o-hydroxy- α -bromoacetophenone in acetone at r.t. for 90 min [5032].

m.p. 170–171° [5137], 58–59° [4394], 57° [5032]. One of the reported melting points is obviously wrong. Ogle and Main [5032] consider that the reported product of m.p. 171° [5137], identified by only elemental and IR analysis, is not the titled product.

1H NMR [4394,5032], ^{13}C NMR [5032], IR [5032,5137].

2-(Acetyloxy)-1-(4-hydroxyphenyl)ethanone

[20816-46-0] $C_{10}H_{10}O_4$ mol.wt. 194.19

Syntheses

- Preparation by reaction of α -chloro-4-acetoxyacetophenone with potassium acetate in boiling ethanol for 4 h (quantitative yield) [5138].
- Preparation by reaction of acetic acid and potassium acetate with α -chloro-4-hydroxyacetophenone in refluxing ethanol for 1 h (80%) [5070].

- Preparation by reaction of acetic acid with p-hydroxyphenacyl chloride in acetonitrile in the presence of triethylamine, first in an ice bath for 15 min, then at reflux for 3 h (50%) [4523].
 - Also refer to: [5139,5140].
- m.p. 133° [4523,5070], 127° [5138].

2-(Acetyloxy)-1-(2,4-dihydroxyphenyl)ethanone

[63124-23-2]

C₁₀H₁₀O₅ mol.wt. 210.19

Synthesis

- Preparation by reaction of acetoxyacetonitrile with resorcinol (Hoesch reaction) (85%) [5085], (40%) [5141].

m.p. 167–168° [5141], 164°⁵ [5085]; ¹H NMR [5141], IR [5141], UV [5090].

2-(Acetyloxy)-1-(3,4-dihydroxyphenyl)ethanone

[67083-58-3]

C₁₀H₁₀O₅ mol.wt. 210.19

Synthesis

- Preparation by adding a solution of sodium acetate in aqueous acetic acid to an ethanolic solution of 3,4-dihydroxy- α -chloroacetophenone, and heating at reflux for 24 h (83%) [5142].

Isolation from natural sources

- Obtained by mild acid hydrolysis of sclerotized cuticles from locusts (*Schistocerca gregaria*) and beetles (*Pachynoda sinuata*) [4744].
- m.p. 157–160° [5142]; UV [4744], MS [4744,4748]; column chromatography [4744]; TLC [4744].

2-(Acetyloxy)-1-(4-hydroxy-3-methoxyphenyl)ethanone

[139473-80-6]

C₁₁H₁₂O₅ mol.wt. 224.21

Syntheses

- Obtained by reaction of α -chloroacetovanillone with potassium acetate,
 - in refluxing ethanol for 2 h (56%) [4637] or for 4 h (67%) [5138];
 - in refluxing acetic acid and ethanol mixture for 1 h (57%) [5111].
- Also obtained by partial hydrolysis of 4, α -diacetoxy-3-methoxyacetophenone (m.p. 75–76°) in the presence of potassium bicarbonate in methanol for 16 h at 20° (96%) [4750].

- Also obtained from 4-hydroxy-3-methoxy- α -diazoacetophenone by slowly heating in acetic acid at 110° (29%) [4750].
- Also refer to: [5143].
m.p. 113–114° [4750], 110° [5111,5138].

2-(Acetyloxy)-1-[4-(acetyloxy)-2-hydroxyphenyl]ethanone

$C_{12}H_{12}O_6$ mol.wt. 252.22

Syntheses

- Preparation by reaction of ammonia with fisetol triacetate (m.p. 94°) in ethanol for 30 min at r.t. (93%) [5090].
- Also obtained by adding acetic anhydride to a suspension of fisetol sodium salt in a water/ethyl ether mixture (27%) [5090].
- Also obtained by adding, with stirring and cooling, a solution of fisetol (m.p. 189–190°) in aqueous sodium hydroxide to a solution of acetic anhydride in chloroform (or benzene). Then, the mixture was maintained for 10 min at r.t. (19%) [5090].
m.p. 99–100° [5090]; UV [5090].

2-(Acetyloxy)-1-[4-(acetyloxy)-2,6-dihydroxyphenyl]ethanone

$C_{12}H_{12}O_7$ mol.wt. 268.22

Syntheses

- Obtained by partial acetylation of α -hydroxy-phloracetophenone with acetic anhydride in chloroform in the presence of aqueous sodium hydroxide, for 24 h at r.t. (31%) [5090].
- Also obtained by partial deacetylation of α -hydroxyphloracetophenone tetraacetate (m.p. 109–110°) in ethanol with ammonia, for 1.5 h at r.t. (30%) [5090].
m.p. 167–169° [5090]; UV [5090].

2-(Acetyloxy)-1-[4-(acetyloxy)-2-hydroxy-6-methoxyphenyl]ethanone

$C_{13}H_{14}O_7$ mol.wt. 282.25

Synthesis

- Obtained by reaction of 4, α -diacetoxy-2,6-di-hydroxyacetophenone with diazomethane in ethyl ether at 0° (37%) [5090].
- m.p. 121° [5090].

2-(Acetyloxy)-1-[2,4-dihydroxy-3-(3-methyl-2-butenyl)phenyl]ethanone

[63124-25-4]

 $C_{15}H_{18}O_5$ mol.wt. 278.30

Synthesis

– Obtained (poor yield) by reaction of 2-methyl-3-buten-2-ol with 2,4-di-hydroxy- α -(acetoxy)acetophenone in dioxane in the presence of boron trifluoride etherate at 50–60° for 3 h (6%) [5141].

m.p. 147–148° [5141]; 1H NMR [5141], IR [5141].

2-(Acetyloxy)-1-[2,4-dihydroxy-5-(3-methyl-2-butenyl)phenyl]ethanone

[63124-24-3]

 $C_{15}H_{18}O_5$ mol.wt. 278.30

Synthesis

– Obtained by reaction of 2-methyl-3-buten-2-ol with 2,4-di-hydroxy- α -(acetoxy)acetophenone in dioxane in the presence of boron trifluoride etherate at 50–60° for 3 h (20%) [5141].

m.p. 129–130° [5141]; 1H NMR [5141], IR [5141].

2-(Acetyloxy)-1-[3,5-bis(1,1-dimethylethyl)-4-hydroxyphenyl]ethanone

[28441-16-9]

 $C_{18}H_{26}O_4$ mol.wt. 306.40

Syntheses

– Preparation by reaction of acetic acid with 3,5-di-tert-butyl-4-hydroxy- α -bromoacetophenone in toluene in the presence of DBU, first at 0° for 1 h, then at r.t. overnight (79%) [4523].

– Also refer to: [5144].

m.p. 103–105° [4523,5144].

16.2 Compounds Derived from Other Acyloxy- and Phenacyloxyacetic Acids**2-(2,4-Dihydroxyphenyl)-2-oxoethyl 2-methylpropanoate**

[63124-27-6]

 $C_{12}H_{14}O_5$ mol.wt. 238.24

Synthesis

– Obtained by reaction of isobutyryloxy-acetonitrile with resorcinol (Hoesch reaction) (40%) [5141].

m.p. 116–117° [5141]; 1H NMR [5141], IR [5141].

2-(4-Hydroxyphenyl)-2-oxoethyl 2,2-dimethylpropanoate

[230310-21-1]

 $C_{13}H_{16}O_4$ mol.wt. 236.27

Synthesis

- Obtained by adding dropwise triethylamine over 15 min to a cooled solution of p-hydroxyphenacyl chloride and pivalic acid in acetonitrile in an ice bath and then refluxing for 3 h [4523].

m.p. 178°5 [4523]; 1H NMR [4523].**2-(2,5-Dihydroxyphenyl)-2-oxoethyl hexanoate**

[216301-66-5]

 $C_{14}H_{18}O_5$ mol.wt. 266.29

Synthesis

- Obtained by reaction of hexanoic acid with 2,5-di-hydroxy- α -bromoacetophenone in acetonitrile in the presence of triethylamine at 70° for 4 h [4441].

flash chromatography [4441]; 1H NMR [4441], IR [4441], MS [4441].**2-(4-Hydroxyphenyl)-2-oxoethyl benzeneacetate**

[230310-20-0]

 $C_{16}H_{14}O_4$ mol.wt. 270.28

Synthesis

- Obtained by adding dropwise triethylamine over 15 min to a cooled solution of p-hydroxyphenacyl chloride and phenylacetic acid in acetonitrile in an ice bath and then refluxing for 3 h [4523].

m.p. 106–107° [4523]; 1H NMR [4523].**2-(2,5-Dihydroxyphenyl)-2-oxoethyl 2-propylpentanoate (so called Valproate)**

[216301-65-4]

 $C_{16}H_{22}O_5$ mol.wt. 294.35

Synthesis

- Obtained by reaction of valproic acid with 2,5-dihydroxy- α -bromoacetophenone in acetonitrile in the presence of triethylamine at 70° for 4 h [4441].

flash chromatography [4441]; 1H NMR [4441], IR [4441], MS [4441].

2-[2,4-Dihydroxy-3-(3-methyl-2-butenyl)phenyl]-2-oxoethyl 2-methylpropanoate

[63124-29-8]

C₁₇H₂₂O₅ mol.wt. 306.36

Synthesis

– Obtained (poor yield) by reaction of 2-methyl-3-buten-2-ol with 2,4-dihydroxy- α -(isobutyryloxy)-acetophenone in dioxane in the presence of boron trifluoride etherate at 50–60° for 3 h (5%) [5141].

m.p. 147–148° [5141]; ¹H NMR [5141], IR [5141].

2-[2,4-Dihydroxy-5-(3-methyl-2-butenyl)phenyl]-2-oxoethyl 2-methylpropanoate

[63124-28-7]

C₁₇H₂₂O₅ mol.wt. 306.36

Synthesis

– Obtained by reaction of 2-methyl-3-buten-2-ol with 2,4-dihydroxy- α -(isobutyryloxy)acetophenone in dioxane in the presence of boron trifluoride etherate at 50–60° for 3 h (20%) [5141].

m.p. 122–123° [5141]; ¹H NMR [5141], IR [5141].

2-[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl]-2-oxoethyl 2,2-dimethylpropanoate

[230310-24-4]

C₂₁H₃₂O₄ mol.wt. 348.48

Synthesis

– Preparation by adding in one portion DBU to a solution of 2-bromo-1-(3,5-di-tert-butyl-4-hydroxyphenyl)ethanone and pivalic acid in toluene. The solution was stirred in ice for 1 h and then overnight at r.t. (70%) [4523].

m.p. 134–135° [4523]; ¹H NMR [4523].

2-[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl]-2-oxoethyl benzeneacetate

[230310-23-3]

C₂₄H₃₀O₄ mol.wt. 382.50

Synthesis

– Preparation by adding in one portion DBU to a solution of 2-bromo-1-(3,5-di-tert-butyl-4-hydroxyphenyl)ethanone and phenylacetic acid in toluene. The solution was stirred in an ice bath for 1 h and then at r.t. overnight (58%) [4523].

m.p. 63–63° [4523]; ¹H NMR [4523].

16.3 Compounds Derived from Benzoyloxyacetic Acids

1-(4-Hydroxyphenyl)-2-[(2-nitrobenzoyl)oxy]ethanone

[130627-04-2]

 $C_{15}H_{11}NO_6$ mol.wt. 301.26

Syntheses

– Refer to: [5145,5146].

2-(Benzoyloxy)-1-(2-hydroxyphenyl)ethanone

[52728-02-6]

 $C_{15}H_{12}O_4$ mol.wt. 256.26

Syntheses

– Preparation by hydrolysis of 2-(benzoyloxy)-1-(2-acetoxy-phenyl)ethanone (SM) with aqueous potassium hydroxide solution by gently warming for 10–15 min on a water bath maintained at 80° (75%) [5137]. SM was obtained by cupric chloride-catalyzed decomposition of o-acetoxy- α -diazoacetophenone in dioxane solution in the presence of benzoic acid (86%, m.p. 110–111°).

– Also obtained by oxidative rearrangement of 2-benzoyloxy- α -bromoacetophenone in moist DMSO for 24 h at 20° (23%) [4394].

m.p. 123–124° [5137], 104–105° [4394]. One of the reported melting points is obviously wrong. 1H NMR [4394].

2-(Benzoyloxy)-1-(2,4-dihydroxyphenyl)ethanone

[143091-87-6]

 $C_{15}H_{12}O_5$ mol.wt. 272.26

Syntheses

– Preparation by reaction of benzoyloxyacetonitrile (so called benzoylglycolnitrile) with resorcinol (Hoesch reaction), (79%) [5147], (63%) [5148].

– Also refer to: [5062,5149,5150].

m.p. 202–203° [5147], 200° [5148].

2-(Benzoyloxy)-1-(2,5-dihydroxyphenyl)ethanone

[117421-24-6]

 $C_{15}H_{12}O_5$ mol.wt. 272.26

Synthesis

– Obtained by reaction of 2,5-dihydroxy- α -bromoacetophenone with benzoic acid in the presence of triethylamine in acetonitrile at 45° for 4 h [4421].

MS [4421]; HPLC [4421].

2-(2-Hydroxyphenyl)-2-oxoethyl 2-hydroxybenzoate

[68176-44-3]

 $C_{15}H_{12}O_5$ mol.wt. 272.26

Synthesis

– Preparation by hydrolysis of 1-(2-acetoxylphenyl)-2-[(2-methoxybenzoyl)oxy]ethanone (SM) with aqueous potassium hydroxide solution by gently warming for 10–15 min on a water bath maintained at 80° (70%) [5137]. SM was obtained by cupric chloride-catalyzed decomposition of o-acetoxy- α -diazooacetophenone in dioxane solution in the presence of o-acetoxybenzoic acid (35%, m.p. 124–125°).

m.p. 139–140° [5137].

2-(Benzoyloxy)-1-(2,4,6-trihydroxyphenyl)ethanone

[65982-77-6]

 $C_{15}H_{12}O_6$ mol.wt. 288.26

Syntheses

– Obtained by reaction of benzoyloxyacetonitrile with phloroglucinol (Hoesch reaction) [4870,4877,4879,5000], (89%) [5106], (67%) [5147].

– Also refer to: [4873,5062,5151–5153].

m.p. 235° [5106], 234–235° [5147], 220–225° [5062].

2-(Benzoyloxy)-1-(2,4-dihydroxy-6-methoxyphenyl)ethanone $C_{16}H_{14}O_6$ mol.wt. 302.28

Synthesis

– Obtained by reaction of benzoyloxyacetonitrile with phloroglucinol monomethyl ether (Hoesch reaction) (68%) [4879].

m.p. 145° [4879].

2-(Benzoyloxy)-1-(2,6-dihydroxy-4-methoxyphenyl)ethanone $C_{16}H_{14}O_6$ mol.wt. 302.28

Syntheses

– Obtained by partial methylation of α -(benzoyl-oxy)phloroacetophenone with diazomethane in ethyl ether for 4 h at 5° (37%) [5062] or in a methanol/ethyl ether mixture for 1 h at 0° (27%) [4879].

– Also refer to: [4877].

m.p. 215–217° [5062], 211° [4879].

2-(Benzoyloxy)-1-(2,4,6-trihydroxy-3-methoxyphenyl)ethanone

[1162-73-8]

C₁₆H₁₄O₇ mol.wt. 318.28

Syntheses

- Obtained by reaction of benzoyloxyacetonitrile with iretol (Hoesch reaction) [5154], (28%) [5155].
- Also refer to: [5156].

m.p. 227–229° [5155]; ¹H NMR [5155], IR [5155], UV [5155].**2-(Benzoyloxy)-1-(2-hydroxy-4,5-dimethoxyphenyl)ethanone**C₁₇H₁₆O₆ mol.wt. 316.31

Synthesis

- Obtained by reaction of benzoyloxyacetonitrile with 3,4-dimethoxyphenol (Hoesch reaction) (17%) [4655].

m.p. 128° [4655].

2-(Benzoyloxy)-1-(2-hydroxy-4,6-dimethoxyphenyl)ethanone

[147437-71-6]

C₁₇H₁₆O₆ mol.wt. 316.31

Syntheses

- Preparation by reaction of benzoyloxyacetonitrile with phloroglucinol dimethyl ether (Hoesch reaction) (56%) [4879].
- Preparation by reaction of benzoyloxyacetonitrile with phloroglucinol (Hoesch reaction), followed by partial methylation of the obtained ketone with dimethyl sulfate [5118].
- Preparation by partial methylation of α-(benzoyloxy)phloroacetophenone with excess diazomethane in ethyl ether for 2 h (50%) [4879] or for 4 h at 5° (6%) [5062].
- Also refer to: [5157].

m.p. 135° [4879], 132° [5062], 120–122° [5157]. One of the reported melting points is obviously wrong.

¹H NMR [5157], ¹³C NMR [5157], IR [5157], UV [5157], MS [5157].**2-(Benzoyloxy)-1-(2,4-dihydroxy-3,6-dimethoxyphenyl)ethanone**

[7741-48-2]

C₁₇H₁₆O₇ mol.wt. 332.31

Syntheses

- Preparation by hydrogenation of 2-(benzoyloxy)-1-[4-(benzoyloxy)-2-hydroxy-3,6-dimethoxy-phenyl]ethanone in ethyl acetate in the presence of Pd/C (86%) [4942].

- Also obtained by reaction of benzoyloxyacetonitrile with 2,5-dimethoxyresorcinol (Hoesch reaction) (51%) [5158].

m.p. 177° [5158], 175–176° [4942]; UV [4942,5158].

2-(Benzoyloxy)-1-(2,4,6-trihydroxy-3,5-dimethoxyphenyl)ethanone

[1167-74-4]

$C_{17}H_{16}O_8$ mol.wt. 348.31

Syntheses

- Obtained by reaction of benzoyloxyacetonitrile with 2,4-dimethoxyphloroglucinol (Hoesch reaction) (12–15%) [5155].

- Also refer to: [5159].

m.p. 139–142° [5155]; 1H NMR [5155], IR [5155], UV [5155].

1-(2-Hydroxy-3,4,6-trimethoxyphenyl)-2-[(4-nitrobenzoyl)oxy]ethanone

[116512-01-7]

$C_{18}H_{17}NO_9$ mol.wt. 391.33

Synthesis

- Preparation by treatment of 2,3,4,6-tetra-methoxy- α -(p-nitrobenzoyloxy)acetophenone with aluminium chloride in acetonitrile at 60° for 2 h (90%) [5160].

m.p. 173–174° [5160]; 1H NMR [5160].

2-(Benzoyloxy)-1-(2-hydroxy-3,4,6-trimethoxyphenyl)ethanone

[7741-49-3]

$C_{18}H_{18}O_7$ mol.wt. 346.34

Synthesis

- Preparation by partial methylation of 2-(benzoyl-oxy)-1-(2,4-dihydroxy-3,6-dimethoxyphenyl)ethanone with diazomethane (71%) [4942].

m.p. 172–174° [4942]; UV [4942].

2-(2-Hydroxy-3,4,6-trimethoxyphenyl)-2-oxoethyl 4-methoxybenzoate

[116512-00-6]

 $C_{19}H_{20}O_8$ mol.wt. 376.36

Synthesis

– Preparation by treatment of 2,3,4,6-tetra-methoxy- α -(p-methoxybenzoyloxy)-acetophenone with aluminium chloride in acetonitrile at 60° for 2 h (90%) [5160].

m.p. 151–152° [5160]; 1H NMR [5160].**2-(Benzoyloxy)-1-[2-hydroxy-4-methoxy-6-(phenylmethoxy)phenyl]ethanone**

[14585-08-1]

 $C_{23}H_{20}O_6$ mol.wt. 392.41

Synthesis

– Obtained by reaction of benzyl chloride with α -benzoyloxy-2,6-dihydroxy-4-methoxyacetophenone in the presence

of potassium carbonate and potassium iodide in refluxing acetone for 3.5 h (17%) [4877].

m.p. 151–153° [4877].

2-(Benzoyloxy)-1-[2-hydroxy-3,6-dimethoxy-4-(phenylmethoxy)phenyl]ethanone

[10048-37-0]

 $C_{24}H_{22}O_7$ mol.wt. 422.43

Synthesis

– Obtained by reaction of benzoyloxyacetonitrile with 1,3-bis(benzyloxy)-2,4-dimethoxy-benzene (Hoesch reaction) (32%) [4942].

m.p. 150–151° [4942]; UV [4942].

2-(Benzoyloxy)-1-[2-hydroxy-4,6-bis(phenylmethoxy)phenyl]ethanone

[14585-09-2]

 $C_{29}H_{24}O_6$ mol.wt. 468.51

Synthesis

– Obtained by reaction of benzyl chloride with α -(benzoyloxy)phloracetophenone in

the presence of potassium carbonate in refluxing acetone for 2 h (12%) [4877] or for 26 h (13%) [5151].

m.p. 140° [5151], 136° [4877]; UV [5151].

2-(Benzoyloxy)-1-[2-hydroxy-4,6-bis(phenylmethoxy)-3-(phenylmethyl)phenyl]ethanone

or

2-(Benzoyloxy)-1-[6-hydroxy-2,4-bis(phenylmethoxy)-3-(phenylmethyl)phenyl]ethanone

C₃₆H₃₀O₆ mol.wt. 558.63

Synthesis

- Obtained by reaction of benzyl chloride with α -(benzoyloxy)phloracetophenone in refluxing acetone for 26 h in the presence of potassium carbonate (7%) or in the presence of potassium carbonate and sodium iodide in the same time (12%). The same result was obtained using only benzyl bromide [5151].

m.p. 182° [5151]; UV [5151].

Chapter 17

Compounds Derived from Nitroacetic Acids

1-(3,5-Dichloro-2-hydroxyphenyl)-2-nitroethanone

[60795-15-5] $C_8H_5Cl_2NO_4$ mol.wt. 250.04

Synthesis

– Preparation by treatment of 6,8-dichloro-4-hydroxy-3-nitro-coumarin with 4% potassium hydroxide solution at r.t. for 24 h (85%) [5161].

m.p. 137° [5161]; IR [5161].

1-(3-Chloro-2-hydroxyphenyl)-2-nitroethanone

[60795-09-7] $C_8H_6ClNO_4$ mol.wt. 215.59

Synthesis

– Preparation by treatment of 8-chloro-4-hydroxy-3-nitro-coumarin with 4% potassium hydroxide solution at r.t. for 24 h (83%) [5161].

m.p. 103° [5161]; IR [5161].

1-(4-Chloro-2-hydroxyphenyl)-2-nitroethanone

[60795-11-1] $C_8H_6ClNO_4$ mol.wt. 215.59

Synthesis

– Preparation by treatment of 7-chloro-4-hydroxy-3-nitro-coumarin with 4% potassium hydroxide solution at r.t. for 24 h (73%) [5161].

m.p. 117–118° [5161]; IR [5161].

1-(5-Chloro-2-hydroxyphenyl)-2-nitroethanone[60795-14-4] $C_8H_6ClNO_4$ mol.wt. 215.59

Syntheses

- Preparation by treatment of 6-chloro-4-hydroxy-3-nitro-coumarin with 4% potassium hydroxide solution at r.t. for 24 h (65%) [5161].
- Also refer to: [5162].

m.p. 112° [5161]; IR [5161].

1-(2-Hydroxy-5-nitrophenyl)-2-nitroethanone[59507-91-4] $C_8H_6N_2O_6$ mol.wt. 226.15

Synthesis

- Preparation by heating a solution of 3,6-dinitro-4-hydroxy-coumarin (m.p. 188°) in 10% aqueous sodium hydroxide at 65° for 2 h, then cooling and acidification with hydrochloric acid (91%) [5056].

m.p. 160° [5056]; 1H NMR [5056].**1-(4-Hydroxyphenyl)-2-nitrosoethanone**[143527-88-2] $C_8H_7NO_3$ mol.wt. 165.15

Synthesis

- Refer to: [5163].

1-(2-Hydroxyphenyl)-2-nitroethanone[29378-60-7] $C_8H_7NO_4$ mol.wt. 181.15

Syntheses

- Preparation by alkaline degradation of 4-hydroxy-3-nitro-coumarin [5164]—m.p. 177° (d)—with 5% sodium hydroxide,
 - for 1.5 h at 50–60° (95%) [5056];
 - for 24 h at 20°, (79%) [4712], (75%) [5161].
- The same compound was isolated in reactions of either some *coumarins* or some *chromenes* with 5% sodium hydroxide for 1 h at r.t. or by heating at 90–95° (70–90%) [5165];

Coumarins

3-Nitro-4-(pyridylamino)coumarin	m.p. 224–225°
3-Nitro-4-(3-methyl-2-pyridylamino)coumarin	m.p. 227–229°
3-Nitro-4-(4-methyl-2-pyridylamino)coumarin	m.p. 243–244°
3-Nitro-4-(5-methyl-2-pyridylamino)coumarin	m.p. 225–226°
3-Nitro-4-(6-methyl-2-pyridylamino)coumarin	m.p. 250–252°

Chromenes

2-Hydroxy-3-nitro-4-(3-methyl-2-pyridylimino)-4 <i>H</i> -chromene	m.p. 245–246°
2-Hydroxy-3-nitro-4-(4-methyl-2-pyridylimino)-4 <i>H</i> -chromene	m.p. 250–252°
2-Hydroxy-3-nitro-4-(5-methyl-2-pyridylimino)-4 <i>H</i> -chromene	m.p. 233–234°
2-Hydroxy-3-nitro-4-(6-methyl-2-pyridylimino)-4 <i>H</i> -chromene	m.p. 274–275°

– Also refer to: [5142,5162,5166–5169].

m.p. 106–107° [4712], 106° [5056], 105–106° [5161], 96–97° [5165];

¹H NMR [5056,5161,5165], IR [5056,5161,5165].

1-(2-Hydroxy-3-methylphenyl)-2-nitroethanone

[60795-08-6] C₉H₉NO₄ mol.wt. 195.17

Synthesis

– Preparation by treatment of 4-hydroxy-8-methyl-3-nitro-coumarin with 4% potassium hydroxide solution at r.t. for 24 h (80%) [5161].

m.p. 126° [5161]; ¹H NMR [5161], IR [5161].

1-(2-Hydroxy-4-methylphenyl)-2-nitroethanone

[60795-10-0] C₉H₉NO₄ mol.wt. 195.17

Synthesis

– Preparation by treatment of 4-hydroxy-7-methyl-3-nitro-coumarin with 4% potassium hydroxide solution at r.t. for 24 h (72%) [5161].

m.p. 114° [5161]; IR [5161].

1-(2-Hydroxy-5-methylphenyl)-2-nitroethanone

[60795-13-3] C₉H₉NO₄ mol.wt. 195.17

Syntheses

– Preparation by treatment of 4-hydroxy-6-methyl-3-nitro-coumarin with 4% potassium hydroxide solution at r.t. for 24 h (88%) [5161].

– Also refer to: [5162,5168,5170].

m.p. 134° [5161]; ¹H NMR [5161], IR [5161].

1-(2-Hydroxy-4-methoxyphenyl)-2-nitroethanone

[60795-12-2]

 $C_9H_9NO_5$

mol.wt. 211.17

Syntheses

– Preparation by treatment of 4-hydroxy-7-methoxy-3-nitro-coumarin with 4% potassium hydroxide solution at r.t. for 24 h (76%) [5161].

– Also refer to: [5142,5171].

m.p. 140° [5161]; IR [5161].

Chapter 18

Compounds Derived from Arylacetic Acids

18.1 Compounds Derived from Phenylacetic Acid

1-(3-Bromo-5-fluoro-2-hydroxyphenyl)-2-phenylethanone

[4108-04-7]

$C_{14}H_{10}BrFO_2$ mol.wt. 309.13

Syntheses

- Preparation by Fries rearrangement of 2-bromo-4-fluoro-phenyl phenylacetate with aluminium chloride, according to the methods [5172],
 - without solvent at 130° for 2 h [5173];
 - in nitrobenzene at 25° for 6 h [5173].

– Also refer to: [5174].

m.p. 130° [5174]; b.p._{1,5} 154–155° [5173].

1-(3,5-Dibromo-2,4-dihydroxyphenyl)-2-phenylethanone

[19816-40-1]

$C_{14}H_{10}Br_2O_3$ mol.wt. 386.04

Syntheses

- Obtained by reaction of bromine (2 mol) with 4-phenyl-acetylresorcinol in acetic acid for 48 h [5175].
- Also obtained by Friedel–Crafts acylation of 2,4-dibromo-resorcinol with phenylacetyl chloride in nitrobenzene in the presence of aluminium chloride, first at r.t. overnight, then heating on a steam bath for 4 h (44%) [5176].

m.p. 190° [5176], 180° [5175].

1-(3-Chloro-5-fluoro-2-hydroxyphenyl)-2-phenylethanone

[4108-05-8]

 $C_{14}H_{10}ClFO_2$ mol.wt. 264.68

Syntheses

- Preparation by Fries rearrangement of 2-chloro-4-fluoro-phenyl phenylacetate with aluminium chloride, according to the methods [5172],
 - without solvent at 130° for 2 h [5173];
 - in nitrobenzene at 25° for 6 h [5173].
 - Also obtained by Friedel–Crafts acylation of p-fluoroanisole, followed by demethylation and chlorination of the obtained ketone [5174].
- m.p. 122° [5174]; b.p._{1-1.5} 209–210° [5173].

1-(3,5-Dichloro-4-hydroxyphenyl)-2-phenylethanone

[73048-86-9]

 $C_{14}H_{10}Cl_2O_2$ mol.wt. 281.11

Synthesis

- Obtained by DDQ oxidation of 1-(3,5-dichloro-4-hydroxy-phenyl)-2-phenylethanol in dioxane at r.t. for 16 h (82%) [5177].
- m.p. 132–135° [5177]; ¹H NMR [5177].

1-(4-Bromo-2-hydroxyphenyl)-2-phenylethanone

[54981-35-0]

 $C_{14}H_{11}BrO_2$ mol.wt. 291.14

Synthesis

- Obtained by Fries rearrangement of 3-bromophenyl phenylacetate with aluminium chloride in carbon disulfide for 1 h at r.t. [5178].
- m.p. 68° [5178].

1-(5-Bromo-2-hydroxyphenyl)-2-phenylethanone

[54981-34-9]

 $C_{14}H_{11}BrO_2$ mol.wt. 291.14

Synthesis

- Obtained by Fries rearrangement of 4-bromophenyl phenylacetate with aluminium chloride in carbon disulfide for 1 h at r.t. [5178].
- m.p. 70° [5178].

1-(3-Bromo-2,4-dihydroxyphenyl)-2-phenylethanone

[19816-35-4]

 $C_{14}H_{11}BrO_3$ mol.wt. 307.14

Synthesis

- Obtained by Friedel–Crafts acylation of 2-bromoresorcinol with phenylacetyl chloride in nitrobenzene in the presence of aluminium chloride, first at r.t. overnight, then heating on a steam bath for 4 h (50%) [5176].

m.p. 195° [5176].

1-(5-Bromo-2,4-dihydroxyphenyl)-2-phenylethanone

[92152-59-5]

 $C_{14}H_{11}BrO_3$ mol.wt. 307.14

Syntheses

- Obtained by reaction of bromine (1 mol) with 4-phenyl-acetylresorcinol in acetic acid at r.t. for 24 h [5175].
- Also obtained by Friedel–Crafts acylation [5179] of 4-bromoresorcinol with phenylacetyl chloride in nitrobenzene in the presence of aluminium chloride [5180].

- Also refer to: [5181].

m.p. 112° [5179,5180], 103° [5175].

1-(5-Bromo-2,3,4-trihydroxyphenyl)-2-phenylethanone $C_{14}H_{11}BrO_4$ mol.wt. 323.14

Synthesis

- Obtained by reaction of bromine with 4-phenylacetyl-pyrogallol in acetic acid [5182], at r.t. for 24 h [5175].

m.p. 164° [5182], 155–156° [5175].

1-(3-Chloro-2-hydroxyphenyl)-2-phenylethanone

[70331-83-8]

 $C_{14}H_{11}ClO_2$ mol.wt. 246.69

Syntheses

- Preparation by Friedel–Crafts reaction [5183].
- Also refer to: [5184].

protonation constants [5185];

complexes with Cu (II), Ni (II) and Co (II) [5185].

1-(4-Chloro-2-hydroxyphenyl)-2-phenylethanone

[107410-55-9]

 $C_{14}H_{11}ClO_2$ mol.wt. 246.69**Synthesis**

- Preparation by Fries rearrangement of m-chlorophenyl phenylacetate with aluminium chloride, first in carbon disulfide for 1 h, then, after elimination of the solvent, at 100° for 5 h (58%) [5186].

m.p. 62–64° [5186].

1-(5-Chloro-2-hydroxyphenyl)-2-phenylethanone

[126260-45-5]

 $C_{14}H_{11}ClO_2$ mol.wt. 246.69**Syntheses**

- Obtained by Friedel–Crafts acylation of p-chlorophenol with phenylacetic acid in the presence of boron trifluoride at 160° for 4 h in a sealed tube (68%) [5187].
- Also obtained by Fries rearrangement of p-chlorophenyl phenylacetate with aluminium chloride in refluxing chlorobenzene for 4 h (25%) [5188].
- Also obtained by Friedel–Crafts acylation of p-chloroanisole with phenylacetyl chloride in the presence of aluminium chloride in refluxing carbon disulfide for 5 h (25%) [4471].

m.p. 69° [5187], 66–67° [4471], 64–65° [5188];

b.p._{0.3} 153–154° [5187], b.p.₃₀ 280–285° [4471].**1-(5-Chloro-2,4-dihydroxyphenyl)-2-phenylethanone**

[92103-22-5]

 $C_{14}H_{11}ClO_3$ mol.wt. 262.69**Syntheses**

- Preparation by Friedel–Crafts acylation [5179] of 4-chlororesorcinol with phenylacetyl chloride in nitrobenzene in the presence of aluminium chloride, first at 10°, then at r.t. for 36 h (73%) [5180].
 - Also refer to: [5181].
- m.p. 121° [5180], 120° [5179].

1-(5-Fluoro-2-hydroxyphenyl)-2-phenylethanone

[343-59-9]

 $C_{14}H_{11}FO_2$ mol.wt. 230.24**Syntheses**

– Preparation by Fries rearrangement of p-fluorophenyl phenylacetate with aluminium chloride,

- at 150–180° for 20 min (85%) [5189];
- at 130° for 2 h (77%) [5190], according to the method [5191];
- at 130° for 2 h [5173], according to the method [5172];
- in nitrobenzene at 25° for 6 h [5173], according to the method [5172].

m.p. 85° [5189]; b.p._{1.5} 175–179° [5173], b.p._{1.2} 200–205° [5190].

1-(2,4-Dihydroxy-3-nitrophenyl)-2-phenylethanone

[19816-52-5]

 $C_{14}H_{11}NO_5$ mol.wt. 273.25**Synthesis**

– Preparation by Fries rearrangement of 2,6-di(phenyl-acetoxy)nitrobenzene (m.p. 124°) with aluminium chloride in nitrobenzene, first at r.t. overnight, then at 70–80° for 30 min (72%) [5176].

m.p. 109° [5176].

1-(2,4-Dihydroxy-5-nitrophenyl)-2-phenylethanone $C_{14}H_{11}NO_5$ mol.wt. 273.25**Synthesis**

– Obtained by reaction of fuming nitric acid (d = 1.5) with 4-phenylacetylresorcinol in acetic acid in an ice bath for 48 h [5175].

m.p. 156–157° [5175].

1-(3,4-Dihydroxy-5-nitrophenyl)-2-phenylethanone

[274925-86-9]

 $C_{14}H_{11}NO_5$ mol.wt. 273.25**Synthesis**

– Preparation by treatment of 1-(4-hydroxy-3-methoxy-5-nitrophenyl)-2-phenylethanone with aluminium chloride in refluxing ethyl acetate/pyridine mixture for 2 h (99%) [5192,5193].

m.p. 178–179° [5193], 177°6–178°8 [5192];
¹H NMR [5192,5193], ¹³C NMR [5192,5193], IR [5192,5193];
 HPLC [5192], IR [5192,5193].

1-(2,3,4-Trihydroxy-5-nitrophenyl)-2-phenylethanoneC₁₄H₁₁NO₆ mol.wt. 289.24**Synthesis**

- Obtained by reaction of fuming nitric acid (d = 1.5) with 4-phenylacetylpyrogallol in acetic acid in an ice bath for 48 h [5175].

m.p. 179–180° [5175].

1-(2-Hydroxyphenyl)-2-phenylethanone

[2491-31-8]

C₁₄H₁₂O₂ mol.wt. 212.25**Syntheses**

- Obtained by Fries rearrangement of phenyl phenylacetate,
 - with aluminium chloride,
 - without solvent, between 80° and 130° for 1 h (72%) [5194], at 140° for 3 h (60%) [5195–5197], at 120° for 4 h [5198,5199] or at 60° for 4 h (26%) [5200];
 - in nitrobenzene at 60° for 4 h (14%) [5201], at r.t. for 24 h (4%) [5195,5196];
 - in nitroethane at r.t. for 24 h (<13%) [5202];
 - in chlorobenzene at 50° for 4 h (21%) [5200];
 - with titanium tetrachloride in chlorobenzene at 50° for 4 h (<5%) [5200];
 - with polyphosphoric acid at 100° (1%) [5203];
 - with or without 20% *Bleicherde* at 200° for 9 h (poor yields) [5204].
- Also obtained by stirring a mixture of S-[3-hydroxy-4-(phenylacetyl)phenyl] dimethylcarbamothioate, Raney nickel and ethanol at r.t. for 1 h (67%) [5205].
- Also obtained by photo-Fries rearrangement of phenyl phenylacetate,
 - in the presence of α - or β -cyclodextrin in organic solvents [5206];
 - included in a Nafion membrane, at r.t. for 7 h (quantitative yield) [5207].
- Also obtained by acylation of phenol with phenylacetic acid,
 - in the presence of boron trifluoride etherate under argon on a water bath for 1.5 h (23%) [5208];
 - in the presence of zinc chloride and phosphorous oxychloride for 24 h at r.t. (21%) [5209];
 - in the presence of polyphosphoric acid at 100° (4%) [5203].
- Also obtained by degradation of 3-phenyl-4-hydroxycoumarin in refluxing 30% ethanolic hydrogen chloride for 1 h (56%) [5210].
- Also obtained by demethylation of 2-methoxyphenyl benzyl ketone (oil, b.p._{0.001} 130–140°),

- with 47% hydrobromic acid ($d = 1.5$) in acetic acid for 5 h at reflux (87%) [5199] or for 10 h on a steam bath (61%) [5211];
 - with aluminium chloride in nitrobenzene on a steam bath for 1 h (36%) [5211].
- Also obtained by hydrolysis of (2-methoxybenzoyl)phenylacetonitrile (m.p. 108–109°) in acetic acid,
- with concentrated hydrochloric acid on a steam bath for 20 h (48%) [5211];
 - with 47% hydrobromic acid on a steam bath for 10 h (34%) [5211].
- Also obtained from ethyl (2-methoxybenzoyl)phenylacetate (m.p. 67–68°),
- with boiling pyridinium chloride for 20 min (ca. 220°) (47%) [5212];
 - in acetic acid with concentrated hydrochloric acid for 15 h on a steam bath (35%) [5211].
- Also obtained by heating under reflux flavone with 5% aqueous sodium hydroxide [5213].
- Also refer to: [5214–5223].

N.B.: Complexes with Mn (II) [5224], Ni (II) [5224], Hg (II) [5224] and Co (II) [5224,5225].

m.p. 60–61° [5205], 60° [5198,5199], 59° [5214], 58–60° [5200], 57–58° [5212], 56–57° [5211], 55° [5195–5197,5204,5210].

b.p._{0.004} 150–155° [5211], b.p.₂₃ 165° [5204];

¹H NMR [5205], IR [5195–5197], UV [5195–5197],

MS [5205]; GC [5207]; GC-MS [5207].

1-(3-Hydroxyphenyl)-2-phenylethanone

[332072-68-1]

C₁₄H₁₂O₂ mol.wt. 212.25

Synthesis

- Obtained by electrolysis in an undivided cell a DMF solution containing 3-iodophenol, chloromethylbenzene, iron pentacarbonyl and a catalytic amount of a nickel-2,2'-bi-pyridine complex (57%) [5226].
- This compound seems to have not been described previously.

It is not mentioned in the *Chemical Abstracts* between 1907 (volume 1) and 2000 (volume 133) under the various denominations, namely: m-Hydroxy- α -phenylacetophenone, 3'-Hydroxy-2-phenyl-acetophenone and actually 1-(3-Hydroxyphenyl)-2-phenylethanone, neither in the *Beilsteins Handbuch der Organischen Chemie* under the denomination [3-Oxy-phenyl]-benzyl-keton. This ketone might very likely be prepared more simply by diazotization of the 1-(3-aminophenyl)-2-phenylethanone [55251-36-0], an amino ketone known for a long time [5227].

¹H NMR [5226], ¹³C NMR [5226], IR [5226], MS [5226].

1-(4-Hydroxyphenyl)-2-phenylethanone

[2491-32-9]

C₁₄H₁₂O₂ mol.wt. 212.25**Syntheses**

- Obtained by reaction of phenylacetic acid with phenol,
 - in the presence of zinc chloride (Nencki reaction),
 - at 170–200° (reflux) for 1.5 h (20%) [5228,5229];
 - at 170–180° [5230], for 2 h (15%) [5231];
 - in the presence of zinc chloride and phosphorous oxychloride for 24 h at r.t. (75%) [5209];
 - in the presence of polyphosphoric acid in a boiling water bath for 15 min (28%) [5232] or at 100° (19%) [5203];
 - in the presence of boron trifluoride at 80° for 2 h (87%) [5233];
 - in the presence of boron trifluoride etherate under argon on a water bath for 1.5 h (75%) [5208].
 - Also obtained by Friedel–Crafts acylation of phenol with phenylacetyl chloride in nitrobenzene in the presence of aluminium chloride (60%) [5231], at 80–90° for 1.5 h (61%) [5234] or at ≤80° for 0.75 h (60–70%) [5229].
 - Also obtained (by-product) by reaction of phenylacetyl chloride with anisole in benzene in the presence of stannic chloride between 55° and 75° for 1 h [5228].
 - Also obtained by Fries rearrangement of phenyl phenylacetate,
 - with aluminium chloride,
 - without solvent at 50° for 4 h (25%) [5200], at 80° for 4 h (72%) [5200], first in a water bath for 1 h, then at 120° for 4 h [5198,5199] or at 140° for 3 h (10%) [5195–5197];
 - in nitrobenzene at r.t. for 12 h (35%) [5202] or for 24 h (65%) [5195,5196], at 50° for 4 h (64%) [5200], at 60° for 4 h (64%) [5201];
 - in nitroethane at r.t. for 24 h (70%) [5202];
 - in nitropropane at 70° for 6 h (30%) [5202];
 - with polyphosphoric acid at 100° (8%) [5203];
 - with titanium tetrachloride in chlorobenzene at 50° for 4 h (19%) [5200].
 - Also obtained by diazotization of p-aminodeoxybenzoin [5235].
 - Also obtained (poor yield) by heating phenyl phenylacetate with or without 20% of *Bleicherde* for 9 h at 200° [5204].
 - Also obtained by photo-Fries rearrangement of phenyl phenylacetate in the presence of α- or β-cyclodextrin in organic solvents [5206].
 - Also refer to: [5236–5247].
- m.p. 151° [5198,5199], 149° [5231], 148° [5209], 146–147° [5228], 145–147° [5200],

144° [5230,5248], 143° [5232], 142° [5195,5196,5229,5233], 141° [5204],
139–142° [5234], 129° [5235].

There is discrepancy between the different melting points.

b.p.₁ 220–230° [5231]; IR [5195,5199], UV [5195,5199,5230,5248].

1-(2,3-Dihydroxyphenyl)-2-phenylethanone

[107410-01-5]

C₁₄H₁₂O₃

mol.wt. 228.25

Syntheses

- Preparation by total demethylation of 2,3-dimethoxy-desoxybenzoin (yellow oil, b.p.₃ 170–173°) with hydrobromic acid (d = 1.5) in refluxing acetic acid for 5 h (74%) [5199].
 - Also obtained by alkaline degradation of 8-hydroxyisoflavone (m.p. 222–224°) with sodium hydroxide in refluxing methanol for 1.5 h [5199].
- m.p. 79–81° [5199]; paper chromatography [5199].

1-(2,4-Dihydroxyphenyl)-2-phenylethanone

[3669-41-8]

C₁₄H₁₂O₃

mol.wt. 228.25

Syntheses

- Preparation by Friedel–Crafts acylation of resorcinol with phenylacetyl chloride in the presence of aluminium chloride,
 - in methylene chloride (85%) [5184];
 - in nitrobenzene at 70–80° for 15 min (<80%) [5249], at r.t. for 24 h (63%) [5250] or for 2 days (60%) [5175];
 - in ethyl ether at r.t. for 24 h (43%) [5251].
- Preparation by acylation of resorcinol with phenylacetyl chloride in boiling ethylene dichloride (84°), using a series of clay based catalysts (KSF, KSF/0, KP10, K10, K0, KS) (65–81%) [5252], (60%) [5253].
- Preparation by reaction of phenylacetic anhydride with resorcinol,
 - in the presence of concentrated sulfuric acid as catalyst at 130° for some minutes (60%) [5254];
 - in the presence of boron trifluoride etherate for 2.5 h at 70–75° (48%) [5255].
- Preparation by reaction of phenylacetic acid with resorcinol,
 - in the presence of boron trifluoride etherate under argon on a water bath for 1 h (89%) [5208];

- in the presence of boron trifluoride at 105–108° for 15 min, followed by hydrolysis of the obtained boron difluoride chelate (m.p. 154–155°) (78%) [5256] or at 90° for 1 h (66%) [5257];
- in the presence of boron trifluoride in chloroform (87%) [5258];
- in the presence of zinc chloride (Nencki reaction) at 120° for 2.5 h (70%) [5175], at 125–135° [5259], at 140° for 15 min (10%) [5249] or at 145–150° for 2 h [5230];
- in the presence of zinc chloride and phosphorous oxychloride for 24 h at r.t. (50%) [5209];
- in the presence of 70% perchloric acid at 150° for 30 min (30%) [5260];
- in the presence of Amberlite IR-120, a cation exchange resin sulfonic acid type, at 160° for 2–3 h (41%) [5261].

N.B.: Zeokarb 225 was found to be as effective.

- Preparation by reaction of phenylacetonitrile with resorcinol (Hoesch reaction) [5262–5265], (64%) [5266], (58%) [5267], (40%) [5268].
- Also obtained by heating 2-phenyl-4-benzylidene-7-hydroxy-[4*H*]-1-benzopyran (SM) with refluxing aqueous sodium hydroxide for 1 h. SM was obtained by condensation of 1,4-diphenyl-1,3-butanediol with resorcinol in acetic acid [5269].
- Also obtained by degradation of 7-hydroxy-2-methyl-3-phenylchromone (m.p. 244–246°) with refluxing 5% aqueous sodium hydroxide for 3 h [5175].
- Also obtained by treatment of ethyl (2,4-dimethoxybenzoyl)phenylacetate with boiling pyridinium chloride (ca. 220°) for 20 min (48%) [5212].
- Also refer to: [4685,4935,5181,5205,5216,5217,5220,5270–5282].

N.B.: Complexes with Mn (II), Co (II), Ni (II) and Hg (II) [5224].

m.p. 116° [5230,5248], 115–116° [5175,5283],
 115° [5250,5257,5258,5260,5262,5269], 114–116° [5261],

 114° [5251], 113° [5209], 110–113° [5212];
 b.p.₁₀ 220–225° [5259];
¹H NMR [5268], IR [5256], UV [5230,5248,5256,5264], MS [5268].

1-(2,5-Dihydroxyphenyl)-2-phenylethanone

[52122-86-8]

C₁₄H₁₂O₃ mol.wt. 228.25

Syntheses

- Obtained by partial demethylation of 2,5-dimethoxyphenyl benzyl ketone,
 - with hydriodic acid in acetic acid on a water bath for 2 h [4989];
- with hydrobromic acid in acetic acid, first at 0°, then at reflux for 6 h [5285].

- Also obtained by Friedel–Crafts acylation of hydroquinone with phenylacetyl chloride in the presence of aluminium chloride in nitrobenzene, keeping overnight, then on a water bath for 3 h [5285] or at 70–80° for 15 min [5249].
 - Also obtained by acylation of hydroquinone with phenylacetic acid,
 - in the presence of boron trifluoride etherate under argon on a water bath for 6 h (68%) [5208];
 - in the presence of boron trifluoride (saturation) at 125° for 1.5 h (56%) [5257];
 - in the presence of zinc chloride at 150° [5249] (Nencki reaction).
 - Also refer to: [5286].
- m.p. 170° [5249], 113° [5285], 112° [5257], 109°5 [4989].
One of the reported melting points is obviously wrong.

1-(2,6-Dihydroxyphenyl)-2-phenylethanone

[13936-92-0]

C₁₄H₁₂O₃

mol.wt. 228.25

Syntheses

- Obtained by treatment of 3,5-dicarbomethoxy-2,6-di-hydroxyphenyl benzyl ketone (m.p. 129–131°),
 - with boiling 10% alcoholic caustic soda for 3 h. The obtained dicarboxylic acid was decarboxylated by boiling with water for 3 h (75%) [5287];
 - with refluxing 4% methanolic potassium hydroxide for 4 h, followed by refluxing 12 h in water (35%) [5288].
 - Also refer to: [5217,5258].
- m.p. 170° [5287], 166–167° [5288].

1-(3,4-Dihydroxyphenyl)-2-phenylethanone

[107410-02-6]

C₁₄H₁₂O₃

mol.wt. 228.25

Syntheses

- Preparation by reaction of phenylacetic acid with pyrocatechol,
 - in the presence of zinc chloride and phosphorous oxychloride for 24 h at r.t. (60%) [5209];
 - in the presence of phosphorous oxychloride for 2 h at 90–100° (59%) [5234];
 - in the presence of boron trifluoride in chloroform, first at 10°, then at r.t. overnight (36%) [5289];
 - in the presence of zinc chloride at 140–150° (Hoesch reaction) [5249].

- Also obtained by total demethylation of 3,4-dimethoxydesoxybenzoin (m.p. 87–88°) with hydrobromic acid (d = 1.5) in refluxing acetic acid for 5 h [5289].

m.p. 173–174° [5289], 173° [5209,5249], 168–170° [5234].

2-Phenyl-1-(2,3,4-trihydroxyphenyl)ethanone

[22761-00-8]

$C_{14}H_{12}O_4$ mol.wt. 244.25

Syntheses

- Obtained by reaction of phenylacetic acid with pyrogallol,
- in the presence of zinc chloride at 150° for 30 min (Nencki reaction) [5230], (52%) [5290] or at 120° for 2.5 h (60%) [5175];
 - in the presence of Amberlite IR-120 cation exchange resin (sulfonic acid type) at 160° for 2–3 h (34%) [5261]. **N.B.:** Zeokarb 225 was found to be as effective;
 - in the presence of 70% perchloric acid at 150° for 30 min (25%) [5260];
 - in the presence of boron trifluoride in chloroform, first in ice cooling, then at r.t. overnight (96%) [5258].
- Also obtained by Friedel–Crafts acylation of pyrogallol,
- with phenylacetyl chloride in nitrobenzene in the presence of aluminium chloride at r.t. for 2 days (50%) [5175];
 - with phenylacetic anhydride in the presence of boron trifluoride etherate for 2.5 h at 75–80° (26%) [5255].
- Also refer to: [5220,5272,5277].

m.p. 147° [5260], 144–145° [5175], 141–142° [5290],
140–141° [5230,5248,5258], 135–136° [5261].

2-Phenyl-1-(2,4,5-trihydroxyphenyl)ethanone

[787-06-4]

$C_{14}H_{12}O_4$ mol.wt. 244.25

Syntheses

- Obtained by reaction of phenylacetonitrile with hydroxy-hydroquinone (Hoesch reaction) (43%) [5291].
- Also refer to: [5292].
- m.p. 208–210° [5291]; ^{13}C NMR [5293].

2-Phenyl-1-(2,4,6-trihydroxyphenyl)ethanone

[727-71-9]

 $C_{14}H_{12}O_4$ mol.wt. 244.25

Syntheses

- Preparation by reaction of phenylacetone nitrile with phloroglucinol (Hoesch reaction),
 - in the presence of zinc chloride [4852,5262,5264,5265], (44–45%) [5250,5294], (39%) [5255];
 - in the presence of boron trifluoride etherate (50%) [5255].
- Also obtained by reaction of phenylacetic acid with phloroglucinol in the presence of zinc chloride and phosphorous oxychloride for 24 h at r.t. (50%) [5209].
- Also refer to: [5217,5220,5263,5272,5273,5295,5296].

N.B.: Complexes with Mn (II), Co (II) Ni (II) and Hg (II) [5224].

The monohydrate of this ketone was at first obtained [5250,5262]. The water of crystallisation is lost on heating the crystals at 90°.

m.p. 164–165° [5264], 163° [5209], 162° [5250,5262,5294];

IR [5294], UV [5264,5294]; TLC [5294].

1-(4-Amino-3-hydroxyphenyl)-2-phenylethanone

[54903-53-6]

 $C_{14}H_{13}NO_2$ mol.wt. 227.26

Syntheses

- Preparation from 6-phenylacetyl-benzoxazolinone by alkaline hydrolysis with boiling 10% aqueous sodium hydroxide solution for 4 h (90–100%) [5297].
- Also refer to: [5298].
- m.p. 141–142° [5297].

1-(3-Amino-4,5-dihydroxyphenyl)-2-phenylethanone

[473790-02-2]

 $C_{14}H_{13}NO_3$ mol.wt. 243.26

Synthesis

- Preparation by hydrogenation of 1-(3,4-dihydroxy-5-nitro-phenyl)-2-phenylethanone in methanolic suspension in the presence of 10% Pd/C at r.t. for 2 h (91%) [5299].
- m.p. 234–237° [5299];
- 1H NMR [5299], ^{13}C NMR [5299], IR [5299].

1-(3,5-Dibromo-2-hydroxy-4-methoxyphenyl)-2-phenylethanone

[19816-38-7]

 $C_{15}H_{12}Br_2O_3$ mol.wt. 400.07

Syntheses

- Obtained by alkaline degradation of two substituted isoflavones with 10% sodium hydroxide in refluxing ethanol for 4 h,
 - from 6,8-dibromo-7-methoxyisoflavone (m.p. 139°) (92%) [5176];
 - from 2,6,8-tribromo-7-methoxyisoflavone (m.p. 218°) [5176].
- m.p. 120° [5176].

1-(2-Hydroxy-3,5-diiodo-4-methoxyphenyl)-2-phenylethanone

[19816-44-5]

 $C_{15}H_{12}I_2O_3$ mol.wt. 494.07

Syntheses

- Obtained by alkaline degradation of 6,8-diiodo-7-methoxyisoflavone (m.p. 210°) with 10% sodium hydroxide in refluxing ethanol for 4 h [5176].
 - Also obtained by iodination of benzyl 2-hydroxy-3-iodo-4-methoxyphenyl ketone with iodine and iodic acid in ethanol at 60–70° overnight [5176].
- m.p. 140° [5176].

1-(3-Bromo-2-hydroxy-4-methoxyphenyl)-2-phenylethanone

[19816-33-2]

 $C_{15}H_{13}BrO_3$ mol.wt. 321.17

Synthesis

- Obtained by alkaline degradation of 8-bromo-7-methoxy-isoflavone (m.p. 178°) with 10% sodium hydroxide in refluxing ethanol for 4 h (83%) [5176].
- m.p. 198° [5176].

1-(5-Chloro-2-hydroxy-4-methylphenyl)-2-phenylethanone

[92435-54-6]

 $C_{15}H_{13}ClO_2$ mol.wt. 260.72

Synthesis

- Preparation by Friedel–Crafts acylation of 4-chloro-3-methylphenol with phenylacetyl chloride in nitrobenzene in the presence of aluminium chloride [5180].
- m.p. 112° [5180].

1-(2-Chloro-6-hydroxy-4-methoxyphenyl)-2-phenylethanone

[116475-72-0]

C₁₅H₁₃ClO₃ mol.wt. 276.72

Syntheses

– Obtained by Friedel–Crafts reaction of 1-chloro-3,5-di-methoxybenzene with phenylacetyl chloride in the presence of aluminium chloride and zinc chloride in ethylene dichloride between -10° and -7° , then at r.t. for 1 h and subsequent demethylation at 70° for 1 h (47%) [5300].

– Also refer to: [5301,5302].

m.p. 123–125° [5300]; ¹H NMR [5300], IR [5300].

1-(4-Chloro-2-hydroxy-6-methoxyphenyl)-2-phenylethanone

[137986-09-5]

C₁₅H₁₃ClO₃ mol.wt. 276.72

Syntheses

– Obtained by Friedel–Crafts reaction of phenylacetyl chloride with 1-chloro-3,5-dimethoxybenzene in the presence of aluminium chloride and zinc chloride in ethylene dichloride between 5° and 10° , then at r.t. for 1 h and subsequent demethylation at $65-70^\circ$ for 3 h (54%) [5300].

– Also refer to: [5302].

m.p. 74–75° [5300]; ¹H NMR [5300], IR [5300].

1-(2-Hydroxy-3-iodo-4-methoxyphenyl)-2-phenylethanoneC₁₅H₁₃IO₃ mol.wt. 368.17

Syntheses

– Obtained by alkaline degradation of 8-iodo-7-methoxy-isoflavone (m.p. 169°) with 10% sodium hydroxide in refluxing ethanol for 4 h (81%) [5176].

– Also obtained by Friedel–Crafts acylation of 2-iodoresorcinol dimethyl ether with phenylacetyl chloride in nitrobenzene in the presence of aluminium chloride and heating for 2 h [5176].

m.p. 217° [5176].

1-(2-Hydroxy-5-methyl-3-nitrophenyl)-2-phenylethanone

[70978-50-6]

 $C_{15}H_{13}NO_4$ mol.wt. 271.27

Synthesis

– Obtained by nitration of 2-hydroxy-5-methylphenyl benzyl ketone,

- using standard reagents at -20° (81%) [4699];

• with fuming nitric acid in acetic acid/methylene chloride at r.t. [4700].

m.p. $80-82^\circ$ [4699,4700].

1-(3-Hydroxy-4-methoxy-5-nitrophenyl)-2-phenylethanone

[473789-93-4]

 $C_{15}H_{13}NO_5$ mol.wt. 287.27

Synthesis

– Obtained by partial methylation of 1-(3,4-dihydroxy-5-nitrophenyl)-2-phenylethanone with dimethyl sulfate in the presence of potassium carbonate in DMF for 1 h at 80° (25%) [5299].

m.p. $121-123^\circ$ [5299]; 1H NMR [5299], ^{13}C NMR [5299], IR [5299].

1-(4-Hydroxy-3-methoxy-5-nitrophenyl)-2-phenylethanone

[274925-97-2]

 $C_{15}H_{13}NO_5$ mol.wt. 287.27

Synthesis

– Preparation by treatment of 1-(4-hydroxy-3-methoxy-phenyl)-2-phenylethanone with 70% nitric acid in acetic acid at r.t. for 30 min (72%) [5192], (71%) [5193].

m.p. $129-130^\circ$ [5193];

1H NMR [5193], ^{13}C NMR [5193].

1-(2-Hydroxy-3-methylphenyl)-2-phenylethanone

[7294-92-0]

 $C_{15}H_{14}O_2$ mol.wt. 226.27

Syntheses

– Obtained by Fries rearrangement of o-cresyl phenylacetate,

- in the presence of aluminium chloride,

– without solvent at $160-180^\circ$ for 30 min (53%) [5303], at 140° for 3 h (45%) [5196,5304] or at 130° for 4 h (12%) [5305];

– in nitrobenzene at 60° for 4 h (10%) [5201];

- with alumina in methanesulfonic acid at 160° for 10 min (15%) [5306].
- Also obtained by Friedel–Crafts acylation of o-cresol with phenylacetic acid in the presence of alumina in methanesulfonic acid at 140° for 5 min (12%) [5306].
- Also obtained by photo-Fries rearrangement of o-tolyl phenylacetate,
 - in the presence of α - or β -cyclodextrin in organic solvents [5206];
 - included in a Nafion membrane at r.t. for 7 h (quantitative yield) [5207].
- Also refer to: [5307].

m.p. 44° [5196,5304]; b.p.₈ 176–180° [5303];

IR [5196,5304], UV [5196,5304]; GC [5207]; GC-MS [5207].

1-(2-Hydroxy-4-methylphenyl)-2-phenylethanone

[2491-34-1]

C₁₅H₁₄O₂ mol.wt. 226.27

Syntheses

- Preparation by Fries rearrangement of m-cresyl phenylacetate,
 - with aluminium chloride,
 - without solvent, for 3 h at 140° (50%) [5197,5304];
 - starting in carbon disulfide and, after solvent elimination, for 1 h at 60–70°, then 24 h at r.t. (77%) [5308];
 - in nitrobenzene for 4 h at 60° (65%) [5201] or in refluxing nitromethane for 3 h (49%) [5305];
 - with alumina in methanesulfonic acid for 15 min at 160° (90%) [5306].
 - Preparation by direct acylation of m-cresol with phenylacetic acid,
 - with boron trifluoride for 2 h at 90° (93%) [5233];
 - with alumina in methanesulfonic acid for 5 min at 120° (83%) [5306].
 - Also obtained by hydrolysis of 2-difluoroboryloxy-4-methylphenyl benzyl ketone (SM) (m.p. 125–126°) with refluxing dilute ethanol for 15–20 min. SM was prepared by action of phenylacetic acid with m-cresol in the presence of boron trifluoride etherate for 30 min at 125–130° (50%) [5309].
- m.p. 52–53° [5309], 49° [5308], 32–33° [5233].
 One of the reported melting points is obviously wrong.
 b.p.₅ 164° [5197,5304], b.p.₄ 170–175° [5233], b.p.₁₇ 218° [5308];
 IR [5309], UV [5309].

1-(2-Hydroxy-5-methylphenyl)-2-phenylethanone

[24258-63-7]

 $C_{15}H_{14}O_2$

mol.wt. 226.27

**Syntheses**

- Preparation by Fries rearrangement of p-cresyl phenylacetate with aluminium chloride (68%) [5310],
 - without solvent at 120–140° for 20 min (82%) [5303], at 130–135° for 30 min (80%) [5311] or at 130–140° for 3 h (14%) [5312];
 - in nitrobenzene at r.t. for 48 h (80%) [5195–5197] or at 60° for 4 h (64%) [5201];
 - in 1,2,4-trichlorobenzene at reflux for 30 min (78%) [5188];
 - in chlorobenzene at reflux for 4 h (23%) [5305] or for 30 min (86%) [5188].
- Preparation by Friedel–Crafts acylation of p-cresol with phenylacetic acid,
 - in the presence of boron trifluoride at 80° for 2 h (89%) [5233];
 - in the presence of zinc chloride [5313].
- Also obtained by Friedel–Crafts acylation of p-cresol methyl ether with phenylacetyl chloride in the presence of aluminium chloride, first in refluxing carbon disulfide for 5 h, then, after solvent elimination, at 120–130° for 5 h (54–61%) [5314].
- Also obtained by photo-Fries rearrangement of p-tolyl phenylacetate,
 - in the presence of α - or β -cyclodextrin in organic solvents [5206];
 - included in a Nafion membrane, at r.t. for 7 h (quantitative yield) [5207].
- Also obtained by reaction of N-diethylaniline with α -bromo-2-hydroxy-5-methyldeoxybenzoin [5314].
- Also refer to: [5315].

m.p. 65–66° [5188,5312], 65° [5195–5197,5314], 64° [5233], 63°5–65° [5310], 63° [5311,5313], 54–58° [5303];

b.p.₇ 169–174° [5303], b.p._{0.6} 170° [5233], b.p.₆ 195–199° [5311],

b.p._{13–14} 210–213° [5314]; GC [5207]; GC-MS [5207];

IR [5195–5197], UV [5195–5197].

1-(2-Hydroxy-6-methylphenyl)-2-phenylethanone

[137937-39-4]

 $C_{15}H_{14}O_2$

mol.wt. 226.27

**Synthesis**

- Obtained (by-product) by Fries rearrangement of m-tolyl phenylacetate with aluminium chloride in chlorobenzene at 140° for 4 h (5%) [5307].
- m.p. 85° [5307];
¹H NMR (Sadtler: standard n° 57893 M) [5307],
 IR (Sadtler: standard n° 84941 K) [5307], UV [5307], MS [5307].

1-(4-Hydroxy-2-methylphenyl)-2-phenylethanone

[3669-50-9]

 $C_{15}H_{14}O_2$ mol.wt. 226.27

Syntheses

- Obtained by reaction of phenylacetyl chloride with m-cresol in the presence of aluminium chloride in nitrobenzene for 30 min in a boiling water bath (26%) [5316].
 - Also obtained by reaction of phenylacetic acid with m-cresol,
 - in the presence of boron trifluoride at 90° for 2 h (3%) [5233];
 - in the presence of zinc chloride at reflux (200°) for 1 h [5316,5317].
 - Also obtained by Fries rearrangement of m-cresyl phenylacetate with aluminium chloride,
 - in refluxing chlorobenzene for 4 h (24%) [5305];
 - in nitromethane or in nitroethane at r.t. for 12 h (18–21%) [5202];
 - in nitrobenzene at 60° for 4 h (10%) [5202], (8%) [5201] or at r.t. for 10 h (10%) [5202];
 - without solvent at 140° for 3 h (10%) [5304] or first in carbon disulfide, then after elimination of the solvent, at 60–70° for 1 h and at r.t. for 24 h (2%) [5308].
- m.p. 142° [5316], 138–139° [5233], 138° [5304,5308].

1-(4-Hydroxy-3-methylphenyl)-2-phenylethanone

[7354-81-6]

 $C_{15}H_{14}O_2$ mol.wt. 226.27

Syntheses

- Preparation by Fries rearrangement of o-cresyl phenylacetate with aluminium chloride,
 - in nitroethane at r.t. for 12 h (73%) [5202];
 - in nitrobenzene at 60° for 4 h (72%) [5201] or at 50° for 4 h (60%) [5305];
 - in refluxing chlorobenzene for 4 h (58%) [5305];
 - in refluxing nitromethane for 4 h (21%) [5305];
 - without solvent at 130° for 4 h (49%) [5305] or at 140° for 3 h (30%) [5196,5304].
- Preparation by Fries rearrangement of o-cresyl phenylacetate with alumina in methanesulfonic acid for 10 min at 160° (85%) [5306].
 - Also obtained by photo-Fries rearrangement of o-cresyl phenylacetate in the presence of α - or β -cyclodextrin in organic solvents [5206].
 - Also obtained by reaction of phenylacetic acid with o-cresol,

- in the presence of alumina in methanesulfonic acid at 140° for 5 min (88%) [5306];
 - in the presence of aluminium chloride in nitrobenzene in a water bath for 1–5 h–1.25 h (60–70%) [5317];
 - in the presence of zinc chloride at reflux (180–200°) [5318], (<20%) [5317] (Nencki reaction).
- Also refer to: [5307].
- m.p. 156° [5196,5304], 152° [5317];
IR [5196,5304], UV [5196,5304].

1-(2,4-Dihydroxy-3-methylphenyl)-2-phenylethanone

[39581-98-1]

C₁₅H₁₄O₃ mol.wt. 242.27

Syntheses

- Preparation by demethylation of 2-hydroxy-4-methoxy-3-methylphenyl benzyl ketone with hydriodic acid in refluxing acetic anhydride (125–135°) for 2 h (64%) [5319].
- Also obtained by reaction of phenylacetic acid with 2-methylresorcinol in the presence of phosphorous oxychloride and zinc chloride, heating on a water bath for 3 h (45%) [5320].
- Also obtained by reaction of phenylacetonitrile with 2-methylresorcinol (Hoesch reaction) [5321].
- Also refer to: [5279,5322].

m.p. 178° [5320], 157–159° [5319,5321].

One of the reported melting points is obviously wrong.

1-(2,4-Dihydroxy-5-methylphenyl)-2-phenylethanone

[106737-29-5]

C₁₅H₁₄O₃ mol.wt. 242.27

Syntheses

- Preparation by reaction of phenylacetonitrile with 4-methyl-resorcinol (Hoesch reaction) [5323].
- Also obtained by demethylation of 4-hydroxy-2-methoxy-5-methylphenyl benzyl ketone with aluminium chloride in refluxing benzene for 4 h (74%) [5324].

m.p. 98–99° [5323], 96° [5324].

1-(2,4-Dihydroxy-6-methylphenyl)-2-phenylethanone

[55338-29-9]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Syntheses

– Preparation by Friedel–Crafts acylation of orcinol with phenylacetyl chloride in nitrobenzene in the presence of aluminium chloride [5180].

– Also refer to: [5325,5326].

m.p. 148° [5180].

1-(2,6-Dihydroxy-3-methylphenyl)-2-phenylethanone

[15578-06-0]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Obtained by treatment of 5-carbomethoxy-2,6-dihydroxy-3-methyldeoxybenzoin (m.p. 168–170°) with potassium hydroxide in refluxing dilute ethanol for 4 h (38%) [5327].

m.p. 135–136° [5327].

1-(2-Hydroxy-3-methoxyphenyl)-2-phenylethanone

[93899-00-4]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Syntheses

– Preparation from 2-acetoxy-3-methoxybenzoinitrile and benzylmagnesium chloride (75–90%) [5328].

– Also obtained (by-product) by reaction of phenylacetic acid with guaiacol in the presence of zinc chloride and phosphorous oxychloride for 24 h at r.t. (5%) [5209].

m.p. 165–168° [5209], 78–79° [5328]. One of the reported melting points is obviously wrong. UV [5209].

1-(2-Hydroxy-4-methoxyphenyl)-2-phenylethanone

[18439-96-8]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Syntheses

– Preparation by partial methylation of 2,4-dihydroxyphenyl benzyl ketone [5265],

- with methyl iodide in the presence of potassium carbonate in refluxing acetone for 3 h (85%) [5250] or for 12 h (91%) [5284];

- with methyl bromide in the presence of potassium carbonate in refluxing acetone for 20 h [5329];

- with dimethyl sulfate,
 - in the presence of potassium carbonate in boiling benzene for 90 min (51%) [5330] or in boiling acetone [4935];
 - in the presence of alkali in boiling ethanol [5331].
 - Also obtained by Friedel–Crafts acylation of resorcinol dimethyl ether with phenylacetyl chloride in the presence of aluminium chloride in boiling carbon disulfide for 1 h (50%) [5332] or in boiling ethyl ether (33%) [5333].
 - Also obtained by acylation of resorcinol monomethyl ether with phenylacetic acid in the presence of polyphosphoric acid at 95° for 30 min (40%) [5334].
 - Also obtained by degradation of 4-hydroxy-7-methoxy-3-phenylcoumarin with refluxing 30% ethanolic hydrogen chloride (45%) [5210].
 - Also obtained from 4,7-dimethoxy-3-phenylcoumarin on heating with 5% aqueous sodium hydroxide for 2 h on a water bath (71%) [5335].
 - Also obtained by hydrolysis of ethyl 2,4-dimethoxybenzoyl-phenylacetate (m.p. 76–77°) in acetic acid with concentrated hydrochloric acid on a steam bath for 15 h (68%) [5211].
 - Also obtained by hydrolysis of 2,4-dimethoxybenzoyl-phenylacetone nitrile (m.p. 108–109°) in acetic acid with concentrated hydrochloric acid on a steam bath for 15 h (47%) [5211].
 - Also obtained by condensation of phenylacetone nitrile with resorcinol monomethyl ether (Hoesch reaction) (23%) [5336].
 - Also refer to: [4935,5215,5216,5222,5270,5273,5277,5278,5337–5340].
- m.p. 92° [5332], 90° [5284,5331,5336], 88–89° [5211],
88° [5250,5330], 87–88° [5335], 86–87° [5329], 86° [5210], 75° [5334].

One of the reported melting points is obviously wrong.

b.p._{0.001} 155–165° [5211]; ¹H NMR [5341,5337].

1-(2-Hydroxy-5-methoxyphenyl)-2-phenylethanone

[80427-38-9]

C₁₅H₁₄O₃ mol.wt. 242.27

Syntheses

- Preparation by Fries rearrangement of p-methoxyphenyl phenylacetate with titanium tetrachloride at 120° for 1 h (60–74%) [5342].
 - Also obtained by Friedel–Crafts acylation of hydroquinone dimethyl ether with phenylacetyl chloride in the presence of aluminium chloride,
 - in carbon disulfide at r.t. for 1 h (by-product) [5343];
 - in refluxing ethyl ether for 8 h [5344], (43%) [5217].
 - Also obtained (poor yield) by partial degradation of 6-methoxy-3-phenyl-4-hydroxycoumarin with 30% ethanolic hydrogen chloride at reflux for 1 h [5210].
 - Also refer to: [5345,5346].
- m.p. 45° [5217], 44° [5342]; IR [5342], UV [5342].

1-(2-Hydroxy-6-methoxyphenyl)-2-phenylethanone

[40584-06-3]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Syntheses

- Obtained by partial methylation of benzyl 2,6-dihydroxy-phenyl ketone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone [5217].
 - Also obtained on heating 3-(6-methoxy-2-tosyloxyphenyl)-3-oxo-2-phenylpropanal (m.p. 137–138°) with ethanolic potassium hydroxide (2N) at reflux for 2 h (88%) [5347].
- m.p. 71° [5347], 66° [5217]; IR [5347].

1-(3-Hydroxy-4-methoxyphenyl)-2-phenylethanone

[58451-99-3]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Syntheses

- Preparation from 2-methoxy-5-(phenylacetyl)phenyl phenylacetate (SM) with refluxing methanolic potassium hydroxide (91%) [5348]. SM was obtained by acylation of 2-methoxyphenyl phenylacetate with phenylacetyl chloride in the presence of stannic chloride in nitromethane for 1 h at 20° (76%, m.p. 95°).
- Preparation from 3-benzyloxy-4-methoxybenzotrile and benzylmagnesium chloride (75–90%) [5328].
- Preparation by treatment of 3-benzyloxy-4-methoxyphenyl benzyl ketone (SM) with a mixture of concentrated hydrochloric acid and acetic acid (1:2 v/v) and heating at 70° for 1 h (69%) [5349]. SM was obtained by oxidation of 1-(3-benzyloxy-4-methoxyphenyl)-2-phenylethanol (m.p. 79–82°) with potassium dichromate in dilute sulfuric acid at 50° for 1 h (80%, m.p. 105–106°).

m.p. 106–107° [5328,5349], 101° [5348];

 1H NMR (Sadtler: standard n° 28214 M) [5349],

IR (Sadtler: standard n° 55286) [5348], UV [5348], MS [5349].

1-(4-Hydroxy-2-methoxyphenyl)-2-phenylethanone

[85288-47-7]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Syntheses

- Obtained by acylation of resorcinol monomethyl ether with phenylacetic acid in the presence of polyphosphoric acid at 95° for 30 min (30%) [5334].

- Also obtained (by-product) by condensation of phenylacetonitrile with resorcinol monomethyl ether (Hoesch reaction) (7%) [5336].

m.p. 113° [5336], 86° [5334].

One of the reported melting points is obviously wrong.

b.p.₁₃ 260–265° [5336]; ¹H NMR [5334,5341].

1-(4-Hydroxy-3-methoxyphenyl)-2-phenylethanone

[66476-02-6] C₁₅H₁₄O₃ mol.wt. 242.27

Syntheses

- Preparation by oxidation of 1-(4-hydroxy-3-methoxyphenyl)-2-phenylethanol with DDQ in dioxane at r.t. for 16 h (89%) [5177].
- Preparation by reaction of benzylmagnesium chloride with 4-acetoxy-3-methoxybenzotrile (72%) [5350].
- Preparation by reaction of phenylacetic acid with guaiacol in the presence of zinc chloride and phosphorous oxychloride for 24 h at r.t. (60%) [5209].
- Preparation from 1-(4-benzyloxy-3-methoxyphenyl)-2-phenylethanol (m.p. 136–138°) by catalytic hydrogen transfer using ammonium formate as hydrogen donor and 10% Pd/C catalysis in refluxing methanol for 30 min (94%) [5193].

N.B.: Na salt [5350].

m.p. 110–111° [5350], 108–110° [5177], 108° [5209], 106–108° [5193];

¹H NMR [5177,5193], ¹³C NMR [5193], UV [5209].

1-(2,4-Dihydroxy-5-methoxyphenyl)-2-phenylethanone

[79744-57-3] C₁₅H₁₄O₄ mol.wt. 258.27

Syntheses

– Refer to: [5293,5351].

¹³C NMR [5293].

1-(2,4-Dihydroxy-6-methoxyphenyl)-2-phenylethanone

[55607-18-6] C₁₅H₁₄O₄ mol.wt. 258.27

Syntheses

- Obtained by reaction of phenylacetonitrile with phloro-glucinol monomethyl ether (Hoesch reaction) (38%) [5295].
 - Preparation by tosylation of 2,4,6-trihydroxyphenyl benzyl ketone with p-toluenesulfonyl chloride in the presence of potassium carbonate in refluxing acetone for 4 h, followed by methylation with dimethyl sulfate (reflux 30 h) and final detosylation with refluxing ethanolic sodium hydroxide for 45 min (19%) [5335].
 - Also refer to: [5352].
- m.p. 146° [5335], 145–146° [5295].

1-(2,5-Dihydroxy-4-methoxyphenyl)-2-phenylethanone

[789-80-0]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Syntheses

– Obtained by partial methylation of 2,4,5-trihydroxyphenyl benzyl ketone with excess diazomethane in ethyl ether at r.t. overnight (47%) [5291].

– Also obtained by alkaline oxidation of 2-hydroxy-4-methoxyphenyl benzyl ketone with potassium persulfate in aqueous potassium hydroxide/pyridine mixture (Elbs reaction) [5344].

– Also refer to: [5217].

m.p. 153–154° [5344], 150–152° [5291]; ^{13}C NMR [5293].

2-Phenyl-1-(2,4,6-trihydroxy-3-methylphenyl)ethanone

[3136-47-8]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Syntheses

– Obtained by reaction of phenylacetonitrile with 2-methyl-phloroglucinol (Hoesch reaction) [5353].

– Also obtained by reduction of 2,4,6-trihydroxy-3-formyl-phenyl benzyl ketone with hydrogen in acetic acid using 5% Pd/C as catalyst [5354].

– Also refer to: [5296,5355,5356].

m.p. 200° [5353], 198–199° [5354].

1-(3-Amino-2-hydroxy-5-methylphenyl)-2-phenylethanone

[70977-87-6]

 $C_{15}H_{15}NO_2$ mol.wt. 241.29

Synthesis

– Preparation by hydrogenation of 2-hydroxy-5-methyl-3-nitrophenyl benzyl ketone in ethanol using 5% Pd/C as catalyst at atmospheric pressure [4700], (74%) [4699].

m.p. 74–76° [4699,4700].

1-[3-Hydroxy-4-(methylamino)phenyl]-2-phenylethanone

[54943-18-9]

 $C_{15}H_{15}NO_2$ mol.wt. 241.29

Synthesis

– Preparation from 3-methyl-6-phenylacetylbenzoxazolinone by alkaline hydrolysis with boiling 10% aqueous sodium hydroxide for 4 h (90–100%) [5297].

m.p. 164–165° [5297].

1-[2-(Ethenyloxy)-6-hydroxyphenyl]-2-phenylethanoneC₁₆H₁₄O₃ mol.wt. 254.29**Synthesis**

– Obtained (by-product) by reaction of diethylaminochloro-ethane with 2,6-dihydroxydesoxybenzoin in the presence of sodium ethoxide in refluxing ethanol for 4 h (6%) [5357].

m.p. 85° [5357].

1-[2-(Acetyloxy)-4-hydroxyphenyl]-2-phenylethanone

[145747-27-9]

C₁₆H₁₄O₄ mol.wt. 270.28**Syntheses**

- Obtained by selective deacetylation catalyzed by porcine pancreas lipase in THF at 42–45° of,
- 1-acetoxy-1-(2,4-diacetoxyphenyl)-2-phenylethane during 72 h (20%) [5265];
 - 2,4-diacetoxyphenyl benzyl ketone during 48 h (65%) [5265] or [5358,5359] (in the table below):

Lipase	Solvent	Time (h)	Yields (%)
PPL	Acetone/n-BuOH	40	35
PPL	CH ₃ CN/n-BuOH	50	35
PPL	THF/n-BuOH	42	65
CCL	DIPE/n-BuOH	45	60

PPL = porcine pancreas lipase; CCL = candida cylindracea lipase; DIPE = diisopropyl ether

m.p. 140° [5265]; TLC [5265];

¹H NMR [5265], ¹³C NMR [5265], IR [5265], UV [5265], MS [5265].**1-(6-Hydroxy-4-methoxy-1,3-benzodioxol-5-yl)-2-phenylethanone**

[2652-17-7]

C₁₆H₁₄O₅ mol.wt. 286.28**Synthesis**

– Obtained by reaction of phenylacetonitrile with 3-methoxy-4,5-methylenedioxyphenol (Hoesch reaction) (24%) [5360].

m.p. 162–164° [5360]; UV [5360].

1-(3-Bromo-2-hydroxy-4,5-dimethoxyphenyl)-2-phenylethanone

[54921-24-3]

 $C_{16}H_{15}BrO_4$ mol.wt. 351.20

Synthesis

– Obtained by alkaline degradation of 6,7-dimethoxy-8-bromoisoflavone with 3% alcoholic potassium hydroxide at reflux for 30 min (41%) [5361].

m.p. 146° [5361].

1-(3-Bromo-2-hydroxy-4,6-dimethoxyphenyl)-2-phenylethanone

[28750-55-2]

 $C_{16}H_{15}BrO_4$ mol.wt. 351.20

Syntheses

– Preparation by bromination of 2-acetoxy-4,6-dimethoxyphenyl benzyl ketone with bromine in acetic acid for 1 h at r.t. (69%) [5215].

– Also obtained by bromination of 2-hydroxy-4,6-dimethoxyphenyl benzyl ketone with bromine in chloroform under UV light at r.t. overnight (55%) [5294].

m.p. 205–206° [5215], 200–202° [5294]; TLC [5294];

[18439-99-1]

 $C_{16}H_{16}O_2$ mol.wt. 240.30

Syntheses

– Preparation by Fries rearrangement of 3,4-dimethylphenyl phenylacetate with aluminium chloride at 130° for 25 min (72%) [5363].

- Also obtained (poor yield) by treatment of 6,7-dimethyl-3-phenyl-4-hydroxycoumarin with refluxing 30% ethanolic hydrogen chloride for 1 h [5210].
m.p. 69–70° [5363], 68° [5210]; ¹H NMR [5363], IR [5363].

1-(2-Hydroxy-4,6-dimethylphenyl)-2-phenylethanone

[38319-83-4]

C₁₆H₁₆O₂ mol.wt. 240.30

Syntheses

- Preparation by Friedel–Crafts acylation of 3,5-dimethyl-anisole with phenylacetyl chloride in the presence of aluminium chloride, first for 1 h at r.t., then for 1 h at reflux (43%) [5364].
- Also obtained by Fries rearrangement of 3,5-dimethylphenyl phenylacetate with aluminium chloride for 30 min on a water bath (10%) [5313].
b.p.₁ 168–173° [5364], b.p.₂₀ 220–225° [5313];
¹H NMR [5364], IR [5364]; n_D^{23.2} = 1.5921 [5364].

1-(4-Hydroxy-3,5-dimethylphenyl)-2-phenylethanone

[73049-13-5]

C₁₆H₁₆O₂ mol.wt. 240.30

Syntheses

- Preparation by oxidation of 1-(4-hydroxy-3,5-dimethylphenyl)-2-phenylethanol with DDQ in dioxane at r.t. for 16 h (83%) [5177].
 - Preparation by Fries rearrangement of 2,6-dimethylphenyl phenylacetate with aluminium chloride in refluxing chlorobenzene for 4 h (74%) [5305].
- m.p. 117–118° [5177]; ¹H NMR [5177].

1-(2-Ethoxy-4-hydroxyphenyl)-2-phenylethanone

[50775-90-1]

C₁₆H₁₆O₃ mol.wt. 256.30

Syntheses

- Refer to: [5365,5366].

1-(4-Ethoxy-2-hydroxyphenyl)-2-phenylethanoneC₁₆H₁₆O₃ mol.wt. 256.30

Syntheses

– Obtained by partial ethylation of 2,4-dihydroxydeoxy-benzoin with ethyl iodide in the presence of potassium carbonate in boiling acetone during 3 h (68%) [5250].

– Also refer to: [5357].

m.p. 86° [5250].

1-(5-Ethyl-2,4-dihydroxyphenyl)-2-phenylethanone

[96643-95-7]

C₁₆H₁₆O₃ mol.wt. 256.30

Syntheses

– Preparation by reaction of phenylacetonitrile with 4-ethyl-resorcinol,
 – in the presence of boron trifluoride etherate (96%) [5367,5371];
 – in the presence of zinc chloride (Hoesch reaction) [5323].

m.p. 105–105°5 [5323], 100–102° [5367,5371]; ¹H NMR [5367].

1-(2-Hydroxy-4-methoxy-3-methylphenyl)-2-phenylethanone

[87538-40-7]

C₁₆H₁₆O₃ mol.wt. 256.30

Synthesis

– Obtained by reaction of methyl iodide with benzyl 2,4-di-hydroxyphenyl ketone in methanol in the presence of potassium hydroxide, first at 0°, then standing overnight and refluxing for 6 h (45%) [5319].

– Also refer to: [5278,5338].

m.p. 110–111° [5319].

1-(2-Hydroxy-4-methoxy-5-methylphenyl)-2-phenylethanone

[87538-41-8]

C₁₆H₁₆O₃ mol.wt. 256.30

Syntheses

– Refer to: [5278,5338].

1-(2-Hydroxy-4-methoxy-6-methylphenyl)-2-phenylethanone $C_{16}H_{16}O_3$ mol.wt. 256.30

Syntheses

– Obtained by condensation of phenylacetone nitrile with orcinol monomethyl ether (1%) (Hoesch reaction) [5336].

– Also obtained by reaction of phenylacetyl chloride with orcinol dimethyl ether in the presence of aluminium chloride [5369].

m.p. 110° [5336].

1-(2-Hydroxy-6-methoxy-3-methylphenyl)-2-phenylethanone

[15578-05-9]

 $C_{16}H_{16}O_3$ mol.wt. 256.30

Synthesis

– Obtained by partial methylation of 2,6-dihydroxy-3-methyldeoxybenzoin with dimethyl sulfate in the presence of potassium carbonate in boiling acetone (74%) [5327].

m.p. 80–82° [5327].

1-(4-Hydroxy-2-methoxy-5-methylphenyl)-2-phenylethanone

[101169-10-2]

 $C_{16}H_{16}O_3$ mol.wt. 256.30

Synthesis

– Obtained by reaction of phenylacetone nitrile with 4-methyl-resorcinol dimethyl ether (Hoesch reaction) [5324].

m.p. 129° [5324].

1-(4-Hydroxy-2-methoxy-6-methylphenyl)-2-phenylethanone $C_{16}H_{16}O_3$ mol.wt. 256.30

Synthesis

– Obtained (poor yield) by condensation of phenylacetone nitrile with orcinol monomethyl ether (7%) (Hoesch reaction) [5336].

m.p. 93° [5336].

1-(2,4-Dihydroxy-6-methoxy-3-methylphenyl)-2-phenylethanoneC₁₆H₁₆O₄ mol.wt. 272.30

Synthesis

– Obtained by reaction of phenylacetonitrile with 2,6-di-hydroxy-4-methoxytoluene (Hoe-sch reaction) (52%) [5353].

m.p. 141–143° [5353].

1-(2-Hydroxy-3,4-dimethoxyphenyl)-2-phenylethanone

[24852-33-3]

C₁₆H₁₆O₄ mol.wt. 272.30

Syntheses

– Obtained by Friedel–Crafts acylation of pyrogallol trimethyl ether with phenylacetyl chloride in the presence of aluminium chloride,

- in boiling carbon disulfide for 30 min (39%) [5370] or for 12 h [5344];
- in ice-cold ethyl ether, then at r.t. overnight (57%) [5371].

– Also refer to: [5277,5293,5351,5372,5375].

m.p. 113–114° [5344], 112–113° [5370], 106–107° [5371]; ¹³C NMR [5293].

1-(2-Hydroxy-4,5-dimethoxyphenyl)-2-phenylethanone

[24195-31-1]

C₁₆H₁₆O₄ mol.wt. 272.30

Syntheses

– Obtained by partial methylation of benzyl 2,5-dihydroxy-4-methoxyphenyl ketone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone [5217].

– Also obtained (by-product) by reaction of phenylacetyl chloride with hydroxy-hydroquinone trimethyl ether in the presence of aluminium chloride [5344,5377,5378].

– Also obtained by reaction of phenylacetonitrile with 3,4-dimethoxyphenol (Hoesch reaction) (56%) [5379].

– Also obtained (compound **7c**) [5380] according to the procedure [5291].

m.p. 94–95° [5379], 94° [5377,5378], 93° [5217];

¹³C NMR [5293], IR [5379], UV [5379], MS [5379].

1-(2-Hydroxy-4,6-dimethoxyphenyl)-2-phenylethanone

[39604-66-5]

 $C_{16}H_{16}O_4$ mol.wt. 272.30

Syntheses

- Obtained by partial methylation of benzyl 2,4,6-tri-hydroxyphenyl ketone [5265],
 - with dimethyl sulfate in the presence of potassium carbonate in boiling acetone [5294], for 1 h [5381], (69%) [5250] or for 14 h (68%) [5382];
 - with methyl iodide in the presence of potassium carbonate in refluxing acetone for 6 h [5353].
- Also obtained by condensation of phenylacetonitrile with phloroglucinol dimethyl ether (Hoesch reaction) (28%) [5383], (19%) [5384].
- Also obtained by Friedel-Crafts acylation of phloroglucinol trimethyl ether with phenylacetyl chloride in ethyl ether in the presence of aluminium chloride, first in an ice bath for 30 min and then at r.t. for 24 h [5385].
- Also obtained from 4,5,7-trimethoxy-3-phenylcoumarin on heating with 5% aqueous sodium hydroxide [5335].
- Also refer to: [4935,5215,5220,5273,5278,5295,5337,5338,5339,5340,5375,5380,5386].

m.p. 118° [5384], 117–118° [5385], 117° [5250,5294,5383], 116° [5353,5382], 115–116° [5335];

1H NMR [5341], IR [5294], UV [5294]; TLC [5294].

1-(4-Hydroxy-2,6-dimethoxyphenyl)-2-phenylethanone

[131196-74-2]

 $C_{16}H_{16}O_4$ mol.wt. 272.30

Syntheses

- Obtained (by-product) by condensation of phenylacetonitrile with phloroglucinol dimethyl ether (Hoesch reaction) [5383], (26%) [5384].
- Also obtained by saponification of (4-acetoxy-2,6-dimethoxyphenyl) benzyl ketone (m.p. 108–110°) in ethanol with 3% aqueous sodium hydroxide on a water bath (77%) [5384].

m.p. 77° [5384].

1-(4-Hydroxy-3,5-dimethoxyphenyl)-2-phenylethanone

[73049-12-4]

 $C_{16}H_{16}O_4$ mol.wt. 272.30

Synthesis

- Preparation by oxidation of 1-(3,5-dimethoxy-4-hydroxyphenyl)-2-phenylethanol with DDQ in dioxane at r.t. for 16 h (92%) [5177].

m.p. 117–118° [5177]; 1H NMR [5177].

1-(3,6-Dihydroxy-2,4-dimethoxyphenyl)-2-phenylethanoneC₁₆H₁₆O₅ mol.wt. 288.30**Syntheses**

– Preparation by condensation of 2,6-dimethoxy-hydroquinone with the complex phenylacetic acid and boron trifluoride (83%) [5387], (quantitative yield) [5388].

- Also obtained by saponification of 6-hydroxy-2,4-di-methoxy-3-(phenylacetoxy) phenyl benzyl ketone with 10% alcoholic potassium hydroxide for 2 h on a water bath [5387].
 - Also obtained (poor yield) by persulfate oxidation of 2-hydroxy-4,6-dimethoxy-phenyl benzyl ketone (Elbs reaction) (8%) [5387].
- yellow oil [5388]; m.p. 108° [5387]; b.p.₁ 220–240° [5387], b.p.₁ 230–250° [5388].

1-[2,4-Dihydroxy-3-(2-propenyl)phenyl]-2-phenylethanone

[38987-02-9]

C₁₇H₁₆O₃ mol.wt. 268.31**Syntheses**

– Obtained by Claisen rearrangement of 4-allyloxy-2-hydroxyphenyl benzyl ketone either using boiling dimethylaniline or heating up to 185–190° under reduced pressure [5276].

- Also obtained by reaction of allyl bromide with 2,4-dihydroxydesoxybenzoin in the presence of methanolic potassium hydroxide (22%) [5283].
 - Also refer to: [5277].
- m.p. 162–163° [5283], 126° [5276]. One of the reported melting points is obviously wrong.
¹H NMR [5283], IR [5283], UV [5283,5279].

[38987-03-0]

C₁₇H₁₆O₃ mol.wt. 268.31**Synthesis**

– Obtained by demethylation of 5-allyl-4-hydroxy-2-methoxy-phenyl benzyl ketone with aluminium chloride in ethyl ether or acetonitrile [5276].

m.p. 99–100° [5276]; UV [5276].

1-[2-Hydroxy-4-(2-propenyloxy)phenyl]-2-phenylethanone

[78660-73-8]

 $C_{17}H_{16}O_3$ mol.wt. 268.31

Syntheses

– Refer to: [5276,5279].

**O-[3-Hydroxy-4-(phenylacetyl)phenyl] dimethylcarbamothioate**

[142751-36-8]

 $C_{17}H_{17}NO_3S$ mol.wt. 315.39

Synthesis

– Obtained by stirring a mixture of 2,4-di-hydroxyphenyl benzyl ketone (1 mol), dimethylthiocarbamoyl chloride (2 mol), 1,4-diazabicyclo[2,2,2]octane (2 mol) and DMF at r.t. for 2 h (95%) [5205].

m.p. 94–95° [5205]; 1H NMR [5205], MS [5205].**S-[3-Hydroxy-4-(phenylacetyl)phenyl] dimethylcarbamothioate**

[142751-40-4]

 $C_{17}H_{17}NO_3S$ mol.wt. 315.39

Synthesis

– Obtained by refluxing a solution of O-[3-hydroxy-4-(phenylacetyl)phenyl] dimethylcarbamothioate [142751-36-8] in N,N-dimethylaniline for 1 h (87%) (Newman-Kwart rearrangement) [5205].

m.p. 100–101° [5205]; 1H NMR [5205], MS [5205].**1-(2,4-Dihydroxy-5-propylphenyl)-2-phenylethanone**

[96661-12-0]

 $C_{17}H_{18}O_3$ mol.wt. 270.33

Syntheses

– Preparation by reaction of phenylacetonitrile with 4-propyl-resorcinol,

- in the presence of boron trifluoride etherate (88%) [5367,5368];

- in the presence of zinc chloride (Hoesch reaction) [5323].

m.p. 95–96° [5323], 92–93° [5367,5368]; 1H NMR [5367].

1-[2-Hydroxy-4-(1-methylethoxy)phenyl]-2-phenylethanone

[50561-04-1]

C₁₇H₁₈O₃ mol.wt. 270.33

Syntheses

– Obtained by partial alkylation of benzyl 2,4-di-hydroxyphenyl ketone with isopropyl bromide in DMF in the presence of potassium carbonate (79%) [5266].

- Also obtained by alkali degradation of *ipriflavone* (7-(1-methylethoxy)-3-phenyl-[4*H*]-1-benzo-pyran-4-one) (m.p. 115–117°) at high pH (pH >9) (main degradation product) [5389].
- Also refer to: [5365,5366,5390,5391,5392].

1-[4-(Ethoxymethoxy)-2-hydroxyphenyl]-2-phenylethanone

[97714-79-9]

C₁₇H₁₈O₄ mol.wt. 286.33

Syntheses

– Obtained by reaction of chloromethyl ethyl ether with benzyl 2,4-dihydroxyphenyl ketone in acetone in the presence of potassium carbonate at r.t. for 15–45 min [5393].

- Also refer to: [5273].

1-(2-Hydroxy-4,6-dimethoxy-3-methylphenyl)-2-phenylethanone

[39604-67-6]

C₁₇H₁₈O₄ mol.wt. 286.33

Syntheses

– Preparation by partial methylation of 2,4-dihydroxy-3-methyl-6-methoxyphenyl benzyl ketone with methyl iodide in the presence of potassium carbonate in boiling acetone for 4 h (82%) [5353].

- Also obtained by O and nuclear methylations of 2,4,6-trihydroxyphenyl benzyl ketone with methyl iodide in the presence of potassium carbonate in refluxing acetone for 6 h (11%) [5353].
- Also obtained by partial methylation of 2,4,6-trihydroxy-3-methylphenyl benzyl ketone with dimethyl sulfate or with an excess methyl iodide in the presence of potassium carbonate in refluxing acetone for 3 h [5353].
- Also obtained by reduction of 2-hydroxy-3-formyl-4,6-dimethoxyphenyl benzyl ketone with hydrogen in acetic acid using 5% Pd/C as catalyst (90%) [5354].
- Also refer to: [5381].

m.p. 153–155° [5353], 153–154° [5354].

1-(6-Hydroxy-2,4-dimethoxy-3-methylphenyl)-2-phenylethanone

[22080-99-5]

 $C_{17}H_{18}O_4$ mol.wt. 286.33

Syntheses

– Obtained (poor yield) by reaction of phenylacetyl chloride with 4-hydroxy-2,6-dimethoxytoluene in ethyl ether in the presence of aluminium chloride for 3 days at r.t. (8%) [5394].

– Also refer to: [5381].

m.p. 47–48° [5394]; IR [5394].

1-[4-(Ethoxymethoxy)-2,6-dihydroxyphenyl]-2-phenylethanone

[97714-81-3]

 $C_{17}H_{18}O_5$ mol.wt. 302.33

Synthesis

– Obtained by reaction of chloromethyl ethyl ether with benzyl 2,4,6-trihydroxyphenyl ketone in acetone in the presence of potassium carbonate at r.t. for 15–45 min [5393].

1-(2-Hydroxy-3,4,6-trimethoxyphenyl)-2-phenylethanone

[55742-64-8]

 $C_{17}H_{18}O_5$ mol.wt. 302.33

Syntheses

– Obtained by reaction of phenylacetyl chloride with 1,2,3,5-tetramethoxybenzene in the presence of aluminium chloride,

- in nitrobenzene on a water bath for 6 h (13%) [5395].
- in ethyl ether for 8 h on a water bath [5344].

m.p. 89° [5395], 85–86° [5344].

1-(6-Hydroxy-2,3,4-trimethoxyphenyl)-2-phenylethanone

[22137-59-3]

 $C_{17}H_{18}O_5$ mol.wt. 302.33

Synthesis

– Preparation by Friedel–Crafts acylation of antiarol with phenylacetyl chloride in ethyl ether in the presence of aluminium chloride at r.t. for 12 h (45%) [5396] or for 24 h (59%) [5251].

m.p. 64° [5396], 63° [5251].

1-[2,6-Bis(acetyloxy)-4-hydroxyphenyl]-2-phenylethanone

[145747-29-1]

 $C_{18}H_{16}O_6$ mol.wt. 328.32

Syntheses

- Obtained by regioselective enzyme-catalyzed deacetylation of benzyl 2,4,6-triacetoxyphenyl ketone in various solvents containing n-butanol with two different lipases at 42–45° for 40 h,

- using porcine pancreas lipase in acetone or in acetonitrile (40%), in THF (70%) [5358,5359], in diisopropyl ether (65%) [5358];
 - using candida cylindracea lipase in diisopropyl ether (40%) [5359].
- Also obtained (small amount) by selective deacetylation of 1-acetoxy-1-(2,4,6-triacetoxyphenyl)-2-phenylethane (m.p. 67°) using porcine pancreas lipase in THF at 42–45° for 72 h [5265].

1-[4-Hydroxy-2-methoxy-5-(2-propenyl)phenyl]-2-phenylethanone

[39022-25-8]

 $C_{18}H_{18}O_3$ mol.wt. 282.34

Synthesis

- Obtained by Claisen rearrangement of 4-allyloxy-2-methoxyphenyl benzyl ketone (m.p. 126–127°) either using boiling dimethylaniline or heating up to 185–190° under reduced pressure [5276].

m.p. 127–128° [5276]; UV [5276].

1-[4-Hydroxy-3-methoxy-5-(2-propenyl)phenyl]-2-phenylethanone $C_{18}H_{18}O_3$ mol.wt. 282.34

Synthesis

- Obtained by DDQ oxidation of 1-(3-allyl-4-hydroxy-5-methoxyphenyl)-2-phenylethanol in dioxane at r.t. for 16 h (88%) [5177].

m.p. 140–142° [5177]; 1H NMR [5177].

N.B.: In the original paper—page 1600—[5177], the authors point out a registry N° [73049-14-6] for the title compound (**4e**) (benzyl 3-allyl-4-hydroxy-5-methoxyphenyl ketone) $C_{18}H_{18}O_3$. Nevertheless, the same registry number was assigned, undoubtedly by mistake, to 1-[4-hydroxy-3-methoxy-5-(2-propenyl)oxy]phenyl]-2-phenylethanone $C_{18}H_{18}O_4$, Chem. Abstr., Formula Index **92**, 215017w (1980). Actually, this ketone is not represented in [5177]. The assigning of this registry number for the ketone $C_{18}H_{18}O_4$ by Chem. Abstr. is definitive.

1-[2-Hydroxy-3-methyl-4-(2-propenyloxy)phenyl]-2-phenylethanone

[57097-17-3]

 $C_{18}H_{18}O_3$ mol.wt. 282.34

Syntheses

– Refer to: [5279,5322].

**1-[2-Hydroxy-6-methoxy-4-(2-propenyloxy)phenyl]-2-phenylethanone**

[66541-26-2]

 $C_{18}H_{18}O_4$ mol.wt. 298.34

Synthesis

– Obtained by treatment of 2,4-dihydroxy-6-methoxyphenyl benzyl ketone with allyl bromide in the presence of potassium carbonate in refluxing acetone for 4 h [5335].

m.p. 81–82° [5335].

1-[5-(1,1-Dimethylethyl)-2-hydroxyphenyl]-2-phenylethanone

[75060-51-4]

 $C_{18}H_{20}O_2$ mol.wt. 268.36

Synthesis

– Obtained by demethylation of 2-phenylacetyl-4-tert-butyl-anisole with a 47% hydrobromic acid/57% hydriodic acid mixture in refluxing acetic acid (63%) [4661].

**1-(4-Butoxy-2-hydroxyphenyl)-2-phenylethanone**

[50775-75-2]

 $C_{18}H_{20}O_3$ mol.wt. 284.36

Syntheses

– Preparation by partial alkylation of 2,4-dihydroxyphenyl benzyl ketone with butyl bromide in the presence of potassium carbonate in refluxing acetone for 20 h [5329].

– Also refer to: [5365,5366,5390,5392].

m.p. 72–75° [5329].

1-(5-Butyl-2,4-dihydroxyphenyl)-2-phenylethanone

[96643-96-8]

 $C_{18}H_{20}O_3$ mol.wt. 284.36

Syntheses

– Preparation by reaction of phenylacetone nitrile with 4-butyl-resorcinol,

- in the presence of boron trifluoride etherate (92%) [5367,5368];

- in the presence of zinc chloride (Hoesch reaction) [5323].
- m.p. 91° [5323], 79–80° [5367,5368]; ¹H NMR [5367].

1-[2-Hydroxy-4-[(3-methyl-2-butenyl)oxy]phenyl]-2-phenylethanone

[35486-77-2]

C₁₉H₂₀O₃ mol.wt. 296.37

Synthesis

- Refer to: [5397].
- paper chromatography [5397].

1-[2-Hydroxy-4-[(tetrahydro-2H-pyran-2-yl)oxy]phenyl]-2-phenylethanone

[130064-20-9]

C₁₉H₂₀O₄ mol.wt. 312.37

Synthesis

- Preparation by reaction of 3,4-dihydro-2H-pyran with 1-(2,4-dihydroxyphenyl)-2-phenylethanone in dioxane in the presence of PTSA (p-toluenesulfonic acid) at r.t. for 4 h (80%) [5280].

m.p. 89° [5280];

¹H NMR [5280], IR [5280], MS [5280].

2-Phenyl-1-[2,4,6-trihydroxy-3-(3-methyl-2-butenyl)phenyl]ethanone

[85602-17-1]

C₁₉H₂₀O₄ mol.wt. 312.37

Synthesis

- Refer to: [5398].

1-(2,4-Dihydroxy-5-pentylphenyl)-2-phenylethanone

[96643-97-9]

C₁₉H₂₂O₃ mol.wt. 298.38

Syntheses

- Preparation by reaction of phenylacetone nitrile with 4-pentyl-resorcinol,
 - in the presence of boron trifluoride etherate (81%) [5367,5371];

- in the presence of zinc chloride (Hoesch reaction) [5323].

m.p. 94–95° [5367,5371], 89–90° [5323]; ¹H NMR [5367].

1-[2-Hydroxy-4-(pentyloxy)phenyl]-2-phenylethanone

[50775-76-3]

 $C_{19}H_{22}O_3$ mol.wt. 298.38

Synthesis

– Preparation by partial alkylation of benzyl 2,4-di-hydroxyphenyl ketone with pentyl bromide in the presence of potassium carbonate in refluxing acetone for 20 h [5329].

– Also refer to: [5365,5366,5390,5392].

m.p. 70–73° [5329].

1-(3-Cyclohexyl-2,6-dihydroxyphenyl)-2-phenylethanone $C_{20}H_{22}O_3$ mol.wt. 310.39

Synthesis

– Obtained by reaction of phenylacetonitrile with 4-cyclo-hexylresorcinol (Hoesch reaction) [5357].

m.p. 221° [5357].

1-(5-Cyclohexyl-2,4-dihydroxyphenyl)-2-phenylethanone

[159977-40-9]

 $C_{20}H_{22}O_3$ mol.wt. 310.39

Syntheses

– Preparation by reaction of phenylacetic acid with 4-cyclohexylresorcinol in the presence of boron trifluoride etherate at 125° for 30 min, followed by hydrolysis of the complex obtained (m.p. 165–166°) with boiling dilute ethanol for 15–20 min (39%) [5256].

– Also obtained by reaction of phenylacetonitrile with 4-cyclohexylresorcinol (Hoesch reaction) [5357].

m.p. 133° [5357], 132–133° [5256]; IR [5256], UV [5256].

1-[2,4-Dihydroxy-6-methoxy-3-(3-methyl-2-butenyl)phenyl]-2-phenylethanone

[55607-21-1]

 $C_{20}H_{22}O_4$ mol.wt. 326.39

Syntheses

– Obtained by reaction of 2-hydroxy-2-methyl-3-butene with 2,4-dihydroxy-6-methoxyphenyl benzyl ketone in the presence of boron trifluoride etherate for 1 h at r.t. (14%) [5352].

- Also obtained by reaction of prenyl bromide with 2,4-dihydroxy-6-methoxyphenyl benzyl ketone in methanolic potassium hydroxide for 20 h at r.t. (20%) [5352].
m.p. 133–134° [5352]; ¹H NMR [5352]; TLC [5352].

1-[4,6-Dihydroxy-2-methoxy-3-(3-methyl-2-butenyl)phenyl]-2-phenylethanone

[55607-22-2]

C₂₀H₂₂O₄ mol.wt. 326.39

Syntheses

- Obtained by reaction of 2-hydroxy-2-methyl-3-butene with 2,4-dihydroxy-6-methoxyphenyl benzyl ketone in dioxane in the presence of boron trifluoride etherate for 1 h at r.t. (19%) [5352].
- Also obtained by reaction of prenyl bromide with 2,4-dihydroxy-6-methoxyphenyl benzyl ketone in methanolic potassium hydroxide for 20 h at r.t. (13%) [5352].
m.p. 93–94° [5352]; ¹H NMR [5352]; TLC [5352].

1-[4-(Ethoxymethoxy)-2-hydroxy-3-(2-propenyl)phenyl]-2-phenylethanone

[117951-95-8]

C₂₀H₂₂O₄ mol.wt. 326.39

Synthesis

- Obtained (poor yield) by reaction of ethoxymethyl chloride with 3-allyl-2,4-dihydroxydesoxybenzoin in the presence of potassium carbonate in acetone (9%) [5283].
light brown oil [5283]; ¹H NMR [5283], IR [5283], UV [5283].

1-(5-Hexyl-2,4-dihydroxyphenyl)-2-phenylethanone

[96643-98-0]

C₂₀H₂₄O₃ mol.wt. 312.41

Syntheses

- Preparation by reaction of phenylacetonitrile with 4-hexyl-resorcinol,
 - in the presence of boron trifluoride etherate under hydrogen chloride atmosphere (8–10 h) and at r.t. overnight (83%) [5367,5371];
 - in the presence of zinc chloride (Hoesch reaction) [5323].
- Also obtained (poor yield) by Friedel–Crafts acylation of 4-hexylresorcinol with phenylacetyl chloride in the presence of aluminium chloride in nitrobenzene at 80° for 2 days [5399].
m.p. 90° [5399], 86–87° [5323], 83–84° [5367,5371]; ¹H NMR [5367].

1-[4-(Hexyloxy)-2-hydroxyphenyl]-2-phenylethanone

[50776-01-7]

 $C_{20}H_{24}O_3$ mol.wt. 312.41

Syntheses

- Preparation by partial alkylation of benzyl 2,4-di-hydroxyphenyl ketone with hexyl bromide in the presence of potassium carbonate in refluxing acetone for 20 h [5329].

- Also refer to: [5365,5366].

m.p. 60–62° [5329].

1-[2-Hydroxy-4-(4-nitrobenzoyloxy)phenyl]-2-phenylethanone $C_{21}H_{15}NO_6$ mol.wt. 377.35

Synthesis

- Obtained by partial esterification of benzyl 2,4-dihydroxyphenyl ketone [5250] with p-nitrobenzoyl chloride in the presence of pyridine [5217].

m.p. 178–180° [5217].

1-[2,4-Dihydroxy-3-(phenylmethyl)phenyl]-2-phenylethanone

[95832-51-2]

 $C_{21}H_{18}O_3$ mol.wt. 318.37

Syntheses

- Obtained by reaction of benzyl alcohol with 2,4-dihydroxydesoxybenzoin in dioxane in the presence of boron trifluoride etherate at 60–70° for 7 h (21%) [5400].

- Also obtained by rearrangement of 2-hydroxy-4-(benzyloxy)desoxybenzoin in TFA at r.t. for 70 h (16%) [5400].

- Obtained by reaction of benzyl bromide with 2,4-dihydroxydesoxybenzoin in methanol in the presence of potassium hydroxide at r.t. for 24 h (11%) [5275].

m.p. 122–124° [5275], 121–122° [5400];

column chromatography [5400]; TLC [5400];

 1H NMR [5400], IR [5400], UV [5400].

1-[2,4-Dihydroxy-5-(phenylmethyl)phenyl]-2-phenylethanone

[95832-52-3]

 $C_{21}H_{18}O_3$

mol.wt. 318.37

**Syntheses**

- Obtained by reaction of benzyl alcohol with 2,4-dihydroxy-desoxybenzoin in dioxane in the presence of boron trifluoride etherate at 60–70° for 7 h (31%) [5400].
- Also obtained by rearrangement of 2-hydroxy-4-(benzyl-oxy)desoxybenzoin in TFA at r.t. for 70 h (31%) [5400].
- Also obtained by reaction of benzyl bromide with 2,4-dihydroxydesoxybenzoin in methanol in the presence of potassium hydroxide at r.t. for 24 h (<3%) [5275].

m.p. 128–129° [5400], 126–128° [5275];
 column chromatography [5400]; TLC [5400];
¹H NMR [5400], IR [5400], UV [5400].

1-[2-Hydroxy-4-(phenylmethoxy)phenyl]-2-phenylethanone

[39604-80-3]

 $C_{21}H_{18}O_3$

mol.wt. 318.37

**Syntheses**

- Preparation by partial benzylation of 2,4-dihydroxy-phenyl benzyl ketone,
 - with benzyl chloride in the presence of potassium carbonate in refluxing acetone [5265], (72%) [5381];
 - with benzyl bromide in the presence of potassium carbonate in refluxing acetone [5329] or in the presence of potassium hydroxide at r.t. for 24 h (29%) [5275].
 - Also refer to: [5337,5404].

m.p. 105–106° [5275], 104–108° [5329], 104–105° [5381].

1-[2-Hydroxy-4-[(4-methylphenyl)sulfonyl]oxy]phenyl]-2-phenylethanone

[102478-26-2]

 $C_{21}H_{18}O_5S$

mol.wt. 382.44

**Synthesis**

- Obtained by partial esterification of benzyl 2,4-dihydroxy-phenyl ketone with p-toluenesulfonyl chloride in acetone in the presence of potassium carbonate [5217].

m.p. 117° [5217].

1-[2-Hydroxy-4,6-dimethoxy-3-(3-methyl-2-butenyl)phenyl]-2-phenylethanone

[55607-23-3]

 $C_{21}H_{24}O_4$ mol.wt. 340.42

Synthesis

– Obtained by partial methylation of 2,4-di-hydroxy-6-methoxy-3-prenylphenyl benzyl ketone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 3.5 h (96%) [5352].

m.p. 113–114° [5352]; 1H NMR [5352]; TLC [5352].**1-[6-Hydroxy-2,4-dimethoxy-3-(3-methyl-2-butenyl)phenyl]-2-phenylethanone**

[55607-25-5]

 $C_{21}H_{24}O_4$ mol.wt. 340.42

Synthesis

– Obtained by partial methylation of 2,4-dihydroxy-6-methoxy-5-prenylphenyl benzyl ketone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 4 h [5352].

m.p. 80–81° [5352]; 1H NMR [5352]; TLC [5352].**1-[2-Hydroxy-4-methoxy-3-(phenylmethyl)phenyl]-2-phenylethanone**

[95832-54-5]

 $C_{22}H_{20}O_3$ mol.wt. 332.40

Synthesis

– Preparation by reaction of dimethyl sulfate with 3-benzyl-2,4-dihydroxydeoxybenzoin in the presence of potassium carbonate in refluxing acetone for 3 h [5400].

oil [5400]; TLC [5400]; 1H NMR [5400].**1-[2-Hydroxy-4-methoxy-5-(phenylmethyl)phenyl]-2-phenylethanone**

[95832-53-4]

 $C_{22}H_{20}O_3$ mol.wt. 332.40

Synthesis

– Preparation by reaction of dimethyl sulfate with 5-benzyl-2,4-dihydroxydeoxybenzoin in the presence of potassium carbonate in refluxing acetone for 3 h (84%) [5400].

m.p. 80–81° [5400]; TLC [5400]; 1H NMR [5400].

1-[2-Hydroxy-5-methyl-4-(phenylmethoxy)phenyl]-2-phenylethanone

[112198-28-4]

 $C_{22}H_{20}O_3$ mol.wt. 332.40

Synthesis

- Preparation by reaction of benzyl chloride with 2,4-dihydroxy-5-methylphenyl benzyl ketone in the presence of potassium carbonate in refluxing acetone for 7 h (73%) [5324].

m.p. 108° [5324].

1-[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl]-2-phenylethanone

[14035-39-3]

 $C_{22}H_{28}O_2$ mol.wt. 324.46

Syntheses

- Preparation by Friedel–Crafts acylation of 2,6-di-tert-butylphenol with phenylacetyl chloride in the presence of aluminium chloride for 15 min at -10° (84%) [5402], (75%) [5403].
- Preparation by oxidation of 1-(3,5-di-tert-butyl-4-hydroxyphenyl)-2-phenylethanol with DDQ in dioxane at r.t. for 16 h (90%) [5177].
- Also refer to: [5404,5405].

m.p. 129–130° [5177], 120–122° [5402,5403]; 1H NMR [5177].**1-[4-(1,5-Dimethylhexyl)-2-hydroxyphenyl]-2-phenylethanone**

[146935-09-3]

 $C_{22}H_{28}O_2$ mol.wt. 324.46

Synthesis

- Refer to: [5406] (Japanese patent).

1-[6-Hydroxy-2,4-dimethoxy-3-[(phenylacetyl)oxy]phenyl]-2-phenylethanone $C_{24}H_{22}O_6$ mol.wt. 406.44

Synthesis

- Obtained (by-product) by condensation of 2,6-dimethoxy-hydroquinone with the complex phenylacetic acid and boron trifluoride [5387].

m.p. 105° [5387].

1-[4-(Decyloxy)-2-hydroxyphenyl]-2-phenylethanone

[143287-02-9]

 $C_{24}H_{32}O_3$ mol.wt. 368.52

Synthesis

- Preparation by partial alkylation of benzyl 2,4-di-hydroxyphenyl ketone with decyl bromide in the presence of potassium carbonate in refluxing acetone for 20 h [5329].

m.p. 66–69° [5329].

1-[2,4-Dihydroxy-6-methoxy-3,5-bis(3-methyl-2-butenyl)phenyl]-2-phenylethanone

[55607-20-0]

 $C_{25}H_{30}O_4$ mol.wt. 394.51

Syntheses

- Obtained (poor yield) by reaction of 2-hydroxy-2-methyl-3-butene with 2,4-di-hydroxy-6-methoxyphenyl benzyl ketone in dioxane in the presence of boron trifluoride etherate for 1 h at r.t. (4%) [5352].
- Also obtained (poor yield) by reaction of prenyl bromide with 2,4-dihydroxy-6-methoxyphenyl benzyl ketone in methanolic potassium hydroxide for 20 h at r.t. (5%) [5352].

oil [5352]; TLC [5352].

1-[(4-Hydroxy-3,5-diphenyl)phenyl]-2-phenylethanone*1-(2'-Hydroxy[1,1':3',1''-terphenyl]-5'-yl)-2-phenylethanone*

[73048-87-0]

 $C_{26}H_{20}O_2$ mol.wt. 364.45

Synthesis

- Obtained by DDQ oxidation of 1-[4-hydroxy-3,5-(di-phenyl)phenyl]-2-phenylethanone in dioxane at r.t. for 76 h (89%) [5177].

m.p. 155–156° [5177]; 1H NMR [5177].

1-[4-(Dodecyloxy)-2-hydroxyphenyl]-2-phenylethanone

[143287-03-0]

 $C_{26}H_{36}O_3$ mol.wt. 396.57

Synthesis

- Preparation by partial alkylation of 2,4-dihydroxy-phenyl benzyl ketone with dodecyl bromide in the presence of potassium carbonate in refluxing acetone for 20 h [5329].

m.p. 68–71° [5329].

1-[3-(Diphenylmethyl)-2,4-dihydroxyphenyl]-2-phenylethanone

[98497-96-2]

 $C_{27}H_{22}O_3$ mol.wt. 394.47

Synthesis

- Obtained by reaction of 2,4-dihydroxydesoxybenzoin with diphenylcarbinol in dioxane in the presence of boron trifluoride etherate at 60–70° for 3 h (17%) [5274].

m.p. 133–134° [5274]; column chromatography [5274]; TLC [5274]; 1H NMR [5274], IR [5274], UV [5274].**1-[5-(Diphenylmethyl)-2,4-dihydroxyphenyl]-2-phenylethanone**

[98497-97-3]

 $C_{27}H_{22}O_3$ mol.wt. 394.47

Synthesis

- Obtained by reaction of 2,4-dihydroxydesoxybenzoin with diphenylcarbinol in dioxane in the presence of boron trifluoride etherate at 60–70° for 3 h (24%) [5274].

m.p. 142–143° [5274]; column chromatography [5274]; TLC [5274]; 1H NMR [5274], IR [5274], UV [5274].**1-[3-(Diphenylmethyl)-2,4,6-trihydroxyphenyl]-2-phenylethanone**

[104310-95-4]

 $C_{27}H_{22}O_4$ mol.wt. 410.47

Synthesis

- Obtained by reaction of diphenylcarbinol with 2,4,6-trihydroxyphenyl benzyl ketone in dioxane in the presence of boron trifluoride etherate at 60–70° for 3.5 h (24%) [5407].

m.p. 160–162° [5407]; TLC [5407]; 1H NMR [5407], IR [5407], UV [5407].

1-[5-(Diphenylmethyl)-2,3,4-trihydroxyphenyl]-2-phenylethanone

[106556-47-2]

 $C_{27}H_{22}O_4$ mol.wt. 410.47

Synthesis

– Obtained by reaction of diphenylcarbinol with 2,3,4-tri-hydroxyphenyl benzyl ketone in dioxane in the presence of boron trifluoride etherate for 4 h at r.t. (39%) [5272].

m.p. 177–178° [5272]; TLC [5272];
 1H NMR [5272], IR [5272], UV [5272].

1-[2,4-Dihydroxy-3,5-bis(phenylmethyl)phenyl]-2-phenylethanone

[95832-50-1]

 $C_{28}H_{24}O_3$ mol.wt. 408.50

Syntheses

– Obtained by reaction of benzyl alcohol with 2,4-di-hydroxydesoxybenzoin in dioxane in the presence of boron trifluoride etherate at 60–70° for 7 h (10%) [5400].

– Also obtained (trace) by reaction of benzyl bromide with 2,4-dihydroxydesoxybenzoin in methanol in the presence of potassium hydroxide at r.t. for 24 h (<2%) [5275].

m.p. 111–112° [5400], 110–112° [5275]; column chromatography [5400];
 1H NMR [5400], ^{13}C NMR [5275], IR [5400], UV [5400].

1-[3-(Diphenylmethyl)-2-hydroxy-4-methoxyphenyl]-2-phenylethanone

[98498-01-2]

 $C_{28}H_{24}O_3$ mol.wt. 408.50

Synthesis

– Preparation by reaction of dimethyl sulfate with 2,4-dihydroxy-3-(diphenylmethyl)desoxybenzoin in the presence of potassium carbonate in refluxing acetone for 3 h (93%) [5274].

m.p. 126–127° [5274]; TLC [5274]; 1H NMR [5274].

1-[5-(Diphenylmethyl)-2-hydroxy-4-methoxyphenyl]-2-phenylethanone

[98498-02-3]

 $C_{28}H_{24}O_3$ mol.wt. 408.50

Synthesis

– Preparation by reaction of dimethyl sulfate with 2,4-di-hydroxy-5-(diphenyl-methyl)desoxybenzoin in the presence of potassium carbonate in refluxing acetone for 3 h (93%) [5274].

m.p. 110–111° [5274]; TLC [5274]; 1H NMR [5274].

1-[2-Hydroxy-4-(phenylmethoxy)-3-(phenylmethyl)phenyl]-2-phenylethanone

[107044-42-8]

 $C_{28}H_{24}O_3$ mol.wt. 408.50**Syntheses**

- Obtained by reaction of benzyl chloride (1 mol) with 3-benzyl-2,4-dihydroxydesoxybenzoin in the presence of potassium carbonate (4 mol) in boiling acetone for 1.5 h [5275].
- Also obtained (trace) by reaction of benzyl bromide with 2,4-dihydroxydesoxybenzoin in methanol in the presence of potassium hydroxide at r.t. for 24 h (<1%) [5275].

m.p. 97–98° [5275]; column chromatography [5275];

 1H NMR [5275], IR [5275], UV [5275].**1-[2-Hydroxy-4-(phenylmethoxy)-5-(phenylmethyl)phenyl]-2-phenylethanone**

[107044-44-0]

 $C_{28}H_{24}O_3$ mol.wt. 408.50**Synthesis**

- Obtained by reaction of benzyl bromide (1 mol) with 5-benzyl-2,4-dihydroxydesoxybenzoin in the presence of potassium carbonate (4 mol) in boiling acetone for 1.5 h (19%) [5275].

m.p. 90–92° [5275]; column chromatography [5275];

 1H NMR [5275], IR [5275].**1-[2,4-Dihydroxy-6-(phenylmethoxy)-3-(phenylmethyl)phenyl]-2-phenylethanone**

[39548-97-5]

 $C_{28}H_{24}O_4$ mol.wt. 424.50**Synthesis**

- Obtained (by-product) by benzylation of 2,4,6-tri-hydroxyphenyl benzyl ketone with benzyl chloride in the presence of potassium carbonate in refluxing acetone for 7 h (9%) [5408].

m.p. 170–171° [5408]; 1H NMR [5408], UV [5408].

1-[2-Hydroxy-4,6-bis(phenylmethoxy)phenyl]-2-phenylethanone

[39548-96-4]

 $C_{28}H_{24}O_4$ mol.wt. 424.50

Syntheses

- Obtained by reaction of benzyl chloride with 2,4,6-trihydroxyphenyl benzyl ketone in the presence of potassium carbonate in refluxing acetone for 5 h (34%) [5381] or for 7 h (21%) [5408].

– Also refer to: [5401].

m.p. 99–100° [5381], 95–96° [5408]; 1H NMR [5408], UV [5408].

1-[2-Hydroxy-4-methoxy-3,5-bis(phenylmethyl)phenyl]-2-phenylethanone

[95832-55-6]

 $C_{29}H_{26}O_3$ mol.wt. 422.52

Synthesis

- Obtained by reaction of dimethyl sulfate with 3,5-di-benzyl-2,4-dihydroxyphenyl benzyl ketone in the presence of potassium carbonate in refluxing acetone for 3 h (23%) [5400].

oil [5400]; TLC [5400]; 1H NMR [5400].

1-[2-Hydroxy-4-(phenylmethoxy)-3,5-bis(phenylmethyl)phenyl]-2-phenylethanone

[107044-43-9]

 $C_{35}H_{30}O_3$ mol.wt. 498.62

Synthesis

- Obtained by reaction of benzyl chloride (1 mol) with 3,5-dibenzyl-2,4-dihydroxydesoxybenzoïn in the presence of potassium carbonate (4 mol) in boiling acetone for 1.5 h (33%) [5275].

m.p. 51–52° [5275]; TLC [5275];

1H NMR [5275], IR [5275], UV [5275].

1-[2-Hydroxy-4,6-bis(phenylmethoxy)-3-(phenylmethyl)phenyl]-2-phenylethanone

[39548-95-3]

 $C_{35}H_{30}O_4$ mol.wt. 514.62

Synthesis

- Obtained (by-product) by benzylation of 2,4,6-tri-hydroxyphenyl benzyl ketone with benzyl chloride in the presence of potassium carbonate in refluxing acetone for 7 h (6%) [5408].

m.p. 131–132° [5408]; 1H NMR [5408], UV [5408].

1-[3,5-Bis(diphenylmethyl)-2,4-dihydroxyphenyl]-2-phenylethanone

[98497-95-1]

 $C_{40}H_{32}O_3$ mol.wt. 560.69

Synthesis

– Obtained by reaction of 2,4-dihydroxydesoxy-benzoin with diphenylcarbinol in dioxane in the presence of boron trifluoride etherate at 60–70° for 3 h (15%) [5274].

m.p. 136–137° [5274]; column chromatography [5274]; TLC [5274]; 1H NMR [5274], IR [5274], UV [5274].

1-[3,5-Bis(diphenylmethyl)-2,4,6-trihydroxyphenyl]-2-phenylethanone

[104310-93-2]

 $C_{40}H_{32}O_4$ mol.wt. 576.69

Synthesis

– Obtained by reaction of diphenylcarbinol with 2,4,6-trihydroxyphenyl benzyl ketone in dioxane in the presence of boron trifluoride etherate at 60–70° for 3.5 h (21%) [5407].

m.p. 122–124° [5407]; TLC [5407]; 1H NMR [5407], IR [5407], UV [5407].

18.2 Compounds Derived from Substituted Phenylacetic Acids**2-(4-Chlorophenyl)-1-(5-fluoro-2-hydroxyphenyl)ethanone** $C_{14}H_{10}ClFO_2$ mol.wt. 264.68

Synthesis

– Preparation by Fries rearrangement of p-fluorophenyl p-chlorophenylacetate with aluminum chloride at 150–180° for 20 min (32%) [5189].

m.p. 124–126° [5189]; 1H NMR [5189], MS [5189].

2-(4-Chlorophenyl)-1-(3,4-dihydroxy-5-nitrophenyl)ethanone

[274925-89-2]

C₁₄H₁₀ClNO₅ mol.wt. 307.69**Synthesis**

– Preparation by treatment of 2-(4-chlorophenyl)-1-(4-hydroxy-3-methoxy-5-nitrophenyl)ethanone with aluminium chloride in refluxing ethyl acetate/pyridine mixture for 2 h (94%) [5192], (90–96%) [5193].

m.p. 162–164° [5192,5193]; HPLC [5192];

¹H NMR [5192,5193], ¹³C NMR [5192,5193], IR [5192,5193].**2-(4-Bromophenyl)-1-(4-hydroxyphenyl)ethanone**

[63186-92-5]

C₁₄H₁₁BrO₂ mol.wt. 291.14**Synthesis**

– Preparation by demethylation of 2-(4-bromophenyl)-1-(4-methoxyphenyl)ethanone with 48% hydrobromic acid in refluxing acetic acid for 7 h (89%) [5409], (82%) [5410].

m.p. 186° [5409,5410];

¹H NMR [5409], IR [5409].**2-(4-Bromophenyl)-1-(2,4-dihydroxyphenyl)ethanone**

[92152-60-8]

C₁₄H₁₁BrO₃ mol.wt. 307.14**Syntheses**

- Preparation by reaction of p-bromophenylacetonitrile with resorcinol,
 - in the presence of boron trifluoride etherate under hydrogen chloride atmosphere (8–10 h) and at r.t. overnight (90%) [5367,5368];
 - in the presence of zinc chloride and hydrogen chloride (Hoesch reaction) [5181].
 - Preparation by Friedel–Crafts acylation of resorcinol with p-bromophenylacetyl chloride in nitrobenzene in the presence of aluminium chloride at 50° (54%) [5357].
 - Also refer to: [4685,5411].
- m.p. 176–177° [5367,5368], 176° [5357], 100–101° [5181]. One of the reported melting points is obviously wrong. ¹H NMR [5367].

2-(4-Bromophenyl)-1-(2,4,6-trihydroxyphenyl)ethanone

[147220-80-2]

C₁₄H₁₁BrO₄ mol.wt. 323.15

Synthesis

– Refer to: [4685] (compound **IIg**), preparation according to reported procedures [5412,5413].

m.p. 231° [4685]; ¹H NMR [4685], IR [4685].

2-(2-Chlorophenyl)-1-(2,4-dihydroxyphenyl)ethanoneC₁₄H₁₁ClO₃ mol.wt. 262.69

Synthesis

– Obtained by reaction of o-chlorophenylacetone with resorcinol (Hoesch reaction) (20%) [5414].

m.p. 142° [5414].

2-(4-Chlorophenyl)-1-(2,4-dihydroxyphenyl)ethanone

[15485-64-0]

C₁₄H₁₁ClO₃ mol.wt. 262.69

Syntheses

– Preparation by Friedel–Crafts acylation of resorcinol with p-chlorophenylacetyl chloride in nitrobenzene in the presence of aluminium chloride for some hours at 40–50° (64%) [5357].

– Obtained by reaction of p-chlorophenylacetone with resorcinol (Hoesch reaction) [5262,5264].

– Also refer to: [4685,5271,5411,5415].

m.p. 159°–160° [5264], 156° [5357], 153–154° [5262]; UV [5264].

1-(5-Chloro-2,4-dihydroxyphenyl)-2-(4-hydroxyphenyl)ethanone

[139256-02-3]

C₁₄H₁₁ClO₄ mol.wt. 278.69

Synthesis

– Obtained by reaction of p-hydroxyphenylacetic acid with 4-chlororesorcinol in the presence of boron trifluoride etherate under argon, on a water bath for 1 h (67%) [5208].

m.p. 196–197° [5208]; ¹H NMR [5208], ¹³C NMR [5208], MS [5208].

1-(5-Chloro-2-hydroxyphenyl)-2-(2,5-dihydroxyphenyl)ethanone

[115781-55-0]

 $C_{14}H_{11}ClO_4$ mol.wt. 278.69

Synthesis

– Obtained by alkali cleavage of 6-chloro-3-(2',5'-dihydroxy-phenyl)-4-hydroxycoumarin with refluxing 2% methanolic potassium hydroxide for 4 h (73%) [5416].

m.p. 219° [5416]; IR [5416], UV [5416].

2-(2-Chlorophenyl)-1-(2,4,6-trihydroxyphenyl)ethanone $C_{14}H_{11}ClO_4$ mol.wt. 278.69

Synthesis

– Obtained by reaction of o-chlorophenylacetone nitrile with phloroglucinol (20%) (Hoesch reaction) [5414].

m.p. 172–172°5 [5414].

2-(4-Chlorophenyl)-1-(2,4,6-trihydroxyphenyl)ethanone

[15485-68-4]

 $C_{14}H_{11}ClO_4$ mol.wt. 278.69

Syntheses

– Obtained by reaction of p-chlorophenylacetone nitrile with phloroglucinol (Hoesch reaction) [5262,5264].

– Also refer to: [4685,5415,5417].

m.p. 224–225° [5264], 221–222° [5262]; UV [5264].

1-(5-Chloro-2-hydroxyphenyl)-2-(2,4,5-trihydroxyphenyl)ethanone

[115781-51-6]

 $C_{14}H_{11}ClO_5$ mol.wt. 294.69

Synthesis

– Obtained from 6-chloro-4-hydroxy-3-(2',4',5'-trihydroxy-phenyl)coumarin with refluxing 2% methanolic potassium hydroxide for 4 h (72%) [5416].

m.p. 189° [5416]; IR [5416], UV [5416].

1-(2,4-Dihydroxyphenyl)-2-(2-fluorophenyl)ethanone

[121060-02-4]

 $C_{14}H_{11}FO_3$ mol.wt. 246.24

Syntheses

– Refer to: [4685] (compound **Id**), preparation according to reported procedures [5412,5413].

– Also refer to: [5026,5418,5419].

m.p. 138° [4685]; 1H NMR [4685], IR [4685].

1-(2,4-Dihydroxyphenyl)-2-(4-fluorophenyl)ethanone

[15485-70-8]

 $C_{14}H_{11}FwO_3$ mol.wt. 246.24

Syntheses

– Preparation by reaction of p-fluorophenylacetonitrile with resorcinol (Hoesch reaction) [5264], (70%) [5420], (45%) [5421].

– Also refer to: [4685,5026,5415,5418,5419].

m.p. 149–150° [5264], 144–145° [5421], 143–144° [5420];

1H NMR [5420,5421], UV [5264], MS [5421].

2-(2-Fluorophenyl)-1-(2,4,6-trihydroxyphenyl)ethanone

[101068-28-4]

 $C_{14}H_{11}FO_4$ mol.wt. 262.24

Synthesis

– Refer to: [4685] (compound **IId**), preparation according to reported procedures [5412,5413].

m.p. 182° [4685]; 1H NMR [4685], IR [4685].

2-(4-Fluorophenyl)-1-(2,4,6-trihydroxyphenyl)ethanone

[15485-69-5]

 $C_{14}H_{11}FO_4$ mol.wt. 262.24

Syntheses

– Obtained by reaction of p-fluorophenylacetonitrile with phloroglucinol (Hoesch reaction) [4852,5264].

– Also refer to: [4685,5415].

m.p. 199–200° [5264]; UV [5264].

1-(2,4-Dihydroxyphenyl)-2-(4-iodophenyl)ethanoneC₁₄H₁₁IO₃ mol.wt. 354.14

Syntheses

– Obtained by reaction of resorcinol with p-iodophenyl-acetyl chloride in nitrobenzene in the presence of aluminium chloride at 50–60° (27%) [5357].

– Also refer to: [5422].

m.p. 186° [5357,5422].

1-(2,4-Dihydroxyphenyl)-2-(3-nitrophenyl)ethanoneC₁₄H₁₁NO₅ mol.wt. 273.25

Synthesis

– Preparation by reaction of m-nitrophenylacetonitrile with resorcinol (Hoesch reaction) (46%) [5423].

m.p. 156°5 [5423].

1-(2,4-Dihydroxyphenyl)-2-(4-nitrophenyl)ethanone

[15485-63-9]

C₁₄H₁₁NO₅ mol.wt. 273.25

Syntheses

– Obtained by reaction of p-nitrophenylacetonitrile with resorcinol (Hoesch reaction) [5264], (65%) [5399], (60%) [5268], (40%) [5424], (35%) [5425], (27%) [5423].

– Also obtained by reaction of p-nitrophenylacetic acid with resorcinol in the presence of boron trifluoride in chloroform, first cooling in ice, then at r.t. overnight (12%) [5258].

– Also refer to: [4685,5217,5271].

m.p. 295–297° [5264], 210° [5258,5425], 205° [5399], 204° [5424], 202° [5423]. One of the reported melting points is obviously wrong. ¹H NMR [5268], UV [5264], MS [5268].

2-(3-Nitrophenyl)-1-(2,4,6-trihydroxyphenyl)ethanoneC₁₄H₁₁NO₆ mol.wt. 289.25

Synthesis

– Preparation by reaction of m-nitrophenylacetonitrile with phloroglucinol (Hoesch reaction) (63%) [5423].

m.p. 211–212° [5423].

2-(4-Nitrophenyl)-1-(2,3,4-trihydroxyphenyl)ethanoneC₁₄H₁₁NO₆ mol.wt. 289.25

Synthesis

– Obtained by reaction of p-nitrophenylacetic acid with pyrogallol in the presence of boron trifluoride in chloroform, first cooling in ice, then at r.t. overnight (93%) [5258].

m.p. 227–228° [5258].

2-(4-Nitrophenyl)-1-(2,4,6-trihydroxyphenyl)ethanone

[15485-67-3]

C₁₄H₁₁NO₆ mol.wt. 289.25

Syntheses

– Obtained by reaction of p-nitrophenylacetonitrile with phloroglucinol (Hoesch reaction) [5264], (quantitative yield) [5424], (56%) [5423].

– Also refer to: [5217,5246,5258].

m.p. 249–250° [5264], 247° [5423], 245° [5424]; UV [5264].

1,2-Bis(2-hydroxyphenyl)ethanone

[7622-42-6]

C₁₄H₁₂O₃ mol.wt. 228.25

Syntheses

– Preparation by reduction of 2,2'-dihydroxybenzoin with zinc dust and 15% potassium hydroxide in boiling ethanol for 8 h [5426], (70–75%) [5427].

– Also refer to: [5428].

m.p. 104° [5427].

1,2-Bis(3-hydroxyphenyl)ethanone

[63192-59-6]

C₁₄H₁₂O₃ mol.wt. 228.25

Syntheses

– Obtained by reductive coupling of methyl m-hydroxybenzoate using TiCl₃/LiAlH₄ in refluxing tetrahydrofuran for 3 h under nitrogen (20%) [5429].

– Also refer to: [5430].

GC [5429]; GC-MS [5429];

¹H NMR [5429], ¹³C NMR [5429], IR [5429], MS [5429].

1,2-Bis(4-hydroxyphenyl)ethanone

[3669-47-4]

 $C_{14}H_{12}O_3$ mol.wt. 228.25**Syntheses**

- Preparation by total demethylation of 4-methoxyphenyl 4-methoxybenzyl ketone (4,4'-dimethoxydeoxybenzoin),
 - with refluxing pyridinium chloride (4 equiv) for 1 h (80–85%) [5431];
 - with boiling a mixture of 50% aqueous hydriodic acid and phenol for 30 min (94%) [5432];
 - with hydriodic acid (d = 1.7) in acetic acid at 135–140° for 10 min (quantitative yield) [5432];
 - with aluminium chloride in refluxing benzene for 1.5 h (25%) [5433].
 - Also obtained by diazotization of 4,4'-diaminodeoxybenzoin, followed by hydrolysis of the diazonium salt formed [5434].
 - Also obtained (by-product) by Fries rearrangement of phenyl p-methoxyphenylacetate with aluminium chloride for 1.5 h at 145° (31%) [5280].
 - Also refer to: [5435].
- m.p. 217° [5432], 215–219° [5433], 215° [5431], 214–215° [5434], 212° [5280].

1-(2-Hydroxyphenyl)-2-(4-hydroxyphenyl)ethanone

[109561-92-4]

 $C_{14}H_{12}O_3$ mol.wt. 228.25**Syntheses**

- Obtained by treatment of ethyl [(2-methoxybenzoyl)-(4-methoxyphenyl)]acetate with boiling pyridinium chloride for 20 min (ca. 220°) (48%) [5212].
 - Also obtained (by-product) by Fries rearrangement of phenyl p-methoxyphenylacetate with aluminium chloride for 1.5 h at 145° (12%) [5280].
 - Also obtained by demethylation of 2-hydroxyphenyl 4-methoxybenzyl ketone with pyridinium chloride at 220° for 1 h (79%) [5280].
 - Also refer to: [5436,5437].
- m.p. 140° [5280], 106–107° [5212]. One of the reported melting points is obviously wrong.

1-(2,3-Dihydroxyphenyl)-2-(4-hydroxyphenyl)ethanone

[139256-01-2]

 $C_{14}H_{12}O_4$ mol.wt. 244.25**Synthesis**

- Refer to: [5208].

1-(2,4-Dihydroxyphenyl)-2-(2-hydroxyphenyl)ethanoneC₁₄H₁₂O₄ mol.wt. 244.25

Synthesis not yet described

N.B.: This ketone (XIII) cannot be prepared by condensation of o-hydroxyphenylacetonitrile with resorcinol (Hoesch reaction) [5438].

1-(2,4-Dihydroxyphenyl)-2-(3-hydroxyphenyl)ethanone

[89019-84-1]

C₁₄H₁₂O₄ mol.wt. 244.25

Syntheses

– Preparation by reaction of m-hydroxyphenylacetic acid with resorcinol in the presence of boron trifluoride etherate under argon on a water bath for 1 h (93%) [5208].

– Also obtained by demethylation of 1-(2,4-dihydroxyphenyl)-2-(3-methoxyphenyl)ethanone with concentrated hydrobromic acid in refluxing acetic acid for 4 h under an argon atmosphere (89%) [5439].

m.p. 214–216° [5439]; ¹H NMR [5439], IR [5439], UV [5439], MS [5439].

1-(2,4-Dihydroxyphenyl)-2-(4-hydroxyphenyl)ethanone

[17720-60-4]

C₁₄H₁₂O₄ mol.wt. 244.25

Syntheses

– Preparation by reaction of p-hydroxyphenylacetic acid with resorcinol [5440] in the presence of boron trifluoride etherate under argon on a water bath for 1 h (98%) [5208], at 100° for 1 h (70%) [5441] or for 15 min (40%) [5268].

– Preparation by demethylation of 2,4-dihydroxy-4'-methoxydesoxybenzoin with pyridinium bromide, kept at the melting stage for 1 min (quantitative yield) [5442].

– Preparation by catalytic hydrogenation of 2,4-dihydroxy-4'-(benzyloxy)desoxybenzoin [5443].

– Also obtained by treatment of ethyl 2,4-dimethoxybenzoyl-4-methoxyphenylacetate with boiling pyridinium chloride for 20 min (ca. 220°) (49%) [5212].

– Also obtained by alkaline degradation of *daidzein* (m.p. 315–320°) (7,4'-dihydroxyisoflavone) with refluxing 30% potassium hydroxide for 5 min (99%) [5444].

- Also obtained by reaction of p-hydroxyphenylacetonitrile with resorcinol (Hoesch reaction) (26%) [5444].
- Also refer to: [4685,5216,5270,5280,5292,5436,5445,5446,5447,5448,5449].

1-(2,4-Dihydroxyphenyl)-2-(4-hydroxyphenyl)ethanone-1-¹³C

[215653-80-8]

C₁₄H₁₂O₄ mol.wt. 245.25

Synthesis

- Preparation by reaction of 4-benzyloxyphenyl-acetonitrile [1-¹³C] with resorcinol (Hoesch reaction) (96%) [5451].

2-(2,5-Dihydroxyphenyl)-1-(2-hydroxyphenyl)ethanone

[115781-54-9]

C₁₄H₁₂O₄ mol.wt. 244.25

Synthesis

- Obtained by alkali cleavage of 3-(2',5'-dihydroxyphenyl)-4-hydroxycoumarin with refluxing 2% methanolic potassium hydroxide for 4 h (62%) [5416].

m.p. 203° [5416]; IR [5416], UV [5416].

1-(3,4-Dihydroxyphenyl)-2-(4-hydroxyphenyl)ethanone

[150295-88-8]

C₁₄H₁₂O₄ mol.wt. 244.25

Synthesis

- Obtained by reaction of p-hydroxyphenylacetic acid with pyrocatechol in the presence of boron trifluoride etherate under argon on a water bath for 2 h (78%) [5208].

m.p. 211° [5208];

¹H NMR [5208], ¹³C NMR [5208], MS [5208].

2-(3,5-Dihydroxyphenyl)-1-(4-hydroxyphenyl)ethanone

[402490-73-7]

C₁₄H₁₂O₄ mol.wt. 244.25

Synthesis

- Obtained by treatment of fluororesveratrol blocked by three MOM groups using trifluoroacetic acid in methylene chloride at r.t. [5452].
MS [5452].

1-(2-Hydroxyphenyl)-2-(2,4,5-trihydroxyphenyl)ethanone

[115781-50-5]

C₁₄H₁₂O₅ mol.wt. 260.25

Synthesis

- Obtained from 4-hydroxy-3-(2',4',5'-trihydroxyphenyl)-coumarin with refluxing 2% methanolic potassium hydroxide for 4 h (75%) [5416].

m.p. 185° [5416]; IR [5416], UV [5416].

2-(2-Hydroxyphenyl)-1-(2,4,6-trihydroxyphenyl)ethanoneC₁₄H₁₂O₅ mol.wt. 260.25

Syntheses

- Obtained by alkaline degradation of *isogenistein* (5,7,2'-trihydroxyisoflone) (SM) (m.p. 302°) [5453] with potassium hydroxide [5453,5454,5455,5456]. SM was obtained by hydrolysis of *isogenistin*, its glycoside, (m.p. 265°) [5455], isolated from soya bean [5453,5454,5455].

- Also obtained by partial demethylation of 2-hydroxy-4,6-dimethoxyphenyl 2-methoxybenzyl ketone (m.p. 116–118°) with aluminium chloride in refluxing benzene for 2 h (35%) [5456].
- Also refer to: [5457].

m.p. 217–220° [5456], 182–183° [5453].

One of the reported melting points is obviously wrong.

2-(4-Hydroxyphenyl)-1-(2,3,4-trihydroxyphenyl)ethanone

[77316-95-1]

C₁₄H₁₂O₅ mol.wt. 260.25

Syntheses

- Obtained by reaction of p-hydroxyphenylacetic acid with pyrogallol in the presence of boron trifluoride etherate under argon on a water bath for 1 h (92%) [5208] or at 100° for 15 min (40%) [5268].

- Also refer to: [5458] (Chinese paper).

m.p. 208–209° [5208];

¹H NMR [5208,5268], ¹³C NMR [5208], MS [5208,5268].

2-(4-Hydroxyphenyl)-1-(2,4,6-trihydroxyphenyl)ethanone

[15485-65-1]

C₁₄H₁₂O₅ mol.wt. 260.25

Syntheses

- Preparation by reaction of p-hydroxyphenyl-acetonitrile with phloroglucinol (Hoesch reaction) (58%) [5459].
- Also obtained by alkaline degradation of *genistein* (5,7,4'-trihydroxyisoflavone) (m.p. 296–298°) with refluxing 5% potassium hydroxide for 30 min [5444].
- Also obtained by reaction of p-hydroxyphenylacetic with phloroglucinol in the presence of boron trifluoride etherate under argon for 5 h at 0° (83%) [5208].
- Also refer to: [5277,5295,5460,5461,5462].

monohydrate [5459];

m.p. 259° (d) [5459], 253–257° [5444]; ¹³C NMR [5293].**2-(4-Hydroxyphenyl)-1-(2,4,6-trihydroxyphenyl)ethanone-1-¹³C**

[262591-28-6]

C₁₄H₁₂O₅ mol.wt. 261.25

Synthesis

- Preparation by reaction of 4-benzyloxyphenylacetonitrile [1-¹³C] with phloroglucinol (Hoesch reaction) (75%) [5451].

2-(3,4-Dihydroxyphenyl)-1-(2,3,4-trihydroxyphenyl)ethanone

[57165-58-9]

C₁₄H₁₂O₆ mol.wt. 276.25

Synthesis

- Preparation in two steps: First, reaction of 3,4-di-methoxyphenylacetyl chloride with 1,2,3-trimethoxy-benzene in the presence of aluminium chloride at 30–40° for 16 h. Then, the formed 2,3,4,3',4'-penta-methoxydeoxybenzoin was demethylated by heating at reflux with pyridinium chloride [5463].

m.p. 155–156° [5463].

2-(4-Aminophenyl)-1-(2,4,6-trihydroxyphenyl)ethanone

[64225-20-3]

C₁₄H₁₃NO₄ mol.wt. 259.26

Syntheses

- Preparation by reaction of p-acetamidophenyl-acetonitrile with phloroglucinol in ethyl ether in the presence of zinc chloride under hydrogen chloride

atmosphere for 4 h. Then, hydrolysis of the obtained ketimine hydrochloride in boiling water for 2 h (Hoesch reaction) [5382].

- Preparation by hydrogenation of 2,4,6-trihydroxyphenyl 4-nitrobenzyl ketone in ethanol in the presence of Raney nickel as catalyst with hydrogen at 40 lb pressure for 6 h (67%) [5382].
- Also refer to: [5464].

m.p. 240–242° [5464], 197° [5382]. One of the reported melting points is obviously wrong. IR [5464].

2-(1,3-Benzodioxol-5-yl)-1-(2-hydroxyphenyl)ethanone

[142751-44-8]

$C_{15}H_{12}O_4$ mol.wt. 256.26

Synthesis

- Preparation by stirring a mixture of S-[4-(1,3-benzodioxol-5-ylacetyl)-3-hydroxyphenyl] dimethylcarbamothioate [142751-43-7], Raney nickel and ethanol at r.t. for 1 h (71%) [5205].

m.p. 62–63° [5205]; 1H NMR [5205], MS [5205].

2-(1,3-Benzodioxol-5-yl)-1-(2,4-dihydroxyphenyl)ethanone

(*Pseudo-baptigenin*)

[5653-25-8]

$C_{15}H_{12}O_5$ mol.wt. 272.26

Syntheses

- Preparation by reaction of (3,4-methylenedioxy)-phenylacetyl chloride with resorcinol in nitromethane in the presence of aluminium chloride, under nitrogen, first at 0° for 3 h and at r.t. for 20 h (59%) [5465].
- Also obtained by reaction of (3,4-methylenedioxy)phenylacetone nitrile with resorcinol (Hoesch reaction) [5466].
- Also obtained by alkaline degradation of *pseudo-baptigenin* (7-hydroxy-3',4'-methylenedioxy-isoflavone) (SM) (m.p. 298–299° [5466], 298° [5467], 296–298° [5468], 293–295° [5469]) with 12% sodium hydroxide in refluxing dilute ethanol for 15 min [5469] or with refluxing 5% potassium hydroxide for 2 h (78%) [5468]. SM was obtained from *pseudo-baptisin* (isolated from *Baptisia tinctoria* RB) whether by heating at 280° or by hydrolysis with various acids or emulsin [5467].
- Also refer to: [5205,5271,5277,5380,5470].

m.p. 151° [5468], 148–149° [5283], 146–148° [5469], 87–89° [5465]. One of the reported melting points is obviously wrong.

b.p._{0.03} 210–220° [5468]; TLC [5465];

1H NMR [5465], IR [5465].

2-(1,3-Benzodioxol-5-yl)-1-(2,3,4-trihydroxyphenyl)ethanone

[84018-72-4]

 $C_{15}H_{12}O_6$ mol.wt. 288.26

Synthesis

– Obtained by reaction of 3,4-(methylenedioxy)phenyl-acetonitrile with pyrogallol (Hoesch reaction) (21%) [5470].

m.p. 185° [5470].

2-(1,3-Benzodioxol-5-yl)-1-(2,4,5-trihydroxyphenyl)ethanone

[2828-14-0]

 $C_{15}H_{12}O_6$ mol.wt. 288.26

Synthesis

– Obtained by reaction of 3,4-(methylenedioxy)phenyl-acetonitrile with hydroxyhydroquinone (Hoesch reaction) (73%) [5471], (42%) [5472].

m.p. 206–208° [5472], 202–203° [5471];

1-(2-Hydroxy-4-methoxyphenyl)-2-(4-nitrophenyl)ethanone

[57272-98-7]

 $C_{15}H_{13}NO_5$ mol.wt. 287.27

Syntheses

- Obtained (poor yield) by reaction of p-nitrophenyl-acetonitrile with resorcinol monomethyl ether (9%) (Hoesch reaction) [5425].
 - Also obtained by partial methylation of 2,4-di-hydroxyphenyl 4-nitrobenzyl ketone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone [5217].
- m.p. 136° [5425], 134–136° [5217].

1-(4-Hydroxy-2-methoxyphenyl)-2-(4-nitrophenyl)ethanone $C_{15}H_{13}NO_5$ mol.wt. 287.27

Synthesis

m.p. 149–150° [5425].

- Obtained by reaction of p-nitrophenylacetonitrile with resorcinol monomethyl ether (Hoesch reaction) [5425].

1-(3,4-Dihydroxy-5-nitrophenyl)-2-(4-methoxyphenyl)ethanone

[440362-23-2]

 $C_{15}H_{13}NO_6$ mol.wt. 303.27

Synthesis

diacetate m.p. 88–89° [5192].

- Preparation by partial demethylation of 1-(4-hydroxy-3-methoxy-5-nitrophenyl)-2-(4-methoxyphenyl)ethanone using aluminium chloride and pyridine in ethyl acetate at reflux for 2 h (91%) [5192].

2-(4-Nitrophenyl)-1-(2,4,6-trihydroxy-3-methoxyphenyl)ethanone $C_{15}H_{13}NO_7$ mol.wt. 319.27

Synthesis

m.p. 220° [5474].

- Obtained by reaction of p-nitrophenylacetonitrile with iretol (Hoesch reaction) (50%) [5474].

1-(2,4-Dihydroxyphenyl)-2-(4-methylphenyl)ethanone

[59208-55-8]

C₁₅H₁₄O₃ mol.wt. 242.27

Synthesis

– Obtained by reaction of p-tolylacetonitrile with resorcinol (Hoesch reaction) [5262].

m.p. 114° [5262].

1-(2-Hydroxyphenyl)-2-(2-methoxyphenyl)ethanone

[92549-19-4]

C₁₅H₁₄O₃ mol.wt. 242.27

Syntheses

- Preparation by stirring a mixture of S-[3-hydroxy-4-[(2-methoxyphenyl)acetyl]phenyl] dimethylcarbamothioate [142751-41-5], Raney nickel and ethanol at r.t. for 1 h (71%) [5205].
 - Also obtained by heating 2-methoxybenzoyl-2-methoxyphenylacetonitrile (m.p. 107–108°) in acetic acid with concentrated hydrochloric acid on a steam bath for 15 h (47%) [5475].
 - Also obtained by alkaline degradation of 2'-methoxyisoflavone (m.p. 184°) with potassium hydroxide in boiling aqueous methanol for 1.5 h (almost quantitative yield) [5476].
 - Also obtained by heating ethyl 2-methoxybenzoyl-2-methoxyphenylacetate (m.p. 76–77°) in acetic acid with concentrated hydrochloric acid on a steam bath for 15 h (54%) [5475].
 - Also refer to: [5477].
- colourless oil [5475]; b.p._{0.004} 140–150° [5475];
m.p. 64° [5476], 59–60° [5205]; ¹H NMR [5205], MS [5205].

1-(2-Hydroxyphenyl)-2-(4-methoxyphenyl)ethanone

[79744-47-1]

C₁₅H₁₄O₃ mol.wt. 242.27

Syntheses

- Preparation by addition of p-methoxybenzylmagnesium chloride to a solution of 2-hydroxybenzonitrile in THF at r.t. overnight, then refluxing with aqueous hydrochloric acid for 4 h (90%) [5478].
- Also obtained by heating a solution of 2-methoxybenzoyl-4-methoxyphenylacetonitrile (m.p. 109–110°) in acetic acid containing hydrochloric acid on a steam bath for 15 h (47%) [5479].
- Also obtained by stirring a mixture of S-[3-hydroxy-4-[(4-methoxyphenyl)acetyl]phenyl] dimethylcarbamothioate [142751-42-6], Raney nickel and ethanol at r.t. for 1 h (73%) [5205].

- Also obtained by heating a solution of ethyl 2-methoxybenzoyl-4-methoxyphenylacetate (b.p._{0.004} 180–200°) in acetic acid containing hydrochloric acid on a steam bath for 15 h (54%) [5479].
- Also obtained by Fries rearrangement of phenyl p-methoxyphenylacetate with aluminium chloride for 1.5 h at 145° (13%) [5280].
m.p. 86° [5280], 85–86° [5205], 79–81° [5478]; b.p._{0.003} 160–180° [5479];

[92549-46-7]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Syntheses

– Preparation by reaction of o-methoxyphenylacetic acid with resorcinol in the presence of boron trifluoride etherate under argon on a water bath for 1 h (98%) [5208].

– Also obtained by reaction of o-methoxyphenylacetonitrile with resorcinol (Hoesch reaction) (25%) [5438], (23%) [5483].

– Also refer to: [5263,5479].

m.p. 164° [5483], 159–160° [5438].

1-(2,4-Dihydroxyphenyl)-2-(3-methoxyphenyl)ethanone

[89019-83-0]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Syntheses

– Preparation by reaction of m-methoxyphenylacetic acid with resorcinol under argon atmosphere,

- in the presence of boron trifluoride etherate on a water bath for 1 h (96%) [5208];

- in ethylene dichloride in the presence of boron trifluoride, first at r.t., then at 60° for 2 h (63%) [5439].
- m.p. 109–110° [5439]; ¹H NMR [5439], IR [5439], UV [5439], MS [5439].

1-(2,4-Dihydroxyphenyl)-2-(4-methoxyphenyl)ethanone (*Ononetin*)

[487-49-0]

C₁₅H₁₄O₄ mol.wt. 258.27

Syntheses

- Preparation by condensation of p-methoxyphenyl-acetonitrile with resorcinol (Hoesch reaction) [4989,5264,5265,5385], (64%) [5484], (50%) [5268], (48%) [5444].
 - Preparation by Friedel–Crafts acylation of resorcinol with p-methoxyphenylacetyl chloride in the presence of aluminium chloride for 24 h at r.t., in nitrobenzene (50%) [5250] or in ethyl ether (36%) [5251].
 - Also obtained by reaction of p-methoxyphenylacetic anhydride with resorcinol in the presence of boron trifluoride etherate for 3.5 h at 75° (67%) [5255].
 - Also obtained by reaction of p-methoxyphenylacetic acid with resorcinol,
 - in the presence of boron trifluoride etherate under argon on a water bath for 1.5 h (98%) [5208] or at 100° for 1 h (77%) [5439];
 - in the presence of boron trifluoride in chloroform (51%) [5258].
 - Also obtained by alkaline degradation of *formononetin* (7-hydroxy-4'-methoxyisoflavone) (SM) (m.p. 265°) [5444,5484,5485,5486], (95%) [5487], (51%) [5484]. SM was prepared by hydrolysis of *ononin* with 4% sulfuric acid [5484].
 - Also obtained by degradation of *onospin* (m.p. 172°) (SM1) by heating with dilute sulfuric acid or by treatment with emulsin. SM1 was prepared from *ononin* by heating with 10% sodium hydroxide for 2 min [5484,5486].
 - Also obtained by decarboxylation of 5-carboxy-2,4-dihydroxy-4'-methoxydeoxybenzoin (m.p. 200°) in boiling quinoline containing copper bronze during 5 min (26%) [5488].
 - Also refer to: [4685,4983,5181,5205,5217,5220,5263,5271,5273,5277,5279,5281,5415,5417,5442,5448,5449].
- m.p. 161°5–162°5 [5264], 159°5 [5484], 159° [4989,5258], 158–159° [5251], 158° [5250,5444,5487,5488], 156–157° [5283], 153–155° [5439];
¹H NMR [5268,5439], ¹³C NMR [5293,5450], IR [5439],
 UV [5264,5439], MS [5268,5439].

1-(2,5-Dihydroxyphenyl)-2-(4-methoxyphenyl)ethanone

[56308-07-7]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Synthesis

– Refer to: [5281] (Hungarian paper).

1-(2-Hydroxy-4-methoxyphenyl)-2-(4-hydroxyphenyl)ethanone

[60278-33-3]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Syntheses

– Obtained by reaction of p-hydroxyphenylacetic acid with m-methoxyphenol,

- in the presence of boron trifluoride in ethylene dichloride at 80° for 2 h under an argon atmosphere (47%) [5439];
- in the presence of polyphosphoric acid at 95° for 30 min (57%) [5334].

– Also refer to: [5270,5448,5489].

gum [5334]; m.p. 151–154° [5439];

 1H NMR [5439], ^{13}C NMR [5293], IR [5439], UV [5439], MS [5439].**1-(4-Hydroxy-2-methoxyphenyl)-2-(4-hydroxyphenyl)ethanone**

[89019-88-5]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Synthesis

– Obtained by reaction of p-hydroxyphenylacetic acid with m-methoxyphenol in ethylene dichloride in the presence of boron trifluoride at 80° for 2 h under an argon atmosphere (23%) [5439].

m.p. 147–151° [5439]; 1H NMR [5439],

IR [5439], UV [5439], MS [5439].

2-(4-Methylphenyl)-1-(2,4,6-trihydroxyphenyl)ethanone

[59108-68-8]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Synthesis

– Preparation by reaction of p-tolylacetone nitrile with phloroglucinol (Hoesch reaction) [4852,5265].

m.p. 205–206° (anhydrous) [5262];

sesquihydrate [5262].

1-(2,4-Dihydroxy-6-methoxyphenyl)-2-(4-hydroxyphenyl)ethanone

[56308-11-3]

C₁₅H₁₄O₅ mol.wt. 274.27

Syntheses

– Preparation by reaction of p-hydroxyphenyl-acetonitrile with phloroglucinol monomethyl ether (57%) (Hoesch reaction) [5330].

– Also refer to: [5281,5295].

m.p. 186–188° [5330].

1-(2,5-Dihydroxy-4-methoxyphenyl)-2-(4-hydroxyphenyl)ethanone

[79744-54-0]

C₁₅H₁₄O₅ mol.wt. 274.27

Synthesis

– Obtained by reaction of p-hydroxyphenylacetone nitrile with 2-methoxyhydroquinone (Hoesch reaction) [5293,5351].

¹³C NMR [5293].**1-(2,6-Dihydroxy-4-methoxyphenyl)-2-(4-hydroxyphenyl)ethanone**

[101094-12-6]

C₁₅H₁₄O₅ mol.wt. 274.27

Synthesis

– Obtained by heating a mixture of 5,4'-dihydroxy-7-methoxyisoflavone and tribasic sodium phosphate in water at reflux for 1 h (83%) [5295].

m.p. 247–249° [5295].

1-(2,4-Dihydroxyphenyl)-2-(3-hydroxy-4-methoxyphenyl)ethanone

[36754-72-0]

C₁₅H₁₄O₅ mol.wt. 274.27

Syntheses

– Obtained by reaction of (3-hydroxy-4-methoxyphenyl)acetonitrile with resorcinol (Hoesch reaction) (41%) [5490,5491].

– Also refer to: [5380,5492].

m.p. 161–162° [5490,5491].

1-(2,4-Dihydroxyphenyl)-2-(3-hydroxy-4-methoxyphenyl)ethanone-1-¹⁴C

[142050-40-6]

C₁₅H₁₄O₅ mol.wt. 274.27

Synthesis

– Obtained by hydrolysis of 2,4-dihydroxyphenyl 3-benzoyloxy-4-methoxybenzyl [¹⁴C] ketone (SM) with sodium hydroxide in dilute methanol (31–35%). SM was obtained by reaction of 3-benzoyloxy-4-methoxybenzyl [¹⁴C] nitrile with resorcinol (Hoesch reaction) [5492].

m.p. 166–168° [5492].

1-(2,4-Dihydroxyphenyl)-2-(4-hydroxy-2-methoxyphenyl)ethanone

[175546-62-0]

C₁₅H₁₄O₅ mol.wt. 274.27

Synthesis

– Refer to: [5277].

1-(2,4-Dihydroxyphenyl)-2-(4-hydroxy-3-methoxyphenyl)ethanone

[40456-49-3]

C₁₅H₁₄O₅ mol.wt. 274.27

Syntheses

– Preparation by reaction of 4-hydroxy-3-methoxyphenyl-acetic acid with resorcinol in the presence of boron trifluoride etherate under argon on a water bath for 1 h (99%) [5208].

– Also obtained by reaction of (4-acetoxy-3-methoxy-phenyl)acetonitrile with resorcinol (Hoesch reaction) [5493].

colourless granules [5493]; ¹H NMR [5493], IR [5493].

1-(2-Hydroxy-5-methylphenyl)-2-(2,4,5-trihydroxyphenyl)ethanone

[115781-49-2]

C₁₅H₁₄O₅ mol.wt. 274.27

Synthesis

– Obtained from 4-hydroxy-6-methyl-3-(2',4',5'-trihydroxy-phenyl)coumarin with refluxing 2% methanolic potassium hydroxide for 4 h (67%) [5416].

m.p. 193° [5416]; IR [5416], UV [5416].

2-(2-Hydroxyphenyl)-1-(2,4,6-trihydroxy-3-methylphenyl)ethanoneC₁₅H₁₄O₅ mol.wt. 274.27**Synthesis**

- Obtained by alkaline degradation of methylisogenistein (8-methyl-5,7,2'-trihydroxyisoflavone) (SM) (m.p. 255°) with potassium hydroxide [5453,5455]. SM was obtained by hydrolysis of *methylisogenistin*, its glycoside, (m.p. 301–302°) [5455], isolated from soya bean [5453,5455].

N.B.: This ketone cannot be prepared by condensation of o-hydroxyphenylacetoneitrile with 2-methylphloroglucinol (Hoesch reaction) [5438].

m.p. 186° [5455].

2-(4-Hydroxyphenyl)-1-(2,4,6-trihydroxy-3-methylphenyl)ethanoneC₁₅H₁₄O₅ mol.wt. 274.27**Syntheses**

- Obtained by partial demethylation of 2-hydroxy-4,6-dimethoxy-3-methylphenyl 4-methoxybenzyl ketone with aluminium chloride in refluxing benzene for 2 h (58%) [5494].
 - Also obtained by alkaline degradation of *methylgenistein* (8-methyl-5,7,4'-trihydroxyisoflavone) (m.p. 298°) with potash [5453,5455].
- m.p. 235–237° [5494], 190° [5455]. One of the reported melting points is obviously wrong.

2-(2-Methoxyphenyl)-1-(2,4,5-trihydroxyphenyl)ethanone

[79744-49-3]

C₁₅H₁₄O₅ mol.wt. 274.27**Synthesis**

- Obtained by reaction of 2-methoxyphenylacetoneitrile with hydroxyhydroquinone (Hoesch reaction) [5293,5351].

¹³C NMR [5293].

2-(2-Methoxyphenyl)-1-(2,4,6-trihydroxyphenyl)ethanone

[116854-95-6]

 $C_{15}H_{14}O_5$ mol.wt. 274.27

Syntheses

– Preparation by reaction of 2-methoxyphenylacetonitrile with phloroglucinol (Hoesch reaction),

- in the presence of zinc chloride [5287,5457], (74%) [5454], (48%) [5456], (42%) [5255], (37%) [5495];
- in the presence of boron trifluoride etherate (45%) [5255].

– Also refer to: [5295,5496,5497,5498].

monohydrate [5456,5495]; sublimation at 120°/0.04 mm [5495];

m.p. 170° [5287], 169° [5495], 168–170° [5456], 167–169° [5454,5457].

2-(3-Methoxyphenyl)-1-(2,4,6-trihydroxyphenyl)ethanone

[111474-27-2]

 $C_{15}H_{14}O_5$ mol.wt. 274.27

Synthesis

– Preparation by reaction of 3-methoxyphenylacetonitrile with phloroglucinol (Hoesch reaction) (75%) [5496], (30%) [5295].

m.p. 168–169° [5295], 165–166° [5496]; 1H NMR [5496], IR [5496].

2-(4-Methoxyphenyl)-1-(2,3,4-trihydroxyphenyl)ethanone

[38412-59-8]

 $C_{15}H_{14}O_5$ mol.wt. 274.27

Syntheses

– Obtained by acid hydrolysis of 4-methoxybenzyl 2-hydroxy-3,4-diphenylmethyleneedioxyphenyl ketone (m.p. 146°) in acetic acid in the presence of 2 drops of concentrated hydrochloric acid at 100° for 5 min (48%) [5499].

– Also obtained by reaction of 4-methoxyphenylacetic acid with pyrogallol in chloroform in the presence of excess boron trifluoride, first at 0°, then at r.t. overnight (77%) [5258] or for 2 days (54%) [5499].

– Also refer to: [5351,5296,5500].

m.p. 157° [5499], 145–146° [5258];

1H NMR [5499], ^{13}C NMR [5293]; TLC [5499].

2-(4-Methoxyphenyl)-1-(2,4,5-trihydroxyphenyl)ethanone

[76095-38-0]

C₁₅H₁₄O₅ mol.wt. 274.27

Syntheses

– Preparation by reaction of p-methoxyphenyl-acetonitrile with hydroxyhydroquinone (Hoesch reaction) [5291,5293,5351,5501], (80%) [5471].

– Also refer to: [5502,5503,5504,5505].

m.p. 180–181° [5471,5501]; TLC [5471];

¹H NMR [5471], ¹³C NMR [5293], UV [5501].

2-(4-Methoxyphenyl)-1-(2,4,6-trihydroxyphenyl)ethanone

[15485-66-2]

C₁₅H₁₄O₅ mol.wt. 274.27

Syntheses

– Preparation by reaction of p-methoxyphenyl-acetonitrile with phloroglucinol (Hoesch reaction),

• in the presence of zinc chloride [4852,5264,5265], (91–92%) [5461,5462,5506], (80%) [5459], (66%) [5294], (57%) [5250], (55%) [5255];

• in the presence of boron trifluoride etherate (82%) [5255].

– Preparation by Fries rearrangement of 3,5-dihydroxyphenyl p-methoxyphenylacetate with aluminium chloride in nitrobenzene, first at 60°, then at 150° for 2 h (75%) [5506].

– Preparation by Friedel–Crafts acylation of phloroglucinol with p-methoxyphenylacetyl chloride in nitrobenzene at 100° for 2 h (50%) [5506].

– Preparation by reaction of p-methoxyphenylacetic acid with phloroglucinol in the presence of zinc chloride and phosphorous oxychloride for 24 h at r.t. (68%) [5209].

– Also refer to: [4685,5263,5273,5281,5295,5415,5417,5448,5460].

m.p. 198–200° [5462], 198–199° [5264], 195° [5250], 194° [5294],

192–193° [5459,5506], 192° [5209]; monohydrate [5459];

¹H NMR [5462], ¹³C NMR [5293,5450,5462], IR [5294],

UV [5264,5294,5462]; TLC [5294].

2-(1,3-Benzodioxol-5-yl)-1-(6-hydroxy-1,3-benzodioxol-5-yl)ethanone

[2746-90-9]

C₁₆H₁₂O₆ mol.wt. 300.27

Syntheses

– Obtained by reaction of (3,4-methylenedioxy)phenyl-acetonitrile with *sesamol* (5-hydroxy-1,3-benzodioxol) (Hoesch reaction) (13%) [5472].

- Also obtained by reaction of methylene sulfate with 2,4,5-trihydroxyphenyl (3,4-methylenedioxy)benzyl ketone in the presence of potassium hydroxide in dilute acetone for 70 min at 45–50° (9%) [5472].

m.p. 172–173° [5472]; IR [5472], UV [5472].

2-(4-Bromophenyl)-1-[2-(ethenyloxy)-6-hydroxyphenyl]ethanone

$C_{16}H_{13}BrO_3$ mol.wt. 333.18

Synthesis

- Obtained (by-product) by reaction of diethylaminochloro-ethane with 2,6-dihydroxy-4'-bromodesoxybenzoin in the presence of sodium ethoxide in refluxing ethanol for 4 h [5357].

m.p. 103° [5357].

1-[2-(Ethenyloxy)-6-hydroxyphenyl]-2-(4-iodophenyl)ethanone

$C_{16}H_{13}IO_3$ mol.wt. 380.18

Synthesis

- Obtained (by-product) by reaction of diethylaminochloro-ethane with 2,6-dihydroxy-4'-iododesoxybenzoin in the presence of sodium ethoxide in refluxing ethanol for 4 h [5357].

m.p. 131° [5357].

1-(6-Hydroxy-4-methoxy-1,3-benzodioxol-5-yl)-2-(4-nitrophenyl)ethanone

$C_{16}H_{13}NO_7$ mol.wt. 331.28

Synthesis

- Obtained by condensation of 3-methoxy-4,5-methylenedioxyphenol with 4-nitrophenyl-acetonitrile (Hoesch reaction) (37%) [5507].

m.p. 165–167° [5507]; IR [5507].

2-(1,3-Benzodioxol-5-yl)-1-(2-hydroxy-4-methoxyphenyl)ethanone

[5128-56-3]

$C_{16}H_{14}O_5$ mol.wt. 286.28

Syntheses

- Obtained by partial methylation of *pseudo-baptigenetin* in ethanol with diazomethane in ethyl ether for 24 h (82%) [5468].

- Also refer to: [5380,5508].

m.p. 145° [5468].

2-(1,3-Benzodioxol-5-yl)-1-(4-hydroxy-3-methoxyphenyl)ethanone

[56766-87-1]

 $C_{16}H_{14}O_5$ mol.wt. 286.28

Synthesis

– Obtained by hydrogenolysis of 4-benzyloxy-3-methoxy-phenyl 3,4-methylenedioxybenzyl ketone (oil) with hydrogen in the presence of 10% Pd/C in ethanol at r.t. for 1.5 h (87%) [5509].

m.p. 132–133° [5509];

 1H NMR [5509], IR [5509], UV [5509], MS [5509].**2-(1,3-Benzodioxol-5-yl)-1-(2,4-dihydroxy-6-methoxyphenyl)ethanone**

[55607-36-8]

 $C_{16}H_{14}O_6$ mol.wt. 302.28

Synthesis

– Obtained by reaction of 3,4-methylenedioxyphenyl-acetonitrile with phloroglucinol monomethyl ether (Hoesch reaction) [5295], (27%) [5352].

m.p. 143–144° [5295], 138–139° [5352];

 1H NMR [5352]; TLC [5352].**2-(1,3-Benzodioxol-5-yl)-1-(2,5-dihydroxy-4-methoxyphenyl)ethanone**

[2746-89-6]

 $C_{16}H_{14}O_6$ mol.wt. 302.28

Synthesis

– Obtained by treatment of 2,4,5-trihydroxyphenyl (3,4-methylenedioxy)benzyl ketone in acetone with an ethereal diazomethane solution at r.t. overnight (76%) [5472].

m.p. 194–196° [5472]; UV [5472].

1-(6-Hydroxy-4-methoxy-1,3-benzodioxol-5-yl)-2-(4-hydroxyphenyl)ethanone

[3207-38-3]

 $C_{16}H_{14}O_6$ mol.wt. 302.28

Syntheses

– Obtained by alkaline degradation of *irisolone* (4'-hydroxy-5-methoxy-6,7-methylenedioxyisoflavone) (m.p. 258–265°) (SM) with refluxing aqueous sodium hydroxide for 1.5 h. SM was isolated from the rhizomes of *iris nepalensis* D. DON (Iridaceae) [5510].

– Also obtained by reaction of 4-hydroxyphenylacetonitrile with 3-methoxy-4,5-methylenedioxy-phenol (Hoesch reaction) (7%) [5507].

- Also obtained by diazotization of 6-hydroxy-2-methoxy-3,4-methylenedioxyphenyl 4-aminobenzyl ketone, followed by hydrolysis of the diazonium salt obtained (10%) [5507].

m.p. 159–160° [5510], 152–153° [5507]; IR [5507], UV [5507,5510].

2-(4-Bromophenyl)-1-(5-ethyl-2,4-dihydroxyphenyl)ethanone

[96643-99-1]

$C_{16}H_{15}BrO_3$ mol.wt. 335.20

Synthesis

- Preparation by reaction of p-bromophenylacetonitrile with 4-ethylresorcinol in the presence of boron trifluoride etherate under hydrogen chloride atmosphere at r.t. overnight (80%) [5368], (70%) [5367].

m.p. 124–125° [5367,5371]; 1H NMR [5367].

1-(2-Bromo-6-hydroxy-4-methoxyphenyl)-2-(4-methoxyphenyl)ethanone

[191847-25-3]

$C_{16}H_{15}BrO_4$ mol.wt. 351.20

Synthesis

- Obtained by Friedel–Crafts acylation of 3,5-di-methoxybromobenzene with 4-methoxyphenyl-acetyl chloride in the presence of aluminum chloride (12%) [5511].

m.p. 180–182° [5511]; 1H NMR [5511], MS [5511].

2-(4-Bromophenyl)-1-(2-hydroxy-3,4-dimethoxyphenyl)ethanone

$C_{16}H_{15}BrO_4$ mol.wt. 351.20

Synthesis

- Refer to: [5370] (Japanese paper).

m.p. 134–135° [5370].

2-(4-Chlorophenyl)-1-(5-ethyl-2,4-dihydroxyphenyl)ethanone

[96644-00-7]

$C_{16}H_{15}ClO_3$ mol.wt. 290.75

Synthesis

- Preparation by reaction of p-chlorophenylacetonitrile with 4-ethylresorcinol in the presence of boron trifluoride etherate under hydrogen chloride atmosphere at r.t. overnight (80%) [5368], (70%) [5367].

m.p. 130–131° [5367,5368]; 1H NMR [5367].

2-(3-Chlorophenyl)-1-(2-hydroxy-3,4-dimethoxyphenyl)ethanone

[24863-50-1]

 $C_{16}H_{15}ClO_4$ mol.wt. 306.75

Synthesis

– Obtained by Friedel–Crafts acylation of pyrogallol tri-methyl ether with m-chlorophenylacetyl chloride in the presence of aluminium chloride in carbon disulfide for 30 min (54%) [5370].

m.p. 111–112° [5370]; 1H NMR [5370].**2-(4-Chlorophenyl)-1-(2-hydroxy-3,4-dimethoxyphenyl)ethanone**

[24852-34-4]

 $C_{16}H_{15}ClO_4$ mol.wt. 306.75

Synthesis

– Obtained by Friedel–Crafts acylation of pyrogallol trimethyl ether with p-chlorophenylacetyl chloride in carbon disulfide in the presence of aluminium chloride for 30 min (59%) [5370].

m.p. 113–114° [5370].

2-(4-Aminophenyl)-1-(6-hydroxy-4-methoxy-1,3-benzodioxol-5-yl)ethanone $C_{16}H_{15}NO_5$ mol.wt. 301.30

Synthesis

– Obtained by catalytic reduction of 6-hydroxy-2-methoxy-3,4-methylenedioxyphenyl 4-nitrobenzyl ketone in ethyl acetate with hydrogen in the presence of 10% Pd/C at r.t. (82%) [5507].

m.p. 170–172° [5507]; IR [5507].

1-(5-Ethyl-2,4-dihydroxyphenyl)-2-(4-nitrophenyl)ethanone

[96644-02-9]

 $C_{16}H_{15}NO_5$ mol.wt. 301.30

Synthesis

– Obtained by reaction of p-nitrophenylacetonitrile with 4-ethylresorcinol in the presence of boron trifluoride etherate under hydrogen chloride atmosphere (8–10 h), then at r.t. overnight (94%) [5367].

m.p. 159–160° [5367]; 1H NMR [5367].

1-(2,4-Dihydroxy-6-methoxy-3-methylphenyl)-2-(4-nitrophenyl)ethanoneC₁₆H₁₅NO₆ mol.wt. 317.30**Synthesis**

– Obtained by reaction of p-nitrophenylacetonitrile with 2,6-dihydroxy-4-methoxytoluene (Hoesch reaction) [5258].

m.p. 201° [5258].

1-(2-Hydroxy-4,6-dimethoxyphenyl)-2-(4-nitrophenyl)ethanone

[56982-36-6]

C₁₆H₁₅NO₆ mol.wt. 317.30**Syntheses**

– Obtained by partial methylation of 4-nitrobenzyl 2,4,6-trihydroxyphenyl ketone,

- with diazomethane in ethyl ether at 0° for 48 h (57%) [5382];
- with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone [5217].

– Also refer to: [5512].

m.p. 150° [5217], 148–149° [5512], 148° [5382].

1-(2,4-dihydroxy-3,6-dimethoxyphenyl)-2-(4-Nitrophenyl)ethanoneC₁₆H₁₅NO₇ mol.wt. 333.30**Synthesis**

– Obtained by reaction of p-nitrophenylacetonitrile with 2,5-dimethoxyresorcinol (Hoesch reaction) [5474].

m.p. 174° [5474].

1-(2-Hydroxy-3-methylphenyl)-2-(2-methoxyphenyl)ethanone

[74384-36-4]

C₁₆H₁₆O₃ mol.wt. 256.30**Synthesis**

– Preparation by Fries rearrangement of o-cresyl o-methoxyphenylacetate with aluminium chloride in nitromethane for 170 h at 20° (60%) [5480].

m.p. 167° [5480];

¹H NMR (Sadler: standard n° 44610 M);

IR (Sadler: standard n° 71638 K) [5480],

UV [5480], MS [5480].

1-(2-Hydroxy-3-methylphenyl)-2-(4-methoxyphenyl)ethanone

[74384-33-1]

 $C_{16}H_{16}O_3$ mol.wt. 256.30

Synthesis

– Obtained (by-product) by Fries rearrangement of o-cresyl p-methoxyphenylacetate with aluminium chloride in nitromethane for 25 h at 20° (11%) [5480].

oil [5480]; IR [5480], UV [5480], MS [5480].

1-(2-Hydroxy-5-methylphenyl)-2-(2-methoxyphenyl)ethanone

[74384-38-6]

 $C_{16}H_{16}O_3$ mol.wt. 256.30

Synthesis

– Obtained by Fries rearrangement of p-cresyl o-methoxyphenylacetate with aluminium chloride in nitromethane for 170 h at 20° (41%) [5480].

m.p. 95° [5480];

1H NMR (Sadtlar: standard n° 44606 M), IR (Sadtlar: standard n°71634 K) [5480], UV [5480], MS [5480].

1-(2-Hydroxy-5-methylphenyl)-2-(4-methoxyphenyl)ethanone

[74384-34-2]

 $C_{16}H_{16}O_3$ mol.wt. 256.30

Synthesis

– Obtained by Fries rearrangement of p-cresyl p-methoxyphenylacetate with aluminium chloride in nitromethane for 25 h at 20° (22%) [5480].

m.p. 55° [5480];

IR [5480], UV [5480], MS [5480].

1-(4-Hydroxy-3-methylphenyl)-2-(4-methoxyphenyl)ethanone

[74384-31-9]

 $C_{16}H_{16}O_3$ mol.wt. 256.30

Synthesis

– Preparation by Fries rearrangement of o-cresyl p-methoxyphenylacetate with aluminium chloride in nitromethane for 25 h at 20° (71%) [5480].

m.p. 160° [5480];

^1H NMR (Sadler: standard n° 44612 M),
 IR (Sadler: standard n° 71640 K) [5480], UV [5480], MS [5480].

1-(2,4-Dihydroxy-3-methylphenyl)-2-(4-methoxyphenyl)ethanone

[93434-89-0]

$\text{C}_{16}\text{H}_{16}\text{O}_4$ mol.wt. 272.30

Syntheses

- Preparation by hydrogenation of 2,4-dihydroxy-3-formylphenyl 4-methoxybenzyl ketone (m.p. 114–115°) in acetic acid in the presence of 5% Pd/C in an atmosphere of hydrogen at r.t. and at atmospheric pressure (79%) [5354].
- Preparation by reaction of p-methoxyphenylacetone nitrile with 2-methylresorcinol (48%) (Hoesch reaction) [5513].

Also refer to: [5514].

m.p. 175° [5513], 172–173° [5354].

1-(2,4-Dihydroxy-5-methylphenyl)-2-(4-methoxyphenyl)ethanone

[56308-10-2]

$\text{C}_{16}\text{H}_{16}\text{O}_4$ mol.wt. 272.30

Syntheses

- Obtained by reaction of 4-methoxyphenylacetone nitrile with 4-methylresorcinol (Hoesch reaction) (44%) [5515], (36%) [5488].
- Also refer to: [5281] (Hungarian paper).

m.p. 155° [5488], 139–140° [5515]. One of the reported melting points is obviously wrong.

1-(2,4-Dihydroxy-6-methylphenyl)-2-(4-methoxyphenyl)ethanone

[15485-71-9]

$\text{C}_{16}\text{H}_{16}\text{O}_4$ mol.wt. 272.30

Synthesis

- Obtained by treatment of orcinol with p-methoxyphenylacetone nitrile in ethyl ether in the presence of zinc chloride and hydrogen chloride (Hoesch reaction) [5264].

m.p. 109–110° [5264]; UV [5264].

1-(2,6-Dihydroxy-3-methylphenyl)-2-(4-methoxyphenyl)ethanone

[131196-70-8]

C₁₆H₁₆O₄ mol.wt. 272.30

Synthesis

– Obtained from 2,6-dihydroxy-4'-methoxy-5-methoxycarbonyl-3-methyldeoxybenzoin

(m.p. 116°) which was simultaneously hydrolysed and decarboxylated by treatment with potassium hydroxide in refluxing dilute ethanol for 1.5 h (84%) [5488].

m.p. 164° [5488].

1-(2,6-Dihydroxy-4-methylphenyl)-2-(4-methoxyphenyl)ethanone

[128672-42-4]

C₁₆H₁₆O₄ mol.wt. 272.30

Synthesis

– Refer to: [5516] (Chinese paper).

2-(3,4-Dimethoxyphenyl)-1-(4-hydroxyphenyl)ethanone

[183054-34-4]

C₁₆H₁₆O₄ mol.wt. 272.30

Synthesis

– Obtained by Friedel–Crafts acylation of isopropyl phenyl ether with homoveratroyl chloride in ethylene dichloride in the presence of aluminium chloride, first at 20°, then at 40° for 2–3 h and at r.t. overnight (31%) [5517].

m.p. 165–167° [5517];

¹H NMR [5517], ¹³C NMR [5517], IR [5517], MS [5517].

1-(2-Hydroxy-4-methoxyphenyl)-2-(2-methoxyphenyl)ethanone

[18440-00-1]

C₁₆H₁₆O₄ mol.wt. 272.30

Syntheses

– Preparation by partial methylation of 2,4-dihydroxy-2'-methoxydeoxybenzoin,

- with methyl iodide in the presence of potassium carbonate in boiling acetone during 1.5 h (quantitative yield) [5483];
- with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 5 h (83%) [5518].

- Also obtained by Friedel–Crafts acylation of resorcinol dimethyl ether with o-methoxyphenylacetyl chloride in the presence of aluminium chloride, first in carbon disulfide, then on steam bath for 2.5 h after solvent elimination (40%) [5519].
 - Also obtained by hydrolysis of 2,4-dimethoxybenzoyl-2-methoxyphenylacetone nitrile (m.p. 114–115°) in acetic acid with concentrated hydrochloric acid on a steam bath for 15 h (43%) [5211].
 - Also obtained by hydrolysis of ethyl 2,4-dimethoxybenzoyl-2-methoxyphenylacetate (m.p. 94–96°) in acetic acid with concentrated hydrochloric acid on a steam bath for 15 h (40%) [5211].
 - Also obtained by degradation of 7,2'-dimethoxy-3-phenyl-4-hydroxycoumarin with refluxing 30% alcoholic hydrogen chloride for 1 h (36%) [5210].
 - Also refer to: [5278,5338,5340,5448,5476].
- m.p. 94° [5483], 93–95° [5519], 93–94° [5518], 92° [5210], 90–91° [5211];
b.p._{0.001} 180° [5211].

1-(2-Hydroxy-4-methoxyphenyl)-2-(4-methoxyphenyl)ethanone

[39604-64-3]

C₁₆H₁₆O₄ mol.wt. 272.30

Syntheses

– Preparation by partial methylation of 2,4-di-hydroxyphenyl 4-methoxybenzyl ketone,

- with methyl iodide in the presence of potassium carbonate in boiling acetone during 3 h (83%) [5250];
 - with dimethyl sulfate [5520], in the presence of potassium carbonate in boiling acetone [5385];
 - with diazomethane in ethyl ether [5484,5487].
- Also obtained by alkaline degradation of *formononetin methyl ether* (7,4'-dimethoxyisoflavone) [5487], (m.p. 156°) with boiling 10% sodium hydroxide for 1 h [5484].
 - Also obtained by hydrolysis of 2,4-dimethoxybenzoyl-4-methoxyphenylacetone nitrile (m.p. 105–106°) in acetic acid with concentrated hydrochloric acid on a steam bath for 15 h (38%) [5211].
 - Also obtained by hydrolysis of ethyl 2,4-dimethoxybenzoyl-4-methoxyphenylacetate (m.p. 48–50°) in acetic acid with concentrated hydrochloric acid on a steam bath for 15 h (33%) [5211].
 - Also obtained by reaction of p-methoxyphenylacetone nitrile with resorcinol monomethyl ether (Hoesch reaction) [5486].
 - Also refer to: [4935,5273,5278,5330,5337,5338,5340,5381,5420,5421,5447,5448,5461,5462].
- m.p. 104° [5250,5484], 102° [5487], 100–100.5 [5211], 92–93° [5486];
b.p._{0.001} 190° [5211]; ¹³C NMR [5293,5450].

1-(4-Hydroxy-2-methoxyphenyl)-2-(4-methoxyphenyl)ethanone

$C_{16}H_{16}O_4$ mol.wt. 272.30

Syntheses

- Obtained by heating 1-[4-(glucopyranosyloxy)-2-methoxyphenyl]-2-(4-methoxyphenyl)ethanone (SM) with concentrated sulfuric acid for 20 min. SM was obtained by methylation of synthetic *onospin* (m.p. 179°5) with excess methyl iodide in the presence of potassium carbonate in boiling methanol for 2 h. This same methylation can be realized by using diazomethane [5486].
 - Also obtained by reaction of p-methoxyphenylacetonitrile with resorcinol monomethyl ether (Hoesch reaction) [5489].
- m.p. 173–175° [5486].

1-(2,4-Dihydroxy-6-methoxy-3-methylphenyl)-2-(4-hydroxyphenyl)ethanone

$C_{16}H_{16}O_5$ mol.wt. 288.30

Syntheses

- Obtained by reaction of p-hydroxyphenylacetonitrile with 2,6-dihydroxy-4-methoxytoluene (m.p. 124°) (Hoesch reaction) (50%) [5495].
- Also refer to: [5488].
- m.p. 207° [5495].

1-(2,3-Dihydroxy-4-methoxyphenyl)-2-(4-methoxyphenyl)ethanone

[38412-65-6]

$C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

- Obtained by reaction of 4-methoxyphenylacetic acid with 3-methoxycatechol in chloroform in the presence of excess boron trifluoride, first at 0°, then at r.t. for 2 days (97%) [5499].
- m.p. 137° [5499].

1-(2,4-Dihydroxy-3-methoxyphenyl)-2-(4-methoxyphenyl)ethanone

[61243-80-9]

C₁₆H₁₆O₅ mol.wt. 288.30

Synthesis

– Obtained by mild base hydrolysis of 8-O-methyl-retusin (7-hydroxy-8,4'-dimethoxyisoflavone) (SM) (m.p. 229–232°), itself isolated from heartwood of *Xanthocercis zambeziaca* (Bak.) (Leguminosae) [5522].

m.p. 140–142° [5522]; ¹H NMR [5522], IR [5522], UV [5522], MS [5522].

1-(2,4-Dihydroxy-5-methoxyphenyl)-2-(4-methoxyphenyl)ethanone

[5128-54-1]

C₁₆H₁₆O₅ mol.wt. 288.30

Syntheses

– Obtained by alkaline degradation of *afromosin* (7-hydroxy-6,4'-dimethoxyisoflavone), (69%) [5501], (64%) [5523]. *Afromosin* (m.p. 228–229°), was isolated from *afromosia elata* Harms [5523]. *Afromosin* is the aglycone of *wistin* (m.p. 209–210°), itself isolated from the bark of *wistaria floribunda* DC [5501].

– Also obtained by reaction of 4-methoxyphenyl-acetonitrile with 4-methoxyresorcinol (Hoesch reaction) (20%) [5523].

m.p. 128–129° [5523], 127° [5501]; ¹³C NMR [5293], IR [5523], UV [5501,5523].

1-(2,4-Dihydroxy-6-methoxyphenyl)-2-(2-methoxyphenyl)ethanoneC₁₆H₁₆O₅ mol.wt. 288.30

Synthesis

– Refer to: [5295].

1-(2,4-Dihydroxy-6-methoxyphenyl)-2-(4-methoxyphenyl)ethanone

[13539-34-9]

 $C_{16}H_{16}O_5$ mol.wt. 288.30

Syntheses

- Preparation by reaction of p-methoxyphenyl-acetonitrile with phloroglucinol monomethyl ether (Hoesch reaction) [5295,5524], (39%) [5525], (31%) [5495].
 - Also obtained by alkaline degradation of *genistein 5,4'-dimethyl ether* (7-hydroxy-5,4'-dimethoxyisoflavone) (m.p. 290–293°) in boiling 30% potassium hydroxide for 15 min (93%) [5444].
- crystals [5444]; m.p. 166–167° [5295], 129–130° [5495], 126–127° [5525]. One of the reported melting points is obviously wrong. UV [5525].

1-(2,5-Dihydroxy-4-methoxyphenyl)-2-(4-methoxyphenyl)ethanone

[79744-55-1]

 $C_{16}H_{16}O_5$ mol.wt. 288.30

Syntheses

- Obtained by alkaline persulfate oxidation of 2-hydroxy-4-methoxyphenyl 4-methoxybenzyl ketone (Elbs reaction) (21%) [5520].
 - Also obtained by partial methylation of 2,4,5-tri-hydroxyphenyl 4-methoxybenzyl ketone with excess diazomethane in ethyl ether at r.t. overnight (14%) [5291].
 - Also obtained by reaction of 4-methoxyphenylacetonitrile with 2-methoxyhydroquinone so called methoxyquinol (24%) (Hoesch reaction) [5523].
- m.p. 150° [5523], 148–149° [5291], 133–134° [5520].
One of the reported melting points is obviously wrong.
 ^{13}C NMR [5293], IR [5523], UV [5520,5526].

1-(2,4-Dihydroxyphenyl)-2-(2,4-dimethoxyphenyl)ethanone

[1855-30-7]

 $C_{16}H_{16}O_5$ mol.wt. 288.30

Syntheses

- Obtained by reaction of 2,4-dimethoxyphenyl-acetonitrile with resorcinol (Hoesch reaction) [5265], (55%) [5526], (37%) [5527,5531], (5%) [5529].
- Also refer to: [5530,5445].
m.p. 158–159° [5526], 155–156° [5529], 154° [5528], 152° [5527];
b.p._{0.02} 200–210° [5529]; IR [5528].

1-(2,4-Dihydroxyphenyl)-2-(2,5-dimethoxyphenyl)ethanone

[18086-25-4]

 $C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

- Obtained by reaction of 2,5-dimethoxyphenylacetonitrile (m.p. 56–57°) with resorcinol (40%) (Hoesch reaction) [5531].

m.p. 144–145° [5531].

1-(2,4-Dihydroxyphenyl)-2-(3,4-dimethoxyphenyl)ethanone

[24126-98-5]

 $C_{16}H_{16}O_5$ mol.wt. 288.30

Syntheses

- Preparation by Friedel–Crafts acylation of resorcinol with 3,4-dimethoxyphenylacetyl chloride in nitro-benzene in the presence of aluminium chloride for 24 h at r.t. (56%) [5250].
- Preparation by reaction of 3,4-dimethoxyphenyl-acetonitrile with resorcinol (Hoesch reaction) [5332], (60%) [5532], (49%) [5527].
- Obtained by heating *Cladrin* (7-hydroxy-3',4'-dimethoxyisoflavone) (m.p. 257–258°) with 10% aqueous barium hydroxide at reflux for 2 h (73%). *Cladrin* was isolated from *Cladrastis lutea* (Mich. f.) K. Koch (Leguminosae) [5533].
- Also refer to: [5271,5537,5280].

m.p. 182–183° [5533], 180° [5527], 177° [5250], 177–178° [5532], 176° [5332].

1-(2,4-Dihydroxyphenyl)-2-(3,4-dimethoxyphenyl)ethanone-1-¹⁴C

[142050-41-7]

 $C_{16}H_{16}O_5$ mol.wt. 290.29

Synthesis

- Obtained by reaction of 3,4-dimethoxybenzyl [¹⁴C] nitrile with resorcinol (Hoesch reaction) (38%) [5492].

m.p. 183–184° [5492]; TLC [5492].

2-(4-Ethoxyphenyl)-1-(2,4,6-trihydroxyphenyl)ethanone $C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

- Preparation by condensation of p-ethoxyphenyl-acetonitrile with phloroglucinol (Hoesch reaction) [5535].

m.p. 208–210° [5535].

1-(2-Hydroxy-4,6-dimethoxyphenyl)-2-(4-hydroxyphenyl)ethanone

[69127-79-3]

C₁₆H₁₆O₅ mol.wt. 288.30

Syntheses

– Obtained by alkaline degradation of *genistein 5,7-di-methyl ether* (5,7-dimethoxy-4'-hydroxyisoflavone) (m.p. 266°) with 40% potassium hydroxide in a water bath for 15 min (41%) [5536].

– Also obtained by diazotization of 4-aminobenzyl 2-hydroxy-4,6-dimethoxyphenyl ketone hydrochloride, followed by hydrolysis of the diazonium salt obtained (33%) [5382].

– Also obtained by reaction of p-hydroxyphenylacetonitrile with phloroglucinol dimethyl ether (Hoesch reaction) (25%) [5537], (19%) [5536].

– Also refer to: [5295,5463].

m.p. 112° [5537,5539], 110° [5382].

1-(4-Hydroxy-2,6-dimethoxyphenyl)-2-(4-hydroxyphenyl)ethanoneC₁₆H₁₆O₅ mol.wt. 288.30

Synthesis

– Obtained by reaction of p-hydroxyphenylacetonitrile with phloroglucinol dimethyl ether (Hoesch reaction) [5537,5539].

m.p. 182° [5536], 181° [5537].

2-(2-Methoxyphenyl)-1-(2,4,6-trihydroxy-3-methylphenyl)ethanoneC₁₆H₁₆O₅ mol.wt. 288.30

Syntheses

– Preparation by reaction of o-methoxyphenylacetonitrile with 2-methylphloroglucinol (m.p. 215°) (Hoesch reaction), (45%) [5495], (35%) [5497].

– Also refer to: [5355].

m.p. 206° [5495], 198–200° [5497]; sublimation at 160°/0.01 mm [5495].

2-(4-Methoxyphenyl)-1-(2,4,6-trihydroxy-3-methylphenyl)ethanoneC₁₆H₁₆O₅ mol.wt. 288.30**Syntheses**

- Obtained by reaction of p-methoxyphenyl-acetonitrile with 2-methylphloroglucinol (m.p. 215°) [5495] (Hoesch reaction), (54%) [5538], (26%) [5495].

– Also refer to: [5296,5355,5359].

m.p. 228° [5495], 220–221° [5538]; sublimation at 160°/ 0.01 mm [5495].

1-(2,4-Dihydroxy-3-methoxyphenyl)-2-(3-hydroxy-4-methoxyphenyl)ethanone

[61243-85-4]

C₁₆H₁₆O₆ mol.wt. 304.**Syntheses**

- Obtained by mild base hydrolysis of 7,3'-di-hydroxy-8,4'-dimethoxyisoflavone (m.p. 212–213°), (71%) [5522].

– Also refer to: [5539].

m.p. 127–129° [5522]; ¹H NMR [5522], IR [5522], UV [5522], MS [5522].

2-(2,3-Dimethoxyphenyl)-1-(2,4,6-trihydroxyphenyl)ethanoneC₁₆H₁₆O₆ mol.wt. 304.30**Syntheses**

- Obtained by reaction of 2,3-dimethoxyphenylacetonitrile with phloroglucinol (Hoesch reaction) (44%) [5483].
- Also refer to: [5476].

m.p. 193° [5483].

2-(2,4-Dimethoxyphenyl)-1-(2,3,4-trihydroxyphenyl)ethanone

[14756-83-3]

C₁₆H₁₆O₆ mol.wt. 304.30**Syntheses**

- Obtained by reaction of phenylacetic acid with pyrogallol in the presence of zinc chloride at 130° for 2 h (Nencki reaction) (39%) [5540].

– Also obtained (poor yield) by reaction of 2,4-di-methoxyphenylacetonitrile with pyrogallol (Hoesch reaction) (4%) [5540].

m.p. 134–135° [5540].

2-(2,4-Dimethoxyphenyl)-1-(2,4,6-trihydroxyphenyl)ethanone

[65568-08-3]

C₁₆H₁₆O₆ mol.wt. 304.30

Syntheses

- Obtained by condensation of 2,4-dimethoxyphenyl-acetonitrile (m.p. 76°) with phloroglucinol (Hoesch reaction) [5276,5381,5541,5542].

– Also refer to: [5277,5295,5476,5534,5543].

m.p. 178° [5542], 175° [5541]; paper chromatography [5397].

2-(3,4-Dimethoxyphenyl)-1-(2,3,4-trihydroxyphenyl)ethanone

[93435-58-6]

C₁₆H₁₆O₆ mol.wt. 304.30

Synthesis

- Obtained by condensation of 3,4-dimethoxyphenyl-acetonitrile (m.p. 45–47°) [5544] with pyrogallol (Hoesch reaction) [5545], (23%) [5470].

m.p. 174° [5470].

2-(3,4-Dimethoxyphenyl)-1-(2,4,5-trihydroxyphenyl)ethanone

[66116-74-3]

C₁₆H₁₆O₆ mol.wt. 304.30

Syntheses

- Preparation by reaction of 3,4-dimethoxyphenyl-acetonitrile with hydroxyhydroquinone (Hoesch reaction) (81%) [5471].

– Also refer to: [5351].

m.p. 193–194° [5471]; TLC [5471];

¹H NMR [5471], ¹³C NMR [5293].

2-(3,4-Dimethoxyphenyl)-1-(2,4,6-trihydroxyphenyl)ethanone

[53084-06-3]

C₁₆H₁₆O₆ mol.wt. 304.30

Syntheses

- Preparation by reaction of 3,4-dimethoxyphenyl-acetonitrile with phloroglucinol (Hoesch reaction),

- in the presence of zinc chloride [5295,5549], (47%) [5250], (42%) [5294], (38%) [5255];

- in the presence of boron trifluoride etherate (59%) [5255].

– Also refer to: [5263].

N.B.: The monohydrate of this ketone was at first obtained [5250]. The water of crystallisation is lost on heating the crystals at 90°.

m.p. 208–210° [5546], 184–186° [5295], 182–184° [5255], 181° [5250], 180–181° [5294]. One of the reported melting points is obviously wrong.
¹³C NMR [5293], IR [5294], UV [5294]; TLC [5294].

2-(4-Methoxyphenyl)-1-(3,4,6-trihydroxy-2-methoxyphenyl)ethanone

[14701-83-8]

C₁₆H₁₆O₆ mol.wt. 304.30

Synthesis

– Obtained by persulfate oxidation of 2,4-dihydroxy-6-methoxyphenyl 4-methoxybenzyl ketone (Elbs reaction) [5525].

m.p. 144° [5525]; UV [5525].

2-(4-Aminophenyl)-1-(2-hydroxy-4,6-dimethoxyphenyl)ethanone

C₁₆H₁₇NO₄ mol.wt. 287.32

Synthesis

– Preparation by hydrogenation of 2-hydroxy-4,6-dimethoxyphenyl 4-aminobenzyl ketone in ethanol in the presence of Raney nickel as catalyst with hydrogen for 8 h [5382].

m.p. 103–104° [5382].

2-(4-Aminophenyl)-1-(2-hydroxy-4,6-dimethoxyphenyl)ethanone (Hydrochloride)

C₁₆H₁₇NO₄, HCl mol.wt. 323.78

Synthesis

– Obtained by treatment of the above base with hot dilute hydrochloric acid [5382].

m.p. 198–200° [5382].

1-[2-(Acetyloxy)-4-hydroxyphenyl]-2-(4-methoxyphenyl)ethanone

[145747-28-0]

C₁₇H₁₆O₅ mol.wt. 300.31

Syntheses

– Obtained by selective deacetylation catalyzed by porcine pancreas lipase in THF at 42–45° of,
 • 2,4-diacetoxyphenyl 4-methoxybenzyl ketone during 48 h (73%) [5265,5358,5359].

- 1-acetoxy-1-(2,4-diacetoxyphenyl)-2-(4-methoxyphenyl)-ethene during 72 h (18%) [5265].

semi solid [5265]; TLC [5265];

¹H NMR [5265], IR [5265], UV [5265], MS [5265].

2-(1,3-Benzodioxol-5-yl)-1-(4-ethoxy-2-hydroxyphenyl)ethanone

(*Pseudo-baptigenin monoethyl ether*)

$C_{17}H_{16}O_5$ mol.wt. 300.31

Syntheses

- Obtained by partial ethylation of pseudo-baptigenin in ethanol with diazoethane in ethyl ether for 1.25 h [5468].
 - Also obtained by alkaline degradation of *pseudo-baptigenin monoethyl ether* (m.p. 172°) with potassium hydroxide in boiling dilute ethanol [5468].
- m.p. 129° [5468].

2-(1,3-Benzodioxol-5-yl)-1-(2-hydroxy-3,4-dimethoxyphenyl)ethanone

[84018-73-5]

$C_{17}H_{16}O_6$ mol.wt. 316.31

Synthesis

- Obtained by reaction of 3,4-(methylenedioxy)phenyl-acetonitrile with pyrogallol (Hoesch reaction) and subsequent partial methylation of the 2,3,4-trihydroxy-phenyl 3,4-methylenedioxybenzyl ketone so obtained with dimethyl sulfate [5374] according to the method [5472].

2-(1,3-Benzodioxol-5-yl)-1-(2-hydroxy-4,5-dimethoxyphenyl)ethanone

[2746-88-5]

$C_{17}H_{16}O_6$ mol.wt. 316.31

Syntheses

- Obtained by partial methylation of 3,4-(methylene-dioxy)benzyl 2,4,5-trihydroxyphenyl ketone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 6 h (40%) [5472] or according to [5273], (90%) [5471].
- Also obtained by partial demethylation of 3,4-(methylenedioxy)benzyl 2,4,5-trimethoxyphenyl ketone (m.p. 153–154°) with aluminium chloride in refluxing acetonitrile for 45 min (43%) [5379].

- Also obtained (trace) by reaction of 3,4-(methylenedioxy)phenylacetyl chloride with 1,2,4-tri-methoxybenzene in the presence of aluminium chloride in ethyl ether at 0° overnight (<1%) [5379].
 - Also refer to: [5381].
- m.p. 153–154° [5472], 119° [5471], 118–119° [5379]. One of the reported melting points is obviously wrong.
IR [5379,5475], UV [5379,5475], MS [5379].

2-(1,3-Benzodioxol-5-yl)-1-(2-hydroxy-4,6-dimethoxyphenyl)ethanone

[22044-73-1]

C₁₇H₁₆O₆ mol.wt. 316.31

Syntheses

- Preparation by partial methylation of 3,4-(methylene-dioxy)benzyl 2,4,6-tri-hydroxyphenyl ketone with dimethyl sulfate in the presence of potassium carbonate in boiling acetone [5295], for 14 h (73%) [5473].

- Also refer to: [5281,5380].

Isolation from natural sources

- Obtained (major product) by alkaline hydrolysis of *Derrystone* (5,7-dimethoxy-3',4'-methylene-dioxyisoflavone) (m.p. 153–154°) (SM) with 25% aqueous potassium hydroxide in refluxing methanol for 2 h (69%). SM was isolated from the root material of *Derris robusta* (Roxb.) Benth [5547].
- m.p. 102–103° [5547], 98–99° [5295], 97° [5473]; IR [5547].

2-(3,4-Dimethoxyphenyl)-1-(6-hydroxy-1,3-benzodioxol-5-yl)ethanone

[61243-78-5]

C₁₇H₁₆O₆ mol.wt. 316.31

Synthesis

- Obtained by mild base hydrolysis of 3',4'-dimethoxy-6,7-methylenedioxyisoflavone [5522].

m.p. 148–151° [5522];
¹H NMR [5522], IR [5522], UV [5522], MS [5522];
 TLC [5522].

1-(4-Hydroxy-6-methoxy-1,3-benzodioxol-5-yl)-2-(4-methoxyphenyl)ethanoneC₁₇H₁₆O₆ mol.wt. 316.31

Synthesis

– Obtained by alkali degradation of 5,4'-dimethoxy-7,8-methylenedioxy-2-methylisoflavone (m.p. 214–215°) with potassium hydroxide in refluxing dilute ethanol for 2 h under a stream of nitrogen gas (88%) [5507].

m.p. 133–134° [5507]; IR [5507], UV [5507].

1-(6-Hydroxy-4-methoxy-1,3-benzodioxol-5-yl)-2-(2-methoxyphenyl)ethanoneC₁₇H₁₆O₆ mol.wt. 316.31

Synthesis

– Obtained by alkaline degradation of *tlatlacuayin* (5,2'-di-methoxy-6,7-methylenedioxyisoflavone) (SM) with refluxing aqueous sodium hydroxide for 1.5 h (quantitative yield). SM was isolated from *Iresine celosioides* L. (Amarantaceae) [5213].

m.p. 115–116° [5213]; IR [5213], UV [5213].

1-(6-Hydroxy-4-methoxy-1,3-benzodioxol-5-yl)-2-(4-methoxyphenyl)ethanone

[3207-42-9]

C₁₇H₁₆O₆ mol.wt. 316.31

Syntheses

- Obtained by methylenation of 2,4,5-trihydroxy-6-methoxyphenyl 4-methoxybenzyl ketone with methylene iodide in the presence of potassium carbonate in refluxing acetone for 40 h [5525].
- Also obtained by alkaline degradation of *irisolone methyl ether* (4',5-dimethoxy-6,7-methylenedioxy-isoflavone) (m.p. 184–185°) with refluxing aqueous sodium hydroxide for 1.5 h [5510].
- Also obtained by reaction of 4-methoxyphenylacetonitrile with 3-methoxy-4,5-methylenedioxy-phenol (Hoesch reaction) (12%) [5507].
- Also obtained in two steps: First, methylation of 6-benzyloxy-2-hydroxy-3,4-methylenedioxy-phenyl 4-methoxybenzyl ketone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 27 h. The obtained methyl ether was debenzylated with hydrogen in ethanol in the presence of 10% Pd/C for 5 h at r.t. (31%) [5507].

m.p. 114–115° [5507], 113–114° [5510,5525];

IR [5507], UV [5507,5510,5525].

1-(3-Bromo-2-hydroxy-4,6-dimethoxyphenyl)-2-(4-methoxyphenyl)ethanone

[28750-74-5]

 $C_{17}H_{17}BrO_5$ mol.wt. 381.22

Synthesis

– Preparation by bromination of 2-hydroxy-4,6,4'-trimethoxydeoxybenzoin with bromine in chloroform under UV light at r.t. overnight (52%) [5294].

m.p. 158–159° [5294]; TLC [5294];
 1H NMR [5294], IR [5294], UV [5294].

1-(5-Bromo-2-hydroxy-3,4-dimethoxyphenyl)-2-(4-methoxyphenyl)ethanone

[24852-43-5]

 $C_{17}H_{17}BrO_5$ mol.wt. 381.22

Synthesis

– Obtained by bromination of 2-hydroxy-3,4-di-methoxyphenyl 4-methoxybenzyl ketone with bromine in the presence of sodium acetate in chloroform for 5 h (70%) [5370].

m.p. 81–82° [5370]; 1H NMR [5370].

1-[4-(2-Chloroethoxy)-2-hydroxyphenyl]-2-(4-methoxyphenyl)ethanone

[247931-29-9]

 $C_{17}H_{17}ClO_4$ mol.wt. 320.77

Synthesis

– Obtained by partial alkylation of 1-(2,4-dihydroxyphenyl)-2-(4-methoxyphenyl)ethanone with

1-bromo-2-chloroethane in the presence of potassium carbonate in refluxing acetone for 24 h (70%) [5420].

m.p. 87–89° [5420]; 1H NMR [5420].

1-(2,4-Dihydroxy-5-propylphenyl)-2-(4-fluorophenyl)ethanone

[96644-01-8]

 $C_{17}H_{17}FO_3$ mol.wt. 288.32

Synthesis

– Obtained by reaction of p-fluorophenylacetonitrile with 4-propylresorcinol in the presence of boron trifluoride etherate under hydrogen chloride at r.t. for 8–10 h, then at r.t. overnight (63%) [5367].

m.p. 100–101° [5367]; 1H NMR [5367].

1-(2-Hydroxy-3,5-dimethylphenyl)-2-(2-methoxyphenyl)ethanone

[74384-39-7]

 $C_{17}H_{18}O_3$ mol.wt. 270.33

Synthesis

– Obtained by Fries rearrangement of 2,4-dimethylphenyl 2-methoxyphenylacetate with aluminium chloride in nitromethane at 20° for 170 h (39%) [5480].

m.p. 85° [5480];

¹H NMR (Sadler: standard n° 44603 M), [5480],

IR (Sadler: standard n° 71631 K), [5480], UV [5480],

MS [5480].

1-(2-Hydroxy-3,5-dimethylphenyl)-2-(4-methoxyphenyl)ethanone

[74384-35-3]

 $C_{17}H_{18}O_3$ mol.wt. 270.33

Synthesis

– Preparation by Fries rearrangement of 2,4-di-methylphenyl 4-methoxyphenylacetate with aluminium chloride in nitromethane at 20° for 170 h (59%) [5480].

m.p. 23° [5480]; IR [5480], UV [5480], MS [5480].

1-(4-Hydroxy-3,5-dimethylphenyl)-2-(2-methoxyphenyl)ethanone

[74384-37-5]

 $C_{17}H_{18}O_3$ mol.wt. 270.33

Synthesis

– Obtained by Fries rearrangement of 2,6-dimethylphenyl 2-methoxyphenylacetate in the presence of ferric chloride or aluminium chloride in nitromethane at 20° for 50 h (29% and 6% yields, respectively) [5480].

m.p. 160° [5480];

¹H NMR (Sadler: standard n° 44607 M), [5480],

IR (Sadler: standard n° 71635 K), [5480], UV [5480], MS [5480].

1-(4-Hydroxy-3,5-dimethylphenyl)-2-(4-methoxyphenyl)ethanone

[74384-32-0]

 $C_{17}H_{18}O_3$ mol.wt. 270.33

Synthesis

– Preparation by Fries rearrangement of 2,6-dimethylphenyl 4-methoxyphenylacetate with aluminium chloride in nitromethane at 20° for 50 h (76%) [5480].

m.p. 177° [5480];

^1H NMR (Sadtlar: standard n° 44604 M), [5480],
IR (Sadtlar: standard n° 71632 K), [5480], UV [5480], MS [5480].

2-(3,5-Dimethoxyphenyl)-1-(2-hydroxy-4-methylphenyl)ethanone

[111191-98-1]

 $\text{C}_{17}\text{H}_{18}\text{O}_4$ mol.wt. 286.33

Synthesis

– Obtained (poor yield) by Fries rearrangement of m-cresyl 3,5-dimethoxyphenylacetate (b.p. 0.05 95°) in the presence of aluminium chloride, first in carbon disulfide, then at 130–145° for 2 h after solvent elimination (15%) [5482].

brown gum [5482].

N.B.: Methyl ether: m.p. 199–200° [5482], ^1H NMR [5482], IR [5482], MS [5482].

2-(4-Ethoxyphenyl)-1-(2-hydroxy-4-methoxyphenyl)ethanone

[89019-87-4]

 $\text{C}_{17}\text{H}_{18}\text{O}_4$ mol.wt. 286.33

Synthesis

– Obtained (by-product) by reaction of p-hydroxyphenylacetic acid with m-methoxy-phenol in ethylene dichloride in the presence of boron trifluoride at 80° for 2 h under an argon atmosphere (2%) [5439].

m.p. 95–97° [5439]; ^1H NMR [5439], IR [5439], UV [5439], MS [5439].

1-(5-Ethyl-2,4-dihydroxyphenyl)-2-(4-methoxyphenyl)ethanone

[96644-03-0]

 $\text{C}_{17}\text{H}_{18}\text{O}_4$ mol.wt. 286.33

Synthesis

– Preparation by condensation of p-methoxyphenyl-acetonitrile with 4-ethylresorcinol in the presence of boron trifluoride etherate under hydrogen chloride atmosphere (8–10 h) at r.t. overnight (86%) [5367].

m.p. 95–96° [5367]; ^1H NMR [5367].

1-(2-Hydroxy-4-methoxy-3-methylphenyl)-2-(4-methoxyphenyl)ethanone

[39604-65-4]

 $C_{17}H_{18}O_4$ mol.wt. 286.33

Syntheses

- Preparation by partial methylation of,
 - 2,4-dihydroxy-3-methylphenyl 4-methoxybenzyl ketone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 6 h [5354], (86%) [5513];
 - 2,4-dihydroxyphenyl 4-methoxybenzyl ketone with methyl iodide in methanolic potash, first in a bath of ice-salt mixture, then at r.t. overnight and at reflux for 7 h (39%) [5354].
 - Also refer to: [5381].
- m.p. 121–122° [5513], 116–117° [5354].

1-(2-Hydroxy-6-methoxy-3-methylphenyl)-2-(4-methoxyphenyl)ethanone $C_{17}H_{18}O_4$ mol.wt. 286.33

Synthesis

- Obtained by partial methylation of 2,6-dihydroxy-3-methylphenyl 4-methoxybenzyl ketone with dimethyl sulfate in the presence of potassium carbonate in boiling acetone for 1 h (71%) [5488].
- oil [5488].

1-(2,4-Dihydroxy-6-methoxy-3-methylphenyl)-2-(2-methoxyphenyl)ethanone $C_{17}H_{18}O_5$ mol.wt. 302.33

Synthesis

- Obtained by reaction of o-methoxyphenyl-acetonitrile with 2,6-dihydroxy-4-methoxyphenol (m.p. 124°) (Hoesch reaction) (36%) [5287], (31%) [5495].
- m.p. 195° [5495], 194° [5287].

1-(2,4-Dihydroxy-6-methoxy-3-methylphenyl)-2-(4-methoxyphenyl)ethanone

[56308-09-9]

 $C_{17}H_{18}O_5$ mol.wt. 302.33

Syntheses

- Obtained by reaction of p-methoxyphenyl-acetonitrile with 2,6-dihydroxy-4-methoxytoluene (m.p. 124°) (Hoesch reaction) [5494], (44%) [5548], (33%) [5495].

– Also refer to: [5281].

m.p. 162–164° [5494], 162° [5495], 125–127° [5548]. One of the reported melting points is obviously wrong.

1-(2,6-Dihydroxy-4-methoxy-3-methylphenyl)-2-(4-methoxyphenyl)ethanone $C_{17}H_{18}O_5$ mol.wt. 302.33

Syntheses

- Obtained by alkaline hydrolysis of 5-hydroxy-7,4'-dimethoxy-8-methylisoflavone (m.p. 164–166°) with potassium hydroxide in refluxing ethanol for 30 min (31%) [5353].

– Also obtained by reaction of p-methoxyphenylacetonitrile with 2,4-dihydroxy-6-methoxytoluene (m.p. 119°) (Hoesch reaction) (41%) [5495].

– Also obtained by alkaline hydrolysis of 5-hydroxy-7,4'-dimethoxy-2,6-dimethylisoflavone (m.p. 198–200°) with 8% alcoholic potassium hydroxide at reflux for 30 min [5353].

m.p. 196–197° [5353], 192° [5495].

1-(4,6-Dihydroxy-2-methoxy-3-methylphenyl)-2-(2-methoxyphenyl)ethanone $C_{17}H_{18}O_5$ mol.wt. 302.33

Synthesis

- Obtained by catalytic debenzoylation of 4,6-bis(benzyloxy)-2-methoxy-3-methylphenyl 2-methoxybenzyl ketone (m.p. 107°) in acetic acid in the presence of Pd/C for 20 min (quantitative yield) [5549].

m.p. 118° [5549].

1-(4,6-Dihydroxy-2-methoxy-3-methylphenyl)-2-(4-methoxyphenyl)ethanoneC₁₇H₁₈O₅ mol.wt. 302.33**Synthesis**

- Obtained by hydrogenolysis of 4,6-bis(benzyloxy)-2-methoxy-3-methylphenyl 4-methoxybenzyl ketone (m.p. 106°) in the presence of Pd/C in acetic acid for 10 min (quantitative yield) [5549].

m.p. 176° [5549].

1-(2,4-Dihydroxyphenyl)-2-(2-ethoxy-5-methoxyphenyl)ethanone

[18086-36-7]

C₁₇H₁₈O₅ mol.wt. 302.33**Synthesis**

- Obtained by reaction of 2-ethoxy-5-methoxyphenyl-acetonitrile (m.p. 46–48°) with resorcinol (34%) (Hoesch reaction) [5531].

m.p. 114–115° [5531].

2-(2,4-Dimethoxyphenyl)-1-(2-hydroxy-4-methoxyphenyl)ethanone

[70779-11-2]

C₁₇H₁₈O₅ mol.wt. 302.33**Syntheses**

- Preparation by partial methylation of 2,4-di-hydroxyphenyl 2,4-dimethoxybenzyl ketone [5265],
 - with methyl iodide in the presence of potassium carbonate in boiling acetone for 70 min (95%) [5527];
 - with diazomethane in ethyl ether for 30 min (quantitative yield) [5529].
- Also refer to: [5277,5534].

m.p. 116° [5527], 114–115° [5529]; b.p._{0.05} 170–180° [5529];¹H NMR [5341], UV [5550].**2-(2,5-Dimethoxyphenyl)-1-(2-hydroxy-4-methoxyphenyl)ethanone**

[18086-26-5]

C₁₇H₁₈O₅ mol.wt. 302.33**Synthesis**

- Preparation by partial methylation of 2,4-dihydroxy-phenyl 2,5-dimethoxybenzyl ketone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 6 h (92%) [5531].

m.p. 113–114° [5531]; ¹H NMR [5341].

2-(3,4-Dimethoxyphenyl)-1-(2-hydroxy-4-methoxyphenyl)ethanone

[53084-05-2]

 $C_{17}H_{18}O_5$ mol.wt. 302.33

Syntheses

– Preparation by partial methylation of 2,4-di-hydroxyphenyl 3,4-dimethoxybenzyl ketone,

- with methyl iodide in the presence of potassium carbonate in boiling acetone for 70 min (86–91%) [5527] or for 3 h (81%) [5250];
 - with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 6 h (69%) [5532] or in boiling 10% alcoholic sodium hydroxide for 1 h (31%) [5332].
- Also obtained by reaction of 3,4-dimethoxyphenylacetyl chloride with 1,3-dimethoxybenzene in the presence of aluminium chloride in boiling benzene for 1 h (52%) [5332].
- Also refer to: [4896,5278,5281,5338].
- m.p. 119° [5250,5332], 118° [5527], 116–117° [5532].

2-(3,4-Dimethoxyphenyl)-1-(4-hydroxy-3-methoxyphenyl)ethanone

[114847-19-7]

 $C_{17}H_{18}O_5$ mol.wt. 302.33

Syntheses

- Preparation by reaction of 3,4-dimethoxyphenylacetic acid with guaiacol in the presence of zinc chloride and phosphorous oxychloride for 24 h at r.t. (40%) [5209].
- Also refer to: [5551].

m.p. 142–144° [5209].

2-(2-Ethoxyphenyl)-1-(2,4,6-trihydroxy-3-methylphenyl)ethanone $C_{17}H_{18}O_5$ mol.wt. 302.33

Synthesis

- Obtained by reaction of o-ethoxyphenylacetonitrile with 2-methylphloroglucinol (Hoesch reaction) (11%) [5483].

m.p. 174° [5483].

1-(2-Hydroxy-3,4-dimethoxyphenyl)-2-(4-methoxyphenyl)ethanone

[3606-32-4]

C₁₇H₁₈O₅ mol.wt. 302.33

Syntheses

– Obtained by alkaline hydrolysis of *di-O-methylretusin* (7,8,4'-trimethoxyisoflavone) (m.p. 151°) (SM) with 10% aqueous potassium hydroxide in refluxing ethanol for 1 h (67%). SM was obtained by partial methylation of *retusin* (m.p. 249°) (7,8-dihydroxy-4'-methoxyisoflavone), itself isolated from *Dalbergia retusa* heartwood (cocobolo) (Leguminosae) [5499].

- Also obtained by Friedel–Crafts reaction of 4-methoxyphenylacetyl chloride with pyrogallol trimethyl ether in the presence of aluminium chloride [5552].
- Also refer to: [5503,5296,5370].

m.p. 122–123° [5499], 121–122° [5552]; ¹³C NMR [5293].

1-(2-Hydroxy-4,5-dimethoxyphenyl)-2-(2-methoxyphenyl)ethanone

[24195-30-0]

C₁₇H₁₈O₅ mol.wt. 302.33

Syntheses

– Obtained by reaction of o-methoxyphenylacetonitrile with 3,4-dimethoxyphenol (Hoesch reaction) [5553], (35%) [5379].

– Also refer to: [5554,5343].

m.p. 108–109° [5379];

IR [5379], UV [5379], MS [5379].

1-(2-Hydroxy-4,5-dimethoxyphenyl)-2-(4-methoxyphenyl)ethanone

[5128-49-4]

C₁₇H₁₈O₅ mol.wt. 302.33

Syntheses

– Preparation by partial methylation of,

- 2,4-dihydroxy-5-methoxyphenyl 4-methoxybenzyl ketone with methyl iodide in the presence of potassium carbonate in boiling acetone [5501];
- 2,5-dihydroxy-4-methoxyphenyl 4-methoxybenzyl ketone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 4 h (80%) [5520];
- 2,4,5-trihydroxyphenyl 4-methoxybenzyl ketone with excess diazomethane in ethyl ether at r.t. overnight (45%) [5291] or with methyl iodide in the presence of potassium carbonate in refluxing acetone for 1.5 h [5501] or according to [5273], (86%) [5471].

- Also obtained by Friedel–Crafts acylation of 1,2,4-trimethoxybenzene with p-methoxyphenylacetyl chloride in the presence of aluminium chloride in ethyl ether [5520].
- Also obtained by reaction of p-methoxyphenylacetonitrile with 3,4-dimethoxyphenol (Hoesch reaction) (25%) [5523].
- Also obtained by alkaline degradation of *afromosin 7-methyl ether* (6,7,4'-trimethoxyisoflavone) (SM) (m.p. 178°) [5501], (m.p. 174–175°) [5523] with potassium hydroxide in refluxing ethanol [5501] for 40 min under nitrogen (61%) [5523]. SM was obtained by methylation of *afromosin* (7-hydroxy-6,4'-dimethoxyisoflavone) (m.p. 228–229°), itself isolated from *Afromosia elata* Harms [5523].

m.p. 100–101° [5471], 99–100° [5501,5520,5523], 98–100° [5291];

¹H NMR [5471], ¹³C NMR [5293], IR [5501], UV [5501,5520]; TLC [5471].

1-(2-Hydroxy-4,6-dimethoxyphenyl)-2-(2-methoxyphenyl)ethanone

[56308-08-8]

C₁₇H₁₈O₅ mol.wt. 302.33

Syntheses

- Preparation by partial methylation of 2,4,6-trihydroxy-phenyl 2-methoxybenzyl ketone,

- with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 14 h (86%) [5287], for 4 h (70%) [5456] or for 3.5 h (58%) [5495];
 - with methyl iodide and of potassium carbonate in refluxing acetone for 4 h (54%) [5498].
 - Also obtained by partial methylation of 2-hydroxy-4,6-dimethoxyphenyl 2-hydroxybenzyl ketone (95%) [5476].
 - Also refer to: [5281,5295,5497,5518].
- m.p. 122° [5495], 116–118° [5456,5498], 116° [5287].

1-(2-Hydroxy-4,6-dimethoxyphenyl)-2-(3-methoxyphenyl)ethanone

[109089-92-1]

C₁₇H₁₈O₅ mol.wt. 302.33

Synthesis

- Preparation by partial methylation of 3-methoxy-benzyl 2,4,6-trihydroxyphenyl ketone with dimethyl sulfate in the presence of potassium carbonate in boiling acetone for 3 h (70%) [5295].

m.p. 66–67° [5295].

1-(2-Hydroxy-4,6-dimethoxyphenyl)-2-(4-methoxyphenyl)ethanone

[39604-68-7]

 $C_{17}H_{18}O_5$ mol.wt. 302.33

Syntheses

- Preparation by partial methylation of 2,4,6-tri-hydroxyphenyl 4-methoxybenzyl ketone,
 - with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone [5294,5535,5555], for 3 h (64%) [5250];
 - with diazomethane in ethyl ether at 0° (80%) [5462] or in methanol [5461];
 - with methyl iodide in the presence of potassium carbonate in refluxing acetone for 3 h (42%) [5538].
 - Also obtained by reaction of 4-methoxyphenylacetonitrile with phloroglucinol dimethyl ether (Hoesch reaction) [5384], (19%) [5383].
 - Also obtained by alkaline degradation of 3-(p-anisoyl)-4,6-dimethoxybenzofuran with potassium hydroxide in refluxing dilute methanol for 1.5 h (78%) [5556].
 - Also obtained by alkaline hydrolysis of 5,7,4'-trimethoxyisoflavone (m.p. 162–163°) with 1 N aqueous sodium hydroxide in refluxing ethanol for 2 h [5487].
 - Also refer to: [4935,5273,5295,5338,5339,5340,5381,5420,5448,5476,5557,5558]. monohydrate [5556]; m.p. 140° [5556], 139–140° [5462]; 89° [5250,5384], 88–89° [5383,5487,5535,5538], 86–87° [5294]. One of the reported melting points is obviously wrong.
- ¹H NMR [5462], IR [5294], UV [5294,5462]; TLC [5294], HPLC [5462].

1-(4-Hydroxy-2,6-dimethoxyphenyl)-2-(4-methoxyphenyl)ethanone

[109089-93-2]

 $C_{17}H_{18}O_5$ mol.wt. 302.33

Syntheses

- Obtained by reaction of p-methoxyphenylacetonitrile with phloroglucinol dimethyl ether (Hoesch reaction) [5384].
 - Also obtained by saponification of 4-acetoxy-2,6-di-methoxyphenyl 4-methoxybenzyl ketone (m.p. 137°) in ethanol with 3% aqueous sodium hydroxide [5384].
- Also refer to: [5558].
m.p. 73° [5384].

1-(3,6-Dihydroxy-2,4-dimethoxyphenyl)-2-(4-methoxyphenyl)ethanoneC₁₇H₁₈O₆ mol.wt. 318.33

Synthesis

- Obtained (poor yield) by condensation of 2,6-di-methoxyhydroquinone with the complex p-methoxyphenylacetic acid and boron trifluoride in chloroform at r.t. overnight (<2%) [5387].

m.p. 110° [5387].

1-(2,4-Dihydroxy-5-methoxyphenyl)-2-(3,4-dimethoxyphenyl)ethanone

[24126-91-8]

C₁₇H₁₈O₆ mol.wt. 318.33

Syntheses

- Obtained by condensation of 3,4-dimethoxyphenyl-acetonitrile with 4-methoxyresorcinol (Hoesch reaction) (14%) [5533].
- Also obtained by heating *Cladrastin* (7-hydroxy-6,3',4'-trimethoxyisoflavone) (m.p. 206–207°) with 10%

aqueous barium hydroxide at reflux for 2 h under nitrogen (62%). *Cladrastin* was isolated from *Cladrastis lutea* (Mich. f.) K. Koch (Leguminosae) [5533].

m.p. 166–167° [5533]; UV [5533], MS [5533].

1-(2,4-Dihydroxy-6-methoxyphenyl)-2-(2,4-dimethoxyphenyl)ethanone

[109091-12-5]

C₁₇H₁₈O₆ mol.wt. 318.33

Synthesis

- Preparation by reaction of 2,4-dimethoxyphenyl-acetonitrile with phloroglucinol monomethyl ether (Hoesch reaction) [5295].

m.p. 169–171° [5295].

1-(2,4-Dihydroxy-6-methoxyphenyl)-2-(3,4-dimethoxyphenyl)ethanone

[109092-83-3]

C₁₇H₁₈O₆ mol.wt. 318.33

Synthesis

- Obtained by reaction of 3,4-dimethoxyphenyl-acetonitrile with phloroglucinol monomethyl ether (Hoesch reaction) [5295,5559], (20%) [5383].

m.p. 180° [5383], 179–180° [5295], 108–109° [5559]. One of the reported melting points is obviously wrong. IR [5559].

1-(2,5-Dihydroxy-4-methoxyphenyl)-2-(3,4-dimethoxyphenyl)ethanone

[24126-94-1]

 $C_{17}H_{18}O_6$ mol.wt. 318.33

Syntheses

– Obtained by reaction of 3,4-dimethoxyphenyl-acetonitrile with methoxyquinol (2-methoxy-hydroquinone) (Hoesch reaction) (16%) [5533].

– Also refer to: [5351].

m.p. 188–189° [5533];

^{13}C NMR [5293], UV [5533], MS [5533].

1-(2,4-Dihydroxyphenyl)-2-(2,4,5-trimethoxyphenyl)ethanone $C_{17}H_{18}O_6$ mol.wt. 318.33

Syntheses

– Obtained by reaction of 2,4,5-trimethoxyphenyl-acetonitrile with resorcinol (Hoesch reaction) (13%) [5560].

– Also obtained by reaction of resorcinol with homoasaronic acid (2,4,5-trimethoxyphenylacetic acid) (m.p. 102–103°),

- in the presence of zinc chloride at 130–140° for 2 h (31%) (Nencki reaction) [5560];
- in the presence of phosphorous oxychloride and zinc chloride at 50–60° for 2 h (24%) [5560];
- in the presence of polyphosphoric acid on a steam bath for 15 min (46%) [5560].

m.p. 201–202° [5560].

2-(2,3-Dimethoxyphenyl)-1-(2,4,6-trihydroxy-3-methylphenyl)ethanone $C_{17}H_{18}O_6$ mol.wt. 318.33

Synthesis

– Obtained by reaction of 2,3-dimethoxyphenyl-acetonitrile with 2-methylphloroglucinol (Hoesch reaction) (47%) [5483].

m.p. 201° [5483].

2-(2,4-Dimethoxyphenyl)-1-(2,4,6-trihydroxy-3-methylphenyl)ethanoneC₁₇H₁₈O₆ mol.wt. 318.33

Syntheses

– Obtained by reaction of 2,4-dimethoxyphenyl-acetonitrile with 2-methylphloroglucinol (Hoesch reaction) (56%) [5561].

– Also refer to: [5562].

m.p. 188–189° [5561]; UV [5561].

1-(2,4-Dihydroxy-3,6-dimethoxyphenyl)-2-(3-hydroxy-4-methoxyphenyl)ethanone

[64640-60-4]

C₁₇H₁₈O₇ mol.wt. 334.33

Synthesis

– Preparation by reaction of 3-(benzyloxy)-4-methoxyphenylacetonitrile with 1,3-(dibenzyl-oxy)-2,5-dimethoxybenzene (Hoesch reaction) [5563], (61%) [5508].

m.p. 278–279° [5508], 277–279° [5563];

¹H NMR [5508], IR [5563], UV [5508].

2-(3,4-Dimethoxyphenyl)-1-(3,4,6-trihydroxy-2-methoxyphenyl)ethanone

[129207-80-3]

C₁₇H₁₈O₇ mol.wt. 334.33

Synthesis

– Obtained by reaction of potassium persulfate with 2,4-dihydroxy-6-methoxyphenyl 3,4-dimethoxy-benzyl ketone in 40% aqueous potassium hydroxide at r.t. overnight (Elbs reaction) [5559].

m.p. 135–137° [5559].

1-(2,4,6-Trihydroxyphenyl)-2-(2,4,5-trimethoxyphenyl)ethanone

[72545-40-5]

C₁₇H₁₈O₇ mol.wt. 334.33

Synthesis

– Obtained by reaction of 2,4,5-trimethoxyphenyl-acetonitrile with phloroglucinol (Hoesch reaction) [5276], (40%) [5564].

N.B.: The phloroglucinol could not be condensed with 2,4,5-trimethoxyphenylacetyl chloride in the presence of aluminium chloride [5249,5567].

m.p. 208–209° [5564].

1-(2,4,6-Trihydroxyphenyl)-2-(3,4,5-trimethoxyphenyl)ethanone

[79744-61-9]

 $C_{17}H_{18}O_7$ mol.wt. 334.33

Syntheses

– Preparation by reaction of 3,4,5-trimethoxyphenyl-acetonitrile with phloroglucinol in ethyl ether (63%) (Hoesch reaction) [5496].

– Also refer to: [5351].

m.p. 197–198° [5496]; 1H NMR [5496], ^{13}C NMR [5293], IR [5496], MS [5496].

2-(1,3-Benzodioxol-5-yl)-1-[2,4-dihydroxy-3-(2-propenyl)phenyl]ethanone

[117951-99-2]

 $C_{18}H_{16}O_5$ mol.wt. 312.32

Syntheses

– Obtained by reaction of allyl bromide with 2,4-dihydroxy-3',4'-methylenedioxydesoxybenzoin in the presence of methanolic potassium hydroxide (16%) [5283].

– Also refer to: [5277].

m.p. 121–122° [5283]; 1H NMR [5283], IR [5283], UV [5283].

2-[4-(Acetyloxy)phenyl]-1-(6-hydroxy-4-methoxy-1,3-benzodioxol-5-yl)ethanone $C_{18}H_{16}O_7$ mol.wt. 344.32

Synthesis

– Obtained by reaction of acetic anhydride with 4'-hydroxybenzyl 2-hydroxy-4,5-methylenedioxy-6-methoxyphenyl ketone in pyridine at r.t. for 1 h [5510].

m.p. 162–163° [5510].

1-[2,6-Bis(acetyloxy)-4-hydroxyphenyl]-2-(4-hydroxyphenyl)ethanone

[147747-31-5]

 $C_{18}H_{16}O_7$ mol.wt. 344.32

Syntheses

– Obtained (poor yields) by regioselective enzyme-catalyzed deacetylation of 4-acetoxybenzyl 2,4,6-tri-acetoxyphenyl ketone in the dry organic solvents hereafter mentioned containing n-butanol with lipase at 42–45° [5359].

Lipase	Solvent	Time (h)	Yields (%)
PPL	THF/n-BuOH	45	15
CCL	DIPE/n-BuOH	46	15

PPL = porcine pancreas lipase;

CCL = candida cylindracea lipase;

DIPE = diisopropyl ether.

O-[4-(1,3-Benzodioxol-5-ylacetyl)-3-hydroxyphenyl] dimethylcarbamothioate

[142751-39-1]

$C_{18}H_{17}NO_5S$ mol.wt. 359.40

Synthesis

– Obtained by stirring a mixture of 2-(1,3-benzodioxol-5-yl)-1-(2,4-dihydroxy-phenyl)ethanone (1 mol), dimethylthio-carbamoyl chloride (2 mol), 1,4-diaza-bicyclo[2,2,2]octane and N,N-dimethyl-formamide at r.t. for 2 h (92%) [5205].

m.p. 168–169° [5205]; 1H NMR [5205], MS [5205].

S-[4-(1,3-Benzodioxol-5-ylacetyl)-3-hydroxyphenyl] dimethylcarbamothioate

[142751-43-7]

$C_{18}H_{17}NO_5S$ mol.wt. 359.40

Synthesis

– Obtained by refluxing a solution of O-[4-(1,3-Benzodioxol-5-ylacetyl)-3-hydroxyphenyl] dimethylcarbamothioate [142751-39-1] in N,N-dimethylaniline for 1 h (91%) (Newman-Kwart rearrangement) [5205].

m.p. 160–161° [5205]; 1H NMR [5205], MS [5205].

1-[2,4-Dihydroxy-3-(2-propenyl)phenyl]-2-(4-methoxyphenyl)ethanone

[117951-88-9]

$C_{18}H_{18}O_4$ mol.wt. 298.34

Syntheses

– Obtained by reaction of allyl bromide with 2,4-dihydroxy-4'-methoxydesoxybenzoin in methanolic potassium hydroxide at r.t. overnight (27%) [5283].

– Also refer to: [5277].

m.p. 97–98° [5283]; 1H NMR [5283], IR [5283], UV [5283].

1-[2-Hydroxy-4-(2-propenyloxy)phenyl]-2-(4-methoxyphenyl)ethanone

[73937-48-1]

 $C_{18}H_{18}O_4$ mol.wt. 298.34

Syntheses

– Refer to: [5565] and [5279] (compound **X**).**2-(3,4-Dimethoxyphenyl)-1-(6-hydroxy-4-methoxy-1,3-benzodioxol-5-yl)ethanone**

[2631-85-8]

 $C_{18}H_{18}O_7$ mol.wt. 346.34

Syntheses

– Obtained by reaction of methylene iodide with 2,4,5-tri-hydroxy-6-methoxyphenyl 3,4-dimethoxybenzyl ketone in the presence of potassium carbonate in refluxing acetone for 45 h [5559].

– Also obtained (poor yield) by reaction of 3,4-di-methoxyphenylacetonitrile with 3-methoxy-4,5-methylenedioxyphenol (Hoesch reaction) (<2%) [5360].

m.p. 125–126° [5559], 121°5–122° [5360]; UV [5360].

2-(3,4-Dimethoxyphenyl)-1-(6-hydroxy-7-methoxy-1,3-benzodioxol-5-yl)ethanone

[61243-79-6]

 $C_{18}H_{18}O_7$ mol.wt. 346.34

Synthesis

– Obtained by mild base hydrolysis of 8,3',4'-tri-methoxy-6,7-methylendioxyisoflavone [5522].

m.p. 162–163° [5522];

 1H NMR [5522], IR [5522], UV [5522], MS [5522];

TLC [5522].

1-(2-Hydroxy-4,5-dimethoxyphenyl)-2-(6-methoxy-1,3-benzodioxol-5-yl)ethanone

[24195-24-2]

 $C_{18}H_{18}O_7$ mol.wt. 346.34

Synthesis

– Obtained by alkaline degradation of 6,7,3'-tri-methoxy-4',5'-methylenedioxyisoflavone (m.p. 234°5–235°5) (SM) with sodium hydroxide in refluxing 50% aqueous ethanol (10–45 min) (88%). SM was

isolated from the heartwood of *Cordyla africana* (Leguminosae, sub-family: Caesalpinioideae, tribe: Swartzieae) [5379].

m.p. 161–162° [5379]; IR [5379], UV [5379], MS [5379].

1-(2-Hydroxy-4,5-dimethoxyphenyl)-2-(7-methoxy-1,3-benzodioxol-5-yl) ethanone

[24195-23-1]

$C_{18}H_{18}O_7$ mol.wt. 346.34

Synthesis

– Obtained by alkaline degradation of 6,7,3'-tri-methoxy-4',5'-methylenedioxyisoflavone (m.p. 211–212°) (SM) with sodium hydroxide in refluxing 50% aqueous ethanol (10–45 min) (28%). SM was isolated from the heartwood of *Cordyla africana* (Leguminosae, sub-family: Caesalpinioideae, tribe: Swartzieae) [5379].

m.p. 143–144° [5379]; IR [5379], UV [5379], MS [5379].

O-[3-Hydroxy-4-[(2-methoxyphenyl)acetyl]phenyl] dimethylcarbamothioate

[142751-37-9]

$C_{18}H_{19}NO_4S$ mol.wt. 345.42

Synthesis

– Obtained by stirring a mixture of 2,4-di-hydroxyphenyl 2-methoxybenzyl ketone (1 mol), dimethylthiocarbamoyl chloride (2 mol), 1,4-diazabicyclo[2,2,2]octane and DMF at r.t. for 2 h (91%) [5205].

m.p. 168–169° [5205];
 1H NMR [5205], MS [5205].

S-[3-Hydroxy-4-[(2-methoxyphenyl)acetyl]phenyl] dimethylcarbamothioate

[142751-41-5]

$C_{18}H_{19}NO_4S$ mol.wt. 345.42

Synthesis

– Obtained by refluxing a solution of O-[3-Hydroxy-4-[(2-methoxyphenyl)acetyl]-phenyl] dimethylcarbamothioate [142751-37-9] in N,N-dimethylaniline for 1 h (89%) (Newman–Kwart rearrangement) [5205].

m.p. 107–108° [5205]; 1H NMR [5205], MS [5205].

O-[3-Hydroxy-4-[(4-methoxyphenyl)acetyl]phenyl] dimethylcarbamothioate

[142751-38-0]

 $C_{18}H_{19}NO_4S$ mol.wt. 345.42**Synthesis**

– Obtained by stirring a mixture of 2,4-dihydroxyphenyl 4-methoxybenzyl ketone (1 mol), dimethylthiocarbamoyl chloride (2 mol), 1,4-diazabicyclo[2,2,2] octane (2 mol) and N,N-dimethyl-formamide at r.t. for 2 h (96%) [5205].

m.p. 114–115° [5205]; 1H NMR [5205], MS [5205].**S-[3-Hydroxy-4-[(4-methoxyphenyl)acetyl]phenyl] dimethylcarbamothioate**

[142751-42-6]

 $C_{18}H_{19}NO_4S$

mol.wt. 345.42

Synthesis

– Obtained by refluxing a solution of O-[3-Hydroxy-4-[(4-methoxyphenyl)acetyl]phenyl] dimethylcarbamothioate [142751-38-0] in N,N-dimethylaniline for 1 h (92%) (Newman-Kwart rearrangement) [5205].

m.p. 130–131° [5205]; 1H NMR [5205], MS [5205].**1-(6-Ethoxy-2,4-dihydroxy-3-methylphenyl)-2-(2-methoxyphenyl)ethanone** $C_{18}H_{20}O_5$

mol.wt. 316.35

Synthesis

– Obtained by reaction of o-methoxyphenylacetonitrile with 4-ethoxy-2,6-dihydroxytoluene (Hoesch reaction) (32%) [5483].

m.p. 185° [5483].

2-(2-Ethoxy-5-methoxyphenyl)-1-(2-hydroxy-4-methoxyphenyl)ethanone

[18086-37-8]

 $C_{18}H_{20}O_5$ mol.wt. 316.35**Synthesis**

- Obtained by partial methylation of 2,4-dihydroxy-phenyl 2-ethoxy-5-methoxybenzyl ketone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 6 h (87%) [5531].

m.p. 107–108° [5531].

1-[4-(Ethoxymethoxy)-2-hydroxyphenyl]-2-(4-methoxyphenyl)ethanone

[97714-80-2]

 $C_{18}H_{20}O_5$ mol.wt. 316.35**Syntheses**

- Obtained by reaction of chloromethyl ethyl ether with 2,4-dihydroxyphenyl 4-methoxybenzyl ketone in acetone in the presence of potassium carbonate at r.t. for 15–45 min [5393].

- Also refer to: [5273].

1-(2-Hydroxy-4,6-dimethoxy-3-methylphenyl)-2-(2-methoxyphenyl)ethanone $C_{18}H_{20}O_5$ mol.wt. 316.35**Syntheses**

- Preparation by partial methylation of 2,4-dihydroxy-6-methoxy-3-methylphenyl 2-methoxybenzyl ketone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone (quantitative yield) [5495], for 14 h (89%) [5287].
- Also obtained by partial methylation of 2,4,6-trihydroxy-3-methylphenyl 2-methoxybenzyl ketone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 4 h (82%) [5497] or for 3 h (66%) [5495].
- Also obtained (by-product) by partial methylation of 2,4,6-trihydroxyphenyl 2-methoxybenzyl ketone with methyl iodide in the presence of potassium carbonate in refluxing acetone for 4 h (11%) [5498].
- Also obtained by reaction of o-methoxyphenylacetonitrile with 2-hydroxy-4,6-dimethoxytoluene (m.p. 67°) (Hoesch reaction) (38%) [5495].
- Also refer to: [5518].

m.p. 150° [5287], 148° [5495], 146–148° [5497,5501].

1-(2-Hydroxy-4,6-dimethoxy-3-methylphenyl)-2-(4-methoxyphenyl)ethanone

[56308-12-4]

 $C_{18}H_{20}O_5$ mol.wt. 316.35

Syntheses

- Obtained by partial methylation of 2,4,6-tri-hydroxy-3-methylphenyl 4-methoxybenzyl ketone,
 - with dimethyl sulfate in the presence of potassium carbonate in boiling acetone for 4 h (73%) [5538] or for 3 h (68%) [5495];
 - with excess methyl iodide in the presence of potassium carbonate in boiling acetone for 4 h [5538].
 - Also obtained by reaction of methyl iodide with 2,4,6-trihydroxyphenyl 4-methoxybenzyl ketone in the presence of potassium carbonate in refluxing acetone for 3 h (13%) [5538].
 - Also obtained by partial methylation of 2,4-dihydroxy-6-methoxy-3-methylphenyl 4-methoxy-benzyl ketone with methyl iodide in the presence of potassium carbonate in boiling acetone [5495] for 2 h (96%) [5538].
 - Also obtained by partial methylation of 2,6-dihydroxy-4-methoxy-3-methylphenyl 4-methoxy-benzyl ketone with dimethyl sulfate with of potassium carbonate in boiling acetone [5495].
 - Also obtained by partial methylation of 2,4-dihydroxy-6-methoxy-3-methylphenyl 4-hydroxy-benzyl ketone with dimethyl sulfate with potassium carbonate in boiling acetone [5495].
 - Also obtained by reaction of p-methoxyphenylacetonitrile with 2-hydroxy-4,6-dimethoxytoluene (m.p. 67°) (Hoesch reaction) (38%) [5495].
 - Also refer to: [5296,5284].
- m.p. 116° [5495], 114–115° [5494,5538].

1-(4-Hydroxy-2,6-dimethoxy-3-methylphenyl)-2-(4-methoxyphenyl)ethanone $C_{18}H_{20}O_5$ mol.wt. 316.35

Synthesis

- Obtained (by-product) by reaction of p-methoxyphenyl-acetonitrile with 2-hydroxy-4,6-dimethoxytoluene (Hoesch reaction) (small amounts) [5495].

1-(6-Hydroxy-2,4-dimethoxy-3-methylphenyl)-2-(2-methoxyphenyl)ethanoneC₁₈H₂₀O₅ mol.wt. 316.35

Syntheses

– Obtained by partial methylation of 4,6-dihydroxy-2-methoxy-3-methylphenyl 2-methoxybenzyl ketone with methyl iodide in the presence of potassium carbonate in boiling acetone for 30 min (96%) [5549].

– Preparation by alkaline degradation of 5,7,2'-trimethoxy-6-methylisoflavone (m.p. 220°) with sodium hydroxide in refluxing dilute methanol for 1.5 h (74%) [5483].

– Also refer to: [4935].

m.p. 134° [5483].

1-(6-Hydroxy-2,4-dimethoxy-3-methylphenyl)-2-(4-methoxyphenyl)ethanone

[22081-01-2]

C₁₈H₂₀O₅ mol.wt. 316.35

Syntheses

– Obtained by partial methylation of 4,6-dihydroxy-2-methoxy-3-methylphenyl 4-methoxybenzyl ketone with excess methyl iodide in the

presence of potassium carbonate in boiling acetone for 1.5 h (96%) [5549].

– Also obtained by reaction of p-methoxyphenylacetyl chloride with 4-hydroxy-2,6-dimethoxy-toluene in ethyl ether in the presence of aluminium chloride (18%) [5394].

m.p. 88° [5549], 87–88° [5394];

¹H NMR [5341], IR [5394]; TLC [5394].

1-(2,6-Dihydroxy-4-methoxy-3-methylphenyl)-2-(2,4-dimethoxyphenyl)ethanoneC₁₈H₂₀O₆ mol.wt. 332.35

Synthesis

– Obtained by alkaline degradation of dehydro-ougenin dimethyl ether acetate (5-acetoxy-6-methyl-7,2',4'-trimethoxyisoflavanone)

(m.p. 216–217°) with refluxing alcoholic potash for 2 h (83%) [5561].

m.p. 174–175° [5561]; UV [5561].

2-(2,3-Dimethoxyphenyl)-1-(2-hydroxy-4,6-dimethoxyphenyl)ethanone
 $C_{18}H_{20}O_6$ mol.wt. 332.35
Synthesis

- Preparation by partial methylation of 2,4,6-tri-hydroxy-2',3'-dimethoxydeoxybenzoin with dimethyl sulfate in the presence of potassium carbonate in boiling acetone (92%) [5483].

m.p. 132° [5483].

2-(2,4-Dimethoxyphenyl)-1-(2-hydroxy-3,4-dimethoxyphenyl)ethanone

[6502-87-0]

 $C_{18}H_{20}O_6$ mol.wt. 332.35
Syntheses

- Preparation by partial methylation of 2,3,4-tri-hydroxyphenyl 2,4-dimethoxybenzyl ketone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 6 h (82%) [5540].
- Also obtained by Friedel–Crafts acylation of pyrogallol trimethyl ether with 2,4-dimethoxy-phenylacetyl chloride [5566], (41%) [5540].
- Also refer to: [5567].

m.p. 134–135° [5566,5543]; ¹H NMR [5341].**2-(2,4-Dimethoxyphenyl)-1-(2-hydroxy-4,5-dimethoxyphenyl)ethanone**

[15402-24-1]

 $C_{18}H_{20}O_6$ mol.wt. 332.35
Syntheses

- Preparation by Hoesch condensations of 1,2,4-tri-hydroxybenzene with 2,4-dimethoxyphenyl-acetonitrile or with 2,4-dihydroxyphenyl-acetonitrile, followed by partial methylations of the ketones so obtained [5265].
- Also obtained by Friedel–Crafts acylation of 1,2,4-trimethoxybenzene with 2,4-dimethoxyphenylacetyl chloride in the presence of aluminium chloride [5567] in ethyl ether [5553], (31%) [5568].
- Also refer to: [5277].

m.p. 122–123° [5568,5570].

2-(2,4-Dimethoxyphenyl)-1-(2-hydroxy-4,6-dimethoxyphenyl)ethanone*(Albizoin)*

[39604-69-8]

C₁₈H₂₀O₆ mol.wt. 332.35

Syntheses

- Preparation by partial methylation of 2,4-di-methoxybenzyl 2,4,6-tri-hydroxyphenyl ketone with dimethyl sulfate in the presence of potassium carbonate in boiling acetone [5295], (92%) [5569].
- Preparation by partial demethylation of 2,4-dimethoxybenzyl 2,4,6-trimethoxyphenyl ketone with aluminium chloride in refluxing ethyl ether for 10 h (65%) [5570].
- Also obtained by alkaline degradation of 5,7,2',4'-tetramethoxyisoflavone (m.p. 203–204°) with potassium hydroxide in refluxing dilute ethanol for 1 h (93%) [5570].
- Also obtained by alkaline degradation of *ferreirin* trimethyl ether (m.p. 163°) [5570], so called *dihydrodalbergioidin tetramethyl ether* (m.p. 165–166°) [5561], (5,7,2',4'-tetramethoxy-isoflavanone) with potassium hydroxide in refluxing dilute ethanol for 1 h (21%) [5570] or for 6 h (26%) [5561].
- Also obtained by Friedel–Crafts acylation of 1,3,5-trimethoxybenzene with 2,4-dimethoxyphenyl-acetyl chloride in the presence of aluminium chloride in ethyl ether at 0° for 16 h [5571].
- Also refer to: [4923,5277,5381,5483,5534].

Isolation from natural sources

- From the marine mollusc *Nerita albicilla* (Class Gastropoda, family Neritidae) [5571].

m.p. 140–142° [5571], 139° [5570], 138–139° [5561], 137–138° [5569],
136–137° [5295];

¹H NMR [5341,5571], IR [5561,5571], UV [5561,5571], MS [5571];

HPLC [5571].

2-(2,5-Dimethoxyphenyl)-1-(2-hydroxy-3,4-dimethoxyphenyl)ethanone

[20569-19-1]

C₁₈H₂₀O₆ mol.wt. 332.35

Synthesis

- Obtained by Friedel–Crafts acylation of pyrogallol trimethyl ether with 2,5-dimethoxyphenylacetyl chloride in the presence of aluminium chloride in ethyl ether at 0° overnight (39%) [5568].

m.p. 153–154° [5568].

2-(3,4-Dimethoxyphenyl)-1-(2-hydroxy-3,4-dimethoxyphenyl)ethanone

[61243-86-5]

C₁₈H₂₀O₆ mol.wt. 332.35

Syntheses

- Obtained by partial methylation of 2,3,4-tri-hydroxyphenyl 3,4-dimethoxybenzyl ketone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 6 h (82%) [5470].
- Also obtained by Friedel–Crafts acylation of pyrogallol trimethyl ether with 3,4-dimethoxyphenyl-acetyl chloride (homoveratroyl chloride) in ethyl ether in the presence of aluminium chloride, first at 0°, then at r.t. overnight (33–34%) [5214,5473] or in refluxing methylene chloride for 2.5 h (70%) [5572,5576].
- Obtained by partial demethylation of 2,3,4-trimethoxyphenyl 3',4'-dimethoxybenzyl ketone (oil) with aluminium chloride in refluxing ethyl ether for 1 h (67%) [5522].
- Also refer to: [5574].

m.p. 139–140° [5573], 135–137° [5522], 134° [5470], 133–134° [5214],
¹H NMR [5573], IR [5573].

2-(3,4-Dimethoxyphenyl)-1-(2-hydroxy-4,5-dimethoxyphenyl)ethanone

[24195-22-0]

C₁₈H₂₀O₆ mol.wt. 332.35

Syntheses

- Obtained by alkaline degradation of 6,7,3',4'-tetra-methoxyisoflavone (m.p. 187–188°) (SM) with sodium hydroxide in refluxing 50% aqueous ethanol (45%) [5379]. SM was isolated from the heartwood of *Cordyla africana* (Leguminosae).
- Also obtained by partial demethylation of 3,4-di-methoxybenzyl 2,4,5-trimethoxyphenyl ketone (m.p. 120–121°) with aluminium chloride in refluxing acetonitrile for 45 min (10%) [5379].
- Also obtained by partial methylation of 3,4-dimethoxybenzyl 2,4,5-trihydroxyphenyl ketone (85%) [5471] according to [5273].

m.p. 138–139° [5471], 137–138° [5379];
¹H NMR [5341], ¹³C NMR [5293], IR [5379], UV [5379], MS [5379]; TLC [5471].

2-(3,4-Dimethoxyphenyl)-1-(2-hydroxy-4,6-dimethoxyphenyl)ethanone

[109250-71-7]

 $C_{18}H_{20}O_6$ mol.wt. 332.35

Syntheses

- Preparation by partial methylation of 2,4-di-hydroxy-6,3',4'-trimethoxydeoxybenzoin with methyl iodide in the presence of potassium carbonate in boiling acetone for 1 h (80%) [5383].
- Also obtained by partial methylation of 2,4,6-trihydroxy-3',4'-dimethoxydeoxybenzoin with dimethyl sulfate in the presence of potassium carbonate in boiling acetone [5294], (80%) [5295], for 3 h [5250] or for 10 h [5546].
- Also obtained by hydrolysis of *O*-trimethylsantal (5,7,3',4'-tetramethoxyisoflavone) (m.p. 155–156°) with potassium hydroxide in boiling dilute ethanol for 1 h (82%) [5383].
- Also obtained by reaction of 3,4-dimethoxyphenylacetonitrile with phloroglucinol dimethyl ether (Hoesch reaction) (12%) [5383].
- Also refer to: [4935,5476].

m.p. 120–121° [5546], 117°5 [5294], 117° [5250,5383], 101–103° [5295];

One of the reported melting points is obviously wrong.

IR [5294], UV [5294]; TLC [5294].

2-(3,4-Dimethoxyphenyl)-1-(4-hydroxy-2,6-dimethoxyphenyl)ethanone $C_{18}H_{20}O_6$ mol.wt. 332.35

Synthesis

- Obtained (by-product) by reaction of 3,4-dimethoxyphenylacetonitrile with phloroglucinol dimethyl ether (Hoesch reaction) (<3%) [5383].

m.p. 140° [5383].

1-(2-Hydroxy-4-methoxyphenyl)-2-(2,4,5-trimethoxyphenyl)ethanone

[85288-48-8]

 $C_{18}H_{20}O_6$ mol.wt. 332.35

Syntheses

- Obtained by partial methylation of 2,4-di-hydroxyphenyl 2,4,5-trimethoxybenzyl ketone in acetone,
 - with an ethereal solution of diazomethane (96%) [5560];
 - with methyl iodide in the presence of potassium carbonate in refluxing acetone for 70 min (96%) [5560].

m.p. 135–136° [5560]; 1H NMR [5341].

1-(2-Hydroxy-3,4,6-trimethoxyphenyl)-2-(4-methoxyphenyl)ethanone

[13539-22-5]

 $C_{18}H_{20}O_6$ mol.wt. 332.35

Synthesis

– Refer to: [5341] (compound **XII**). 1H NMR [5341].**1-(6-Hydroxy-2,3,4-trimethoxyphenyl)-2-(4-methoxyphenyl)ethanone**

[22110-04-9]

 $C_{18}H_{20}O_6$ mol.wt. 332.35

Syntheses

– Preparation by acylation of antiarol,

- with p-methoxyphenylacetyl chloride in ethyl ether in the presence of aluminium chloride at r.t. for 12 h (28%) [5396] or for 24 h (55%) [5251];

- with p-methoxyphenylacetic acid in chloroform in the presence of boron trifluoride at r.t. overnight (37%) [5387].

– Also obtained by alkaline hydrolysis of *munigin* dimethyl ether (m.p. 176°) (5,6,7,4'-tetramethoxy-isoflavone) with potassium hydroxide in refluxing ethanol for 30 min (84%) [5575].

m.p. 91–92° [5396], 73° [5575], 69° [5251,5390].

One of the reported melting points is obviously wrong.

b.p.₁ 190–200° [5575], b.p.₄ 207–222° [5251], b.p.₂ 210–220° [5387].**1-(2,4-Dihydroxy-6-methoxyphenyl)-2-(3,4,5-trimethoxyphenyl)ethanone**

[129207-78-9]

 $C_{18}H_{20}O_7$ mol.wt. 348.35

Synthesis

– Obtained by reaction of 3,4,5-trimethoxyphenyl-acetonitrile with phloroglucinol monomethyl ether (Hoech reaction) [5559].

m.p. 130–131° [5559]; IR [5559].

1-(3,4,6-Trihydroxy-2-methoxyphenyl)-2-(3,4,5-trimethoxyphenyl)ethanone

[129207-79-0]

 $C_{18}H_{20}O_8$ mol.wt. 364.35

Synthesis

- Obtained by reaction of potassium persulfate with 2,4-dihydroxy-6-methoxyphenyl 3,4,5-trimethoxybenzyl ketone in 40% aqueous potassium hydroxide at r.t. overnight (Elbs reaction) (21%) [5559].

m.p. 164–165° [5559].

1-[2,6-Bis(acetyloxy)-4-hydroxyphenyl]-2-(4-methoxyphenyl)ethanone

[204068-63-3]

 $C_{19}H_{18}O_7$ mol.wt. 358.35

Synthesis

- Obtained (small amount) by selective deacetylation of 1-acetoxy-1-(2,4,6-triacetoxy-phenyl)-2-(4-methoxyphenyl)ethene catalyzed by porcine pancreas lipase in THF at 42–45° for 72 h [5265].

2-(4-Chlorophenyl)-1-[2,4,6-trihydroxy-3-(3-methyl-2-butenyl)phenyl]ethanone

[85602-22-8]

 $C_{19}H_{19}ClO_4$ mol.wt. 346.81

Synthesis

- Preparation by reaction of prenyl chloride with 2-(4-chlorophenyl)-1-(2,4,6-trihydroxyphenyl)ethanone in ethyl ether in the presence of a saturated aqueous sodium carbonate solution and a catalytic amount of cuprous chloride for 3 h at r.t. (45%) [5576].

m.p. 182–184° [5576]; ^{13}C NMR [5576], IR [5576], MS [5576].**1-(2-Hydroxyphenyl)-2-[4-[(tetrahydro-2H-pyran-2-yl)oxy]phenyl]ethanone**

[130064-19-6]

 $C_{19}H_{20}O_4$ mol.wt. 312.37

Synthesis

- Preparation by reaction of 3,4-dihydro-2H-pyran with 2,4'-dihydroxydeoxybenzoin in dioxane in the presence of PTSA (p-toluenesulfonic acid) at r.t. for 4 h (80%) [5280].

m.p. 95° [5280]; 1H NMR [5280], IR [5280], MS [5280].

1-(6-Hydroxy-4-methoxy-1,3-benzodioxol-5-yl)-2-(3,4,5-trimethoxyphenyl)ethanone

[50901-33-2]

C₁₉H₂₀O₈ mol.wt. 376.38

Synthesis

– Obtained by reaction of methylene iodide with 2,4,5-trihydroxy-6-methoxyphenyl 3,4,5-trimethoxy-benzyl ketone in the presence of potassium carbonate in refluxing acetone for 50 h [5559].

m.p. 119–120° [5559].

1-(5-Ethyl-2,4-dihydroxyphenyl)-2-[4-(1-methylethoxy)phenyl]ethanone

[96644-04-1]

C₁₉H₂₂O₄ mol.wt. 314.38

Synthesis

– Preparation by condensation of p-isopropyl-oxyphenylacetonitrile with 4-ethylresorcinol in the presence of boron trifluoride etherate under hydrogen chloride atmosphere (8–10 h) at r.t. overnight (62%) [5367].

m.p. 95–96° [5367]; ¹H NMR [5367].

2-(3,4-Diethoxyphenyl)-1-(2,4-dihydroxy-6-methoxyphenyl)ethanone

C₁₉H₂₂O₆ mol.wt. 346.38

Synthesis

– Obtained by reaction of 3,4-diethoxyphenyl-acetonitrile with phloroglucinol monomethyl ether (Hoesch reaction) (24%) [5383].

m.p. 129–130° [5383].

2-(3,4-Dimethoxyphenyl)-1-(4-ethoxymethoxy-2-hydroxyphenyl)ethanone

C₁₉H₂₂O₆ mol.wt. 346.38

Synthesis

– Obtained by reaction of ethoxymethyl chloride with 2,4-dihydroxyphenyl 3,4-dimethoxybenzyl ketone in the presence of potassium carbonate in acetone for 45 min [5534].

TLC [5534].

2-(2,3-Dimethoxyphenyl)-1-(2-hydroxy-4,6-dimethoxy-3-methylphenyl) ethanoneC₁₉H₂₂O₆ mol.wt. 346.38**Synthesis**

- Preparation by partial methylation of 2,4,6-tri-hydroxy-3-methylphenyl 2,3-dimethoxybenzyl ketone with dimethyl sulfate in the presence of potassium carbonate in boiling acetone (69%) [5483].

m.p. 160° [5483].

2-(2,4-Dimethoxyphenyl)-1-(2-hydroxy-4,6-dimethoxy-3-methylphenyl) ethanoneC₁₉H₂₂O₆ mol.wt. 346.38**Syntheses**

- Preparation by partial methylation of 2,4,6-tri-hydroxy-3-methylphenyl 2,4-dimethoxybenzyl ketone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 40 h (55%) [5561].
- Also refer to: [5562].

m.p. 142–143° [5561]; UV [5561].

2-(2,4-Dimethoxyphenyl)-1-(6-hydroxy-2,4-dimethoxy-3-methylphenyl) ethanone

[22081-04-5]

C₁₉H₂₂O₆ mol.wt. 346.38**Synthesis**

- Obtained by reaction of 2,4-dimethoxyphenyl-acetyl chloride with 4-hydroxy-2,6-dimethoxy-toluene in ethyl ether in the presence of aluminium chloride [5394].

m.p. 115–116° [5394]; IR [5394], UV [5394].

1-(2-Hydroxy-3,4-dimethoxyphenyl)-2-(2,4,5-trimethoxyphenyl)ethanone

[20390-13-0]

C₁₉H₂₂O₇ mol.wt. 362.38**Synthesis**

- Preparation by Friedel-Crafts acylation of pyrogallol trimethyl ether with 2,4,5-trimethoxy-phenylacetyl chloride in the presence of aluminium chloride in ethyl ether at 0° overnight (68%) [5568].

m.p. 170–171° [5568].

1-(2-Hydroxy-4,5-dimethoxyphenyl)-2-(2,4,5-trimethoxyphenyl)ethanone

[24195-21-9]

C₁₉H₂₂O₇ mol.wt. 362.38**Synthesis**

- Obtained by alkaline degradation of 6,7,2',4',5'-pentamethoxyisoflavone (m.p. 171–172°) (SM) with sodium hydroxide in refluxing 50% aqueous ethanol (10–45 min) (84%). SM was isolated from the heartwood of *Cordyla africana* (Leguminosae; sub-family: Caesal-pinoideae, tribe: Swartzieae) [5379].

m.p. 137–138° and 127°5–128°5 [5379]; IR [5379], UV [5379], MS [5379].

1-(2-Hydroxy-4,6-dimethoxyphenyl)-2-(2,4,5-trimethoxyphenyl)ethanoneC₁₉H₂₂O₇ mol.wt. 362.38**Synthesis**

- Obtained by partial methylation of 2,4,6-tri-hydroxyphenyl 2,4,5-trimethoxybenzyl ketone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 14 h (74%) [5564].

m.p. 144–145° [5564].

2-[4-(Acetyloxy)phenyl]-1-[2,6-bis(acetyloxy)-4-hydroxyphenyl]ethanone

[145747-30-4]

 $C_{20}H_{18}O_8$ mol.wt. 386.36

Syntheses

- Obtained by regioselective enzyme-catalyzed deacetylation of 4-acetoxybenzyl 2,4,6-triacetoxyphenyl ketone in the dry organic solvents hereafter mentioned containing n-butanol with lipase at 42–45° [5359].

Lipase	Solvent	Time (h)	Yields (%)
PPL	Acetone/n-BuOH	48	18
PPL	CH ₃ CN/n-BuOH	48	18
PPL	THF/n-BuOH	45	55
CCL	DIPE/n-BuOH	46	52

PPL = porcine pancreas lipase; CCL = candida cylindracea lipase; DIPE = diisopropyl ether.

TLC [5359].

2-(1,3-Benzodioxol-5-yl)-1-[2-hydroxy-4-[(3-methyl-2-butenyl)oxy]phenyl]ethanone

[94683-36-0]

 $C_{20}H_{20}O_5$ mol.wt. 340.38

Syntheses

- Obtained by alkaline degradation of *Tephrosia maxima* Pers. (7- γ,γ -dimethylallyloxy)-3',4'-methylenedioxy-isoflavone so called 7-O- γ,γ -dimethyl-allylpseudobaptigenin (m.p. 126–128°) $C_{21}H_{18}O_5$, with sodium hydroxide (12%) in refluxing dilute ethanol for 15 min [5469].

- Also obtained by partial allylation of Ψ -*baptigenetin* (2,4-dihydroxyphenyl 3,4-methylenedioxy-benzyl ketone) with γ,γ -dimethylallyl bromide in the presence of potassium carbonate in refluxing acetone for 8 h (64%) [5470].

m.p. 81–82° [5470], 73–74° [5469].

2-(3,4-Diethoxyphenyl)-1-(2-ethoxy-4,6-dihydroxyphenyl)ethanone $C_{20}H_{24}O_6$ mol.wt. 360.41

Synthesis

- Obtained by condensation of 3,4-diethoxyphenyl-acetonitrile with phloroglucinol monoethyl ether (Hoesch reaction) (16%) [5383].

rhombohedral prisms [5383];

4-methyl ether m.p. 99° [5383]

1-(3-Ethoxy-6-hydroxy-2,4-dimethoxyphenyl)-2-(4-ethoxyphenyl)ethanone
 $C_{20}H_{24}O_6$ mol.wt. 360.41
Syntheses

- Obtained by acylation of 4-ethoxy-3,5-dimethoxy-phenol,
 - with p-ethoxyphenylacetic acid in chloroform in the presence of boron trifluoride at r.t. overnight (31%) [5387];
 - with p-ethoxyphenylacetyl chloride in ethyl ether in the presence of aluminum chloride at 0° for 2 h, then at r.t. overnight (9%) [5577].
- m.p. 104° [5387,5580]; b.p._{0.5} 220–230° [5387].

1-(6-hydroxy-2,3,4-trimethoxyphenyl)-2-(3,4,5-trimethoxyphenyl)ethanone

[64554-42-3]

 $C_{20}H_{24}O_8$ mol.wt. 392.41
Synthesis

- Obtained by alkaline degradation of *irigenin trimethyl ether* (5,6,7,3',4',5'-hexamethoxy-isoflavone) (m.p. 163°) with potassium hydroxide in refluxing dilute ethanol for 3 h (82%). *Irigenin* (5,7,3'-trihydroxy-6,4',5'-tri-methoxyisoflavone) (m.p. 185°) was prepared by acidic hydrolysis of *iridin* (7-glucopyranosyloxy-5,3'-dihydroxy-6,4',5'-trimethoxyisoflavone) (m.p. 216–217°), itself isolated from *iris kumaonensis* Wall. [5578].

m.p. 92° [5578]; IR [5578], UV [5578]; TLC [5578].

2-[4-(Benzoyloxy)phenyl]-1-(2,4,6-trihydroxyphenyl)ethanone
 $C_{21}H_{16}O_6$ mol.wt. 364.35
Synthesis

- Preparation by reaction of 4-benzoyloxy-acetonitrile with phloroglucinol (Hoesch reaction) (44%) [5330].
- m.p. 224° [5330].

2-(1,3-Benzodioxol-5-yl)-1-[2,4-dihydroxy-6-methoxy-3-(3-methyl-2-butenyl)phenyl]ethanone

[55607-37-9]

C₂₁H₂₂O₆ mol.wt. 370.95

Synthesis

– Obtained (poor yield) by prenylation of 2,4-dihydroxy-6-methoxyphenyl 3,4-methylenedioxybenzyl ketone with 2-hydroxy-2-methyl-3-butene in dioxane in the presence of boron tri-fluoride etherate for 1 h at r.t. (4%) [5352].

m.p. 155–156° [5352]; ¹H NMR [5352]; TLC [5352].

2-(1,3-Benzodioxol-5-yl)-1-[4,6-dihydroxy-2-methoxy-3-(3-methyl-2-butenyl)phenyl]ethanone

[55607-38-0]

C₂₁H₂₂O₆ mol.wt. 370.95

Synthesis

– Obtained (poor yield) by prenylation of 2,4-dihydroxy-6-methoxyphenyl 3,4-methylenedioxybenzyl ketone with 2-hydroxy-2-methyl-3-butene in dioxane in the presence of boron trifluoride etherate for 1 h at r.t. (3%) [5352].

m.p. 105–106° [5352]; ¹H NMR [5352]; TLC [5352].

1-[2,4-Dihydroxy-6-methoxy-3-(3-methyl-2-butenyl)phenyl]-2-(4-methoxyphenyl)ethanone

[35817-95-9]

C₂₁H₂₄O₅ mol.wt. 356.42

Syntheses

– Obtained by nuclear prenylation of 2,4-dihydroxy-6-methoxyphenyl 4-methoxybenzyl ketone,

- using 2-methyl-2-hydroxy-3-methylbutene in dioxane in the presence of boron trifluoride etherate, first at 0°, then for 1 h at r.t. (9%) [5524];
- with prenyl bromide in the presence methanolic potassium hydroxide, first with cooling, then keeping the reaction mixture for 20 h at r.t. (12%) [5524].

m.p. 153–154° [5524]; ¹H NMR [5524]; TLC [5524].

1-[4,6-Dihydroxy-2-methoxy-3-(3-methyl-2-butenyl)phenyl]-2-(4-methoxyphenyl)ethanone

[35817-96-0]

 $C_{21}H_{24}O_5$

mol.wt. 356.42

Synthesis

– Obtained by nuclear prenylation of 2,4-dihydroxy-6-methoxyphenyl 4-methoxybenzyl ketone using 2-methyl-2-hydroxy-3-methylbutene in dioxane in the presence of boron trifluoride etherate, first at 0°, then for 1 h at r.t. (7%) [5524].

m.p. 91–92° [5524]; 1H NMR [5524]; TLC [5524].

1-[4-(Ethoxymethoxy)-2-hydroxy-3-(2-propenyl)phenyl]-2-(4-methoxyphenyl)ethanone

[117951-89-0]

 $C_{21}H_{24}O_5$

mol.wt. 356.42

Synthesis

– Obtained by reaction of ethoxymethyl chloride with 3-allyl-2,4-dihydroxy-4'-methoxydesoxybenzoin in the presence of potassium carbonate in acetone for 10 min at r.t. [5283].

TLC [5283].

1-[2-Hydroxy-6-methoxy-4-(3-methyl-2-butenyl)oxy]phenyl]-2-(4-methoxyphenyl)ethanone

[35817-38-0]

 $C_{21}H_{24}O_5$

mol.wt. 356.42

Synthesis

– Obtained by reaction of prenyl bromide with 2,4-dihydroxy-6,4'-dimethoxydesoxybenzoin in the presence of potassium carbonate in refluxing acetone for 3 h (81%) or in the presence of methanolic potassium hydroxide, first with cooling, then keeping the reaction mixture for 20 h at r.t. (2%) [5524].

m.p. 76–77° [5524]; 1H NMR [5524]; TLC [5524].

1-[4-(β-D-Glucopyranosyloxy)-2-hydroxyphenyl]-2-(4-methoxyphenyl)ethanone (*Onospin*)

$C_{21}H_{24}O_9$ mol.wt. 420.42

Syntheses

- Obtained by reaction of acetobromoglucose with 1-(2,4-dihydroxyphenyl)-2-(4-methoxyphenyl)ethanone in acetone in the presence of 10% aqueous sodium hydroxide at r.t. for 12 h (25%) [5486].
- Also obtained by alkaline degradation of *Ononin* — 7-(β-D-glucopyranosyloxy)-4'-methoxy isoflavone (SM) — [5251] with boiling aqueous barium hydroxide [5486]. SM was isolated from the roots of thorny restharrow (*Ononis spinosa*) (Leguminosae, sub-family Fabaceae) [5251,5489].

m.p. 179°5 [5486];

(α)_D = 65°9–67°2 (methanol) [5486].

1-(2,4-Diethoxy-6-hydroxy-3-methoxyphenyl)-2-(4-ethoxyphenyl)ethanone

$C_{21}H_{26}O_6$ mol.wt. 374.43

Synthesis

- Obtained by Friedel–Crafts acylation of 3,5-di-ethoxy-4-methoxyphenol with p-ethoxy-phenylacetyl chloride in ethyl ether in the presence of aluminium chloride at r.t. for 12 h [5396].

oil [5396].

1-(2,4-Diethoxy-6-hydroxyphenyl)-2-(3-ethoxy-4-methoxyphenyl)ethanone

$C_{21}H_{26}O_6$ mol.wt. 374.43

Synthesis

- Obtained by condensation of 3-ethoxy-4-methoxyphenylacetone nitrile with phloroglucinol diethyl ether (Hoesch reaction) (16%) [5383].

m.p. 117° [5383].

1-(2,4-Diethoxy-6-hydroxyphenyl)-2-(4-ethoxy-3-methoxyphenyl)ethanoneC₂₁H₂₆O₆ mol.wt. 374.43

Synthesis

– Obtained by condensation of 4-ethoxy-3-methoxyphenylacetone nitrile with phloro-glucinol diethyl ether (Hoesch reaction) (16%) [5383].

m.p. 138° [5383].

2-(3,4-Diethoxyphenyl)-1-(2-ethoxy-6-hydroxy-4-methoxyphenyl)ethanoneC₂₁H₂₆O₆ mol.wt. 374.43

Syntheses

– Obtained by alkaline degradation of O-triethyl-santal (7-methoxy-5,3',4'-triethoxyisoflavone) (m.p. 111–112°) with potassium hydroxide in boiling dilute ethanol for 1.5 h (67%) [5383].

– Also obtained by partial methylation of 2,4-di-hydroxy-6,3',4'-triethoxydeoxybenzoin [5383].

m.p. 99° [5383].

2-(3,4-Diethoxyphenyl)-1-(4-ethoxy-2-hydroxy-6-methoxyphenyl)ethanoneC₂₁H₂₆O₆ mol.wt. 374.43

Synthesis

– Obtained by partial ethylation of 2,4-di-hydroxy-6-methoxyphenyl 3,4-diethoxybenzyl ketone with ethyl iodide in the presence of potassium carbonate in boiling acetone for 2 h (77%) [5383].

m.p. 111–112° [5383].

1-[2-Hydroxy-4-(4-nitrobenzoyloxy)phenyl]-2-(4-methoxyphenyl)ethanoneC₂₂H₁₇NO₇ mol.wt. 407.38

Synthesis

– Obtained by partial esterification of 2,4-dihydroxyphenyl 4-methoxybenzylketone with p-nitrobenzoyl chloride in the presence of pyridine [5217].

m.p. 166–167° [5217].

1-[4-(Benzoyloxy)-2-hydroxyphenyl]-2-(4-methoxyphenyl)ethanone

[102706-12-7]

 $C_{22}H_{18}O_5$ mol.wt. 362.38

Syntheses

– Obtained by partial esterification of 2,4-di-hydroxyphenyl 4-methoxybenzyl ketone with benzoyl chloride (Schotten-Baumann method) [5217].

– Also refer to: [4846].

m.p. 120–121° [5217].

2-[2-(Benzoyloxy)-4-methoxyphenyl]-1-(2,4-dihydroxyphenyl)ethanone

[52250-27-8]

 $C_{22}H_{18}O_6$ mol.wt. 378.38

Synthesis

– Preparation by reaction of 2-benzoyloxy-4-methoxy-phenylacetone nitrile with resorcinol (Hoesch reaction) [5579].

oil [5579].

2-[2-(Benzoyloxy)-4-methoxyphenyl]-1-(2,4,6-trihydroxyphenyl)ethanone

[32884-28-9]

 $C_{22}H_{18}O_7$ mol.wt. 394.38

Synthesis

– Obtained by reaction of 2-benzoyloxy-4-methoxy-phenylacetone nitrile with phloroglucinol [5562].

m.p. 207–208° [5562]; IR [5562].

1-[2-Hydroxy-4-(phenylmethoxy)phenyl]-2-(4-methoxyphenyl)ethanone

[95307-71-4]

 $C_{22}H_{20}O_4$ mol.wt. 348.40

Syntheses

– Preparation by partial alkylation of 2,4-di-hydroxyphenyl 4-methoxybenzyl ketone with benzyl chloride in the presence of potassium carbonate in refluxing acetone for 6 h (80%) [5420] or 8 h [5580], (37%) [5581].

– Also refer to: [5277,5385].

m.p. 103° [5581], 93–95° [5420]; 1H NMR [5420].

1-[2-Hydroxy-4-[[4-methylphenyl)sulfonyl]oxy]phenyl]-2-(4-methoxyphenyl)ethanone

[102599-68-8]

C₂₂H₂₀O₆S mol.wt. 412.46

Synthesis

– Obtained by partial esterification of 2,4-dihydroxyphenyl 4-methoxybenzyl ketone with p-toluenesulfonyl chloride in acetone in the presence of potassium carbonate [5217].

m.p. 91° [5217].

2-(1,3-Benzodioxol-5-yl)-1-[2-hydroxy-4,6-dimethoxy-3-(3-methyl-2-butenyl)phenyl]ethanone

[55607-39-1]

C₂₂H₂₄O₆ mol.wt. 384.43

Synthesis

– Obtained by partial methylation of 2,4-dihydroxy-6-methoxy-3-prenyl-phenyl 3,4-methylenedioxybenzyl ketone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 3.5 h (96%) [5352].

m.p. 118–119° [5352]; ¹H NMR [5352]; TLC [5352].

2-(1,3-Benzodioxol-5-yl)-1-[6-hydroxy-2,4-dimethoxy-3-(3-methyl-2-butenyl)phenyl]ethanone

[55607-41-5]

C₂₂H₂₄O₆ mol.wt. 384.43

Synthesis

– Obtained by partial methylation of 2,4-dihydroxy-6-methoxy-5-prenylphenyl 3,4-methylenedioxybenzyl ketone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 4 h (96%) [5352].

m.p. 83–84° [5352]; ¹H NMR [5352]; TLC [5352].

1-[2-Hydroxy-4,6-dimethoxy-3-(3-methyl-2-butenyl)phenyl]-2-(4-methoxyphenyl)ethanone

[51323-85-4]

 $C_{22}H_{26}O_5$

mol.wt. 370.45

**Synthesis**

– Obtained by partial methylation of 3-prenyl-2,4-dihydroxy-6,4'-di-methoxydesoxybenzoin with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 3.5 h [5524].

m.p. 94–95° [5524].

2-(2,4-Dimethoxyphenyl)-1-[4,6-bis(ethoxymethoxy)-2-hydroxyphenyl]ethanone $C_{22}H_{28}O_8$

mol.wt. 420.46

**Synthesis**

– Refer to: [5534] (compound **1d**).

1-[4-Hydroxy-6-(phenylmethoxy)-1,3-benzodioxol-5-yl]-2-(4-methoxyphenyl)ethanone $C_{23}H_{20}O_6$

mol.wt. 392.41

**Synthesis**

– Obtained by alkaline degradation of 5-benzyloxy-4'-methoxy-7,8-methylenedioxy-2-methylisoflavone with 10% aqueous potassium hydroxide in refluxing ethanol for 2 h under a stream of nitrogen gas (74%) [5507].

m.p. 148–149° [5507]; IR [5507], UV [5507].

1-[2-Hydroxy-6-methoxy-4-(phenylmethoxy)phenyl]-2-(2-hydroxy-4-methoxyphenyl)ethanone

[32884-33-6]

C₂₃H₂₂O₆ mol.wt. 394.42

Synthesis

– Obtained by alkaline degradation of 2'-benzoyloxy-7-benzoyloxy-4',5-di-methoxy-2-methoxycarbonylisoflavone

(m.p. 183–184°) with potassium hydroxide in refluxing dilute ethanol for 2 h (98%) [5562].

m.p. 120–122° [5562]; ¹H NMR [5562], IR [5562].

1-[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl]-2-(4-methylphenyl)ethanone

[81116-01-0]

C₂₃H₃₀O₂ mol.wt. 338.49

Syntheses

– Obtained by acylation of 2,6-di-tert-butylphenol with p-methylphenylacetyl chloride according to [5402], (35%) [5403].

– Also refer to: [5582].

m.p. 114–115° [5403]; IR [5403].

1-[2-Hydroxy-6-methoxy-3-methyl-4-(phenylmethoxy)phenyl]-2-(4-methoxyphenyl)ethanone

[102749-29-1]

C₂₄H₂₄O₅ mol.wt. 392.45

Synthesis

– Obtained by reaction of benzyl bromide with 2,4-dihydroxy-6-methoxy-3-methylphenyl 4-methoxybenzyl ketone in the presence of potassium carbonate in boiling acetone for 3 h (77%) [5488].

m.p. 118° [5488].

1-[2-Hydroxy-4-(phenylmethoxy)phenyl]-2-(2,4,5-trimethoxyphenyl)ethanone
 $C_{24}H_{24}O_6$ mol.wt. 408.45
Synthesis

– Obtained by reaction of 2,4-dihydroxyphenyl 2,4,5-trimethoxybenzyl ketone with benzyl chloride in the presence of potassium carbonate in refluxing acetone for 8 h (94%) [5560].

m.p. 149–150° [5560].

1-[2-Hydroxy-4-[(tetrahydro-2H-pyran-2-yl)oxy]phenyl]-2-[4-[(tetrahydro-2H-pyran-2-yl)oxy]phenyl]ethanone

[130064-21-0]

 $C_{24}H_{28}O_6$ mol.wt. 412.48
Synthesis

– Preparation by reaction of 3,4-dihydro-2H-pyran with 1-(2,4-dihydroxyphenyl)-2-(4-hydroxyphenyl)ethanone in concentrated hydrochloric acid and stirring in an ice bath for 4 h (87%) [5280].

m.p. 118° [5280]; ^1H NMR [5280], IR [5280], MS [5280].

2-(2-Fluorophenyl)-1-[2-hydroxy-4-[(2,3,4,6-tetra-O-acetyl-β-D-glucopyranosyl)oxy]-phenyl]ethanone

[121060-06-8]

 $C_{28}H_{29}FO_{12}$ mol.wt. 576.53
Synthesis

– Obtained by glycosidation of 1-(2,4-dihydroxy-phenyl)-2-(2-fluorophenyl)ethanone with acetobromo- α -D-glucose in aqueous acetone containing potassium hydroxide [5418].

2-(1,3-Benzodioxol-5-yl)-1-[2,4-dihydroxy-6-(phenylmethoxy)-3-(phenylmethyl)phenyl]ethanone

[39549-01-4]

C₂₉H₂₄O₆ mol.wt. 468.51

Synthesis

– Obtained by benzylation of 2,4,6-trihydroxy-phenyl 3,4-methylenedioxybenzyl ketone with benzyl chloride in the presence of potassium carbonate in refluxing acetone for 7 h (10%) [5408].

m.p. 145–146° [5408]; ¹H NMR [5408], UV [5408].

2-(1,3-Benzodioxol-5-yl)-1-[2-hydroxy-4,6-bis(phenylmethoxy)phenyl]ethanone

[39549-00-3]

C₂₉H₂₄O₆ mol.wt. 468.51

Synthesis

– Obtained by benzylation of 2,4,6-tri-hydroxyphenyl 3,4-methylenedioxy-benzyl ketone with benzyl chloride in the presence of potassium carbonate in refluxing acetone for 7 h (17%) [5408].

m.p. 78–79° [5408]; ¹H NMR [5408], UV [5408].

1-[2-Hydroxy-4-(phenylmethoxy)phenyl]-2-[4-methoxy-2-(phenylmethoxy)phenyl]ethanone

[67685-29-4]

C₂₉H₂₆O₅ mol.wt. 454.52

Syntheses

– Obtained by decarbonylation of the acetal—2-(2-benzyloxy-4-methoxyphenyl)-1-(2,4-dibenzyloxyphenyl)-3,3-dimethoxy-propan-1-one—(colourless oil) in refluxing methanol (200 ml) containing 60% perchloric acid (30 ml) for 1.5 h (12%) [5521].

– Also obtained by selective debenylation of 2,2',4-tribenzyloxy-4'-methoxydeoxybenzoin (m.p. 111°) in acetonitrile in the presence of boron trifluoride etherate and sodium iodide at r.t. (88%) [5521].

m.p. 101° [5521]; ¹H NMR [5521], MS [5521]; TLC [5521].

1-[2-Hydroxy-4-[(2,3,4,6-tetra-O-acetyl-β-D-glucopyranosyl)oxy]phenyl]-2-(4-methoxyphenyl)ethanone

[42868-73-5]

C₂₉H₃₂O₁₃ mol.wt. 588.57

Synthesis

– Obtained by glycosidation of 1-(2,4-dihydroxyphenyl)-2-(4-methoxyphenyl)ethanone with acetobromo-α-D-glucose in aqueous acetone containing potassium hydroxide [5418].

1-[2-Hydroxy-3-methyl-4,6-bis(phenylmethoxy)phenyl]-2-(2-methoxyphenyl)ethanone

C₃₀H₂₈O₅ mol.wt. 468.55

Synthesis

– Obtained by reaction of benzyl bromide (2 mol) with 2,4,6-trihydroxy-3-methylphenyl 2-methoxybenzyl ketone in the presence of potassium carbonate in boiling acetone for 3 h (31%) [5549].

m.p. 146° [5549].

1-[2-Hydroxy-3-methyl-4,6-bis(phenylmethoxy)phenyl]-2-(4-methoxyphenyl)ethanone

C₃₀H₂₈O₅ mol.wt. 468.55

Synthesis

– Obtained by reaction of benzyl bromide (2 mol) with 2,4,6-trihydroxy-3-methylphenyl 4-methoxybenzyl ketone in the presence of potassium carbonate in boiling acetone for 3 h (37%) [5549].

m.p. 129° [5549].

2-(2,4-Dimethoxyphenyl)-1-[2-hydroxy-4,6-bis(phenylmethoxy)phenyl]ethanone

[39604-84-7]

C₃₀H₂₈O₆ mol.wt. 484.55

Synthesis

– Obtained by reaction of benzyl chloride with 2,4,6-trihydroxyphenyl 2,4-dimethoxybenzyl ketone in the presence of potassium carbonate in refluxing acetone for 5 h (38%) [5381].

m.p. 136–137° [5381].

2-(1,3-Benzodioxol-5-yl)-1-[2-hydroxy-4,6-bis(phenylmethoxy)-3-(phenylmethyl)phenyl]ethanone

[39548-99-7]

C₃₆H₃₀O₆ mol.wt. 558.63

Synthesis

– Obtained (poor yield) by benzylation of 2,4,6-trihydroxyphenyl 3',4'-methylenedioxy-benzyl ketone with benzyl chloride in the presence of potassium carbonate in refluxing acetone for 7 h (10%) [5408].

m.p. 135–136° [5408]; ¹H NMR [5408], UV [5408].

18.3 Compounds Derived from Di- and Triphenylacetic Acids

1-(3,4-Dihydroxy-5-nitrophenyl)-2,2-diphenylethanone

[400871-22-9]

C₂₀H₁₅NO₅ mol.wt. 349.34

Synthesis

– Preparation by treatment of 2,2-diphenyl-1-(4-hydroxy-3-methoxy-5-nitrophenyl)ethanone with aluminium chloride in refluxing ethyl acetate/pyridine mixture for 2 h (90–96%) [5193].

m.p. 204–205° [5193]; ¹H NMR [5193], ¹³C NMR [5193], IR [5193].

1-(2-Hydroxyphenyl)-2,2-diphenylethanone[4970-24-5] $C_{20}H_{16}O_2$ mol.wt. 288.34

Syntheses

- Obtained (by-product) by Fries rearrangement of phenyl diphenylacetate with aluminium chloride in nitrobenzene for 4 h at 60° (3%) [5201].
- Also obtained (poor yield) by refluxing phenyl diphenyl-acetate (pyrolysis, 300°) [5204].

N.B.: By using “*Kupferbronze*” or various silicates (“*Bleicherde*”, for example) as catalysts, the yield increases with appreciable change from 140°.

m.p. 99–100° [5201].

1-(4-Hydroxyphenyl)-2,2-diphenylethanone[4873-38-5] $C_{20}H_{16}O_2$ mol.wt. 288.34

Syntheses

- Preparation by Fries rearrangement of phenyl diphenyl-acetate with aluminium chloride,

- in nitrobenzene at 60° for 4 h (70%) [5201];
- in nitroethane at r.t. for 24 h (86%) or at 60° for 4 h (79%) [5202].

m.p. 178–180° [5202], 174–177° [5201].

1-(2-Hydroxy-3-methylphenyl)-2,2-diphenylethanone[133859-03-7] $C_{21}H_{18}O_2$ mol.wt. 302.37

Synthesis

- Obtained by Fries rearrangement of o-tolyl diphenylacetate with aluminium chloride in nitrobenzene at 60° for 4 h (20%) [5201].

IR [5201].

1-(2-Hydroxy-4-methylphenyl)-2,2-diphenylethanone[133859-04-8] $C_{21}H_{18}O_2$ mol.wt. 302.37

Synthesis

- Obtained by Fries rearrangement of m-tolyl diphenylacetate with aluminium chloride in nitrobenzene at 60° for 4 h (7%) [5201].

m.p. 179–180° [5201]; IR [5201].

1-(2-Hydroxy-5-methylphenyl)-2,2-diphenylethanone[133859-05-9] $C_{21}H_{18}O_2$ mol.wt. 302.37

Syntheses

- Obtained by Fries rearrangement of p-tolyl diphenylacetate (m.p. 76°) [4548] with aluminium chloride,
 - without solvent in boiling water bath for 1 h [4548];
 - in nitrobenzene at 60° for 4 h (22%) [5201].

IR [5201].

1-(4-Hydroxy-2-methylphenyl)-2,2-diphenylethanone[133859-06-0] $C_{21}H_{18}O_2$ mol.wt. 302.37

Syntheses

- Obtained (poor yields) by Fries rearrangement of m-tolyl diphenylacetate with aluminium chloride,
 - in nitromethane or in nitroethane at r.t. for 12 h (19–21%) [5202];
 - in nitrobenzene at r.t. for 10 h (10%) or at 60° for 4 h (10%) [5202], (6%) [5201].

m.p. $150\text{--}151^\circ$ [5202], $125\text{--}127^\circ$ [5201].

One of the reported melting points is obviously wrong.

1-(4-Hydroxy-3-methylphenyl)-2,2-diphenylethanone[122918-54-1] $C_{21}H_{18}O_2$ mol.wt. 302.37

Synthesis

- Preparation by Fries rearrangement of o-cresyl diphenylacetate with aluminium chloride in nitrobenzene at 60° for 4 h (49%) [5201] or in nitroethane at r.t. for 12 h (73%) [5202].

m.p. $211\text{--}212^\circ$ [5201].**1-(4-Hydroxyphenyl)-2,2,2-triphenylethanone**[133859-07-1] $C_{26}H_{20}O_2$ mol.wt. 364.44

Synthesis

- Obtained (poor yield) by Fries rearrangement of phenyl triphenylacetate with aluminium chloride in nitrobenzene for 4 h at 60° (5%) [5201].

IR [5201].

18.4 Compounds Derived from Cycloalkylacetic Acids

2-Cyclopentyl-1-(2-hydroxyphenyl)ethanone

[56234-70-9]

C₁₃H₁₆O₂ mol.wt. 204.27

Synthesis

- Obtained by reaction of cyclopentylacetyl chloride with phenol in the presence of aluminium chloride at 140° for 15 min (46%) [5583].

b.p.₁ 112–114° [5583].

2-Cyclopentyl-1-(4-hydroxyphenyl)ethanone

[56184-10-2]

C₁₃H₁₆O₂ mol.wt. 204.27

Synthesis

- Obtained by reaction of cyclopentylacetyl chloride with phenol in the presence of aluminium chloride at 140° for 15 min (36%) [5583].

b.p.₁ 175–185° [5583].

2-Cyclopentyl-1-(2,4-dihydroxyphenyl)ethanone

[59108-69-9]

C₁₃H₁₆O₃ mol.wt. 220.27

Synthesis

- Obtained by reaction of cyclopentylacetonitrile with resorcinol (Hoesch reaction) [4852].

2-Cyclohexyl-1-(3,4-dihydroxy-5-nitrophenyl)ethanone

[400871-12-7]

C₁₄H₁₇NO₅ mol.wt. 279.29

Synthesis

- Preparation by treatment of 2-cyclohexyl-1-(4-hydroxy-3-methoxy-5-nitrophenyl)ethanone with aluminium chloride in refluxing ethyl acetate/pyridine mixture for 2 h (90–96%) [5193].

m.p. 113–114° [5193];

¹H NMR [5193], ¹³C NMR [5193], IR [5193].

2-Cyclopentyl-1-(2-hydroxy-3-methylphenyl)ethanone

[56184-11-3]

 $C_{14}H_{18}O_2$ mol.wt. 218.30

Synthesis

– Preparation by reaction of cyclopentylacetyl chloride with o-cresol in the presence of aluminium chloride at 180° for 15 min (40–45%) [5583].

b.p.₁ 121–123° [5583].**2-Cyclopentyl-1-(2-hydroxy-4-methylphenyl)ethanone**

[56184-13-5]

 $C_{14}H_{18}O_2$ mol.wt. 218.30

Synthesis

– Preparation by reaction of cyclopentylacetyl chloride with m-cresol in the presence of aluminium chloride at 140° for 15 min (81%) [5583].

b.p.₁ 126–128° [5583].**2-Cyclopentyl-1-(2-hydroxy-5-methylphenyl)ethanone**

[56184-14-6]

 $C_{14}H_{18}O_2$ mol.wt. 218.30

Synthesis

– Preparation by reaction of cyclopentylacetyl chloride with p-cresol in the presence of aluminium chloride at 140° for 15 min (80%) [5583].

b.p.₁ 124–126° [5583].**2-Cyclopentyl-1-(4-hydroxy-3-methylphenyl)ethanone**

[56184-12-4]

 $C_{14}H_{18}O_2$ mol.wt. 218.30

Synthesis

– Preparation by reaction of cyclopentylacetyl chloride with o-cresol in the presence of aluminium chloride at 140° for 15 min (56%) [5583].

b.p.₁ 180–190° [5583].

Chapter 19

Compounds Derived from S-Substituted Mercaptoacetic Acids

2-(3,5-Dibromo-2-hydroxyphenyl)-2-oxoethyl thiocyanate

$C_9H_5Br_2NO_2S$ mol.wt. 351.02

Synthesis

– Obtained by reaction of ammonium thiocyanate with 3,5,α-tribromo-2-hydroxyacetophenone in aqueous acetone at r.t. for 6 h (69%) [4383].

m.p. 142–143° [4383]; IR [4383].

2-(5-Bromo-2-hydroxyphenyl)-2-oxoethyl thiocyanate

[260430-29-3]

$C_9H_6BrNO_2S$ mol.wt. 272.12

Synthesis

– Obtained by reaction of ammonium thiocyanate with 5,α-di-bromo-2-hydroxyacetophenone in aqueous acetone at r.t. for 6 h (88%) [4383].

m.p. 131–132° [4383]; IR [4383].

1-(2-Hydroxyphenyl)-2-(methylthio)ethanone

[56986-82-4]

$C_9H_{10}O_2S$ mol.wt. 182.96

Synthesis

– Preparation by adding a solution of 15% sodium methylmercaptide to a solution of 2-hydroxy-α-bromo-acetophenone in methanol in an ice bath. The reaction mixture was stirred for 30 min at r.t. (98%) [4395].

yellow liquid [4395]; MS [4395].

1-(2-Hydroxyphenyl)-2-(methylsulfonyl)ethanone[39068-36-5] $C_9H_{10}O_4S$ mol.wt. 214.24

m.p. 139–140° [5584].

Synthesis

– Obtained by condensation of methyl 2-hydroxybenzoate with dimethylsulfone carbanion in DMSO (65%) [5584].

1-(3-Hydroxyphenyl)-2-(methylsulfonyl)ethanone[52945-17-2] $C_9H_{10}O_4S$ mol.wt. 214.24

m.p. 168–169° [5584].

Synthesis

– Obtained by condensation of methyl 3-hydroxybenzoate with dimethylsulfone carbanion in DMSO (60%) [5584].

1-(4-Hydroxyphenyl)-2-(methylsulfonyl)ethanone[52945-18-3] $C_9H_{10}O_4S$ mol.wt. 214.24

Synthesis

– Obtained by condensation of methyl 4-hydroxybenzoate with dimethylsulfone carbanion in DMSO (58%) [5584].

m.p. 173–174° [5584].

2-(3-Bromo-2-hydroxy-5-methylphenyl)-2-oxoethyl thiocyanate $C_{10}H_8BrNO_2S$ mol.wt. 286.15

Synthesis

– Obtained by reaction of ammonium thiocyanate with 3,α-dibromo-2-hydroxy-5-methylacetophenone in aqueous acetone at r.t. for 6 h (66%) [4383].

m.p. 148–149° [4383]; IR [4383].

2-(5-Bromo-2-hydroxy-4-methylphenyl)-2-oxoethyl thiocyanate $C_{10}H_8BrNO_2S$ mol.wt. 286.15

Synthesis

– Obtained by reaction of ammonium thiocyanate with 5,α-di-bromo-2-hydroxy-4-methylacetophenone in aqueous acetone at r.t. for 6 h (73%) [4383].

m.p. 122–123° [4383]; IR [4383].

1-(2-Hydroxy-5-methylphenyl)-2-(methylsulfinyl)ethanone

[52159-50-9]

C₁₀H₁₂O₃S mol.wt. 212.27

Synthesis

– Refer to: [5585].

**1-(2,4-Dihydroxy-6-methylphenyl)-2-(methylsulfinyl)ethanone**

[478795-87-8]

C₁₀H₁₂O₄S mol.wt. 228.27

Synthesis

– Obtained by reaction of ethyl 2,4-dihydroxy-6-methylbenzoate with sodium methylsulfinylmethide [5586] according to [5587].

oil [5586].

1-(2-Hydroxy-3-methoxyphenyl)-2-(methylsulfinyl)ethanone

[65220-47-5]

C₁₀H₁₂O₄S mol.wt. 228.27

Synthesis

– Preparation by reaction of methyl 3-methoxysalicylate (methyl 2-hydroxy-3-methoxybenzoate) with methylsulfinyle carbanion, itself obtained from DMSO and sodium hydride (83%) [5588].

m.p. 140–142° [5588]; TLC [5588].

1-(3-Hydroxy-4-methoxyphenyl)-2-(methylsulfinyl)ethanone

[66100-55-8]

C₁₀H₁₂O₄S mol.wt. 228.27

Synthesis

– Preparation by reaction of methyl isovanillinate (methyl 3-hydroxy-4-methoxybenzoate) with methylsulfinyle carbanion, itself obtained from DMSO and sodium hydride (89%) [5589].

m.p. 158–161° [5589];
¹H NMR [5589], IR [5589].

1-(4-Hydroxy-3-methoxyphenyl)-2-(methylsulfinyl)ethanone

[66100-54-7]

C₁₀H₁₂O₄S mol.wt. 228.27

Synthesis

- Preparation by reaction of methyl vanillin (methyl 4-hydroxy-3-methoxybenzoate) with methylsulfinyle, carbanion itself obtained from DMSO and sodium hydride (90%) [5589].

m.p. 151–152° [5589];
¹H NMR [5589], IR [5589].

1-(4-Hydroxy-3-methoxyphenyl)-2-(methylsulfonyl)ethanone

[52945-22-9]

C₁₀H₁₂O₅S mol.wt. 244.27

Synthesis

- Obtained by condensation of methyl 4-hydroxy-3-methoxybenzoate with dimethylsulfone carbanion in DMSO (76%) [5584].

m.p. 157–158° [5584].

2-(5-Bromo-2-hydroxy-3,4-dimethylphenyl)-2-oxoethyl thiocyanate

[260430-31-7]

C₁₁H₁₀BrNO₂S mol.wt. 300.18

Synthesis

- Obtained by reaction of ammonium thiocyanate with 5,α-di-bromo-2-hydroxy-3,4-dimethylacetophenone in aqueous acetone at r.t. for 6 h (52%) [4383].

m.p. 149–150° [4383]; IR [4383].

2-(3,5-Dibromo-2-hydroxyphenyl)-2-oxoethyl dimethylcarbamodithioate

[214959-26-9]

C₁₁H₁₁Br₂NO₂S₂ mol.wt. 413.15

Synthesis

- Obtained by reaction of 3,5-dibromo-2-hydroxy-α-bromoacetophenone with sodium or piperidinium N,N-dimethyldithiocarbamate in methanol at r.t. for 12 h (72%) [4382].

m.p. 164° [4382];
¹H NMR [4382], IR [4382], UV [4382].

2-(3,5-Dichloro-2-hydroxyphenyl)-2-oxoethyl dimethylcarbamodithioate

[87669-75-8]

 $C_{11}H_{11}Cl_2NO_2S_2$ mol.wt. 324.2

Syntheses

– Refer to: [5590,5591].

1-(2-Hydroxy-4-methoxy-6-methylphenyl)-2-(methylsulfinyl)ethanone

[104783-89-3]

 $C_{11}H_{14}O_4S$ mol.wt. 242.30

Syntheses

– Preparation by reaction of ethyl 2-hydroxy-4-methoxy-6-methylbenzoate (m.p. 73–74°) with sodium methyl-sulfinylmethide, itself obtained from DMSO and sodium hydride (85%) [5587].

– Also refer to: [5586].

m.p. 146–148° [5587]; 1H NMR [5587], IR [5587].**1-(2-Hydroxy-6-methoxy-4-methylphenyl)-2-(methylsulfinyl)ethanone**

[205880-83-7]

 $C_{11}H_{14}O_4S$ mol.wt. 242.30

Syntheses

– Preparation by treatment of methyl 2-hydroxy-6-methoxy-4-methylbenzoate (methyl mono-O-methyl-p-orsellinate)

(m.p. 94–96°) with sodium methylsulfinyl-methide (SM) formed in situ. SM was obtained by action of sodium hydride (3 equiv) with DMSO (7 equiv) in benzene at 50° for 1 h. (78%) [5592].

– Also refer to: [5593].

m.p. 62–64° [5592].

1-(4-Hydroxy-3,5-dimethoxyphenyl)-2-(methylsulfonyl)ethanone

[52945-23-0]

 $C_{11}H_{14}O_6S$ mol.wt. 274.29

Synthesis

– Obtained by condensation of methyl 4-hydroxy-3,5-di-methoxybenzoate with dimethylsulfonyl carbanion in DMSO (74%) [5584].

m.p. 154–155° [5584].

1-[2-Hydroxy-5-(1-methylethyl)phenyl]-2-(methylsulfinyl)ethanone

[63220-58-6]

C₁₂H₁₆O₃S mol.wt. 240.32

Syntheses

– Refer to: [5585,5594].

**1-(4-Ethoxy-2-hydroxy-6-methylphenyl)-2-(methylsulfinyl)ethanone**

[478795-93-6]

C₁₂H₁₆O₄S mol.wt. 256.32

Synthesis

– Obtained by reaction of ethyl 4-ethoxy-2-hydroxy-6-methylbenzoate with sodium methylsulfinylmethide [5586] according to [5587].

oil [5586].

2-(3,5-Dibromo-2-hydroxyphenyl)-2-oxoethyl diethylcarbamidithioate

[214959-27-0]

C₁₃H₁₅Br₂NO₂S₂ mol.wt. 441.21

Synthesis

– Obtained by action of 3,5-dibromo-2-hydroxy- α -bromoacetophenone with sodium or piperidinium N,N-diethylthiocarbamate in methanol at r.t. for 12 h (58%) [4382].

m.p. 132° [4382]; ¹H NMR [4382], IR [4382], UV [4382].**1-[2-Hydroxy-6-methyl-4-(1-methylethoxy)phenyl]-2-(methylsulfinyl)ethanone**

[478795-95-8]

C₁₃H₁₈O₄S mol.wt. 270.35

Synthesis

– Obtained by reaction of ethyl 2-hydroxy-4-iso-propoxy-6-methylbenzoate with sodium methyl-sulfinylmethide [5586] according to [5587].

oil [5586].

1-(2-Hydroxy-6-methyl-4-propoxyphenyl)-2-(methylsulfinyl)ethanone

[478795-94-7]

C₁₃H₁₈O₄S mol.wt. 270.35

Synthesis

– Obtained by reaction of ethyl 2-hydroxy-6-methyl-4-propoxybenzoate with sodium methylsulfinylmethide [5586] according to [5587].

oil [5586].

1-(2-Hydroxyphenyl)-2-[2-(trimethylsilyl)ethylthio]ethanone

[193075-79-5]

C₁₃H₂₀O₂SSi mol.wt. 268.45

Synthesis

– Preparation by adding an ethanolic solution of sodium 2-(trimethylsilyl)ethanethiolate in a solution of 2-chloro-1-(2-hydroxyphenyl)ethanone in dioxane at r.t. for 2 h under nitrogen (99%) [4570]. pale yellow oil [4570]; ¹H NMR [4570], IR [4570].

2-[(4-Chlorophenyl)thio]-1-(2-hydroxyphenyl)ethanone

[113272-14-3]

C₁₄H₁₁ClO₂S mol.wt. 278.76

Syntheses

– Preparation by adding dropwise at r.t. an ethanolic solution of sodium 4-chlorothiophenoxide to a solution of 2-hydroxy- α -bromoacetophenone in dioxane and stirring the mixture for a further hour (84%) [5595].

– Also refer to: [5596].

m.p. 83–84° [5595]; ¹H NMR [5595], IR [5595], MS [5595].

2-[(4-Chlorophenyl)sulfinyl]-1-(2-hydroxyphenyl)ethanone

[113272-15-4]

[131137-71-8] (\pm)C₁₄H₁₁ClO₃S mol.wt. 294.76

Syntheses

– Preparation by oxidation of α -(4-chlorophenylthio)-2-hydroxyacetophenone in methylene chloride with 3-chloroperoxybenzoic acid at 0° for 5 h (93%) [5595].

– Also refer to: [5596].

m.p. 131–132° [5595];
¹H NMR [5595], IR [5595], MS [5595].

1-(2-Hydroxyphenyl)-2-(phenylthio)ethanone

[56307-98-3]

 $C_{14}H_{12}O_2S$

mol.wt. 244.31

Syntheses

- Preparation by adding an ethanolic solution of sodium benzenethiolate to a solution of 2-hydroxy- α -bromoacetophenone in dioxane at r.t. and stirring for 1 h at the same temperature (77%) [5596,5597].
- Preparation by condensation of 2-hydroxy- α -bromoacetophenone (or 2-hydroxy- α -chloroacetophenone) with thiophenol in the presence of sodium ethoxide in an ethanol/dioxane mixture (77%) [5598].
- Also refer to: [4395].

m.p. 55° [5597,5598], 52–54° [5596];

 1H NMR [5596,5597], IR [5596,5597], UV [5597,5598].**1-(4-Hydroxyphenyl)-2-(phenylthio)ethanone**

[137524-65-3]

 $C_{14}H_{12}O_2S$

mol.wt. 244.31

Syntheses

- Preparation by adding thiophenol (0.1 ml) and rhodium (II) acetate dimer (2 mg) to a suspension of resin **6** (52 mg) in benzene and the mixture agitated at 50° for 2 h. Resin was filtered, successively washed with methylene chloride, THF and ethyl ether and dried in vacuo. A 50% (v/v) solution of TFA in methylene chloride was added to the above resin and the mixture was agitated at r.t. for 30 min. After, the resin was filtered and washed with methylene chloride, the combined filtrates were concentrated and purified by preparative TLC (ethyl acetate/toluene) to give the titled compound (64%) [4814].

N.B.: Resin **6** (resin-bound α -TMS diazoketon **6**) (preparation given).

- Also refer to: [4815].

 1H NMR [4814], ^{13}C NMR [4814], IR [4814], MS [4814].**1-(2,4-Dihydroxyphenyl)-2-(phenylthio)ethanone**

[56307-99-4]

 $C_{14}H_{12}O_3S$

mol.wt. 260.31

Syntheses

- Preparation by condensation of 2,4-dihydroxy- α -chloroacetophenone with thiophenol in the presence of sodium ethoxide in a mixture of ethanol/dioxane (93%) [5598].
 - Also obtained by condensation of phenylthioacetonitrile with resorcinol (Hoesch reaction) (54%) [5598].
- m.p. 152–153° [5598]; UV [5598].

1-(3,4-Dihydroxyphenyl)-2-(phenylthio)ethanone[131985-77-8] $C_{14}H_{12}O_3S$ mol.wt. 260.31

Synthesis

– Refer to: [5599] (Japanese patent).

1-(2-Hydroxyphenyl)-2-(phenylsulfinyl)ethanone[131137-70-7] $C_{14}H_{12}O_3S$ mol.wt. 260.31

Synthesis

– Preparation by oxidation of 1-(2-hydroxyphenyl)-2-(phenyl-thio)ethanone with *m*-CPBA in methylene chloride at 0° for 5 h and water then added (90%) [5596].

m.p. 117–118° [5596];

¹H NMR [5596], IR [5596], MS [5596].**2-(Phenylthio)-1-(2,4,6-trihydroxyphenyl)ethanone**[56308-00-0] $C_{14}H_{12}O_4S$ mol.wt. 276.31

Syntheses

– Preparation by condensation of phenylthioacetone nitrile with phloroglucinol (Hoesch reaction) (85%) [5598].

– Also obtained by condensation of 2,4,6-trihydroxy- α -chloro-acetophenone with thiophenol in the presence of sodium ethoxide in an ethanol/dioxane mixture (20%) [5598].

m.p. 173–174° [5598]; UV [5598].

1-(4-Butoxy-2-hydroxy-6-methylphenyl)-2-(methylsulfinyl)ethanone[478795-98-1] $C_{14}H_{20}O_4S$ mol.wt. 284.38

Synthesis

– Obtained by reaction of ethyl 4-butoxy-2-hydroxy-6-methylbenzoate with sodium methylsulfinylmethide [5586] according to [5587].

oil [5586].

1-[2-Hydroxy-6-methyl-4-(1-methylpropoxy)phenyl]-2-(methylsulfinyl)ethanone

[478795-97-0]

C₁₄H₂₀O₄S mol.wt. 284.38

Synthesis

– Obtained by reaction of ethyl 4-sec-butoxy-2-hydroxy-6-methylbenzoate with sodium methylsulfinylmethide [5586] according to [5587].

oil [5586].

1-[2-Hydroxy-6-methyl-4-(2-methylpropoxy)phenyl]-2-(methylsulfinyl)ethanone

[478795-96-9]

C₁₄H₂₀O₄S mol.wt. 284.38

Synthesis

– Obtained by reaction of ethyl 4-isobutoxy-2-hydroxy-6-methylbenzoate with sodium methylsulfinylmethide [5586] according to [5587].

oil [5586].

1-[2-Hydroxy-4-[(2-methoxyethoxy)methoxy]-6-methylphenyl]-2-(methylsulfinyl)ethanoneC₁₄H₂₀O₆S mol.wt. 316.38

Synthesis

– Preparation by reaction of ethyl 2-hydroxy-4-(2-methoxyethoxy)-methoxy-6-methylbenzoate with methylsulfinyl carbanion, itself obtained from DMSO and sodium hydride (86%) [5587].

m.p. 106–107° [5587]; ¹H NMR [5587], IR [5587].**2-Chloro-1-(2-hydroxy-4-methoxyphenyl)-2-(phenylthio)ethanone**

[153432-53-2]

C₁₅H₁₃ClO₃S mol.wt. 308.79

Synthesis

– Preparation by reaction of N-chlorosuccinimide with 2'-hydroxy-4'-methoxy-2-(phenylthio)acetophenone in carbon tetrachloride under argon at r.t. for 2 h (83%) [5600].

m.p. 49–50°5 [5600]; ¹H NMR [5600], ¹³C NMR [5600], IR [5600], MS [5600].

1-(2-Hydroxyphenyl)-2-[(4-methylphenyl)thio]ethanone

[108378-94-5]

C₁₅H₁₄O₂S mol.wt. 258.34

Synthesis

– Preparation by adding an ethanolic solution of sodium 4-methylbenzenethiolate to a solution of 2-hydroxy- α -bromoacetophenone in dioxane at r.t. and stirring for 1 h at the same temperature (83%) [5601,5596].

m.p. 66–67° [5596]; ¹H NMR [5596], IR [5596].

1-(2-Hydroxyphenyl)-2-[(phenylmethyl)thio]ethanone

[111809-47-3]

C₁₅H₁₄O₂S mol.wt. 258.34

Synthesis

– Preparation by adding a solution of sodium phenylmethane-thiolate in ethanol to a solution of o-hydroxy- α -chloro-acetophenone in dioxane at 20° during 40 min and then stirring at the same temperature for 30 min more (84%) [4571].

m.p. 64° [4571]; ¹H NMR [4571], IR [4571].

1-(2-Hydroxy-4-methoxyphenyl)-2-(phenylthio)ethanone

[56308-01-1]

C₁₅H₁₄O₃S mol.wt. 274.34

Syntheses

- Preparation by reaction of sodium thiophenolate with 2-hydroxy-4-methoxy- α -chloroacetophenone in tetrahydrofuran under argon, at r.t. for 10 min (73%) [5600].
- Also obtained by partial methylation of 2,4-dihydroxy- α -phenylthioacetophenone with dimethyl sulfate in the presence of potassium carbonate in acetone for 3 h (64%) [5598].
- Also obtained by alkaline degradation of 3-(phenylthio)-7-methoxychromone (m.p. 101–102°) with N-sodium hydroxide in dilute methanol for 3 h (96%) [5598].

m.p. 42–44° [5600], 42–43° [5598]; ¹H NMR [5600], ¹³C NMR [5600], UV [5598].

1-(2-Hydroxyphenyl)-2-[(4-methylphenyl)sulfinyl]ethanone[108378-95-6] (\pm)

[108448-95-9] (R)

C₁₅H₁₄O₃S mol.wt. 274.34

Syntheses

- Preparation by oxidation of 1-(2-hydroxyphenyl)-2-[(4-methylphenyl)thio]ethanone with *m*-CPBA in methylene chloride at 0° for 5 h and water then added (95%) [5596].

– Also refer to: [5601].

m.p. 118–119° [5596]; ¹H NMR [5596], IR [5596].

1-(2-Hydroxy-5-methylphenyl)-2-[(R)-(4-methylphenyl)sulfinyl]ethanone

[371258-74-1]

C₁₆H₁₆O₃S mol.wt. 288.37

Syntheses

– Preparation at –78° by reaction between methyl 2-hydroxy-5-methylbenzoate and (R)-(+)-methyl p-tolyl sulfoxide in the presence of lithium diisopropylamide (LDA) in THF (91%) [5602].

m.p. 128° [5602]; (α)_D²² = +134° to +148° (c = 1 in chloroform) [5602]; ¹H NMR [5602], IR [5602], MS [5602].

1-(2-Hydroxy-5-methylphenyl)-2-[(S)-(4-methylphenyl)sulfinyl]ethanone

[371258-72-9]

C₁₆H₁₆O₃S mol.wt. 288.37

Synthesis

– Refer to: [5602].

1-(2-Hydroxy-4,6-dimethoxyphenyl)-2-(phenylthio)ethanone

[56308-02-2]

C₁₆H₁₆O₄S mol.wt. 304.37

Synthesis

– Preparation by partial methylation of 2-(phenylthio)-2',4',6'-trihydroxyacetophenone with dimethyl sulfate in the presence of potassium carbonate in acetone for 2 h (88%) [5598].

m.p. 75° [5598]; UV [5598].

1-(2-Hydroxy-4,6-dimethoxyphenyl)-2-[(R)-(4-methylphenyl)sulfinyl]ethanone

[371258-80-9]

C₁₇H₁₈O₅S mol.wt. 334.39

Synthesis

– Preparation at –78° by reaction between methyl 2-hydroxy-4,6-dimethoxybenzoate and (R)-(+)-methyl p-tolyl sulfoxide in the presence of lithium diisopropylamide (LDA) in THF (58%) [5602].

m.p. 107–109° [5602]; (α)_D²⁰ = –28° to –32° (c = 1 in chloroform) [5602]; ¹H NMR [5602], IR [5602], MS [5602]; TLC [5602].

1-[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl]-2-(methylsulfinyl)ethanone

[115207-18-6]

 $C_{17}H_{26}O_3S$ mol.wt. 310.46

Syntheses

- Obtained by reaction of 3,5-di-tert-butyl-4-hydroxybenzoyl chloride with excess DMSO at r.t. (16–18%) [5603].
- Obtained by acylation of 2,6-di-tert-butylphenol with 2-(methylthio)acetic acid and the intermediate oxidized with m-CPBA [5604].

m.p. 143°6–144°9 [5604], 61–62° [5603].

One of the reported melting points is obviously wrong.

 1H NMR [5603], IR [5603].**1-[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl]-2-(methylsulfonyl)ethanone**

[191157-34-3]

 $C_{17}H_{26}O_4S$ mol.wt. 326.46

Synthesis

- Refer to: [5604].

1-[2-Hydroxy-4,6-dimethoxy-3-(2-propenyl)phenyl]-2-[(S)-(4-methylphenyl)sulfinyl]ethanone

[371258-84-3]

 $C_{20}H_{22}O_5S$ mol.wt. 374.46

Synthesis

- Obtained at -78° in THF using lithium diisopropylamide (LDA), either by reaction between methyl 2-hydroxy-4,6-dimethoxy-3-(2-propenyl)-benzoate and (R)-(+)-methyl p-tolyl sulfoxide in the presence of 1,3-dimethyl-3,4,5,6-tetrahydro-2[1H]-pyrimidinone (DMPU) (this method yields only a trace of the desired compound), or by reaction between 2-hydroxy-4,6-dimethoxy-3-(2-propenyl)benzaldehyde and (R)-(+)-methyl p-tolyl sulfoxide via the subsequent oxidation at r.t. by MnO_2 of the intermediate 1-[2-hydroxy-4,6-dimethoxy-3-(2-propenyl)phenyl]-2-(4-methylsulfinyl)ethanol (57%) [5602].

m.p. 150–151° [5602]; $(\alpha)_D^{30} = +52^\circ$ to $+56^\circ$ ($c = 1.5$ in chloroform) [5602]; 1H NMR [5602], ^{13}C NMR [5602], IR [5602], MS [5602];

TLC [5602].

Part VIII
Di- and Polyketones

Chapter 20

Aromatic Ketones Containing Only Acetyl Groups

20.1 Acetyl Groups Located on One Ring

20.1.1 Unsubstituted Acetyl Groups and Homologues

1,1'-(5-Bromo-4,6-dihydroxy-1,3-phenylene)bis-ethanone

[117156-78-2]

$C_{10}H_9BrO_4$ mol.wt. 273.08

Syntheses

– Preparation by bromination of resodiacetophenone,

- with NBS in refluxing dioxane for 10 h (97%) [5605];
- with bromine, for 6 h at r.t. [5606], in cooled acetic acid [4538].

– Also refer to: [5607].

m.p. 205° [4538], 202–203° [5606]; 1H NMR [5605], IR [5605], UV [5605].

1,1'-(5-Bromo-2,4,6-trihydroxy-1,3-phenylene)bis-ethanone

[98149-38-3]

$C_{10}H_9BrO_5$ mol.wt. 289.08

Synthesis

– Preparation by Friedel–Crafts acylation of 2-bromophloroglucinol with acetyl chloride or acetic anhydride in the presence of boron trifluoride (72–78%) [5608].

m.p. 150–152° [5608].

1,1'-(4-Chloro-6-hydroxy-1,3-phenylene)bis-ethanone

[30335-99-0]

 $C_{10}H_9ClO_3$ mol.wt. 212.63

Syntheses

- Obtained by Fries rearrangement,
 - of 4-acetyl-3-chlorophenyl acetate with aluminium chloride at 120° for 20 min (35%) [5609];
 - of 3-chlorophenyl acetate with aluminium chloride at 175–180° for 3 h (by-product) [5610].
- Also obtained from 5-acetyl-6-chloro-2,3-dimethyl-benzofuran by oxidation with chromium trioxide in dilute acetic acid at 50° for 30 min, followed by hydrolysis of the resulting keto ester (18%) [5609].

m.p. 84° [5610], 75° [5609]

b.p., 167° [5609]; 1H NMR [5610], MS [5610].**1,1'-(5-Chloro-2-hydroxy-1,3-phenylene)bis-ethanone**

[71643-62-4]

 $C_{10}H_9ClO_3$ mol.wt. 212.63

Syntheses

- Preparation by Fries rearrangement of 2-(acetyloxy)-5-chloroacetophenone with aluminium chloride for 1 h at 130°, then 1 h at 140° (80%) [5611].
- Also refer to: [5612, 5613].

b.p., 120° [5611].

1,1'-(5-Fluoro-2-hydroxy-1,3-phenylene)bis-ethanone

[106823-62-5]

 $C_{10}H_9FO_3$ mol.wt. 196.18

Synthesis

- Preparation by Fries rearrangement of 2-acetyl-4-fluoro-phenyl acetate (b.p. 124–126°) with aluminium chloride at 130–140° for 3 h (71%) [5614].

b.p. 130–135° [5614]; IR [5614].

1,1'-(4-Hydroxy-5-nitro-1,3-phenylene)bis-ethanone

[100245-07-6]

 $C_{10}H_9NO_5$ mol.wt. 223.19

Synthesis

- Preparation by nitration of 5-acetyl-2-hydroxyacetophenone at -20° using standard reagents (51%) [4699].

m.p. 104–105° [4699].

1,1'-(2,4-Dihydroxy-5-nitro-1,3-phenylene)bis-ethanone

[103264-32-0]

C₁₀H₉NO₆ mol.wt. 239.18

Syntheses

- Preparation by reaction of 1,3-dinitroquinolizin-4-one with sodio-2,4,6-heptanetrione in DMF for 1.5 h between -15° and -10° (57%) [5615].
- Also obtained by nitration of 2,4-diacetylresorcinol with a nitric acid ($d = 1.42$)/sulfuric acid ($d = 1.84$) mixture in acetic acid at 0° for 1 h (41%) [5616].
- Also obtained by Fries rearrangement of 4-nitroresorcinol diacetate in nitrobenzene with aluminium chloride at $95-100^{\circ}$ for 2 h or at r.t. for 72 h (38%) [5616].

m.p. $142-143^{\circ}$ [5615], $139-140^{\circ}$ [5616]; ¹H NMR [5615], IR [5615].**1,1'-(4,6-Dihydroxy-5-nitro-1,3-phenylene)bis-ethanone**

[103262-48-2]

C₁₀H₉NO₆ mol.wt. 239.18

Syntheses

- Preparation by Fries rearrangement of 2-nitroresorcinol diacetate with aluminium chloride,
 - without solvent, at 140° [5617], at $100-110^{\circ}$ (30%) [5618];
 - in nitrobenzene, at 140° [5617], at $100-110^{\circ}$ for 3 h (60%) [5618] and at $25-28^{\circ}$ for 70 h (73%) [5618].
- Preparation by Friedel–Crafts acetylation of 2-nitroresorcinol with acetic anhydride in the presence of aluminium chloride in nitrobenzene at $120-130^{\circ}$ for 3 h (76%) [5618].
- Preparation by nitration of 4,6-diacetylresorcinol,
 - with nitric acid ($d = 1.42$) at 80° (84%) [5605], or first at 80° , then at r.t. for 2 h [5619];
 - with nitric acid in sulfuric acid at 0° [5617];
 - with concentrated nitric acid in a concentrated sulfuric acid/acetic acid mixture at 0° for 1 h [5618];
 - with cooled fuming nitric acid, then at r.t. for 30 min [4538];
 - with fuming nitric acid in acetic acid, first at 0° , then at r.t. for a few minutes [4538].

m.p. 235° [5605], $235^{\circ}(d)$ [5619], 234° [5617,5618], 231° [4538];¹H NMR [5605], IR [5605], UV [5605].

1,1'-(2-Hydroxy-1,3-phenylene)bis-ethanone

[103867-89-6]

 $C_{10}H_{10}O_3$ mol.wt. 178.19

Syntheses

- Obtained by hydrolysis of 2-(3-acetyl-2-hydroxyphenyl)-2-methyl-1,3-dioxolane with a 5% aqueous hydrochloric acid/ethanol mixture at r.t. for 5 min (almost quantitative yield) [5620].
- Also obtained by UV light irradiation of 2-(2-acetoxy-phenyl)-2-methyl-1,3-dioxolane in hexane (7%) [5621] or in hexane in the presence of potassium carbonate for 6 h (7%) [5620].
- m.p. 71–73° [5621]; 1H NMR [5621], IR [5621], UV [5621].

1,1'-(4-Hydroxy-1,2-phenylene)bis-ethanone

[90464-79-2]

 $C_{10}H_{10}O_3$ mol.wt. 178.19

Synthesis

- Refer to: [5622] (Japanese patent).

1,1'-(4-Hydroxy-1,3-phenylene)bis-ethanone

[30186-16-4]

 $C_{10}H_{10}O_3$ mol.wt. 178.19

Syntheses

- Preparation by reaction of acetyl chloride (2 mol) with o-methoxyacetophenone (1 mol) in the presence of aluminium chloride (2 mol) in boiling carbon disulfide for 12 h (87%) [5623].
- Preparation by Fries rearrangement of various substituted phenyl esters (1 mol) in the presence of aluminium chloride,
- of p-acetylphenyl acetate,
 - at 150° for 3 h: (AlCl₃ 3.5 mol) (80%) [5624,5625] or (AlCl₃ 4 mol) (60%) [5626];
 - at 140–150° for 2 h (AlCl₃ 3.4 mol) (78%) [5627] or for 1 h (AlCl₃ 3.3 mol) (40%) [5628];
 - first at 130–140°, then at 160° for 10 min (AlCl₃ 2.7 mol) (poor yields) [5623,5629];
 - of o-acetylphenyl acetate,
 - first at 50°, then at 80° for 15 min (AlCl₃ 2.7 mol) (46%) [5623,5629];
 - in nitrobenzene at r.t. overnight (AlCl₃ 3.3 mol) (43%) [5628];

- of o-bromophenyl acetate at 180° for 5 h (AlCl₃ 3.2 mol) (by-product) (18%) [5630].
- Also obtained by photo-Fries rearrangement of two different esters in hexane for 6 h,
 - of 2-(4-acetoxyphenyl)-2-methyl-1,3-dioxolane (12%) [5620,5621];
 - of 2-(2-acetoxyphenyl)-2-methyl-1,3-dioxolane (4%) [5620,5621].
- Also obtained by Friedel–Crafts acylation of p-hydroxyacetophenone with acetyl chloride in tetrachloroethane in the presence of aluminium chloride (4 mol) at 130° for 4 h (49%) [5626].
- Also obtained by treatment of two different substituted acetophenones with 5% aqueous hydrochloric acid/ethanol (30v/1v) at r.t. for 5 min,
 - of 2-(5-acetyl-2-hydroxyphenyl)-2-methyl-1,3-dioxolane (almost quantitative yield) [5620];
 - of 2-(3-acetyl-4-hydroxyphenyl)-2-methyl-1,3-dioxolane (almost quantitative yield) [5620].
- Also obtained by decarboxylation of 3,5,3',3'-tetraacetyl-xanthyrone in boiling water for 4 h (18%) [5631].
- Also refer to: [5632,5633,5634] and also [5635] (Fries rearrangement).

Isolation from natural sources

- From the aerial parts of *Ophryosporus floribundus* (Compositae, tribe Eupatorieae) [5636].
 - From the *Artemisia campestris* L. subsp. *glutinosa* (Gay ex Besser) (Compositae) [5637].
- m.p. 95° [5623], 93° [5630], 92–93° [5628], 92 [5624], 91–92° [5626], 90–92° [5621], 90–91° [5629], 72° [5631], 64–65° [5637].

One of the reported melting points is obviously wrong.

1,1'-(2,4-Dihydroxy-1,3-phenylene)bis-ethanone

[2163-12-4]

C₁₀H₁₀O₄ mol.wt. 194.19

Syntheses

– Obtained from resorcinol by a typical Friedel–Crafts reaction (40%) [5641],

- with acetic acid in the presence of boron trifluoride,
 - at 140° for 3 h in a sealed tube (30%) [5257];
 - at 125° for 6 h (20%) [5642];
- with acetic anhydride,
 - in the presence of concentrated sulfuric acid at 130° for 15 min (15%) [5643];
 - in the presence of zinc chloride at 145–150° (7%) [5644] or at 150–160° for 20 min (6%) [5645];
- with acetyl chloride,
 - by heating in the presence of concentrated sulfuric acid (10%) [5643];
 - in ethyl ether in the presence of aluminium chloride at r.t. for 3 days (7%) [5251].
- Also obtained by acetylation of resacetophenone with acetic anhydride,
 - in the presence of boron trifluoride in acetic acid at 80° for 1.5 h (31%) [5646];
 - in the presence of boron trifluoride at 70° for 2 h in a sealed tube (30%) [5257];
 - in the presence of aluminium chloride in nitrobenzene at 105–110° for 2 h (15%) [5647].
- Also obtained by acetylation of 2-acetylresorcinol with acetic acid in the presence of zinc chloride at reflux for 5 min [5648].
- Also obtained by Fries rearrangement of resorcinol diacetate,
 - on heating with concentrated sulfuric acid (45%) [5643];
 - with aluminium chloride,
 - at 180–185° for 1.5 h (AlCl₃ 3 mol) (60%) [5649];
 - at 160–170° for 2 h (AlCl₃ 3 mol) [5650];
 - at 130–135° for 4.5 h (AlCl₃ > 2 mol) (crude, 90%) [5651];
 - in nitrobenzene at 100° for 3 h (AlCl₃ 3.3 mol) [5616].
- Also obtained by treatment of 4-acetoxy-2-hydroxyacetophenone with aluminium chloride in nitrobenzene at 115° [5652,5653], (26%) [5619] (Fries rearrangement).
- Also obtained by heating 2,4-diacetoxyacetophenone with aluminium chloride for 3 h (26%) [5654] (Fries rearrangement).
- Also obtained by decarboxylation of 3,5-diacetyl-2,4-dihydroxybenzoic acid,
 - with refluxing very dilute hydrochloric acid in water for 12–18 h [5655];
 - with very dilute hydrochloric acid in acetic acid at 160–170° in a sealed tube for 7–8 h [5656].

- Also obtained by degradation of 7,7'-diacetoxy-4,4'-dimethyl-3,4-dihydro-4,6'-bicoumarin with aluminium chloride between 135° and 170° for 2 h (19%) [5654].
- Also obtained by Claisen rearrangement of 3-acetyl-2,4-bis(3-methyl-2-butenyloxy)acetophenone, resulting from deprenylation,
 - in trifluoroacetic acid at 0° for 3 h (95%) [5657];
 - in the presence of palladium chloride-bis(acetonitrile) in refluxing dioxane for 45 min (31%) [5657];
 - by heating neat at 185° for 2 h (22%) [5657].
- Also refer to: [5658,5659,5660,5661,5662,5663,5664].

N.B.: Mono Na salt [5665]; di Na salt [5660].

1,1'-(2,5-Dihydroxy-1,4-phenylene)bis-ethanone

[20129-52-6]

C₁₀H₁₀O₄

mol.wt. 194.19

Syntheses

- Obtained by reaction of acetyl chloride (7.6 mol) with hydroquinone dimethyl ether (1.8 mol) in nitrobenzene in the presence of aluminium chloride (5 mol), first at r.t. for 67 h, then at 95° for 40 h (10%) [5666].
- Also obtained by photo-Fries rearrangement of hydroquinone diacetate in methanol under nitrogen for 12 h (10%) [5667].
- Also refer to: [5668].

m.p. 192° [5666], 155° [5667]. One of the reported melting points is obviously wrong.

¹H NMR [5639,5667], ¹³C NMR [5639], IR [5667], MS [5668];

Crystals data [5669,5670,5671]; Hueckel MO calculations (compound **VIII**) [5640].

1,1'-(3,6-Dihydroxy-1,2-phenylene)bis-ethanone

[39125-99-0]

C₁₀H₁₀O₄

mol.wt. 194.19

Synthesis

- Preparation by oxidative cyclization of 1,3-bis(trimethylsilyloxy)-1-methyl-1,3-butadiene: to a acetonitrile solution of sodium bicarbonate (12 equiv.) and CAN (6 equiv.) was slowly added an acetonitrile solution of 1,3-bis(trimethylsilyloxy)-1-methyl-1,3-butadiene (2 equiv.) at –45°.

The temperature of the reaction mixture was allowed to rise to 20° during 2 h.

After stirring for 1 h at 20°, a saturated aqueous solution of brine was added, the organic layer was separated and the aqueous layer was extracted with ethyl ether.

The combined organic extracts were dried, filtered and the solvent was removed in vacuo. The residue was purified by column chromatography (compound **4 h**) (28%) [5672].

Hueckel MO calculations (compound **VII**) [5640].

1,1'-(4,6-Dihydroxy-1,3-phenylene)bis-ethanone

[2161-85-5]

$C_{10}H_{10}O_4$ mol.wt. 194.19

Syntheses

- Preparation by Friedel–Crafts acylation of resorcinol,
 - with acetic anhydride,
 - in the presence of zinc chloride [5673,5674,5675], (80%) [5676], at 142–150° for 15 min (96%) [5677], (90%) [5644] or at 150–160° for 20 min (68%) [5645];
 - in the presence of ferric chloride [5678].
 - in the presence of concentrated sulfuric acid at 130° for 15 min (15%) [5643];
 - in the presence of 70% perchloric acid at 125–135° for 15–20 min (42%) [5679].
 - with acetyl chloride,
 - in the presence of zinc chloride [5680,5681], at 120° [5682];
 - in the presence of ferric chloride [4598,5678], at 150° for 15 min (60%) [5683] or at reflux for 30 min [5673];
 - in the presence of concentrated sulfuric acid (18%) [5643].
 - by a typical Friedel–Crafts reaction (24%) [5641].
- Also obtained by acylation of resorcinol with acetic acid,
 - in the presence of polyphosphoric acid for 15 min in a boiling water bath (9%) [5684];
 - in the presence of boron trifluoride at 125° for 6 h (20%) [5642].
- Also obtained by Friedel–Crafts acylation of paeonol with acetic anhydride in nitrobenzene in the presence of aluminium chloride [5685].
- Also obtained by Fries rearrangement of resorcinol diacetate,
 - with hot concentrated sulfuric acid (31%) [5643];
 - with polyphosphoric acid at 70° for 2 h (19%) [5686];
 - with aluminium chloride,
 - in nitrobenzene in a boiling water bath (70%) [4471];
 - without solvent (15%) [5687], at 205–210° for 1.5 h (14%) [5649].
 - with fused zinc chloride [5606,5673,5680,5688,5689], at 120° [5682] or at 130° (40–50%) [5690];
 - with ferric chloride at 180° for 3 h [5691], (32%) [5692], under nitrogen (16%) [5693,5694] or under carbon dioxide [5673], (15%) [5695].

- Also obtained by photo-Fries rearrangement of resorcinol diacetate in methanol at 25° under nitrogen [5696].
- Also obtained by acylation of resacetophenone,
 - with acetic acid,
 - in the presence of zinc chloride (Nencki reaction) [5618];
 - in the presence of zinc chloride and phosphorous oxychloride at 140–150° for 30 min [5606,5673,5697].
 - in the presence of polyphosphoric acid (14%) [5698], in a boiling water bath for 10 min (21%) [5684].
 - with acetic anhydride,
 - in the presence of boron trifluoride in acetic acid at 80° for 1.5 h (35%) [5646].
 - in the presence of aluminium chloride in nitrobenzene at 105–110° for 2 h (15%) [5647].
- Also obtained by Friedel–Crafts acylation of resorcinol dimethyl ether with acetyl chloride in carbon disulfide at 10° for 1 h (9%) [5646].
- Also obtained by Fries rearrangement of 2-acetoxy-4-hydroxyacetophenone with ferric chloride at 180° for 3 h (12%) [5695].
- Also obtained by Fries rearrangement of 2,4-diacetoxyacetophenone with aluminium chloride (9%) [4660].
- Also obtained (poor yield) by treatment of 7,7'-diacetoxy-4,4'-dimethyl-3,4-dihydro-4,6'-bi-coumarin with aluminium chloride between 135° and 170° for 2 h (< 3%) [4660].
- Also obtained by total dealkylation,
 - of resodiacetophenone diallyl ether with trifluoroacetic acid at 60° for 1 h (85%) [5605];
 - of resodiacetophenone dimethyl ether with 48% aqueous hydrobromic acid in refluxing acetic acid for 2 h (34%) [5699,5700].
 - of resodiacetophenone diprenyl ether,
 - with trifluoroacetic acid at 0° for 24 h (95%) [5657];
 - with boron trifluoride etherate in refluxing carbon tetrachloride (98%) [5657].
- Also refer to: [5607,5619,5651,5653,5658,5661,5701,5702,5703,5704,5705,5706,5707,5708,5709].

1,1'-(2,4,5-Trihydroxy-1,3-phenylene)bis-ethanone

[2999-24-8]

 $C_{10}H_{10}O_5$ mol.wt. 210.19

Syntheses

- Preparation by Fries rearrangement of 1,2,4-triacetoxybenzene with aluminium chloride,
 - at 140° for 35 min [5712], 64% [5713], 30% [5714];
 - at 160–170° for 2 h (60%) [5650].
 - Also obtained by oxidation of 2,4-diacetylresorcinol with potassium persulfate (Elbs reaction) [5712].
- m.p. 186–187° [5712], 186° [5714], 185° [5650], 183° [5713].

1,1'-(2,4,6-Trihydroxy-1,3-phenylene)bis-ethanone

[2161-86-6]

 $C_{10}H_{10}O_5$ mol.wt. 210.19

Syntheses

- Preparation by Friedel–Crafts acylation of phloroglucinol,
 - with acetic acid,
 - by using boron trifluoride-acetic acid complex at 28–30° for 18 h (85%) [5642];
 - without cooling (71%) [5715];
 - or by heating on a steam bath for 2 h (60%) [5716];
 - with acetic anhydride,
 - in the presence of boron trifluoride-ethyl ether complex at 20° for 1 h (80%) [5646];
 - in the presence of zinc chloride at 145–150° for 15 min (25%) [5644];
 - in the presence of concentrated sulfuric acid (24%) [5643];
 - with acetyl chloride,
 - (4 equiv.) in the presence of ferric chloride [5673,5717], (3%) [5678];
 - in ethyl ether in the presence of aluminium chloride at r.t. for 5 days (8%) [5251].
- Also obtained by Fries rearrangement of phloroglucinol triacetate with aluminium chloride at 160–170° for 2 h (10%) [5650].
- Also obtained by monocarbonylation of 2,4,6-triacetylphloroglucinol in 73% sulfuric acid at r.t. for 72 h [5650].
- Also obtained by hydrolysis of 5-acetoxy-2,4-diacetyl-1,3-dihydroxybenzene [5667], in the presence of 70% sulfuric acid [5678].
- Also refer to: [5718,5719,5720].

Isolation from natural sources

- This compound is one of the antifungal metabolites produced by *Pseudomonas fluorescens* [5721,5722,5723,5724,5725,5726,5727,5728,5729,5730,5731,5732,5733,5734,5735,5736,5737,5738,5739].
- Production in the rhizosphere by strains of fluorescent *Pseudomonas* spp. [5740].
- Also produced by a bacterial symbiot of the white-backed planthopper (insect), *Sogatella furcifera* [5741,5742].
- Also produced by a fungal ectosymbiot of an ambrosia beetle (insect), *Scolytoplatypus mikado* [5742].

N.B.: An hemihydrate was obtained by crystallisation of ketone in aqueous ethanol [5725] and a monohydrate in 20% aqueous acetic acid [5717]. The melting points are determined after solvents elimination.

m.p. 173° [5644], 172–173° [5667], 171° [5251], 170° [5717], 168–170° [5716,5725], 168° [5642,5646,5650,5715,5743], 153° [5643].

One of the reported melting points is obviously wrong.

¹³C NMR [5748].**1,1'-(2-Hydroxy-5-methyl-1,3-phenylene)bis-ethanone**

[55108-28-6]

C₁₁H₁₂O₃ mol.wt. 192.21

Syntheses

– Preparation by Friedel–Crafts acylation of p-cresol with excess acetyl chloride in nitrobenzene in the presence of aluminium chloride [5750,5751], at 60° for 6 h (42%) [5752], (20%) [5753].

– Also obtained by Friedel–Crafts acylation of p-cresol methyl ether with excess acetyl chloride in the presence of aluminium chloride [4625].

Also obtained by Fries rearrangement of p-cresyl acetate with aluminium chloride [5748,5754].

– Preparation by Fries rearrangement of 2-(acetyloxy)-5-methylacetophenone with aluminium chloride,

- at 100–120° for 10 min (76%) [5755];
- at 130° for 1 h, then at 140° for 1 h (70%) [5611].

– Also refer to: [5756,5757,5758,5759,5760,5761,5762,5763,5764,5765,5766].

N.B.: Metal complexes of binucleating ligands: Cu (II) [5750,5759,5760,5764], Ni (II) [5759] and UO₂ (VI) [5759]; Li salt (compound **2**) [5767]. Dioxime [5768].

1,1'-(4-Hydroxy-2-methyl-1,3-phenylene)bis-ethanone[170802-46-7] $C_{11}H_{12}O_3$ mol.wt. 192.21

Synthesis

– Obtained by Fries rearrangement of m-cresyl acetate with aluminium chloride [5748].

 1H NMR [5748], ^{13}C NMR [5748].**1,1'-(4-Hydroxy-5-methyl-1,3-phenylene)bis-ethanone**[23133-81-5] $C_{11}H_{12}O_3$ mol.wt. 192.21

Syntheses

– Obtained by Fries rearrangement of o-cresyl acetate with aluminium chloride [5748].

– Also refer to: [5770].

 ^{13}C NMR [5748].**1,1'-(4-Hydroxy-6-methyl-1,3-phenylene)bis-ethanone**[16475-85-7] $C_{11}H_{12}O_3$ mol.wt. 192.21

Syntheses

– Preparation by cyclization of 1,1,3,3-tetraacetylpropene (formerly so called methenylbisacetylacetone) (SM) (m.p. 117–118°) [5771],

- by adding a solution of SM (1 mol) in benzene to a sodium methoxide (4 mol) or magnesium methoxide (4 mol) solution in methanol and set aside for 24 h (quantitative yields) [5772];
 - on heating of its potassium salt in alcoholic solution for 6–8 h at reflux. SM was prepared by treatment of ethoxymethyleneacetylacetone (m.p. 140–142°) with the potassium salt of acetylacetone in ethanol [5771].
- Also obtained directly by heating together sodioacetylacetone and ethoxymethyleneacetylacetone at 100° for 30 min [5773].
- Also obtained by Fries rearrangement of m-cresyl acetate with aluminium chloride [5635,5748,5749].
- Also obtained by heating a mixture of 3,5-diacetyl-2,4-heptanedione (m.p. 33–35°) and triethyl-ammonium formate (TEAF) at 145–150° for 5 h with stirring in a constant stream of air (28%) [5774].
- Also obtained by heating a mixture of 4,6-diacetyl-3-methyl-2-cyclohexen-1-one and TEAF at 145–150° for 4 h with stirring in a stream of oxygen (33%) [5774].
- Also obtained from 1,1,3,3-tetraacetylpropane (formerly so called methylenebisacetylacetone) (SM1) (m.p. 87–88°),

- by reaction with concentrated sulfuric acid under oxygen of the air during short-lived—via the formation of 4,6-diacetyl-3-methyl-2-cyclohexen-1-one—(m.p. 75°) [5775];
- in chloroformic solution with hydrogen chloride under oxygen of the air [5775];
- SM1 (1 vol) in solution of 20% hydrochloric acid (3–4 vol) during 5–8 days at r.t. (44%).

SM1 was obtained by condensation of formaldehyde with acetylacetone [5775].

– Also refer to: [5755,5776,5777,5778].

N.B.: Ba [5771] and K salts [5771,5775].

m.p. 112° [5771], 108° [5772], 106° [5775], 105° [5773], 104–105° [5774];

b.p. 310° (without decomposition) [5771]; TLC [5772];

1,1'-(2,4-Dihydroxy-5-methyl-1,3-phenylene)bis-ethanone

C₁₁H₁₂O₄ mol.wt. 208.21

Synthesis

– Obtained by Fries rearrangement of 4,6-dimethylresorcinol diacetate (m.p. 44°) with aluminium chloride by heating, first at 120° and then raising the temperature to 180° over a period of an hour (19%) [5779]. **N.B.:** One of the methyl groups was displaced during the reaction.

m.p. 83–84° [5779].

1,1'-(2,4-Dihydroxy-6-methyl-1,3-phenylene)bis-ethanone

[13444-19-4]

C₁₁H₁₂O₄ mol.wt. 208.21

Syntheses

– Preparation by Fries rearrangement of orcinol diacetate (m.p. 25°) [5780] with aluminium chloride, at 140–150° for 1.5 h (80%) [5649], at 150° for 2 h (42%) [5781].

- Also obtained by acylation of γ -orcacetophenone or β -orcacetophenone with acetic anhydride in nitrobenzene in the presence of aluminium chloride in a water bath for 6 h (15–20%) [5782].
- Also obtained by reaction of acetyl chloride with an anhydrous disodium salt (SM) in chloroform (major product). SM was prepared by action of sodium ethoxide with diacetylacetone or dimethylpyrone in ethanol [5747].
- Also obtained (small amount) during an attempt to acylate 2-acetylfuran with a three-fold excess acetyl chloride in the presence of aluminium chloride,

first between 20° and 45°, then at 115° for 3 h. This diketone was formed by self-condensation of acetyl chloride in these conditions [5783].

- Also obtained by decarboxylation of 3,5-diacetyl-o-orsellinic acid [5781].
- Also obtained in two steps: first, reaction of acetyl chloride with diacetyl acetone disodium salt in chloroform at 20° for 1 h, then, after elimination of solvent, treatment of the residue in refluxing 3 N sodium hydroxide for 30 min [5783].
- Also obtained by reaction of acetic anhydride with orcinol in concentrated sulfuric acid at 130° for 15 min [5783], according to the method [5643].

m.p. 96° [5781], 95° [5747,5782,5784], 94–95° [5783];

¹H NMR [5783,5784], IR [5784], MS [5783,5784].

1,1'-(4,6-Dihydroxy-5-methyl-1,3-phenylene)bis-ethanone

[22304-66-1]

C₁₁H₁₂O₄

mol.wt. 208.21

Syntheses

- Preparation by Fries rearrangement of 2,6-diacetoxy-toluene with aluminium chloride in nitrobenzene,
 - at 75° for 3 h, under nitrogen (63%) [5693,5694];
 - at 67° for 4 h (58%) [5687].
- Preparation by reaction of acetic anhydride with 2-methyl-resorcinol,
 - in the presence of sodium acetate at reflux for 8 h (83%) [5687];
 - in the presence of zinc chloride at 142° for 15 min (60%) [5785].

m.p. 146–147° [5785], 139–142° [5687], 137–139° [5693,5694];

¹H NMR [5693,5694,5785], IR [5785], MS [5693,5694].

1,1'-(2-Hydroxy-4-methoxy-1,3-phenylene)bis-ethanone

[64857-81-4]

C₁₁H₁₂O₄

mol.wt. 208.21

Syntheses

- Preparation by Friedel–Crafts acylation of paeonol with acetic anhydride,
 - in acetic acid in the presence of boron trifluoride at 50° for 1 h [5646];
 - in nitrobenzene in the presence of aluminium chloride at r.t. for 72 h [5685].
- Preparation by methylation of 2,4-diacetylresorcinol [5682], with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 2 h (51%) [5646] or for 8 h (50%) [5652].
- Also obtained by hydrolysis of 2-(3-acetyl-2-hydroxy-4-methoxyphenyl)-2-methyl-1,3-dioxolane with a mixture of 5% aqueous hydrochloric acid and ethanol at r.t. for 5 min (almost quantitative yield) [5652].

m.p. 104° [5646,5652], 102° [5685,5786], 101–102° [5720]; IR [5720].

1,1'-(2-Hydroxy-5-methoxy-1,3-phenylene)bis-ethanone[103867-90-9] $C_{11}H_{12}O_4$ mol.wt. 208.21

Synthesis

– Obtained by hydrolysis of 2-(3-acetyl-2-hydroxy-5-methoxyphenyl)-2-methyl-1,3-dioxolane with a mixture of 5% aqueous hydrochloric acid and ethanol at r.t. for 5 min (almost quantitative yield) [5620].

m.p. 116–117° [5620]; 1H NMR [5620], IR [5620].**1,1'-(4-Hydroxy-5-methoxy-1,3-phenylene)bis-ethanone**[294888-77-0] $C_{11}H_{12}O_4$ mol.wt. 208.21

Synthesis

– Refer to: [5787].

1,1'-(4-Hydroxy-6-methoxy-1,3-phenylene)bis-ethanone[99865-77-7] $C_{11}H_{12}O_4$ mol.wt. 208.21

Syntheses

- Preparation by action of methyl iodide with the potassium salt of resodiacetophenone in ethanol [5606].
- Preparation by reaction of acetyl chloride (1 mol) with resorcinol dimethyl ether (0.15 mol) in the presence of aluminium chloride in carbon disulfide for 1 h (27%) [5788].
- Preparation by reaction of acetic acid with resacetophenone monomethyl ether (m.p. 51°) in the presence of polyphosphoric acid for 10 min in a boiling water bath (36%) [5698].

m.p. 121–122° [5788], 121°5 [5682], 121° [5698], 120° [5606];

UV [5711]; Conductimetry [5711]; Polarography [5711].

1,1'-(4,6-Dihydroxy-5-(hydroxymethyl)-1,3-phenylene)bis-ethanone[58805-54-2] $C_{11}H_{12}O_5$ mol.wt. 224.21

Synthesis

– Obtained by action of a 40% formaldehyde solution with resodiacetophenone in 1% aqueous sodium hydroxide at r.t. for 5 min (78%) [5789].

m.p. 150–151° [5789].

1,1'-(2,4-Dihydroxy-6-methoxy-1,3-phenylene)bis-ethanone

[3098-38-2]

 $C_{11}H_{12}O_5$

mol.wt. 224.21

Syntheses

- Preparation by reaction of phloroglucinol monomethyl ether,
 - with boron trifluoride-acetic acid complex at 100° for 4 h (80%) [5642];
 - with acetic anhydride and acetic acid in the presence of boron trifluoride at 20° for 1 h (81%) [5646].
- Preparation by Fries rearrangement of phloroglucinol monomethyl ether diacetate in acetic acid in the presence of boron trifluoride at 75° for 15 min (66%) [5790].
- Also obtained by partial demethylation,
 - of 2,4-diacetylphloroglucinol trimethyl ether with boron trichloride, first at -70°, then at r.t. for 20 min (72%) [5791];
 - of 2,4-diacetyl-3,5-dimethoxyphenol with boron trifluoride in ethyl ether containing a small amount of acetic acid at r.t. for 24 h (10%) [5646].
- Also obtained by monomethylation of 2,4-diacetylphloroglucinol [5789,5792],
 - with diazomethane in benzene [5646];
 - with methyl iodide in the presence of potassium carbonate in boiling acetone for 3 h [5646].
- Also obtained by hydrogenolysis of 3-(benzyloxy)-2,6-diacetyl-5-methoxyphenol [5646].
- Also obtained by treatment of 2,6-dihydroxy-4-methoxy-3-trichloroacetylacetophenone with zinc dust in acetic acid on a steam bath for 3 min (quantitative yield) [4680].
- Also refer to: [5793].

m.p. 106° [5642,5646], 105–106° [5790], 105° [4680];

[144632-80-4]

 $C_{11}H_{12}O_5$

mol.wt. 224.21

Synthesis

- Obtained by reaction of acetonitrile with pyrogallol 2-methyl ether in the presence of triflic acid, first at r.t. for 8 days, and at reflux for 30 min (20%) [5795].

m.p. 130–132° [5795];

 1H NMR [5795], IR [5795], MS [5795].

1,1'-(2,4,6-Trihydroxy-5-methyl-1,3-phenylene)bis-ethanone

[2999-42-0]

 $C_{11}H_{12}O_5$ mol.wt. 224.21

Syntheses

- Preparation by Friedel–Crafts acylation of 2-methyl-phloroglucinol with acetic anhydride/acetic acid in the presence of excess boron trifluoride,
 - at r.t. for 20 h (56%) [5646];
 - first at r.t., then heating on a steam bath for 2 h [5796], (21%) [5716].
 - Also obtained by UV irradiation of a d-uscnic acid solution in THF for 12 h at -20° under oxygen (13%) [5797].
 - Also obtained by UV irradiation of a decarbousnic acid solution in THF for 8 h at -20° under oxygen (6%) [5797].
 - Also obtained by hydrolysis of 2,4-diacetyl-3,5-dihydroxy-6-methylphenyl acetate with concentrated sulfuric acid for 10 min in cold (78%) [5797].
 - Also obtained by saponification of its diacetate (SM)—1,1'-[4,6-di(acetyloxy)-2-hydroxy-5-methyl-1,3-phenylene]bis-ethanone—with refluxing 2 N sodium carbonate for 10 min (69%). SM was prepared from the ozonid of diacetyldecarbousnic acid ($C_{21}H_{22}O_{11}$, m.p. 146°) by treatment with boiling 3% methanolic hydrogen chloride for 5 min (73%, m.p. 116°) [5798].
 - Also refer to: [5720,5799].
- m.p. 172° [5797], 169 – 170° [5716], 168° [5798], 160° [5646]; TLC [5797]; 1H NMR [5716,5797], IR [5716], UV [5797], MS [5797].

1,1'-(2,4,6-Trihydroxy-5-methoxy-1,3-phenylene)bis-ethanone

[17678-03-4]

 $C_{11}H_{12}O_6$ mol.wt. 240.21

Synthesis

- Obtained by reaction of iretol with boron trifluoride-acetic acid complex at r.t. for 20 h (52%) [4919].
- m.p. 140° [4919].

1,1'-(2-Hydroxy-4-methyl-6-(trifluoromethyl)-1,3-phenylene)bis-ethanone

[76716-15-9]

 $C_{12}H_{11}F_3O_3$ mol.wt. 260.21

Synthesis

- Obtained (poor yield) by condensation of 2,4-heptanetrione (1 mol) and 1,1,1-trifluoro-2,4-pentanedione (1 mol) in the presence of sodium hydroxide in 50% aqueous methanol at 25° for 25 h (13%) [5800].
- m.p. 83 – 85° [5800]; 1H NMR [5800], ^{19}F NMR [5800].

1,1'-[4-(Acetyloxy)-2-hydroxy-1,3-phenylene]bis-ethanone

[116470-16-7]

C₁₂H₁₂O₅ mol.wt. 236.22

Synthesis

– Obtained by heating at reflux (180°) for 1 h a mixture of 2,4-diacetylresorcinol, sodium acetate and acetic anhydride (29%) [5658].

m.p. 147–148° [5658]; ¹H NMR [5658], IR [5658], UV [5658].

1,1',1''-(2,4-Dihydroxy-1,3,5-benzenetriyl)tris-ethanone

[64857-82-5]

C₁₂H₁₂O₅ mol.wt. 236.22

Syntheses

- Obtained by heating 2,4-diacetoxyacetophenone with aluminium chloride (29%) (Fries rearrangement) [5654].
- Also obtained (by-product) by Friedel–Crafts acylation of resorcinol dimethyl ether with acetyl chloride in the presence of aluminium chloride in carbon disulfide at 10° for 1 h (5%) [5646].
- Also obtained by Friedel–Crafts acylation of paeonol with acetic anhydride in the presence of aluminium chloride in nitrobenzene at 100° for 2 h [5685].
- Also obtained by reaction of acetic anhydride (2 mol) with resacetophenone (1 mol) in the presence of aluminium chloride (3 mol) in nitrobenzene on a steam bath for 4 h (51%) [5664].
- Also obtained by reaction of acetyl chloride with 4,6-diacetylresorcinol in the presence of aluminium chloride, first at 110° for 15 min, then at 130° for 1 h (73%) [5665].
- Also obtained by degradation of 7,7'-diacetoxy-4,4'-dimethyl-3,4-dihydro-4,6'-bicycoumarin with aluminium chloride in dilute hydrochloric acid between 135° and 170° for 2 h (5%) [5654].

m.p. 137–138° [5664], 137° [5646], 136° [5665,5685], 135–136°5 [5654]; ¹H NMR [5654], MS [5654].

[85450-67-5]

C₁₂H₁₃NO₅

mol.wt. 251.24

Synthesis

- Obtained by reaction of nitromethane with 3,5-diacetyl-2,6-dimethyl-4-pyrone in the presence of potassium tert-butoxide in tert-butanol at 30–40° for 75 min (74%) [5809].

m.p. 117–119° [5809].

1,1'-(2-Hydroxy-4,6-dimethyl-1,3-phenylene)bis-ethanone

[66634-65-9]

C₁₂H₁₄O₃

mol.wt. 206.24

Syntheses

- Obtained by Friedel–Crafts acylation of 3,5-dimethylphenol with acetyl chloride in the presence of aluminium chloride in boiling carbon disulfide for some hours [5810], (40%) [5811], (36%) [5812].
- Also obtained by acylation of 3,5-dimethylanisole with acetyl chloride (6 mol) in the presence of a large excess of aluminium chloride in boiling carbon disulfide for 2 h, then, after solvent elimination, heating in a water bath for 4 h (33%) [5811].
- Also obtained by Fries rearrangement of 3,5-dimethylphenyl acetate with aluminium chloride (2 mol) in a water bath for 2 h [5810].
- Also obtained by condensation of 2,4,6-heptanetrione (1 mol) and 2,4-pentanedione (1 mol) in the presence of sodium hydroxide in 50% aqueous methanol at 25° for 25 h (50%) [5800].

m.p. 109–110° [5810,5811,5812], 102–105° [5800]; ¹H NMR [5800].

1,1'-(4-Hydroxy-5,6-dimethyl-1,3-phenylene)bis-ethanone[51233-76-2] $C_{12}H_{14}O_3$ mol.wt. 206.24

Syntheses

– Obtained (by-product) by Fries rearrangement of 2,3-di-methylphenyl acetate with aluminium chloride at 135° for 30 min (<10%) [5813].

– A sample of pure 4-hydroxy-2,3-dimethylacetophenone (m.p. 144°) [5814], stored in a stoppered bottle, was analyzed 10 years later. The melting point (144°) was lowered to 138°. By treatment of the mixture in boiling heptane, the pure insoluble 4-hydroxy-2,3-dimethylacetophenone was recovered by filtration and thoroughly washed with boiling heptane (50%). The solution was then concentrated and the residue chromatographed on silica gel with benzene-ethyl acetate-acetic acid mixture (90/5/5) as eluent. The 2,3-dimethylphenol (25%) and the pure entitled diketone (25%) were isolated [5815].

m.p. 101° [5815]; TLC [5815];

IR [5815] 1685 cm^{-1} (C=O para), 1640 cm^{-1} (C=O ortho), UV [5815].

N.B.: This transformation was unexpectedly obtained by a simple storage in a dry dull place.

1,1'-(2,4-Dihydroxy-5,6-dimethyl-1,3-phenylene)bis-ethanone[82817-51-4] $C_{12}H_{14}O_4$ mol.wt. 222.24

Synthesis

– Obtained by Fries rearrangement of 1,3-diacetoxy-4,5-di-methylbenzene with aluminium chloride at 115–120° for 30 min (54%) [5816].

m.p. 78–80° [5816]; IR [5816], UV [5816].

1,1'-(5-Ethyl-2,4-dihydroxy-1,3-phenylene)bis-ethanone[63411-83-6] $C_{12}H_{14}O_4$ mol.wt. 222.24

Synthesis

– Obtained by Fries rearrangement of 4,6-diethylresorcinol diacetate (1 mol) with aluminium chloride (2.2 mol) at 155° for 1 h (57%) [5817].

m.p. 71–73° [5817]; TLC [5817].

1,1'-(5-Ethyl-4,6-dihydroxy-1,3-phenylene)bis-ethanone

m.p. 110° [5665].

 $C_{12}H_{14}O_4$ mol.wt. 222.24**Synthesis**

– Obtained by Fries rearrangement of 2-ethylresorcinol diacetate (m.p. 70–71°) with aluminium chloride at 150° for 30 min (84%) [5665].

1,1'-(2-Hydroxy-4-methoxy-6-methyl-1,3-phenylene)bis-ethanone

[78274-03-0]

m.p. 98° [5818]; 1H NMR [5818], IR [5818], MS [5818]. $C_{12}H_{14}O_4$ mol.wt. 222.24**Synthesis**

– Obtained by Friedel–Crafts acylation of 2-hydroxy-6-methoxy-4-methylacetophenone (yield 25%) or 2-hydroxy-4-methoxy-6-methylacetophenone with acetyl chloride in the presence of aluminium chloride [5818].

1,1'-(4-Hydroxy-2,6-dimethoxy-1,3-phenylene)bis-ethanone

[72221-04-6]

– Also obtained by saponification of its veratric ester (m.p. 198°) in pyridine with powdered potassium hydroxide (pre-heated at 100°) at 50° for 1 h [5820].

m.p. 192° [5820], 127–128° [5819], 106° [5646]. One note a very large dispersion of the various melting points.

 $C_{12}H_{14}O_5$ mol.wt. 238.24**Syntheses**

– Obtained by debenzoylation of 3-acetyl-6-(benzyloxy)-2,4-di-methoxyacetophenone (83%) [5646].

– Also obtained (by-product) by Friedel–Crafts acylation of phloroglucinol trimethyl ether with acetyl chloride in the presence of aluminium chloride in boiling carbon disulfide [5819]. **N.B.:** No direct proof of the constitution of the diketone was described, but it would appear most probable that it is 3-acetyl-6-hydroxy-2,4-dimethoxyacetophenone [5819].

1,1'-(2,4-Dihydroxy-5,6-dimethoxy-1,3-phenylene)bis-ethanone

[91498-04-3]

 $C_{12}H_{14}O_6$ mol.wt. 254.24

Synthesis

- Obtained from antiarol by reaction,
- with acetic anhydride in the presence of boron trifluoride in acetic acid at 30° (max), followed by standing overnight (quantitative yield) [5821];
 - with acetyl chloride in the presence of aluminium chloride in nitrobenzene, during a short time on a steam bath (poor yield) [4946].
- m.p. 93°5–94°5 [5821], 91–93° [4946].

1,1'-(2,5-Dihydroxy-3,6-dimethoxy-1,4-phenylene)bis-ethanone

[34554-37-5]

 $C_{12}H_{14}O_6$ mol.wt. 254.24

Synthesis

- Obtained (by-product) by metallation of 2,5-dimethoxy-hydroquinonebis[tetrahydropyranyl (2) ether], followed by treatment of the intermediate aryllithium compound with acetic anhydride in THF at r.t. (3–5%) [5822].
- m.p. 159° [5822].

1,1'-(5-Amino-2-hydroxy-4,6-dimethyl-1,3-phenylene)bis-ethanone

[85450-76-6]

 $C_{12}H_{15}NO_3$ mol.wt. 221.26

Synthesis

- Preparation by catalytic hydrogenation of 3-acetyl-2-hydroxy-4,6-dimethyl-5-nitroacetophenone in ethanol in the presence of 10% Pd/C at 40° for 3 days (61%) [5809].
- m.p. 111° [5809].

1,1'-[4-(Ethylamino)-6-hydroxy-1,3-phenylene]bis-ethanone

[79324-49-5]

 $C_{12}H_{15}NO_3$ mol.wt. 221.26

Syntheses

- Obtained by hydrolysis of 2-(ethylamino)-5-[1-(ethylimino)-ethyl]-4-hydroxyacetophenone on heating with aqueous hydrochloric acid [5746].
- Also obtained first, by treatment of 3-acetamido-4,6-diacetyl-phenol with sodium hydride in N-methylpyrrolidone at <5°.

After 15 min, the mixture was treated with ethyl iodide at $<5^\circ$ for 2 h, then acidified with concentrated hydrochloric acid/ethanol (1:1) and heated to reflux for 2.5 h (63%) [5744].

m.p. 103–104° [5744], 99° [5746].

1,1'-[4,6-Dihydroxy-5-(2-propenyl)-1,3-phenylene]bis-ethanone

[75631-42-4]

$C_{13}H_{14}O_4$ mol.wt. 234.25

Syntheses

- Obtained (poor yield) by Claisen rearrangement of 4,6-di-acetylresorcinol diallyl ether (m.p. 92°) in refluxing N,N-diethylaniline for 6 h (6%) [5823].
- Also refer to: [5746].

m.p. 93–94° [5823]; MS [5823].

1,1'-[4-Hydroxy-6-(2-propenyloxy)-1,3-phenylene]bis-ethanone

[117156-74-8]

$C_{13}H_{14}O_4$ mol.wt. 234.25

Synthesis

- Obtained by partial deallylation of 3-acetyl-4,6-di-(allyloxy)acetophenone (m.p. 92°) in trifluoroacetic acid, with stirring at 0° . Stirring was continued at r.t. for a further 24 h (70%) [5605].

m.p. 95° [5605]; TLC [5605]; 1H NMR [5605], IR [5605], UV [5605].

1,1'-[2,4-Dihydroxy-6-(2-propenyloxy)-1,3-phenylene]bis-ethanone

[35075-32-2]

$C_{13}H_{14}O_5$ mol.wt. 250.24

Synthesis

- Obtained by reaction of allyl bromide with 2,4-diacetyl-phloroglucinol in the presence of potassium carbonate in refluxing acetone for 48 h (27%) [5789,5792].

m.p. 111–112° [5789,5792].

1,1'-[2-(Acetyloxy)-4,6-dihydroxy-5-methyl-1,3-phenylene]bis-ethanone

$C_{13}H_{14}O_6$ mol.wt. 266.25

Synthesis

- Obtained by treatment of usnetol with ozone, in 20 parts of chloroform or acetic acid for 1 h [5798], (15–20%) [5824].

m.p. 172° [5824].

1,1'-[4-(Acetyloxy)-2,6-dihydroxy-5-methyl-1,3-phenylene]bis-ethanone

[69150-72-7]

 $C_{13}H_{14}O_6$ mol.wt. 266.25

Synthesis

– Obtained by ozonolysis of diacetyldecarbousnic acid in carbon tetrachloride for 4 h at 15° [5797].

m.p. 120–121° [5797]; TLC [5797];

 1H NMR [5797], IR [5797], MS [5797].**1,1'-[5-(Acetyloxy)-2,4-dihydroxy-6-methoxy-1,3-phenylene]bis-ethanone** $C_{13}H_{14}O_7$ mol.wt. 282.25

Synthesis

– Obtained by reaction of acetic anhydride with 2,6-di-methoxyhydroquinone diacetate in the presence of boron trifluoride in acetic acid at 30° (max), followed by standing overnight (60%) [5821].

m.p. 98°5–100°2 [5821].

1,1'-(4-Ethyl-2-hydroxy-6-methyl-1,3-phenylene)bis-ethanone

[76716-12-6]

 $C_{13}H_{16}O_3$ mol.wt. 220.27

Synthesis

– Obtained by condensation of 2,4,6-heptanetrione (1 mol) and 2,4-hexanedione (1 mol) in the presence of sodium hydroxide in 50% aqueous methanol at 25° for 25 h (41%) [5800].

m.p. 86–89° [5800]; 1H NMR [5800].**1,1'-[4,6-Dihydroxy-5-(1-methylethyl)-1,3-phenylene]bis-ethanone**

[75643-06-0]

 $C_{13}H_{16}O_4$ mol.wt. 236.27

Synthesis

– Refer to: [5825] (Japanese patent).

1,1'-(4,6-Dihydroxy-5-propyl-1,3-phenylene)bis-ethanone

[58805-52-0]

 $C_{13}H_{16}O_4$ mol.wt. 236.27

Syntheses

– Obtained by Fries rearrangement of 2-propylresorcinol diacetate with aluminium chloride for 1 h at 130–150° [5789].

– Also refer to: [5746,5825] (Japanese patent).

1,1'-[5-(Ethoxymethyl)-4,6-dihydroxy-1,3-phenylene]bis-ethanone

[58805-51-9]

 $C_{13}H_{16}O_5$

mol.wt. 252.27

Synthesis

– Obtained by refluxing an ethanolic solution of 4,6-diacetyl-2-(hydroxymethyl)resorcinol in the presence of a small amount of concentrated sulfuric acid for 2 h (84%) [5789].

m.p. 163–165° [5789].

1,1'-[2,4-Dihydroxy-6-(2-hydroxypropoxy)-1,3-phenylene]bis-ethanone

[23937-51-1]

 $C_{13}H_{16}O_6$

mol.wt. 268.27

Synthesis

– Preparation by reaction of propylene oxide with 2,4-diacetylphloroglucinol in the presence of benzyl trimethyl ammonium hydroxide at 100° for 48 h (63%) [5792].

m.p. 152–154° [5792].

1,1'-(4-Amino-6-hydroxy-5-propyl-1,3-phenylene)bis-ethanone

[79324-47-3]

 $C_{13}H_{17}NO_3$

mol.wt. 235.28

Syntheses

– Preparation by hydrogenation of 2-allyl-3-amino-4,6-di-acetylphenol (SM) in ethanol in the presence of 5% Pd/C at atmospheric pressure and at r.t. (82%). SM was obtained by Claisen rearrangement of 3-(allyloxy)-4,6-diacetylaniline (m.p. 131–134°) in N-methylpyrrolidone under nitrogen at 200° for 3 h [5744].

– Also refer to: [5801,5826,5827].

m.p. 138–139° [5744].

1,1'-[2,4-Dihydroxy-6-methoxy-5-(2-propenyl)-1,3-phenylene]bis-ethanone

[37126-09-3]

 $C_{14}H_{16}O_5$

mol.wt. 264.28

Synthesis

– Obtained by Claisen rearrangement of 2,6-diacetyl-3-(allyloxy)-5-methoxyphenol in refluxing tetralin for 3.5 h (25%) [5789].

m.p. 84°5–85° [5789].

1,1'-[2-Hydroxy-4-methoxy-6-(2-propenyloxy)-1,3-phenylene]bis-ethanone

[58805-53-1]

 $C_{14}H_{16}O_5$ mol.wt. 264.28

Synthesis

– Obtained by reaction of methyl iodide with 2,4-diacetyl-5-(allyloxy)resorcinol in the presence of potassium carbonate in refluxing acetone for 16 h (quantitative yield) [5789].

red oil (crude product) [5789]; b.p._{0.3} 148–162° [5789].

1,1'-[5-(1,1-Dimethylethyl)-2-hydroxy-1,3-phenylene]bis-ethanone

[203004-96-0]

 $C_{14}H_{18}O_3$ mol.wt. 234.20

Synthesis

– Obtained by Friedel–Crafts acylation of p-tert-butylphenol with acetyl chloride (3 mol) in nitrobenzene in the presence of aluminium chloride at 65–70° overnight (45%) [5766].

m.p. 53–54° [5766]; ¹H NMR [5766], MS [5766].

1,1'-(5-Butyl-4,6-dihydroxy-1,3-phenylene)bis-ethanone

[40449-66-9]

 $C_{14}H_{18}O_4$ mol.wt. 250.29

Syntheses

– Obtained by Fries rearrangement of 2-butylresorcinol diacetate with aluminium chloride for 1 h at 130–150° [5789].

– Also refer to: [5793,5825] (Japanese patent).

m.p. 61–64° [5789].

1,1'-(2,4-Dihydroxy-6-methoxy-5-propyl-1,3-phenylene)bis-ethanone

[37126-10-6]

 $C_{14}H_{18}O_5$ mol.wt. 266.29

Synthesis

– Obtained by hydrogenation of 2,4-diacetyl-6-allyl-5-methoxyresorcinol in ethanol over 5% Pd/C at three atmospheres for 2 h (61%) [5789].

m.p. 48–49° [5789].

1,1'-(4,6-Dihydroxy-2-methoxy-5-propyl-1,3-phenylene)bis-ethanone[37126-08-2] $C_{14}H_{18}O_5$ mol.wt. 266.29

Syntheses

– Obtained by hydrogenation of 2,4-diacetyl-6-allyl-5-(benzyl-oxy)-3-methoxyphenol in ethanol containing hydrochloric acid at three atmospheres in the presence of 5% Pd/C for 1 h (61%) [5789].

– Also refer to: [5793,5828].

b.p._{0.6} 150–170° [5789]; m.p. 80° [5789].**1,1'-[2,4-(Diacetyloxy)-6-hydroxy-5-methyl-1,3-phenylene]bis-ethanone** $C_{15}H_{16}O_7$ mol.wt. 308.29

Synthesis

– Obtained from the ozonid of diacetyldecarbousnic acid ($C_{21}H_{22}O_{11}$, m.p. 146°) by treatment with boiling 3% methanolic hydrogen chloride for 5 min (73%) [5798].

m.p. 116° [5798]; sublimation without decomposition at 110°/12 mm [5798].

1,1'-(2,4-Dihydroxy-5-(3-methyl-2-butenyl)-1,3-phenylene)bis-ethanone[117374-55-7] $C_{15}H_{18}O_4$ mol.wt. 262.31

Syntheses

- Obtained by thermal rearrangement,
- of 3-acetyl-2,4-bis(3-methyl-2-butenyloxy)-acetophenone (m.p. 62°) in refluxing N,N-dimethylaniline for 1.5 h (11%) [5829];
 - of 5-acetyl-2,4-bis(3,3-dimethylallyloxy)-acetophenone (m.p. 103–104°), in refluxing N,N-dimethylaniline for 3 h (6%) [5830], in refluxing n-decane for 18 h (6%) [5830], in refluxing o-xylene for 90 h (10%) [5830] or by heating in a sealed tube at 150° for 18 h (6%) or at 185° for 8 h (2%) [5830].

m.p. 65–66° [5830]; TLC [5830]; 1H NMR [5830], IR [5830], UV [5830], MS [5830].**1,1'-(4,6-Dihydroxy-5-(3-methyl-2-butenyl)-1,3-phenylene)bis-ethanone**[117374-56-8] $C_{15}H_{18}O_4$ mol.wt. 262.31

Syntheses

– Obtained (poor yields) by thermal rearrangement of 5-acetyl-2,4-bis(3,3-dimethylallyloxy)acetophenone (m.p. 103–104°),

- in refluxing n-decane for 18 h (8%) [5830];
- in refluxing o-xylene for 90 h (11%) [5830];
- by heating in a sealed tube at 150° for 8 h (10%) [5830].

m.p. 89–90° [5830]; TLC [5830]; ¹H NMR [5830], IR [5830], UV [5830], MS [5830].

1,1'-[4-Hydroxy-2-[(3-methyl-2-butenyl)oxy]-1,3-phenylene]bis-ethanone

[136811-82-0]

C₁₅H₁₈O₄ mol.wt. 262.31

Syntheses

- Obtained by Claisen rearrangement of 3-acetyl-2,4-bis(3-methyl-2-butenyloxy)acetophenone with palladium chloride-bis(acetonitrile) in refluxing dioxane for 45 min (29%) [5657].
- Also refer to: [5831].

m.p. 51° [5657]; ¹H NMR [5657], IR [5657], UV [5657], MS [5657].

1,1'-[4-Hydroxy-6-[(3-methyl-2-butenyl)oxy]-1,3-phenylene]bis-ethanone

[136811-83-1]

C₁₅H₁₈O₄ mol.wt. 262.31

Syntheses

- Obtained by Claisen rearrangement of 5-acetyl-2,4-bis(3-methyl-2-butenyloxy)acetophenone,
 - with palladium chloride-bis(acetonitrile) in refluxing dioxane for 4 h (95%) [5657];
 - with boron trifluoride etherate at r.t. for 7 days (48%) [5657].
- Also refer to: [5831].

m.p. 83–87° [5657]; ¹H NMR [5657], UV [5657], MS [5657].

1,1'-[4-(Ethylamino)-6-hydroxy-5-propyl-1,3-phenylene]bis-ethanone

[79324-51-9]

C₁₅H₂₁NO₃ mol.wt. 263.34

Syntheses

- Preparation by hydrogenation of 2-allyl-3-hydroxy-4,6-di-acetyl-N-ethylaniline (SM) in ethanol in the presence of 5% Pd/C at 15–20 psi for 2.5 h (63%). SM was obtained by Claisen rearrangement of 3-(allyloxy)-4,6-diacetyl-N-ethyl-aniline (m.p. 82–83°) in refluxing N-methylpyrrolidone under nitrogen for 1 h [5744].
 - Also refer to: [5826].
- m.p. 114–115° [5744].

1,1'-(4-Hydroxy-5-iodo-6-phenoxy-1,3-phenylene)bis-ethanone

[145489-92-5]

 $C_{16}H_{13}IO_4$ mol.wt. 396.18

Synthesis

– Preparation by thermal rearrangement of 4,6-diacetyl-3-hydroxy-2-phenyliodonophenolate (SM) in refluxing acetonitrile for 30 min (50%). SM was obtained by reaction of iodosobenzene diacetate with resodiacetophenone in methanol in the presence of potassium hydroxide, at 0° for 30 min (40%, m.p. 120–130°) [5709].

m.p. 132–136° [5709]; 1H NMR [5709], IR [5709], MS [5709].

1,1'-[4'-(Dimethylamino)-3-hydroxy-5-methyl[1,1'-biphenyl]-2,6-diyl]bis-ethanone

[108909-50-8]

 $C_{19}H_{21}NO_3$ mol.wt. 311.38

Synthesis

– Obtained by aromatization of 4,6-diacetyl-5-[4-(dimethyl-amino)phenyl]-3-methyl-2-cyclohexen-1-one (m.p. 117°) with bromine in chloroform (45%) or by heating at 170° for 3 h [5832].

m.p. 153° [5832]; IR [5832].

1,1'-[2-Hydroxy-4-(phenylmethoxy)-6-(2-propenyloxy)-1,3-phenylene]bis-ethanone

[37126-05-9]

 $C_{20}H_{20}O_5$ mol.wt. 340.38

Synthesis

– Obtained by reaction of benzyl chloride with 2,4-di-acetyl-5-(allyloxy)resorcinol in the presence of potassium carbonate and potassium iodide in refluxing acetone for 43 h (33%) [5789].

m.p. 92° [5789].

1,1'-[4-Hydroxy-2-methoxy-6-(phenylmethoxy)-5-(2-propenyl)-1,3-phenylene]bis-ethanone $C_{21}H_{22}O_5$ mol.wt. 354.40

Syntheses

– Obtained by Claisen rearrangement of 3-acetyl-4-allyloxy-6-benzyloxy-2-methoxyacetophenone in refluxing tetralin under nitrogen for 4 h (36%) [5789].

– Also refer to: [5793,5828].

oil [5789].

20.1.2 Diversely Substituted Acetyl Groups

1,1'-(2-Hydroxy-5-methyl-1,3-phenylene)bis[2-chloroethanone]

[99984-12-0]

 $C_{11}H_{10}Cl_2O_3$

mol.wt. 261.10

Syntheses

– Obtained (by-product) by Friedel–Crafts acylation of p-cresol methyl ether with chloroacetyl chloride in the presence of aluminium chloride in refluxing carbon disulfide for 4–5 h [4625].

– Also obtained by Friedel–Crafts acylation of p-cresol with chloroacetyl chloride in the presence of aluminium chloride at 140° for 4 h [4623].

m.p. 168° [4623], 167–168° [4625].

1,1'-(2-Hydroxy-4,5,6-trimethoxy-1,3-phenylene)bis[2-phenylethanone]

3,4,5-Trimethoxy-2,6-bis(phenylacetyl)phenol

[22228-86-0]

 $C_{25}H_{24}O_6$

mol.wt. 420.46

Syntheses

– Obtained by Friedel–Crafts acylation of 6-hydroxy-2,3,4-trimethoxyphenyl benzyl ketone with phenylacetyl chloride in the presence of aluminium chloride [5251].

– Also obtained (by-product) by Friedel–Crafts acylation of antiarol with phenylacetyl chloride in the presence of aluminium chloride (<3%) [5251].

m.p. 106° [5251]; 1H NMR [5251], IR [5251].

20.2 Acetyl Groups Located on Different Rings

20.2.1 Diphenyl Derivatives

Symmetrical ketones

1,1'-(2,2'-Dihydroxy[1,1'-biphenyl]-3,3'-diyl)bis-ethanone

[60312-44-9]

 $C_{16}H_{14}O_4$

mol.wt. 270.28

Synthesis

– Obtained by alkaline degradation of 8,8'-bichromonyl (m.p. 326°) with refluxing 10% sodium hydroxide for 20 min [5833].

m.p. 167–168° [5833]; IR [5833].

1,1'-(4,4'-Dihydroxy[1,1'-biphenyl]-3,3'-diyl)bis-ethanone

[13938-28-8]

 $C_{16}H_{14}O_4$ mol.wt. 270.28

Syntheses

- Preparation by Fries rearrangement of 4,4'-diacetoxy-biphenyl,
 - with a mixture of aluminium chloride and sodium chloride (5:1, w/w), first at 140°, then at 200° for 2 min (melting) (70%) [5834];
 - with a mixture of aluminium chloride and zinc chloride (5:1, w/w), first at 140°, then at 200° for 2 min (melting) (82%) [5834];
 - with aluminium chloride at 120° [5835], (75%) [5836,5837];
 - with aluminium chloride in refluxing chlorobenzene for 24 h (19%) [5838].
 - Also obtained by alkaline degradation of 6,6'-bichromonyl (m.p. 298–299°) with refluxing 10% sodium hydroxide for 20 min [5833].
 - Also refer to: [5839,5840].
- m.p. 219–220° [5836], 219–219°5 [5837], 215–216° [5838], 209–210° [5833];
IR [5838].

1,1'-(6,6'-Dihydroxy[1,1'-biphenyl]-3,3'-diyl)bis-ethanone

[23080-48-0]

 $C_{16}H_{14}O_4$ mol.wt. 270.28

Syntheses

- Preparation by Fries rearrangement of 2,2'-diacetoxy-biphenyl (1 mol) with aluminium chloride (1 mol) at 110–120° for 4 h (52%) [5835].
 - Also obtained by Friedel–Crafts acylation of 2,2'-di-hydroxybiphenyl (1 mol) with acetyl chloride (4 mol) in the presence of aluminium chloride (4 mol) at 110–120° [5835].
- m.p. 275° [5835].

1,1'-(2,2',4,4'-Tetrahydroxy[1,1'-biphenyl]-3,3'-diyl)bis-ethanone

[2551-44-2]

 $C_{16}H_{14}O_6$ mol.wt. 302.28

Syntheses

- Obtained by refluxing a solution of 9,9'-di-O-methylergoflavinone—m.p. 330° (d)—in 50% aqueous potassium hydroxide for 30 min (10%) [5841].
- Also obtained (poor yield) by Fries rearrangement of 6,6'-bi-(7-acetoxy-4-methylcoumarin) (m.p. 327°) with aluminium chloride at 260° for 75 min, followed by heating the resulting 6,6'-bi-(8-acetyl-7-hydroxy-4-methylcoumarin) with 20% (w/v) aqueous sodium hydroxide on a steam bath for 5 h under nitrogen (<3%) [5842].

- Also obtained by Fries rearrangement of 2,2',4,4'-tetraacetoxybiphenyl (1 mol) with aluminium chloride (4 mol),
 - without solvent at 130–140° for 4 h (27%) [5835];
 - in nitrobenzene at r.t. for 24 h [5835].
 - Also refer to: [5843].
- m.p. 249–250° [5841], 248–249° [5842], 245° [5835]; IR [5841].

1,1'-(2,2',6,6'-Tetrahydroxy[1,1'-biphenyl]-3,3'-diyl)bis-ethanone

[93107-98-3]

C₁₆H₁₄O₆ mol.wt. 302.28

Synthesis

- Obtained by oxidative coupling of resacetophenone using silica-bound ferric chloride, first in methylene chloride, then, after solvent elimination, the residue left at r.t. for a week (13%) [5844].

m.p. 286–287° [5844]; TLC [5844]; IR [5844].

1,1'-(4,4',6,6'-Tetrahydroxy[1,1'-biphenyl]-3,3'-diyl)bis-ethanone

[23080-53-7]

C₁₆H₁₄O₆ mol.wt. 302.28

Syntheses

- Obtained by Fries rearrangement of 2,2',4,4'-tetra-acetoxybiphenyl (1 mol) with aluminium chloride (4 mol),
 - without solvent at 130–140° for 4 h (30%) [5835];
 - in nitrobenzene at r.t. for 24 h [5835].
 - Also obtained by oxidative coupling of resacetophenone using silica-bound ferric chloride, first in methylene chloride, then, after solvent elimination, the residue left at r.t. for a week (10%) [5844].
- m.p. 236° [5835], 197–198° [5844]. One of the reported melting points is obviously wrong.
- ¹H NMR [5844], IR [5844]; TLC [5844].

1,1'-(5,5',6,6'-Tetrahydroxy[1,1'-biphenyl]-3,3'-diyl)bis-ethanone

[224030-70-0]

C₁₆H₁₄O₆ mol.wt. 302.28

Synthesis

- Refer to: [5845].

1,1'-(2,2'-Dihydroxy-5,5'-dimethyl[1,1'-biphenyl]-3,3'-diyl)bis-ethanone

[13938-30-2]

 $C_{18}H_{18}O_4$ mol.wt. 298.34

Syntheses

- Obtained by hydrolysis of [m,m'-bitolyl]-6,6'-diol-5,5'-bis(2-methyl-1,3-dioxolan-2-yl), its diketal—[24046-06-8], $C_{22}H_{26}O_6$, m.p. 169°5–170°—with hydrogen chloride in methanol (almost quantitative yield) [5846].
 - Also obtained (poor yield) by Fries rearrangement of 2,2'-diacetoxy-5,5'-dimethylbiphenyl with aluminium chloride in nitrobenzene at 120° for 2 h (11%) [5846].
 - Also refer to: [5847].
- m.p. 189°5–190° [5846]; TLC [5846];
 1H NMR [5846,5847], IR [5846,5847].

1,1'-(2,2'-Dihydroxy-6,6'-dimethoxy[1,1'-biphenyl]-3,3'-diyl)bis-ethanone

[93107-89-2]

 $C_{18}H_{18}O_6$ mol.wt. 330.34

Synthesis

- Obtained by oxidative coupling of resacetophenone 4-methyl ether using silica-bound ferric chloride, first in methylene chloride, then, after solvent elimination, the residue left at r.t. for a week (10%) [5844].
- m.p. 322° [5844]; TLC [5844]; IR [5844].

1,1'-(4,4'-Dihydroxy-2,2'-dimethoxy[1,1'-biphenyl]-3,3'-diyl)bis-ethanone

[2551-38-4]

 $C_{18}H_{18}O_6$ mol.wt. 330.34

Syntheses

- Obtained by degradation of 1,1',9,9'-tetra-O-methylergoflavinone in 10% sodium hydroxide solution at reflux for 2 h under nitrogen [5848], (40%) [5841].
- Also obtained by degradation of 9,9'-di-O-ethyl-1,1'-di-O-methylergoflavinone (m.p. 271°) in 1% sodium hydroxide solution on a steam bath for 2 h (31%) [5841].
- Also obtained by degradation of 6,6'-bis(5-methoxy-2-methylchromone) in 80% (w/v) aqueous sodium hydroxide solution on a steam bath for 2.5 h under nitrogen (11%) [5848].
- Also obtained by degradation of 1,1',9-tri-O-methylchrysinone A in 10% aqueous sodium hydroxide solution on a steam bath for 1.5 h under nitrogen (9%) [5849].

- Also obtained by degradation of 1,1',9,9'-tetra-O-methylergoflavin (m.p. 282° (d)) with barium hydroxide octahydrate in boiling water for 5 h (5%) [5850].
- Also obtained by degradation of 1,1'-di-O-methyl-9,9'-di-O-ethylergoflavin (m.p. 280° (d)) in a 50% (w/v) barium hydroxide octahydrate solution in boiling water for 5 h (<2%) [5841].

m.p. 168–169° [5848], 168° [5841,5850];

¹H NMR [5848], IR [5841,5848,5849], UV [5841].

1,1'-(4,4'-Dihydroxy-6,6'-dimethoxy[1,1'-biphenyl]-3,3'-diyl)bis-ethanone

[93107-86-9]

C₁₈H₁₈O₆ mol.wt. 330.34

Synthesis

- Obtained by oxidative coupling of resacetophenone 4-methyl ether using silica-bound ferric chloride, first in methylene chloride, then, after solvent elimination, the residue left at r.t. for a week (10%) [5844].

m.p. 125° [5844]; TLC [5844]; ¹H NMR [5844], IR [5844].

1,1'-(6,6'-Dihydroxy-5,5'-dimethoxy[1,1'-biphenyl]-3,3'-diyl)bis-ethanone

[29799-22-2]

C₁₈H₁₈O₆ mol.wt. 330.34

Syntheses

- Obtained by alkaline CuO oxidation of lignin (compound **Vn-Vn**) named dehydrodiacetovanillone [5851].
- Also refer to: [5852].

GC [5851], GC-MS [5851].

N.B.: Utilisation in the long-lasting perfume compositions [5852].

1,1-(2,2',4,4'-Tetrahydroxy[1,1'-biphenyl]-3,3',5,5'-tetrayl)tetrakis-ethanone

[23080-58-2]

C₂₀H₁₈O₈ mol.wt. 386.36

Syntheses

- Obtained by Fries rearrangement of 2,2',4,4'-tetra-acetoxybiphenyl (1 mol) with aluminium chloride (4 mol),
 - without solvent at 130–140° for 4 h (20%) [5835];
 - in nitrobenzene at r.t. for 24 h [5835].
- Also obtained by Friedel–Crafts acylation of 2,2',4,4'-tetrahydroxybiphenyl (1 mol) with acetyl chloride (4 mol) in the presence of aluminium chloride (7 mol) at 120° for 2 h [5835].

m.p. 302° [5835].

1,1'-(2,2'-Diethoxy-4,4'-dihydroxy[1,1'-biphenyl]-3,3'-diyl)bis-ethanone

[35292-40-1]

 $C_{20}H_{22}O_6$ mol.wt. 358.39

Synthesis

- Obtained by degradation of 1,1',9,9'-tetra-O-ethyl-ergoflavinone (m.p. 303–306°) (SM) in 10% aqueous sodium hydroxide solution on a steam bath for 2 h under nitrogen (22%). SM was obtained by oxidation of 1,1',9,9'-tetra-O-ethylergoflavin with Jones reagent [5848].

m.p. 99° [5848]; 1H NMR [5848].**1,1'-(2,2'-Dihydroxy-4,4',6,6'-tetramethoxy[1,1'-biphenyl]-3,3'-diyl)bis-ethanone**

[35134-71-5]

 $C_{20}H_{22}O_8$ mol.wt. 390.39

Syntheses

- Obtained by oxidative coupling of phloracetophenone 4,6-dimethyl ether (*Xanthoxylin*) using silica-bound ferric chloride, either at 43–45° for 6 days (81%) [5853], or first in methylene chloride, then, after solvent elimination, the residue left at r.t. for a week (40%) [5844].
- Obtained by Friedel–Crafts acylation of 2,2',4,4',6,6'-hexamethoxybiphenyl,
 - with acetic anhydride in the presence of aluminium chloride in nitrobenzene (20%) [5854];
 - with acetyl chloride in the presence of aluminium chloride in ethyl ether (15%) [5854].

m.p. 262–264° [5844], 254–257° [5854], 211–212° [5853]. One of the reported melting points is obviously wrong.

 1H NMR [5844,5853,5854], ^{13}C NMR [5853], IR [5844,5853], MS [5853].**Asymmetrical ketones****1,1'-(4,6'-Dihydroxy[1,1'-biphenyl]-3,3'-diyl)bis-ethanone**

[131844-78-5]

 $C_{16}H_{14}O_4$ mol.wt. 270.28

Synthesis

- Refer to: [4664] (European patent).

1,1'-(2',3,6,6'-Tetrahydroxy[1,1'-biphenyl]-2,3'-diyl)bis-ethanone (*Cynandione A*)
 1,1'-(2,2',3',6,-Tetrahydroxy[1,1'-biphenyl]-3,4'-diyl)bis-ethanone
 (Present name attributed by CAS Registry Handbook Number Section-1995 Supplement)

[168706-29-4]

C₁₆H₁₄O₆ mol.wt. 302.28

Isolation from natural sources

- From the *Cynanchum taiwanianum* (Asclepiadaceae) [5855,5856,5857,5858,5859].
- From the *Cynanchum wilfordii* Hemsley (Asclepiadaceae) [5860,5861,5862,5863].

N.B.: The structure of *Cynandione A*, previously designated as 3',4'-diacetyl-2,2',3,6'-tetrahydroxy-biphenyl [5855], has been revised as 2,3'-diacetyl-2',3,6,6'-tetrahydroxybiphenyl [5859] in 1997.

m.p. 203–206° [5855]; ¹H NMR [5855,5857,5859], ¹H NMR-NOE [5859], ¹³C NMR [5855], IR [5855,5859], UV [5855], MS [5855,5857].

1,1'-(2,4',6,6'-Tetrahydroxy[1,1'-biphenyl]-3,3'-diyl)bis-ethanone

[93108-00-0]

C₁₆H₁₄O₆ mol.wt. 302.28

Synthesis

- Obtained by oxidative coupling of resacetophenone using silica-bound ferric chloride, first in methylene chloride, then, after solvent elimination, the residue left at r.t. for a week (15%) [5844].

m.p. 130° [5844]; TLC [5844]; IR [5844].

1,1'-(3-Hydroxy-4',5-dimethyl[1,1'-biphenyl]-2,6-diyl)bis-ethanone

[108909-49-5]

C₁₈H₁₈O₃ mol.wt. 282.34

Synthesis

- Obtained by aromatization of 4,6-diacetyl-3-methyl-5-(4-methylphenyl)-2-cyclohexen-1-one (m.p. 140°) with bromine in chloroform (40%) or by heating at 170° for 3 h [5832].

m.p. 165° [5832].

1,1'-(2,4'-Dihydroxy-2',4'-dimethoxy[1,1'-biphenyl]-3,3'-diyl)bis-ethanone

[35287-64-0]

C₁₈H₁₈O₆ mol.wt. 330.34

Synthesis

– Obtained by degradation of 6,8'-bis(5-methoxy-2-methylchromone) (m.p. 250–252°) in 80% (w/v) aqueous sodium hydroxide solution on a steam bath for 2 h (13%) [5848].

[78563-10-7]

 $C_{17}H_{16}O_6$ mol.wt. 316.31

Synthesis

- Preparation by Fries rearrangement of 2,2',5,5'-tetra-acetoxydiphenylmethane with aluminium chloride at 150–155° for 20 min (50%) [5866].
- m.p. 227–228° [5866]; IR [5866], MS [5866].

1,1'-[Methylenebis(4,6-dihydroxy-3,1-phenylene)]bis-ethanoneC₁₇H₁₆O₆ mol.wt. 316.31

Synthesis

- Obtained by heating at reflux a mixture of resaceto-phenone, 40% formaldehyde and concentrated hydrochloric acid for 2 h [5879].

m.p. >250° [5879].

1,1'-[Methylenebis(4,5,6-trihydroxy-3,1-phenylene)]bis-ethanoneC₁₇H₁₆O₈ mol.wt. 348.31

Synthesis

- Obtained by reaction of formaldehyde with gallaceto-phenone in the presence of hydrogen chloride [5182,5879].

m.p. 265° [5879].

1-[3-[(3-Acetyl-4-hydroxyphenyl)methyl]-2-hydroxy-5-(hydroxymethyl) phenyl]ethanone*2',6'''-Dihydroxy-5'-(hydroxymethyl)-3',3'''-methylenediacetophenone*

[30787-44-1]

C₁₈H₁₈O₅ mol.wt. 314.34

Synthesis

- Obtained by hydrolyzing 2-hydroxy-5-(chloro-methyl)acetophenone [5880,5881].

1,1'-[Methylenebis(4-hydroxy-5-methyl-3,1-phenylene)]bis-ethanone

[38782-67-1]

C₁₉H₂₀O₄ mol.wt. 312.37

Synthesis

- Preparation by Fries rearrangement of 2,2'-di-acetoxy-3,3'-dimethyldiphenylmethane in nitrobenzene with aluminium chloride at 60° for 3 h [5882], (59%) [5872].

m.p. 257° [5872]; ¹H NMR [5882], IR [5882].

1-[3-[(5-Acetyl-4-hydroxy-2-methoxyphenyl)methyl]-2-hydroxy-4-methoxyphenyl]ethanone

[71204-08-5]

C₁₉H₂₀O₆ mol.wt. 344.36

Synthesis

– Obtained by acid-catalyzed condensation of formaldehyde with 2-hydroxy-4-methoxy-acetophenone in the presence of 35% aqueous sulfuric acid [4897].

m.p. 161–162° [4897]; ¹H NMR [4897].

1,1'-[Methylenebis(2,4-dihydroxy-5-methyl-3,1-phenylene)]bis-ethanone

C₁₉H₂₀O₆ mol.wt. 344.36

Synthesis

– Preparation by action of 40% aqueous formaldehyde with 2,4-dihydroxy-5-methylacetophenone in ethanol in the presence of concentrated sulfuric acid at 10° (77%) [5883].

m.p. 258° (d) [5883].

1,1'-[Methylenebis(4,6-dihydroxy-5-methyl-3,1-phenylene)]bis-ethanone

C₁₉H₂₀O₆ mol.wt. 344.36

Synthesis

– Preparation by action of 40% aqueous formaldehyde with 2,4-dihydroxy-3-methylacetophenone in ethanol in the presence of concentrated sulfuric acid at r.t. for 3 days (68%) [5883].

m.p. 263–264° [5883].

1,1'-[Methylenebis(2-hydroxy-4-methoxy-3,1-phenylene)]bis-ethanone

[28466-42-4]

C₁₉H₂₀O₆ mol.wt. 344.36

Synthesis

– Obtained by acid-catalyzed condensation of formaldehyde with 2-hydroxy-4-methoxy-acetophenone in the presence of 35% aqueous sulfuric acid [4897].

m.p. 255–256° [4897];

diacetate derivative: m.p. 161–162° [4897]; ¹H NMR [4897].

[71204-07-4]

 $C_{19}H_{20}O_6$ mol.wt. 344.36

Synthesis

- Obtained by acid-catalyzed condensation of formaldehyde with 2-hydroxy-4-methoxy-acetophenone in the presence of 35% aqueous sulfuric acid [4897].

m.p. 204–205° [4897]; 1H NMR [4897].**1,1'-[Methylenebis(2,4-dihydroxy-6-methoxy-3,1-phenylene)]bis-ethanone (*Didemethylpseudoaspidin*)**

[142382-28-3]

 $C_{19}H_{20}O_8$ mol.wt. 376.36

Isolation from natural sources

- From the roots of *Euphorbia ebracteolata* Hayata (Euphorbiaceae) [5884].
- From the roots of *Euphorbia kansui* (Euphorbiaceae) [5885].

m.p. 232–233° [5885];

 1H NMR [5885], ^{13}C NMR [5885], IR [5885], EIMS [5885].**1,1'-[Methylenebis(2,4,6-trihydroxy-5-methyl-3,1-phenylene)]bis-ethanone** $C_{19}H_{20}O_8$ mol.wt. 376.36

Synthesis

- Obtained by hydrolysis of 8-isobutyryl-5-methoxy-methyleneoxy-2,2-dimethylchroman-7-ol (SM) in the presence of 2,4,6-trihydroxy-3-methylacetophenone. The hydrolysis of SM proceeds with the liberation of formaldehyde which condenses with phenol under these acidic conditions [5716].

1,1',1'',1'''-[Methylenebis(2,4-dihydroxy-5,1,3-benzenetriyl)]tetrakis-ethanone

[84422-46-8]

 $C_{21}H_{20}O_8$ mol.wt. 400.39

Synthesis

- Obtained by reaction of formaldehyde with 3-acetylresacetophenone in the presence of dilute sulfuric acid in refluxing ethanol for 16 h (42%) [5661].

m.p. 184° [5661]; 1H NMR [5661].

1,1',1'',1'''-[Methylenebis(4,6-dihydroxy-5,1,3-benzenetriyl)]tetrakis-ethanone

[84422-38-8]

 $C_{21}H_{20}O_8$

mol.wt. 400.39

Synthesis

- Obtained by acid-catalysed condensation of formaldehyde with 5-acetylresacetophenone in the presence of dilute sulfuric acid in refluxing ethanol for 30 min [5661].

m.p. 345–346° [5661]; TLC [5661].

1,1',1'',1'''-[Methylenebis(2,4,6-trihydroxy-5,1,3-benzenetriyl)]tetrakis-ethanone

[58316-48-6]

 $C_{21}H_{20}O_{10}$

mol.wt. 432.39

Synthesis

- Obtained by condensation of formaldehyde with 2,4-diacetylphloroglucinol (35%) [5608].

Isolation from natural sources

- From the culture fluid of *Pseudomonas aurantiaca* [5886].
- Also refer to: [5720] (compound **28**).

m.p. 284–286° [5608].

1,1'-[Methylenebis(2,6-dihydroxy-4-methoxy-5-methyl-3,1-phenylene)]bis-ethanone (*Mallotphenone*)

[98569-63-2]

 $C_{21}H_{24}O_8$

mol.wt. 404.42

Isolation from natural sources

- From the pericarps of *Mallotus japonicus* Muell. Arg. (Euphorbiaceae) [5887,5888,5889,5890,5891,5892,5893,5894,5895].

1-[3,5-Bis[(5-acetyl-2-hydroxy-3-methylphenyl)methyl]-4-hydroxyphenyl]ethanone

[38782-69-3]

C₂₈H₂₈O₆ mol.wt. 460.53

Synthesis

– Obtained by Fries rearrangement of 2,6-bis(2-acetoxy-3-methylbenzyl)-acetoxymethylbenzene with aluminium chloride in nitrobenzene at 50° for 5 h (41%) [5872].

m.p. 242° [5872].

20.2.2.2 Halogenated Acetyl Groups

1,1'-[Methylenebis(5-chloro-2,4-dihydroxy-3,1-phenylene)]bis[2,2-trifluoroethanone

[65240-40-6]

C₁₇H₈Cl₂F₆O₆ mol.wt. 493.14

Synthesis

– Preparation by reaction of paraformaldehyde with 5-chloro-2,4-dihydroxy- α , α -trifluoroacetophenone in methanol in the presence of concentrated sulfuric acid at 0° for 5 h (87%) [4689].

m.p. 205° [4689].

**1,1'-[Methylenebis(2,4-dihydroxy-5-methyl-3,1-phenylene)]bis
[2,2,2-trifluoroethanone**

[65240-30-4]

C₁₉H₁₄F₆O₆ mol.wt. 452.31

Synthesis

- Preparation by reaction of paraformaldehyde with 2,4-dihydroxy-5-methyl- α,α,α -trifluoro-acetophenone at 140° (92%) [4689].

m.p. 234° [4689].

**1,1'-[Methylenebis(4,6-dihydroxy-5-methyl-3,1-phenylene)]bis
[2,2,2-trifluoroethanone**

[65240-39-3]

C₁₉H₁₄F₆O₆ mol.wt. 452.31

Synthesis

- Preparation by reaction of paraformaldehyde with 2,4-dihydroxy-3-methyl- α,α,α -trifluoro-acetophenone in methanol in the presence of concentrated sulfuric acid at 0° for 5 h (87%) [4689].

m.p. 195° [4689].

**1,1'-[Methylenebis(5-ethyl-2,4-dihydroxy-3,1-phenylene)]bis
[2,2,2-trifluoroethanone**

[65240-29-1]

C₂₁H₁₈F₆O₆ mol.wt. 480.36

Synthesis

- Preparation by reaction of paraformaldehyde with 2,4-dihydroxy-5-ethyl- α,α,α -trifluoroacetophenone at 140° for 1 h (92%) [4689].

m.p. 170° [4689].

m.p. 110° [4689].

20.2.3 Diphenylalkanes Derivatives and Homologues

1,1'-[1,2-Ethanediy]bis(6-hydroxy-3,1-phenylene)]bis-ethanone

[34036-53-8]

C₁₈H₁₈O₄ mol.wt. 298.34

Synthesis

– Preparation by Friedel–Crafts acylation of 1,2-bis(p-methoxyphenyl)ethane (m.p. 127–129°) with acetyl chloride in the presence of aluminium chloride in ethylene dichloride at 65° for 2.5 h (86%) [5899].

m.p. 194–195°5 [5899].

1,1'-[Ethylidenebis(4,5,6-trihydroxy-3,1-phenylene)]bis-ethanone

[128197-51-3]

C₁₈H₁₈O₈ mol.wt. 362.34

Syntheses

– Refer to: [5900,5901,5902,5903] (Japanese patents).

1-[5-[2-(3-Acetyl-4-hydroxyphenyl)ethyl]-2-methoxyphenyl]ethanone

[27171-77-3]

C₁₉H₂₀O₄ mol.wt. 312.37

Syntheses

- Obtained by partial methylation of 1,2-bis-(3'-acetyl-4'-hydroxyphenyl)ethane with dimethyl sulfate in ethyl ether in the presence of 2 N aqueous potassium hydroxide at 100° for 8 h (29%) [5899] or with methyl halide [5904].
- Also obtained by acetylation of 1,2-bis(4'-methoxyphenyl)ethane with acetyl chloride in the presence of aluminium chloride [5904].

m.p. 62–63°5 [5899].

1,1'-[2-Hydroxy-5-[1-(4-hydroxyphenyl)-1-methylethyl]-1,3-phenylene]bis-ethanone

[104676-23-5]

C₁₉H₂₀O₄ mol.wt. 312.37

Syntheses

- Obtained by action of acetyl chloride with 2,2-bis(4-acetoxyphenyl)propane in ethylene dichloride in the presence of aluminium chloride at 50° for 5 h (38%) [5905].
- Also refer to: [5906].

m.p. 151–152° [5905].

1,1'-[(1-Methylethylidene)bis(6-hydroxy-3,1-phenylene)]bis-ethanone

[3511-69-1]

C₁₉H₂₀O₄ mol.wt. 312.37

Syntheses

- Preparation by reaction of acetyl chloride,
 - with 2,2-bis(4-ethoxyphenyl)propane (bisphenol A diethyl ether) in the presence of aluminium chloride in methylene chloride at 30° for 30 min (61%) [5905] or in ethylene dichloride at 50° for 3 h (63–65%) [5907];
 - with 2,2-bis(4-methoxyphenyl)propane (bisphenol A dimethyl ether) in the presence of aluminium chloride in ethylene dichloride at 70° for 2 h (45%) [5908].
- Also obtained by Fries rearrangement of bisphenol A diacetate in nitrobenzene,
 - in the presence of aluminium chloride, first at r.t., then at 120–130° for 3 h (28%) [5909];
 - in the presence of titanium tetrachloride, first at r.t. for 24 h, then at 55° for 6 h (11%) [5910].

m.p. 142–143° [5910], 141–142° [5905,5907,5908], 107–109° [5909].

One of the reported melting points is obviously wrong.

¹H NMR [5910], ¹³C NMR [5910], IR [5910].**1,1'-[1,3-Propanediylbis(6-hydroxy-3,1-phenylene)]bis-ethanone**

[29668-20-0]

C₁₉H₂₀O₄ mol.wt. 312.37

Syntheses

- Obtained by Friedel–Crafts acylation of 1,3-bis(4-methoxyphenyl)propane with acetyl chloride in tetrachloroethane in the presence of aluminium chloride, first at 0–5°, then below 15° overnight [5875].
- Also refer to: [5911,5912,5913].

m.p. 112° [5875].

[29668-19-7]

 $C_{22}H_{26}O_4$ mol.wt. 354.45

Synthesis

– Obtained by Friedel–Crafts acylation of 1,6-bis-(4-methoxyphenyl)hexane with acetyl chloride in the presence of aluminium chloride in tetrachloro-ethane, first at 0–5°, then below 15° overnight (65%) [5875].

m.p. 97–98° [5875].

1,1'-[(4-Chlorophenyl)methylene]bis(4,5,6-trihydroxy-3,1-phenylene)bis-ethanone $C_{23}H_{19}ClO_8$ mol.wt. 458.85

Synthesis

– Obtained by condensation of 1 mol of p-chloro-benzaldehyde (m.p. 47–50°) with two mol of gallacetophenone [5182].

m.p. 230–231° [5182].

1,1',1'',1'''-[(1-Methylethylidene)bis(2-hydroxy-5,1,3-benzenetriyl)] tetrakis-ethanone

[104676-25-7]

C₂₃H₂₄O₆ mol.wt. 396.44

Syntheses

- Preparation by Friedel–Crafts acylation of 2,2-bis(4-ethoxyphenyl)propane (bisphenol A diethyl ether) with acetyl chloride in ethylene dichloride in the presence of aluminium chloride at 60° for 7 h (52%) [5905].
 - Also obtained by Fries rearrangement of 2,2-bis(4-acetoxyphenyl)propane (bisphenol A diacetate) with aluminium chloride in an acetyl chloride/ethylene dichloride mixture at 50° for 30 h (10%) [5905].
- m.p. 204°5–205° [5905].

20.2.4 Diphenyl Ethers and Related Compounds

1,1'-[Oxybis(6-hydroxy-3,1-phenylene)]bis-ethanone

[28467-08-5]

C₁₆H₁₄O₅ mol.wt. 286.28

Syntheses

- Obtained by Fries rearrangement of 4,4'-diacetoxy-diphenyl ether with aluminium chloride and sodium chloride at 140–150° for 4 h [5875] or at 140° for 3 h (40%) [5915].
 - Also refer to: [5874,5876].
- m.p. 185° [5915], 181–183° [5875].

1-[5-(2-Acetyl-3,6-dihydroxyphenoxy)-2-hydroxyphenyl]ethanone

[72926-21-7]

C₁₆H₁₄O₆ mol.wt. 302.28

Synthesis

- Preparation by adding an aqueous solution of sodium hydrosulfite to an ethereal solution of 2-acetyl-3-(3-acetyl-4-hydroxyphenoxy)-1,4-benzoquinone (m.p. 120–121°) and stirring the mixture at r.t. for 30 min (80%) [5916].

¹H NMR [5916].

1,1'-[1,2-Ethanediybis[oxy(6-hydroxy-2,1-phenylene)]]bis-ethanone

[16139-62-1]

C₁₈H₁₈O₆ mol.wt. 330.34

Syntheses

– Obtained by reaction of 1,2-dibromoethane with 2,6-di-hydroxyacetophenone in the presence of potassium carbonate in refluxing acetone for 48 h [5875] or for 72 h [5917].

– Also refer to: [5918].

m.p. 188–189° [5875,5917].

1,1'-[1,3-Propanediybis[oxy(6-hydroxy-2,1-phenylene)]]bis-ethanone

[16150-42-8]

C₁₉H₂₀O₆ mol.wt. 344.36

Synthesis

– Obtained by reaction of 1,3-dibromopropane with 2,6-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone for 48 h [5875].

m.p. 184–185° [5875].

1-[4-[3-(2-Acetyl-3-hydroxyphenoxy)-2-hydroxypropoxy]-2-hydroxyphenyl]ethanone

[16130-16-8]

C₁₉H₂₀O₇ mol.wt. 360.36

Synthesis

– Obtained by reaction of 2-(3-chloro-2-hydroxypropoxy)-6-hydroxyacetophenone

(SM) with resaceto-phenone in the presence of potassium carbonate in refluxing acetone for 48 h (31%). SM was prepared by reaction of epichlorohydrin with 2,6-dihydroxyacetophenone in the presence of benzyltrimethylammonium hydroxide in dioxane at 100° for 72 h (37%, oil) [5875].

m.p. 182–185° [5875].

1,1'-[(2-Hydroxy-1,3-propanediy)bis[oxy(6-hydroxy-2,1-phenylene)]]bis-ethanone

[16150-44-0]

C₁₉H₂₀O₇ mol.wt. 360.36

Syntheses

– Preparation by reaction of 2,6-hydroxy-acetophenone,

- with 1,3-dichloro-2-propanol [5919], in the presence of potassium carbonate in refluxing acetone for 72 h [5917];

- with 1,3-dibromo-2-propanol in the presence of potassium carbonate in refluxing acetone for 48 h (21%) [5875].
- with epichlorohydrin in the presence of potassium hydroxide in refluxing isopropanol for 48 h (59%) [5875].

m.p. 165–166° [5875,5917].

1,1'-[(2-Hydroxy-1,3-propanediyl)bis[oxy(6-hydroxy-3,1-phenylene)]]bis-ethanone

[16139-50-7]

$C_{19}H_{20}O_7$ mol.wt. 360.36

Syntheses

- Obtained by reaction of 1,3-dibromo-2-hydroxypropane with 2,5-dihydroxyacetophenone (quinacetophenone) in the presence of potassium carbonate in refluxing acetone for 48 h [5875].
- Also obtained by reaction of epichlorohydrin with quinacetophenone in the presence of potassium hydroxide in boiling isopropanol for 48 h [5875].

m.p. 127–129° [5875].

1,1'-[(2-Hydroxy-1,3-propanediyl)bis[oxy(2-hydroxy-4,1-phenylene)]]bis-ethanone

[16139-45-0]

$C_{19}H_{20}O_7$ mol.wt. 360.36

Syntheses

- Obtained by reaction of 1,3-di-bromo-2-hydroxypropane with resacetophenone in the presence of potassium carbonate in refluxing acetone for 48 h [5875].
- Also obtained by reaction of epichlorohydrin with resacetophenone in the presence of potassium hydroxide, in boiling acetone for 48 h [5875] or in boiling water for 3 h (20%) (by-product) [5920].
- Also obtained by heating a mixture of epichlorohydrin, sodium, ethanol and resacetophenone under reflux for 4 h [5920].

m.p. 178–180° [5875], 161° [5920]. One of the reported melting points is obviously wrong.

1,1'-[1,4-Butanediylbis[oxy-(6-hydroxy-2,1-phenylene)]]bis-ethanone

[16129-95-6]

$C_{20}H_{22}O_6$ mol.wt. 358.39

Synthesis

- Preparation by reaction of 1,4-dibromobutane with 2,6-di-hydroxyacetophenone in the presence of potassium carbonate in refluxing acetone for 72 h [5917] or for 48 h [5875].

m.p. 219–221° [5875,5917].

1,1'-[1,5-Pentanediybis[oxy(5-chloro-6-hydroxy-2,1-phenylene)]]bis-ethanone
 2',2'''-(Pentamethylenedioxy)bis[5'-chloro-6'-hydroxyacetophenone

[16130-26-0]

C₂₁H₂₂Cl₂O₆ mol.wt. 441.31

Synthesis

– Preparation by reaction of 1,5-dibromopentane with 3-chloro-2,6-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone for 72 h [5917].

m.p. 96° [5917].

1-[4-[[5-(2-Acetyl-3-hydroxyphenoxy)pentyl]oxy]-2-hydroxyphenyl]ethanone

[16130-20-4]

C₂₁H₂₄O₆ mol.wt. 372.42

Syntheses

– Obtained by reaction of 2-(5-bromopentyl)oxy-6-hydroxyacetophenone (SM) with resacetophenone in the presence of potassium carbonate in refluxing acetone for 18 h (60%). SM was formed by reaction of 1,5-dibromopentane with 2,6-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone for 20 h (oil, 50%) [5875].

– Also refer to: [5917].

m.p. 91–91°5 [5875,5917].

1,1'-[1,5-Pentanediybis[oxy(2-hydroxy-3,1-phenylene)]]bis-ethanone

[16139-26-7]

C₂₁H₂₄O₆ mol.wt. 372.42

Synthesis

– Obtained by reaction of 1,5-dibromopentane with 2,3-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone for 48 h [5875,5917].

m.p. 103°5–104°5 [5875,5917].

1,1'-[1,5-Pentanediybis[oxy(2-hydroxy-4,1-phenylene)]]bis-ethanone

[37086-37-6]

C₂₁H₂₄O₆ mol.wt. 372.42

Synthesis

– Obtained by reaction of 1,5-dibromopentane with resacetophenone in the presence of potassium carbonate in refluxing acetone for 48 h [5875].

m.p. 119–121° [5875].

1,1'-[1,5-Pentanediy]bis[oxy(6-hydroxy-2,1-phenylene)]bis-ethanone

[16130-01-1]

 $C_{21}H_{24}O_6$ mol.wt. 372.42

Synthesis

– Preparation by reaction of 1,5-dibromopentane with 2,6-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone for 72 h [5917] or for 48 h [5875].

m.p. 131–133° [5875,5917].

1,1'-[1,5-Pentanediy]bis[oxy(6-hydroxy-3,1-phenylene)]bis-ethanone

[16139-42-7]

 $C_{21}H_{24}O_6$ mol.wt. 372.42

Synthesis

– Obtained by reaction of 1,5-dibromopentane with quinacetophenone in the presence of potassium carbonate in refluxing acetone for 48 h [5875,5917].

m.p. 107–109° [5875,5917].

1,1'-[(2-Hydroxy-1,3-propanediyl)bis[oxy(6-hydroxy-4-methoxy-2,1-phenylene)]bis-ethanone

[23937-88-4]

 $C_{21}H_{24}O_9$ mol.wt. 420.42

Syntheses

- Obtained by reaction of 1,3-dibromo-2-hydroxypropane with 2,6-dihydroxy-4-methoxyacetophenone in the presence of potassium carbonate in refluxing acetone for 48 h [5875].
- Also obtained by reaction of epichlorohydrin with 2,6-dihydroxy-4-methoxyacetophenone in the presence of potassium hydroxide in refluxing isopropanol for 48 h [5875].

m.p. 108–182° [5875]. A typing error probably occurred in the published data.

1,1'-[1,6-Hexanediy]bis[oxy-(6-hydroxy-2,1-phenylene)]bis-ethanone

[16130-02-2]

 $C_{22}H_{26}O_6$ mol.wt. 386.44

Synthesis

– Preparation by reaction of 1,6-dibromohexane with 2,6-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone for 72 h [5917] or for 48 h [5875].

m.p. 147°5–148°5 [5875,5917].

1,1'-[1,5-Pentanediy]bis[oxy(2-hydroxy-3-methyl-4,1-phenylene)]]bis-ethanone

1,1'-[1,5-Pentanediy]bis[oxy(6-hydroxy-4-methoxy-2,1-phenylene)]]bis-ethanone

1,1'-[1,5-Pentanediy]bis[oxy(6-hydroxy-4-methoxy-3,1-phenylene)]]bis-ethanone

1,1'-[1,8-Octanediy]bis[oxy-(6-hydroxy-2,1-phenylene)]]bis-ethanone

1,1'-[1,9-Nonanediy]bis[oxy-(6-hydroxy-2,1-phenylene)]bis-ethanone

[16139-60-9]

 $C_{25}H_{32}O_6$ mol.wt. 428.53

Synthesis

– Preparation by reaction of 1,9-dibromononane with 2,6-di-hydroxyacetophenone in the presence of potassium carbonate in refluxing acetone for 72 h [5917] or for 48 h [5875].

m.p. 55–59° [5875,5917].

1,1'-[1,10-Decanediy]bis[oxy-(6-hydroxy-2,1-phenylene)]bis-ethanone

[16258-59-6]

 $C_{26}H_{34}O_6$ mol.wt. 442.55

Synthesis

– Preparation by reaction of 1,10-dibromodecane with 2,6-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone for 72 h [5917] or for 48 h [5875].

m.p. 102°5–104° [5875,5917].

20.2.5 Diphenyl Sulfide Derivatives and Related Compounds**20.2.5.1 Diphenyl Sulfide Derivatives****1,1v-[Thiobis(5-bromo-6-hydroxy-3,1-phenylene)]bis[2,2-dibromoethanone** $C_{16}H_8Br_6O_4S$ mol.wt. 775.73

Synthesis

– Obtained by reaction of excess bromine with 3,3'-diacetyl-4,4'-dihydroxydiphenyl sulfide in acetic acid in a boiling water bath for 3 h [4530].

m.p. 168–170° [4530].

1,1'-[Thiobis(4,6-dihydroxy-3,1-phenylene)]bis[2,2,2-trifluoroethanone

[65239-96-5]

 $C_{16}H_8F_6O_6S$ mol.wt. 442.29

Synthesis

– Obtained by Friedel–Crafts acylation of 2,2',4,4'-tetrahydroxydiphenylsulfide with trifluoroacetic anhydride in the presence of aluminium chloride in ethylene dichloride at r.t. (10%) [4689].

m.p. 172° [4689].

1,1'-[Thiobis(5-Bromo-6-hydroxy-3,1-phenylene)]bis-ethanone
 $C_{16}H_{12}Br_2O_4S$ mol.wt. 460.14
Synthesis

- Obtained by reaction of bromine with 3,3'-di-acetyl-4,4'-dihydroxydiphenyl sulfide in acetic acid, first at 90°, then at r.t. for 6 h [4530].

m.p. 218–219° [4530].

1,1'-[Thiobis(4-hydroxy-5-nitro-3,1-phenylene)]bis-ethanone
 $C_{16}H_{12}N_2O_8S$ mol.wt. 392.35
Synthesis

- Obtained by reaction of thionyl chloride with 4-hydroxy-3-nitroacetophenone in the presence of copper, first at r.t. overnight, then at reflux for 30 min [5921].

m.p. >300° [5921].

1,1'-[Thiobis(6-hydroxy-5-nitro-3,1-phenylene)]bis-ethanone
 $C_{16}H_{12}N_2O_8S$ mol.wt. 392.35
Synthesis

- Obtained by reaction of 3,3'-diacetyl-4,4'-di-hydroxydiphenyl sulfide with dilute nitric acid at reflux for 2 h [4530].

m.p. 206–208° [4530].

1,1'-[Thiobis(6-hydroxy-3,1-phenylene)]bis-ethanone
 $C_{16}H_{14}O_4S$ mol.wt. 302.35
Syntheses

- Obtained by reaction of thionyl chloride or sulfur dichloride with o-hydroxyacetophenone in the presence of copper powder, first at r.t. overnight, then in a boiling water bath for 10 min [4530].

– Also refer to: [5922].

m.p. 196–197° [4530].

1,1'-[Thiobis(4,6-dihydroxy-3,1-phenylene)]bis-ethanone

[56923-41-2]

 $C_{16}H_{14}O_6S$ mol.wt. 334.35

Syntheses

- Obtained by reaction of thionyl chloride with resacetophenone in chloroform in the presence of copper powder, first at 0°, then at r.t. overnight and, the next day, at reflux (60°) for 5 min (11%) [5923].
- Also refer to: [5922].

m.p. 209–210° [5923].

1,1'-[Thiobis(2-hydroxy-6-methoxy-3,1-phenylene)]bis-ethanone

[103154-01-4]

 $C_{18}H_{18}O_6S$ mol.wt. 362.40

Syntheses

- Obtained by reaction of thionyl chloride with 2-hydroxy-6-methoxyacetophenone in chloroform in the presence of copper powder at r.t. overnight (23%) [4457].
- Also obtained by reaction of sulfur monochloride or sulfur dichloride with 2-hydroxy-6-methoxyacetophenone in ethyl ether, first at 0° for 1 h and at r.t. overnight (<15%) [4457].

m.p. 184–185° [4457].

1,1'-[Thiobis(6-hydroxy-4-methoxy-3,1-phenylene)]bis-ethanone

[56923-42-3]

 $C_{18}H_{18}O_6S$ mol.wt. 362.40

Syntheses

- Obtained by reaction of thionyl chloride with paeonol in chloroform in the presence of copper powder, first at r.t. overnight, then at 60° for 10 min (19%) [4467].
- Also refer to: [5922].

m.p. 223–224° [4467].

1,1'-[Thiobis[4-(benzoyloxy)-6-hydroxy-3,1-phenylene]]bis-ethanone

[56923-50-3]

 $C_{30}H_{22}O_8S$ mol.wt. 542.57

Syntheses

- Obtained by reaction of thionyl chloride or sulfur dichloride with 4-(benzoyloxy)-2-hydroxyacetophenone in the presence of copper powder in chloroform at 60° for 10 min [5924].
- Also refer to: [5922].

m.p. 228–229° [5924].

1,1'-[Thiobis[6-hydroxy-4-(phenylmethoxy)-3,1-phenylene]]bis-ethanone

[56923-49-0]

 $C_{30}H_{26}O_6S$ mol.wt. 514.60

Syntheses

- Obtained by reaction of thionyl chloride or sulfur chloride with 4-(benzyloxy)-2-hydroxy-acetophenone in chloroform in the presence of copper powder, first at 0°, then at r.t. overnight and at 60° for 10 min [5925].
- Also refer to: [5922].
- m.p. 202–203° [5925].

20.2.5.2 Diphenyl Sulfone Derivatives**1,1'-[Sulfonylbis(4-hydroxy-5-nitro-3,1-phenylene)]bis-ethanone** $C_{16}H_{12}N_2O_{10}S$ mol.wt. 424.34

Synthesis

m.p. 135° [5921].

- Obtained by oxidation of 5,5'-diacetyl-2,2'-dihydroxy-3,3'-dinitrodiphenyl sulfide with hydrogen peroxide in acetone at r.t. overnight (74%) [5921].

1,1'-[Sulfonylbis(4-hydroxy-3,1-phenylene)]bis-ethanone $C_{16}H_{14}O_6S$ mol.wt. 334.35

Synthesis

m.p. >300° [5921].

- Obtained by oxidation of 5,5'-diacetyl-2,2'-dihydroxy-diphenyl sulfide with hydrogen peroxide in acetone at r.t. overnight (73%) [5921].

1,1'-[Sulfonylbis(6-hydroxy-3,1-phenylene)]bis-ethanone

[56923-31-0]

 $C_{16}H_{14}O_6S$ mol.wt. 334.35

Syntheses

- Obtained by Fries rearrangement of bisphenol S diacetate with aluminium chloride (10 equiv.) at 160° (23%) [5926].

N.B.: The UV irradiation of a diester solution in 0.02 M acetonitrile does not lead to the above mentioned diketone.

- Also obtained by Fries rearrangement of 4,4'-diacetyoxydiphenyl sulfone with aluminium chloride (5 equiv.) at 150–160° for 5 h (30%) [5915].
- Also obtained by oxidation of 3,3'-diacetyl-4,4'-dihydroxydiphenyl sulfide with hydrogen peroxide (73%) [5915] according to [5921] or with 30% hydrogen peroxide in acetic acid at r.t. for 48 h (63%) [5922].
- Also obtained by alkaline degradation of 6,6'-bichromonyl sulfone (m.p. 266–268°) with refluxing aqueous 10% sodium hydroxide for 20 min [5833].
- Also refer to: [5927].

m.p. 189–190° [5915], 189° [5921,5922], 187–188° [5833], 186°6 [5926];
¹H NMR [5926], IR [5922], UV [5922].

1,1'-[Sulfonylbis(4,6-dihydroxy-3,1-phenylene)]bis-ethanone

[56923-32-1]

C₁₆H₁₄O₈S mol.wt. 366.35

Synthesis

- Obtained by oxidation of 5,5'-diacetyl-2,2'-4,4'-tetra-hydroxydiphenyl sulfide with 30% hydrogen peroxide in acetic acid at r.t. for 48 h (75%) [5922] or in acetone at r.t. overnight (73%) [5921].

m.p. 195° [5921,5922]; IR [5922], UV [5922].

1,1'-[Sulfonylbis(6-hydroxy-4-methoxy-5-nitro-3,1-phenylene)]bis-ethanone

C₁₈H₁₆N₂O₁₂S mol.wt. 484.40

Synthesis

- Obtained by nitration of 3,3'-diacetyl-4,4'-dihydroxy-6,6'-dimethoxydiphenyl sulfone in concentrated sulfuric acid with concentrated nitric acid at 60° for 15 min [5922].

1,1'-[Sulfonylbis(6-hydroxy-4-methoxy-3,1-phenylene)]bis-ethanone

[56923-33-2]

C₁₈H₁₈O₈S mol.wt. 394.40

Synthesis

- Obtained by oxidation of 3,3'-diacetyl-4,4'-di-hydroxy-6,6'-dimethoxydiphenyl sulfide with 30% hydrogen peroxide in acetic acid at r.t. for 48 h (68%) [5922].

m.p. 281–282° [5922]; IR [5922], UV [5922].

1,1'-[Sulfonylbis[4-(benzoyloxy)-6-hydroxy-5-nitro-3,1-phenylene]]bis-ethanone
 $C_{30}H_{20}N_2O_{14}S$ mol.wt. 664.56
Synthesis

– Obtained by nitration of 5,5'-diacetyl-2,2'-bis(benzoyloxy)-4,4'-dihydroxy-diphenyl sulfone in concentrated sulfuric acid with concentrated nitric acid at 50° for 15 min [5922].

1,1'-[Sulfonylbis[4-(benzoyloxy)-6-hydroxy-3,1-phenylene]]bis-ethanone

[56923-35-4]

 $C_{30}H_{22}O_{10}S$ mol.wt. 574.56
Synthesis

– Obtained by oxidation of 5,5'-diacetyl-2,2'-bis(benzoyloxy)-4,4'-dihydroxy-diphenyl sulfide with 30% hydrogen peroxide in acetic acid at r.t. for 48 h (71%) [5922].

m.p. 245–246° [5922]; IR [5922], UV [5922].

1,1'-[Sulfonylbis[6-hydroxy-5-nitro-4-(phenylmethoxy)-3,1-phenylene]]bis-ethanone
 $C_{30}H_{24}N_2O_{12}S$ mol.wt. 636.59
Synthesis

– Obtained by nitration of 5,5'-diacetyl-2,2'-bis(benzoyloxy)-4,4'-dihydroxy-diphenyl sulfone in concentrated sulfuric acid with concentrated nitric acid at 60° for 15 min [5922].

1,1'-[Sulfonylbis[6-hydroxy-4-(phenylmethoxy)-3,1-phenylene]]bis-ethanone

[56923-34-3]

 $C_{30}H_{26}O_8S$ mol.wt. 546.60
Synthesis

– Obtained by oxidation of 5,5'-diacetyl-2,2'-bis(benzoyloxy)-4,4'-dihydroxy-diphenyl sulfide with 30% hydrogen peroxide in acetic acid at r.t. for 48 h (75%) [5922].

m.p. 222–223° [5922]; IR [5922], UV [5922].

Chapter 21

Aromatic Ketones Containing At Least One Acetyl Group and One Other Acyl Group

21.1 Acyl Groups Located on One Ring

21.1.1 Diphenyl Ketone Derivatives

1-(3-Benzoyl-2,4-dihydroxy-5-nitrophenyl)ethanone

[54917-81-6]

$C_{15}H_{11}NO_6$

mol.wt. 301.26

Synthesis

- Obtained by heating 3-benzoyl-2,4-dihydroxy-acetophenone-4- β -D-glucopyranoside with dilute nitric acid for 3 min (44%) [5928].

N.B: A sesquihydrate was obtained by crystallisation of the ketone in water [5928]. The melting point is determined after water elimination (100°/0.04 mm/1 h).

m.p. 114–118° [5928].

1-(3-Benzoyl-4-hydroxyphenyl)ethanone

[13043-37-3]

$C_{15}H_{12}O_3$

mol.wt. 240.26

Synthesis

- Refer to: [5929,5930].

1-(4-Benzoyl-3-hydroxyphenyl)ethanone

[39954-75-1]

$C_{15}H_{12}O_3$

mol.wt. 240.26

Synthesis

- Obtained by alkaline hydrolysis of 3-(benzoyloxy)-4-benzoylacetophenone (SM) (m.p. 88°)

with sodium hydroxide in boiling ethanol for 15 min. SM was prepared by oxidation of 6-acetyl-2,3-diphenyl-benzofuran (m.p. 119°) with chromium trioxide in acetic acid at 70–75° for 2 h [5931].

m.p. 103° [5931]; IR [5931].

1-(5-Benzoyl-2-hydroxyphenyl)ethanone

[2589-80-2]

$C_{15}H_{12}O_3$ mol.wt. 240.26

Syntheses

– Obtained by Fries rearrangement of 4-(acetyloxy)-benzophenone with aluminum chloride (3.3 mol) at 150–160° for 1 h [5628].

- Also obtained by hydrolysis of 3-acetyl-4-(acetyloxy)-benzophenone [5932].
- Also refer to: [5929].

m.p. 102–103° [5628], 95–96° [5932]; 1H NMR [5932], IR [5932], MS [5932].

1-(3-Benzoyl-2,4,6-trihydroxyphenyl)ethanone

[31188-65-5]

$C_{15}H_{12}O_5$ mol.wt. 272.26

Syntheses

– Preparation by C-acetylation of 2-benzoylphloroglucinol with boron trifluoride-acetic acid complex (76%) [5933].

– Also refer to: [5929,5934].

m.p. 145–146° [5933].

1-(4-Benzoyl-3-hydroxy-2-methylphenyl)ethanone

[51846-39-0]

$C_{16}H_{14}O_3$ mol.wt. 254.29

Synthesis

– Obtained by alkaline hydrolysis of 4-benzoyl-3-benzoyl-oxy-2-methylacetophenone (m.p. 102°) [5935].

m.p. 39° [5935]; IR [5935].

1-(4-Benzoyl-5-hydroxy-2-methylphenyl)ethanone

[39954-81-9]

$C_{16}H_{14}O_3$ mol.wt. 254.29

Synthesis

– Obtained by alkaline hydrolysis of 3-(benzoyloxy)-4-benzoyl-6-methylacetophenone (m.p. 135°) (SM) with sodium hydroxide in boiling ethanol for 15 min. SM

was obtained by oxidation of 6-acetyl-5-methyl-2,3-diphenyl-benzofuran (m.p. 133°) with chromium trioxide in acetic acid at 70–75° for 2 h [5931].

m.p. 92° [5931]; IR [5931].

1-(5-Benzoyl-4-hydroxy-2-methylphenyl)ethanone

[51846-51-6]

$C_{16}H_{14}O_3$ mol.wt. 254.29

Synthesis

– Obtained by alkaline hydrolysis of 5-benzoyl-4-benzoyl-oxy-2-methylacetophenone [5935].

m.p. 108–112° [5935]; IR [5935].

1-(3-Benzoyl-2-hydroxy-4,6-dimethylphenyl)ethanone

[84312-32-3]

$C_{17}H_{16}O_3$ mol.wt. 268.31

Synthesis

– Obtained by UV light irradiation of 2-acetyl-3,5-di-methylphenyl benzoate in benzene for 10 h (13%) [5936].

m.p. 138–139° [5936]; 1H NMR [5936], IR [5936], UV [5936], MS [5936].

1-(3-Benzoyl-6-hydroxy-2,4-dimethylphenyl)ethanone

[84312-33-4]

$C_{17}H_{16}O_3$ mol.wt. 268.31

Synthesis

– Obtained by UV light irradiation of 2-acetyl-3,5-dimethyl-phenyl benzoate in benzene for 10 h (6%) [5936].

m.p. 61–65° [5936]; 1H NMR [5936], IR [5936], UV [5936], MS [5936].

1-(4-Benzoyl-3-hydroxy-2,5-dimethylphenyl)ethanone

[51846-44-7]

$C_{17}H_{16}O_3$ mol.wt. 268.31

Synthesis

– Obtained by alkaline hydrolysis of 4-benzoyl-3-benzoyl-oxy-2,5-dimethylacetophenone (m.p. 145–146°) [5935].

m.p. 95–102° [5935].

1-[3-Benzoyl-4-(β-D-galactopyranosyloxy)-2-hydroxyphenyl]ethanone

[54917-83-8]

 $C_{21}H_{22}O_9$ mol.wt. 418.40

Synthesis

– Obtained by action of 4-formyl-1,2-phenylene dibenzoate with 2-hydroxy-4-(β-D-galactopyranosyloxy)-acetophenone in acetone in the presence of 2 N aqueous sodium hydroxide at 20° (16%) [5928].

m.p. 199–201° [5928]; $(\alpha)_D^{18} = +78^\circ$ (c = 0.4 in pyridine) [5928].

1-[3-Benzoyl-4-(β-D-glucopyranosyloxy)-2-hydroxyphenyl]ethanone

[54918-25-1]

 $C_{21}H_{22}O_9$ mol.wt. 418.40

Synthesis

– Obtained by reaction of 4-formyl-1,2-phenylene dibenzoate with 2-hydroxy-4-(β-D-glucopyranosyloxy)-acetophenone in acetone in the presence of 2 N aqueous sodium hydroxide at 20° for 17 h (29%) [5928].

m.p. 192–194° [5928]; $(\alpha)_D^{30} = -89^\circ$ (c = 0.55 in acetone/water 1:1) [5928].

1-(4-Benzoyl-3-hydroxy-5-methyl-6-nitro[1,1'-biphenyl]-2-yl)ethanone

[85450-70-0]

 $C_{22}H_{17}NO_5$ mol.wt. 375.38

Synthesis

– Obtained (by-product) by reaction of 1,3-dibenzoyl-4,6-dimethylpyrone with nitromethane in tert-butanol in the presence of potassium tert-butoxide at 60° for 4 h (13%) [5809].

m.p. 141–142° [5809].

1-(6-Amino-4-benzoyl-3-hydroxy-5-methyl[1,1'-biphenyl]-2-yl)ethanone

[85450-81-3]

 $C_{22}H_{19}NO_3$ mol.wt. 345.40

Synthesis

– Obtained (poor yield) by catalytic hydrogenation of 3-acetyl-2-hydroxy-6-methyl-5-nitro-4-phenyl-benzophenone in ethanol in the presence of 10% Pd/C at 40° for 3 days (9%) [5809].

m.p. 120–123° [5809].

21.1.2 Miscellaneous

1-(3-Acetyl-4-hydroxyphenyl)-1-propanone

[79010-36-9] $C_{11}H_{12}O_3$ mol.wt. 192.21

Synthesis

– Preparation by Fries rearrangement of 4-propionylphenyl acetate with aluminium chloride at 150° for 3 h (80%) [5937].

m.p. 69° [5937]; 1H NMR [5937], IR [5937].

1-(5-Acetyl-2-hydroxyphenyl)-1-propanone

[36039-26-6] $C_{11}H_{12}O_3$ mol.wt. 192.20

Syntheses

– Preparation by Fries rearrangement of p-(propionyloxy)-acetophenone with aluminium chloride (4 mol) without solvent at 150° for 3 h (62%) [5626].

- Also obtained by Friedel–Crafts acylation of p-hydroxyacetophenone with propionyl chloride in the presence of aluminium chloride (4 mol) in tetrachloroethane at 130° for 4 h (47%) [5626].
- Also obtained by deacylation of 2-(LD-2'-acetoxypropionyloxy)-5-acetylpropiophenone (24%) [5633].

m.p. 67–69° [5626]; 1H NMR [5626], IR [5626].

1-(5-Acetyl-2-hydroxyphenyl)-1-butanone

[92757-66-9] $C_{12}H_{14}O_3$ mol.wt. 206.24

Syntheses

– Preparation by Fries rearrangement of p-(butyryloxy)-acetophenone with aluminium chloride (4 mol) without solvent at 150° for 3 h (58%) [5626].

- Also obtained by Friedel–Crafts acylation of p-hydroxyacetophenone with butyryl chloride in the presence of aluminium chloride (4 mol) in tetrachloroethane at 130° for 4 h (47%) [5626].

m.p. 54–55° [5626]; 1H NMR [5626], IR [5626].

1-(5-Acetyl-2-hydroxyphenyl)-3-methyl-2-buten-1-one

[65580-31-6]

 $C_{13}H_{14}O_3$ mol.wt. 218.25

Isolation from natural sources

- From the aerial parts of *Ophryosporus floribundus* (Compositae, tribe Eupatorieae) [5636].
- From the leaves of *ageratina altissima* (L) K. et R. (Compositae) [5938].

- From the aerial parts of *senecio behnii* Ric. et Martic [5939].
 - From the aerial parts of *Ophryosporus charua* (Griseb.) Hieron (Compositae) [5940].
 - From *Ophryosporus chilca* [5940].
- m.p. 75° [5938]; TLC [5938];
 1H NMR [5938], IR [5938], UV [5938], MS [5938].

1-(5-Acetyl-2-hydroxyphenyl)-3-methyl-1-butanone

[62458-64-4]

 $C_{13}H_{16}O_3$ mol.wt. 220.27

Syntheses

- Preparation by Fries rearrangement of p-acetylphenyl isovalerate without solvent in the presence of aluminium chloride at 140–160° for 2.5 h (51%) [5941] or at 150° for 3 h (32%) [5626].
- Also obtained by Friedel–Crafts acylation of p-hydroxy-acetophenone with isovaleryl chloride (4 mol) in tetrachloroethane at 130° for 4 h (37%) [5626].

Isolation from natural sources

- From the genus *Flourensia cernua* DC (Compositae) [5942].
- From the aerial parts of *Ophryosporus floribundus* (Compositae, tribe Eupatorieae) [5636].
- From sliced yacon tubers after inoculation with the bacterium *Pseudomonas cichorii* and incubation at 20° for 3 days, then extraction with acetone. Yacon (*Polymnia sonchifolia*) (Compositae) is cultivated in South America and has recently been introduced in Japan [5943].

Colourless oil [5942];

m.p. 94°5–96° [5943]; 64–66° [5626], 61°5 [5941].

One of the reported melting points is obviously wrong.

 1H NMR [5626,5942,5943], ^{13}C NMR [5943], IR [5626,5942,5943],
UV [5943], MS [5942,5943].

1-(5-Acetyl-2-hydroxyphenyl)-1-hexanone

[92757-67-0]

 $C_{14}H_{18}O_3$

mol.wt. 234.30

Syntheses

– Obtained by Fries rearrangement of p-(caproyloxy)-acetophenone with aluminium chloride (4 mol) without solvent at 150° for 3 h (37%) [5626].

– Also obtained by Friedel–Crafts acylation of p-hydroxy-acetophenone with caproyl chloride in the presence of aluminium chloride in tetrachloroethane at 130° for 4 h (39%) [5626].

m.p. 52° [5626]; 1H NMR [5626], IR [5626].

1-(3-Acetyl-2,4-dihydroxyphenyl)-3-phenyl-2-propen-1-one

[116470-07-6]

 $C_{17}H_{14}O_4$

mol.wt. 282.30

[84422-44-6] (*E*)

Synthesis

– Obtained by reaction of benzaldehyde with 2,4-diacetyl-resorcinol in ethanol in the presence of concentrated aqueous potassium hydroxide at r.t. (Claisen–Schmidt condensation), for 48 h (34%) [5661] or for 24 h (9%) [5658].

m.p. 149° [5658], 134° [5661]; TLC [5658,5661].

One of the reported melting points is obviously wrong.

1H NMR [5658,5661], IR [5658], UV [5658], MS [5658].

1-(5-Acetyl-2,4-dihydroxyphenyl)-3-phenyl-2-propen-1-one (*E*)

[104236-84-2]

 $C_{17}H_{14}O_4$

mol.wt. 282.30

Synthesis

– No details of synthesis are given [5944].

1-[5-Acetyl-2-hydroxy-3-(1-hydroxy-3-methyl-2-butenyl)phenyl]-3-methyl-1-butanone

[94413-27-1]

 $C_{17}H_{24}O_4$

mol.wt. 292.38

Isolation from natural sources

– From the aerial parts of *Ophryosporus peruvianus* (Gmel.) K. et R. (Compositae) [5945].

1-[5-Acetyl-2-hydroxy-3-(3-methyl-1,3-butadienyl)phenyl]-3-methyl-1-butanone (E)

[148707-32-8]

C₁₈H₂₂O₃ mol.wt. 286.37

Synthesis

N.B.: After several days in a CDCl₃ solution used for the ¹H NMR measurements, 3-(3-hydroxy-3-methyl-1-butenyl)-5-isovaleryl-p-hydroxy-acetophenone (E) was converted into the titled substance [5946].

¹H NMR [5946].**1-[5-Acetyl-2-hydroxy-3-(3-methyl-2-butenyl)phenyl]-3-methyl-2-buten-1-one (Piloselloidon)**

[94413-26-0]

C₁₈H₂₂O₃ mol.wt. 286.37

Isolation from natural sources

- From the roots of *Gerbera piloselloides* Cass. (Compositae, tribe Arctotideae) [5947].
 - From the aerial parts of *Ophryosporus chilca* (Compositae, tribe Eupatorieae) [5945].
 - From the aerial parts of *Ophryosporus peruvianus* (Compositae) [5945].
- Colourless oil [5947]; TLC [5945]; ¹H NMR [5947], IR [5947], MS [5947].

1-[5-Acetyl-2-hydroxy-3-(3-hydroxy-3-methyl-1-butenyl)phenyl]-3-methyl-1-butanone (E)

[54963-60-9]

C₁₈H₂₄O₄ mol.wt. 304.39

Isolation from natural sources

- From the aerial parts of *Ophryosporus charua* (Griseb.) Hieron (Compositae) [5940].
 - From the aerial parts of *Ophryosporus macrodon* Griseb. (Compositae, tribe Eupatorieae) [5946].
- m.p. 103–105° [5946]; ¹H NMR [5946], MS [5946].

1,1'-(5-Acetyl-2-hydroxy-1,3-phenylene)bis[3-methylbutanone]

[94413-28-2]

 $C_{18}H_{24}O_4$ mol.wt. 304.39

Isolation from natural sources

– From the aerial parts of *Ophryosporus peruvianus* (Gmel.) K. et R. (Compositae) [5945].

 1H NMR [5945], IR [5945], MS [5945]; TLC [5945].**1-(3-Acetyl-2,4-dihydroxyphenyl)-3-(3,4-dimethoxyphenyl)-2-propen-1-one**

[116470-11-2]

 $C_{19}H_{18}O_6$ mol.wt. 342.35

Synthesis

– Obtained by reaction of veratraldehyde with 2,4-diacetylresorcinol in ethanol in the presence of aqueous potassium hydroxide at r.t. for 24 h (18%) [5658].

m.p. 189–190° [5658]; TLC [5658];

 1H NMR [5658], IR [5658], UV [5658], MS [5658].**1-(3-Acetyl-2,6-dihydroxyphenyl)-3-(3,4-dimethoxyphenyl)-2-propen-1-one**

[116470-10-1]

 $C_{19}H_{18}O_6$ mol.wt. 342.35

Synthesis

– Obtained (by-product) by reaction of veratraldehyde with 2,4-diacetylresorcinol in ethanol in the presence of aqueous potassium hydroxide at r.t. for 24 h (6%) [5658].

m.p. 164° [5658]; TLC [5658]; 1H NMR [5658], IR [5658], UV [5658], MS [5658].

21.2 Acyl Groups Located on Different Rings

21.2.1 Diphenyl Ketone Derivatives

Symmetrical ketones

1,1'-[Carbonylbis(5-bromo-2-hydroxy-3,1-phenylene)]bis-ethanone

[83143-07-1]

C₁₇H₁₂Br₂O₅ mol.wt. 456.09

Synthesis

- Preparation by Fries rearrangement of 2,2'-di-acetoxy-5,5'-dibromobenzophenone with aluminium chloride at 160–180° for 20 min (50%) [5865].

m.p. 230–231° [5865].

1,1'-[Carbonylbis(5-chloro-2-hydroxy-3,1-phenylene)]bis-ethanone

[83143-06-0]

C₁₇H₁₂Cl₂O₅ mol.wt. 367.18

Synthesis

- Preparation by Fries rearrangement of 2,2'-di-acetoxy-5,5'-dichlorobenzophenone with aluminium chloride,

- at 160–180° for 20 min (80%) [5865];
- at 170–180° for 30 min (80%) [5867].

m.p. 222–224° [5865,5867].

N.B.: Na salt, m.p. >360° [5867].

1,1'-[Carbonylbis(5-fluoro-2-hydroxy-3,1-phenylene)]bis-ethanone

[83143-05-9]

C₁₇H₁₂F₂O₅ mol.wt. 334.28

Synthesis

- Preparation by Fries rearrangement of 2,2'-di-acetoxy-5,5'-difluorobenzophenone with aluminium chloride at 160–180° for 20 min (72%) [5865].

m.p. 149–150° [5865].

1,1'-[Carbonylbis(2-hydroxy-3,1-phenylene)]bis-ethanone

[83143-08-2]

 $C_{17}H_{14}O_5$ mol.wt. 298.30

Synthesis

- Preparation by Fries rearrangement of 2,2'-di-acetoxybenzophenone with aluminium chloride at 160–180° for 20 min (63%) [5865].

m.p. 170–171° [5865].

1,1'-[Carbonylbis(4-hydroxy-3,1-phenylene)]bis-ethanone $C_{17}H_{14}O_5$ mol.wt. 298.30

Synthesis

- Obtained (by-product) by Fries rearrangement of 2,2'-diacetoxybenzophenone with aluminium chloride at 160–180° for 20 min (10%) [5865].

1,1'-[Carbonylbis(6-hydroxy-3,1-phenylene)]bis-ethanone

[20795-69-1]

 $C_{17}H_{14}O_5$ mol.wt. 298.30

Syntheses

- Obtained by Fries rearrangement of 4,4'-diacetoxy-benzophenone,
 - with aluminium chloride at 140° for 4 h (40%) [5948];
 - with aluminium chloride and sodium chloride at 140–150° for 6 h [5875].
 - Also obtained by alkaline degradation of 6,6'-bichromonyl ketone (m.p. 249–250°) with refluxing 10% aqueous sodium hydroxide for 20 min [5833].
- m.p. 182–183° [5948], 180–181° [5833], 174–176° [5875].

1,1'-[Carbonylbis(2,5-dihydroxy-3,1-phenylene)]bis-ethanone

[78563-21-0]

 $C_{17}H_{14}O_7$ mol.wt. 330.29

Synthesis

- Obtained by Fries rearrangement of 2,2',5,5'-tetra-acetoxybenzophenone with aluminium chloride at 175–178° for 20 min (30%) [5866].

m.p. >300° [5866].

N.B.: This ketone (**5d**) was characterized by its corresponding tetraacetate (**5d₁**)

m.p. 254–256° [5866]; IR [5866], MS [5866].

1,1'-[Carbonylbis(5-amino-2-hydroxy-3,1-phenylene)]bis-ethanone

[78563-23-2]

 $C_{17}H_{16}N_2O_5$ mol.wt. 328.31

Synthesis

- Preparation by Fries rearrangement of 5,5'-di-acetamido-2,2'-diacetoxybenzophenone with aluminium chloride at 175–178° for 20 min (80%) [5866].

m.p. 254–255° [5866]; IR [5866], MS [5866].

*Asymmetrical ketones***1-[5-(5-Chloro-2-hydroxybenzoyl)-2-hydroxyphenyl]ethanone**

[220042-68-2]

 $C_{15}H_{11}ClO_4$ mol.wt. 290.70

Synthesis

- Obtained (20% yield) by adding a solution of 6-chloro-4-oxo-4*H*-1-benzopyran-3-carboxaldehyde in acetic acid to a preheated (70–80°) mixture of acetylacetone in acetic acid containing a catalytic amount of concentrated hydrochloric acid [5949].

m.p. 144° [5949]; 1H NMR [5949], IR [5949].**1-[2-Hydroxy-5-(2-hydroxy-5-nitrobenzoyl)phenyl]ethanone**

[220042-69-3]

 $C_{15}H_{11}NO_6$ mol.wt. 301.26

Synthesis

- Obtained (30% yield) by adding a solution of 6-nitro-4-oxo-4*H*-1-benzopyran-3-carboxaldehyde in acetic acid to a preheated (70–80°) mixture of acetylacetone in acetic acid containing a catalytic amount of concentrated hydrochloric acid [5949].

m.p. 174° [5949]; 1H NMR [5949], IR [5949].**1-[2-(2-Hydroxybenzoyl)phenyl]ethanone**

[17526-21-5]

 $C_{15}H_{12}O_3$ mol.wt. 240.26

Synthesis

- Refer to: [5929].

1-[2-(2,4-Dihydroxybenzoyl)phenyl]ethanone

[36414-93-4]

C₁₅H₁₂O₄ mol.wt. 256.26

Syntheses

– Refer to: [5929,5950].

**1-[2-Hydroxy-5-(2-hydroxybenzoyl)phenyl]ethanone**

[124208-69-1]

C₁₅H₁₂O₄ mol.wt. 256.26

Syntheses

– Obtained (17% yield) by adding a solution of 4-oxo-4*H*-1-benzopyran-3-carboxaldehyde in acetic acid to a preheated (70–80°) mixture of acetylacetone in acetic acid containing a catalytic amount of concentrated hydrochloric acid [5949].

– Also refer to: [5929].

m.p. 128° [5949]; ¹H NMR [5949], IR [5949].**1-[2-Hydroxy-5-(2-hydroxy-5-methylbenzoyl)phenyl]ethanone**

[220042-67-1]

C₁₆H₁₄O₄ mol.wt. 270.28

Synthesis

– Obtained (15% yield) by adding a solution of 6-methyl-4-oxo-4*H*-1-benzopyran-3-carboxaldehyde in acetic acid to a preheated (70–80°) mixture of acetylacetone in acetic acid containing a catalytic amount of concentrated hydrochloric acid [5949].

m.p. 141° [5949]; ¹H NMR [5949], IR [5949].**1-[3-(3,6-Dihydroxy-2-methylbenzoyl)-2,4-dihydroxyphenyl]ethanone***(Baishouwubenzophenone)*

[115834-34-9]

C₁₆H₁₄O₆ mol.wt. 302.28

Isolation from natural sources

– From *Baishouwu*, the botanical source of which being chiefly the tuber of *Cynanchum auriculatum* Royle ex Wight (Asclepiadaceae) [5951].

– Also refer to: [5929].

¹H NMR [5951], ¹³C NMR [5951], IR [5951], UV [5951], MS [5951].

1-[3-(3-Acetyl-4-hydroxybenzoyl)-2-hydroxyphenyl]ethanoneC₁₇H₁₄O₅ mol.wt. 298.30

Synthesis

– Obtained (by-product) by Fries rearrangement of 2,4'-diacetoxybenzophenone with aluminium chloride at 158–160° for 2 h (<2%) [5952].

m.p. 152° [5952]; IR [5952].

1-[3-(3-Acetyl-4-hydroxybenzoyl)-4-hydroxyphenyl]ethanone

[124208-68-0]

C₁₇H₁₄O₅ mol.wt. 298.30

Synthesis

– Preparation by Fries rearrangement of 2,4'-di-acetoxybenzophenone with aluminium chloride at 158–160° for 2 h (60%) [5952].

m.p. 184–185° [5952]; IR [5952].

1-[4-Hydroxy-3-(4-hydroxy-3-methoxybenzoyl)-5-methoxyphenyl]ethanone

[147904-65-2]

C₁₇H₁₆O₆ mol.wt. 316.31

Synthesis

– Obtained by alkaline CuO oxidation of lignin (compound **Vo5Vn**) named 5-vanilloacetovanillone [5851].

GC [5851], GC-MS [5851].

1-[3-(3,4-Dihydroxy-5-methoxybenzoyl)-4-hydroxy-5-methoxyphenyl]ethanone

[147904-69-6]

C₁₇H₁₆O₇ mol.wt. 332.31

Synthesis

– Obtained by alkaline CuO oxidation of lignin [5851].

GC [5851], GC-MS [5851].

1-[4-Hydroxy-3-(4-hydroxy-3-methoxy-5-methylbenzoyl)-5-methoxyphenyl]ethanone

[147904-68-5]

C₁₈H₁₈O₆ mol.wt. 330.34

Synthesis

– Obtained by alkaline CuO oxidation of lignin [5851].

GC [5851], GC-MS [5851].

1-[4-Hydroxy-3-(4-hydroxy-3,5-dimethoxybenzoyl)-5-methoxyphenyl]ethanone

GC [5851], GC-MS [5851].

 $C_{18}H_{18}O_7$ mol.wt. 346.34

Synthesis

- Obtained by alkaline CuO oxidation of lignin (compound **S.5Vn**) named 5-syringacetovanillon [5851].

21.2.2 Miscellaneous**2,2'-Thiobis-1-(3,4-dihydroxyphenyl)ethanone**

[215431-54-2]

 $C_{16}H_{14}O_6S$ mol.wt. 334.35

Synthesis

- Refer to: [5953] (Japanese patent).

1,1'-[Methylenebis(6-hydroxy-4-methoxy-3,1-phenylene)]bis[2-methoxyethanone]

[71204-18-7]

 $C_{21}H_{24}O_8$ mol.wt. 404.42

Synthesis

- Obtained from 2-hydroxy-4, α -di-methoxyacetophenone with formaldehyde and 35% aqueous sulfuric acid [4897].

m.p. 152° [4897]; (dibenzoate: m.p. 95–96°) [4897].

1-(2,4-Dihydroxyphenyl)-2-[4-[2-(2,4-dihydroxyphenyl)-2-oxoethyl]phenyl]ethanone $\alpha\alpha,\alpha$ -bis-(2,4-dihydroxybenzoyl)-*p*-xylene

[97829-54-4]

 $C_{22}H_{18}O_6$ mol.wt. 378.38

Syntheses

- Preparation by reaction of 1,4-di-cyanobenzene (terephthalonitrile) with resorcinol (Hoesch reaction) (52%) [5954].

- Also refer to: [5955].

m.p. 282° (d) [5954,5955].

1,1'-[(3,4-Dichlorophenyl)methylene]bis(4,5,6-trihydroxy-3,1-phenylene)bis-ethanone

m.p. 259–260° [5182].

 $C_{23}H_{18}Cl_2O_8$ mol.wt. 493.30**Synthesis**

- Obtained by condensation of 1 mol of 3,4-dichloro-benzaldehyde (m.p. 41–44°) with 2 mol of gallacetophenone [5182].

1,1'-[(Phenylmethylene)bis(4,5,6-trihydroxy-3,1-phenylene)]bis-ethanone**1,1'-[Methylenebis(2-hydroxy-4,6-dimethoxy-3,1-phenylene)]bis[2-methoxyethanone**

[71204-19-8]

m.p. 232–234° [4897]; (monobenzoate, m.p. 176–178°) [4897].

 $C_{23}H_{28}O_{10}$ mol.w.464.47**Synthesis**

- Obtained from 2-hydroxy-4,6, a-tri-methoxyacetophenone on refluxing with formaldehyde and 35% aqueous sulfuric acid [4897].

1-[3-[(5-Benzoyl-2,4-dihydroxy-3-methylphenyl)methyl]-2,4-dihydroxy-5-methylphenyl]ethanone

ethanol in the presence of concentrated sulfuric acid at r.t. for 3 days (27%) [5883].

m.p. 239–240° [5883].

 $C_{24}H_{22}O_6$ mol.wt. 406.44**Synthesis**

- Obtained by action of 40% aqueous formaldehyde with a mixture of 5-methyl-resacetophenone and 3-methylresbenzophenone (1:1) in ethanol in the presence of concentrated sulfuric acid at r.t. for 3 days (27%) [5883].

1,1'-[[4-(4-Hydroxy-3-methoxyphenyl)methylene]bis(4,6-dihydroxy-3,1-phenylene)]bis-ethanone

[146533-78-0]

C₂₄H₂₂O₈ mol.wt. 438.44

Synthesis

– Refer to: [5957].

1-[3-[(3-Acetyl-2,4-dihydroxy-6-methoxy-5-methylphenyl)methyl]-5-(2,3-dihydroxy-3-methylbutyl)-2,4,6-trihydroxyphenyl]ethanone

(Mallotojaponol)

[131836-01-6] (racemic)

C₂₄H₃₀O₁₀ mol.wt. 478.18

Isolation from natural sources

– From the pericarps of *Mallotus japonicus* Muell. Arg. (Euphorbiaceae) [5896].

m.p. 150–151° [5896];

 $n_D^{23} = 0^\circ$ (c = 0.1 in chloroform) [5896];¹H NMR [5896], IR [5896], UV [5896], EIMS [5896].

1-[3-[(3-Acetyl-2,4-dihydroxy-6-methoxy-5-methylphenyl)methyl]-2,4,6-trihydroxy-5-(3-methyl-2-butenyl)phenyl]-1-butanone

(Butyrylmallotojaponin)

[96853-73-5]

C₂₆H₃₂O₈ mol.wt. 72.54

Isolation from natural sources

– From the pericarps of *Mallotus japonicus* Muell. Arg. (Euphorbiaceae) [5887, 5893, 5892–5894, 5899, 5897].

¹H NMR [5897], ¹³C NMR [5897], IR [5897], MS [5897]; Cytotoxicity [5894].

1-[3-[(3-Acetyl-2,4-dihydroxy-6-methoxy-5-methylphenyl)methyl]-2,4,6-trihydroxy-5-(3-methyl-2-butenyl)phenyl]-2-methyl-1-propanone*(Isobutyrylmallotojaponin)*

[96853-74-6]

 $C_{26}H_{32}O_8$ mol.wt. 72.54

Isolation from natural sources

– From the pericarps of *Mallotus japonicus* Muell. Arg. (Euphorbiaceae) [5887, 5890, 5892–5894, 5896, 5897].

1-[3-[(3-Acetyl-2,4-dihydroxy-6-methoxy-5-methylphenyl)methyl]-2,4,6-trihydroxy-5-(2-hydroxy-3-methyl-3-butenyl)phenyl]-2-methyl-1-propanone*Proposed name isobutyrylmallotolerin* (old name Isomallotolerin)*

[126026-30-0]

 $C_{26}H_{32}O_9$ mol.wt. 488.54

Isolation from natural sources

– From the pericarps of *Mallotus japonicus* Muell. Arg. (Euphorbiaceae) [5896],* [5887, 5888, 5889, 5890].

m.p. 216–217° [5888];

 $(\alpha)_D^{23} = 0^\circ$ (c = 0.63 in chloroform) [5888]; 1H NMR [5888, 5889], ^{13}C NMR [5888, 5889], IR [5888], UV [5888], MS [5888].

1,1'-[(Phenylmethylene)bis(4-ethoxy-6-hydroxy-3,1-phenylene)]bis-ethanone

m.p. 211° [5956].

 $C_{27}H_{28}O_6$ mol.wt. 448.52**Synthesis**

- Obtained by condensation of resacetophenone 4-ethyl ether (2 mol) with benzaldehyde (1 mol) in the presence of hydrogen chloride in ethanol [5956].

1,1'-[Methylenebis(2,4-dihydroxy-3,1-phenylene)]bis[2-phenylethanone

m.p. 191–192° [5878]; IR [5878], UV [5878].

 $C_{29}H_{24}O_6$ mol.wt. 468.50**Synthesis**

- Obtained by treatment of 2,4-dihydroxy-deoxybenzoin with methylene iodide in the presence of sodium ethoxide in ethanol (29%) [595].

1,1'-[Methylenebis(2,4,6-trihydroxy-3,1-phenylene)]bis-[2-phenoxyethanone

[243465-50-1]

led to the exclusive formation of bis-(α -phenoxy-2,4,6-trihydroxy-acetophenon-3-yl)methane (26%) [5022].m.p. 239° [5022]; 1H NMR [5022]. $C_{29}H_{24}O_{10}$ mol.wt. 532.50**Synthesis**

- The Mannich reaction of α -phenoxy-2,4,6-trihydroxy-acetophenone with aminoacids

1,1'-[Methylenebis(5-acetyl-4,6-dihydroxy-3,1-phenylene)]bis-[3-phenyl-2-propen-1-one[84422-51-5] (*E,E*)

ethanol in the presence of aqueous potassium hydroxide, first with shaking for 30 min, then the reaction mixture was kept in the refrigerator for 48 h (10%) [5661].

m.p. 220° [5661]; 1H NMR [5661]; TLC [5661], column chromatography [5661]. $C_{35}H_{28}O_8$ mol.wt. 576.60**Synthesis**

- Obtained by reaction of benzaldehyde with 3,3',5,5'-tetra-acetyl-2,2',4,4'-tetrahydroxy-diphenylmethane in

Monoketones Substituted on the Acetyl Groups

Chapter 11. Compounds Derived from Halogenoacetic Acids [5958] p. 1201

11.1 Compounds Derived from Bromoacetic Acids [5958] p. 1201

11.1.1 From Monobromoacetic Acid [5958] p. 1201

2-Bromo-1-(3-chloro-4-hydroxyphenyl)ethanone

[41877-19-4] $C_8H_6BrClO_2$ mol.wt. 249.49

Methyl ether $C_9H_8BrClO_2$ mol.wt. 263.52

- Preparation by reaction of bromine with 3-chloro-4-methoxyacetophenone in acetic acid in the presence of concentrated hydrochloric acid at r.t. for 3.5 h (88%) [5959]. Yellow solid [5959]; 1H NMR [5959].

2-Bromo-1-(4-chloro-2-hydroxyphenyl)ethanone

[157068-00-3] $C_8H_6BrClO_2$ mol.wt. 249.49

2-Bromo-1-(5-chloro-2-hydroxyphenyl)ethanone[52727-99-8] $C_8H_6BrClO_2$ mol.wt. 249.49**Described** [5958] **p. 1203**

Syntheses

– Also refer to: [5961,5962].

2-Bromo-1-(3-hydroxy-4-nitrophenyl)ethanone[5086-77-1] $C_8H_6BrNO_4$ mol.wt. 260.04**New compound**

Syntheses

– Refer to: [5963,5964].

m.p. 89° [5963]; IR [5964].

Methyl ether [90725-63-6] $C_9H_8BrNO_4$ mol.wt. 274.07

- Obtained by reaction of bromine with 3-methoxy-4-nitroacetophenone in acetic acid [5965].
- Also obtained from 3-methoxy-4-nitrotoluene (multi-step reaction) [5965].
- Also obtained from 3-methoxy-4-nitrobenzoic acid (multi-step reaction) [5965].
- Also obtained from 3-methoxy-4-nitrobenzoyl chloride (multi-step reaction) [5965].
- Also refer to: [5966,5967].

m.p. 90–91.5° [5965].

2-Bromo-1-(4-hydroxy-3-nitrophenyl)ethanone[5029-61-8] $C_8H_6BrNO_4$ mol.wt. 260.04**Described** [5958] **p. 1204**

Synthesis

– Also refer to: [5968].

Methyl ether [65447-49-6] $C_9H_8BrNO_4$ mol.wt. 274.07

- Obtained by reaction of bromine with 4-hydroxy-3-nitroacetophenone in chloroform [5969,5970].
- Also obtained by reaction of pyridinium hydrobromide perbromide with 4-methoxy-3-nitroacetophenone in THF at r.t. for 3 h [5971].
- Also refer to: [5972].

m.p. 96° [5970], 95–96° [5972]; 1H NMR [5972], IR [5972].

2-Bromo-1-(3,4-dihydroxy-5-nitrophenyl)ethanone[134610-95-0] $C_8H_6BrNO_5$ mol.wt. 276.04**Described [5958] p. 1205**

Synthesis

– Also refer to: [5973].

2-Bromo-1-(5-bromo-2-hydroxyphenyl)ethanone[67029-74-7] $C_8H_6Br_2O_2$ mol.wt. 293.94**Described [5958] p. 1206****Methyl ether** [67639-58-1] $C_9H_8Br_2O_2$ mol.wt. 307.97

– Refer to: [5974,5975,5976,5977].

2-Bromo-1-(2-hydroxyphenyl)ethanone[2491-36-3] $C_8H_7BrO_2$ mol.wt. 215.05**Described [5958] p. 1206**

Syntheses

– Also refer to: [5960,5978,5979].

Methyl ether [31949-21-0] $C_9H_9BrO_2$ mol.wt. 229.07

– Also obtained according to the procedure of Buckman (80%) [5980].

– Also refer to: [5981,5982,5983].

b.p.₁ 130° [5980]; 1H NMR [5980], IR [5980].**Benzyl ether** $C_{15}H_{13}BrO_2$ mol.wt. 305.17

– Obtained by reaction of bromine with 2-(benzyloxy)acetophenone in diethyl ether (65%) [5984].

m.p. 79–81° [5984]; 1H NMR [5984]; GC-MS [5984].**2-Bromo-1-(3-hydroxyphenyl)ethanone**[2491-37-4] $C_8H_7BrO_2$ mol.wt. 215.05**Described [5958] p. 1207**

Syntheses

– Also refer to: [5985,5986,5987,5988].

Methyl ether [5000-65-7] $C_9H_9BrO_2$ mol.wt. 229.07

- Obtained by reaction of bromine with 3-methoxyacetophenone in chloroform at 0° for 3 h (88%) [5989].
- Also refer to: [5981,5983,5990,5991,5992,5993,5994,5995].

Benzyl ether $C_{15}H_{13}BrO_2$ mol.wt. 305.17

- Obtained by reaction of bromine with 3-(benzyloxy)acetophenone in diethyl ether (70%) [5984].
- m.p. 58–60° [5984]; 1H NMR [5984]; GC-MS [5984].

Benzoate $C_{15}H_{11}BrO_3$ mol.wt. 319.15 m.p. 104–105° [5996]

2-Bromo-1-(4-hydroxyphenyl)ethanone

[2491-38-5] $C_8H_7BrO_2$ mol.wt. 215.05

Described [5958] p. 1207

Syntheses

- Also obtained by reaction of pyridinium hydrobromide perbromide with 4-hydroxyacetophenone in THF at r.t. for 3 h [5971].
- Also refer to: [5977,5985,5997,5998,5999,6000,6001,6002,6003,6004,6005,6006,6007].

Methyl ether [2632-13-5] $C_9H_9BrO_2$ mol.wt. 229.07

- Obtained by reaction of N-bromosuccinimide (NBS) with 4-methoxyacetophenone in the presence of trimethylsilyl trifluoromethanesulfonate (TMS-OTf) in acetonitrile at r.t. for 24 h (87%) [6008].
- Also obtained by reaction of pyridinium hydrobromide perbromide with 4-methoxyacetophenone in THF at r.t. for 3 h [5971].
- Also refer to: [5994,5999,6009].

Benzyl ether [4254-67-5] $C_{15}H_{13}BrO_2$ mol.wt. 305.17

- Obtained by reaction of bromine with 4-benzyloxyacetophenone in methanol in the presence of concentrated hydrochloric acid at 0–5° for 1 h, then at r.t. for another 1 h (90%) [6010].
- Also refer to: [6011,6012,6013,6014,6015,6016,6017].
- m.p. 83–84° [6011], 82° [6010], 68° [6012].
- One of the reported melting points is obviously wrong.
- 1H NMR [6010,6012,6015], IR [6010], MS [6010].

2-Bromo-1-(2,4-dihydroxyphenyl)ethanone

[2491-39-6] $C_8H_7BrO_3$ mol.wt. 231.05

Described [5958] p. 1208

Synthesis

- Also refer to: [5985].

Dimethyl ether [60965-26-6] $C_{10}H_{11}BrO_3$ mol.wt. 259.10

– Refer to: [5981,6018,6019,6020].

2-Bromo-1-(2,5-dihydroxyphenyl)ethanone

[25015-91-2] $C_8H_7BrO_3$ mol.wt. 231.05

Described [5958] **p. 1208**

Synthesis

– Also refer to: [5985].

Dimethyl ether [1204-21-3] $C_{10}H_{11}BrO_3$ mol.wt. 259.10

– Obtained by bromination of 2,5-dimethoxyacetophenone using polymer-supported pyridinium bromide perbromide in chloroform at r.t. [6021].

– Also obtained by a halogen-exchange reaction [6022].

– Also refer to: [5981,5994,6018,6023,6024,6025,6026,6027].

2-Bromo-1-(3,4-dihydroxyphenyl)ethanone

[40131-99-5] $C_8H_7BrO_3$ mol.wt. 231.05

Described [5958] **p. 1209**

Syntheses

– Also refer to: [6028,6029,6030].

Dimethyl ether [1835-02-5] $C_{10}H_{11}BrO_3$ mol.wt. 259.10

– Obtained by reaction of bromine with acetoveratrone in chloroform at r.t. (84%) [6031].

– Also obtained by reaction of pyridinium bromide with 3,4-dimethoxyacetophenone in a mixture of chloroform and ethanol [6032].

– Also obtained by reaction of pyridinium hydrobromide perbromide with 3,4-dimethoxy-acetophenone in THF at r.t. for 3 h [5971].

– Also obtained by bromination of 3,4-dimethoxyacetophenone using polymer-supported pyridinium bromide perbromide in chloroform at r.t. [6021].

– Also obtained by reaction of bromine with 3,4-dimethoxyacetophenone in chloroform at r.t. for 1 h (58%) [6033].

– Also refer to: [6009,6020,6026,6027,6034,6035].

m.p. 80–81° [6031].

Diacetate $C_{12}H_{11}BrO_5$ mol.wt. 315.12

– Preparation by bubbling bromine vapours with nitrogen into a concentrated solution of 3,4-diacetoxyacetophenone in chloroform (71%) [6036].

m.p. 99.2–99.8° [6036].

2-Bromo-1-(3,5-dihydroxyphenyl)ethanone[62932-92-7] $C_8H_7BrO_3$ mol.wt. 231.05**Described [5958] p. 1210**

Syntheses

- Also obtained by treatment of 3,5-dihydroxyacetophenone with cupric bromide in boiling ethyl acetate for 2.5 h [6037].
- Also obtained by treatment of its diacetyl ester (**I**) with hydrobromic acid in boiling dilute ethanol for 30 min. **I** was prepared by reaction of bromine with 3,5-diacetoxyacetophenone in chloroform at r.t. for 30 min [6038].

Dimethyl ether [50841-50-4] $C_{10}H_{11}BrO_3$ mol.wt. 259.10

- Refer to: [6023,6026,6034,6039].

Dibenzyl ether [28924-18-7] $C_{22}H_{19}BrO_3$ mol.wt. 411.30

- Refer to: [6040,6041].

2-Bromo-1-(2,3,4-trihydroxyphenyl)ethanone[105190-52-1] $C_8H_7BrO_4$ mol.wt. 247.05**Described [5958] p. 1210****Trimethyl ether** [103477-58-3] $C_{11}H_{13}BrO_4$ mol.wt. 289.13

- Refer to: [6042].

2-Bromo-1-(3,4,5-trihydroxyphenyl)ethanone[111011-09-7] $C_8H_7BrO_4$ mol.wt. 247.05**Described [5958] p. 1210****Trimethyl ether** [51490-01-8] $C_{11}H_{13}BrO_4$ mol.wt. 289.13

- Refer to: [6009,6023,6034,6043].

2-Bromo-1-(2-chloro-4-methoxyphenyl)ethanone[30095-51-3] $C_9H_8BrClO_2$ mol.wt. 263.52**New compound**

Synthesis

– Refer to: [6044].

2-Bromo-1-(3-fluoro-4-methoxyphenyl)ethanone[350-27-6] $C_9H_8BrFO_2$ mol.wt. 247.06**New compound**

Synthesis

– Refer to: [6045].

2-Bromo-1-(2-hydroxy-5-methyl-3-nitrophenyl)ethanone[685892-02-8] $C_9H_8BrNO_4$ mol.wt. 274.07**New compound**

Syntheses

– Refer to: [6046,6047].

Benzoate [36695-28-0] $C_{16}H_{12}BrNO_5$ mol.wt. 378.18 (m.p. 20°) [6048].**2-Bromo-1-(3-bromo-2-hydroxy-5-methylphenyl)ethanone**[194226-50-1] $C_9H_8Br_2O_2$ mol.wt. 307.97**Described [5958] p. 1212**

Syntheses

– Also refer to: [6046,6047].

2-Bromo-1-(4-bromo-2-methoxyphenyl)ethanone[252561-75-4] $C_9H_8Br_2O_2$ mol.wt. 307.97**New compound**

Synthesis

– Refer to: [6049].

2-Bromo-1-(2-hydroxy-4-methylphenyl)ethanone

[144219-74-9]

 $C_9H_9BrO_2$ mol.wt. 229.07**Described** [5958] p. 1213

Synthesis

- Also obtained by reaction of cupric bromide with 2-hydroxy-4-methylacetophenone in boiling ethyl acetate/chloroform mixture for 8 h (82%) [6050].

 1H NMR [6050].**Methyl ether** [145964-98-3] $C_{10}H_{11}BrO_2$ mol.wt. 243.10

- Obtained by bromination of 2-methoxy-4-methylacetophenone in ethyl ether [6051].
- Also refer to: [5966,6052].

b.p.₁₅ 190° [6051].

BIOLOGICAL DATA: Phytotoxic activity [6052]; phytogrow-inhibitory activity on seeds of *Amaranthus hypochondriacus*, *Echinochloa crus-galli* and *Medicago sativa* [6052].

Benzyl ether [860782-82-7] $C_{16}H_{15}BrO_2$ mol.wt. 319.20

- Obtained by reaction of bromine with 2-benzyloxy-4-methylacetophenone in benzene, first at 0°, then at r.t. for 4 h (40%) [6052].

White solid; m.p. 84° [6052]; 1H NMR [6052], ^{13}C NMR [6052], IR [6052], MS [6052].

BIOLOGICAL DATA: Phytotoxic activity [6052]; phytogrow-inhibitory activity on seeds of *Amaranthus hypochondriacus*, *Echinochloa crus-galli* and *Medicago sativa* [6052].

2-Bromo-1-(2-hydroxy-5-methylphenyl)ethanone

[51317-87-4]

 $C_9H_9BrO_2$ mol.wt. 229.07**Described** [5958] p. 1213

Syntheses

- Also refer to: [6046,6047].

Benzyl ether $C_{16}H_{15}BrO_2$ mol.wt. 319.20

- Obtained by reaction of bromine with 2-benzyloxy-5-methylacetophenone in methanol in the presence of concentrated hydrochloric acid at 0–5° for 1 h, then at r.t. for another 1 h (89%) [6010].

m.p. 115° [6010]; 1H NMR [6010], IR [6010], MS [6010].

2-Bromo-1-(4-hydroxy-3-methylphenyl)ethanone[41877-17-2] $C_9H_9BrO_2$ mol.wt. 229.07**Described [5958] p. 1214****Benzyl ether** $C_{16}H_{15}BrO_2$ mol.wt. 319.20

– Obtained by reaction of bromine with 4-benzyloxy-3-methylacetophenone in methanol in the presence of concentrated hydrochloric acid first at 0–5° for 1 h, then at r.t. for 1 h (71%) [6010].

m.p. 170° [6010]; 1H NMR [6010], ^{13}C NMR [6010], IR [6010], MS [6010].

2-Bromo-1-[4-hydroxy-3-(hydroxymethyl)phenyl]ethanone[62932-94-9] $C_9H_9BrO_3$ mol.wt. 245.07**Described [5958] p. 1214**

Synthesis

– Obtained by treatment of its diacetate with 1 N hydrogen bromide in tetrahydrofuran at 75° [6053].

4-Benzyl ether [324556-80-1] $C_{16}H_{15}BrO_3$ mol.wt. 335.20

– Obtained by reaction of bromine with 4-benzyloxy-3-hydroxymethylacetophenone in methanol in the presence of concentrated hydrochloric acid first at 0–5° for 1 h, then at r.t. for 1 h (70%) [6010].

– Also refer to: [6013,6014,6054].

m.p. 130° [6010]; 1H NMR [6010], ^{13}C NMR [6010], IR [6010], MS [6010].

2-Bromo-1-(2-hydroxy-4-methoxyphenyl)ethanone[60965-24-4] $C_9H_9BrO_3$ mol.wt. 245.07**Described [5958] p. 1214**

Synthesis

– Also refer to: [5960].

2-Bromo-1-(2-hydroxy-5-methoxyphenyl)ethanone[203524-87-2] $C_9H_9BrO_3$ mol.wt. 245.07**Described [5958] p. 1215**

Syntheses

– Also refer to: [5961,6055].

Benzyl ether [857561-04-7] $C_{16}H_{15}BrO_3$ mol.wt. 335.20

- Obtained by bromination of 2-benzyloxy-5-methoxyacetophenone,
 - using polymer-supported pyridinium bromide perbromide in chloroform (μ w, 300 sec) at 60° [6021];
 - with bromine in water at r.t. [6021].

2-Bromo-1-(3-hydroxy-4-methoxyphenyl)ethanone

[90971-90-7] $C_9H_9BrO_3$ mol.wt. 245.07

Described [5958] p. 1215

Benzyl ether $C_{16}H_{15}BrO_3$ mol.wt. 335.20

- Obtained by reaction of pyridinium hydrobromide perbromide with 3-benzyloxy-4-methoxy-acetophenone in THF at r.t. for 3 h [5971].

2-Bromo-1-(4-hydroxy-3-methoxyphenyl)ethanone

[69638-06-8] $C_9H_9BrO_3$ mol.wt. 245.07

Described [5958] p. 1215

Acetate [50893-83-9] $C_{11}H_{11}BrO_4$ mol.wt. 287.11

- Refer to: [6056].

2-Bromo-1-(2,3-dihydroxy-4-methoxyphenyl)ethanone

[204648-67-9] $C_9H_9BrO_4$ mol.wt. 261.07

Described [5958] p. 1216

Synthesis

- Also refer to: [6057].

Methyl 3-(Bromoacetyl)-4-hydroxybenzoate

[71620-33-2] $C_{10}H_9BrO_4$ mol.wt. 273.08

New compound

Synthesis

- Obtained by adding methyl 3-acetyl-4-hydroxybenzoate in a chloroform and ethyl acetate mixture to a suspension of $CuBr_2$ in the same solvent. Then the resulting mixture was refluxed for 6 h (49%) [6058].

m.p. 98–99° [6058].

Methyl 5-(Bromoacetyl)-2-hydroxybenzoate[36256-45-8] $C_{10}H_9BrO_4$ mol.wt. 273.08**New compound**

Synthesis

– Obtained by reaction of dioxane dibromide with methyl 5-acetyl-2-hydroxybenzoate in dioxane/ethyl ether mixture (76%) [6059].

Benzoate $C_{17}H_{13}BrO_5$ mol.wt. 377.19

– Refer to: [6054]

2-Bromo-1-(2,5-dimethoxy-4-nitrophenyl)ethanone[851531-99-2] $C_{10}H_{10}BrNO_5$ mol.wt. 304.10**New compound**

Synthesis

– Refer to: [6039].

2-Bromo-1-(3,6-dimethoxy-2-nitrophenyl)ethanone[99057-95-1] $C_{10}H_{10}BrNO_5$ mol.wt. 304.10**New compound**

Synthesis

– Refer to: [6039].

2-Bromo-1-(4,5-dimethoxy-2-nitrophenyl)ethanone[33245-76-0] $C_{10}H_{10}BrNO_5$ mol.wt. 304.10**New compound**

Synthesis

– Refer to: [6039].

2-Bromo-1-(2,4-dihydroxy-3,6-dimethoxyphenyl)ethanone $C_{10}H_{11}BrO_5$ mol.wt. 291.10**Described [5958] p. 1220**

Synthesis

– Preparation by reaction of N-bromosuccinimide with 2,4-dihydroxy-3,6-dimethoxyacetophenone [6060].

m.p. 159–160° [6060].

2-Bromo-1-(2-methoxy-4,5-dimethylphenyl)ethanoneC₁₁H₁₃BrO₂ mol.wt. 257.13**New compound****Synthesis**

- Obtained by bromination of 2-methoxy-4,5-dimethyl-acetophenone [6051].

2-Bromo-1-(2,4,5-trimethoxyphenyl)ethanone

[7298-46-6]

C₁₁H₁₃BrO₄ mol.wt. 289.13**New compound****Synthesis**

- Obtained by reaction of bromoacetonitrile with 1,2,4-trimethoxybenzene (Hoesch reaction) [6061].

USE: Intermediate in lamellarin-S synthesis [6061].

2-Bromo-1-(2-hydroxy-3,4,6-trimethoxyphenyl)ethanone

[91335-60-3]

C₁₁H₁₃BrO₅ mol.wt. 305.13**New compound****Synthesis**

- Obtained by bromination under UV light of 2-acetoxy-3,4,6-trimethoxyacetophenone followed by hydrolysis of the product with methanolic hydrochloric acid [6060] according to the process [6062].

2-Bromo-1-(5-butyl-2-methoxyphenyl)ethanone

[784177-15-7]

C₁₃H₁₇BrO₂ mol.wt. 285.18**New compound****Synthesis**

- Refer to: [6063].

1-[2,6-Bis(1,1-dimethylethyl)-4-hydroxyphenyl]-2-bromoethanone

[1019197-17-1]

C₁₆H₂₃BrO₂ mol.wt. 327.26**New compound****Synthesis**

- Refer to: [6064].

1-[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl]-2-bromoethanone

[14386-64-2]

C₁₆H₂₃BrO₂ mol.wt. 327.26**Described [5958] p. 1223**

Syntheses

- Also obtained by reaction of bromine with 4-hydroxy-3,5-ditert-butylacetophenone in the presence of aluminium chloride in octane at 70° for 30 min (91%) [6065].
 - Also obtained by reaction of bromine with 4-hydroxy-3,5-di-tert-butylacetophenone [6066] in octane or isooctane [6067].
 - Also refer to: [6064,6068].
- m.p. 95–97° [6065].

11.1.2 From Dibromoacetic Acid [5958] p. 1224**2,2-Dibromo-1-(4-hydroxyphenyl)ethanone**

[92596-96-8]

C₈H₆Br₂O₂ mol.wt. 293.94**Described [5958] p. 1226**

Synthesis

- Also refer to: [5958].

Methyl ether [13664-92-1] C₉H₈Br₂O₂ mol.wt. 307.97 [5990]**2,2-Dibromo-1-[3-(hydroxymethyl)-4-(phenylmethoxy)phenyl]ethanone**

[324556-83-4]

C₁₆H₁₄Br₂O₃ mol.wt. 414.09**New compound**

Syntheses

- Obtained by reaction of bromine with 4-benzyloxy-3-hydroxymethylacetophenone in methanol in the presence of concentrated hydrochloric acid at 0–5° for 1 h, then at r.t. for another 1 h (25%) [6010].
- Also refer to: [6014].
- m.p. 110° [6010]; ¹H NMR [6010], IR [6010], MS [6010].

11.1.3 From Tribromoacetic Acid [5958] p. 1228

11.2 Compounds Derived from Chloroacetic Acids [5958] p. 1229

1-(3-Bromo-5-chloro-2-hydroxyphenyl)-2-chloroethanone

[1019854-96-6]

 $C_8H_5BrCl_2O_2$

mol.wt. 283.94

**New compound**

Synthesis

– Refer to: [6069].

2-Chloro-1-(5-chloro-3-fluoro-2-hydroxyphenyl)ethanone

[1019854-97-7]

 $C_8H_5Cl_2FO_2$

mol.wt. 223.03

**New compound**

Synthesis

– Refer to: [6069].

2-Chloro-1-(3,5-dichloro-2-hydroxyphenyl)ethanone

[79214-30-5]

 $C_8H_5Cl_3O_2$

mol.wt. 239.48

**Described [5958] p. 1229**

Synthesis

– Also refer to: [6069].

1-(5-Bromo-2-hydroxyphenyl)-2-chloroethanone

[100959-21-5]

 $C_8H_6BrClO_2$

mol.wt. 249.49

**Described [5958] p. 1230**

Synthesis

– Also refer to: [6070].

2-Chloro-1-(5-fluoro-2-hydroxyphenyl)ethanone[2002-75-7] $C_8H_6ClFO_2$ mol.wt. 188.59**Described [5958] p. 1230**

Synthesis

– Also refer to: [6070].

2-Chloro-1-(3-chloro-4-hydroxyphenyl)ethanone[39066-18-7] $C_8H_6Cl_2O_2$ mol.wt. 205.04**Described [5958] p. 1231****Methyl ether** [79881-25-7] $C_9H_8Cl_2O_2$ mol.wt. 219.07 [6071]**2-Chloro-1-(5-chloro-2-hydroxyphenyl)ethanone**[24483-75-8] $C_8H_6Cl_2O_2$ mol.wt. 205.04**Described [5958] p. 1232**

Syntheses

– Also refer to: [6069,6072].

2-Chloro-1-(3-hydroxyphenyl)ethanone[62932-90-5] $C_8H_7ClO_2$ mol.wt. 170.60**Described [5958] p. 1233**

Synthesis

– Also refer to: [6073].

2-Chloro-1-(4-hydroxyphenyl)ethanone[6305-04-0] $C_8H_7ClO_2$ mol.wt. 170.60**Described [5958] p. 1233**

Syntheses

– Also obtained by reaction of acetyl chloride with anisole in the presence of aluminium chloride in n-heptane at 35° for 4 h 30 min (20%) [5961].

– Also refer to: [5962,6002,6074].

 1H NMR [5961], MS [5961].

Methyl ether [2196-99-8] $C_9H_9ClO_2$ mol.wt. 184.62

- Obtained by treatment of 4-methoxyacetophenone with 1,3-dichloro-5,5-dimethylhydantoin (DCDMH) and p-toluenesulfonic acid in methanol at 30–35° (94%) [6075].
 - Also refer to: [6074,6076,6077,6078].
- m.p. 96–98° [6078], 92–94° [6075].

2-Chloro-1-(2,4-dihydroxyphenyl)ethanone

[25015-92-3] $C_8H_7ClO_3$ mol.wt. 186.59

Described [5958] p. 1234

Dimethyl ether [4783-90-8] $C_{10}H_{11}ClO_3$ mol.wt. 214.65

- Refer to: [6079].

2-Chloro-1-(3,4-dihydroxyphenyl)ethanone

[99-40-1] $C_8H_7ClO_3$ mol.wt. 186.59

Described [5958] p. 1235

Syntheses

- Also refer to: [5985,6080,6081,6082,6083].

2-Chloro-1-(2,4,5-trihydroxyphenyl)ethanone

[14771-02-9] $C_8H_7ClO_4$ mol.wt. 202.59

Described [5958] p. 1236

Trimethyl ether [19278-85-4] $C_{11}H_{13}ClO_4$ mol.wt. 244.67

- Obtained by reaction of chloroacetonitrile with 1,2,4-trimethoxybenzene (Hoesch reaction) [6061].

USE: Intermediate in lamellarin-S synthesis [6061].

2-Chloro-1-(2,4,6-trihydroxyphenyl)ethanone[110865-03-7] $C_8H_7ClO_4$ mol.wt. 202.59**Described** [5958] **p. 1236**

Syntheses

– Also refer to: [6084,6085].

1-(2-Bromo-5-methoxyphenyl)-2-chloroethanone[949898-83-3] $C_9H_8BrClO_2$ mol.wt. 263.52**New compound**

Synthesis

– Refer to: [6086].

2-Chloro-2-fluoro-1-(4-methoxyphenyl)ethanone $C_9H_8ClFO_2$ mol.wt. 202.61**New compound**

Syntheses

- Obtained by adding 2,2-dichloro-2-fluoromethyl 4-methoxyphenyl ketone in DMF to a solution of stannous chloride and aluminium powder in DMF at r.t. Then, the mixture was heated at 60° for 1.5 h (52%) [6087].
- Also obtained by reaction of ethyl chlorofluoroacetate with p-anisole magnesium bromide in ethyl ether at -78° for 2 h (20%) [6088].

b.p.₁₂ 145° [6088]; light-yellow crystals [6088];¹H NMR [6087,6088], ¹⁹F NMR [6087,6088], IR [6087,6088]; TLC [6087].**2-Chloro-1-(2-hydroxy-4-methylphenyl)ethanone**[20834-75-7] $C_9H_9ClO_2$ mol.wt. 184.62**Described** [5958] **p. 1239**

Synthesis

- Also obtained by Fries rearrangement of 3-methylphenyl chloroacetate in the presence of Fe- or Zn-contg. catalysts [6089].

2-Chloro-1-(4-hydroxy-2-methylphenyl)ethanone[37904-71-5] $C_9H_9ClO_2$ mol.wt. 184.62**Described [5958] p. 1240**

Synthesis

– Also obtained by Fries rearrangement of 3-methylphenyl chloroacetate in the presence of Fe- or Zn-contg. catalysts [6089].

2-Chloro-1-(4-hydroxy-3-methylphenyl)ethanone[40943-24-6] $C_9H_9ClO_2$ mol.wt. 184.62**Described [5958] p. 1240****Methyl ether** [62613-62-1] $C_{10}H_{11}ClO_2$ mol.wt. 198.65

– Obtained by reaction of chloroacetyl chloride with 2-methoxytoluene [6090].
m.p. 70° [6090].

2-Chloro-1-(3-methoxy-4-methylphenyl)ethanone $C_{10}H_{11}ClO_2$ mol.wt. 198.65**New compound**

Synthesis

– Obtained from 3-methoxy-4-methylbenzoyl chloride by Nierenstein reaction [6051].

b.p.₁₀ 157–160° [6051].**2-Chloro-1-(2-hydroxy-3,4-dimethoxyphenyl)ethanone**[7507-92-8] $C_{10}H_{11}ClO_4$ mol.wt. 230.65**Described [5958] p. 1248**

Synthesis

– Also refer to: [6095,6097].

Methyl ether [29003-60-9] C₉H₈Cl₂O₂ mol.wt. 219.07 [6096]– Preparation by treatment of anisole with benzyltrimethylammonium tetrachloroiodate (BTMA ICl₄) in acetic acid at 70° for 5 h (78%) [6098].

- Also obtained by reaction of anisole with dichloroacetyl chloride in the presence of aluminium chloride [6095].

m.p. 77–78° [6098], 75–76° [6095]; ¹H NMR [6098], IR [6098].

2,2-Dichloro-2-fluoro-1-(4-methoxyphenyl)ethanone

[16629-88-2] C₉H₇Cl₂FO₂ mol.wt. 237.06

New compound

Syntheses

- To acetonitrile was added periodic acid and this mixture was stirred at r.t. for 15 min. Dichlorofluoromethyl 4-methoxyphenyl alcohol was added followed by addition of pyridinium chlorochromate in acetonitrile, then the reaction mixture was stirred at 0°, for 10 min and at r.t. for 2.5 h (62%) [6087].
- Also obtained by reaction of sodium fluorodichloroacetate with p-anisole magnesium bromide in ethyl ether [6099].

b.p.₂ 110–112° [6099]; n_D¹⁸ = 1.5616 [6099];
¹H NMR [6087], ¹⁹F NMR [6087], IR [6087,6099].

1-(3,5-Diacetoxyphenyl)-2,2-dichloroethanone

[144660-11-7] C₁₂H₁₀Cl₂O₅ mol.wt. 305.11

New compound

Synthesis

- Preparation by treatment of 3,5-diacetoxyacetophenone with benzyltrimethylammonium tetrachloroiodate (BTMA ICl₄) in acetic acid at 70° for 6 h (93%) [6098].
- m.p. 85–87° [6098]; ¹H NMR [6098], IR [6098].

1-(3,4-Dihydroxyphenyl)-2-fluoroethanone

[402-99-3] $C_8H_7FO_3$ mol.wt. 170.14

New compound

Synthesis

- Obtained by reaction of monofluoroacetyl chloride with pyrocatechol in the presence of phosphorous oxychloride in benzene (32%) [6109].

m.p. 185° [6109].

1-(3,5-Difluoro-4-methoxyphenyl)-2-fluoroethanone[872968-14-4] $C_9H_7F_3O_2$ mol.wt. 204.15**New compound****Synthesis**

- Obtained by fluorination of 4-methoxyacetophenone with manganese (IV) tetrafluoride formed in situ using manganese (IV) dioxide and pyridinium polyhydrogeno-fluoride under very mild conditions [6110].

MS [6110].

2-Fluoro-1-(3-fluoro-4-methoxyphenyl)ethanone[501426-62-6] $C_9H_8F_2O_2$ mol.wt. 186.16**New compound****Synthesis**

- Also obtained by reaction of Selectfluor with 1-(4-methoxyphenyl)ethanone in boiling methanol for 24 h (9%) [6104].

m.p. 82–84° [6104]; 1H NMR [6104].**2-Fluoro-1-(3-methoxyphenyl)ethanone** $C_9H_9FO_2$ mol.wt. 168.17**New compound****Syntheses**

- Obtained by reaction of potassium bifluoride with α -bromo-3-methoxyacetophenone in triethyleneglycol at 100° for 3 h (54%) [5989].
- Also obtained by reaction of aqueous sodium hydroxide with 2,3,3-trifluoro-1-(3-methoxyphenyl)-1-propenyl p-toluenesulfonate in DMSO at 80° for 3 h (69%) [6106].

m.p. 53–54° [5989].

11.3.2 From Difluoroacetic Acid [5958] p. 1265**2,2-Difluoro-1-(4-methoxyphenyl)ethanone**[114829-07-1] $C_9H_8F_2O_2$ mol.wt. 186.16**Described [5958] p. 1266****Syntheses**

- Also obtained by treatment of butyl-[2,2-difluoro-1-(4-methoxyphenyl)-eth-(Z)-ylidene]amine with aqueous hydrochloric acid in acetonitrile [6111].

- Also obtained by reaction of p-anisole magnesium bromide with ethyl 2,2-difluoroacetate in THF at -78° (36%) [6112].
 - Also obtained by treatment of 2,2-difluoro-1-(4-methoxyphenyl)vinyl benzoate with aqueous potassium hydroxide in THF at r.t. for 12 h (72%) [6113].
 - Also obtained by reaction of Selectfluor with 1-(4-morpholinyl)-1-(4-methoxyphenyl)ethene in the presence of 4 Å molecular sieves in acetonitrile at -10° for 8 h (64%) [6107].
 - Also refer to: [6108,6114,6115].

Methyl ether [711-38-6] $C_9H_7F_3O_2$ mol.wt. 204.15

– Refer to: [6112,6118,6119,6120,6121,6122].

1-(2,3-Dihydroxyphenyl)-2,2,2-trifluoroethanone

[874992-53-7] $C_8H_5F_3O_3$ mol.wt. 206.12

New compound

Syntheses

– Obtained by bioconversion of trifluoroacetophenone through living cells of *Escherichia coli* carrying,

- plasmid pKF6256 expressing *todCI-bphA2A3A4* (1.9%) [6123];
- plasmid pUC6256B expressing *todCI-bphA2A3A4* and *bphB* (4.4%) [6123].

1H NMR [6123], ^{13}C NMR [6123], MS [6123].

2,2,2-Trifluoro-1-(3-methoxyphenyl)ethanone

[30724-22-2] $C_9H_7F_3O_2$ mol.wt. 204.15

New compound

Syntheses

– Obtained by adding successively 1.6 M n-BuLi in hexane, then after 10 min, N,N-diethyltrifluoroacetamide (5 min) to a solution of 1-bromo-3-methoxybenzene in THF at -78° under argon and stirring the mixture for 2 h (88%) [6124].

– Also refer to: [6112].

Pale yellow oil [6124];

1H NMR [6124], ^{13}C NMR [6124], ^{19}F NMR [6124], IR [6124], MS [6124].

Oxime [154187-44-7] $C_9H_8F_3NO_2$ mol.wt. 219.05

– Preparation by reaction of hydroxylamine hydrochloride with 2,2,2-trifluoro-1-(3-methoxy-phenyl)ethanone in refluxing methanol for 2 h (97%) [6124].

– Also refer to: [6125].

Clear viscous oil [6124];

1H NMR [6124], ^{13}C NMR [6124], ^{19}F NMR [6124], IR [6124], MS [6124].

[77369-38-1] $C_8H_9NO_2$ mol.wt. 151.17

$COCH_2NH_2$

Described [5958] p. 1294

Synthesis

– Also refer to: [6135].

Hydrochloride [19745-72-3] $C_8H_9NO_2$, HCl mol.wt. 187.63

– Obtained by treatment of α -bromo-4-hydroxyacetophenone with hexamethylenetetramine in chloroform at r.t. for 1 h [5971].

– Also refer to: [6132].

Methyl ether [40513-43-7] $C_9H_{11}NO_2$ mol.wt. 165.19

– Refer to: [6027,6135,6136].

Hydrochloride (of the methyl ether) [3883-94-1] $C_9H_{11}NO_2$, HCl mol.wt. 201.65

– Obtained by treatment of α -bromo-4-methoxyacetophenone with hexamethylenetetramine in chloroform at r.t. for 1 h [5971].

– Also refer to: [6127,6132,6134,6137,6138,6139].

2-Amino-1-(3,4-dihydroxyphenyl)ethanone[499-61-6] $C_8H_9NO_3$ mol.wt. 167.16**Described** [5958] p. 1296**Synthesis**

- Also obtained by reaction of 3,4-dihydroxyphenacyl chloride and α -N-acetyllysine in 15% potassium borate and r.t. overnight, then adding acetic acid to adjust pH to 5 [6140].

Isolation from natural sources

- Obtained by hydrolysis of sclerotized cuticles from locust *Scistocerca gregaria* and the beetle *Tenebrio molitor* by dilute hydrochloric acid [6140].

MS [6140]; HPLC [6140].

Dimethyl ether (*Hydrochloride*) [61416-34-0] $C_{10}H_{13}NO_3, HCl$ mol.wt. 231.69

- Also obtained by treatment of α -bromo-3,4-dimethoxyacetophenone with hexamethylenetetramine in chloroform at r.t. for 1 h [5971].
- Also refer to: [6132].

2-Amino-1-(4-methoxy-3-nitrophenyl)ethanone (*Hydrochloride*)[877395-19-2] $C_9H_{10}N_2O_4, HCl$ mol.wt. 246.65**New compound****Synthesis**

- Obtained by treatment of α -bromo-4-methoxy-3-nitroacetophenone with hexamethylenetetramine in chloroform at r.t. for 1 h [5971].

2-Amino-1-[4-methoxy-3-(phenylmethoxy)phenyl]ethanone (*Hydrochloride*) $C_{16}H_{17}NO_3, HCl$ mol.wt. 307.78**New compound****Synthesis**

- Obtained by treatment of α -bromo-3-(benzyloxy)-4-methoxyacetophenone with hexamethylenetetramine in chloroform at r.t. for 1 h [5971].

12.2 Compounds Derived from Substituted Aminoacetic Acids [5958] p. 1298

2-Azido-1-(2-hydroxyphenyl)ethanone

[67139-49-5] $C_8H_7N_3O_2$ mol.wt. 177.16

New compound

Syntheses

– Preparation by reaction of sodium azide with 2-bromo-1-(2-hydroxyphenyl)ethanone (89%) [6141].

– Also refer to: [6142,6143].

m.p. 73–74° [6141].

Methyl ether $C_9H_9N_3O_2$ mol.wt. 191.19

– Obtained by reaction of sodium azide with 2-bromo-1-(2-methoxyphenyl)ethanone in dilute ethanol at r.t. for 30 min (89%) [6133].

m.p. 45–46° [6133]; 1H NMR [6133], IR [6133].

Acetate $C_{10}H_9N_3O_3$ mol.wt. 219.20

– Preparation by adding dropwise triethylamine and acetyl chloride to a solution of o-hydroxy-phenacyl azide in THF at 0–5°, then at r.t. for 1 h (95%) [6143].

m.p. 54–55° [6143]; 1H NMR [6143].

Benzoate $C_{15}H_{11}N_3O_3$ mol.wt. 281.27 [6143]

– Preparation by adding dropwise triethylamine and benzoyl chloride to a solution of o-hydroxy-phenacyl azide in THF at 0–5°, then at r.t. for 1.5 h (90%) [6143].

m.p. 59–60° [6143]; 1H NMR [6143].

2-Azido-1-(4-hydroxyphenyl)ethanone

[169315-44-0] $C_8H_7N_3O_2$ mol.wt. 177.16

New compound

Syntheses

– Preparation by reaction of sodium azide with α -bromo-4-hydroxyacetophenone [6144], (80%) [6141].

– Also obtained by reaction of sodium azide with α -chloro-4-hydroxyacetophenone in alcohol [6145].

– Also refer to: [6146,6147].

m.p. 139–140° [6141], 136° [6145]; 1H NMR [6146], ^{13}C NMR [6146].

Methyl ether [6595-28-4] $C_9H_9N_3O_2$ mol.wt. 191.19

– Obtained by reaction of sodium azide with 4-methoxyphenacyl bromide in DMSO at r.t. for at least 30 min (93%) [6148].

– Also refer to: [6149,6150].

Light yellow powder [6148]; $^1\text{H NMR}$ [6148].

2-Azido-1-(3,4-dihydroxyphenyl)ethanone

[165947-83-1] $\text{C}_8\text{H}_7\text{N}_3\text{O}_3$ mol.wt. 193.16

New compound

Syntheses

– Preparation by reaction of sodium azide with 3,4-dihydroxyphenacyl chloride in water (80%) [5996] or in DMF (90%) [6080].

m.p. 132° (d) [5996].

Dimethyl ether [187101-52-6] $\text{C}_{10}\text{H}_{11}\text{N}_3\text{O}_3$ mol.wt. 221.22

– Obtained by reaction of sodium azide with 3,4-dimethoxyphenacyl bromide in DMSO at r.t. for at least 30 min (87%) [6148].

Yellow powder [6148]; $^1\text{H NMR}$ [6148].

2-Azido-1-(3-methoxyphenyl)ethanone

[194787-89-8] $\text{C}_9\text{H}_9\text{N}_3\text{O}_2$ mol.wt. 191.19

New compound

Syntheses

– Refer to: [6027,6151,6152] (Chinese patent).

1-(3,4-Dihydroxyphenyl)-2-(methylamino)ethanone

[99-45-6] $\text{C}_9\text{H}_{11}\text{NO}_3$ mol.wt. 181.19

Described [5958] p. 1300

Syntheses

– Also refer to: [6153,6154,6155,6156].

Diacetate (Hydrochloride) $\text{C}_{13}\text{H}_{15}\text{NO}_5$, HCl mol.wt. 301.73 [6157]

1-(3,4-Dihydroxy-5-nitrophenyl)-2-(dimethylamino)ethanone (Hydrochloride)

$\text{C}_{10}\text{H}_{12}\text{NO}_5$, HCl mol.wt. 262.67

New compound

Synthesis

– Obtained by adding a solution of 3,4-dihydroxy-5-nitro- α -bromoacetophenone in DMF to a solution of 40% aqueous dimethylamine

for 1 h. at r.t. Then, treatment with concentrated hydrochloric acid (pH 1) (96%) [5973].

Monohydrate; yellow solid [5973]; $^1\text{H NMR}$ [5973], $^{13}\text{C NMR}$ [5973], IR [5973].

1-(2-Methoxyphenyl)-2-(methylamino)ethanone (Hydrochloride)[958292-64-3] $C_{10}H_{13}NO_2 \cdot HCl$ mol.wt. 215.68**New compound****Synthesis**

– A solution of α -bromo-2-methoxyacetophenone in acetonitrile was added to a solution of dimethylamine (8 M solution in ethanol) in acetonitrile at 0°. The solution was stirred at 0° for 5 min. Ether was added and the resulting precipitate after drying, was dissolved in ether and 1 M hydrogen chloride in ether was added at 0° [6027].

1-(3-Methoxyphenyl)-2-(methylamino)ethanone (Hydrochloride)[958292-65-4] $C_{10}H_{13}NO_2 \cdot HCl$ mol.wt. 215.68**New compound****Synthesis**

– A solution of α -bromo-3-methoxyacetophenone in acetonitrile was added to a solution of dimethylamine (8 M solution in ethanol) in acetonitrile at 0°. The solution was stirred at 0° for 5 min. Ether was added and the resulting precipitate after drying, was dissolved in ether and 1 M hydrogen chloride in ether was added at 0° [6027].

1-(4-Methoxyphenyl)-2-(methylamino)ethanone (Hydrochloride)[29705-80-4] $C_{10}H_{13}NO_2 \cdot HCl$ mol.wt. 215.68**New compound****Synthesis**

– A solution of α -bromo-4-methoxyacetophenone in acetonitrile was added to a solution of dimethylamine (8 M solution in ethanol) in acetonitrile at 0°. The solution was stirred at 0° for 5 min. Ether was added and the resulting precipitate after drying, was dissolved in ether and 1 M hydrogen chloride in ether was added at 0° [6027].

2-Amino-1-(2,5-dimethoxyphenyl)ethanone (Hydrochloride)[671224-08-1] $C_{10}H_{13}NO_3 \cdot HCl$ mol.wt. 231.69**New compound****Synthesis**

– Refer to: [6027].

2-(Ethylmethylamino)-1-(4-hydroxyphenyl)ethanone

[1009636-07-0]

C₁₁H₁₅NO₂ mol.wt. 193.25COCH₂N(C₂H₅)(CH₃)**New compound**

[107584-69-0]

C₁₆H₁₃F₃O₄ mol.wt. 326.27

Described [5958] p. 1362

Methyl ether C₁₇H₁₅F₃O₄ mol.wt. 340.30

– Preparation by [6163] according to: [6178,6179].

m.p. 144–145° [6163]; ¹H NMR [6163], ¹³C NMR [6163], MS [6163].

1-(4-Hydroxy-3-methoxyphenyl)-2-(2-methoxyphenoxy)ethanone

α-(2-Methoxyphenoxy)acetoveratrone

[22317-35-7]

C₁₆H₁₆O₅ mol.wt. 288.30

Described [5958] p. 1363

Methyl ether [22675-96-3] C₁₇H₁₈O₅ mol.wt. 302.33

– Preparation by reaction of 3',4'-dimethoxy-*α*-bromoacetophenone with guaiacol in the presence of potassium carbonate in acetone [6163,6178,6179], (94%) [6182].

- Preparation [6183], according to the procedure [6178].
- Also refer to: [6180,6184,6185,6186,6187,6188,6189,6190].
- m.p. 94–95.4° [6191], 94° [6180], 93–94° [6182], 92–93° [6183], 90–92° [6178];
- ¹H NMR [6180,6182,6191], UV [6190]; circular dichroism [6188].

1-(4-Hydroxy-3-methoxyphenyl)-2-(3-methoxyphenoxy)ethanone

[107584-68-9]

C₁₆H₁₆O₅ mol.wt. 288.30

Described [5958] p. 1364

Methyl ether [72327-16-3] C₁₇H₁₈O₅ mol.wt. 302.33

- Preparation by reaction of 3',4'-dimethoxy- α -bromoacetophenone with 3-methoxyphenol in the presence of potassium carbonate in boiling acetone [6163,6178,6179] for 6 h [6192].
- m.p. 90° [6179,6192];
- ¹H NMR [6179], ¹³C NMR [6179], IR [6192], MS [6179].

2,4-Dinitrophenylhydrazone (of the methyl ether) C₂₃H₂₂N₄O₈ mol.wt. 482.30

m.p. 177° [6192].

3-[2-(3,4-Dimethoxy)-2-oxoethoxy]benzonitrile

α -(m-Cyanophenoxy)acetoveratrone

C₁₇H₁₅NO₄ mol.wt. 297.31

New compound

Synthesis

– Preparation by [6163] according to: [6178,6179].

m.p. 144–145° [6163].

¹H NMR [6163], ¹³C NMR [6163], MS [6163].

4-[2-(3,4-Dimethoxy)-2-oxoethoxy]benzonitrile*α*-(*p*-Cyanophenoxy)acetoveratrone

[151425-43-3]

C₁₇H₁₅NO₄ mol.wt. 297.31**New compound****Syntheses**

- Preparation by reaction of *α*-bromoacetoveratrone with 4-hydroxybenzonitrile in the presence of potassium carbonate in refluxing acetone [6163,6178,6179].

m.p. 131–132° [6179]; ¹H NMR [6179], ¹³C NMR [6179], MS [6179].**1-(3,4-Dimethoxyphenyl)-2-(4-methoxyphenoxy)ethanone**

[129229-41-0]

C₁₇H₁₈O₅ mol.wt. 302.33**New compound****Syntheses**

- Preparation by reaction of 3',4'-dimethoxy-*α*-bromo-acetophenone with 4-methoxyphenol in the presence of potassium carbonate in acetone [6163,6178,6179].

m.p. 104° [6179]; ¹H NMR [6179], ¹³C NMR [6179], MS [6179].**2-(2,3-Dimethoxyphenoxy)-1-(3,4-dimethoxyphenyl)ethanone***ω*-(2',3'-Dimethoxyphenoxy)acetoveratrone

[72327-23-2]

C₁₈H₂₀O₆ mol.wt. 332.35**New compound****Synthesis**

- Obtained by reaction of *ω*-bromoacetoveratrone with 2,3-dimethoxyphenol in the presence of potassium carbonate in refluxing acetone for 8 h (70%) [6192].

m.p. 94–95° [6192]; IR [6192].

2,4-Dinitrophenylhydrazone C₂₄H₂₄N₄O₉ mol.wt. 512.48

m.p. 198–199° [6192].

2-(2,6-Dimethoxyphenoxy)-1-(3,4-dimethoxyphenyl)ethanone*α*-(2,6-Dimethoxyphenoxy)acetoveratrone

[29389-04-6]

C₁₈H₂₀O₆ mol.wt. 332.35**New compound****Syntheses**

- Preparation by reaction of α -bromoacetoveratrone with 2,6-dimethoxyphenol in the presence of potassium carbonate in refluxing acetone [6179,6180].
- Also obtained by reaction of 3',4'-dimethoxy- α -bromo-acetophenone with the sodium salt of 2,6-dimethoxyphenol in DMF at r.t. for 1 h (93%) [6193].

m.p. 103–104° [6179], 100–103° [6193], 97° [6180];

¹H NMR [6179,6180,6193], ¹³C NMR [6179], MS [6179].**1-(3,4-Dimethoxyphenyl)-2-(2-methoxy-4-propylphenoxy)ethanone***ω*-(2-Methoxy-4-propylphenoxy)acetoveratroneC₂₀H₂₄O₅ mol.wt. 344.41**New compound****Synthesis**

- Refer to: [6182].

***o*-Methyl ether** [224321-19-1] C₉H₁₀O₃ mol.wt. 166.18 Refer to: [6100,6197]**2-Hydroxy-1-(3-hydroxyphenyl)ethanone**

[131341-58-7]

C₈H₈O₃ mol.wt. 152.15**Described [5958] p. 1370**

m-Methyl ether [87428-52-2] $C_9H_{10}O_3$ mol.wt. 166.18

– Refer to: [6198].

2-Hydroxy-1-(4-hydroxyphenyl)ethanone

[5706-85-4] $C_8H_8O_3$ mol.wt. 152.15

Described [5958] p. 1370

p-Methyl ether [4136-21-4] $C_9H_{10}O_3$ mol.wt. 166.18

- Obtained by photocatalytic oxidation of 2-(4-methoxyphenyl)-1,2-ethanediol using silica-encapsulated $H_3PW_{12}O_{40}$ as photocatalyst in acetonitrile for 1 h at r.t. under oxygen as the sole reoxidant of the catalyst, (90%) [6199].
- Also obtained by treatment of 4-methoxyacetophenone with iodosobenzene in methanolic sodium hydroxide (50%) [6200].
- Also refer to: [6201].

1H NMR [6199], IR [6199], MS [6199]; TLC [6199].

2,2-Dihydroxy-1-(4-hydroxyphenyl)ethanone

[197447-05-5] $C_8H_8O_4$ mol.wt. 168.15

Described [5958] p. 1372

Synthesis

- Also obtained by adding a saturated aqueous solution of sodium carbonate to a solution of ω -dichloro p-hydroxyacetophenone in ethanol and heating to 40–120° [6097].

1-(2,4-Dihydroxyphenyl)-2-hydroxyethanone (*Fisetol*)

[487-47-8] $C_8H_8O_4$ mol.wt. 168.15

Described [5958] p. 1372

Synthesis

- Also refer to: [6202].

1-(3,4-Dihydroxyphenyl)-2-hydroxyethanone (DOPKET)

[29477-54-1] $C_8H_8O_4$ mol.wt. 168.15

Described [5958] p. 1373

Syntheses

- Also refer to: [6203,6204,6205].

Isolation from natural sources

- From the aerial parts of *Jasminum grandiflorum* collected in Jessore (Bangladesh) [6206].

^1H NMR [6207], ^{13}C NMR [6207], IR [6207], UV [6207].

BIOLOGICAL ACTIVITY: In vitro antioxidative activity with the linoleic acid system [6207].

Dimethyl ether $\text{C}_{10}\text{H}_{12}\text{O}_4$ mol.wt. 196.20

- Obtained by treatment of 3,4-dimethoxyacetophenone with iodobenzene in methanolic sodium hydroxide (40%) [6200].

1-(3-Fluoro-4-methoxyphenyl)-2,2-dihydroxyethanone

$\text{C}_9\text{H}_9\text{FO}_4$ mol.wt. 200.17

New compound

Synthesis

- Obtained by hydrolysis of (3-fluoro-4-methoxyphenyl)-oxo-acetaldehyde [6208].

m.p. 95° [6208]; ^1H NMR [6208], IR [6208].

2-Hydroxy-1-(4-hydroxy-3,5-dimethoxyphenyl)ethanone

[90426-22-5] $\text{C}_{10}\text{H}_{12}\text{O}_5$ mol.wt. 212.20

Described [5958] p. 1377

Synthesis

- Also refer to: [6209].

1-[2-[[2-(E)-3,7-Dimethyl-2,6-octadien-1-yl]oxy]-4,6-dihydroxy]-2-hydroxyethanone

[149492-42-2]

$\text{C}_{18}\text{H}_{24}\text{O}_5$ mol.wt. 320.38

Described [5958] p. 1380

Isolation from natural sources

- From the fruits of *Melicope semecarpifolia* (Merr.) T. G. Hartley (Rutaceae) compound **8** [6210].

BIOLOGICAL ACTIVITY: Antiinflammatory [6210].

1-[4-[(2E)-3,7-Dimethyl-2,6-octadien-1-yl]oxy]-2,6-dihydroxy]-2-hydroxyethanone

[142905-41-7]

 $C_{18}H_{24}O_5$

mol.wt. 320.38

**Described [5958]
p. 1380**

Isolation from natural sources

- From the fruits of *Melicope semecarpifolia* (Merr.) T. G. Hartley (Rutaceae) compound **9** [6210]. BIOLOGICAL ACTIVITY: Antiinflammatory [6210].

Chapter 16. Compounds Derived from Acyloxy- and Aroyloxyacetic Acids [5958] p. 1383**16.1 Compounds Derived from Acetoxyacetic Acids [5958] p. 1383****2-(Acetyloxy)-1-(2-hydroxyphenyl)ethanone**

**Described [5958] p. 1383****Methyl ether** [74786-55-3] $C_{11}H_{12}O_4$ mol.wt. 208.21

- Obtained from 2-methoxyacetophenone and [hydroxy(tosyloxy)iodo]benzene (HTIB)/polymer-supported [hydroxy(tosyloxy)iodo] benzene (PSHTIB) in N,N-dimethylformamide/dimethyl-acetamide (72%) [6211].

m.p. 55° [6211]; 1H NMR [6211], ^{13}C NMR [6211].**2-(Acetyloxy)-1-(4-hydroxyphenyl)ethanone**

[20816-46-0]

 $C_{10}H_{10}O_4$

mol.wt. 194.19

**Described [5958] p. 1383**

Syntheses

- Also obtained by adding, step by step, triethylamine in a solution of ω -chloro-4-hydroxy acetophenone in acetic acid/acetonitrile at 0°, then refluxing for 3 h (40%) [5961].
 - Also refer to: [6055,6212].
- 1H NMR [5961], MS [5961].

Methyl ether [58518-78-8] $C_{11}H_{12}O_4$ mol.wt. 208.21

- Obtained by reaction of sodium acetate with 2-bromo-4'-methoxyacetophenone in boiling methanol for 48 h (43%) [6213].
- Also obtained by reaction of potassium thioacetate with 4-methoxy- α -chloroacetophenone [6214].
- Also obtained from 4-methoxyacetophenone and [hydroxy(tosyloxy)iodo]benzene (HTIB)/polymer-supported [hydroxy(tosyloxy)iodo]benzene (PSHTIB) in *N,N*-dimethyl-formamide/dimethylacetamide (74%) [6211].
- Also refer to: [5962].

b.p._{2.5} 140–141.5° [6215];

m.p. 69° [6211], 59° [6214], 56° [6213], 55–56° [6216].

One of the reported melting points is obviously wrong.

¹H NMR [6211,6213,6216], ¹³C NMR [6211,6216], IR [6213,6216], MS [6216].

Acetate $C_{12}H_{12}O_5$ mol.wt. 236.22

- Obtained by reaction of acetic anhydride with ω -acetoxy-4-hydroxyacetophenone at reflux (100°) for 2 h (75%) [5961].

¹H NMR [5961], MS [5961].

2-(Acetyloxy)-1-(2-hydroxy-4-methylphenyl)ethanone

[860806-61-7]

$C_{11}H_{12}O_4$ mol.wt. 208.21

New compound

Synthesis

- Obtained by hydrogenation of α -acetoxy-2-benzyloxy-4-methylacetophenone in ethyl acetate with hydrogen (60 bar) in the presence of 10% Pd/C at 60° for 5 h (57%) [6052].

Colourless crystalline needles; m.p. 87° [6052];

¹H NMR [6052], ¹³C NMR [6052], IR [6052], UV [6052], MS [6052].

BIOLOGICAL DATA: Phytotoxic activity [6052]; phytogrow-inhibitory activity on seeds of *Amaranthus hypochondriacus*, *Echinochloa crus-galli* and *Medicago sativa* [6052].

Isolation from natural sources

- From *Hofmeisteria schaffneri* (A. Gray) R.M. King and H. Robinson (Asteraceae) [6052].

Methyl ether [860782-84-9] $C_{12}H_{14}O_4$ mol.wt. 222.24

- Obtained by adding successively DBU, then after 10 min, α -bromo-2-methoxy-4-methyl-acetophenone in THF to an acetic acid/THF mixture and stirring at r.t. for 2.5 h (76%) [6052].

Colourless oil [6052]; ¹H NMR [6052], ¹³C NMR [6052], IR [6052], MS [6052].

BIOLOGICAL DATA: Phytotoxic activity [6052]; phyto-growth-inhibitory activity on seeds of *Amaranthus hypochondriacus*, *Echinochloa crus-galli* and *Medicago sativa* [6052].

Benzyl ether [860782-83-8] $C_{18}H_{18}O_4$ mol.wt. 298.34

- Obtained by adding α -bromo-2-benzyloxy-4-methylacetophenone in THF to a mixture of DBU in ethyl acetate/THF at r.t. for 10 min, then stirring for 2.5 h (82%) [6052].

White solid; m.p. 73° [6052];

1H NMR [6052], ^{13}C NMR [6052], IR [6052], UV [6052], MS [6052].

BIOLOGICAL DATA: Phytotoxic activity [6052]; phyto-growth-inhibitory activity on seeds of *Amaranthus hypochondriacus*, *Echinochloa crus-galli* and *Medicago sativa* [6052].

2-Acetoxy-1-(7-hydroxy-2,2-dimethyl-2H-1-benzopyran-6-yl)ethanone
(*Ripariochromene B*)

[27045-16-5]

$C_{15}H_{16}O_5$ mol.wt. 276.29

New compound

Synthesis

- Refer to: [6217].

Isolation from natural sources

- From the roots of *Eupatorium riparium* Regel [6218].
- From the aerial parts of *Ageratina riparia* [6219].

m.p. 146–147° [6217,6220];

1H NMR [6217,6220], IR [6217,6220], UV [6217,6220].

BIOLOGICAL DATA: Antifungic activity [6218].

16.2 Compounds Derived from Other Acyloxy- and Phenacyloxyacetic Acids [5958] p. 1386

16.3 Compounds Derived from Benzoyloxyacetic Acids [5958] p. 1389

2-(Benzoyloxy)-1-(2,5-dihydroxyphenyl)ethanone

[117421-24-6]

$C_{15}H_{12}O_5$ mol.wt. 272.26

Described [5958] p. 1389

Dimethyl ether [478972-03-1] $C_{17}H_{16}O_5$ mol.wt. 300.31

– Obtained from 2-bromo-1-(2,5-dimethoxyphenyl)ethanone (Chinese paper) [6022].

Chapter 17. Compounds Derived from Nitroacetic Acids [5958] p. 1395

1-(4-Methoxyphenyl)-2-nitroethanone

[46318-58-5] $C_9H_9NO_4$ mol.wt. 195.17

New compound

Synthesis

– Refer to: [6221].

18.1 Compounds Derived from Phenylacetic Acid [5958] p. 1399

1-(3,4-Dihydroxy-5-nitrophenyl)-2-phenylethanone (*BIA-3-202*)

[274925-86-9] $C_{14}H_{11}NO_5$ mol.wt. 273.25

Described [5958] p. 1403

Syntheses

– Also refer to: [5973,6222,6223,6224].

BIOLOGICAL ACTIVITY: [5973].

1-(2-Hydroxyphenyl)-2-phenylethanone

[2491-31-8] $C_{14}H_{12}O_2$ mol.wt. 212.25

Described [5958] p. 1404

Acetate $C_{16}H_{14}O_3$ mol.wt. 254.29

– Obtained by reaction of acetic anhydride with 2-hydroxybenzoin [6225].

Methyl ether [33470-10-9] $C_{15}H_{14}O_2$ mol.wt. 226.27

2-Methoxydeoxybenzoin

- Also obtained by deamination of 2-amino-1-(2-methoxyphenyl)-1-phenylethanol with sodium nitrite in 50% aqueous acetic acid at 0° [6133].
 - Also obtained by reaction of 2-methoxybenzamide with benzylmagnesium bromide [6133].
- 1H NMR [6133], IR [6133], UV [6133].

1-(2,4-Dihydroxyphenyl)-2-phenylethanone

[3669-41-8] $C_{14}H_{12}O_3$ mol.wt. 228.25

Described [5958] p. 1407

Synthesis

- Also refer to: [6226].

1-(3,4-Dihydroxyphenyl)-2-phenylethanone

[107410-02-6] $C_{14}H_{12}O_3$ mol.wt. 228.25

Described [5958] p. 1409

Dimethyl ether [3141-93-3] $C_{16}H_{16}O_3$ mol.wt. 256.30

- Refer to: [6227] (Japanese patent).

2-Phenyl-1-(2,4,6-trihydroxyphenyl)ethanone

[727-71-9] $C_{14}H_{12}O_4$ mol.wt. 244.25

Described [5958] p. 1411

Syntheses

- Preparation by reaction of phenylacetonitrile with phloroglucinol (Hoesch reaction) in the presence of zinc chloride [6084].
- Also refer to: [6225,6228], (20%) [6229].

White crystals; m.p. 162° [6229];

1H NMR [6229], ^{13}C NMR [6229], IR [6229], UV [6229], MS [6229]; TLC [6229].

1-(2-Hydroxy-4-methoxyphenyl)-2-phenylethanone

[18439-96-8]

 $C_{15}H_{14}O_3$ mol.wt. 242.27**Described [5958] p. 1419**

Synthesis

– Also refer to: [6230].

**N.B.:** Terbium complex (luminescent properties) [6230].**1-(4-Hydroxy-3-methoxyphenyl)-2-phenylethanone**

[66476-02-6]

 $C_{15}H_{14}O_3$ mol.wt. 242.27**Described [5958] p. 1422**

Synthesis

– Also obtained by cleavage of 1-(4-benzyloxy-3-methoxyphenyl)-2-phenylethanone with 30% HBr in acetic acid/methylene chloride (91%) [6231].

**1-(2-Hydroxy-4,6-dimethoxyphenyl)-2-phenylethanone**

[39604-66-5]

 $C_{16}H_{16}O_4$ mol.wt. 272.30**Described [5958] p. 1430**

Synthesis

– Also refer to: [6230].

**N.B.:** Terbium complex (luminescent properties) [6230].**1-(3-Hexyl-2,4-dihydroxyphenyl)-2-phenylethanone** $C_{20}H_{24}O_3$ mol.wt. 312.41**New compound**

Synthesis

– Obtained by reaction of phenylacetonitrile with 2-hexyl-resorcinol in the presence of zinc chloride (31%) (Hoesch reaction) [6225].

m.p. 104–105° [6225].

1-(3-Hexyl-2,6-dihydroxyphenyl)-2-phenylethanone

[110146-61-7]

 $C_{20}H_{24}O_3$ mol.wt. 312.41**New compound**

Synthesis

- Obtained by reaction of phenylacetone nitrile with 4-hexyl-resorcinol in the presence of zinc chloride (17%) (Hoesch reaction) [6225].
m.p. 210–211° [6225].

1-[2-Hydroxy-4-(phenylmethoxy)phenyl]-2-phenylethanone

[39604-80-3]

C₂₁H₁₈O₃ mol.wt. 318.37**Described** [5958] p. 1441

Synthesis

- Also obtained by reaction of benzyl alcohol with 1-(2,4-dihydroxy-phenyl)-2-phenylethanone in the presence of triphenylphosphine and DIAD (diisopropyl diazodicarboxylate) in THF (87%) [6226].

1-[3,5-Bis(1,1-dimethyl)-4-hydroxyphenyl]-2-phenylethanone

[14035-39-3]

C₂₂H₂₈O₂ mol.wt. 324.46**Described** [5958] p. 1443

Synthesis

- Preparation by reaction of phenylacetyl chloride with 2,6-di-tert-butylphenol in the presence of titanium tetrachloride [6066].

1-[3,5-Bis(1,1-dimethyl)-4-hydroxyphenyl]-2-cyclohexylethanone

C₂₂H₃₄O₂ mol.wt. 330.51**New compound**

Synthesis

- Preparation by reaction of cyclohexylacetyl chloride with 2,6-di-tert-butylphenol in the presence of titanium tetrachloride [6066].

18.2 Compounds Derived from Substituted Phenylacetic Acids [5958] p. 1449

1-(5-Bromo-2-hydroxyphenyl)-2-(4-nitrophenyl)ethanone

[340959-83-3]

C₁₄H₁₀BrNO₄ mol.wt. 322.14**New compound**

Synthesis

- Refer to: [6232].

2-(3,4-Dichlorophenyl)-1-(2,4,6-trihydroxyphenyl)ethanone

[1005418-07-4]

 $C_{14}H_{10}Cl_2O_4$ mol.wt. 313.14**New compound****Synthesis**

- Preparation by reaction of 3,4-dichlorophenylacetonitrile with phloroglucinol (Hoesch reaction) in the presence of zinc chloride [6084].

2-(4-Bromophenyl)-1-(2,4-dihydroxyphenyl)ethanone

[92152-60-5]

 $C_{14}H_{11}BrO_3$ mol.wt. 307.14**Described [5958] p. 1450****Synthesis**

- Also obtained by Friedel–Crafts acylation of resorcinol with 4-bromophenylacetic acid in the presence of boron trifluoride (good yield) [6233,6234].

 1H NMR [6233], ^{13}C NMR [6233], MS [6233].

BIOLOGICAL DATA: Potent selective estrogen receptor modulator [6233].

2-(3-Bromophenyl)-1-(2,4,6-trihydroxyphenyl)ethanone

[879559-91-8]

 $C_{14}H_{11}BrO_4$ mol.wt. 323.15**New compound****Synthesis**

- Obtained by reaction of 3-bromophenylacetonitrile with phloroglucinol (Hoesch reaction) [6235].

BIOLOGICAL ACTIVITY: In vitro activity against the coccidian parasite *Cryptosporidium parvum* [6235].**2-(4-Bromophenyl)-1-(2,4,6-trihydroxyphenyl)ethanone**

[147220-80-2]

 $C_{14}H_{11}BrO_4$ mol.wt. 323.15**Described [5958] p. 1451****Syntheses**

- Also obtained by reaction of 4-bromophenylacetonitrile with phloroglucinol (Hoesch reaction) [6235].

– Also refer to: [6236].

m.p. 231° [6236], 222–224° [6235]; 1H NMR [6235,6236], ^{13}C NMR [6235], IR [6236].

BIOLOGICAL ACTIVITY: In vitro activity against the coccidian parasite *Cryptosporidium parvum* [6235].

1-(2,4-Dihydroxyphenyl)-2-(4-fluorophenyl)ethanone

[15485-70-8]

$C_{14}H_{11}FO_3$ mol.wt. 246.24

Described [5958] p. 1453

Dimethyl ether [315233-59-1]

$C_{16}H_{15}FO_3$ mol.wt. 274.29

– Refer to: [6237].

1-(2-Hydroxyphenyl)-2-(4-nitrophenyl)ethanone

[340959-86-6]

$C_{14}H_{11}NO_4$ mol.wt. 257.25

New compound

Synthesis

– Refer to: [6238] (70%).

1-(2,4-Dihydroxyphenyl)-2-(4-nitrophenyl)ethanone

[15485-63-9]

$C_{14}H_{11}NO_5$ mol.wt. 273.25

Described [5958] p. 1454

Syntheses

– Also obtained by reaction of p-nitrophenylacetic acid with resorcinol in the presence of boron trifluoride etherate at 80° for 5 h [6239].

– Also refer to: [6240,6241].

m.p. 206–208° [6241]; 1H NMR [6241].

BIOLOGICAL ACTIVITY: Effect on enzyme activity [6241].

2,4-Dinitrophenylhydrazone $C_{20}H_{15}N_5O_8$ mol.wt. 453.37 m.p. 238° [6242]

2-(3-Nitrophenyl)-1-(2,4,6-trihydroxyphenyl)ethanone

[876487-63-7]

$C_{14}H_{11}NO_6$ mol.wt. 289.25

Described [5958] p. 1454

Synthesis

– Also obtained by reaction of 3-nitrophenylacetonitrile with phloroglucinol (Hoesch reaction) [6235].

BIOLOGICAL ACTIVITY: In vitro activity against the coccidian parasite *Cryptosporidium parvum* [6235].

2-(4-Nitrophenyl)-1-(2,4,6-trihydroxyphenyl)ethanone

[15485-67-3]

C₁₄H₁₁NO₆ mol.wt. 289.25**Described** [5958] **p. 1455**

Syntheses

– Also obtained by reaction of 4-nitrophenylacetonitrile with phloroglucinol (Hoesch reaction) (51%) [6235].

– Also refer to: [6240,6243,6244].

m.p. 212–214° [6235]; ¹H NMR [6235], ¹³C NMR [6235], MS [6235].

BIOLOGICAL ACTIVITY: In vitro activity against the coccidian parasite *Cryptosporidium parvum* [6235].

1-(2-Hydroxyphenyl)-2-(4-hydroxyphenyl)ethanone

[109561-92-4]

C₁₄H₁₂O₃ mol.wt. 228.25**Described** [5958] **p. 1456**

Synthesis

– Also obtained by demethylation of 1-(2-hydroxyphenyl)-2-(4-methoxyphenyl)ethanone [6245].

m.p. 102° [6245].

1-(2,4-Dihydroxyphenyl)-2-(4-hydroxyphenyl)ethanone

[17720-60-4]

C₁₄H₁₂O₄ mol.wt. 244.25**Described** [5958] **p. 1457**

Synthesis

– Also obtained by demethylation of 1-(2,4-dihydroxyphenyl)-2-(4-methoxyphenyl)ethanone [6245].

m.p. 186° [6245].

1,2-Bis(3,4-dihydroxyphenyl)ethanone*3,3',4,4'-Tetrahydroxydeoxybenzoin*

[100622-09-1]

C₁₄H₁₂O₅ mol.wt. 260.25**New compound**

Synthesis

– Obtained by treatment of 3,3',4,4'-tetrahydroxybenzil dihydrate (m.p. 125–130°) with granulated tin in dilute hydrochloric acid. The mixture was heated on a steam bath 1.5 h (49%) (compound **VIII**) [6246].

m.p. 196–198° (monohydrate) [6246]; UV [6246].

Tetramethyl ether [4927-55-3] $C_{18}H_{20}O_5$ mol.wt. 316.35

(*Desoxyveratrolin*), (3,3',4,4'-Tetramethoxydesoxybenzoin)

- Preparation by the reduction of veratril with tin and hydrochloric acid [6247].
- Also obtained by treatment of veratrolin with zinc powder in methanol and acetic acid mixture on a boiling water bath for 1–2 h [6248].
- Also obtained by treatment of veratril in ethanol with granulated tin and a saturated copper sulfate solution in the presence of concentrated hydrochloric acid on a boiling water bath for 4 h [6247].
- Also obtained by reaction of homoveratroyl chloride (3,4-dimethoxyphenylacetyl chloride) with veratrole in the presence of aluminium chloride,
 - in refluxing carbon disulfide (31%) [6249] for 2 h [6247];
 - in refluxing methylene chloride for 2 h (98%) [6250].
- Also refer to: [6251,6252].

b.p._{0,01} 190–210° [6248], b.p.₁ 240–270° [6249];

m.p. 107° [6247], 106° [6248], 105–107° [6250], 104–106° [6249], 100–101° [6253];

¹H NMR [6250,6252], ¹³C NMR [6250], IR [6252], MS [6251].

Tetraacetate [102599-72-4] $C_{22}H_{20}O_9$ mol.wt. 428.39

- Obtained by reaction of acetic anhydride with 3,3',4,4'-tetrahydroxydesoxybenzoin in the presence of pyridine [6246].

m.p. 127–128° [6246]; UV [6246].

2-(4-Aminophenyl)-1-(2,4-dihydroxyphenyl)ethanone

$C_{14}H_{13}NO_3$ mol.wt. 243.26

New compound

Synthesis

- Obtained by reduction of 1-(2,4-dihydroxyphenyl)-2-(4-nitrophenyl)ethanone with iron powder in the presence of ammonium chloride in water at 60–70° for 2 h (56%) [6225].

m.p. 241° [6225].

2-(2-Carboxyphenyl)-1-(3,4-dihydroxy-5-nitrophenyl)ethanone

$C_{15}H_{11}NO_7$ mol.wt. 2255.27

New compound

Synthesis

- Obtained by demethylation of 2-(2-carboxyphenyl)-1-(4-hydroxy-3-methoxy-5-nitrophenyl)ethanone with aluminium chloride by refluxing an ethyl acetate/pyridine mixture for 2 h (72%) [6254].

m.p. 244–247°; ^1H NMR [6254], ^{13}C NMR [6254], IR [6254].

BIOLOGICAL ACTIVITY: [6254].

1-(4-Hydroxy-3-methoxy-5-nitrophenyl)-2-(4-chlorophenyl)ethanone

$\text{C}_{15}\text{H}_{12}\text{ClNO}_5$ mol.wt. 321.72

New compound

Syntheses

- Preparation by reaction of 70% nitric acid with 2-(4-chloro-phenyl)-1-(4-hydroxy-3-methoxyphenyl)ethanone in acetic acid at 20° for 30 min [6254].

- Also refer to: [6231].

2-(1,3-Benzodioxol-5-yl)-1-(2,4,6-trihydroxyphenyl)ethanone

[39548-98-6]

$\text{C}_{15}\text{H}_{12}\text{O}_6$ mol.wt. 288.26

Described [5958] p. 1462

Synthesis

- Preparation by reaction of (3,4-methylenedioxy)phenyl-acetonitrile with phloroglucinol (Hoesch reaction) in the presence of zinc chloride (95%) [6084].

White powder [6084]; ^1H NMR [6084], ^{13}C NMR [6084], MS [6084].

2-(2-Bromophenyl)-1-(4-methoxyphenyl)ethanone

[655244-07-8]

$\text{C}_{15}\text{H}_{13}\text{BrO}_2$ mol.wt. 305.17

New compound

Syntheses

- Preparation by Friedel–Crafts acylation of anisole with 2-bromophenylacetyl chloride in the presence of aluminium chloride in tetrahydrofuran for 2 h at 20° (81%) [6255].

- Also refer to: [6256].

m.p. 91–92° [6255]; ^1H NMR [6255], ^{13}C NMR [6255].

2-[4-(Bromomethyl)phenyl]-1-(2,5-dihydroxyphenyl)ethanone

[340960-50-1]

$\text{C}_{15}\text{H}_{13}\text{BrO}_3$ mol.wt. 321.17

New compound

Synthesis

- Refer to: [6257].

1-(4-Chloro-2-hydroxyphenyl)-2-(4-methoxyphenyl)ethanone

[189289-99-4]

C₁₅H₁₃ClO₃ mol.wt. 276.72**New compound**

Synthesis

– Obtained by Fries rearrangement of 3-chlorophenyl 4-methoxyphenylacetate [6245].

m.p. 107° [6245].

2-(2-Chlorophenyl)-1-(2,4-dihydroxy-3-methylphenyl)ethanone

[328019-93-8]

C₁₅H₁₃ClO₃ mol.wt. 276.72**New compound**

Synthesis

– Refer to: [6258].

BIOLOGICAL DATA: Protein binding [6258].

2-(4-Fluorophenyl)-1-(4-methoxyphenyl)ethanone

[2729-19-3]

C₁₅H₁₃FO₂ mol.wt. 244.27**New compound**

Synthesis

– Refer to: [6237].

1-(2-Hydroxyphenyl)-2-(3-methyl-4-nitrophenyl)ethanone

[1018669-07-2]

C₁₅H₁₃NO₄ mol.wt. 272.27**New compound**

Synthesis

– Refer to: [6238] (50%).

¹H NMR [6238], ¹³C NMR [6238], IR [6238], MS [6238].**1-(2,5-Dihydroxyphenyl)-2-(4-methylphenyl)ethanone**

[340959-90-2]

C₁₅H₁₄O₃ mol.wt. 242.27**New compound**

Synthesis

– Refer to: [6257].

1-(2-Hydroxyphenyl)-2-(4-methoxyphenyl)ethanone

[79744-47-1]

 $C_{15}H_{14}O_3$ mol.wt. 242.27**Described** [5958] p. 1465

Synthesis

- Also obtained by Fries rearrangement of phenyl 4-methoxyphenylacetate [6245].

m.p. 85° [6245].

1-(4-Hydroxyphenyl)-2-(2-methoxyphenyl)ethanone

[341526-37-2]

 $C_{15}H_{14}O_3$ mol.wt. 242.27**New compound**

Synthesis

- Refer to: [6259].

1-(4-Hydroxyphenyl)-2-(3-methoxyphenyl)ethanone

[341526-35-0]

 $C_{15}H_{14}O_3$ mol.wt. 242.27**New compound**

Synthesis

- Refer to: [6259].

1-(2,4-Dihydroxyphenyl)-2-(4-methoxyphenyl)ethanone

[487-49-0]

 $C_{15}H_{14}O_4$ mol.wt. 258.27**Described** [5958] p. 1468

Syntheses

- Also obtained by reaction of resorcinol with 4-methoxyphenylacetic acid in the presence of PPA under microwave irradiation and solvent-free conditions [6260].
- Also obtained by Fries rearrangement of 3-hydroxyphenyl 4-methoxyphenylacetate [6245].
- Also refer to: [6261].

m.p. 155° [6245].

2-(3-Methoxyphenyl)-1-(2,4,6-trihydroxyphenyl)ethanone

[111474-27-2]

C₁₅H₁₄O₅ mol.wt. 274.27**Described [5958] p. 1473**

Synthesis

- Preparation by reaction of 3-methoxyphenylacetonitrile with phloroglucinol (Hoesch reaction) in the presence of zinc chloride [6084].

2-(4-Methoxyphenyl)-1-(2,4,6-trihydroxyphenyl)ethanone

[15485-66-2]

C₁₅H₁₄O₅ mol.wt. 274.27**Described [5958] p. 1474**

Syntheses

- Preparation by reaction of 4-methoxyphenyl-acetonitrile with phloroglucinol (Hoesch reaction) in the presence of zinc chloride [6084].
- Also obtained by reaction of phloroglucinol with 4-methoxyphenylacetic acid in the presence of PPA under microwave irradiation [6260].

2-(2-Carboxyphenyl)-1-(4-hydroxy-3-methoxy-5-nitrophenyl)ethanoneC₁₆H₁₃NO₇ mol.wt. 331.28**New compound**

Synthesis

- Obtained by adding dropwise 70% nitric acid to a stirred suspension of 2-(2-carboxyphenyl)-1-(4-hydroxy-3-methoxyphenyl)ethanone in acetic acid at room temperature, then stirring for 30 min (62%) [6254].

2-(2-Carboxyphenyl)-1-(4-hydroxy-3-methoxyphenyl)ethanoneC₁₆H₁₄O₅ mol.wt. 286.28**New compound**

Synthesis

- To a stirred and cooled (−78°) solution of diisopropylamine in THF under nitrogen was added 2 M n-butyllithium solution in hexane. After stirring the mixture for 30 min, o-toluic acid in THF was added dropwise, and the resulting deep red solution was stirred at −78° for 1 h. Thereupon, a solution of methyl vanillate in THF was added dropwise, and the temperature was gradually allowed to reach room temperature. The mixture was then poured on ice/2 N HCl (66%) [6254].

m.p. 166–168° [6254].

2-(2-Bromo-5-methoxyphenyl)-1-(4-methoxyphenyl)ethanone

[1019652-01-7]

 $C_{16}H_{15}BrO_3$ mol.wt. 335.20**New compound****Synthesis**

- Obtained by reaction of 2-bromo-5-methoxyphenylacetyl chloride with anisole in the presence of aluminium chloride in methylene chloride (89%) [6262].

1-(5-Chloro-2,4-dihydroxyphenyl)-2-(ethoxyphenyl)ethanone

[708259-71-6]

 $C_{16}H_{15}ClO_4$ mol.wt. 306.75**New compound****Synthesis**

- Obtained by Friedel–Crafts acylation of 4-chloro-resorcinol with 4-ethoxyphenylacetic acid in the presence of boron trifluoride (good yield) [6233,6234].

 1H NMR [6233], ^{13}C NMR [6233], MS [6233].

BIOLOGICAL DATA: Potent selective estrogen receptor modulator [6233].

1-(4-Hydroxy-3-methoxy-5-nitrophenyl)-2-(4-methoxyphenyl)ethanone $C_{16}H_{15}NO_6$ mol.wt. 317.30**New compound****Syntheses**

- Obtained by reaction of 70% nitric acid with 1-(4-hydroxy-3-methoxyphenyl)-2-(4-methoxyphenyl)ethanone [6254].
- Also refer to: [6231].

1-(2,4-Dihydroxy-5-methylphenyl)-2-(4-methylphenyl)ethanone

[1002716-64-4]

 $C_{16}H_{16}O_3$ mol.wt. 256.30**New compound****Synthesis**

- Obtained by reaction of 4-methylresorcinol with 4-methylphenylacetyl compound at molar ratio 1:1 in solvent in the presence of Lewis acid catalyst [6263] (Chinese paper).

1-(2-Hydroxy-4-methylphenyl)-2-(4-methoxyphenyl)ethanone

[189289-98-3]

C₁₆H₁₆O₃ mol.wt. 256.30**New compound**

Synthesis

- Also obtained by Fries rearrangement of 3-methyl-phenyl 4-methoxyphenylacetate [6245].

m.p. 124° [6245].

2-(3-Methoxyphenyl)-1-(4-methoxyphenyl)ethanone

[98540-26-2]

C₁₆H₁₆O₃ mol.wt. 256.30**New compound**

Synthesis

- Refer to: [6262].

1-(2-Hydroxy-4-methoxyphenyl)-2-(4-methoxyphenyl)ethanone

[39604-64-3]

C₁₆H₁₆O₄ mol.wt. 272.30**Described [5958] p. 1483**

Syntheses

- Also obtained by Fries rearrangement of 3-methoxyphenyl 4-methoxyphenylacetate [6245].

- Also refer to: [6230].

m.p. 136° [6245].

N.B.: Terbium complex (luminescent properties) [6230].**1,2-Bis(4-hydroxy-3-methoxyphenyl)ethanone** (*Melicopone*, *Desoxyvanilloin*)

[5438-67-5]

C₁₆H₁₆O₅ mol.wt. 288.30**New compound**

Syntheses

- Obtained by treatment of 4,4'-dihydroxy-3,3'-dimethoxy-benzil with zinc and ammonium chloride in boiling dilute ethanol [6253], (84%) [6253].

- Also obtained from 3,3'-dimethoxy-4,4'-dihydroxy-*trans*-stilbene (27%) [6251].

– Also refer to: [6264,6265].

Isolation from natural sources

– From the root wood *Melicope semecarpifolia* Merr. T. Hartley [6266].

m.p. 154–155° [6253,6265];

¹H NMR [6266], ¹³C NMR [6266], IR [6266], UV [6253,6266], MS [6266].

BIOLOGICAL DATA: Cytotoxicity [6266].

Diacetate C₂₀H₂₀O₇ mol.wt. 372.37

– Obtained by reaction of acetic anhydride with Melicopone in the presence of pyridine [6253].

m.p. 172–173° [6253].

Dibenzyl ether [3122-36-9] C₃₀H₂₈O₅ mol.wt. 468.55

– Obtained by reaction of benzyl chloride with melicopone in the presence of potassium carbonate in boiling ethanol for 12 h (74%) [6264].

– Also obtained by reduction of 4,4'-dibenzoyloxy-3,3'-dimethoxybenzoin with zinc powder in acetic acid [6267].

m.p. 146.5–147.5° [6267], 145–146° [6264].

2-(1,3-Benzodioxol-5-yl)-1-(3,4-dimethoxyphenyl)ethanone

C₁₇H₁₆O₅ mol.wt. 300.31

New compound

Syntheses

– Obtained by reaction of 3,4-dimethoxyphenyl-acetyl chloride with 1,3-benzodioxole in the presence of stannic chloride in methylene chloride, first at –10°, then at r.t. for 2 h (66%) [6250].

– Also obtained from 1,3-benzodioxole-5-carbaldehyde and [(3,4-dimethoxyphenyl)-(tetrahydropyran-2-yloxy)methyl]phosphonic acid dimethyl ester [6268].

– Also obtained from polymer-PPh₂(1+)-CH₃*I(1-) (multi-step reaction) [6268].

m.p. 110–111° [6250], 88–89° [6268]. One of the reported melting points is obviously wrong.

¹H NMR [6250,6268], ¹³C NMR [6250], IR [6250,6268].

2-(1,3-Benzodioxol-5-yl)-1-(3,5-dimethoxyphenyl)ethanone

[1003857-18-8]

C₁₇H₁₆O₅ mol.wt. 300.31

New compound

Synthesis

– Refer to: [6269].

2-(2,6-Dimethoxyphenyl)-1-(3-methoxyphenyl)ethanone

[960591-80-4]

 $C_{17}H_{18}O_4$ mol.wt. 286.33**New compound**

Synthesis

- Obtained by reaction of 1-chloro-2,6-dimethoxybenzene with 3-methoxyacetophenone in the presence of (DtBPF)PdCl₂ (2 mol%) and NaOtBu (1.1 equiv) in dioxane at 100° (98%) [6270].

GC [6270].

2-(2,6-Dimethoxyphenyl)-1-(4-methoxyphenyl)ethanone

[960591-81-5]

 $C_{17}H_{18}O_4$ mol.wt. 286.33**New compound**

Synthesis

- Obtained by reaction of 1-chloro-2,6-dimethoxybenzene with 4-methoxyacetophenone in the presence of (DtBPF)PdCl₂ (2 mol%) and NaOtBu (1.1 equiv) in dioxane at 100° (99%) [6270].

GC [6270].

1-(5-Ethyl-2,4-dihydroxyphenyl)-2-(2-methylphenyl)ethanone

[302918-18-9]

 $C_{17}H_{18}O_3$ mol.wt. 270.33**New compound**

Synthesis

- Refer to: [6258].

1-(3-Methoxy-5-methylphenyl)-2-(4-methoxyphenyl)ethanone

[1019984-29-2]

 $C_{17}H_{18}O_3$ mol.wt. 270.33**New compound**

Synthesis

- Refer to: [6271].

1-(3,4-Dimethoxyphenyl)-2-(2-hydroxy-3-methoxyphenyl)ethanoneC₁₇H₁₈O₅ mol.wt. 302.33**New compound****Synthesis**

– Obtained by photochemical rearrangement of α -guaiacoxy-acetoveratrone on solid supports [6179].

1-(3,4-Dimethoxyphenyl)-2-(3-hydroxy-4-methoxyphenyl)ethanone

[18929-89-0]

C₁₇H₁₈O₅ mol.wt. 302.33**New compound****Synthesis**

– Obtained by reaction of 3-hydroxy-4-methoxyphenylacetic acid with pyrocatechol dimethyl ether in the presence of phosphoric acid [6272].

m.p. 112–113° [6272]; ¹H NMR [6272], IR [6272], UV [6272].

1-(3,4-Dimethoxyphenyl)-2-(4-hydroxy-3-methoxyphenyl)ethanone

[135625-64-8]

C₁₇H₁₈O₅ mol.wt. 302.33**New compound****Syntheses**

– Obtained by photochemical rearrangement of α -guaiacoxyl-acetoveratrone [6183],

- on solid supports [6179];
- in tetradeuteriomethanol at 25° [6180];
- in acetonitrile [6190].

– Also obtained by desilylation of 1-(3,4-dimethoxyphenyl)-2-[4-[(tert-butyl)dimethylsilyloxy]-phenyl]ethanone (C₂₃H₃₂O₅S; m.p. 129–130°) (60%) [6183], according to the procedure [6273].

m.p. 119–119.5° [6274], 118–120° [6183];

¹H NMR [6180,6183], ¹³C NMR [6183], IR [6183], MS [6183].

1-(2-Hydroxy-4,6-dimethoxyphenyl)-2-(4-methoxyphenyl)ethanone

[39604-68-7]

C₁₇H₁₈O₅ mol.wt. 302.33**Described [5958] p. 1504****Synthesis**

– Refer to: [6230].

N.B.: Terbium complex (luminescent properties) [6230].

1-(5-Ethyl-2,4-dihydroxyphenyl)-2-(4-ethylphenyl)ethanone

[1002716-66-6]

 $C_{18}H_{20}O_3$ mol.wt. 284.36**New compound**

Synthesis

– Refer to: [6263] (Chinese patent).

1,2-Bis(3,5-di-tert-butyl-4-hydroxyphenyl)ethanone

[17055-19-5]

 $C_{30}H_{44}O_3$ mol.wt. 452.68**New compound**

Syntheses

– Obtained by adding 2,6-di-tert-butylphenol (0.01 mol) in bromoacetyl chloride (10 ml) to a mixture of bromoacetyl chloride (15 ml) and aluminium chloride (0.5g) at -10° and allowed to stand for 15 min (23%) [6065].

N.B.: The same compound was obtained by reaction of chloroacetyl chloride with 2,6-di-tert-butylphenol.

– Also refer to: [6275].

m.p. $240-241^\circ$ [6275], $95-97^\circ$ (recrystallized from octane) [6065].

One of the reported melting points is obviously wrong. IR [6065,6275].

18.3 Compounds Derived from Di- and Triphenylacetic Acids [5958] p. 1538**18.4 Compounds Derived from Cycloalkylacetic Acids [5958] p. 1541****Chapter 19. Compounds Derived from S-Substituted Mercaptoacetic acids [5958] p. 1543****1-(4-Hydroxyphenyl)-2-mercaptoethanone**

[23081-13-2]

 $C_8H_8O_2S$ mol.wt. 168.22**New compound**

Synthesis

– Refer to: [6276].

m.p. $133-134^\circ$ [6276].

Methyl ether [139488-44-1] $C_9H_{10}O_2S$ mol.wt. 182.24

- Facile displacement of the bromide in 2-bromo-1-(4-methoxyphenyl)ethanone with potassium thioacetate delivered the corresponding thioacyl analog, which was easily hydrolyzed to the free thiol [5981]. Obtained in two steps: First, reaction of potassium thioacetate with 2-bromo-1-(4-methoxyphenyl)ethanone in THF at 40° for 24 h (99%), then treatment of the thioacyl derivative so obtained with 1 M sodium hydroxide in methanol at r.t. for 1 h (84%) [5981].

1-(3,4-Dihydroxyphenyl)-2-(methylthio)ethanone

[104692-98-0] $C_9H_{10}O_3S$ mol.wt. 198.24

New compound

Synthesis

- Obtained by reaction of methanethiol sodium salt and 2-chloro-1-(3,4-dihydroxyphenyl)ethanone in methanol (85%) [6277], (77%) [6278].

m.p. 110° [6277], 107–108° [6278]; 1H NMR [6278].

Dimethyl ether [67489-10-5] $C_{11}H_{14}O_3S$ mol.wt. 226.30

- Obtained by reaction of α -(methylthio)acetyl chloride with veratrole in the presence of aluminium chloride in methylene chloride for 30 min at 0° (82%) [6279].
- Also obtained by reaction of methanethiol sodium salt and 2-chloro-1-(3,4-dimethoxyphenyl)ethanone in methanol (53%) [6277].
- Also refer to: [6279,6280,6281].

m.p. 53° [6277]; 1H NMR [6279,6281].

Diacetate $C_{13}H_{14}O_5S$ mol.wt. 282.32

- Obtained by reaction of acetic anhydride with the titled compound in the presence of concentrated sulfuric acid [6277].

m.p. 97–98° [6277].

1-(4-Hydroxyphenyl)-2-(methylsulfonyl)ethanone

[52945-18-3] $C_9H_{10}O_4S$ mol.wt. 214.24

Described [5958] p. 1544

Synthesis

- Also refer to: [6282].

1-(4-Methoxyphenyl)-2-(methylthio)ethanone[46188-84-5] $C_{10}H_{12}O_2S$ mol.wt. 196.27**New compound****Syntheses**

- Obtained by reaction of methanethiol sodium salt and ω -chloro-p-methoxyacetophenone in methanol (94%) [6277], (72%) [6283].
- Also obtained by adding a 20% aqueous solution of the sodium salt of methylmercaptan to a solution of α -bromo-4-methoxyacetophenone in ethyl ether at r.t. for 14 h [6284], (89%) [6285].
- Also obtained by reaction of α -(methylthio)acetyl chloride with anisole in the presence of aluminium chloride in methylene chloride at 0° for 30 min (83%) [6279].
- Also refer to: [6280,6284,6286].

b.p.₁ 132–136° [6285], b.p.₁₀ 175° [6284]; m.p. 33° [6277,6283];
¹H NMR [6279,6284], ¹³C NMR [6284], IR [6284], MS [6284].

1-(3,4-Dihydroxyphenyl)-2-(ethylthio)ethanone $C_{10}H_{12}O_3S$ mol.wt. 212.26**New compound****Synthesis**

- Obtained by reaction of ethanethiol sodium salt and 2-chloro-1-(3,4-dihydroxyphenyl)ethanone in methanol [6277].
- m.p. 94–94.5° [6277].

Dimethyl ether [100257-47-4] $C_{12}H_{16}O_3S$ mol.wt. 240.32

- Obtained by reaction of ethanethiol with 2-bromo-1-(3,4-dimethoxyphenyl)ethanone in the presence of ethanolic sodium ethylate [6287].
- b.p._{0,1} 170° [6287].

Dibenzoate $C_{24}H_{20}O_5S$ mol.wt. 420.49

- Obtained by reaction of benzoyl chloride with the titled compound in the presence of pyridine [6277].
- m.p. 107.5–108.5° [6277].

1-(2-Methoxyphenyl)-2-[(methylsulfonyl)oxy]ethanone[1023921-91-6] $C_{10}H_{12}O_5S$ mol.wt. 244.27**New compound****Synthesis**

- Refer to: [6288].

1-(3-Methoxyphenyl)-2-[(methylsulfonyl)oxy]ethanone[1023921-93-8] $C_{10}H_{12}O_5S$ mol.wt. 244.27**New compound**

Synthesis

– Refer to: [6288].

1-(4-Methoxyphenyl)-2-[(methylsulfonyl)oxy]ethanone[142608-19-3] $C_{10}H_{12}O_5S$ mol.wt. 244.27**New compound**

Synthesis

– Refer to: [6288].

[2-(3,4-Dihydroxyphenyl)-2-(oxoethyl)]dimethylsulfonium chloride $C_{10}H_{13}ClO_3S$ mol.wt. 249.26**New compound**

Synthesis

– Obtained by reaction of silver chloride with dimethyl-(3,4-dihydroxyphenacyl)sulfonium iodide [6277].

m.p. 151.5–152.5° [6277].

[2-(3,4-Dihydroxyphenyl)-2-(oxoethyl)]dimethylsulfonium iodide[77263-39-9] $C_{10}H_{13}IO_3S$ mol.wt. 340.18**New compound**

Syntheses

– Obtained from 1-(3,4-dihydroxyphenyl)-2-methylsulfanyl ethanone [6277].

– Also refer to: [6289].

m.p. 135° [6289], 130–130.5° [6277]; 1H NMR [6289].

BIOLOGICAL ACTIVITY: Inhibition of <3H> dopamine binding [6289]; ability to produce circling behavior in rats lesioned unilaterally in the substantia nigra with 6-hydroxydopamine and antagonism by haloperidol of circling behavior [6289].

Dimethyl ether $C_{12}H_{17}IO_3S$ mol.wt. 368.24

– Refer to: [6277]. m.p. 107–108° [6277].

2-(Ethylthio)-1-(4-methoxyphenyl)ethanone[115505-09-4] $C_{11}H_{14}O_2S$ mol.wt. 210.30**New compound**

Syntheses

- Obtained by reaction of ethanethiolate sodium salt with 2'-chloro-4-methoxyacetophenone in methanol (50%) [6277].
- Also refer to: [5981,6290].

b.p.₁₁ 181° [6277];¹H NMR [6291], ¹³C NMR [6290], IR [6291], UV [6291,6292].

BIOLOGICAL DATA: Inhibition of enzyme activity [5981]; effect on cell growth [5981].

1-(2-Methoxy-5-methylphenyl)-2-[(methylsulfonyl)oxy]ethanone[1023022-17-9] $C_{11}H_{14}O_5S$ mol.wt. 258.30**New compound**

Synthesis

- Refer to: [6288].

1-[4-(Acetyloxy)-3-methoxyphenyl]-2-(methylthio)ethanone[1018948-88-3] $C_{12}H_{14}O_4S$ mol.wt. 228.27**New compound**

Synthesis

- Refer to: [6056].

1-[4-Methoxy-3-(methoxymethyl)phenyl]-2-[(methylsulfonyl)oxy]ethanone[1023922-21-5] $C_{12}H_{16}O_6S$ mol.wt. 288.32**New compound**

Synthesis

- Refer to: [6288].

1-(4-Hydroxyphenyl)-2-(phenylthio)ethanone[137524-65-3] $C_{14}H_{12}O_2S$ mol.wt. 244.31**Described [5958] p. 1550****Methyl ether** $C_{15}H_{14}O_2S$ mol.wt. 258.34

- Obtained by reaction of α -(phenylthio)acetyl chloride with anisole in the presence of aluminium chloride in methylene chloride for 30 min at 0° (59%) [6279].
- Also refer to: [6293].
- m.p. 85–85.5° [6279], 79–81.5° [6293]; 1H NMR [6279].

1-(3,4-Dihydroxyphenyl)-2-(phenylthio)ethanone[131985-77-8] $C_{14}H_{12}O_3S$ mol.wt. 260.31**Described [5958] p. 1551****Dimethyl ether** $C_{16}H_{16}O_3S$ mol.wt. 288.37

- Obtained by reaction of α -(phenylthio)acetyl chloride with veratrole in the presence of aluminium chloride in methylene chloride at 0° for 30 min (65%) [6279].
- 1H NMR [6279].

1-(4-Hydroxyphenyl)-2-[(4-methylphenyl)sulfonyl]ethanone[896109-71-0] $C_{15}H_{14}O_4S$ mol.wt. 290.34**New compound**

Synthesis

- Refer to: [6282].

Part VIII Di- and Polyketones

Chapter 20. Aromatic Ketones Containing Only Acetyl Groups [5958] p. 1559

20.1 Acetyl Groups Located on One Ring [5958] p. 1559

20.1.1 Unsubstituted Acetyl Groups [5958] p. 1559

1,1'-(5-Fluoro-2-hydroxy-1,3-phenylene)bis-ethanone

[106823-62-5]

C₁₀H₉FO₃ mol.wt. 196.18**Described [5958] p. 1560**

Synthesis

– Also obtained by Fries rearrangement of 2-acetyl-4-fluorophenyl acetate by heating at 170–180° for 3 h with aluminium chloride first heated at 140° for 20 min (19%) [6294].

Yellow solid; m.p. 64–66° [6294]; ¹H NMR [6294].

1,1'-(4-Hydroxy-1,3-phenylene)bis-ethanone

[30186-16-4]

C₁₀H₁₀O₃ mol.wt. 178.19**Described [5958] p. 1562**

Isolation from natural sources

– From capitulum of a head rot-resistant sunflower genotype [6295].

BIOLOGICAL ACTIVITY: Antifungal [6295].

Acetate [1007089-42-0] C₁₂H₁₂O₄ mol.wt. 220.22

Isolation from natural sources

– From capitulum of a head rot-resistant sunflower genotype [6295].

BIOLOGICAL ACTIVITY: Antifungal [6295].

1,1'-(4,6-Dihydroxy-1,3-phenylene)bis-ethanone[2161-85-5] $C_{10}H_{10}O_4$ mol.wt. 194.19**Described** [5958] p. 1566

Synthesis

– Also refer to: [6296].

1,1'-(2,4,6-Trihydroxy-1,3-phenylene)bis-ethanone[2161-86-6] $C_{10}H_{10}O_5$ mol.wt. 210.19**Described** [5958] p. 1568

Syntheses

– Obtained by phloroglucin acetylation with acetic anhydride catalyzed by boron trifluoride etherate at 95° [6297].

– Also obtained by reaction of acetonitrile on phloroglucinol (Houben-Hoesch reaction) (14%) [6298].

– Also refer to: [6299,6300,6301,6302,6303,6304,6305].

m.p. 167–169° [6298].

BIOLOGICAL ACTIVITY: Antifungal compound [6299,6306,6307,6308]; antimicrobial antibiotic [6309]; an active ingredient in plant protection against soil-borne pathogens [6297]; role of 2,4-diacetylphloroglucinol-producing fluorescent *Pseudomonas* spp. in the defense of plant roots [6310]; phenotypic, genotypic and colonization properties of 2,4-diacetylphloroglucinol-producing *Pseudomonas* spp. isolated from roots of wheat [6311].

1,1'-(2,4-Dihydroxy-6-methoxy-1,3-phenylene)bis-ethanone[3098-38-2] $C_{11}H_{12}O_5$ mol.wt. 224.21**Described** [5958] p. 1575

Synthesis

– Also obtained by reaction of acetonitrile with 2,4-dihydroxy-6-methoxyacetophenone (Houben-Hoesch reaction) (23%) [6298].

1,1'-(2,4,6-Trihydroxy-5-methyl-1,3-phenylene)bis-ethanone[2999-42-0] $C_{11}H_{12}O_5$ mol.wt. 224.21**Described** [5958] p. 1576

Trimethyl ether [3133-39-9] $C_{14}H_{18}O_5$ mol.wt. 266.29

- Obtained by total methylation of 2,4-diacetyl-6-methylphloroglucinol with dimethyl sulfate in the presence of potassium carbonate in boiling acetone [6312].
 - Also obtained by methylation of 4,6-diacetyl-5-methoxy-2-methylresorcinol with dimethyl sulfate in the presence of potassium carbonate in boiling acetone [6312].
 - Also obtained by methylation of 2,4-diacetyl-5-methoxy-6-methylresorcinol with dimethyl sulfate in the presence of potassium carbonate in boiling acetone [6312].
 - Also refer to: [6313].
- m.p. 67–68° [6313], 66–67° [6312]; 1H NMR [6313], IR [6313].

1,1',1''-(2,4,6-Trihydroxy-1,3,5-benzenetriyl)tris-ethanone

[2161-87-7] $C_{12}H_{12}O_6$ mol.wt. 252.22

Described [5958] p. 1578

Syntheses

- Also obtained by Fries rearrangement of phloroglucinol triacetate [6314].
- Also obtained by reaction of acetic acid with phloroglucinol in the presence of PPA on a boiling water bath for 5–20 min (12%) [6315].

m.p. 154–155° [6315].

1,1'-(4,6-Dihydroxy-2-methoxy-5-methyl-1,3-phenylene)bis-ethanone

$C_{12}H_{14}O_5$ mol.wt. 238.24

New compound

Synthesis

- Obtained by reaction of acetic anhydride with 2,4-dihydroxy-6-methoxy-3-methylacetophenone in the presence of boron trifluoride at 80° for 1 h (47%) [6312].

m.p. 94° [6312].

1,1'-(2-Hydroxy-4,6-dimethoxy-1,3-phenylene)bis-ethanone

$C_{12}H_{14}O_5$ mol.wt. 238.24

New compound

Syntheses

- Obtained by reaction of acetonitrile with 2-hydroxy-4,6-dimethoxyacetophenone (Houben-Hoesch reaction) [6298].

- Also obtained by reaction of acetic anhydride with phloroglucinol dimethyl ether in the presence of boron trifluoride [6312].
 - Also refer to: [6316].
- b.p._{0.005} 140–160° [6298]; m.p. 128° [6312], 127° [6298].

Benzyl ether C₁₉H₂₀O₅ mol.wt. 328.34

- Obtained by reaction of benzyl bromide with the titled diketone [6312].

1,1'-(4-Hydroxy-2,6-dimethoxy-1,3-phenylene)bis-ethanone

[72221-04-6] C₁₂H₁₄O₅ mol.wt. 238.24

Described [5958] p. 1581

Synthesis

- Also obtained by reaction of acetic acid with phloroglucinol dimethyl ether in the presence of PPA on a boiling water bath for 5–20 min (46%) [6315].

m.p. 126° [6315].

1-(2-Acetyl-6-methoxy-5-benzofuranyl)ethanone

(2,5-Diacetyl-6-methoxybenzofuran) (*Euparone methyl ether*)

[23840-15-5] C₁₃H₁₂O₄ mol.wt. 232.14

New compound

Synthesis

- Obtained by adding a solution of 6-methoxycoumarone-2,5-dicarboxylic acid in THF to a solution of methyl lithium in ethyl ether. After 3 h, the reaction mixture was decomposed with aqueous ammonium chloride [6317].

Isolation from natural source

- From *Encelia californica* Nutt. (Compositae, tribe Heliantheae) [6317].
- m.p. 140–141° [6317]; ¹H NMR [6317], IR [6317], UV [6317], MS [6317].

1',1''',1'''-(2,4-Dihydroxy-6-methoxy-1,3,5-benzenetriyl)tris-ethanone

C₁₃H₁₄O₆ mol.wt. 266.25

New compound

Synthesis

- Obtained by reaction of acetic acid with phloroglucinol monomethyl ether in the presence of PPA on a boiling water bath for 5–20 min (34%) [6315].

m.p. 109° [6315].

1,1'-(2-Hydroxy-4,5,6-trimethoxy-1,3-phenylene)bis-ethanone

[870480-47-0]

 $C_{13}H_{16}O_6$ mol.wt. 268.27**New compound****Synthesis**

- Preparation by reaction of acetic anhydride (4 equiv) with 3,4,5-trimethoxyphenol (1 equiv) in the presence of aluminium chloride (3 equiv) in nitromethane, first at 0°, then at r.t. for 20 h (74%) [6318].

Colourless crystals [6318]; m.p. 85–86° [6318]; ¹H NMR [6318], MS [6318].**1-[3-Acetyl-2,6-dihydroxy-5-(phenylazo)phenyl]ethanone** $C_{16}H_{14}N_2O_4$ mol.wt. 298.30**New compound****Synthesis**

- Obtained by coupling 2,4-diacetylresorcinol with benzenediazonium chloride [6319].

m.p. 144° [6319].

1-[5-Acetyl-2,4-dihydroxy-3-(phenylazo)phenyl]ethanone $C_{16}H_{14}N_2O_4$ mol.wt. 298.30**New compound****Synthesis**

- Obtained by coupling 4,6-diacetylresorcinol with benzenediazonium chloride [6319].

m.p. 202° [6319].

Pale yellow prisms [6324]; m.p. 238–239° [6324];

1H NMR [6324], ^{13}C NMR [6324], UV [6324], MS [6324]; TLC [6324].

Triacetate (compound **15**) $C_{26}H_{28}O_{11}$ mol.wt. 516.50

- Obtained by reaction of acetic anhydride with leprolomin in the presence of sulfuric acid (2 drops) at 40° for 30 min (46%) [6324].

m.p. 121.5–122.5° [6324]; 1H NMR [6324], MS [6324];

X-ray crystallography [6324].

1-[3-(2-Acetyl-3-hydroxy-5-methoxy-4-methylphenoxy)-2,4,6-trimethoxy-5-methylphenyl]ethanone

3'-(2''-Acetyl-3''-hydroxy-5''-methoxy-4''-methylphenoxy)-2',4',6'-trimethoxy-5'-methyl-acetophenone (*Di-O-methyllepromin*)

[68984-68-9]

$C_{22}H_{26}O_8$ mol.wt. 418.16

New compound

Synthesis

- Obtained by treatment of a solution of *leprolomin* in ethyl acetate with an excess of ethereal diazomethane at r.t. for 2 h (compound **13**) (93%) [6324].

Pale yellow crystals; m.p. 122–123° [6324];

1H NMR [6324], MS [6324]; TLC [6324].

Methyl ether $C_{23}H_{28}O_8$ mol.wt. 432.18

(*Tri-O-methylleprolomin*) (*compound 14*)

- Obtained by reaction of dimethyl sulfate with di-O-methylleprolomin in the presence of potassium carbonate in refluxing acetone for 16 h (77%) [6324].
oil [6324]; 1H NMR [6324], MS [6324]; TLC [6324].

2,4-Dihydroxy-3-(1-oxoethyl)benzaldehyde

$C_9H_8O_4$ mol.wt. 180.16

New compound

Syntheses

- Obtained by adding successively zinc cyanide (2 mol) and aluminium chloride (2 mol) to a solution of resacetophenone in ethyl ether, then passing hydrogen chloride for 4.5 h into the stirred mixture [6326], (45%) [6327].

m.p. 112–114° [6327].

2,4-Dinitrophenylhydrazone $C_{15}H_{12}N_4O_7$ mol.wt. 360.49

m.p. 283–285° (d) [6327]

Dioxime $C_9H_{10}N_2O_4$ mol.wt. 210.19 m.p. 218–219° (d) [6327]

2,6-Dihydroxy-3-(1-oxoethyl)benzaldehyde

$C_9H_8O_4$ mol.wt. 180.16

New compound

Synthesis

- Obtained by adding zinc cyanide to a solution of 2,6-dihydroxyacetophenone in ethyl ether; hydrogen

chloride was passed into the solution to saturation (6–7 h). Then, the reaction mixture was allowed to stand overnight (35%) [6326].

m.p. 101–102° [6326].

2,4,6-Trihydroxy-3-(1-oxoethyl)benzaldehyde

[62018-55-7] $C_9H_8O_5$ mol.wt. 196.16

New compound

Syntheses

- Obtained by reaction of acetonitrile with 2,4,6-trihydroxy-benzaldehyde (Houben-Hoesch reaction) [6298].
- Also obtained by reaction of ethyl orthoformate with phloracetophenone in the presence of aluminium chloride [6328].
- Preparation by adding successively zinc cyanide and aluminium chloride to a solution of phloracetophenone in ethyl ether. The reaction mixture was cooled in ice and saturated with hydrogen chloride [6298,6329], (73%) [6326].
- Also obtained by reaction of DMF with phloracetophenone in the presence of phosphorous oxychloride at 20° for 1 h (70%) [6330,6331,6332].
- Also refer to: [6326,6333,6334,6335] (compound **10**).

m.p. 182–183° [6334], 180–182° [6329], 176° [6326], 173–174° [6298], 163–165° [6336].

One of the reported melting points is obviously wrong.

1H NMR [6335,6336], ^{13}C NMR [6335], IR [6333,6336].

BIOLOGICAL ACTIVITY: Cytotoxicity [6332].

- No effect: Antifungal [6332]; antimalarial [6332]; antibacterial [6332].

Monohydrate $C_9H_8O_5 \cdot H_2O$ mol.wt. 214.18 [6326]

5-Acetyl-2-hydroxy-3-methoxybenzaldehyde

[112579-47-2] $C_{10}H_{10}O_4$ mol.wt. 194.19

New compound

Synthesis

- Obtained by Fries rearrangement of o-vanillin acetate (small amount) [6337].

5-Acetyl-3-hydroxy-2-methoxybenzaldehyde (5-Acetylvainillin)

$C_{10}H_{10}O_4$ mol.wt. 194.19

New compound

Synthesis

- Obtained by treatment of 2-hydroxy-3-methoxy-acetophenone by chloroform in the presence of potassium hydroxide (19%) [6337].

Pale yellow needles; m.p. 120–121° [6337].

Bis-semicarbazone $C_{12}H_{16}N_6O_4$ mol.wt. 308.30

m.p. 335–338° [6337].

Bis-phenylhydrazone $C_{22}H_{22}N_4O_2$ mol.wt. 374.44

m.p. 186–188° [6337].

Benzenesulfonate $C_{16}H_{14}O_6S$ mol.wt. 334.35

– Obtained by reaction of benzenesulfonyl chloride with 5-acetylvanillin in the presence of pyridine (84%) [6337].

m.p. 123–125° [6337].

3-Acetyl-2,6-dihydroxy-4-methoxybenzaldehyde

[52117-67-6] $C_{10}H_{10}O_5$ mol.wt. 210.19

New compound

Synthesis

- Obtained by reaction of hydrogen cyanide with 2,4-dihydroxy-6-methoxyacetophenone [6338].
- Also refer to: [6339]

Isolation from natural sources

- From the roots of *Euphorbia ebracteolata* Hayata (Euphorbiaceae) [6321].
- From the roots of *Euphorbia kansui* (Euphorbiaceae) [6340].
- From *Euphorbia decipiens* Boiss and Buhse (Euphorbiaceae) [6341].
- Also obtained by heating 2,4-dihydroxy-6-methoxy-3-methylacetophenone 4-O- α -L-arabinofuranosyl-(1 \rightarrow 6)- β -D-glucopyranoside with 10% HCl under reflux for 5 h [6321].

Plates [6340]; m.p. 137–138° [6340,6341], 134° [6338];

1H NMR [6321,6340,6341], ^{13}C NMR [6321,6340], IR [6339,6340,6341], MS [6340, 6341].

BIOLOGICAL ACTIVITY: [6341].

2,4-Dinitrophenylhydrazone $C_{16}H_{14}N_4O_8$ mol.wt. 390.31

m.p. 291–293° (d) [6338]

3-Acetyl-2,4,6-trihydroxy-5-methylbenzaldehyde

[59677-81-5] $C_{10}H_{10}O_5$ mol.wt. 210.19

New compound

Syntheses

- Obtained by reaction of methyl iodide with 2,4,6-trihydroxy-3-(1-oxoethyl)benzaldehyde in the presence of potassium hydroxide in methanol at 70° (50%) [6330,6331,6332].

- Also prepared by interaction of C-methylphloroacetophenone, zinc cyanide and hydrogen cyanide in ethyl ether saturated at 0°, for 24 h followed by rapid heating to boiling of the aldimine salt with water [6334].
 - Also obtained by reaction of acetyl chloride with 2-formyl-4-methylphloroglucinol in the presence of aluminium chloride at 0° and at r.t. for 48 h, then at 60° for 1 h [6342].
 - Also refer to: [6339].
- m.p. 155° [6342], 134° [6334]. One of the reported melting points is obviously wrong.

¹H NMR [6342], IR [6339], MS [6342].

BIOLOGICAL ACTIVITY: Antifungal (*Candida albicans*) [6332]; antibacterial (no effect*) [6332], **Aspergillus fumigatus*, mycobactetium intracellulaire, methicillin-resistant *Staphylococcus aureus*; antimalarial (no effect) [6332]; antiprotozoal (no effect) [6332]; cytotoxicity [6332].

2,4-Dinitrophenylhydrazone C₁₆H₁₄N₄O₈ mol.wt. 390.31

m.p. 294–295° [6334].

2-Hydroxy-4,6-dimethoxy-3-(1-oxoethyl)benzaldehyde

[99866-01-0]

C₁₁H₁₂O₅ mol.wt. 224.21

New compound

Syntheses

- Obtained by treatment of 2-hydroxy-4,6-dimethoxyacetophenone with zinc cyanide in ethyl ether in the presence of hydrogen chloride (84%) [6298].
 - Preparation by reaction of acetonitrile with 4,6-dimethoxysalicylaldehyde (Houben-Hoesch reaction) (76%) [6298].
 - Also refer to: [6343,6344].
- Sublimation 180–200°/0.005 mm [6298]; m.p. 170° [6343], 168–170° [6298].

21.1.1 Diphenyl Ketone Derivatives [5958] p. 1627

21.1.2 Miscellaneous [5958] p. 1631

1-(4-Acetyl-3-hydroxyphenoxy)-2-propanone

[248595-17-7]

C₁₁H₁₂O₄ mol.wt. 208.21

New compound

Synthesis

- Obtained by reaction of chloroacetone with resacetophenone in the presence of potassium carbonate in refluxing acetone for 12 h (75%) [6345].
- m.p. 102–103° [6345]; ¹H NMR [6345], IR [6345].

1-(4-Acetyl-3-hydroxy-2-methylphenoxy)-2-propanone

[948045-85-0]

C₁₂H₁₄O₄ mol.wt. 222.24**New compound**

Synthesis

- Obtained by reaction of chloroacetone with 2,4-dihydroxy-3-methylacetophenone in the presence of potassium carbonate in refluxing acetone for 12 h (79%) [6345].

m.p. 126–128° [6345]; ¹H NMR [6345], IR [6345].**2-(4-Acetyl-3-hydroxyphenoxy)-1-phenylethanone**

[948045-82-7]

C₁₆H₁₄O₄ mol.wt. 270.28**New compound**

Synthesis

- Obtained by reaction of phenacyl bromide with resacetophenone in the presence of potassium carbonate in refluxing acetone for 12 h (53%) [6345].

m.p. 132–133° [6345]; ¹H NMR [6345], IR [6345].**21.2 Acyl Groups Located on Different Rings [5958] p. 1636****21.2.1 Diphenyl Ketone Derivatives [5958] p. 1636**

Chapter 23

Aromatic Ketones Containing One Propionyl Group

23.1 Benzene Derivatives

1-(3-Hydroxy-4-methylphenyl- $^{14}\text{C}_6$)-1-propanone

[106697-21-6]

$\text{C}_4^{14}\text{C}_6\text{H}_{12}\text{O}_2$ mol.wt. 176.16

Synthesis

– Preparation by treatment of ^{14}C -3-amino-4-methyl-propiofenone in dilute hydrochloric acid with sodium nitrite in water, first at 0°, then at 50° (71%) [6349].

1-(2-Hydroxyphenyl)-1-propanone-2,2,3,3,3- d_5

$\text{C}_9\text{H}_5\text{D}_5\text{O}_2$ mol.wt. 155.21

Synthesis

– Refer to: [6350].

ion 1[•], radical ion 1⁻ [72051-68-4], ESR spectrum [6350].

1-(3,5-Dibromo-4,6-dichloro-2-hydroxyphenyl)-1-propanone

$\text{C}_9\text{H}_6\text{Br}_2\text{Cl}_2\text{O}_2$ mol.wt. 376.86

Synthesis

– Preparation by bromination of 2,4-dichloro-6-hydroxy-propiofenone [6351] according to the method [6352].

m.p. 97° [6351];

^1H NMR (Sadtlar: standard n° 9475M),

IR (Sadtlar: standard n° 38941); TLC [6353].

1-(3,5-Dibromo-2-chloro-4-hydroxyphenyl)-1-propanone[2892-20-8] $C_9H_7Br_2ClO_2$ mol.wt. 342.41

Syntheses

– Preparation by bromination of 2-chloro-4-hydroxypropiofenone, according to [6354], (good yield) [6355, 6356].

m.p. 80° [6355,6356]; 1H NMR (Sadtlar: standard n° 8917M),IR (Sadtlar: standard n° 38080) [6355,6356], UV [6356,6357];

TLC [6353,6358].

1-(3,5-Dibromo-4-chloro-2-hydroxyphenyl)-1-propanone[17765-21-8] $C_9H_7Br_2ClO_2$ mol.wt. 342.41

Syntheses

– Preparation by bromination of 4-chloro-2-hydroxypropiofenone, according to [6354], (good yield) [6355,6356].

m.p. 87° [6355,6356];

IR [6355,6356], UV [6356,6359]; TLC [6353,6358].

1-(2,3,5-Tribromo-4-hydroxyphenyl)-1-propanone[17765-09-2] $C_9H_7Br_3O_2$ mol.wt. 386.87

Synthesis

– Preparation by reaction of potassium bromate and potassium bromide on 2-bromo-4-hydroxypropiofenone according to the procedure [6352], (96%) [6360].

m.p. $84-85^\circ$ [6360];IR (Sadtlar: standard n° 38935) [6360],

UV [6357,6360]; TLC [6353,6358].

1-(2,4,6-Tribromo-3-hydroxyphenyl)-1-propanone[23689-31-8] $C_9H_7Br_3O_2$ mol.wt. 386.87

Synthesis

– Preparation by bromination of m-hydroxypropiofenone in acetic acid using potassium bromate-potassium bromide mixture [6352] in the presence of hydrochloric acid at r.t. for 24 h (90%) [6360].

m.p. $72-73^\circ$ [6360]; 1H NMR (Sadtlar: standard 9471M), IR [6360], UV [6360].

1-(3,4,5-Tribromo-2-hydroxyphenyl)-1-propanone[17765-22-9] $C_9H_7Br_3O_2$ mol.wt. 386.87

Synthesis

– Preparation by bromination of 4-bromo-2-hydroxypropio-phenone according to [6354], (89%) [6360].

m.p. 111° [6360];

IR (Sadtler: standard n° 38936) [6360], UV [6359,6360];

TLC [6353,6358].

1-[4-(Hydroxy-*d*)phenyl]-1-propanone-2,2-*d*₂[91889-34-8] $C_9H_7D_3O_2$ mol.wt. 153.20

Synthesis

– Preparation from p-hydroxypropio-phenone in a refluxing mixture of dioxane/D₂O in nitrogen atmosphere with p-toluenesulfonyl chloride overnight (94%) [6361].¹H NMR [6361].**1-(3-Bromo-5-chloro-2-hydroxyphenyl)-1-propanone**[2892-15-1] $C_9H_8BrClO_2$ mol.wt. 263.52

Syntheses

– Preparation by bromination of 5-chloro-2-hydroxypropio-phenone, according to [6354], (good yield) [6355,6356].

m.p. 126–127° [6355,6356];

¹H NMR (Sadtler: standard n° 9089M),

IR (Sadtler: standard n° 38077) [6355,6356], UV [6356,6359];

TLC [6353,6358].

1-(3-Bromo-5-chloro-4-hydroxyphenyl)-1-propanone[2892-25-3] $C_9H_8BrClO_2$ mol.wt. 263.52

Syntheses

– Preparation by bromination of 3-chloro-4-hydroxy-propio-phenone in aqueous acetic acid [6362] or according to the procedure [6354], (good yield) [6355,6356].

– Also refer to: [6363].

m.p. 125° [6362], 121–122° [6355,6356];

¹H NMR (Sadtler: standard n° 8729M), IR (Sadtler: standard n° 38074) [6355,6356], UV [6356,6357]; TLC [6353,6358].

1-(5-Bromo-3-chloro-2-hydroxyphenyl)-1-propanone[2892-22-0] $C_9H_8BrClO_2$ mol.wt. 263.52

Syntheses

- Preparation by bromination of 3-chloro-2-hydroxypropionophenone, according to the procedure [6354], (good yield) [6355,6356].
- Also refer to: [6364].

m.p. 115° [6355,6356];

 1H NMR (Sadtlar: standard n° 8730M), IR (Sadtlar: standard n° 38075) [6355,6356], UV [6356,6359]; TLC [6353,6358].**Thiosemicarbazone** $C_{10}H_{11}BrClN_3OS$ mol.wt. 336.64 (m.p. 213°).

USE: Fungicide [6364].

BIOLOGICAL ACTIVITY: Antituberculosic [6364].

1-(3-Bromo-5-fluoro-2-hydroxyphenyl)-1-propanone[342-16-5] $C_9H_8BrFO_2$ mol.wt. 247.06

Syntheses

- Preparation by bromination of 5-fluoro-2-hydroxypropionophenone [6351] according to the method [6352], in aqueous acetic acid medium [6365].

m.p. 85° [6351,6365];

 1H NMR (Sadtlar: standard n° 9473M), IR (Sadtlar: standard n° 38939), UV [6359]; TLC [6353,6358].**1-(3-Bromo-5-fluoro-4-hydroxyphenyl)-1-propanone**[350-14-1] $C_9H_8BrFO_2$ mol.wt. 247.06

Synthesis

- Preparation by bromination of 3-fluoro-4-hydroxypropionophenone in aqueous acetic acid [6362].

m.p. 114° [6362].

1-(5-Bromo-2-hydroxy-3-iodophenyl)-1-propanone[868606-10-4] $C_9H_8BrIO_2$ mol.wt. 354.97

Synthesis

- Preparation by reaction of iodine and iodic acid with 5-bromo-2-hydroxypropionophenone in dilute ethanol for 1.5 h at 35–40° (82%) [6366].

1-(5-Bromo-2-hydroxy-3-nitrophenyl)-1-propanone[90725-67-0] $C_9H_8BrNO_4$ mol.wt. 274.07

Synthesis

– Preparation by reaction of nitric acid ($d = 1.52$) with 5-bromo-2-hydroxypropiofenone in concentrated sulfuric acid ($d = 1.80$) between -2° and 0° (73%) [6367].

m.p. 101° [6367].**1-(3-Bromo-2,4-dihydroxy-5-nitrophenyl)-1-propanone**[100246-22-8] $C_9H_8BrNO_5$ mol.wt. 290.07

Syntheses

– Obtained by treatment of 3,3'-dipropionyl-4,4',6,6'-tetra-hydroxy-5,5'-dibromophenyl thioether (m.p. $212-213^\circ$) with nitric acid ($d = 1.4$) at 5° for 2 h [6368].

– Also obtained by bromination of 5-nitrorespropiophenone in acetic acid with bromine [6368].

m.p. $230-231^\circ$ [6368].**1-(3,5-Dibromo-2-hydroxyphenyl)-1-propanone**[2887-68-5] $C_9H_8Br_2O_2$ mol.wt. 307.97

Syntheses

– Preparation by bromination of various o-hydroxy-propiofenones,

- from 2-hydroxypropiofenone, according to the procedure [6354], (71%) [6360] or with bromine in 80% aqueous acetic acid (54%) [6369];
- from 3-bromo-2-hydroxypropiofenone, according to the procedure [6354], (98%) [6360];
- from 5-bromo-2-hydroxypropiofenone, according to the procedure [6354], (98%) [6360].

– Preparation by Fries rearrangement of 2,4-dibromophenyl propionate (b.p. $275-280^\circ$) [6370] with aluminium chloride at 100° for 2 h (88%) [6360], at $160-165^\circ$ for 30 min (66%) [6371] or at 150° for 2 h (33%) [6370].

– Also obtained by Friedel-Crafts acylation of 2,4-dibromophenol with propionic anhydride in nitrobenzene in the presence of aluminium chloride at 120° [6370].

– Also refer to: [6363,6372,6373].

m.p. 121° [6370], $119-120^\circ$ [6360], 118° [6369], $117-118^\circ$ [6355,6356], $116.5-117^\circ$ [6371];

1-(3,5-Dibromo-4-hydroxyphenyl)-1-propanone

[2887-65-2]

 $C_9H_8Br_2O_2$ mol.wt. 307.97**Syntheses**

– Preparation by treatment of p-hydroxypropiophenone with bromine,

- in dilute acetic acid [6374], at r.t. for 5 h (80%) [6375], (63%) [6362] or in an acetic acid and sodium acetate mixture [6375];
 - in dilute ethanol [6376,6377] or in methanol (90%) [6378];
 - in acetone (97%) [6355,6356,6360].
- Preparation by treatment of 3-bromo-4-hydroxypropiophenone with bromine in acetone (97%) [6360].
- Also obtained by demethylation of 3,5-dibromo-4-methoxypropiophenone (m.p. 59°) [6362], (m.p. 99°) [6379] with pyridinium chloride at reflux for 10 min [6379].

N.B.: One of the reported melting points is obviously wrong.

– Also refer to: [6363].

1-(3,5-Dichloro-4-hydroxyphenyl)-1-propanone

[51335-40-1]

 $C_9H_8Cl_2O_2$ mol.wt. 219.07**Syntheses**

- Preparation by Fries rearrangement of 2,6-dichlorophenyl propionate (b.p._{0,5} 113–115°) with aluminium chloride at 134–145° for 2 h (87%) [6401].
- N.B.:** Not obtained by Fries rearrangement of the same ester with boron trifluoride instead of aluminium chloride at 195–210° for 3 h.
- Also obtained by heating a suspension of sodium propionate and 2,6-dichlorophenol in neat triflic acid [6402].
 - Also obtained by demethylation of 3,5-dichloro-4-methoxypropiophenone (m.p. 90°) with pyridinium chloride at reflux for 10 min [6379].
 - Also obtained by chlorination of p-hydroxypropiophenone [6403].
 - Also refer to: [6404–6408].
- m.p. 118° [6379], 110–111° [6401].

1-(4,5-Dichloro-2-hydroxyphenyl)-1-propanone

[288401-09-2]

 $C_9H_8Cl_2O_2$ mol.wt. 219.07**Synthesis**

- Preparation by Fries rearrangement of 3,4-dichlorophenyl propionate with aluminium chloride at 160° for 3 h [6409].
- white solid [6409];
¹H NMR [6409], ¹³C NMR [6409], MS [6409].

1-(3,5-Dichloro-2,4-dihydroxyphenyl)-1-propanone[66021-81-6] $C_9H_8Cl_2O_3$ mol.wt. 235.07

Syntheses

– Preparation by chlorination of resorpiophenone [6410] in 80% acetic acid [6383].

m.p. 146–147° [6383], 142–145° [6410].

1-(2-Amino-5-hydroxyphenyl)-1-propanone-3,3,3-*d*₃[718613-15-1] $C_9H_8D_3NO_2$ mol.wt. 168.21

Synthesis

– Preparation [6411].

1-(4-Fluoro-2-hydroxy-5-nitrophenyl)-1-propanone[123450-85-1] $C_9H_8FNO_4$ mol.wt. 213.17

Synthesis

– Obtained by reaction of fuming nitric acid with 4-fluoro-2-hydroxypropiofenone in acetic acid at 0° for 30 min [6412].

1-(2,5-Difluoro-4-hydroxyphenyl)-1-propanone[188435-69-0] $C_9H_8F_2O_2$ mol.wt. 186.16

Synthesis

– Refer to: [6413].

1-(3,5-Difluoro-4-hydroxyphenyl)-1-propanone[178374-78-2] $C_9H_8F_2O_2$ mol.wt. 186.16

Syntheses

– Obtained by Fries rearrangement of 2,6-difluorophenyl propionate (b.p._s 61–65°) with aluminium chloride for 2 h at 90–95° under nitrogen (50%) [6414].

– Also refer to: [6405,6406,6415–6417].

m.p. 127–129° [6414]; ¹H NMR [6414].

1-(2-Hydroxy-3,5-diiodophenyl)-1-propanone

[32559-06-1]

 $C_9H_8I_2O_2$ mol.wt. 401.97

Syntheses

– Preparation by reaction of iodine with o-hydroxypropionophenone in 10% aqueous sodium carbonate at r.t. for some hours (75%) [6418,6419].

m.p. 110–112° [6418].

1-(4-Hydroxy-3,5-diiodophenyl)-1-propanone

[7091-08-9]

 $C_9H_8I_2O_2$ mol.wt. 401.97

Syntheses

– Preparation by reaction of iodine with 4-hydroxypropionophenone,

- in the presence of an aqueous sodium carbonate solution at r.t. (97%) [6419];
- in ammonia in the presence of potassium iodide at r.t. overnight (94%) [6420];
- in ethanol in the presence of mercuric oxide yellow [6362].

– Also refer to: [6363,6421].

Note: Effect on pituitary-thyroid relation [6421].

m.p. 124° [6362], 122° [6420]; UV [6422]; TLC [6422].

1-(2-Hydroxy-3,5-dinitrophenyl)-1-propanone

[91211-02-8]

 $C_9H_8N_2O_6$ mol.wt. 240.17

Syntheses

– Obtained (by-product) by reaction of fuming nitric acid (d = 1.52) with o-hydroxypropionophenone in concentrated sulfuric acid at 0° for 2 h [6423,6424].

– Also obtained by reaction of nitric acid with 2-hydroxy-5-nitropropionophenone in acetic acid, first at 0°, then at r.t. [6425].

m.p. 115–117° [6423,6424]; IR [6425]; HPLC [6426]; TLC [6426].

1-(2-Bromo-4-hydroxyphenyl)-1-propanone

[18430-73-4]

 $C_9H_9BrO_2$ mol.wt. 229.07

Synthesis

– Obtained by Fries rearrangement of m-bromophenyl propionate with aluminium chloride at 50° for 3 h (16%) [6360].

m.p. 101–102° [6360];

IR (Sadtler: standard n° 38931) [6360], UV [6357,6360]; TLC [6353,6358].

1-(2-Bromo-6-hydroxyphenyl)-1-propanoneC₉H₉BrO₂ mol.wt. 229.07

Synthesis

– Obtained by alkaline degradation of 5-bromo-2,3-dimethyl-chromone (m.p. 163°) [6427].

m.p. 82° [6427].

1-(3-Bromo-2-hydroxyphenyl)-1-propanone

[17764-91-9]

C₉H₉BrO₂ mol.wt. 229.07

Synthesis

– Obtained by Fries rearrangement of o-bromophenyl propionate with titanium tetrachloride at 110° for 30 min (29%) [6360].

m.p. 55–56° [6360];

¹H NMR (Sadler: standard n° 9531M), IR (Sadler: standard n° 38930) [6360],

UV [6359,6360]; TLC [6353,6358].

1-(3-Bromo-4-hydroxyphenyl)-1-propanone

[18430-72-3]

C₉H₉BrO₂ mol.wt. 229.07

Syntheses

– Preparation by Fries rearrangement of o-bromophenyl propionate with aluminium chloride at 100° for 2 h (95%) [6360] or 120° for 20–30 min [6428].

– Also obtained (by-product) by Friedel–Crafts acylation of o-bromoanisole or o-bromophenetole with propionyl chloride in the presence of aluminium chloride [6429,6430].

– Also refer to: [6431,6432].

m.p. 132° [6360], 130° [6428], 125° [6429,6430];

IR (Sadler: standard n° 38929) [6360], UV [6357,6360]; TLC [6353,6358].

USE: Fungicide [6432].

1-(4-Bromo-2-hydroxyphenyl)-1-propanone

[17764-92-0]

C₉H₉BrO₂ mol.wt. 229.07

Syntheses

– Preparation by Friedel–Crafts acylation of m-bromophenol with propionyl chloride in the presence of aluminium chloride in refluxing ethylene dichloride for 2 h (78%) [6433].

– Also obtained by Fries rearrangement of 3-bromophenyl propionate in the presence of aluminium chloride at 50° for 3 h (47%) [6360].

– Also refer to: [6434].

b.p.₁₇ 156–158° [6360];

- 1H NMR (Sadtler: standard n° 9472M), IR (Sadtler: standard n° 38938), UV [6359];
- TLC [6353,6358].

Notes: Deuteration [6447]; acidity of methylene proton [6446].**1-(2-Fluoro-4,6-dihydroxyphenyl)-1-propanone**

[864866-62-6]

 $C_9H_9FO_3$ mol.wt. 184.17

Synthesis

- Refer to: [6529].

1-(4-Hydroxy-3-iodophenyl)-1-propanone $C_9H_9IO_2$ mol.wt. 276.07

Synthesis

- Refer to: [6432] (compound **F/54**).

USE: Fungicide [6432].

1-(2,4-Dihydroxy-3-iodophenyl)-1-propanone

[117844-79-8]

 $C_9H_9IO_3$ mol.wt. 292.07

Synthesis

– Obtained by adding an aqueous solution of iodine and periodic acid to an ethanolic solution of respropionophenone, then stirring the mixture for 2 h (49%) [6530].

m.p. 97–98° [6530]; 1H NMR [6530].

1-(2-Hydroxy-3-nitrosophenyl)-1-propanone

2-Propionyl-6-nitrosophenol

 $C_9H_9NO_3$ mol.wt. 179.18

Synthesis

– Preparation from o-propionylphenol [6531].

1-(3-Hydroxy-4-nitrosophenyl)-1-propanone

3-Propionyl-6-nitrosophenol

 $C_9H_9NO_3$ mol.wt. 179.18

Synthesis

– Preparation from propionophenone (no precision) [6531].

1-(4-Hydroxy-3-nitrosophenyl)-1-propanone

4-Propionyl-2-nitrosophenol

 $C_9H_9NO_3$ mol.wt. 179.18

Synthesis

– Preparation from p-propionylphenol [6531].

1-(2-Hydroxy-3-nitrophenyl)-1-propanone

[91991-98-9]

 $C_9H_9NO_4$ mol.wt. 195.17

Syntheses

– Obtained by degradation of 3-methyl-8-nitrochromone (m.p. 148–150°) with boiling 5% potassium hydroxide for 2 h (84%) [6423].

- Also obtained by reaction of fuming nitric acid ($d = 1.52$) with *o*-hydroxypropiofenone in concentrated sulfuric acid at 0° for 2 h (38%) [6423], (8%) [6532].
- Also refer to: [6424,6533,6534].
m.p. $97\text{--}98^\circ$ [6423], $95\text{--}97^\circ$ [6423], $92\text{--}94^\circ$ [6532];
TLC [6426]; HPLC [6426]; conformation and H bonds [6425].

1-(2-Hydroxy-4-nitrophenyl)-1-propanone

[79925-34-1]

 $C_9H_9NO_4$

mol.wt. 195.17

Syntheses

- Obtained by Fries rearrangement of 3-nitrophenyl propionate* (m.p. 49°) [6535] with aluminium chloride [6536], in nitrobenzene at $125\text{--}130^\circ$ for 25 h (20%) or without solvent at 125° for 20 h (14%) [6537].
- Also obtained by Friedel–Crafts acylation of 3-nitrophenol with propionyl chloride in the presence of aluminium chloride [6536].
- Also refer to: [6483] (compound **1f**), [6446].
m.p. $68\text{--}69^\circ$ [6537].

Notes: C-Deuteration [6447]; *temperature of decomposition of the mixture $AlCl_3$ /ester (2:1) 183° [6535].

1-(2-Hydroxy-5-nitrophenyl)-1-propanone

[55805-95-3]

 $C_9H_9NO_4$

mol.wt. 195.17

Syntheses

- Preparation by Friedel–Crafts acylation of *p*-nitrophenol with propionyl chloride in nitrobenzene in the presence of aluminium chloride (36%) [6538].
- Also obtained by Fries rearrangement of *p*-nitrophenyl propionate (m.p. $63\text{--}64^\circ$) [6535] in nitrobenzene in the presence of aluminium chloride at 125° for 5 h (23%) [6539].
- Preparation by reaction of boron trichloride with 2-methoxy-5-nitropropiofenone in methylene chloride, first at -78° , then at r.t. for 14 h (92%) [6409].
- Also obtained by nitration of *o*-hydroxypropiofenone (23%) [6532], in acetic acid with fuming nitric acid, first at 0° , then at 60° [6540].
- Also obtained by alkaline hydrolysis of 3-methyl-6-nitrochromone (m.p. $147\text{--}148^\circ$) (85%) [6540].
- Also refer to: [6534,6541].

white solid [6409];

m.p. 114° [6437], 99° [6540], $94.5\text{--}95.0^\circ$ [6538], $93\text{--}94^\circ$ [6539], $91\text{--}93^\circ$ [6532].

One of the reported melting points is obviously wrong.

 1H NMR [6409,6540], ^{13}C NMR [6409], IR [6538], MS [6409];

TLC [6426]; HPLC [6426].

Notes: Temperature of decomposition of the mixture $\text{AlCl}_3/\text{ester}$ (2:1) 135° [6535]; C-deuteration [6447]; chelates with cobalt (II), copper (II), nickel (II), and zinc (II) [6542,6543]; acidity of methylene proton [6446].

Oxime [58402-96-3] $\text{C}_9\text{H}_{10}\text{N}_2\text{O}_4$ mol.wt. 210.18 [6544].

1-(3-Hydroxy-4-nitrophenyl)-1-propanone

$\text{C}_9\text{H}_9\text{NO}_4$ mol.wt. 195.17

Synthesis

– Obtained by reaction of 3-hydroxypropiophenone with nitric acid in acetic acid at 70° [6545].

1-(3-Hydroxy-5-nitrophenyl)-1-propanone

[193693-96-8]

$\text{C}_9\text{H}_9\text{NO}_4$ mol.wt. 195.17

Synthesis

– Obtained in two steps: First, a mixture of 3-hydroxy-propiophenone and dysprosium nitrate in ethyl acetate was refluxed ($85\text{--}105^\circ$) for 30 min. Then, the isolated intermediate ($\text{C}_9\text{H}_8\text{NO}_4$)₃Dy (60%) was dissolved in 6 N hydrochloric acid (52%) [6546].

m.p. $130\text{--}132^\circ$ [6546]; MS [6546].

Dysprosium salt [193693-93-5] [6546].

1-(4-Hydroxy-3-nitrophenyl)-1-propanone

[50916-44-4]

$\text{C}_9\text{H}_9\text{NO}_4$ mol.wt. 195.17

Syntheses

- Preparation by treatment of 4-hydroxypropiophenone with fuming nitric acid [6473,6547] or with nitric acid in concentrated sulfuric acid between -2° and 0° (80%) [6367].
- Preparation by Friedel–Crafts acylation of o-nitrophenol with propionyl chloride in nitrobenzene in the presence of aluminium chloride at $55\text{--}60^\circ$ for 2.5 h, then at r.t. overnight [6547,6548], (41%) [6549].
- Also obtained (poor yield) by Fries rearrangement of 2-nitrophenyl propionate in nitrobenzene with aluminium chloride at 90° for 8 h, then at r.t. overnight [6539].
- Also obtained by reaction of concentrated nitric acid with 2,2'-dihydroxy-5,5'-dipropionyl diphenyl sulfide (m.p. 103°) in concentrated sulfuric acid at r.t. overnight [6550].
- Also refer to: [6534,6551].

m.p. 67° [6367], 66° [6473], $65.4\text{--}66.2^\circ$ [6549], $65\text{--}66^\circ$ [6548], $58\text{--}61^\circ$ [6539], $58\text{--}60^\circ$ [6550].

USE: Fungicide [6552].

BIOLOGICAL ACTIVITY: Sympathomimetic [6548].

1-(5-Hydroxy-2-nitrophenyl)-1-propanone[453518-19-9] $C_9H_9NO_4$ mol.wt. 195.17

Syntheses

- Obtained by reaction of nitric acid with 3-hydroxypropionophenone in acetic acid at 70° (30–35%) [6545].
- Also refer to: [6553].

1-(2,4-Dihydroxy-3-nitrophenyl)-1-propanone[103441-87-8] $C_9H_9NO_5$ mol.wt. 211.17

Synthesis

- Obtained by Friedel–Crafts acylation of 2-nitroresorcinol with propionic anhydride (1 mol) in the presence of aluminium chloride (3.3 mol) in nitrobenzene at 120–130° for 3 h [6554].

m.p. 83° [6554].

1-(2,4-Dihydroxy-5-nitrophenyl)-1-propanone[63411-89-2] $C_9H_9NO_5$ mol.wt. 211.17

Syntheses

- Preparation by adding respropionophenone in small portions with constant stirring to nitric acid (d = 1.42) cooled in an ice bath (<10°), (77%) [6555], (43%) [6380].
- Preparation by reaction of fuming nitric acid with respropionophenone in glacial acetic acid at 0–5° [6556].
- Also obtained by treatment of 3,3'-dipropionyl-4,4',6,6'-tetrahydroxydiphenyl thioether (m.p. 161–162°) with nitric acid (d = 1.4) at 5° for 2 h [6368].
- Also refer to: [6452] (compound **1g**).

m.p. 137–138° [6380], 131° [6368,6555];

¹H NMR [6380], IR [6380]; TLC [6380].**Diacetate** $C_{13}H_{13}NO_7$ mol.wt. 295.25 (m.p. 89°) [6555].

- Preparation by reaction of acetic anhydride with 2,4-dihydroxy-5-nitropropionophenone in the presence of sodium acetate [6555].

Oxime [473807-71-5] $C_9H_{10}N_2O_5$ mol.wt. 226.18.

USE: As a gravimetric reagent for Cu (II) determination [6557] and Ni (II) and Pd (II) determination [6558].

1-(2,6-Dihydroxy-3-nitrophenyl)-1-propanone[103440-67-1] $C_9H_9NO_5$ mol.wt. 211.17

Syntheses

- Obtained by reaction of propionic anhydride with 4-nitroresorcinol in nitrobenzene in the presence of aluminium chloride, first at 0°, then heating in a steam bath for 3 h [6559].
- Also obtained by reaction of nitric acid ($d = 1.42$) with 2,6-dihydroxypropiophenone at 0° for 10 min [6559].
- Also obtained by Fries rearrangement of 4-nitroresorcinol dipropionate with aluminium chloride (3.3 equiv) in nitrobenzene, first at 95–100° for 2 h, then at r.t. for 72 h (42%) or without solvent at 100° for 3 h (25%) [6560].
- m.p. 115–116° [6560], 114–115° [6559].

1-(2,4,6-Trihydroxy-3-nitrophenyl)-1-propanone[119691-92-8] $C_9H_9NO_6$ mol.wt. 227.17

Synthesis

- Preparation by addition of a concentrated sulfuric acid and fuming nitric acid mixture to a solution of 2,4,6-trihydroxy-propiophenone in concentrated sulfuric acid and hexane mixture under cooling with an ice bath (70–80%) [6561].
- m.p. 108–109° [6561]; 1H NMR [6561], IR [6561], MS [6561].

1-(2-Hydroxyphenyl)-1-propanone[610-99-1] $C_9H_{10}O_2$ mol.wt. 150.18

Syntheses

- Obtained by Fries rearrangement of phenyl propionate,
- with aluminium chloride in refluxing carbon disulfide [6562], then at 130–150° for 2–3 h after solvent elimination (32–35%) [6389,6563,6564], (43%) [6565];
 - with aluminium chloride in chlorobenzene using microwave irradiation for 3 min at 106° (28%) [6566];
 - with aluminium chloride in nitrobenzene at 50° for 18 h (16%) [6567] or at 20° for 48 h (10%) [6568];
 - with aluminium chloride in nitromethane at 20° for 7 days (20%) [6569,6570];
 - with aluminium chloride in heptane at 80–90° for 7 h (53%) or in tetrachloroethane at 95° for 5 h (43%) [6571];
 - with aluminium chloride without solvent at 250° for 5 min or at 180–200° for 15 min (76–78%) [6355], at 140–160° (32–35%) [6572,6573], at 140° (48%) [6574], at 120° (30%) [6575] or at 50° for 10 h (30%) [6355,6356,6576].

N.B.: Industrial manufacturing (S.P.C.A. in 1956), with aluminium chloride without solvent at 180–200° for 15 min (62%) [6351].

- with zirconium chloride in *o*-dichlorobenzene at 120° for 3 h (83%) [6467];
 - with titanium tetrachloride in *o*-dichlorobenzene at 150° for 1 h (62%) [6577], in nitromethane at 20° for 7 days (13%) [6569] or without solvent at 50° for 10 h (30%) [6355,6356,6576];
 - with titanium tetrabromide in *o*-dichlorobenzene at 150° for 1 h (60%) [6577];
 - with stannic chloride at 50° for 3 h (25%) [6355,6356];
 - with boron trifluoride at 120–135° for 15 min (15%) [6355,6356];
 - with zinc chloride at 180–200° for 15 min (10%) [6355];
 - with polyphosphoric acid at 100° (13%) [6578].
- Also obtained by Friedel–Crafts acylation of phenol with propionyl chloride in the presence of aluminium chloride (40%) [6579], at 120–130° for 1 h (45%) [6580,6581] according to the method [6582].
- Also obtained by acylation of phenol with propionic acid,
- in the presence of boron trifluoride at 165° for 1 h (45%) [6583] or at 80° for 2 h (8%) [6572];
 - in the presence of polyphosphoric acid at 100° for 10 min (by-product) (5%) [6578];
 - in the presence of zinc chloride at 160° for 1 h [6584].
- Also obtained by isomerization of 4-hydroxypropiophenone with aluminium chloride (1.5 equiv) at 165° for 1 h (40%) or at 180–200° for 15 min (55%) [6356,6468,6482].
- Also obtained by demethylation of 2-propionylanisole with fuming hydrochloric acid (*d* = 1.19) in a sealed tube at 110° for 6 h [6585].
- Also obtained (by-product) by heating 3-*tert*-butyl-4-hydroxypropiophenone with aluminium chloride at 170° for 15 min (13%) [6586].
- Also obtained by treatment of 2,3-dimethylchromone with sodium ethoxide in boiling ethanol for 30 h [6587] according to the method [6588].
- Also obtained from 2-allylphenol by treatment with perbenzoic acid in ethyl ether, first at 0°, then between 0° and 25° for 24 h (78%) [6589].
- Also obtained by reaction of 2-bromophenyl propionate in a ethyl ether/hexane/THF mixture at low temperature (–78 to –95°) with *sec*-butyllithium to give, after hydrolysis, the titled ketone (metal-promoted Fries rearrangement) (17%) [6590].
- Also obtained by reaction of ethylmagnesium bromide,
- with 2-hydroxybenzamide in boiling benzene, followed by hydrolysis (30%) [6591];
 - with 2-hydroxy-*N,N*-diethylbenzamide in boiling benzene, followed by hydrolysis (82–84%) [6591].
- Also isolated by heating of 1-(*o*-hydroxyphenyl)cyclopropyltrimethylammonium iodide for 1 h at 140° with 1.5 equiv of *N,N*-diisopropylethylamine (not water-free) (38%) [6592].
- Also obtained by hydrolysis of 2-(1-methyliminopropyl)phenol (4aa) with aqueous acetic acid/THF at 40° for 4 h (86%) [6593].

- Also obtained by photolysis of phenyl propionate [6594] in water or in solution containing β -cyclodextrine (254 nm) at 25° for 2 h [6595].
- Also obtained by treatment of 2-(1-hydroxypropyl)phenol with MnO_2 in methylene chloride for 7 h at r.t. [6596].
- Also refer to: [6439,6597–6619].

1-(2-Hydroxyphenyl)-1-propanone labelled with carbon-141-[2-Hydroxy[phenyl-U-¹⁴C]]-1-propanone[132899-53-7] $C_9H_{10}O_2$ mol.wt. 152.16

Synthesis

- Obtained by Fries rearrangement of [phenyl-U-¹⁴C] propionate (232 μ Ci) with aluminium chloride at 110° for 30 min (48%) (112 μ Ci) [6654].

Colourless oil [6654].

1-(3-Hydroxyphenyl)-1-propanone[13103-80-5] $C_9H_{10}O_2$ mol.wt. 150.18

Syntheses

- Preparation by diazotization of m-aminopropiofenone, followed by decomposition of the diazonium salt obtained [6562,6655], (76%) [6389], (71%) [6656].
- Also obtained by saponification of 3-acetoxypropiofenone (b.p.₂ 127–128°) with refluxing 10% sodium hydroxide for 2–3 h (83%) [6657].
- Also obtained by reductive deamination of 2-amino-5-hydroxypropiofenone (diazotization, followed by decomposition of the diazonium salt formed with copper powder in ethanol) [6658].
- Also obtained by reaction of ethylmagnesium bromide with 3-hydroxy-N,N-diethylbenzamide in refluxing n-butyl ether for 4 h (75%) [6591].
- Also obtained by treatment of 3-methoxypropiofenone (b.p._{0.05} 70–76°) with pyridinium chloride at 210° for 30 min (85%) [6659].

- Also obtained by treatment of 1-hydroxy-1-(3-hydroxyphenyl)propane (m.p. 105–107°) with DDQ in dioxane for 72 h (97%) [6659].
- Also refer to: [6545,6546,6659–6664].

b.p._{1.8} 131–133° [6657], b.p._{0.05} 150° [6656];

m.p. 82° [6389,6562,6591], 78° [6656], 77.5–78° [6658], 76–77° [6659], 76° [6657], 75–77° [6663];

MS [6628], UV [6457]; paper chromatography [6631,6632,6665].

BIOLOGICAL ACTIVITY: Tyrosine hydroxylase inhibition [6666].

1-(4-Hydroxyphenyl)-1-propanone (*Paroxypropione*)

[70-70-2] C₉H₁₀O₂ mol.wt. 150.18

Syntheses

- Preparation by Fries rearrangement of phenyl propionate,
 - with aluminium chloride in refluxing carbon disulfide [6562], (44%) [6473], then at 130–150° for 2–3 h after solvent elimination (45–50%) [6389,6563,6564];
 - with aluminium chloride in nitrobenzene at 50° for 18 h (72%) [6567] or at 20° for 48 h (60%) [6568];
 - with aluminium chloride in nitromethane at 20° for 7–8 days (80%) [6569,6570];
 - with aluminium chloride in chlorobenzene using microwave irradiation for 3 min at 106° (62%) [6566];
 - with aluminium chloride in ethylene dichloride at 95° for 5 h or in heptane at 80–90° for 7 h (36%) [6571], in benzene or in tetrachloroethane at 80° [6667];
 - with aluminium chloride in the presence of propionyl chloride at 50–60° for 6 h (49%) [6668];
 - with aluminium chloride without solvent at 50° for 10 h (60%) [6355,6356,6576], at 120° (43%) [6575] or at 140° (40%) [6574];
 - with titanium tetrachloride in nitromethane at 20° for 7 days (56%) [6569] or without solvent at 50° for 10 h (39%) [6355,6356,6576];
 - with polyphosphoric acid at 100° (61%) [6578];
 - with boron trifluoride at 50° for 3 h (46%) [6355];
 - with stannic chloride at 50° for 3 h (10%) [6355].
- Also obtained by acylation of phenol with propionic acid,
 - in the presence of boron trifluoride at 70° for 1 h (84%) [6583], at 70–75° (65–70%) [6362], at 73–75° for 3 h (88%) [6378] according to the method [6669] or at 80° for 2 h (40%) [6572];
 - in the presence of polyphosphoric acid at 100° for 10 min (81%) [6578] or in a boiling water bath for 5 min (58%) [6670];
 - in the presence of zinc chloride (Nencki reaction) at 160° for 1 h [6584] or at reflux for 5 min (155°) [6376], (10–12%) [6620,6667].

- Also obtained by Friedel–Crafts acylation of phenol with propionyl chloride in the presence of aluminium chloride (37%) [6579] or at 125–130° for 1 h (22%) [6580,6581] according to the method [6582]. **N.B.:** This same reaction in carbon disulfide, using propionyl chloride formed in situ by action of oxalyl chloride with sodium propionate (method B), for 1 h at 70°, yield 65% [6671].
- Also obtained by demethylation of 4-propionylanisole with refluxing pyridinium chloride for 10–15 min (90%) [6667], (78%) [6672].
- Also obtained by an ethyl group elimination in 4-propionylphenetole with aluminium chloride [6673] according to the method [6674] or with refluxing pyridinium chloride for 10 min (90%) [6667].
- Also obtained by tert-butyl group elimination in 3-tert-butyl-4-hydroxypropio-phenone with aluminium chloride without solvent at 170° for 15 min (66%) [6586] or in nitromethane at 20° for 8 days (34%) [6570,6586].
- Also obtained by hydrolysis of 4-propionoxypropio-phenone with potassium hydroxide in boiling ethanol [6675].
- Also obtained by reaction of ethylmagnesium bromide with 4-hydroxy-N,N-diethylbenzamide in boiling n-butyl ether (135°), followed by hydrolysis (65%) [6591].
- Also obtained by reaction of propionitrile with phenol (Hoesch reaction) [6667].
- Also obtained by pyrolysis of α -(4'-propionylphenoxy)propio-phenone, first at 335–345° for 16 min, then at 430° for 8 min (26%) [6676].
- Also obtained by photolysis of phenyl propionate [6594] in water or in solution containing β -cyclodextrine (254 nm) at 25° for 2 h [6595].
- Also refer to: [6364,6403,6408,6431,6432,6598,6602,6607,6610,6611,6677–6695].

b.p.₁₁ 135–150° [6563,6564], b.p._{0.5} 140–145° [6583], b.p.₁ 164° [6574].

Some boiling points are obviously wrong.

m.p. 152–153° [6696], 150° [6355,6356], 149–150° [6578], 149° [6473], 148–149° [6378,6579], 148.5° [6675], 148° [6376,6389,6562,6566,6575,6697], 147–150° [6668], 147–148° [6563,6564,6567,6584,6621], 147° [6670], 146° [6574], 145–147° [6583];

Notes: Toxicity [6709,6710]; deuteration [6361]; bacterial degradation [6711].

BIOLOGICAL ACTIVITY: Pituitary gonadotropic hormone inhibitor (compound **7116**) [6640]; antimicrobial [6712]; antiinflammatory [6713]; antiviral [6714]; choleric [6715]; melanoma metastasis chemotherapy [6716].

Oxime [133595-72-9] $C_9H_{11}NO_2$ mol.wt. 165.19 [6717,6718].

Potassium salt [138660-02-3] [6719].

β -D-Glucopyranoside [31826-80-9] $C_{15}H_{20}O_7$ mol.wt. 312.32.

– Preparation by reaction of sodium methoxide with the tetraacetate described below in methanol at r.t. for 20 min [6647,6648].

– Also refer to: [6720].

m.p. 173–175° [6648], 160° [6647]. One of the reported melting points is obviously wrong.

$(\alpha)_D^{25} = -95.9^\circ$ (water) [6647], $(\alpha)_D^{15} = -84.4^\circ$ [6648]; UV [6647].

Tetra-O-acetyl- β -D-glucopyranoside [31867-16-0] $C_{23}H_{28}O_{11}$ mol.wt. 480.47.

– Preparation by reaction of tetra-O-acetyl- α -D-glucopyranosyl bromide with 4-hydroxy-propiophenone,

- in the presence of silver oxide in quinoline at r.t. for 30 min [6647];
- in the presence of aqueous potassium hydroxide in acetone (40–50%) [6648].

– Also refer to: [6650,6720].

m.p. 158–159.5° [6647], 157–158° [6648];

UV [6647]; $(\alpha)_D^{24} = -27.8^\circ$ (chloroform) [6648], $(\alpha)_D^{25} = -21.5^\circ$ (1,2-dichloroethane) [6647].

Ethyl ether $C_{11}H_{14}O_2$ mol.wt. 178.23.

– Obtained by reaction of propionic anhydride with phenetole in the presence of iodine at reflux for 3 h (57%) [6721].

– Preparation by reaction of propionyl chloride with phenetole in the presence of aluminium chloride in carbon disulfide [6722].

m.p. 30° [6722], 29–30° [6721].

Propionate $C_{12}H_{14}O_3$ mol.wt. 206.24 (m.p. 63°) [6351].

1H NMR (Sadtlar: standard n° 57885M), IR (Sadtlar: standard n° 84933K).

1-(4-Hydroxyphenyl)-1-propanone labelled with carbon-14

1-[4-Hydroxy[phenyl- U - ^{14}C]]-1-propanone

[132899-54-8] $C_9H_{10}O_2$ mol.wt. 152.16

Syntheses

- Obtained by Fries rearrangement of [phenyl- U - ^{14}C] propionate (232 mCi) with aluminium chloride at 110° for 30 min (39%) (90 mCi) [6654].

- Also obtained with a radioactivity of 27 microcuries/mg by condensing phenol with $\text{Et}^{14}\text{CO}_2\text{H}$ in the presence of BF_3 [6723].

m.p. 147–149° [6654].

1-(2,3-Dihydroxyphenyl)-1-propanone

[90536-26-8]

$\text{C}_9\text{H}_{10}\text{O}_3$

mol.wt. 166.18

Syntheses

- Obtained by total demethylation of 2,3-dimethoxypropiofenone (b.p.₂ 114°) (SM) with refluxing hydriodic acid ($d = 1.96$) and an equal volume of acetic acid for 6 h (41%) [6724]. SM was prepared by action of ethyl-magnesium iodide on 2,3-dimethoxybenzaldehyde (m.p. 51–52°), followed by oxidation of the obtained carbinol (b.p.₂ 108–110°) with potassium dichromate in dilute sulfuric acid.
- Obtained by total demethylation of 2,3-dimethoxypropiofenone (b.p._{0.2-0.3} 100–102°) with refluxing pyridinium chloride for 30 min (75%) [6725].
- Obtained by total demethylation of 2,3-dimethoxypropiofenone with boron tribromide in methylene chloride at r.t. overnight (78%) [6726].
- Also obtained (by-product) by Fries rearrangement of *o*-methoxyphenyl propionate (1 mol) or pyrocatechol dipropionate in the presence of pyrocatechol with aluminium chloride (2 mol) without solvent at 135–140° for 2–3.5 h (small amounts) [6727].

b.p.₅ 182–187° [6727];

m.p. 102.5–103.5° [6727], 56–57° [6725], 56° [6726], 53° [6724]. One of the reported melting points is obviously wrong.

^1H NMR [6726], ^{13}C NMR [6726], IR [6726,6728], MS [6726].

Note: This leads [6724] to doubt the correctness of the structure given to the by-product obtained [6727].

1-(2,4-Dihydroxyphenyl)-1-propanone (*Respropiophenone*)

[5792-36-9]

$\text{C}_9\text{H}_{10}\text{O}_3$

mol.wt. 166.18

Syntheses

- Preparation by reaction of propionic acid with resorcinol,
 - in the presence of zinc chloride (Nencki reaction) [6729], at reflux (160–165°) for 15 min [6376,6382,6389,6556,6730,6731], (86%) [6732], (76%) [6733], (73%) [6383], (62%) [6380,6734], at 150° for 20 min [6735];
 - in the presence of boron trifluoride for 2 h at 70° (79%) [6736], at 80° (67%) [6572] or at 105–108° for 15 min (71%) [6737];
 - in the presence of polyphosphoric acid for 10–20 min in a boiling water bath (65%) [6738];

- in the presence of 70% perchloric acid at reflux for 30 min (70%) [6739];
- in the presence of Amberlite IR-120 (cation exchange resin sulfonic acid type) at 160° for 2–3 h (76%) [6740].

N.B.: Zeokarb 225 was found to be as effective.

- Preparation by reaction of propionitrile with resorcinol (Hoesch reaction) [6741,6742], (75%) [6565], (65%) [6555], (46%) [6743], (35%) [6744].
- Preparation by reaction of propionic anhydride with resorcinol,
 - in the presence of Amberlite IR-120 (cation exchange resin sulfonic acid type) at 160° for 2–3 h (82%) [6740];
 - in the presence of concentrated sulfuric acid (small drops) at 130° for some min (60%) [6744].
- Also obtained by Fries rearrangement of resorcinol dipropionate,
 - with aluminium chloride at 180–185° for 90 min (25%) [6745];
 - with boron trifluoride, in the presence of resorcinol, at 75° for 1 h (83%) [6736].
- Also obtained by reaction of ethylmagnesium bromide with 2,4-dihydroxy-N, N-diethylbenzamide in refluxing benzene (12%) [6591].
- Also refer to: [6452,6524,6617,6746–6771].

b.p._{0.8} 152–154° [6736];

m.p. (monohydrate) 57° [6743], 56° [6572,6591,6730,6731];

(anhydrous) 102–104° [6740], 101.5° [6743], 101° [6733,6736,6738],

100–101° [6737], 99° [6744], 98–100° [6565],

98° [6382,6772], 97.5° [6730,6731], 97–98° [6380],

97° [6572,6591,6739], 96° [6383], 95–96° [6732], 95° [6376];

¹H NMR [6380], IR [6380,6733,6737], UV [6733,6737];

paper chromatography [6773]; TLC [6380].

USE: For chelatometric determination of iron [6774,6775]; preserving agent for liquid foods [6776]; fungicide [6777].

BIOLOGICAL ACTIVITY: Antimelanoma and skin depigmentation [6778]; choleric [6715]; anthelmintic [6779]; trypanosoma brucei brucei response [6780]; bactericide [6781].

1-(2,5-Dihydroxyphenyl)-1-propanone

[938-46-5]

C₉H₁₀O₃ mol.wt. 166.18

Syntheses

- Preparation by Fries rearrangement of quinol dipropionate (hydroquinone dipropionate),

- with aluminium chloride without solvent at 130–140° for 4 h (75%) [6782], at 142° for 30 min (80%) [6783], at 160–165° for 3 h (good yields) [6508] or at 190–200° for 90 min (60%) [6745];
- by using various quantities of aluminium chloride at 180° for 2 h (to see below) [6733];

AlCl ₃ (equiv)	Yields (%)
1	21
2	21
3	45
4	78
5	89

- with aluminium chloride (2 equiv) in nitromethane at 20° for a week (7%) [6733] or in nitrobenzene (24%) [6784];
 - with boron trifluoride complex (BF₃-OEt₂) at reflux for 1 h (42%) [6785];
 - by using titanium tetrachloride (2 equiv) at 130° for 2 h gave only 6% yield [6733].
- Also obtained by treatment of,
- hydroquinone dipropionate with aluminium chloride in the presence of hydroquinone (61%) [6784];
 - 2-hydroxy-5-(propionyloxy)propiophenone with aluminium chloride (5 equiv) at 180° for 30 min in the presence of hydroquinone (57%) [6733].
- Also obtained by acylation of hydroquinone with propionic acid,
- in the presence of boron trifluoride in ethylene dichloride at 50–55° (59%) [6509], in tetrachloroethane at 90–95° for 5 h (70%) [6786] or at 50° for 4 h (70%) [6787] or without solvent (67%) [6510], at 80° for 2 h (54%) [6572] or at 125° for 2 h (71%) [6736];
 - in the presence of zinc chloride at 190° few min (Nencki reaction) [6376];
 - in the presence of 70% perchloric acid at reflux for 1 h (12%) [6739].
- Also obtained by Friedel–Crafts acylation of hydroquinone with propionyl chloride in nitrobenzene in the presence of aluminium chloride (40%) [6784].
- Also obtained from 2-hydroxy-5-(propionyloxy)propiophenone; the ester group elimination on hydrolysis with 85% sulfuric acid at r.t. or by treatment with aluminium chloride [6745].
- Also obtained by reaction of benzoquinone (2.5 equiv) with 2-oxobutanoic acid in aqueous acetonitrile or an acetonitrile/methylene chloride mixture (91%) [6788].
- Also refer to: [6761,6789–6798].
- m.p. 99–99.5° [6787], 98° [6786], 97–98° [6509], 97° [6733], 96° [6510,6745], 92° [6376,6572,6736,6739,6784], 91–92° [6782], 80–82° [6783].
- Some melting points are obviously wrong.
¹H NMR [6472,6783], IR [6733,6783];
 TLC [6783]; capillary electrochromatography [6799];
 paper chromatography [6632].

Notes: C-Deuteration [6447]; acidity of methylene proton [6446]; skin depigmentation [6778].

USE: Preserving agent for liquid foods [6776].

BIOLOGICAL ACTIVITY: Antimelanoma [6778].

1-(2,6-Dihydroxyphenyl)-1-propanone

[3361-72-6] $C_9H_{10}O_3$ mol.wt. 166.18

Syntheses

- Preparation by alkaline degradation of two substituted coumarins,
 - from 4-methyl-7-hydroxy-8-propionylcoumarin (m.p. 200°, [6800], 197–198° [6801], 187° [6802,6803]) (70%) [6800], (65%) [6380,6804], (60%) [6801,6803], (48%) [6805];
 - from 7-hydroxy-8-propionylcoumarin (m.p. 168°) [6806].
 - Also obtained by reaction of ethylmagnesium iodide on 2,6-dimethoxybenzotrile, followed by cleavage of the ether linkages with aluminium chloride [6804].
 - Preparation by dehydrogenation of 2-propionylcyclohexane-1,3-dione,
 - in the presence of 10% Pd/C in refluxing cumene overnight under nitrogen (57%) [6807];
 - in the presence of 5% Pd/C in tetraethyleneglycol dimethyl ether at 185° [6808].
 - Also obtained by decarboxylation of 4,6-dihydroxy-5-propionyl-1,3-benzenedicarboxylic acid in refluxing water for 12 h (25%) [6809].
 - Also obtained from 2-chloro-2-propionyl-1,3-cyclohexanedione (m.p. 89°) by rearrangement in 10–20% hydrogen chloride-DMF at 120–130° for 15–20 min, according to the procedure [6810], (79%) [6811].
 - Also refer to [6812–6817].
- m.p. 139° [6800,6806], 137–138° [6380,6809], 136–137° [6801], 136° [6811], 135–137° [6807], 133.5° [6803], 130–132° [6802,6805]; 1H NMR [6380,6811], ^{13}C NMR [6811], IR [6380,6811], UV [6733]; TLC [6380]; sublimation 118–132°/0.01 mbar [6811].

Dibenzoate $C_{23}H_{18}O_5$ mol.wt. 374.39 (m.p. 95°) [6800].

1-(3,4-Dihydroxyphenyl)-1-propanone (*4-Propionylpyrocatechol*)

[7451-98-1] $C_9H_{10}O_3$ mol.wt. 166.18

Syntheses

- Obtained by Fries rearrangement of pyrocatechol dipropionate with aluminium chloride in chlorobenzene at 80° for 2 h (84%) [6818] or in nitrobenzene at 100° for 15 min [6389], (39%) [6784].

- Obtained by Fries rearrangement of pyrocatechol dipropionate with aluminium chloride in the presence of pyrocatechol, in nitrobenzene at 80° for 1 h (37%) [6580,6581] or in nitromethane at r.t. for 72 h (76%) [6733].
- Also obtained by Fries rearrangement of o-methoxyphenyl propionate (1 mol) by aluminium chloride (2 mol) without solvent at 140° for 2 h (51–55%) [6727] or in nitrobenzene at 80° for 30–60 min [6620]. A demethylation occurs during the reaction.
- Also obtained by acylation of pyrocatechol with propionic acid,
 - in the presence of boron trifluoride [6819], at 150° for 2 h in a sealed tube (36%) [6736];
 - in the presence of polyphosphoric acid for 15 min in a boiling water bath (12%) [6738].
- Preparation by demethylation of 4-hydroxy-3-methoxypropiofenone with refluxing pyridinium chloride for 10 min (80%) [6820].
- Also obtained when propiovanillone was heated with an alkali sulfide under conditions used in the kraft cooking process [6821].
- Also refer to: [6685,6713,6822–6835].

Isolation from natural sources

- From sprucewood pulp cooking with sodium bisulfite [6836].
- From high-moorland peat extracts [6837].
- From components of the peat fulvic acid fraction [6838].

b.p.₁₅ 210–220° [6620];

m.p. 148° [6819], 146° [6580,6581,6620,6736,6738,6784],
146–148° [6818], 145° [6733], 142° [6820];

ESR spectrum [6839], IR [6733], UV [6733];

chromatography [6840–6842]; paper chromatography [6843]; chromatography on ion-exchange paper [6844]; TLC [6733];

dielectric constant and dipole moment in p-dioxane [6845].

Note: skin depigmentation [6778].

USE: Antioxidizing agent [6846,6847].

BIOLOGICAL ACTIVITY: β-Adrenergic receptor mutant [6848]; antiinflammatory [6713]; as trypanocide, mitochondria respiration response [6849]; trypanosoma brucei brucei inhibition [6780]; pharmacological [6828]; antimelanoma [6778].

Diethyl ether [720-66-1] $C_{13}H_{18}O_3$ mol.wt. 222.28.

- Obtained by reaction of propionyl chloride with catechol diethyl ether in the presence of aluminium chloride in refluxing benzene for 40 min (49%) [6850].
- Also refer to: [6851–6854].

b.p._{0.5} 119–121° [6850], b.p.₃₀ 181° [6851];

m.p. 39–40° [6854], 38–39° [6851], 36–39° [6850].

BIOLOGICAL ACTIVITY: Antiinflammatory [6713].

1-(3,5-Dihydroxyphenyl)-1-propanone

[100523-86-2]

 $C_9H_{10}O_3$ mol.wt. 166.18

Syntheses

- Obtained by hydrolysis of its diacetate (SM) with boiling 10% sulfuric acid. SM was prepared by condensation of 3,5-diacetoxybenzoyl chloride (m.p. 88°) with diethyl cadmium in benzene (50%) [6855].
- Also refer to: [6856].

m.p. 175° [6855].

BIOLOGICAL ACTIVITY: Anthelmintic [6857].

1-(2,3,4-Trihydroxyphenyl)-1-propanone

[22760-98-1]

 $C_9H_{10}O_4$ mol.wt. 182.18

Syntheses

- Preparation by acylation of pyrogallol with propionic acid,

- in the presence of boron trifluoride [6454] in ethyl ether for 1 h at 0° (80%) [6858,6859];
- in the presence of Amberlite IR-120 (cation exchange resin sulfonic acid type) at 160° for 2–3 h (78%) [6740].

N.B.: Zeokarb 225 was found to be as effective.

- in the presence of zinc chloride [6860,6861], at 130–140° for 90 min (Nencki reaction) (35%) [6862];
- in the presence of 70% perchloric acid at reflux for 1 h (33%) [6739].
- Preparation by reaction of propionyl chloride with pyrogallol and heating 4 h on a water bath (75%) [6454].
- Preparation by acylation of pyrogallol with propionic anhydride,
 - in the presence of Amberlite IR-120 (cation exchange resin sulfonic acid type) at 160° for 2–3 h (79%) [6740].

N.B.: Zeokarb 225 was found to be as effective.

- in the presence of concentrated sulfuric acid (small drops) at 130° for some min (65%) [6744];
- in the presence of zinc chloride, but using a mixture of propionic acid/propionic anhydride (85/100) at 135–140° for 40 min, then at r.t. overnight (59%) [6863].
- Also refer to: [6757,6758,6864,6865].

m.p. 129° [6454], 128–130° [6740], 128–129° [6862], 128° [6858,6859], 127° [6739,6860,6861], 126–127° [6744], 125–127° [6863];

 1H NMR [6863], IR [6863], ESR spectrum [6839], UV [6858].

Note: In determination of molybdenum (molybdenum complex) [6866] for determination of tungsten by spectrophotometry [6867].

USE: Matrix metalloprotease inhibitors and their application in cosmetic and pharmaceutical compositions [6868].

1-(2,3,5-Trihydroxyphenyl)-1-propanone

[870701-66-9] $C_9H_{10}O_4$ mol.wt. 182.18

USE: Matrix metalloprotease inhibitors and their application in cosmetic and pharmaceutical compositions [6868].

1-(2,3,6-Trihydroxyphenyl)-1-propanone

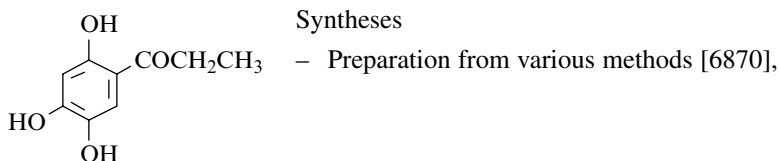

[870701-67-0] $C_9H_{10}O_4$ mol.wt. 182.18

USE: Matrix metalloprotease inhibitors and their application in cosmetic and pharmaceutical compositions [6868].

1-(2,4,5-Trihydroxyphenyl)-1-propanone

[79744-62-0] $C_9H_{10}O_4$ mol.wt. 182.18

- by Friedel–Crafts acylation of hydroxyhydroquinone with propionyl chloride in the presence of aluminium chloride;
 - by Fries rearrangement of hydroxyhydroquinone dipropionate with aluminium chloride;
 - by reaction of propionitrile with hydroxyhydroquinone (Hoesch reaction).
- Also refer to: [6871].

1H NMR [6870], ^{13}C NMR [6870].

USE: Matrix metalloprotease inhibitors and their application in cosmetic and pharmaceutical compositions [6868].

Triethyl ether [63213-30-9] $C_{15}H_{22}O_4$ mol.wt. 266.34.

– Preparation by condensation of 1,2,4-triethoxybenzene with propionic acid in the presence of PPA at 50–55° for 40 min (60–80%) [6872].

m.p. 66–67° [6872].

1-(2,4,6-Trihydroxyphenyl)-1-propanone (*Phloropropiophenone*) (*Flopropione*)

[2295-58-1] $C_9H_{10}O_4$ mol.wt. 182.18

Syntheses

– Preparation by reaction of propionitrile with phloroglucinol (Hoesch reaction) [6744,6873–6876], (85%) [6565], (73%) [6877], (64%) [6878].

N.B.: Shinoda [6875,6876] has previously described this experiment and gives the m.p. as 113° for the hydrated and 207° for the anhydrous product. These melting points correspond with those of hydrated and anhydrous phloroglucinol, and it would appear that Shinoda did not obtain phloropropiophenone [6744].

- Preparation by reaction of propionic anhydride with phloroglucinol,
 - in the presence of concentrated sulfuric acid (one drop) at 130° for 5 min (65%) [6744];
 - in the presence of Amberlite IR-120 (cation exchange resin sulfonic acid type) at 160° for 2–3 h (42%) [6740]. **N.B.:** Zeokarb 225 was found to be as effective.
 - in the presence of boron trifluoride etherate at 10° (62–65%) [6879].
- Preparation by reaction of propionyl chloride with phloroglucinol,
 - in the presence of aluminium chloride in nitrobenzene/carbon disulfide solution (76%) [6880], in nitrobenzene at 60° (55%) [6881] or without solvent at 50° (70%) [6882];
 - in the presence of boron trifluoride etherate at 10° (compound **3**) (62–65%) [6879].
- Also refer to: [6743,6758,6765,6857,6883–6891].

Isolation from natural sources

- From *Inula viscosa* (L.) Ait (Tribus Inulea, Compositae) [6892].

m.p. (monohydrate) 114–115° [6565], 113° [6875,6876];

 174–175° [6873,6885,6886], 174° [6880],
 170–171° [6744];

¹H NMR [6881,6893], ¹³C NMR [6881], UV-visible spectrum [6894]; GLC [6895]; TLC [6629,6890,6895]; HPLC [6896]; paper chromatography [6895].

Note: Toxicity [6897].

USE: Fungicide [6880]; matrix metalloprotease inhibitors and their application in cosmetic and pharmaceutical compositions [6868].

BIOLOGICAL ACTIVITY: Antispasmodic [6640,6898,6899]; choleric [6715,6900]; antischistosomal [6879]; antimicrobial [6901], for staphylococcus aureus [6891]; identification of candidate drugs for treatment of amyotrophic lateral sclerosis [6902]; ligand-based virtual screening and design of antimalarial compounds [6903]; pharmacological action [6904].

Compound with 4,4'-(1E)-1,2-ethenediylbis[pyridine] (1:1) [820990-87-2] [6905].

1-(3,4,5-Trihydroxyphenyl)-1-propanone

[267410-40-2] $C_9H_{10}O_4$ mol.wt. 182.18

Syntheses

– Refer to: [6868,6869].

USE: Matrix metalloprotease inhibitors and their application in cosmetic and pharmaceutical compositions [6868].

1-(Pentahydroxyphenyl)-1-propanone

[881672-76-0] $C_9H_{10}O_6$ mol.wt. 214.27

Synthesis

– Refer to: [6868].

USE: Matrix metalloprotease inhibitors and their application in cosmetic and pharmaceutical compositions [6868].

1-(2-Amino-5-hydroxyphenyl)-1-propanone

[35364-15-9] $C_9H_{11}NO_2$ mol.wt. 165.19

Syntheses

– Obtained by UV-irradiation of 3-ethyl-2,1-benzisoxazole in 66% sulfuric acid for 90 min at 80–90° [6906], (88–95%) [6658].

– Also prepared from 2-nitro-5-hydroxybenzaldehyde (five steps) or from p-anisidine (one step) [6907,6908].

– Also refer to: [6553,6908–6912].

m.p. 145° [6658].

1-(3-Amino-4-hydroxyphenyl)-1-propanone[130521-20-9] $C_9H_{11}NO_2$ mol.wt. 165.19

Syntheses

- Preparation by hydrolysis of 3-acetamido-4-hydroxy-propiofenone [6913] with refluxing 10 N hydrochloric acid for 30 min (74%) [6744,6913].
- Also obtained by treatment of 4-hydroxy-3-nitro-propiofenone suspended in hydrochloric acid with granulated tin [6473] or in the presence of Pd/C [6914].
- Preparation by reduction of the nitro group of 4-hydroxy-3-nitropropiofenone in boiling alkaline solution with sodium hydrosulfite [6915].
- Also refer to: [6916,6917].

m.p. 145–146° [6913], 144–145° (d) [6915];

 1H NMR [6913], IR [6913].

BIOLOGICAL ACTIVITY: Bactericide [6915].

Hydrochloride $C_9H_{11}NO_2$, HCl mol.wt. 201.65 (m.p. 217°) [6473].**1-(4-Amino-2-hydroxyphenyl)-1-propanone**[83294-23-9] $C_9H_{11}NO_2$ mol.wt. 165.19

Syntheses

- Obtained by hydrolysis of 3-hydroxy-4-(1-oxopropyl)-acetanilide with boiling 50% hydrochloric acid [6918,6919].
- Also refer to: [6429].

Note: Acidity of methylene proton [6446].

m.p. 137° [6918].

1-(4-Amino-3-hydroxyphenyl)-1-propanone[54903-52-5] $C_9H_{11}NO_2$ mol.wt. 165.19

Syntheses

- Preparation by alkaline hydrolysis of 6-propionyl-2-(3*H*)-benzoxazolinone with boiling 10% aqueous sodium hydroxide solution for 4 h (90–100%) [6913,6920].
- Also refer to: [6921–6924].

m.p. 139° [6913], 138–139° [6920]; 1H NMR [6913], IR [6913].

BIOLOGICAL ACTIVITY: Analgesic [6923].

1-(5-Amino-2-hydroxyphenyl)-1-propanone[79925-35-2] $C_9H_{11}NO_2$ mol.wt. 165.19

Syntheses

- Obtained from 4-hydroxy-3-(1-oxopropyl)acetanilide by hydrolysis with boiling 50% hydrochloric acid [6429].
- Also refer to: [6925].

Notes: C-Deuteration [6447]; acidity of methylene proton [6446]; antidote against cyanide [6925].

m.p. 81° [6429].

Hydrochloride [142301-96-0] $C_9H_{11}NO_2, HCl$ mol.wt. 201.65.

- Refer to: [6925].

Note: Antidote against cyanide [6925].

1-(5-Amino-2,4-dihydroxyphenyl)-1-propanone $C_9H_{11}NO_3$ mol.wt. 181.19

Syntheses

- Preparation by hydrogenation of 2,4-dihydroxy-5-nitro-propiofenone in acetone in the presence of Raney nickel [6555].
- Preparation from its hydrochloride, by addition of N sodium carbonate solution [6555].

m.p. 147–151° (d) [6555].

Hydrochloride $C_9H_{11}NO_3, HCl$ mol.wt. 217.65.

- Preparation from the corresponding nitro compound by catalytic reduction in acetone solution using Raney nickel. Then, after filtration of the catalyst and half elimination of solvent by vacuum distillation, the hydrochloride was prepared by passing dry hydrogen chloride into the remaining solution [6555].

m.p. >300° [6555].

1-(2-Hydroxy-4-methylphenyl)-1-propanone-2,2,3,3,3-*d*₅ $C_{10}H_7D_5O_2$ mol.wt. 169.23

Synthesis

- Refer to: [6350].

ion (1⁻), radical ion (1⁻) [72051-77-5], ESR spectrum [6350].

4-Hydroxy-3-nitro-5-(1-oxopropyl)benzonitrile[70978-55-1] $C_{10}H_8N_2O_4$ mol.wt. 220.18

Synthesis

– Preparation by nitration of 4-hydroxy-3-(1-oxopropyl)-benzonitrile at -20° (40%) [6926].

m.p. 90° [6926].**5-Bromo-2,4-dihydroxy-3-(1-oxopropyl)benzoic acid**[101012-66-2] $C_{10}H_9BrO_5$ mol.wt. 289.08

Syntheses

- Obtained by Fries rearrangement of methyl 5-bromo-2,4-di-propionybenzoate (m.p. 122°) with aluminium chloride (3.3 mol) at $125-130^\circ$ for 1 h (25%) or at $160-170^\circ$ [6450]. The above reaction, when carried out using nitrobenzene at r.t. for 24 h or at 100° for 1 h gave the same keto acid.
- Also obtained by acylation of methyl 5-bromo- β -resorcyate with propionic anhydride under the conditions of the Friedel–Crafts reaction [6450].
- Also obtained by treatment of methyl 5-bromo-2,4-dihydroxy-3-propionylbenzoate with 10% sodium hydroxide solution at r.t. for 24 h [6450].
- Also obtained by Fries rearrangement of 2-hydroxy-4-propiony-5-bromobenzoic acid (m.p. 166°) with aluminium chloride (3.3 mol) at $165-170^\circ$ for 1 h (33%) [6450].
- Also obtained by Friedel–Crafts propionylation of 5-bromo- β -resorcylic acid [6450].

m.p. $219-220^\circ$ [6450].**1-(2,3,5-Tribromo-4-methoxyphenyl)-1-propanone**[23689-25-0] $C_{10}H_9Br_3O_2$ mol.wt. 400.89

Synthesis

– Preparation by reaction of dimethyl sulfate with 2,3,5-tribromo-4-hydroxypropiophenone [6360].

m.p. 90° [6360]; IR [6360], UV [6360].

1-(2,4,6-Tribromo-3-methoxyphenyl)-1-propanone

[23689-32-9]

 $C_{10}H_9Br_3O_2$ mol.wt. 400.89

Synthesis

– Preparation by reaction of dimethyl sulfate with 2,4,6-tribromo-3-hydroxypropiophenone [6360].

b.p.₁₅ 192° [6360]; m.p. 36–37° [6360];
IR [6360], UV [6360].

1-(3,4,5-Tribromo-2-methoxyphenyl)-1-propanone

[23600-68-2]

 $C_{10}H_9Br_3O_2$ mol.wt. 400.89

Synthesis

– Preparation by reaction of dimethyl sulfate with 3,4,5-tribromo-2-hydroxypropiophenone [6360].

m.p. 64° [6360]; IR [6360], UV [6360].

5-Chloro-2,4-dihydroxy-3-(1-oxopropyl)benzoic acid

[102541-32-2]

 $C_{10}H_9ClO_5$ mol.wt. 244.63

Syntheses

- Obtained by Fries rearrangement of methyl 5-chloro-2,4-dipropionybenzoate (m.p. 114°) with aluminium chloride at 125–130° for 1 h (21%) [6450].
- Also obtained by alkaline hydrolysis of methyl 5-chloro-2,4-dihydroxy-3-propionylbenzoate [6450].
- Also obtained by Friedel–Crafts acylation of 5-chloro-2,4-dihydroxybenzoic acid with propionic anhydride in the presence of aluminium chloride [6450].
- Also obtained by Fries rearrangement of 5-chloro-2-hydroxy-4-propionybenzoic acid (m.p. 155°) with aluminium chloride at 165° for 1 h (32%) [6450].

m.p. 206–207° [6450].

2-Hydroxy-3-(1-oxopropyl)benzotrile

[99184-81-3]

 $C_{10}H_9NO_2$ mol.wt. 175.19

Synthesis

- Preparation by treatment of 2-methoxy-3-propionyl-benzotrile with aluminium chloride in refluxing benzene for 2 h (72%) [6533].

m.p. 82–85° [6533]; UV [6533].

3-Hydroxy-4-(1-oxopropyl)benzonitrile $C_{10}H_9NO_2$ mol.wt. 175.19

Synthesis

– Obtained by demethylation of its methyl ether with aluminium chloride in refluxing benzene for 1 h [6927].

m.p. 170–171° [6927].

1-(3-Bromo-5-chloro-2-hydroxy-4-methylphenyl)-1-propanone

[22362-76-1]

 $C_{10}H_{10}BrClO_2$ mol.wt. 277.54

Synthesis

– Preparation by bromination of 5-chloro-2-hydroxy-4-methylpropiophenone [6351] according to the method [6352].

m.p. 100° [6351];

 1H NMR (Sadtlar: standard n° 8734M), IR (Sadtlar: standard n° 38082),

UV [6359].

1-(3-Bromo-5-chloro-4-methoxyphenyl)-1-propanone $C_{10}H_{10}BrClO_2$ mol.wt. 277.54

Synthesis

– Obtained by reaction of bromine with 3-chloro-4-methoxypropiophenone in dilute acetic acid [6362].

m.p. 57° [6362].

1-(5-Bromo-4-methoxy-2-nitrosophenyl)-1-propanone

[81484-62-0]

 $C_{10}H_{10}BrNO_3$ mol.wt. 272.10

Synthesis

– Refer to: [6928].

1-(3,5-Dibromo-2-hydroxy-4-methylphenyl)-1-propanone[2892-33-3] $C_{10}H_{10}Br_2O_2$ mol.wt. 322.00

Syntheses

– Preparation by bromination of 2-hydroxy-4-methyl-propiofenone with bromine, according to the procedure [6354], (good yield) [6355,6356].

m.p. 105° [6355,6356];

 1H NMR (Sadtler: standard n° 8733M), IR (Sadtler: standard n° 38079) [6355,6356],

UV [6356,6359]; TLC [6353,6358].

1-(3,5-Dibromo-4-hydroxy-2-methylphenyl)-1-propanone[3023-09-4] $C_{10}H_{10}Br_2O_2$ mol.wt. 322.00

Syntheses

– Preparation by bromination of 4-hydroxy-2-methyl-propiofenone with bromine, according to the procedure [6354], (good yield) [6355,6356].

m.p. 97–98° [6355,6356];

 1H NMR (Sadtler: standard n° 8732M), IR (Sadtler: standard n° 38078) [6355,6356],

UV [6353,6356–6358].

1-(3,5-Dibromo-2-methoxyphenyl)-1-propanone[24876-08-2] $C_{10}H_{10}Br_2O_2$ mol.wt. 322.00

Syntheses

– Preparation from 3,5-dibromo-2-hydroxypropiofenone,

- by reaction with dimethyl sulfate in the presence of potassium carbonate in acetone [6370] or in the presence of sodium hydroxide in methanol [6360];
- by reaction with methyl iodide in the presence of potassium hydroxide in ethanol [6363].

b.p.₁₇ 170° [6360];

m.p. 66° [6363], 54° [6360,6370]; IR [6360], UV [6360].

2,4-Dinitrophenylhydrazone [23600-74-0] $C_{16}H_{14}Br_2N_4O_5$ mol.wt. 502.12

(m.p. 131–132°) [6360].

1-(3,5-Dibromo-4-methoxyphenyl)-1-propanone[24876-03-7] $C_{10}H_{10}Br_2O_2$ mol.wt. 322.00

Syntheses

- Preparation by reaction of dimethyl sulfate with 3,5-dibromo-4-hydroxypropioiophenone [6360,6378].
- Also refer to: [6379].

b.p.₁₇ 193° [6360];

m.p. 63–65° [6360], 62–63° [6378]; IR [6360], UV [6360].

2,4-Dinitrophenylhydrazone [23600-56-8] $C_{16}H_{14}Br_2N_4O_5$ mol.wt. 502.12

(m.p. 63–65°) [6360].

1-(3,4-Dichloro-5-methoxyphenyl)-1-propanone[113730-37-3] $C_{10}H_{10}Cl_2O_2$ mol.wt. 233.09

Synthesis

- Obtained by adding a solution of 45% nitrosylsulfuric acid in sulfuric acid to a solution of 2-amino-3,4-dichloro-5-methoxypropioiophenone in THF between –25° and –16° over 7 min, then to keep at 0° for 1.5 h. Next, 45–50% aqueous hypophosphorous acid was added at <10° and to keep like this for 2.5 h (93%) [6386].

m.p. 85° [6386]; ¹H NMR [6386].**1-(3,5-Dichloro-2-methoxyphenyl)-1-propanone** $C_{10}H_{10}Cl_2O_2$ mol.wt. 233.09

Synthesis

- Obtained by reaction of dimethyl sulfate with 3,5-dichloro-2-hydroxypropioiophenone in the presence of aqueous sodium hydroxide in refluxing acetone (80%) [6390].

m.p. 37–38° [6390].

1-(3,5-Dichloro-4-methoxyphenyl)-1-propanone[213470-65-6] $C_{10}H_{10}Cl_2O_2$ mol.wt. 233.09

Syntheses

- Obtained by reaction of propionyl chloride with 2,6-dichloroanisole in the presence of aluminium chloride in carbon disulfide for 2 h at 0° [6379,6407].

– Also obtained by oxidation of 1-(3,5-dichloro-4-methoxy-phenyl)-1-propanol with PDC in methylene chloride at 25° overnight (97%) [6929,6930].

m.p. 90° [6379], 65–66° [6929,6930]. One of the reported melting points is obviously wrong.

¹H NMR [6930], ¹³C NMR [6930], MS [6930].

1-(3,5-Dichloro-2-hydroxy-4-methoxyphenyl)-1-propanone

[66021-80-5]

C₁₀H₁₀Cl₂O₃ mol.wt. 249.09

Synthesis

– Preparation by chlorination of 2-hydroxy-4-methoxy-propiofenone [6410].

1-(3,5-Difluoro-4-methoxyphenyl)-1-propanone

[71292-82-5]

C₁₀H₁₀F₂O₂ mol.wt. 200.19

Synthesis

– Refer to: [6415].

1-(3,5-Diiodo-4-methoxyphenyl)-1-propanone

[31827-85-7]

C₁₀H₁₀I₂O₂ mol.wt. 416.00

Syntheses

– Preparation by methylation of 4-hydroxy-3,5-diiodo-propiofenone with,

- methyl iodide in the presence of potassium hydroxide in ethanol [6362] or methanol [6931];
- dimethyl sulfate in the presence of sodium hydroxide in dilute methanol [6420].

m.p. 106° [6931], 104° [6362], 83–84° [6420]. One of the reported melting points is obviously wrong.

3-Amino-4-hydroxy-5-(1-oxopropyl)benzonitrile

[70977-86-5]

C₁₀H₁₀N₂O₂ mol.wt. 190.20

Synthesis

– Preparation by hydrogenation of 4-hydroxy-3-nitro-5-(1-oxopropyl)benzonitrile using 5% Pd/C as catalyst in ethanol (70%) [6932].

m.p. 144–146° [6926].

2-Hydroxy-3-(1-oxopropyl)benzoic acid

3-Propionylsalicylic acid

[35888-92-7]

 $C_{10}H_{10}O_4$

mol.wt. 194.19

Syntheses

- Obtained by ozonolysis of 2-hydroxy-3-propenyl-propiophenone [6933].
- Also obtained by hydrolysis of 2-acetoxy-3-propionyl-benzoic acid (SM) with 10% sodium hydroxide (65%). SM was prepared by treatment of 2-acetoxy-3-propenylpropiophenone with potassium permanganate in acetic acid at 15° for 30 min (80%) [6934].
- Also obtained by heating 2-hydroxy-3-propionylbenzaldehyde with potassium hydroxide at 110° (85%) [6935].
- Also refer to: [6936].

2-Hydroxy-5-(1-oxopropyl)benzoic acid

5-Propionylsalicylic acid

[78417-99-9]

 $C_{10}H_{10}O_4$

mol.wt. 194.19

Syntheses

- Obtained by hydrolysis of methyl propionylsalicylate [6937], in boiling 20% aqueous potassium hydroxide [6938].
- Also obtained by alkaline hydrolysis of 5-propionyl-salicylamide (m.p. 216°) [6939].

m.p. 179° [6939], 177–179° [6938], 176–177° [6940].

4-Hydroxy-3-(1-oxopropyl)benzoic acid

[25065-13-8]

 $C_{10}H_{10}O_4$

mol.wt. 194.19

Syntheses

- Preparation by reaction of propionyl chloride with ethyl p-hydroxybenzoate in the presence of aluminium chloride in tetrachloroethane at 120° for 3–4 h (70–80%) [6941].
- Also obtained by Fries rearrangement of 4-propionyl-oxybenzoic acid (m.p. 185–188°) with aluminium chloride in nitrobenzene (47%) [6942], (25%) [6943].

m.p. 225–227° [6943], 220–221° [6942], 220° [6941].

1-[2-[(Difluoroboryl)oxy]-4-hydroxy-6-methylphenyl]-1-propanone

[154921-37-6]

 $C_{10}H_{11}BF_2O_3$ mol.wt. 228.00

Synthesis

– Obtained by reaction of propionic acid with 5-methyl-resorcinol in the presence of boron trifluoride etherate [6944].

1-(3-Bromo-2-hydroxy-5-methylphenyl)-1-propanone

[2892-30-0]

 $C_{10}H_{11}BrO_2$ mol.wt. 243.10

Syntheses

– Preparation by bromination of 2-hydroxy-5-methyl-propiofenone,

- with bromine, according to the procedure [6354], (good yield) [6355,6356];
- with N-bromosuccinimide in DMF, first at 0°, then at r.t. for 18 h (86%) [6945,6946].

– Also refer to: [6947] (compound I), [6948].

m.p. 133° [6355,6356], 130° [6945,6946];

1H NMR (Sadtlar: standard n° 8731M), IR (Sadtlar: standard n° 38076) [6355,6356],

1-(3-Bromo-2-methoxyphenyl)-1-propanone[23689-23-8] $C_{10}H_{11}BrO_2$ mol.wt. 243.10

Synthesis

– Preparation by reaction of dimethyl sulfate with 3-bromo-2-hydroxypropiofenone [6360].

b.p.₁₄ 143° [6360];m.p. 2–3° [6360]; n_D²⁰ = 1.551 [6360]; IR [6360], UV [6360].**1-(3-Bromo-4-methoxyphenyl)-1-propanone**[4374-36-1] $C_{10}H_{11}BrO_2$ mol.wt. 243.10

Syntheses

– Preparation by methylation of 3-bromo-4-hydroxy-propiofenone with dimethyl sulfate [6360].

– Also obtained by treatment of 4-methoxypropiofenone with bromine in acetic acid/potassium acetate [6375].

- Also obtained by reaction of sodium methoxide with 2-bromo-4-(2-bromo-1-methoxypropyl)-1-methoxy-benzene in boiling methanol for 2 h [6951].
 - Also obtained by reaction of zinc powder with 2-bromo-1-(3-bromo-4-methoxyphenyl)-1-propanone in boiling ethanol for 2–3 h [6952].
 - Also obtained by distillation of 4-(1-ethoxypropenyl)-2-bromo-1-methoxybenzene or by treatment of this with acid [6953].
 - Also refer to: [6362,6377,6430,6954,6955].
- m.p. 101° [6360,6375], 100–101° [6951], 100.5° [6953], 99–101° [6954,6956]; IR [6360], UV [6360].

1-(4-Bromo-2-methoxyphenyl)-1-propanone

[23600-63-7] $C_{10}H_{11}BrO_2$ mol.wt. 243.10

Synthesis

- Preparation by reaction of dimethyl sulfate with 4-bromo-2-hydroxypropiophenone [6360].

b.p.₁₁ [6360], b.p.₁₉ 171° [6360];
m.p. 42° [6360]; IR [6360], UV [6360].

1-(5-Bromo-2-methoxyphenyl)-1-propanone

[502924-41-6] $C_{10}H_{11}BrO_2$ mol.wt. 243.10

Syntheses

- Preparation by reaction of dimethyl sulfate with 5-bromo-2-hydroxypropiophenone in the presence of sodium hydroxide in methanol [6360].
- Obtained by ozonolysis of 4-bromo-2-(1-ethyl-1-propenyl)-anisole [6957].
- Also refer to: [6958].

b.p.₂₅ 145–147° [6957], b.p.₄₆ 192–200° [6360];
m.p. 74° [6957], 39° [6360]. One of the reported melting points is obviously wrong.
IR [6360], UV [6360].

1-(3-Bromo-4-hydroxy-5-methoxyphenyl)-1-propanone

[103653-15-2] $C_{10}H_{11}BrO_3$ mol.wt. 259.10

Synthesis

- Preparation by reaction of bromine with propiovanilone in dilute acetic acid (67%) [6959].

m.p. 141–142.5° [6959].

1-(2-Chloro-6-hydroxy-4-methylphenyl)-1-propanone[24490-26-4] $C_{10}H_{11}ClO_2$ mol.wt. 198.65Synthesis
– Refer to: [6960].

Fluorescence spectrum data [6960].

1-(3-Chloro-2-hydroxy-5-methylphenyl)-1-propanone $C_{10}H_{11}ClO_2$ mol.wt. 198.65Syntheses
– Obtained by alkaline hydrolysis of 8-chloro-3,6-dimethyl-2-ethylchromone (m.p. 74–75°) or 8-chloro-3,6-dimethyl-2-propylchromone (m.p. 68–71°) with sodium ethoxide in ethanol at r.t. overnight [6428].– Also obtained by Fries rearrangement of 2-chloro-4-methylphenyl propionate (b.p.₇₆₀ 248°) [6961] with aluminium chloride [6962], without solvent at 120° for 10 min (quantitative yield) [6961] or for 30 min [6428].

– Also refer to: [6963].

m.p. 115° [6961].

1-(2-Iodo-4-methoxyphenyl)-1-propanone $C_{10}H_{11}IO_2$ mol.wt. 290.10

Synthesis

- Obtained by reaction of propionic anhydride with 3-iodoanisole in the presence of aluminium chloride in carbon disulfide (58%) [6949].

b.p.₆ 158–162° [6949]; m.p. 61–63° [6949].**1-(3-Iodo-4-methoxyphenyl)-1-propanone** $C_{10}H_{11}IO_2$ mol.wt. 290.10

Syntheses

- Obtained by reaction of propionic anhydride with 2-iodoanisole in the presence of aluminium chloride in carbon disulfide [6518].
- Also refer to: [6672].

b.p.₂ 170° [6518]; m.p. 95° [6518].

1-(4-Hydroxy-3-iodo-5-methoxyphenyl)-1-propanone

[103653-13-0]

 $C_{10}H_{11}IO_3$ mol.wt. 306.10

Synthesis

– Preparation by adding an aqueous solution of iodine and potassium iodide to a solution of 4-hydroxy-3-methoxy-propionophenone in aqueous sodium hydroxide (90%) [6959].

m.p. 136.5° [6959].

2-Hydroxy-5-(1-oxopropyl)benzamide

5-Propionylsalicylamide

 $C_{10}H_{11}NO_3$ mol.wt. 193.20

Synthesis

– Preparation by Friedel–Crafts acylation of salicylamide (m.p. 140°) (compound **8407**) [6640] with propionyl chloride in the presence of aluminium chloride in nitrobenzene at 20° for 12 h (90%) [6939].

m.p. 216° [6939].

1-(2-Hydroxy-3-methyl-5-nitrophenyl)-1-propanone

[90922-89-7]

 $C_{10}H_{11}NO_4$ mol.wt. 209.20

Synthesis

– Preparation by reaction of nitric acid (d = 1.52) with 2-hydroxy-3-methylpropionophenone in concentrated sulfuric acid (d = 1.80) between –2° and 0° (82%) [6367].

m.p. 113° [6367].

1-(2-Hydroxy-5-methyl-3-nitrophenyl)-1-propanone

[70978-40-4]

 $C_{10}H_{11}NO_4$ mol.wt. 209.20

Syntheses

– Preparation by nitration of 2-hydroxy-5-methyl-propionophenone,

- with nitric acid in acetic acid [6991] at r.t. for 2.5 h (80%) [6992];
- with nitric acid (d = 1.52) in sulfuric acid (d = 1.8), between –2° and 0° for 20 min (75%) [6367].

– Also refer to: [6993].

m.p. 151° [6367], 136–137° [6992], 135–136° [6991]. One of the reported melting points is obviously wrong.

1-(4-Hydroxy-2-methyl-5-nitrophenyl)-1-propanone

[90922-90-0]

 $C_{10}H_{11}NO_4$ mol.wt. 209.20

Syntheses

- Preparation by reaction of concentrated nitric acid ($d = 1.42$) with 4-hydroxy-2-methylpropiophenone in acetic acid [6994].
- Preparation by reaction of nitric acid ($d = 1.52$) with 4-hydroxy-2-methylpropiophenone in concentrated sulfuric acid ($d = 1.80$) between -2° and 0° (65%) [6367].

m.p. 95° [6994], 92° [6367].**1-(4-Hydroxy-3-methyl-5-nitrophenyl)-1-propanone**

[141771-81-5]

 $C_{10}H_{11}NO_4$ mol.wt. 209.20

Synthesis

- Obtained by nitration of 4-hydroxy-3-methylpropiophenone (62%) [6995].

1-(2-Methoxy-3-nitrophenyl)-1-propanone

[103205-56-7]

 $C_{10}H_{11}NO_4$ mol.wt. 209.20

Synthesis

- Preparation by reaction of dimethyl sulfate with 2-hydroxy-3-nitropropiophenone in the presence of potassium carbonate in boiling acetone for 8–10 h (50%) [6533].

yellow oil [6533]; b.p.₁₀ 160 – 165° [6533]; d_{20} 1.2136 [6533]; $n_D^{21} = 1.5379$ [6533]; UV [6533].**1-(2-Methoxy-5-nitrophenyl)-1-propanone**

[682320-25-8]

 $C_{10}H_{11}NO_4$ mol.wt. 209.20

Synthesis

- Obtained by adding tetrabutylammonium nitrate to a solution of 2-methoxypropiophenone, trifluoroacetic anhydride and 18-crown-6 in methylene chloride under argon, then the solution mixed at r.t. for 3.5 h (91%) [6409].

white solid [6409];

 1H NMR [6409], ^{13}C NMR [6409], MS [6409]; TLC [6409].

1-(3-Methoxy-2-nitrophenyl)-1-propanone[103204-36-0] $C_{10}H_{11}NO_4$ mol.wt. 209.20

Synthesis

– Obtained by reaction of methyl iodide with ethyl 3-methoxy-2-nitrobenzoylmalonate in ethanolic sodium ethoxide solution [6996].

m.p. 96° [6996]; sublimation at 80°/0.001 mm [6996]; IR [6997], UV [6996].

1-(3-Methoxy-4-nitrophenyl)-1-propanone[246041-90-7] $C_{10}H_{11}NO_4$ mol.wt. 209.20

Synthesis

– Obtained by hydrolysis of 1-[1-(3-methoxy-4-nitrophenyl)-1-phenoxypropyl]-1*H*-benzotriazole in dioxane with dilute sulfuric acid [6998].

1-(4-Methoxy-2-nitrophenyl)-1-propanone[37888-90-7] $C_{10}H_{11}NO_4$ mol.wt. 209.20

Synthesis

– Refer to: [6999].

1-(4-Methoxy-3-nitrophenyl)-1-propanone[103204-39-3] $C_{10}H_{11}NO_4$ mol.wt. 209.20

Syntheses

- Preparation by reaction of concentrated nitric acid with *p*-methoxypropiophenone in sulfuric acid between 0° and 5° for 30 min (64%) [7000], (77%) [6937], (96%) [7001,7002].
- Also obtained by treatment of 2,2'-dimethoxy-5,5'-di-propionyl diphenyl sulfide (m.p. 175°) with concentrated sulfuric acid/concentrated nitric acid mixture at r.t. overnight [7003].
- Also refer to: [7004].
- m.p. 101° [7001], 100–101° [6937,7005], 99–101° [7002], 99–100° [7003], 86° [7000]. One of the reported melting points is obviously wrong.

1-(4-Hydroxy-3-methoxy-5-nitrophenyl)-1-propanoneC₁₀H₁₁NO₅ mol.wt. 225.20**Synthesis**

– Obtained (poor yield) by nitration of 1-(4-hydroxy-3-methoxyphenyl)-1-propanol with nitric acid (2 mol) in carbon tetrachloride at 5° [7006].

m.p. 160–161° [7006].

2,4,6-Trihydroxy-3-(1-oxopropyl)benzaldehyde 1-oxime[96573-44-3] C₁₀H₁₁NO₅ mol.wt. 225.20**Synthesis**

– Refer to: [7007] (compound **36**).

Oxime [104129-08-0] $C_{10}H_{13}ClN_2O_2$ mol.wt. 228.67 [6476,7008].

BIOLOGICAL ACTIVITY: Diuretic and antihypertensive [7008].

1-(2-Amino-4-fluoro-5-methoxyphenyl)-1-propanone[124623-37-6] $C_{10}H_{12}FNO_2$ mol.wt. 197.21

Syntheses

– Preparation by successively adding propionitrile and aluminium chloride to a solution of boron trichloride and 3-fluoro-4-methoxyaniline in benzene under nitrogen and refluxing the mixture obtained for 8 h (70%) [7009].

– Also refer to: [7010].

m.p. 96.5–97.5° [7009]; MS [7009].

1-[3-(Aminomethyl)-4-hydroxy-5-iodophenyl]-1-propanone[109314-56-9] $C_{10}H_{12}INO_2$ mol.wt. 305.11

Syntheses

– Refer to: [6476,7008].

Oxime [104129-07-9] $C_{10}H_{13}IN_2O_2$ mol.wt. 320.12 [6476,7008].*Note:* Isomerization [7011].

BIOLOGICAL ACTIVITY: Diuretic and antihypertensive [7008].

1-(2-Hydroxy-3-methylphenyl)-1-propanone[3338-15-6] $C_{10}H_{12}O_2$ mol.wt. 164.20

Syntheses

– Preparation by Fries rearrangement of o-cresyl propionate.

- with aluminium chloride [6389,6562], without solvent, at 50° for 3 h (16%) [6355], at 120° for 3 h (40%) [7012], (49%) [7013], at 130° (35%) [7014], at 160° for 2 h (60%) [7015] or at 165° for 1 h (41–45%) [6355,6466] or in nitromethane at 20° for a week (18%) [6569];
 - with zirconium chloride in o-dichlorobenzene over 1 h at 120° [6467].
- Also obtained by Fries rearrangement of o-cresyl propionate with titanium tetrachloride at 50° for 3 h (38%) [6355].
 - Also obtained by isomerization of 4'-hydroxy-3'-methylpropiophenone at 180–200° for 1 h in the presence of aluminium chloride (1.5 mol) (43%) [6468] or (2.5 mol) (59%) [6466].
 - Also obtained from 5-tert-butyl-2-hydroxy-3-methylpropiophenone by tert-butyl group elimination with aluminium chloride (2 equiv) at 190° for 15 min (77%) [6466].
 - Also obtained by acylation of o-cresol with propionic acid in the presence of zinc chloride at reflux for 30 min (25%) (Nencki reaction) [7016].
 - Also refer to: [7017,7018].
- b.p.₂₀ 115–117° [6355], b.p.₁₅ 127–129° [7012–7014,7016],
 b.p.₃ 140° [6389,6562], b.p.₇₆₀ 222–224° [7015];
 m.p. 22–23° [7012,7013]; d_{20} 1.088 [6355];
 $n_D^{20} = 1.548$ [6355];
¹H NMR (Sadtlar: standard n° 8374M), IR (Sadtlar: standard n° 37029) [6355],
 UV [6359,6457].

Note: Isomerization [7011].

1-(2-Hydroxy-4-methylphenyl)-1-propanone

[2886-52-4]

C₁₀H₁₂O₂

mol.wt. 164.20

Syntheses

- Preparation by Fries rearrangement of m-cresyl propionate with aluminium chloride [7019],
 - in nitromethane at 20° for 7 days (81%) [6569];
 - in nitrobenzene at r.t. [6620,7020], (79%) [6571], (63–67%) [7021,7022];
 - first, in carbon disulfide, then at 60–70° for 1 h after solvent elimination and at r.t. for 24 h (76%) [7023];
 - without solvent at 100° (86%) [7019], (71%) [6355,6576], 120° (85%) [7014], 120–150° [7024], (45%) [7025], (93%) [7021], (39%) [7013] or 165° (89%) [6355].
- Preparation by Fries rearrangement of m-cresyl propionate using various catalysts,
 - with titanium tetrachloride without solvent at 100° for 7 h (96%) [6355,6576] or in nitromethane at 20° for 7 days (86%) [6569];
 - with boron trifluoride in propionic acid at 70° for 2 h (90%) [6583];
 - with stannic chloride without solvent at 100° for 7 h (56%) [6355];
 - with zinc chloride at 150–160° for 1 h (20%) [6620].

- Also obtained by Fries rearrangement of 2-tert-butyl-5-methylphenyl propionate using various catalysts. In this reaction, the tert-butyl group elimination precedes the Fries rearrangement.
 - without solvent, in the presence of aluminium chloride at 120° for 30 min (45%) [7025];
 - with solvents, in the presence of various catalysts, at r.t. for 2 weeks [7025] (in the table below),

Catalyst	Solvent	Yield (%)
AlCl ₃	Nitromethane	56
	Ethylene dichloride	17
TiCl ₄	Nitromethane	22
	Ethylene dichloride	39
	Ethylene tetrachloride	32
NbCl ₅	Nitromethane	26
	Ethylene dichloride	21
TaCl ₅	Nitromethane	26
	Ethylene dichloride	25

- Also obtained (by-product) by Fries rearrangement of 2-isopropyl-5-methylphenyl propionate with aluminium chloride (1.4 equiv) without solvent at 100° for 2 h (14%) [7026].
- Also obtained by acylation of m-cresol with propionic acid,
 - in the presence of boron trifluoride for 2 h at 70° (93%) [6583] or 80° (83%) [6572] and for 30 min at 125–130° (50%) [7027];
 - in the presence of zinc chloride (Nencki reaction) at reflux for 20 min (good yield) [6667], (11%) [6620];
 - in the presence of polyphosphoric acid (low yield) [7028].
- Also obtained from 2-allyl-5-methylphenol by treatment with perbenzoic acid in ethyl ether, first at 0°, then between 0° and 25° for 24 h (74%) [6589].
- Also obtained by treatment of 5-tert-butyl-4-hydroxy-2-methylpropiophenone with aluminium chloride at 200° for 15 min (40%) [7025]. There are first a tert-butyl group elimination, followed by an acyl group migration from *para* to *ortho* position.
- Also obtained by reduction of 2-chloro-2'-hydroxy-4'-methylpropiophenone with zinc powder in acetic acid [7019].
- Also obtained by degradation of 3,7-dimethylchromone with sodium ethoxide in boiling ethanol for 30 min [7019].
- Also obtained by heating various ketones (SM) with a large excess of aluminium chloride (5.2 equiv) in chlorobenzene at 100° for 2 h [7026] (to see table below):

SM	Yield (%)
2-Hydroxy-4-methyl-3-isopropylpropiophenone	100
2-Hydroxy-4-methyl-5-isopropylpropiophenone	85
2-Hydroxy-6-methyl-3-isopropylpropiophenone	37
2-Hydroxy-4-methyl-6-isopropylpropiophenone	22

- Also obtained by isomerization of 4-hydroxy-2-methylpropiophenone with aluminium chloride (3 mol) for 1 h at 180–200° (43%) [6482].
- Also refer to: [6364,6614,6639,7011,7029–7032].

1-(2-Hydroxy-5-methylphenyl)-1-propanone

[938-45-4]

C₁₀H₁₂O₂

mol.wt. 164.20

Syntheses

– Preparation by acylation of p-cresol with propionic acid using various catalysts,

- in the presence of boron trifluoride for 2 h at 80° (87%) [6572] or 70° (80%) [6583];
 - in the presence of zinc chloride (Nencki reaction) for 1 h at reflux (55%) [7016].
- Preparation by Fries rearrangement of 4-methylphenyl propionate [7033–7035], (80%) [7036] using various conditions,
- with aluminium chloride, without solvent, at 110° for 90 min [6409], at 120° (90%) [7014] for 40 min (93%) [6992], at 165° for 1 h (88%) [6355,6356], at 170° for 1–2 h (80–96%) [6492] or heating on a water bath for 1 h (80%) [7037];
 - with aluminium chloride (1 equiv), without solvent, at 100° for 1 h (50%) [7013] or in nitromethane at 20° for 7 days (58%) [6569].

- Preparation by dealkylation of phenolic ethers,
 - from 2-ethoxy-5-methylpropiophenone by treatment with aluminium chloride in refluxing carbon disulfide, then heating at 60–70° for 8 h after solvent elimination [6673,7038] according to the Gattermann procedure [6674];
 - from 2-methoxy-5-methylpropiophenone by refluxing with pyridinium chloride for 4 h (77%) [7023];
 - from direct acylation of 4-methylanisole with propionyl chloride in the presence of aluminium chloride in methylene chloride (82%) [6946], in petroleum ether heating for 30 h in a water bath (42%) [7039] or in refluxing carbon disulfide for 5 h, dealkylation of the obtained 2-methoxy-5-methylpropiophenone occurring in situ [7033,7037,7040].
- Preparation by Friedel–Crafts acylation of p-cresol,
 - with propionyl chloride in the presence of aluminium chloride in ethylene dichloride at 110–120° for 8 h (70%) [7041];
 - with propionic anhydride in the presence of aluminium chloride (2 mol) and a trace of magnesium perchlorate at 170° for 1 h (96%) [6491].
- Also obtained by adding aluminium chloride, followed by addition over 6 h of propionyl chloride to aluminium p-cresylate in benzene. After standing 15 h, the mixture was refluxed 2 h (82%) [7042].
- Preparation from 3-iodo-2'-hydroxy-5'-methylpropiophenone by treatment with zinc powder in 80% acetic acid and heating on a water bath [7043].
- Also obtained by treatment of 2-hydroxy-3-isopropyl-6-methylpropiophenone with aluminium chloride (1.4 equiv) without solvent at 100° for 2 h (25%) [7026].
- Also refer to: [6496,7011,7044] (compound **3**), [7045] (compound **3b**) and [6364,7046–7051].
- Also obtained by treatment of 3,6-dimethylchromone with sodium methoxide in boiling methanol for 30 min [7052].

1-(3-Hydroxy-4-methylphenyl)-1-propanone

[18158-56-0] $C_{10}H_{12}O_2$ mol.wt. 164.20

Syntheses

- Preparation by diazotization of 3-amino-4-methyl-propiofenone, followed by hydrolysis of the diazonium salt formed [6389, 6562, 7061, 7062], (79%) [7063], (67%) [7064].
- m.p. 123° [6389,6562], 121° [7064], $120-122^\circ$ [7062], $119-121^\circ$ [7063];
 1H NMR [7063], IR [7063].

Sodium salt [7062].

1-(4-Hydroxy-2-methylphenyl)-1-propanone

[2887-55-0] $C_{10}H_{12}O_2$ mol.wt. 164.20

Syntheses

- Obtained (poor yield) by Fries rearrangement of m-cresyl propionate (b.p.₁₀ 108–110°) [7019] with aluminium chloride,
 - in nitrobenzene at 2° for 24 h (10%) [7021] or at 0° for 5 days [7020];
 - without solvent at 50° for 3 h (21%) [6355,6576], at 100° for 90 min [6994], (11%) [7019] or for 7 h (12%) [6355,6356] or at 120° (6%) [7014].
 - Also obtained (poor yield) by Fries rearrangement of m-cresyl propionate with boron trifluoride in propionic acid at 70° for 2 h (8%) [6583].
 - Also obtained (poor yield) by Fries rearrangement of p-thymyl propionate with aluminium chloride at 100° for 2 h (11%) [7026].
 - Also obtained by reaction of propionyl chloride with m-cresol in the presence of aluminium chloride in nitrobenzene at 15° for 42 h (39%) [7065].
 - Also obtained (poor yields) by reaction of propionic acid with m-cresol,
 - in the presence of boron trifluoride at 80° for 2 h [6572] or at 70° for 2 h (6%) [6583];
 - in the presence of polyphosphoric acid [7028].
 - Preparation by heating 4-methoxy-2-methylpropiophenone with pyridinium chloride at reflux for 10–15 min [7066], (90%) [6667], (78%) [6672].
 - Also obtained by treatment of 2-methoxy-6-methylpropiophenone (b.p.₁₆ 137°; m.p. 8°) with aluminium chloride in refluxing carbon disulfide for 6 h (68%) [7058].
 - Preparation by treatment of 4-hydroxy-2-methyl-5-isopropylpropiophenone with aluminium chloride in chlorobenzene, first at r.t. for 24 h, then at 50° for 3 h (63%) [7067].
 - Also obtained by reaction of propionyl chloride with 3-methylanisole in the presence of aluminium chloride in refluxing methylene chloride for 3 h [6976].
 - Also refer to: [7022,7031].
- m.p. 127° [7014], 120° [6583,7067], 118° [7065], 117–119° [6355,6356], 117–118° [7021], 116° [6667,7066], 114–115° [7019], 114° [7058], 110–111° [7020]. There is a large dispersion of melting points pointed out in literature.
- ¹H NMR (Sadler: standard n° 8378M) [7020],
 IR (Sadler: standard n° 37034) [6355,6356,7020],
 UV [6356,6357,6457]; TLC [6353,6358].
- BIOLOGICAL ACTIVITY:** Nematocide [7030].

1-(4-Hydroxy-3-methylphenyl)-1-propanone[940-04-5] $C_{10}H_{12}O_2$ mol.wt. 164.20

Syntheses

– Preparation by Fries rearrangement of o-cresyl propionate with aluminium chloride,

- in nitrobenzene at r.t. [7068,7069], (75%) [7070];
 - in nitromethane at 20° for a week (58%) [6569];
 - first in gently refluxing carbon disulfide, then at 135–140° for 2 h after solvent elimination [6562], (43%) [6389];
 - without solvent at 50° for 3 h (55%) [6355], at 120° for 3 h [7012], (15%) [7013], at 130° (65%) [7014], or at 165° for 1 h (22%) [6355].
- Also obtained by demethylation of its methyl ether by treatment with aluminium chloride in light petroleum (b.p. 100–120°), first at 100° for 4 h, then at 78–80° overnight [7071].
- Also obtained by isopropyl group elimination from 4-hydroxy-5-methyl-2-isopropylpropiophenone with aluminium chloride in chlorobenzene at r.t. for 24 h, then at 50° for 3 h (55%) [7067].
- Also obtained by acylation of o-cresol with propionic acid in the presence of zinc chloride at reflux for 5 min (15%) [6667], (11%) [7016].
- Also refer to: [6519,6995,7072–7077].
- b.p.₁ 150–155° [7070], b.p.₁₆ 185–190° [7014], b.p.₁₂ 190–195° [6389,6562], b.p.₁₅ 205–210° [6667];
- m.p. 86.5° [6389,6562], 86° [6355,6667,7067,7070], 85° [7013], 84–85° [7071], 83.5° [7012], 83–84° [7016], 83° [7014]; 63° (monohydrate) [6355];
- ¹H NMR [6472], IR (Sadtlter: standard n° 37030) [7078], UV [6357,6457].
- USE: Fungicide [7075].

1-(2-Methoxyphenyl)-1-propanone[5561-92-2] $C_{10}H_{12}O_2$ mol.wt. 164.20

Syntheses

- Preparation by reaction of ethylmagnesium bromide with o-methoxybenzoxonitrile (90%) [7079,7080].
 - Also obtained (by-product) by Pd(II)-catalyzed aerobic dialkoxylation of 2-propenylanisole (22%) [7081].
- Also obtained by propionylation of anisole with propionyl chloride and propionic anhydride over solid-acid catalysts [7082].
- Also refer to: [6980,7083–7086].
- b.p.₁₂ 125° [7079], b.p.₁₆ 133° [7079].

1-(3-Methoxyphenyl)-1-propanone[37951-49-8] $C_{10}H_{12}O_2$ mol.wt. 164.20

Syntheses

– Preparation by reaction of ethylmagnesium bromide,

- with m-methoxybenzotrile (m.p. 60°), (91–94%) [7079,7080];
- with 3-methoxybenzaldehyde and oxidation of the resulting 1-(3-methoxyphenyl)-1-propanol with sodium dichromate in sulfuric acid (70%) [6979].

– Also refer to: [7083,7087,7088].

oil [6979]; b.p.₁₄ 129° [7079].**1-(4-Methoxyphenyl)-1-propanone**[121-97-1] $C_{10}H_{12}O_2$ mol.wt. 164.20

Syntheses

– Preparation by reaction of ethylmagnesium bromide with p-methoxybenzotrile (95%) [7079,7080].

– Preparation by acylation of anisole with propionic anhydride,

- in the presence of chloroacetic acid for 48 h at 170–180° (86–88%) [7089];
- in the presence of iodine for 3 h at reflux (50%) [6721].

– Preparation by acylation of anisole with propionic acid,

- on the solid surface of alumina in the presence of trifluoroacetic anhydride (95%) [7090];
- in the presence of HNTf₂ (20 mol %) in refluxing toluene for 24 h (64%) [7091];
- and propionic anhydride in the presence of scandium triflate [7092].

– Formation from diethylpropionyloxonium chloroantimonate (V) reaction with anisole (41%) [7073].

– Also obtained by oxidation of 1-(4-methoxyphenyl)propane with DDQ in wet dioxane/silica gel under sonication (61%) [7093].

– Also refer to: [6605,6980,7033,7094–7100].

Note: Deuteration: Obtention of 1-(4-methoxyphenyl)-1-propanone-2,2-d₂ [91889-35-9] [6361].

Isolation from natural sources

- From the essential oil of *Crithmum maritimum* L. (Umbelliferae) [7101].
- From *Pimpinella anisum* (Umbelliferae) [6704].
- From the essential oil of *Anethum graveolens* L. [7102].

- From volatile components and key odorants of Fennel (*Foeniculum vulgare* Mill.) and Thyme (*Thymus vulgaris* L.) [7103].
- From the essential oil of *Zanthoxylum rhetsa* (Roxb.) DC [7104].
- From volatile metabolites of marine fungus *Hypoxylon* sp. [7105].
- Also refer to: [6672,7083].

1-[2-Hydroxy-5-(methylthio)phenyl]-1-propanone

[75060-89-8] C₁₀H₁₂O₂S mol.wt. 196.27

Synthesis

1-[4-Hydroxy-3-(methylthio)phenyl]-1-propanone

[66265-14-3] C₁₀H₁₂O₂S mol.wt. 196.27

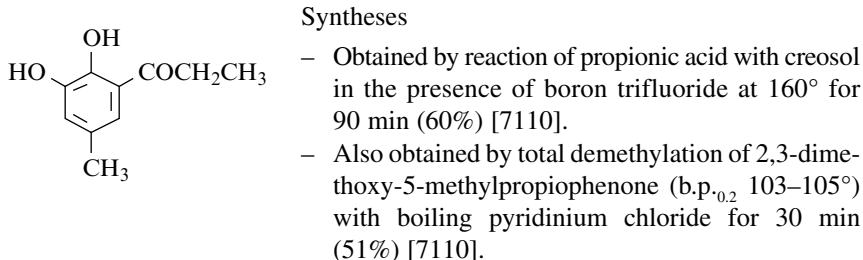

Syntheses

- Also obtained by reaction of propionic acid with 2-(methyl-thio)phenol in the presence of boron trifluoride [7108].
 - Also refer to: [7109].
- crystalline product [7107].

1-(2,3-Dihydroxy-5-methylphenyl)-1-propanone

[91061-55-1] C₁₀H₁₂O₃ mol.wt. 180.20

m.p. 84–85° [7110], 73° [6351]. One of the melting points is obviously wrong.
¹H NMR (Sadtlar: standard n° 49337M), IR (Sadtlar: standard n° 76410K), UV [7110].

1-(2,4-Dihydroxy-3-methylphenyl)-1-propanone[63876-46-0] $C_{10}H_{12}O_3$ mol.wt. 180.20

Syntheses

- Obtained by demethylation of 2-hydroxy-4-methoxy-3-methylpropiophenone,
 - with hydriodic acid ($d = 1.7$) in acetic anhydride at 130–140° for 2 h (65%) [6769];
 - with aluminium chloride at 135–140° for 3 h [6769].
 - Preparation by reaction of propionic anhydride with 1,3-dihydroxy-2-methylbenzene in the presence of boron trifluoride etherate at 75° for 6 h (84%) [7111].
 - Also obtained by reaction of propionitrile with 2-methylresorcinol (Hoesch reaction) [6768,6769].
 - Also refer to: [6453,7112–7114].
- m.p. 128–130° [6768,6769], 124–125° [7111];
 1H NMR [7111], IR [7111], UV [7111], MS [7111].

1-(2,4-Dihydroxy-5-methylphenyl)-1-propanone[117952-43-9] $C_{10}H_{12}O_3$ mol.wt. 180.20

Syntheses

- Preparation by reaction of propionitrile with 4-methyl-resorcinol (Hoesch reaction) (66%) [7115].
 - Also refer to: [7116,7117].
- m.p. 109–110° [7115].

1-(2,4-Dihydroxy-6-methylphenyl)-1-propanone (*Orcpropiophenone*)
(β -*Orcpropiophenone*)[5880-41-1] $C_{10}H_{12}O_3$ mol.wt. 180.20

Syntheses

- Obtained by reaction of propionitrile with orcinol [6744], (23%) [7118].
 - Also obtained (by-product) by acylation of orcinol with propionic anhydride in nitrobenzene in the presence of aluminium chloride, first in a water bath for 1 h, then at r.t. overnight (5%) [7119].
 - Also obtained by reaction of propionic acid with orcinol in the presence of boron trifluoride etherate, then heating the chelate formed with dilute ethanol [6944].
 - Also refer to: [7120] (compound **7**), [7121] (compound **XII**), [7122,7123] (compound **IX**).
- m.p. 127–128° [7118], 122° [6744].

1-(2,5-Dihydroxy-4-methylphenyl)-1-propanone

[75859-13-1]

 $C_{10}H_{12}O_3$ mol.wt. 180.20

Syntheses

- Preparation by reaction of propionic acid with 2-methylhydroquinone [6507], by known methods [6509,6510].
- Also obtained (by-product) by irradiation (490 nm) of 5-methyl-2-propanoyl-1,4-benzoquinone in acetonitrile in the presence of Rose bengal for 12 h (5–10%) [7124].

m.p. 110–116° [6507].

1-(2,6-Dihydroxy-4-methylphenyl)-1-propanone (*p*-Orcipropiophenone)
(*γ*-Orcipropiophenone)

[5792-37-0]

 $C_{10}H_{12}O_3$ mol.wt. 180.20

Syntheses

- Preparation by action of 85% sulfuric acid on di-propionylorcinol 4 h at r.t. (80%) [7125].
- Also obtained by reaction of propionic anhydride with orcinol,
 - in the presence of concentrated sulfuric acid (one drop) at 130° (60%) [6744].

N.B.: Crystallized in yellow needles with one molecule of water.

- in the presence of aluminium chloride in nitrobenzene, heating for 1 h on a water bath, then keeping the mixture at r.t. overnight (40%) [7119];
- in the presence of Amberlite IR-120 (cation exchange resin sulfonic acid type) at 160° for 2–3 h (19%) [6740]. **N.B.:** Zeokarb 225 was found to be as effective.
- Also obtained (by-product) by Fries rearrangement of orcinol dipropionate with aluminium chloride (3 mol) at 140–150° for 90 min (20%) [6745].
- Also obtained by acylation of pyrogallol with propionic acid in the presence of Amberlite IR-120 (cation exchange resin sulfonic acid type) at 160° for 2–3 h (14%) [6740].
- Also refer to: [6609,7126].

m.p. 135° [7125], 132–133° [7119], 130–132° [6740], 129° [6744].

1-(4,5-Dihydroxy-2-methylphenyl)-1-propanone $C_{10}H_{12}O_3$ mol.wt. 180.20

Synthesis

– Obtained by Fries rearrangement of 4-methylcatechol dipropionate with aluminium chloride [6351].

m.p. 95° [6351];

¹H NMR (Sadler: standard n° 49335M),

IR (Sadler: standard n° 76408K).

1-[4-Hydroxy-3-(hydroxymethyl)phenyl]-1-propanone[106909-29-9] $C_{10}H_{12}O_3$ mol.wt. 180.20

Synthesis

– Obtained by hydrolysis of 3-(chloromethyl)-4-hydroxy-propiofenone [6983].

1-(2-Hydroxy-3-methoxyphenyl)-1-propanone[78094-43-6] $C_{10}H_{12}O_3$ mol.wt. 180.20

Syntheses

- Obtained by Fries rearrangement of 2-methoxyphenyl propionate with zirconium chloride in o-dichlorobenzene 1 h at 120° (good yield) [6467] or with aluminium chloride in nitrobenzene at 20° for 24 h (28%) [7127].
- Also obtained by partial demethylation of 2,3-dimethoxypropiofenone with aluminium chloride for 3 h at 0° (75%) [7128].
 - Also obtained (by-product) by reaction of ethylmagnesium iodide with 2,3-dimethoxybenzocnitrile (16%) [7129].
 - Also obtained by reaction of ethylmagnesium bromide with 2-(benzyloxy)-3-methoxybenzocnitrile in ethyl ether at r.t. overnight (11%) [7130].
 - Also refer to: [7131].

m.p. 73–74° [7130], 72–73° [7128] 72° [7129].

1-(2-Hydroxy-4-methoxyphenyl)-1-propanone[6270-44-6] $C_{10}H_{12}O_3$ mol.wt. 180.20

Syntheses

- Preparation by reaction of propionyl chloride with resorcinol dimethyl ether in ethyl ether at 0° in the presence of aluminium chloride [7132,7133].

- Also obtained by reaction of propionic acid with resorcinol monomethyl ether in the presence of polyphosphoric acid for 10 min in a boiling water bath (31%) [6738].
 - Also obtained by reaction of methyl iodide with 2,4-dihydroxypropiophenone in methanol in the presence of potassium hydroxide [7134] or potassium carbonate [6747].
 - Also obtained by partial methylation of respropiophenone with methyl iodide [7135] or a methyl halogenide (unspecified) [6380] in the presence of potassium carbonate in refluxing acetone for 2.5 h (55%) [7135] or for 5 h (40%) [6380].
 - Also obtained by partial methylation of respropiophenone [7136], with dimethyl sulfate in the presence of potassium carbonate in boiling benzene for 10 h (72%) [6762].
 - Also obtained by treatment of 2-hydroxy-4-methoxy- α -(hydroxymethyl)propiophenone (pale yellow oil) with 4% aqueous sodium carbonate in refluxing ethanol for 1 h (31%) [6757].
 - Preparation by Birch reduction of methoxychromone [7137].
 - Also refer to: [6483,6617,6755,6757,6758,7138–7142].
- m.p. 60° [6738], 58° [7134,7135], 57–58° [6757], 56° [6762], 55–57° [6380];
¹H NMR (Sadtlar: standard n° 30286M) [6380], IR (Sadtlar: standard n° 57331) [6380]; TLC [6380].

Notes: Acidity of methylene proton [6446]; C-deuteration [6447].

1-(2-Hydroxy-5-methoxyphenyl)-1-propanone

[49710-99-8]

C₁₀H₁₂O₃ mol.wt. 180.20

Syntheses

- Preparation by Fries rearrangement of p-methoxyphenyl propionate,
 - with titanium tetrachloride without solvent at 120° for 1 h (74%) [7143];
 - with aluminium chloride in nitrobenzene at 80–100° for 2 h (41%) [6465].
 - Also obtained from 2-hydroxy-5-methoxy- α -chloropropiophenone by treatment with zinc in acetic acid [7144,7145].
 - Also obtained (by-product) by reaction of propionyl chloride with p-dimethoxybenzene in methylene chloride in the presence of aluminium chloride at r.t. [7146,7147].
 - Also refer to: [7148–7150].
- b.p._{0.9} 140–142° [6465], b.p.₁₉ 158–160° [7144];
 m.p. 85–88° [6465], 48.5° [7143], 47–49° [7144], 47–48° [7147]. One of the reported melting points is obviously wrong.
¹H NMR (Sadtlar: standard n° 30291M), IR (Sadtlar: standard n° 57336) [7143], UV [7143].

Notes: C-Deuteration [6447]; acidity of methylene proton [6446].

1-(2-Hydroxy-6-methoxyphenyl)-1-propanone[3839-97-2] $C_{10}H_{12}O_3$ mol.wt. 180.20

Syntheses

- Obtained by partial methylation of 2,6-dihydroxypropionophenone with dimethyl sulfate,
 - in the presence of potash in refluxing acetone (70–75%) [6801];
 - in the presence of 2 N sodium hydroxide at r.t. for 2 h (9%) [6800]. **N.B.:** In this reaction, the dimethyl ether was the main product ($C_{11}H_{14}O_3$, 37%, m.p. 45°).
 - Also obtained by partial methylation of 2,6-dihydroxypropionophenone with methyl iodide (51%) [7151].
 - Preparation by oxidative aromatization of 2-propionylcyclohexane-1,3-dione with iodine (2 equiv) in refluxing methanol for 13 h (79%) [7152].
 - Also refer to: [7153].
- vacuum sublimation [7151];
m.p. 55° [6800], 53–54° [6801], 52–53° [7151].

1-(3-Hydroxy-4-methoxyphenyl)-1-propanone[829-76-5] $C_{10}H_{12}O_3$ mol.wt. 180.20

Syntheses

- Preparation by hydrolysis of various esters,
 - of 4-methoxy-3-propionyloxypropionophenone with potassium hydroxide in refluxing methanol (92%) [7154];
 - of 3-chloroacetoxy-4-methoxypropionophenone (m.p. 77.5–78.5°) with sodium acetate in refluxing methanol for 3 h [7155].
 - Also obtained by direct acylation of guaiacol with propionic acid in the presence of phosphorous oxychloride on a steam bath for 3 h (25%) [6620,7156].
 - Also obtained (by-product) by Fries rearrangement of 2-methoxyphenyl propionate with various catalysts at 20° for 24 h: Aluminium chloride and titanium tetrachloride (10–13%), stannic chloride and antimony pentachloride (6–7%) [7154].
 - Compound derived from secondary products of isoeugenol synthesis [7157].
 - Also obtained by treatment of 2-methoxy-5-propionylphenyl methoxyphenylphosphonate with dilute hydrochloric acid in aqueous ethanol [6822].
- m.p. 93–94° [6620], 93° [7154], 90–91° [6822], 89–91° [7155];
 1H NMR (Sadtlar: standard n° 28212M), IR (Sadtlar: standard n° 55284) [6822,7154],
UV [7154].

Propionate $C_{13}H_{16}O_4$ mol.wt. 236.27 (m.p. 44°) [6351]; 1H NMR (Sadtlar: standard n° 30296M), IR (Sadtlar: standard n° 57341).

Benzoate $C_{17}H_{16}O_4$ mol.wt. 284.31 (m.p. 98°) [6351];

1H NMR (Sadtler: standard n $^\circ$ 28223M), IR (Sadtler: standard n $^\circ$ 55295).

1-(3-Hydroxy-5-methoxyphenyl)-1-propanone

[502924-49-4]

$C_{10}H_{12}O_3$ mol.wt. 180.20

Synthesis

– Refer to: [6958].

1-(4-Hydroxy-2-methoxyphenyl)-1-propanone

$C_{10}H_{12}O_3$ mol.wt. 180.20

Syntheses

– Obtained by reaction of propionic acid with resorcinol monomethyl ether in the presence of polyphosphoric acid for 10 min in a boiling water bath (28%) [6738].

– Also obtained by debenylation of 4'-(benzyloxy)-2'-methoxypropiophenone (m.p. $59-60^\circ$) with concentrated hydrochloric acid in acetic acid at 100° for 30 min [7135].

b.p._{0.001} 140° [7135];

m.p. 117° [6738], $114-116^\circ$ [7135];

1H NMR (Sadtler: standard n $^\circ$ 28220M), IR (Sadtler: standard n $^\circ$ 55292).

1-(4-Hydroxy-3-methoxyphenyl)-1-propanone (*Propiovanillone*) (*Propioguaiacone*) (*Guaiacylpropanone*) (*Ethyl guaiacyl ketone*)

[1835-14-9]

$C_{10}H_{12}O_3$ mol.wt. 180.20

Syntheses

– Preparation by Fries rearrangement of 2-methoxyphenyl propionate [7158], (b.p.₂₀ $140-143^\circ$) [7159],

• with aluminium chloride in nitrobenzene, first at $60-80^\circ$ for 1 h, then at r.t. overnight [7160], at 60° for 1 h [7161], (65%) [7159], (50%) [6620] or at 50° for 5 h (44%) [7127];

- with aluminium chloride (2 mol) in nitromethane at r.t. for 24 h (65%) [7154];
- with aluminium chloride in carbon disulfide [6832];
- with titanium tetrachloride (2 mol) in nitromethane at r.t. for 24 h (62%) [7154];
- with stannic chloride (2 mol) in nitromethane at r.t. for 24 h (69%) [7154];
- with antimony pentachloride (2 mol) in nitromethane at r.t. for 24 h (28%) with formation of important tars [7154].

– Also obtained by acylation of guaiacol with propionic acid,

- in the presence of boron trifluoride in xylene at $60-70^\circ$ (almost theoretical yield) [6820], boron trifluoride at 70° for 90 min (77%) [7162], (50%)

- [7163], boron trifluoride (60%) [7164] or boron trifluoride etherate for 170 h at r.t. in a sealed tube (30%) [7165];
- by heating in the presence of polyphosphoric acid (70%) [7166], for 15 min in a boiling water bath (61%) [6738].
- Also obtained by acylation of veratrole with propionyl chloride in the presence of aluminium chloride in carbon disulfide at r.t. for 10 h (50–60%) [7167].
 - Also obtained by oxidation of 1-(4-hydroxy-3-methoxyphenyl)propane with DDQ in wet dioxane/silica gel under sonication (53%) [7093].
 - Also obtained by reaction of propionyl chloride (SM) with guaiacol in carbon disulfide in the presence of aluminium chloride for 1 h at 70° (70%) [6671]. SM was formed in situ by action of oxalyl chloride with sodium propionate (method B).
 - Also obtained by oxidation of 1-(4-hydroxy-3-methoxyphenyl)-1-propanol (m.p. 69°) [7168],
 - with silver nitrate in aqueous sodium hydroxide, first at 60°, then at reflux for 2 h [6700], (90%) [7169] or at reflux for 5 h (51%) [7170];
 - with DDQ in dioxane for 18 h at r.t. [7171] or for 3 days [7172] or in benzene [7168].
 - Also obtained by hydrogenation of 1-(4-hydroxy-3-methoxyphenyl)-2-propen-1-one in ethyl acetate over Pd-BaSO₄, followed by chromatography on silica gel [7173].
 - Also obtained by reduction of β-hydroxypropioiguaiacone (VI) in the presence of sulfide ions [7174].
 - Also refer to: [6821,7175–7194].

Isolation from natural sources

- From Brazilian propolis, *Myrceugenia euosma* (O. Berg) Legrand (Myrtaceae) (compound **5**) [7195].
- From leaves and stems of *Rhinacanthus nasutus* (L.) Kurz (Acanthaceae) [7196].
- From bamboo stems, *Phyllostachys edulis* Makino (Gramineae) (compound **11**) [7197].
- From the aerial parts of sage (*Salvia lavandulifolia*) [7198].
- By enzymatic hydrolysis of bound aroma constituents from raspberry fruit pulp [7199].
- By enzymatic hydrolysis of bound aroma constituents from strawberry fruit (*Fragaria vesca* f. *semperflorens*) [7200].
- Obtained by oxidation of Pepper *dioxane* lignin [8068-03-9] with hydrogen peroxide in 1 N sodium hydroxide [7201].
- Of raw cane sugar flavour [7202].
- Also obtained by oxidation of lignin [9005-53-2] [7203].
- Identification in softwood lignin [7164].
- The sodium bisulfite digestion of sprucewood yields about 1.5% of propiovanil-lone. Similar yield of this compound was obtained from sodium borohydride-reduced sprucewood [7204].
- Determination, in wastewater from kraft pulping [7205].
- Formation during lignin degradation with “white liquor” [7174].

- Formation in spruce lignin degradation in wood digestion with sodium bisulfide [7206].
 - Also obtained by alkaline cooking of lignin model compounds (veratrylglycerol β -guaiacyl ether, α -(2-methoxyphenoxy)- β -hydroxypropioveratrone and ω -(2-methoxyphenoxy)acetoveratrone) with a solution containing sodium hydroxide and sodium sulfide or sodium bisulfide [7207].
 - Identification in lignin and sprucewood ethanolysis products [7208].
 - Identification on the aromatic composition of *Vitis vinifera* L. var. *treixadura* Wines [7209].
 - Identification in Spanish oak heartwood of *Quercus robur*, *Quercus petraea*, *Quercus pyrenaica* and *Quercus faginea* [7210].
 - Identification in *Quercus rubra* L. oak heartwood (Fagaceae) [7211].
- b.p._{0,15} 110–125° [7163], b.p.₁₁ 162–168° [6738], b.p.₅₋₇ 165–175° [7162],

Notes: Thermal decomposition [7233]; basicity [7234]; ion (1⁻) [116235-78-0] [7235]; of sunflower, honeybee olfaction in relation to, [7236].

BIOLOGICAL ACTIVITY: Choleric [7237].

Ethyl ether [833-67-0] C₁₂H₁₆O₃ mol.wt. 208.26.

- Preparation by reaction of diethyl sulfate with 4-hydroxy-3-methoxypropionophenone in the presence of potassium hydroxide in dilute methanol at 50° for 10 min (91%) [6850].
- Also obtained by treatment of α -(4-ethoxy-3-methoxybenzoyl)propionic acid ethyl ester (b.p.₃ 202–205°) with sodium hydroxide in boiling dilute ethanol for 1.5 h (81–94%) [7238] or in aqueous methanol [7239].
- Also obtained by reaction of sodium methoxide with 1-ethoxy-4-(1,2-dibromopropyl)-2-methoxybenzene in methanol [7100,7240].

- Also obtained by treatment of 1-ethoxy-4-(1-ethoxypropenyl)-2-methoxybenzene with diluted acid [7100,7240,7241].
 - Preparation from 4-hydroxy-3-methoxypropiofenone [7242].
 - Also refer to: [7239].
- b.p.₁₃ 155° [7100];
m.p. 62° [7100,7238,7239], 60–61° [6850], 56–57° [7241].

Propyl ether C₁₃H₁₈O₃ mol.wt. 222.28.

- Obtained by treatment of propyl isoeugenol dibromide (m.p. 53–54°) with sodium hydroxide in refluxing methanol for 4 h (quantitative yield) [7243].
- b.p. 284–287° [7243]; m.p. 63–64° [7243].

Benzyl ether C₁₇H₁₈O₃ mol.wt. 270.33 [7244,7245].

Sodium salt [7167].

β-D-Glucopyranoside (*Baihuaqianhuoside*)

[155969-61-2] C₁₆H₂₂O₈ mol.wt. 342.35 [6720,7246].

- Isolated from *Kokuto*, non-centrifuged Cane Sugar (*Saccharum officinarum*) [7247] and from *Glehnia littoralis* root and rhizoma (Umbelliferae) [7248].

Note: Effect on lignification in potato and spruce bark cultures [7249] and in tissue cultures in vitro [7250].

Tetra-O-acetyl-β-D-glucopyranoside

[432547-82-5] C₂₄H₃₀O₁₂ mol.wt.510.49 [6720].

Acetate C₁₂H₁₄O₄ mol.wt. 222.40 GC-MS [7251].

Propionate C₁₃H₁₆O₄ mol.wt. 236.27 (b.p.₂₆ 202°) [6351];

¹H NMR (Sadler: standard n° 30294M), IR (Sadler: standard n° 57339).

Benzoate C₁₇H₁₆O₄ mol.wt. 284.31 (m.p. 109°) [6351];

¹H NMR (Sadler: standard n° 28222M), IR (Sadler: standard n° 55294).

1-(4-Hydroxy-3-methoxyphenyl)-1-propanone-1-¹⁴C

[15212-07-4] C₁₀H₁₂O₃ mol.wt. 182.20

Syntheses

- Obtained by reaction of propionyl chloride-3-¹⁴C (EtCOCl-1-¹⁴C) (SM) with veratrole in the presence of aluminium chloride in refluxing carbon disulfide (40%) [7252], then at 70° for 1 h (60%) [7253]. SM was prepared by action of oxalyl chloride with sodium propionate-(carboxyl-¹⁴C) [7253].

b.p._{0.001} 110–120°; dark red oil which slowly crystallized [7253].

1-(5-Hydroxy-2-methoxyphenyl)-1-propanone[80427-31-2] $C_{10}H_{12}O_3$ mol.wt. 180.20

Synthesis

– Preparation by hydrolysis of the corresponding propionic ester (SM) with sodium hydroxide in refluxing methanol for 1 h (quantitative yield) [7143]. SM was obtained by acylation of 4-methoxyphenyl propionate with propionyl chloride in nitromethane in the presence of stannic chloride at 20° for 48 h (56%).

m.p. 68° [7143];

¹H NMR (Sadler: standard n° 30292M), IR (Sadler: standard n° 57337) [7143], UV [7143].

Propionate $C_{13}H_{16}O_4$ mol.wt. 236.27 [6351].

¹H NMR (Sadler: standard n° 35282M), IR (Sadler: standard n° 62650K).

1-(2,4-Dihydroxy-5-methoxyphenyl)-1-propanone[79744-64-2] $C_{10}H_{12}O_4$ mol.wt. 196.20

Syntheses

- Preparations using various methods [6870],
- by Friedel–Crafts acylation of 4-methoxyresorcinol with propionyl chloride in the presence of aluminium chloride;
 - by Fries rearrangement of 4-methoxyresorcinol propionate with aluminium chloride;
 - by reaction of propionitrile with 4-methoxyresorcinol (Hoesch reaction).

¹³C NMR [6870].**1-(2,5-Dihydroxy-4-methoxyphenyl)-1-propanone**[3839-58-5] $C_{10}H_{12}O_4$ mol.wt. 196.20

Synthesis

– Preparation by Fries rearrangement of 2-methoxyhydroquinone dipropionate (m.p. 59.5–60°) with aluminium chloride in nitrobenzene at r.t. for 64 h (82%) [7254].

m.p. 112–114° [7254].

Dibenzyl ether $C_{24}H_{24}O_4$ mol.wt. 376.45.

– Obtained by reaction of benzyl chloride with 2,5-dihydroxy-4-methoxypropio-phenone in the presence of potash in ethanol at 20° for 4 h (85%) [7254].

m.p. 119–120° [7254].

Diacetate $C_{14}H_{16}O_6$ mol.wt. 280.63.

– Obtained by reaction of acetic anhydride with 2,5-dihydroxy-4-methoxypropio-phenone in the presence of pyridine at 20° for 48 h (90%) [7254].

m.p. 104° [7254].

1-(2,6-Dihydroxy-4-methoxyphenyl)-1-propanone (*Desaspidinol P*)

[69480-04-2] $C_{10}H_{12}O_4$ mol.wt. 196.20

Syntheses

– Preparation according to: [7255,7256].

– Also refer to: [6895] (compound **15**) and [7257] (compound **17**).

m.p. 118–120° [7257];

MS [7257]; GLC [6895]; TLC [6895,7257]; paper chromatography [6895].

1-(3,4-Dihydroxy-5-methoxyphenyl)-1-propanone

[3934-94-9] $C_{10}H_{12}O_4$ mol.wt. 196.20

Synthesis

– Refer to: [7258].

Note: Redox potential [7258].

1-(3,5-Dihydroxy-4-methoxyphenyl)-1-propanone

[148204-59-5] $C_{10}H_{12}O_4$ mol.wt. 196.20

From natural sources

– In liquid wastes from eucalyptus wood and kraft lignin charring [7259].

GC [7259], GC-MS [7259].

1-(2,4,6-Trihydroxy-3-methylphenyl)-1-propanone

[57765-50-1] $C_{10}H_{12}O_4$ mol.wt. 196.20

Syntheses

– Obtained by Friedel–Crafts acylation of 2-methyl-phloroglucinol with propionyl chloride in the presence of aluminium chloride in nitrobenzene [7260].

– Also refer to: [6890] (compound **23**), [6895] (compound **8**) and [7261] (compound **5**).

Isolation from natural sources

- From *Dryopteris caucasia* (A. Br.; Fraser-Jenkins, Corley) [7261].
 - From *Dryopteris* of Japan (*Dryopteris bissetiana*, *Dryopteris lacera*) [7262].
- m.p. 205° [6890,7260];
TLC [6890,6895,7262]; GLC [6895]; paper chromatography [6895,7262].

1-(3-Amino-2-hydroxy-5-methylphenyl)-1-propanone

[70978-23-3]

$C_{10}H_{13}NO_2$ mol.wt. 179.22

Syntheses

- Preparation by reduction of 2-hydroxy-5-methyl-3-nitropropiophenone in ethanol using 5% Pd/C as catalyst at atmospheric pressure and 25° [6926,6993].

m.p. 40° [6993].

1-(3-Amino-4-hydroxy-5-methylphenyl)-1-propanone

[141771-82-6]

$C_{10}H_{13}NO_2$ mol.wt. 179.22

Synthesis

- Obtained by reduction of 4-hydroxy-3-methyl-5-nitropropiophenone with Raney nickel in ethanol (99%) [6995].

1-(5-Amino-4-hydroxy-2-methylphenyl)-1-propanone

$C_{10}H_{13}NO_2$ mol.wt. 179.22

Synthesis

- Preparation by reduction of the nitro group of 4-hydroxy-2-methyl-5-nitropropiophenone with sodium hydrosulfite in boiling alkaline solution [6994].

m.p. 135° [6994].

1-(3-Amino-2-methoxyphenyl)-1-propanone

[103030-81-5]

$C_{10}H_{13}NO_2$ mol.wt. 179.22

Synthesis

- Preparation from its hydrochloride [6533].

Hydrochloride $C_{10}H_{13}NO_2 \cdot HCl$ mol.wt. 215.68.

- Preparation by reduction of 2-methoxy-3-nitropropiophenone with iron powder in the presence of concentrated hydrochloric acid in refluxing ethanol for 1 h (63%) [6533].

m.p. 154–155° (d) [6533]; UV [6533].

1-(3-Amino-4-methoxyphenyl)-1-propanone[103028-92-8] $C_{10}H_{13}NO_2$ mol.wt. 179.22

Syntheses

– Obtained from the 4-methoxy-3-nitropropiophenone by hydrogenation in the presence of Pd in benzene/ethyl acetate [7263] or by selective reduction with tin in aqueous hydrochloric acid [7002,7263].

m.p. 107–109° [7002,7263].

1-[3-(Aminomethyl)-4-hydroxyphenyl]-1-propanone (Hydrochloride)[109314-49-0] $C_{10}H_{13}NO_2, HCl$ mol.wt. 203.58

Synthesis

– Refer to: [6476].

1-[3-Hydroxy-4-(methylamino)phenyl]-1-propanone[54903-58-1] $C_{10}H_{13}NO_2$ mol.wt. 179.22

Syntheses

– Preparation from 3-methyl-6-propionylbenzoxazolinone by alkaline hydrolysis with boiling 10% aqueous sodium hydroxide solution for 4 h (90–100%) [6920,7264].

m.p. 149–150° [6920], 145–149° [7264].

1-(4-Ethyl-2-hydroxyphenyl)-1-propanone-2,2,3,3,3-*d*₅ $C_{11}H_9D_5O_2$ mol.wt. 183.26

Synthesis

– Refer to: [6350].

ion (1⁻), radical ion (1⁻) [72051-81-1]; ESR spectrum [6350].**4,6-Dihydroxy-5-(1-oxopropyl)-1,3-benzenedicarboxylic acid**

4,6-Dihydroxy-5-propionylisophthalic acid

 $C_{11}H_{10}O_7$ mol.wt. 254.20

Synthesis

– Obtained by hydrolysis of its dimethyl ester with 4% potassium hydroxide in refluxing methanol [6809].

5-Bromo-2,4-dihydroxy-3-(1-oxopropyl)benzoic acid methyl ester

[99853-35-7]

 $C_{11}H_{11}BrO_5$ mol.wt. 303.11

Syntheses

- Obtained by Fries rearrangement of methyl 5-bromo-2,4-di-propionoxybenzoate (m.p. 122°) with aluminium chloride (3.3 mol) at 125–130° for 1 h (32%) [6450]. The above reaction, when carried out using nitrobenzene at r.t. for 24 h or at 100° for 1 h gave the same keto ester.
- Also obtained by acylation of methyl 5-bromo-β-resorcyate with propionic anhydride under the conditions of the Friedel–Crafts reaction [6450].
- m.p. 120° [6450].

5-Chloro-2,4-dihydroxy-3-(1-oxopropyl)benzoic acid methyl ester

[99854-30-5]

 $C_{11}H_{11}ClO_5$ mol.wt. 258.66

Syntheses

- Obtained by Fries rearrangement of methyl 5-chloro-2,4-dipropionoxybenzoate (m.p. 114°) with aluminium chloride at 125–130° for 1 h (37%) [6450].
- Also obtained by Friedel–Crafts acylation of methyl 5-chloro-2,4-dihydroxybenzoate with propionic anhydride in the presence of aluminium chloride [6450].
- Preparation by esterification of the corresponding keto acid [6450].
- m.p. 107° [6450].

1-(3,4-Dimethoxyphenyl)-1-propanone-3,3,3-*d*₃

[63386-37-8]

 $C_{11}H_{11}D_3O_3$ mol.wt. 197.25

Synthesis

- Obtained by trideuteriomethylation of the lithio derivative of 3,4-dimethoxyacetophenone (41%) [7265].
- m.p. 57–59° [7265]; ¹H NMR [7265].

1-[4-(Acetyloxy)-2-hydroxy-3-iodophenyl]-1-propanone

[130737-50-7]

 $C_{11}H_{11}IO_4$ mol.wt. 334.11

Syntheses

- Refer to: [7113,7266].

4-Hydroxy-3-(1-oxopropyl)phenylacetonitrile[99842-69-0] $C_{11}H_{11}NO_2$ mol.wt. 189.21

Synthesis

– Preparation by slowly adding a solution of 5-chloromethyl-2-hydroxypropiophenone in benzene to an aqueous solution of potassium cyanide at r.t. for 1 h, then keeping at 30–35° for 2–3 h (68%) [6942].

b.p.₈ 180–185° [6942]; m.p. 55–57° [6942].**2-Methoxy-3-(1-oxopropyl)benzonitrile**[99842-70-3] $C_{11}H_{11}NO_2$ mol.wt. 189.21

Synthesis

– Preparation by diazotization of 3-amino-2-methoxy-propiophenone hydrochloride, followed by treatment of the diazonium salt obtained with cuprous cyanide (74%) [6533].

m.p. 87–88° [6533]; UV [6533].

3-Methoxy-4-(1-oxopropyl)benzonitrile[14004-66-1] $C_{11}H_{11}NO_2$ mol.wt. 189.21

Synthesis

– Preparation by diazotization of 4-amino-2-methoxy-propiophenone hydrochloride (SM), followed by treatment of the diazonium salt obtained with cuprous cyanide (41%) [6927]. SM was prepared by hydrolysis of 4-acetamido-2-methoxypropiophenone with boiling 2% hydrochloric acid for 1 h.

m.p. 90–91° [6927].

1-(3,5-Dibromo-2-hydroxy-4,6-dimethylphenyl)-1-propanone[5384-16-7] $C_{11}H_{12}Br_2O_2$ mol.wt. 336.02

Syntheses

– Preparation by bromination of 2'-hydroxy-4',6'-dimethyl-propiophenone, according to [6352], (good yield) [6356,6981].

m.p. 104° [6356,6981];

IR (Sadtler: standard n° 38088), UV [6356,6359]; TLC [6353,6358].

1-[3,5-Bis(chloromethyl)-2-hydroxyphenyl]-1-propanone

[99860-74-9]

 $C_{11}H_{12}Cl_2O_2$

mol.wt. 247.12

Synthesis

– Obtained by reaction of paraformaldehyde with o-hydroxy-propiofenone in the presence of hydrochloric acid at 60–70° for 7 h (15%) [6986].

b.p.₂ 161–164° [6986]; m.p. 73–74° [6986].

1-(3,5-Dichloro-2-hydroxy-4,6-dimethoxyphenyl)-1-propanone

[66021-78-1]

 $C_{11}H_{12}Cl_2O_4$

mol.wt. 279.12

Synthesis

– Preparation by chlorination of 2-hydroxy-4,6-dimethoxy-propiofenone [6410].

1-[4-(Acetyloxy)-2-hydroxyphenyl]-1-propanone

[91143-73-6]

 $C_{11}H_{12}O_4$

mol.wt. 208.21

Syntheses

– Preparation by reaction of acetic anhydride with 2,4-di-hydroxypropiofenone (respropiofenone) in the presence of sodium acetate for 24 h at r.t. (80%) [6731].

- Also obtained by treatment of respropiofenone in a 9:1 (vol/vol) mixture of cyclohexane/tert-amyl alcohol with vinyl acetate (5 equiv) in the presence of *Pseudomonas cepacia* lipase adsorbed on Celite for 24 h at 40° (20%) [6761].
- Also refer to: [7267].

m.p. 80–81° [6731];

¹H NMR [6761], ¹³C NMR [6761], IR [6761].

1-[5-(Acetyloxy)-2-hydroxyphenyl]-1-propanone

[148730-78-3]

 $C_{11}H_{12}O_4$

mol.wt. 208.21

Syntheses

– Obtained by treatment of 2,5-dihydroxypropiofenone in a 9:1 (vol/vol) mixture of cyclohexane/tert-amyl alcohol with vinyl acetate (5 equiv) in the presence of *Pseudomonas cepacia* lipase adsorbed on Celite for 24 h at 40° (93%) [6761].

- Also obtained (by-product) by treatment of hydroquinone dipropionate with boron trifluoride complex (BF₃-OAc) at reflux for 1 h (9%) [6785].

¹H NMR [6761], ¹³C NMR [6761], IR [6761].

2-Hydroxy-5-methyl-3-(1-oxopropyl)benzoic acid[1760-86-7] $C_{11}H_{12}O_4$ mol.wt. 208.21

Syntheses

- Obtained by Fries rearrangement of 2-propionyloxy-5-methylbenzoic acid [6926], (m.p. 104°) with aluminium chloride (3.3 mol) at 170° for 3 h (30%) [7268].
 - Also obtained by Friedel–Crafts acylation of 2-hydroxy-5-methylbenzoic acid with propionyl chloride in the presence of aluminium chloride (3 mol) in nitrobenzene, first at r.t. overnight, then heating on a water bath for 3 h (15%) [7268].
- m.p. 110° [7268].

2-Hydroxy-3-(1-oxopropyl)benzoic acid methyl ester[88466-30-2] $C_{11}H_{12}O_4$ mol.wt. 208.21

Syntheses

– Refer to: [6936,7269].

2-Hydroxy-5-(1-oxopropyl)benzoic acid methyl ester

Methyl 5-propionylsalicylate

[77526-99-9] $C_{11}H_{12}O_4$ mol.wt. 208.21

Syntheses

- Obtained by Fries rearrangement of methyl 2-(propionyl-oxy)benzoate (SM) with aluminium chloride in boiling carbon disulfide for 2 h [6938]. SM was prepared by treating the oil of *wintergreen* (methyl salicylate) with propionyl chloride at reflux for 2 h (90%) [6938].
 - Preparation by Friedel–Crafts acylation of methyl salicylate with propionyl chloride using aluminium chloride as catalyst in carbon disulfide (96%) [6940].
 - Also obtained by Fries rearrangement of methyl propionylsalicylate [7005].
 - Also obtained by Fries rearrangement of 2-(propionyloxy)benzoic acid, according to [6961], followed by esterification (30%) [7270].
 - Also refer to: [7271].
- m.p. 64–65° [6938], 60–61° [6940], 59–60° [7270].

4-Hydroxy-3-(1-oxopropyl)phenylacetic acid[115048-28-7] $C_{11}H_{12}O_4$ mol.wt. 208.21

Synthesis

- Preparation by hydrolysis of 4-hydroxy-3-(1-oxopropyl)phenylacetonitrile with dilute sulfuric acid in boiling acetic acid for 2 h (82%) [6942].
- m.p. 145–146° [6942].

2-Methoxy-5-(1-oxopropyl)benzoic acid

$C_{11}H_{12}O_4$ mol.wt. 208.21

Syntheses

- Obtained by treatment of its methyl ester with sodium hydroxide [6937].
- Also refer to: [7272].

m.p. 127–128° [6937].

4-Methoxy-3-(1-oxopropyl)benzoic acid

[91143-39-4]

$C_{11}H_{12}O_4$ mol.wt. 208.21

**Syntheses**

- Preparation by treatment of methyl 4-methoxy-3-propionyl-benzoate with potassium hydroxide in refluxing methanol for 30 min, then acidification with 6 N sulfuric acid (84%) [6943].
- Also refer to: [6941].

m.p. 209–211° [6943], 194° [6941]. One of the reported melting points is obviously wrong.

1-[4-(Acetyloxy)-2,6-dihydroxyphenyl]-1-propanone

[27178-00-3]

$C_{11}H_{12}O_5$ mol.wt. 224.21

**Synthesis**

- Obtained by reaction of acetic anhydride with phloro-propiophenone in 2 N sodium hydroxide at 0° for 5 min [6629].

m.p. 130–131° [6629]; IR [6629]; TLC [6629].

1-(3-Bromo-2-hydroxy-4,5-dimethylphenyl)-1-propanone

[7376-15-0]

$C_{11}H_{13}BrO_2$ mol.wt. 257.13

**Syntheses**

- Preparation by bromination of 2-hydroxy-4,5-dimethyl-propiophenone, according to the procedure [6354], (good yield) [6356,6981].

m.p. 124–125° [6356,6981];

IR (Sadtler: standard n° 38086) [6356,6981], UV [6356,6359];

TLC [6353,6358].

1-(3-Bromo-4-hydroxy-2,5-dimethylphenyl)-1-propanone[5384-08-7] $C_{11}H_{13}BrO_2$ mol.wt. 257.13

Syntheses

- Preparation by bromination of 4-hydroxy-2,5-dimethyl-propiophenone, according to the procedure [6354], (good yield) [6356,6981].

m.p. 77° [6356,6981];

 1H NMR (Sadtler: standard n° 8919M), IR (Sadtler: standard n° 38085) [6356, 6981],

UV [6356,6357]; TLC [6353,6358].

1-(3-Bromo-6-hydroxy-2,4-dimethylphenyl)-1-propanone[5384-19-0] $C_{11}H_{13}BrO_2$ mol.wt. 257.13

Syntheses

- Preparation by Fries rearrangement of 4-bromo-3,5-di-methylphenyl propionate (m.p. 30.5°) with aluminium chloride at 100° for 2 h (79%) [6356,6981].
- Also obtained by partial bromination of 2-hydroxy-4,6-di-methylpropiophenone, according to the procedure [6352], (51%) [6356,6981].
- Also obtained by partial debromination of 3',5'-dibromo-2'-hydroxy-4',6'-dimethylpropiophenone with copper powder in benzoic acid at 200° for 15 min (24%) [6356,6981].

m.p. 131° [6356,6981];

 1H NMR (Sadtler: standard n° 9091M), IR (Sadtler: standard n° 38087),

UV [6356,6359]; TLC [6353,6358].

1-(5-Bromo-2-hydroxy-3,4-dimethylphenyl)-1-propanone[5384-03-2] $C_{11}H_{13}BrO_2$ mol.wt. 257.13

Syntheses

- Preparation by bromination of 2-hydroxy-3,4-dimethyl-propiophenone, according to the procedure [6354], (good yield) [6356,6981].

m.p. 45° [6356,6981];

 1H NMR (Sadtler: standard n° 8921M), IR (Sadtler: standard n° 38084) [6356, 6981], UV [6356,6359]; TLC [6353,6358].

1-(5-Bromo-4-hydroxy-2,3-dimethylphenyl)-1-propanone[5570-71-8] $C_{11}H_{13}BrO_2$ mol.wt. 257.13

Syntheses

– Preparation by bromination of 4-hydroxy-2,3-dimethyl-propiofenone, according to the procedure [6354], (good yield) [6356,6981].

m.p. 69–70° [6356,6981];

1H NMR (Sadler: standard n° 9090M), IR (Sadler: standard n° 38083) [6356, 6981], UV [6356,6357]; TLC [6353,6358].

1-(3-Bromo-2-methoxy-5-methylphenyl)-1-propanone[106942-90-9] $C_{11}H_{13}BrO_2$ mol.wt. 257.13

Synthesis

– Preparation by reaction of methyl iodide with 3-bromo-2-hydroxy-5-methylpropiofenone in the presence of potassium carbonate in acetone (93%) [6946].

b.p._{9,5} 95–100° [6945,6946];

1H NMR [6945], ^{13}C NMR [6945], IR [6945].

1-(5-Bromo-4-ethoxy-2-hydroxyphenyl)-1-propanone $C_{11}H_{13}BrO_3$ mol.wt. 273.13

Synthesis

– Refer to: [7273].

Oxime [344367-93-7] $C_{11}H_{14}BrNO_3$ mol.wt. 288.14[7273].**1-(5-Chloro-3-ethyl-2-hydroxyphenyl)-1-propanone**[53347-07-2] $C_{11}H_{13}ClO_2$ mol.wt. 212.68

Synthesis

– Preparation by Fries rearrangement of 4-chloro-2-ethyl-phenyl propionate (b.p.₁₃ 137–140.5°) with aluminium chloride at 120° for 1 h (82%) [7274].

m.p. 44–45° [7274].

USE: Fungicide [7275].

BIOLOGICAL ACTIVITY: Bactericide [7274].

1-(3-Chloro-6-hydroxy-2,4-dimethylphenyl)-1-propanone

[105041-56-3]

 $C_{11}H_{13}ClO_2$ mol.wt. 212.68

Syntheses

- Preparation by Fries rearrangement of 4-chloro-3,5-di-methylphenyl propionate (b.p.₃ 123°) with aluminium chloride in carbon disulfide for 2 h at 80°, then at 110° for 2 h after solvent elimination [7276], (76%) [7277].
- Also obtained (by-product) by reaction of propionic anhydride with 4-chloro-3,5-dimethylanisole or 4-chloro-3,5-dimethylphenetole in the presence of aluminium chloride in refluxing carbon disulfide [7278].
white crystalline solid [7278], yellowish white [7277]; m.p. 106° [7277].

Ethyl ether $C_{13}H_{17}ClO_2$ mol.wt. 240.73.

- Obtained by reaction of propionic anhydride with 4-chloro-3,5-dimethylphenetole in the presence of aluminium chloride in refluxing carbon disulfide (62%) [7278].
b.p.₇ 155–156° [7278]; m.p. 53–54° [7278].

1-(2-Chloro-4-methoxy-5-methylphenyl)-1-propanone

[488106-61-2]

 $C_{11}H_{13}ClO_2$ mol.wt. 212.68

Synthesis

- Refer to: [7279].

1-(3-Chloro-2-methoxy-5-methylphenyl)-1-propanone $C_{11}H_{13}ClO_2$ mol.wt. 212.68

Synthesis

- Obtained by treatment of 3-chloro-2-hydroxy-5-methyl-propiofenone with methyl iodide in the presence of sodium ethoxide in refluxing ethanol for 3 h [6962].
oil [6962]; b.p.₈ 140° [6962].

1-(5-Chloro-2-methoxy-3-methylphenyl)-1-propanone

[107076-03-9]

 $C_{11}H_{13}ClO_2$ mol.wt. 212.68

Syntheses

- Preparation from 5-chloro-2-hydroxy-3-methyl-propiofenone,

- by reaction with methyl iodide in the presence of sodium methoxide [6477] or ethoxide [6962];
- by reaction with dimethyl sulfate in the presence of sodium hydroxide in refluxing ethanol for 2 h (74%) [6966].

colourless oil [6966];

b.p.₈ 139° [6477,6962]; ¹H NMR [6966], IR [6966], MS [6966].

1-(5-Chloro-2-methoxy-4-methylphenyl)-1-propanone

[107076-02-8]

C₁₁H₁₃ClO₂

mol.wt. 212.68

Synthesis

– Obtained by reaction of methyl iodide with 5-chloro-2-hydroxy-4-methylpropiophenone in the presence of sodium ethoxide in ethanol [6488].

m.p. 74° [6488].

1-[5-(Chloromethyl)-2-methoxyphenyl]-1-propanone

[100126-81-6]

C₁₁H₁₃ClO₂

mol.wt. 212.68

Synthesis

– Obtained by chloromethylation of 2-methoxypropiophenone (54%) [6986].

m.p. 107–108° [6986].

1-(2-Chloro-4,5-dimethoxyphenyl)-1-propanone

[149743-47-5]

C₁₁H₁₃ClO₃

mol.wt. 228.68

Syntheses

– Refer to: [6503,7280].

1-(4-Chloro-2,5-dimethoxyphenyl)-1-propanone

[13720-54-2]

C₁₁H₁₃ClO₃

mol.wt. 228.68

Synthesis

– Obtained by reaction of propionyl chloride with 2-chloro-1,4-dimethoxybenzene in the presence of aluminium chloride in carbon disulfide (50%) [7281].

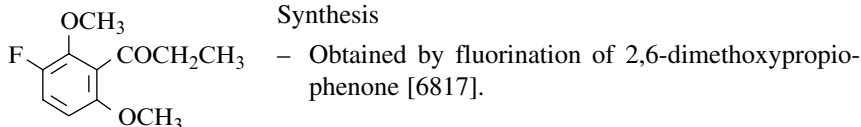

m.p. 80–81° [7281].

1-(2-Fluoro-4,6-dimethoxyphenyl)-1-propanone[864866-61-5] $C_{11}H_{13}FO_3$ mol.wt. 212.22

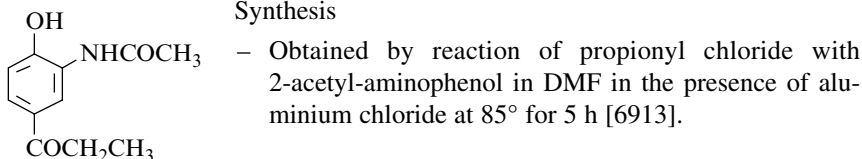

Synthesis

**1-(3-Fluoro-2,6-dimethoxyphenyl)-1-propanone**[119257-50-0] $C_{11}H_{13}FO_3$ mol.wt. 212.22

Synthesis

**2-Hydroxy-5-(1-oxopropyl)acetanilide**[130521-17-4] $C_{11}H_{13}NO_3$ mol.wt. 207.23

Synthesis

**3-Hydroxy-4-(1-oxopropyl)acetanilide**[66611-86-7] $C_{11}H_{13}NO_3$ mol.wt. 207.23

Syntheses

– Also obtained by Friedel–Crafts acylation of m-acetaminoanisole with propionyl chloride in the presence of aluminium chloride in refluxing ethylene dichloride for 2 h (40%) [6918].

– Also refer to: [6429,6919,6927].

m.p. 161° [6351], 154° [6918];

¹H NMR (Sadtlar: standard n° 28219M), IR (Sadtlar: standard n° 55291).

4-Hydroxy-3-(1-oxopropyl)acetanilide[99855-34-2] $C_{11}H_{13}NO_3$ mol.wt. 207.23

Syntheses

1-(5-Ethyl-2-hydroxy-3-nitrophenyl)-1-propanone

[70978-47-1]

 $C_{11}H_{13}NO_4$ mol.wt. 223.23

Syntheses

– Preparation by nitration of 5-ethyl-2-hydroxypropiofenone at -20° (25%) [6926], with concentrated nitric acid ($d = 1.42$) in concentrated sulfuric acid between -15° and 5° [6993].

m.p. $86.5-87.5^\circ$ [6993], $86-87^\circ$ [6926].

1-(2-Methoxy-5-methyl-3-nitrophenyl)-1-propanone $C_{11}H_{13}NO_4$ mol.wt. 223.23

Synthesis

– Obtained by reaction of nitric acid with 2-methoxy-5-methylpropiofenone in acetic anhydride for 45 min (52%) [7285].

yellow oil [7285]; 1H NMR [7285], MS [7285].

1-(2,4-Dimethoxy-5-nitrophenyl)-1-propanone $C_{11}H_{13}NO_5$ mol.wt. 239.23

Synthesis

– Preparation by reaction of dimethyl sulfate with 2,4-di-hydroxy-5-nitropropiofenone in the presence of 20% sodium hydroxide (75%) [6555].

m.p. 155° [6555].

1-(4,5-Dimethoxy-2-nitrophenyl)-1-propanone

[91134-62-2]

 $C_{11}H_{13}NO_5$ mol.wt. 239.23

Syntheses

- Preparation by nitration of propioveratrone,
 - with fuming nitric acid in sulfuric acid (60%) [7001];
 - with nitric acid in acetic acid (65%) [7286].
- Also obtained by oxidation of 1-(4,5-dimethoxy-2-nitrophenyl)propyl nitrate (m.p. $99-100^\circ$) with potassium permanganate [7006].

– Also refer to: [7287,7288].

m.p. 132–133° [7001,7286], 130–131° [7006];

¹H NMR [7286], IR [7286].

USE: As intermediate for photoreactive protecting reagents [7288].

BIOLOGICAL ACTIVITY: Hypolipidemic [7287].

1-(6-Ethoxy-2-hydroxy-3-nitrophenyl)-1-propanone

C₁₁H₁₃NO₅ mol.wt. 239.23

Syntheses

– Obtained by Friedel–Crafts reaction of propionic anhydride with 5-ethoxy-2-nitrophenol in the presence of aluminium chloride on heating in nitrobenzene [6407]. To see (58C) [6559].

2-[[2,4,6-Trihydroxy-3-(1-oxopropyl)phenyl]methylene]hydrazinecarboxamide

[96573-45-4]

C₁₁H₁₃N₃O₅ mol.wt. 267.24

Synthesis

– Refer to: [7007] (compound **37**).

m.p. 193–195° (d) [7007];

¹H NMR [7007], IR [7007], MS [7007].

1-(3-Ethyl-4-hydroxyphenyl)-1-propanone

[540495-26-9]

C₁₁H₁₄O₂ mol.wt. 178.23

Synthesis

– Refer to: [7289].

1-(4-Ethyl-2-hydroxyphenyl)-1-propanone

C₁₁H₁₄O₂ mol.wt. 178.23

Syntheses

– Preparation by Fries rearrangement of 3-ethylphenyl propionate (b.p._{3.5} 97–98°) [7024] with aluminium chloride in nitrobenzene at 25° for 6 h (92%) or without solvent at 130° for 2 h (89%) [7290] or at 140–150° [7024].

Note: Ion (1⁻), radical ion (1⁻) [72051-80-0], ESR spectrum [6350].

b.p.₄ 116–120° [7024], b.p.₅ 146° [7290].

1-(5-Ethyl-2-hydroxyphenyl)-1-propanone[63909-10-4] $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Preparation by Fries rearrangement of 4-ethylphenyl propionate with aluminium chloride at 100° for 2 h (70%) [7291] or at 170° for 1–2 h (80–96%) [6492].
- Preparation by Friedel–Crafts acylation of 4-ethylphenol,
 - with propionic anhydride in the presence of magnesium perchlorate at 170° for 90 min (82%) [6491];
 - with propionyl chloride in the presence of aluminium chloride in refluxing methylene chloride (59%) [6993].
- Also refer to: [6926,7048].

Hydrazone [70136-40-2] $C_{11}H_{16}N_2O$ mol.wt. 192.26 [6646].**1-(2-Hydroxy-3,4-dimethylphenyl)-1-propanone**[5384-01-0] $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Preparation by Fries rearrangement of 2,3-dimethylphenyl propionate,
 - with titanium tetrachloride at 50° for 3 h or 100° for 2 h (82–84%) [6356,6576,6981];
 - with aluminium chloride at 165° for 2 h (85%) [6356,6981].
- Also obtained by isomerization of 2',3'-dimethyl-4'-hydroxypropiophenone by treatment with aluminium chloride [6482], for 1 h at 180–200° (59–71%) [6356,6468].
- Also refer to: [7292].
- m.p. 44–45° [6356,6981];
- 1H NMR (Sadtlar: standard n° 8381M), IR (Sadtlar: standard n° 37037) [6356,6981],
- UV [6356,6359,6457]; TLC [6353,6356,6358].

1-(2-Hydroxy-3,5-dimethylphenyl)-1-propanone[5570-72-9] $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Preparation by Fries rearrangement of 2,4-dimethylphenyl propionate,

- with aluminium chloride, without solvent, at 100° for 7 h (63%) [6356,6576,6981], 130–140° for 5 h (90%) [7293], 165° for 1 h (74%) [6356,6981] or in nitromethane at 20° for 7 h (72%) [6569];
 - with titanium tetrachloride at 100° for 7 h (83–86%) [6356,6576,6981].
- Also obtained by Fries rearrangement of 2,5-dimethylphenyl propionate with aluminium chloride at 100° for 7 h (60%) [6356,6981] or 165° for 1 h (92%) [6981].
- Also obtained by isomerization of 2,5-dimethyl-4-hydroxypropiophenone by heating with aluminium chloride [6482], at 180–200° for 1 h (57%) [6356,6468].
- Also obtained by isomerization of 4-hydroxy-2,6-dimethylpropiophenone with aluminium chloride (3 mol) for 1 h at 180–200° (10%) [6482].
- Also obtained by reaction of sec-butyllithium (1.1 equiv) with 2-bromo-4,6-dimethylphenyl propionate in tetrahydrofuran/ethyl ether/hexane at –95° for 30 min and –78° for 30 min, then hydrolysis with saturated ammonium chloride (31%) (Metal-promoted Fries rearrangement) [6590].
- Also refer to: [7294].
- m.p. 54° [6356,6981], 52–53° [7293];
¹H NMR (Sadtler: standard n° 8382M) [6590], ¹³C NMR [6590],
 IR (Sadtler: standard n° 37038) [6356,6590,6981], UV [6356,6359,6457]; TLC [6353,6358].

Hydrazone [70136-44-6] C₁₁H₁₆N₂O mol.wt. 192.26 [6646].

1-(2-Hydroxy-3,6-dimethylphenyl)-1-propanone

[51233-75-1] C₁₁H₁₄O₂ mol.wt. 178.23

Syntheses

– Preparation by Fries rearrangement of 2,5-dimethylphenyl propionate,

- with titanium tetrachloride at 120° for 1 h (76–79%) [7031];
 - with aluminium chloride in nitromethane at r.t. for 21 days (11%) [6569].
- Also refer to: [7292].
- m.p. 43° [6569,7031];
¹H NMR (Sadtler: standard n° 21708M) [6569,7031], IR [6569,7031],
 UV [6569,7031], MS [7031].

1-(2-Hydroxy-4,5-dimethylphenyl)-1-propanone

[5384-13-4] C₁₁H₁₄O₂ mol.wt. 178.23

Syntheses

– Preparation by Fries rearrangement of 3,4-dimethylphenyl propionate with aluminium chloride,

- without solvent between 120° and 150° (quantitative yield) [7295], at 165° for 1 h (93%) [6356,6981], at 100° for 2 h (90%) [6356], at 110° (85%) [7296] and in the presence of sodium chloride [7297];
- in nitromethane at 20° for 7 days (89%) [6569].
- Preparation by Fries rearrangement of 3,4-dimethylphenyl propionate with titanium tetrachloride,
 - without solvent at 100° for 1–2 h (91%) [6356,6981];
 - in nitromethane at 20° (63%) [6569] for 100 h (99%) [7031].
- Preparation by Friedel–Crafts acylation of 3,4-xylenol with propionic acid in the presence of boron trifluoride etherate (quantitative yield) [7298].
- Also obtained by isomerization,
 - of 2-hydroxy-4,6-dimethylpropiophenone (1 mol) with aluminium chloride (3 mol) [6482] at 140–180° some hours (quantitative yield) [6468,7295] and in the presence of sodium chloride [7297];
 - of 2-hydroxy-3,5-dimethylpropiophenone (1 mol) with aluminium chloride (1.5 mol) at 180–200° for 1 h (20%) [6468].
- Also refer to: [7292,7294].

b.p.₇ 101° [7296], b.p.₁₀ 140° [6569,7031]. One of the reported boiling points is obviously wrong.

m.p. 61° [6569,7031], 60–61° [6356,6981], 60° [7295,7297];

¹H NMR (Sadtlter: standard n° 8384M), IR (Sadtlter: standard n° 37041) [6356,6981,7031]; UV [6356,6359,6399,6457,7031], MS [7031]; TLC [6353,6358].

1-(2-Hydroxy-4,6-dimethylphenyl)-1-propanone

[5384-54-3]

C₁₁H₁₄O₂ mol.wt. 178.23

Syntheses

– Preparation by Fries rearrangement of 3,5-dimethylphenyl propionate (m-5-xylyl propionate, b.p.₅₆ 167°) [7299],

- in the presence of aluminium chloride at 120–150° (quantitative yield) [7295], at 130° for 2 h (95%) [7290], at 120° for 1 h (98%) [7031], at 100° for 5 h (83%) [7299] or at 50° for 3 h (61%) [6356,6576];
- in the presence of aluminium chloride in nitrobenzene at 25° for 6 h (96%) [7290];
- in the presence of an aluminium chloride and sodium chloride mixture at 85° for 5 h [7297];
- in the presence of titanium tetrachloride at 120° for 1 h (98%) [7031] or at 50° for 3 h (79%) [6356,6576,6981].
- Also obtained by reaction of propionic acid with 3,5-xylenol in the presence of boron trifluoride at 70° for 2 h (90%) [6583] or boron trifluoride etherate at 97–100° for 30 min (15%) [7027].

- Also obtained by reaction of propionic anhydride,
 - with 3,5-dimethylphenol in the presence of aluminium chloride in refluxing ethylene dichloride (79%) [7300];
 - with 3,5-dimethylanisole in the presence of aluminium chloride in refluxing carbon disulfide (small amount) [7278].
 - Also obtained by alkaline degradation of 2,3,5,7-tetramethylchromone [6427].
 - Also obtained by reaction of 2-bromo-4,6-dimethylphenyl propionate at low temperature (–78 to –95°) with *sec*-butyllithium to give, after hydrolysis, the titled ketone (metal-promoted Fries rearrangement) (yields: 31% by GC; 17% isolated) [6590].
 - Also refer to: [7294,7301].
- b.p.₂ 150° [7290], b.p.₁₅ 151_151.5° [6583].

1-(4-Hydroxy-2,3-dimethylphenyl)-1-propanone

[5355-81-7] C₁₁H₁₄O₂ mol.wt. 178.23

Syntheses

- Obtained by Fries rearrangement of 2,3-dimethylphenyl propionate with aluminium chloride in nitrobenzene at 50° for 3 h (10%) [6356,6576,6981].

m.p. 140° [6356,6981];

¹H NMR (Sadtlar: standard n° 9088M), IR (Sadtlar: standard n°38071) [6356,6981],

UV [6356,6357,6457]; TLC [6353,6358].

1-(4-Hydroxy-2,5-dimethylphenyl)-1-propanone

[5384-06-5] C₁₁H₁₄O₂ mol.wt. 178.23

Syntheses

- Preparation by Fries rearrangement of 2,5-dimethylphenyl propionate with aluminium chloride,

- in nitrobenzene at r.t. for 24 h (70%) [7302] or 44 h (41%) [6981];
- in nitromethane at r.t. for 21 days (61%) [6569]. The same result (61%) was obtained by using titanium tetrachloride as catalyst at r.t. for 7 days;
- in nitromethane at 20° for 24 h, but using different quantities of aluminium chloride by mole of ester:

AlCl ₃ (mol)	Yield (%)
1	9
2	74
3	82

- without solvent at 100° for 7 h (36%) [6356,6981].
- Also refer to: [6468,6482,7294].
- m.p. 128° [7302], 127° [6356,6569,6981];
- ¹H NMR (Sadtler: standard n° 8379M), IR (Sadtler: standard n°37039) [6356,6981],

1-(4-Hydroxy-3,5-dimethylphenyl)-1-propanone

[5384-09-8]

C₁₁H₁₄O₂

mol.wt. 178.23

Syntheses

- Preparation by Fries rearrangement of 2,6-dimethylphenyl propionate with aluminium chloride,
- without solvent at 50° for 10 h (56%) [6356,6981], at 130–140° [7303], (59%) [7304] or at 165° for 1 h [7305], (59%) [6981];
- in nitrobenzene at r.t. for 24 h (70%) [7294] or in nitromethane at 20° for 7 days (69%) [6569].
- Preparation by Fries rearrangement of 2,6-dimethylphenyl propionate with titanium tetrachloride at 100° for 2 h (20%) [6981].
- Preparation by oxidation of (3,5-dimethyl-4-hydroxyphenyl)ethylcarbinol with DDQ in dioxane at r.t. for 16 h (80%) [7306].
- Also refer to: [6405,6406,6519,7307,7308].
- m.p. 108° [6356,6981], 106–108° [7303], 106–107° [7294], 106–106.5° [7304];
- ¹H NMR (Sadtler: standard n° 8383M), IR (Sadtler: standard n° 37040) [6356,6981],
- UV [6356,6357,6457]; TLC [6353,6358].

1-(6-Hydroxy-2,3-dimethylphenyl)-1-propanone

[121194-66-9]

C₁₁H₁₄O₂

mol.wt. 178.23

Synthesis

- Preparation by treatment of 3-tert-butyl-2-hydroxy-5,6-dimethylpropiophenone with aluminium chloride in nitromethane at 20° for 24 h (quantitative yield) [7031].
- m.p. 70° [7031];
- ¹H NMR (Sadtler: standard n° 52710M) [7031],
- IR (Sadtler: standard n° 79767K) [7031], UV [7031], MS [7031].

1-(2-Methoxy-3-methylphenyl)-1-propanone

[68597-45-5]

 $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Preparation by adding a solution of 5-chloro-2-methoxy-3-methylpropiophenone and ammonium formate in ethanol to a suspension of 10% Pd/C in aqueous 2.5 N potassium hydroxide and heating at 60° for 20 min (82%) [6966].
- Also obtained by reaction of methyl iodide with 2-methoxy-3-methylbenzoyl chloride in the presence of zinc in an ethyl acetate/toluene mixture (70%) [7309].
- Also obtained by reaction of ethylmagnesium bromide with 2-methoxy-3-methylbenzocyanide (69%) [6973].
- Also refer to: [7292].

colourless oil [6966]; b.p._{0.3} 86° [6973], b.p.₁₂ 122° [7309];
¹H NMR [6966], IR [6966], MS [6966].

1-(2-Methoxy-4-methylphenyl)-1-propanone

[36871-54-2]

 $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Obtained by reaction of methyl iodide with 2-methoxy-4-methylbenzoyl chloride in the presence of zinc in an ethyl acetate/toluene mixture (68%) [7309].
 - Obtained by reaction of dimethyl sulfate with 2-hydroxy-4-methylpropiophenone in the presence of sodium hydroxide in methanol [6980,6981].
 - Also obtained by reaction of propionyl chloride with 3-methylanisole in the presence of aluminium chloride in carbon disulfide at r.t. for 24 h (27%) [7310].
- b.p.₁₅ 142–144° [7310], b.p.₁₄ 147° [7309]; IR [6980].

1-(2-Methoxy-5-methylphenyl)-1-propanone

[82620-73-3]

 $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Preparation by reaction of propionyl chloride with 4-methylanisole in the presence of aluminium chloride in carbon disulfide (97%) [7311].
 - Also obtained by reaction of methyl iodide with 2-methoxy-5-methylbenzoyl chloride in the presence of zinc in an ethyl acetate/toluene mixture (60%) [7309].
 - Also refer to: [7033,7312,7313].
- b.p.₁₀ 128–130° [7311], b.p.₁₃ 142–143° [7309], b.p.₁₆₋₁₇ 144.8–146.4° [7033];
¹H NMR [7311], IR [7311], UV [7033].

2,4-Dinitrophenylhydrazone [82623-49-2] $C_{17}H_{18}N_4O_5$ mol.wt. 358.39

(m.p. 112–112.5°) [7311].

1-(2-Methoxy-6-methylphenyl)-1-propanone

[137937-37-2] $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

– Preparation by reaction of dimethyl sulfate with 2-hydroxy-6-methylpropiophenone (92%) [7011].

– Preparation by reaction of 3-methoxy-o-tolunitrile (m.p. 64°) [7314] with ethylmagnesium iodide in ethyl ether at reflux for 6 h (68%) [7058].

b.p.₁₁ 124–125° [7011], b.p.₆ 137° [7058];

1-(5-Methoxy-2-methylphenyl)-1-propanone[29578-81-2] $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Obtained (method P) by reaction of ethylmagnesium bromide with 5-methoxy-2-methylbenzoyl chloride in THF at -78° (73%) [6979].
- Also refer to: [7321].

oil [6979]; b.p.₁₈ 146–147° [7321].**1-(3,6-Dihydroxy-2,4-dimethylphenyl)-1-propanone**[210104-11-3] $C_{11}H_{14}O_3$ mol.wt. 194.23

Synthesis

- Preparation by reaction of 2,6-dimethylbenzoquinone (2.5 equiv) with 2-oxobutanoic acid in aqueous acetonitrile or an acetonitrile/methylene chloride mixture (38%) [6788].

1-(2,3-Dimethoxyphenyl)-1-propanone[76049-04-2] $C_{11}H_{14}O_3$ mol.wt. 194.23

Syntheses

- Obtained by reaction of ethylmagnesium bromide with 2,3-dimethoxybenzoyl chloride [6724, 7130,7322].

- Preparation by reaction of dimethyl sulfate with 2-hydroxy-3-methoxypropiophenone in aqueous alkaline solution [7130].
- Also obtained by a Jones oxidation of 1-(2,3-dimethoxyphenyl)-1-propanol in acetone with sodium dichromate in dilute sulfuric acid for 3 h at 20° [6726].
- Also obtained by reaction of 2,3-dimethoxybenzoyl chloride with diethylcadmium in ethyl ether [7322].
- Also refer to: [6725,7129,7131,7323].
colourless oil [6724];

1-(2,4-Dimethoxyphenyl)-1-propanone

[831-00-5]

C₁₁H₁₄O₃

mol.wt. 194.23

Syntheses

- Preparation by reaction of dimethyl sulfate with respropiophenone in methanol,

- in the presence of aqueous sodium hydroxide solution (89%) [6389];
- in the presence of potassium hydroxide, according to the procedure [7324], (68%) [6555].

- Also obtained by reaction of methyl iodide with respropiophenone in butanone in the presence of potassium carbonate [7325].
- Also obtained by Friedel–Crafts acylation of 1,3-dimethoxybenzene with propionyl chloride [6796] using stannic chloride in carbon disulfide (80%) [7111] or 10% mol. samarium triiodide in acetonitrile [7318].
- Also obtained by reaction of propionic acid with 1,3-dimethoxybenzene in the presence of PPA [6738], (quantitative yield) [7326], (74%) [7327].
- Also obtained by decarboxylation of 2,4-dimethoxy-6-carboxypropiophenone with Cu dust [7325].
- Also refer to: [6530,6796,7097,7328–7333].

b.p.₂ 143.5° [7327], b.p.₁₈ 174–176° [6796], b.p.₂₀ 180° [6389];m.p. 83° [6389], 78° [6738], 75° [7325], 74–75° [7326], 72° [6796], 67° [6555],
66–67° [7111]. Some melting points are obviously wrong.¹H NMR [7111,7318], IR [7111,7318,7326],

1-(2,5-Dimethoxyphenyl)-1-propanone

[5803-30-5]

C₁₁H₁₄O₃

mol.wt. 194.23

Syntheses

- Obtained by acylation of hydroquinone dimethyl ether,

- with propionyl chloride [6796,7147,7149,7334] in the presence of aluminium chloride in petroleum ether (34%) [7335], in carbon disulfide [7336], (64%) [7281] or using 10% mol. samarium triiodide in acetonitrile (60%) [7318];
 - with propionic anhydride in the presence of aluminium chloride in nitromethane [7337];
 - with propionic acid in the presence of PPA at 70° for 2 h (95%) [7338];
 - in the presence of zeolite catalyst [7339].
- Also obtained by oxidation of 1-(2,5-dimethoxyphenyl)-1-propanol with PDC in methylene chloride for 2 days at r.t. [7340].
- Also refer to: [6407,6713,7014,7341–7345].

Isolation from natural sources

- From leaf and root of *Asarum forbesii* Maxim (Aristolochiaceae) [7346].

1-(2,6-Dimethoxyphenyl)-1-propanone

[3840-02-6] C₁₁H₁₄O₃ mol.wt. 194.23

Syntheses

- Preparation by reaction of dimethyl sulfate,
- with 2-hydroxy-6-methoxypropiophenone in the presence of aqueous sodium hydroxide (quantitative yield) [6801];
 - with 2,6-dihydroxypropiophenone in the presence of alkali (70%) [6801] or 2 N sodium hydroxide at r.t. for 2 h (38%) [6800].
- Also refer to: [7348].
- b.p.₉ 148–150° [6801];
 m.p. 45° [6800], 44–45° [6801], 42–43° [7348].

1-(3,4-Dimethoxyphenyl)-1-propanone (*Propioveratrone*)

[1835-04-7] C₁₁H₁₄O₃ mol.wt. 194.23

Syntheses

- Preparation by reaction of dimethyl sulfate with propionylcatechol in alkaline solution (43%) [7349].
- Preparation by reaction of propionyl chloride with veratrole [6796,7350].

- in the presence of aluminium chloride in nitrobenzene for 24 h at r.t. (85%) [7351] or 1 h at -5° (36%) [6854], in refluxing benzene [7352], (84%) [7353], (65%) [7354], in chloroform for 1 h at $0-5^{\circ}$ under nitrogen (79%) [7355], in carbon disulfide (61%) [7354], in ethylene dichloride for 1 h at 35° (54%) [7356] or in boiling petroleum ether for 30 h (28%) [7335];
 - in the presence of zinc chloride in boiling carbon disulfide (36%) [7357];
 - over cation-exchanged clays [7358] or using zeolite-H-beta catalysts [7359].
- Preparation by reaction of propionic acid with veratrole,
 - in the presence of PPA at 60° for 2.5 h (98%) [7360], at 100° for 90 min (75%) [7361] or at $70-80^{\circ}$ for 4 h (55%) [7362];
 - in the presence of zinc chloride (12–15%) [7363].
 - Preparation by reaction of propionic anhydride with veratrole in the presence of iodine for 3 h at reflux (46%) [6721].
 - Also obtained by oxidation of 1-(3,4-dimethoxyphenyl)propane with DDQ in wet dioxane/silica gel under sonication (78%) [7093].
 - Also obtained from (3,4-dimethoxyphenyl) (dimethylaminoethyl) ketone by hydrogenation in the presence of Pd-BaSO₄ catalyst in tetralin at 130° (65%) [7364].
 - Also obtained by reaction of sodium methoxide with 1,2-dibromo-1-(3,4-dimethoxyphenyl)-propane [7100,7241,7335].
 - Also refer to: [6591,6828,7167,7365,7366].

Isolation from natural sources

- From the leaves of *Hedyosmum* spp. from Bolivia (Chlorantaceae) [7367].
- From the aerial parts of *Pteronia camphorata* (Compositae) [7368].
- From *Asarum max.* [7369].

1-(3,5-Dimethoxyphenyl)-1-propanone

[41497-31-8]

C₁₁H₁₄O₃

mol.wt. 194.23

Syntheses

- Preparation by reaction of ethylmagnesium bromide,

- with 3,5-dimethoxybenzamide (m.p. 145–146°) (80–85%) [6856,7373];
 - with 3,5-dimethoxybenzonitrile (m.p. 86–87°) [7373].
 - Also obtained by decarboxylation of 3,5-dimethoxy-2-carboxypropiofenone with Cu dust [7325] or by heating its ethyl ether with 25% sulfuric acid for 13 h [7374].
 - Preparation by following the method [6856] starting from benzoic acid (good yield) [7349].
 - Preparation (method O) by reaction of diethylcadmium with 3,5-dimethoxybenzoyl chloride (71%) [6979].
 - Obtained by reaction of methyl iodide with 3,5-dimethoxybenzoyl chloride in the presence of zinc in an ethyl acetate/toluene mixture (19%) [7309].
 - Also refer to: [7375].
- b.p._{0,08} 98–100° [7373], b.p.₁₁ 162–163° [6856], b.p.₁₇ 168–170° [7309],
 b.p.₁₅ 170–172° [7374];
 m.p. 34–35° [7325,7374], 33.5° [7349], 32.5° [6856], 27° [6979].

1-(3-Ethoxy-4-hydroxyphenyl)-1-propanone

[159186-06-8] C₁₁H₁₄O₃ mol.wt. 194.23

Syntheses

- Obtained by reaction of ethyl bromide with 3,4-dihydroxypropiofenone in the presence of potassium hydroxide in refluxing ethanol (38%) [6851].
- Also refer to: [7376,7377].

BIOLOGICAL ACTIVITY: Antiasthmatic [7377].

Ethyl ether C₁₃H₁₈O₃ mol.wt. 222.28.

- Preparation by reaction of propionyl chloride with o-diethoxybenzene in the presence of aluminium chloride in nitrobenzene at –5° for 2 h (73%) [6851].
 - Also obtained by reaction of excess ethyl bromide with 3,4-dihydroxypropiofenone in the presence of potassium hydroxide in refluxing ethanol for 9 h (54%) [6851].
- b.p.₃₂ 181–184° [6851]; m.p. 38–39° [6851].

1-(4-Ethoxy-2-hydroxyphenyl)-1-propanone

[63411-90-5] C₁₁H₁₄O₃ mol.wt. 194.23

Syntheses

- Preparation by reaction of an ethyl halide (unspecified) with respropiofenone in the presence of potassium carbonate in refluxing acetone for 5 h (51%) [6380].
- Also obtained by reaction of ethyl iodide with respropiofenone in the presence of potassium hydroxide in ethanol [7140,7378].

Notes: Polymer with 1,2-ethanediol [161450-86-8] [7379]; polymer with 1,3-propanediol [163706-93-2] [7076]; polymer with 1,4-butanediol [160308-44-1] [7380].

m.p. 54° [7140], 52–53° [6380], 49° [7378];
¹H NMR [6380], IR [6380]; TLC [6380].

1-(4-Ethoxy-3-hydroxyphenyl)-1-propanone

C₁₁H₁₄O₃ mol.wt. 194.23

Synthesis

– Obtained (by-product) by reaction of ethyl bromide with 3,4-dihydroxypropiophenone in boiling 25% ethanolic potassium hydroxide solution for 9 h (38%) [6851].

1-(5-Ethoxy-2-hydroxyphenyl)-1-propanone

C₁₁H₁₄O₃ mol.wt. 194.23

Synthesis

– Obtained (by-product) by Friedel–Crafts acylation of hydroquinone diethyl ether with propionyl chloride or propionic anhydride in the presence of aluminium chloride, first below 5° and short reflux times [7149].

N.B.: The amount of dealkylation could, however, be held below 20% under mild conditions. When more drastic conditions were employed, for example with longer reflux times, up to about 40% of the titled ketone could be obtained [7149].

m.p. 82° [7149].

1-(2-Ethyl-4,5-dihydroxyphenyl)-1-propanone

[267008-04-8]

C₁₁H₁₄O₃ mol.wt. 194.23

Synthesis

– Preparation by demethylation of 4-propionyl-5-ethylveratrole (b.p.₂ 95–101°) with boron tribromide in methylene chloride, first at 0°, then at r.t. for 12 h (95–97%) [7381].

¹H NMR [7381].

1-(2-Ethyl-4,6-dihydroxyphenyl)-1-propanone

C₁₁H₁₄O₃ mol.wt. 194.23

Synthesis

– Obtained by reaction of propionitrile with 5-ethylresorcinol (Hoesch reaction) (19%) [7382].

m.p. 142° [7382].

1-(3-Ethyl-2,6-dihydroxyphenyl)-1-propanone

[116867-95-9]

 $C_{11}H_{14}O_3$ mol.wt. 194.23

Syntheses

- Obtained from 5-ethyl-2,4-dihydroxy-3-propionylbenzoic acid in refluxing dilute acetic acid in the presence of a few drops of concentrated hydrochloric acid (37%) [6450].
 - Also obtained by hydrolysis of 8-propionyl-7-hydroxy-6-ethyl-4-methylcoumarin in refluxing 10% sodium hydroxide for 2 h [6450].
- m.p. 102° [6450].

1-(5-Ethyl-2,4-dihydroxyphenyl)-1-propanone

[158153-04-9]

 $C_{11}H_{14}O_3$ mol.wt. 194.23

Syntheses

- Preparation by Fries rearrangement of 4-ethylresorcinol dipropionate in the presence of aluminium chloride (2 equiv) without solvent at 60–70° for 3–4 h or in nitrobenzene at 110° for 5 h [7383].
 - Preparation by reaction of propionitrile with 4-ethylresorcinol (Hoesch reaction) (76%) [7115].
 - Also refer to: [7384].
- m.p. 69–70° [7115], 67.5° [7383].

Oxime [114113-06-3] $C_{11}H_{15}NO_3$ mol.wt. 209.22.

- For determination of cobalt and copper by gravimetry [7385].

1-(2-Hydroxy-3-methoxy-5-methylphenyl)-1-propanone

[91970-96-6]

 $C_{11}H_{14}O_3$ mol.wt. 194.23

Syntheses

- Preparation by partial demethylation of 2,3-dimethoxy-5-methylpropiophenone with aluminium chloride in nitromethane, first at 0°, then at 20° for 5 days (88%) [7285].
 - Also obtained by partial methylation of 2,3-dihydroxy-5-methylpropiophenone with dimethyl sulfate in the presence of potassium carbonate in acetone (39%) [7110].
- m.p. 69–70° [7110], 67–68° [7285];
 1H NMR (Sadtler: standard n° 49338M) [7285],
 IR (Sadtler: standard n° 76411K) [7285], UV [7285].

1-(2-Hydroxy-4-methoxy-3-methylphenyl)-1-propanoneC₁₁H₁₄O₃ mol.wt. 194.23

Syntheses

- Obtained by reaction of methyl iodide (5 mol) with respropiophenone in methanol in the presence of potassium hydroxide, first at 0° and at r.t. overnight, then at reflux for 6 h (22%) [6769].
 - Also obtained by alkaline hydrolysis of 7-methoxy-2,3,8-trimethylchromone [6769].
- m.p. 78–79° [6769].

1-(2-Hydroxy-4-methoxy-6-methylphenyl)-1-propanone

[64030-63-3]

C₁₁H₁₄O₃ mol.wt. 194.23

Syntheses

- Preparation by partial methylation of 2,4-dihydroxy-6-methylpropiophenone with dimethyl sulfate,
 - in the presence of excess 0.5 N sodium hydroxide [6744];
 - in the presence of potassium carbonate in refluxing acetone [7120], (65%) [7121].
- Also obtained by reaction of propionitrile with orcinol monomethyl ether (Hoesch reaction) [6744].
- Also refer to: [7386].

Isolation from natural sources

- From *Juniperus sabina* leaves (Cupressaceae) [7387].
 - Obtained by alkaline degradation of *Coumarsabin* with potassium hydroxide in refluxing methanol for 2 h (40%) [7388]. *Coumarsabin* (3,5-dimethyl-4,7-dimethoxycoumarin) (m.p. 86–87°) was isolated from the leaves of *Juniperus sabina* (Cupressaceae).
- m.p. 98–100° [7387], 84–85° [7121], 83–84° [7120], 82–83° [7388], 73.5° [6744];
¹H NMR [7121,7387,7388], ¹³C NMR [7387], IR [7387,7388],
 UV [7387,7388].

1-(2-Hydroxy-6-methoxy-4-methylphenyl)-1-propanoneC₁₁H₁₄O₃ mol.wt. 194.23

Syntheses

- Obtained by partial methylation of 2,6-dihydroxy-4-methyl-propiophenone with dimethyl sulfate in the presence of 0.5 N sodium hydroxide (40%) [6744].

- Also obtained by reaction of propionic anhydride with orcinol monomethyl ether in the presence of concentrated sulfuric acid at 130° [6744].

m.p. 75° [6744].

1-(3-Hydroxy-2-methoxy-5-methylphenyl)-1-propanone

[108439-91-4]

$C_{11}H_{14}O_3$ mol.wt. 194.23

Synthesis

- Obtained by treatment of 2-methoxy-5-methyl-3-nitro-propiofenone (yellow oil) with stannous chloride dihydrate, then sodium nitrite, according to the Woodward procedure [7389], (23%) [7285].

m.p. 31° [7285]; 1H NMR [7285], IR [7285], UV [7285].

1-(4-Hydroxy-2-methoxy-6-methylphenyl)-1-propanone

$C_{11}H_{14}O_3$ mol.wt. 194.23

Syntheses

- Obtained by partial methylation of 2,4-dihydroxy-6-methylpropiophenone with dimethyl sulfate in the presence of 0.5 N sodium hydroxide [6744].
- Also obtained by reaction of ethyl cyanide with orcinol monomethyl ether (Hoesch reaction) [6744].

m.p. 114° [6744].

1-(4-Hydroxy-3-methoxy-5-methylphenyl)-1-propanone

[91970-97-7]

$C_{11}H_{14}O_3$ mol.wt. 194.23

Synthesis

- Obtained by Fries rearrangement of 2-methoxy-6-methyl-phenyl propionate with aluminium chloride in refluxing carbon disulfide for 3 h (55%) [7390].

m.p. 106–108° [7390].

1-(4-Hydroxy-5-methoxy-2-methylphenyl)-1-propanone

[104216-16-2]

$C_{11}H_{14}O_3$ mol.wt. 194.23

Syntheses

- Preparation by Fries rearrangement of isocresol propionate with aluminium chloride in nitromethane, first at 0°, then at 30° for 24 h (97%) [7285].
- Also obtained by reaction of propionyl chloride with isocresol in the presence of aluminium chloride in nitrobenzene, first at 30–35°, then at r.t. overnight (25%) [7391].

m.p. 87° [7285], 85.5° [7391];
¹H NMR (Sadtlter: standard n° 49334M) [7285],
 IR (Sadtlter: standard n° 76407K) [7285], UV [7285]; pK_a [7285].

Benzoate [109469-57-0] C₁₈H₁₈O₄ mol.wt. 298.34 (m.p. 69°) [7391].

1-(5-Hydroxy-4-methoxy-2-methylphenyl)-1-propanone

[91970-98-8] C₁₁H₁₄O₃ mol.wt. 194.23

Syntheses

- Preparation by reaction of propionyl chloride with creosol in the presence of aluminium chloride in methylene chloride, first at -20°, then at 20° for 2 h (95%) [7040].
- Preparation by reaction of propionic acid with creosol in the presence of boron trifluoride, first at 0°, then at 25° for 2 days (80%) [7110].
- Also obtained by Fries rearrangement of creosol propionate with aluminium chloride in methylene chloride, first at -20°, then at 20° for 8 h (59%) [7285].

m.p. 98° [7285], 97–99° [7110];
¹H NMR (Sadtlter: standard n° 49333M) [7285],

1-[4-Hydroxy-3-(methoxymethyl)phenyl]-1-propanone

[136715-21-4] C₁₁H₁₄O₃ mol.wt. 194.23

Synthesis

- Preparation [7392] (Czech patent).

USE: Pharmaceutical intermediate [7392].

1-(2,6-Dihydroxy-4-methoxy-3-methylphenyl)-1-propanone (Aspidinol-P)

[55765-53-4] C₁₁H₁₄O₄ mol.wt. 210.23

Syntheses

- Refer to: [6890] (compound **15**), [6895] (compound **23**) and [7393] (compound **31-P**).
- Also refer to: [7394].

N.B.: On the EI mass spectra drawing, the formula of the “titled ketone” was displayed (Fig. 9, page 136) [7394]. Actually, the concerned ketone was the upper homologous, i.e. the 2,6-dihydroxy-4-methoxy-3-methylbutyrophenone,

called *Aspidinol* (compound **7**). On the drawing of the displayed formula of compound **7**, a methylene group is missing in the lateral chain [7394].

Isolation from natural sources

- From *Dryopteris* of Japan [7262].

m.p. 190–192° [6890];

UV [7394], MS [7262,7393,7394];

GLC [6895]; TLC [6890,6895,7262]; HPLC [7394];

paper chromatography [6895,7262].

1-(4,6-Dihydroxy-2-methoxy-3-methylphenyl)-1-propanone

[39026-68-1]

$C_{11}H_{14}O_4$ mol.wt. 210.23

Isolation from natural sources

- Preparation by acid hydrolysis of its glycoside (SM1) ($C_{20}H_{30}O_9$, m.p. 179–180°, [39027-10-6]), itself obtained by treatment of (SM2) ($C_{36}H_{40}O_{12}$, m.p. 270°, [39036-20-9]) with barium hydroxide in boiling aqueous dioxane. SM2 is the hexamethyl ether of *poriolide*. The *poriolide* (major compound) ($C_{29}H_{26}O_{12}$, m.p. 265°, [39262-30-1]) was isolated from the leaves of *Leucothoe Keiskei* Miq. (Ericaceae) [7395,7396].

N.B.: *Isoporiolide* ($C_{29}H_{26}O_{12}$, m.p. 293–295°, [39262-31-2]) is an isomer of *poriolide*. *Isoporiolide* hexamethyl ether (SM3) ($C_{36}H_{40}O_{12}$, [39084-13-4]), decomposed under the same conditions using barium hydroxide, yields the phenol glycoside SM1 [7395,7396].

m.p. 132–134° [7395,7396];

¹H NMR [7395,7396], IR [7395,7396], UV [7395,7396].

1-(2-Hydroxy-3,4-dimethoxyphenyl)-1-propanone

[61948-26-3]

$C_{11}H_{14}O_4$ mol.wt. 210.23

Syntheses

- Preparation by reaction of propionyl chloride with pyrogallol trimethyl ether in the presence of aluminium chloride in ethyl ether at 0° [7133], (56%) [7132] or at r.t. for 24 h (92%) [7397].
- Preparation by reaction of methyl iodide with 2,3,4-tri-hydroxypropiofenone in the presence of potassium carbonate in acetone, first at r.t. for 20 h, then at reflux for 8 h (94%) [6863].
- Also refer to: [6757,6758,7398] (compound **1f**).
m.p. 94–96° [6863], 93–94° [7132], 91–92° [7397];
¹H NMR [6863,7132,7397], IR [6863].

1-(2-Hydroxy-4,5-dimethoxyphenyl)-1-propanoneC₁₁H₁₄O₄ mol.wt. 210.23

Syntheses

- Obtained by condensation of propionitrile with 3,4-di-methoxyphenol (Hoesch reaction) (16%) [7399].
- Also obtained (by-product) by reaction of propionyl chloride with 1,2,4-trimethoxybenzene in the presence of aluminium chloride in carbon disulfide [7400], (29%) [7401].

- Also refer to: [7133,7402,7403].

m.p. 125° [7399], 124–126° [7401,7402], 124–125° [7400].

1-(2-Hydroxy-4,6-dimethoxyphenyl)-1-propanone

[2215-82-9]

C₁₁H₁₄O₄ mol.wt. 210.23

Syntheses

- Preparation by reaction of propionyl chloride with phloroglucinol trimethyl ether in the presence of aluminium chloride in ethyl ether at 0° for 40 h (64%) [7404] or 48 h (71%) [7405].

- Also obtained by reaction of propionitrile with phloroglucinol dimethyl ether (Hoesch reaction) (67%) [7406], (38%) [6873,7407].

- Also obtained by reaction of dimethyl sulfate with phloropropiophenone in acetone in the presence of potassium carbonate [6629].

- Also obtained (by-product) by irradiation of 3,5-dimethoxy-2-propionylphenyl methacrylate in acetonitrile under argon atmosphere with high-pressure Hg lamp at r.t. (25%) [7408].

- Also refer to: [6757,6758,7138,7386,7409] (compound **1d**).

m.p. 113–114° [6629], 113° [7406], 111° [6873,7405], 110–111° [7404]; TLC [6629].

1-(4-Hydroxy-2,6-dimethoxyphenyl)-1-propanoneC₁₁H₁₄O₄ mol.wt. 210.23

Syntheses

- Obtained by saponification of 4-(benzoyloxy)-2,6-di-methoxypropiophenone (m.p. 103°) with 15% methanolic potassium hydroxide at r.t. for 2 h [6873].

- Also obtained (by-product) by reaction of propionitrile with phloroglucinol dimethyl ether (Hoesch reaction) [6873].

- Also refer to: [6743].

m.p. 180° [6743,6873].

1-(4-Hydroxy-3,5-dimethoxyphenyl)-1-propanone (*Propiosyringone*)

[5650-43-1]

 $C_{11}H_{14}O_4$ mol.wt. 210.23

Syntheses

- Preparation by oxidation of (3,5-dimethoxy-4-hydroxy-phenyl)ethylcarbinol also named 1-(4-hydroxy-3,5-di-methoxyphenyl)-1-propanol,
- with DDQ in dioxane at r.t. for 16 h (70%) [7306];
- using silver oxide in sodium hydroxide as described by [7169], (40%) [7170].
- Also obtained by partial demethylation of 3,4,5-trimethoxypropiophenone,
 - with hydrobromic acid at 40° or hydrochloric acid at 100° (20–30%) [6591];
 - in concentrated sulfuric acid solution [6973,7410], at 45–47° for 12 h (67%) [7411];
 - in the course of the reaction of ethylmagnesium bromide with 3,4,5-trimethoxybenzonitrile (14%) [7349].
- Also obtained by Fries rearrangement of 2,6-dimethoxyphenyl propionate (b.p._{0.5} 125–127°) with aluminium chloride in nitrobenzene [7411,7412], (30%) [7413] or at 80° for 30–60 min [7414], according to the procedure [6620], (11%) [6700,7161,7411].
- Preparation by reaction of sodium methoxide with 3-bromo or 3-iodo-4-hydroxy-5-methoxy-propiophenone in the presence of anhydrous cupric chloride (trace) in DMF at 100° (64%) [6959].

Isolation from natural sources

- Preparation from *Aspen poplar wood* [7415].
- From the aerial parts of *Baccharis magellanica* (Compositae) [7416].
- Identification in Spanish oak heartwood of *Quercus robur*, *Quercus petraea*, *Quercus pyrenaica* and *Quercus faginea* [7210].
- Identification in organic aerosols emitted from the combustion of biomass indigenous to South Asia [7417].
- In biodegradation of oak (*Quercus alba*) wood during growth of the shiitake mushroom (*Lentinula edodes*) [7418].
- One of aromatic degradation products in the steam hydrolysis residue of birchwood (*Betula pubescens*) [7419].
- Identification from volatile components of hardwood sawdust smoke [7420].
- Identification, in hydrogenolysis products of *Fraxinus mandshurica* [7421].
- Determination in black kraft liquor by GLC [7422].
- Of raw cane sugar flavour [7202].
- A flavour component of whiskey [7423].

- Its β -D-glucopyranoside [367502-03-2] was isolated from *Kokuto*, non-centrifuged Cane Sugar (*Saccharum officinarum*) [7247] or from the aerial parts of *Conyza blinii* [7424].
- Also refer to: [7092,7180,7188,7425–7430].

1-(2,4-Dihydroxy-3,6-dimethoxyphenyl)-1-propanone

C₁₁H₁₄O₅

mol.wt. 226.23

Synthesis

- Preparation by reaction of propionitrile with 2,5-dimethoxy-resorcinol (Hoesch condensation) (63%) [7441].

m.p. 126–127° [7441].

1-(2,6-Dihydroxy-3,4-dimethoxyphenyl)-1-propanone

[134081-93-9]

C₁₁H₁₄O₅

mol.wt. 226.23

Synthesis

- Preparation by hydrolysis of 6-hydroxy-3,4-dimethoxy-2-(tosyloxy)propiophenone (m.p. 120.5–121°) with potassium carbonate in refluxing methanol for 1–3 h (82%) [7442].

m.p. 142–143° [7442]; ¹H NMR [7442].

1-(3,6-Dihydroxy-2,4-dimethoxyphenyl)-1-propanoneC₁₁H₁₄O₅ mol.wt. 226.23**Synthesis**

– Obtained by Elbs persulfate oxidation of 2-hydroxy-4,6-di-methoxypropio-phenone (31%) [7405].

m.p. 120–121° [7405].

[2,4-Dimethoxy-5-(1-oxopropyl)phenyl]arsonic acid

2,4-Dimethoxy-5-arsonopropiophenone

C₁₁H₁₅AsO₆ mol.wt. 318.16.**Syntheses**

– Obtained from 5-amino-2,4-dimethoxypropio-phenone through diazo reaction and coupling with sodium nitrite (61%) [6555].

– Also obtained by direct arsonation of respro-phenone with arsenic acid for 75 h at 100°, followed by methylation of the intermediate compound (11%) [6555].

m.p. 243° [6555].

1-(3-Amino-5-ethyl-2-hydroxyphenyl)-1-propanone

[70978-24-4]

C₁₁H₁₅NO₂ mol.wt. 193.25**Syntheses**

– Preparation by hydrogenation of 5-ethyl-2-hydroxy-3-nitropropio-phenone in ethanol using 5% Pd/C as catalyst at atmospheric pressure and 25° [6926,6993].

m.p. 30° [6993].

1-[3-(Dimethylamino)-4-hydroxyphenyl]-1-propanone

[141771-86-0]

C₁₁H₁₅NO₂ mol.wt. 193.25**Synthesis**

– Obtained from methylation of 3-amino-4-hydroxy-propio-phenone by methyl iodide and triethylamine in methanol [6995].

1-[3-(Aminomethyl)-2-hydroxy-5-(methylthio)phenyl]-1-propanone

[75061-07-3]

 $C_{11}H_{15}NO_2S$ mol.wt. 225.31

Synthesis

– Refer to: [7106].

Hydrochloride [75060-88-7] $C_{11}H_{15}NO_2S, HCl$ mol.wt. 261.77.

BIOLOGICAL ACTIVITY: Antiinflammatory [7106].

1-(2-Amino-4,5-dimethoxyphenyl)-1-propanone

[4765-46-2]

 $C_{11}H_{15}NO_3$ mol.wt. 209.25

Synthesis

- Preparation by successively adding propionitrile and aluminium chloride to a solution of boron trichloride and 3,4-dimethoxyaniline in benzene under nitrogen and refluxing the mixture obtained for 8 h (60%) [7009].
- Preparation by reduction of 4,5-dimethoxy-2-nitropropiophenone with iron and acetic acid (68%) [7286].

m.p. 128–129° [7009];

 1H NMR [7286], IR [7286], MS [7009].**1-(2-Amino-4,6-dimethoxyphenyl)-1-propanone**

[124623-19-4]

 $C_{11}H_{15}NO_3$ mol.wt. 209.25

Synthesis

- Preparation by successively adding propionitrile and aluminium chloride to a solution of boron trichloride and 3,5-dimethoxyaniline in benzene under nitrogen and refluxing the mixture obtained for 8 h (92%) [7009].

m.p. 63–66° [7009]; MS [7009].

1-(5-Amino-2,4-dimethoxyphenyl)-1-propanone $C_{11}H_{15}NO_3$ mol.wt. 209.25

Synthesis

- Preparation from the corresponding nitro compound by catalytic reduction in acetone solution using Raney nickel. Then, after filtration of the catalyst and half elimination of solvent by vacuum distillation, the hydrochloride was prepared by passing dry hydrogen chloride into the remaining solution [6555].

m.p. 107° [6555].

Hydrochloride $C_{11}H_{15}NO_3 \cdot HCl$ mol.wt. 245.71 (m.p. > 300°) [6555].

1-[2-Hydroxy-4-(1-methylethyl)phenyl]-1-propanone-2,2,3,3,3- d_5

$C_{12}H_{11}D_5O_2$ mol.wt. 197.29

Synthesis

Ion (1⁻), radical ion (1⁻) [72051-85-5], ESR spectrum [6350].

1-[4,5-Dichloro-3-hydroxy-2-(2-propenyl)phenyl]-1-propanone

[113730-43-1]

$C_{12}H_{12}Cl_2O_2$ mol.wt. 259.13

Synthesis

m.p. 80° [6386]; ¹H NMR [6386].

1-[2-Hydroxy-4-(2-propynyloxy)phenyl]-1-propanone

[457628-03-4]

$C_{12}H_{12}O_3$ mol.wt. 204.23

Syntheses

1-(3,5-Dibromo-2-methoxy-4,6-dimethylphenyl)-1-propanone

[5384-17-8]

$C_{12}H_{14}Br_2O_2$ mol.wt. 350.05

Synthesis

m.p. 70° [6981].

1-[2-Hydroxy-3-(1-propenyl)phenyl]-1-propanone

[35888-89-2]

$C_{12}H_{14}O_2$ mol.wt. 190.24

Syntheses

– Also refer to: [6934,7443,7444] (Japanese patents) and [6936,7445,7446].

1-[2-Hydroxy-3-(1-propenyl)phenyl]-1-propanone (*E*)

[187276-37-5]

C₁₂H₁₄O₂ mol.wt. 190.24

Synthesis

**1-[2-Hydroxy-3-(2-propenyl)phenyl]-1-propanone**

[35888-91-6]

C₁₂H₁₄O₂ mol.wt. 190.24

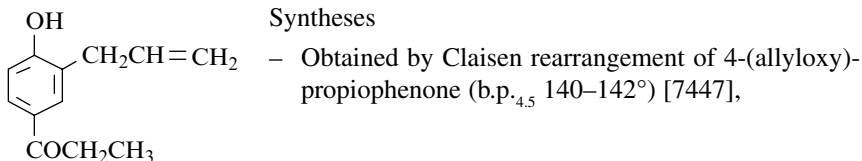

Syntheses

b.p.₅ 100–102° [7447].**1-[4-Hydroxy-3-(2-propenyl)phenyl]-1-propanone**

[91496-09-2]

C₁₂H₁₄O₂ mol.wt. 190.24

Syntheses

- in boiling dimethylaniline [6667], for 5–6 h [7448];
- without solvent at 200–210° for 12 h [6667] or at 260–270° (80%) [7447].

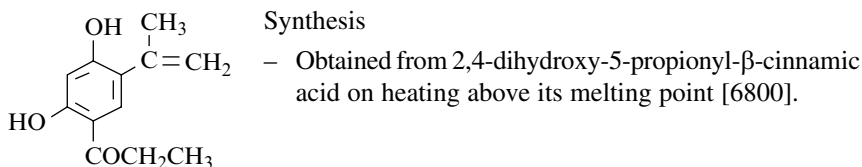

– Also refer to: [7449].

b.p.₂₁ 203–204° [7448]; m.p. 83° [6667,7448], 65° [7447].

One of the reported melting points is obviously wrong.

1-[2,4-Dihydroxy-5-(1-methylethenyl)phenyl]-1-propanoneC₁₂H₁₄O₃ mol.wt. 206.24

Synthesis

1-[2,4-Dihydroxy-3-(2-propenyl)phenyl]-1-propanone

[74815-88-6]

C₁₂H₁₄O₃ mol.wt. 206.24

Syntheses

– Preparation by Claisen rearrangement of 4-(allyl-oxy)-2-hydroxypropio-phenone,

- at 210–215° for 1.5 h (90%) [7450] or at 205° for 2 h (85%) [7451];
- in refluxing o-dichlorobenzene for 20–24 h (75–80%) [6766].

– Also refer to: [7452,7453].

m.p. 124° [7451]; ¹H NMR [7450], MS [7450].**1-[2,6-Dihydroxy-3-(2-propenyl)phenyl]-1-propanone**

[17488-75-4]

C₁₂H₁₄O₃ mol.wt. 206.24

Synthesis

– Obtained by heating 6-allyl-8-propionyl-β-methyl-umbelliferone (m.p. 136–137.5°) in sodium hydroxide solution containing sodium hydrosulfite [7153].

m.p. 57–59° [7153].

1-[3,6-Dihydroxy-2-(2-propenyl)phenyl]-1-propanone

[28885-62-3]

C₁₂H₁₄O₃ mol.wt. 206.24

Syntheses

– Obtained by thermal Claisen rearrangement of 5-(allyloxy)-2-hydroxypropio-phenone [7454], at 180–225° for 1 h under nitrogen (65%) [6787].

m.p. 90–91° [7454], 90–90.5° [6787];

¹H NMR [6787], MS [6787].**1-[2-Hydroxy-4-(2-propenyloxy)phenyl]-1-propanone**

[106627-40-1]

C₁₂H₁₄O₃ mol.wt. 206.24

Syntheses

– Preparation by reaction of allyl bromide with respropio-phenone,

- in the presence of potassium carbonate in refluxing acetone for 7 h [7451] or in refluxing methyl ethyl ketone for 3 days (55%) [7450];
- in the presence of cesium carbonate in DMF at 20° (95–98%) [6766].

b.p.₇ 156–162° [7450], b.p.₁₄ 174° [7451]; MS [7450].

1-[2-Hydroxy-5-(2-propenyloxy)phenyl]-1-propanone[29026-02-6] $C_{12}H_{14}O_3$ mol.wt. 206.24

Syntheses

– Obtained by allylation of 2,5-dihydroxypropiophenone [7454], with allyl bromide in the presence of potassium carbonate in refluxing acetone for 8 h (65%) [6787].

b.p.₁₀ 163–165° [6787]; m.p. 50–51° [6787,7454];
¹H NMR [6787], MS [6787].

1-[5-(Acetoxymethyl)-2-hydroxyphenyl]-1-propanone[108540-33-6] $C_{12}H_{14}O_4$ mol.wt. 222.24

Synthesis

– Preparation by reaction of sodium acetate with 5-chloromethyl-2-hydroxypropiophenone in acetic acid at 125–130° for 2 h (92%) [6986].

m.p. 55–57° [6986].

1-[4-(Acetyloxy)-2-hydroxy-3-methylphenyl]-1-propanone[130737-47-2] $C_{12}H_{14}O_4$ mol.wt. 222.24

Syntheses

– Preparation by partial acetylation of 2,4-dihydroxy-3-methylpropiophenone [7113] with acetyl chloride in the presence of boron trifluoride etherate [7114].
 – Also refer to: [7455].

1-[2-(Acetyloxy)-5-methoxyphenyl]-1-propanone $C_{12}H_{14}O_4$ mol.wt. 222.24

Synthesis

– Preparation by acetylation of 2-hydroxy-5-methoxypropiophenone [7149].

m.p. 54° [7149].

5-Ethyl-2-hydroxy-3-(1-oxopropyl)benzoic acid

[67127-81-5]

 $C_{12}H_{14}O_4$ mol.wt. 222.24

Synthesis

– Obtained by Fries rearrangement of 5-ethyl-2-propionoxy-benzoic acid according to [7268], (45%) [6926].

m.p. 135–136° [6926].

1-[2-Hydroxy-5-(1-oxopropoxy)phenyl]-1-propanone

[459124-92-6]

 $C_{12}H_{14}O_4$ mol.wt. 222.24

Syntheses

– Obtained by Fries rearrangement of 1,4-dipropionyloxy-benzene with aluminium chloride (20%) [6745], at 142° for 30 min [6783,6798] or at 120° for 4 h (43%) [6733].

– Also obtained by heating 2-propionylhydroquinone with propionic anhydride [6745].

m.p. 71–73° [6783,6798], 71° [6733], 53° [6745].

One of the reported melting points is obviously wrong.

 1H NMR [6783,6798], IR [6733,6783,6798], UV [6733].**2-Hydroxy-3-(1-oxopropyl)benzoic acid ethyl ester**

[35888-93-8]

 $C_{12}H_{14}O_4$ mol.wt. 222.24

Syntheses

– Obtained by esterification of the corresponding acid [6935].

– Also refer to: [6933,6936,7269].

4-Hydroxy-3-(1-oxopropyl)benzoic acid ethyl ester

[100117-91-7]

 $C_{12}H_{14}O_4$ mol.wt. 222.24

Syntheses

– Obtained by reaction of propionyl chloride with ethyl p-hydroxybenzoate in the presence of aluminium chloride in tetrachloroethane at 120° for 3–4 h [6941].

– Also refer to: [6942].

m.p. 73–75° [6942], 65° [6941].

One of the reported melting points is obviously wrong.

2-Methoxy-5-(1-oxopropyl)benzoic acid methyl ester

$C_{12}H_{14}O_4$ mol.wt. 222.24

Syntheses

- Preparation by methylation of 5-propionylsalicylic acid with dimethyl sulfate in 25% sodium hydroxide at 80° (62%) [6937,7005].
- Also obtained by refluxing 1 h methyl 5-propionylsalicylate in a methanolic solution of sodium methoxide with dimethyl sulfate (74%) [6937,7005].

m.p. 83.5–84.5° [6937,7005].

4-Methoxy-3-(1-oxopropyl)benzoic acid methyl ester

[91497-18-6]

$C_{12}H_{14}O_4$ mol.wt. 222.24

**Synthesis**

- Obtained by reaction of 4-hydroxy-3-propionylbenzoic acid with potassium carbonate in refluxing acetone for 15 min, then treatment in situ of the potassium salt formed with methyl iodide at reflux for 20 h (67%) [6943].

m.p. 74–75° [6943].

1-[2,4,6-Trihydroxy-3-(2-propenyl)phenyl]-1-propanone

[85602-23-9]

$C_{12}H_{14}O_4$ mol.wt. 222.24

**Syntheses**

- Preparation by alkenylation of phloropropiophenone with allyl chloride in aqueous ethyl ether in the presence of sodium carbonate and cuprous chloride at r.t. for 3 h (90%) [7456].
- Also refer to: [7457].

m.p. 157–159° [7456]; ^{13}C NMR [7456,7458], IR [7456], MS [7456].

USE: Fungicide [7457].

BIOORGANIC ACTIVITY: Bactericide [7457].

2,4-Dimethoxy-6-(1-oxopropyl)benzoic acid

$C_{12}H_{14}O_5$ mol.wt. 238.24

Synthesis

- Obtained by heating 3,5-dimethoxyphthalic anhydride, propionic acid and sodium propionate at 170–180° for 1.5 h [7325].

m.p. 158° [7325].

3,5-Dimethoxy-2-(1-oxopropyl)benzoic acidC₁₂H₁₄O₅ mol.wt. 238.24

Synthesis

m.p. 160° [7325].

– Obtained by heating 3,5-dimethoxyphthalic anhydride, propionic acid and sodium propionate at 170–180° for 1.5 h [7325].

5-Ethyl-2,4-dihydroxy-3-(1-oxopropyl)benzoic acid

[105339-17-1]

C₁₂H₁₄O₅ mol.wt. 238.24

Syntheses

- Obtained by Fries rearrangement of methyl 2,4-dipropionyloxy-5-ethylbenzoate (m.p. 89°) with aluminium chloride at 110–120° for 1 h (26%) [6450].
- Also obtained by Friedel–Crafts acylation of methyl 2,4-dihydroxy-5-ethylbenzoate with propionic anhydride in the presence of aluminium chloride in nitrobenzene, first at 25–30° for 20 h, then at 105° for 4 h [6450].
- Also obtained by treatment of methyl 5-ethyl-2,4-dihydroxy-3-propionylbenzoate with 10% sodium hydroxide solution at r.t. for 24 h [6450].

m.p. 183° [6450].

1-(3-Bromo-6-methoxy-2,4-dimethylphenyl)-1-propanone

[36871-61-1]

C₁₂H₁₅BrO₂ mol.wt. 271.15

Syntheses

- Preparation by reaction of dimethyl sulfate with 3-bromo-6-hydroxy-2,4-dimethylpropiophenone [6351].
- Preparation by reaction of bromine with 2-methoxy-4,6-dimethylpropiophenone in dilute acetic acid at r.t. for 2 h [6980].

¹H NMR [6980].**1-(3-Chloro-4-hydroxy-5-propylphenyl)-1-propanone**C₁₂H₁₅ClO₂ mol.wt. 226.70

Synthesis

- Preparation by heating a suspension of sodium propionate and 2-chloro-6-propylphenol in neat triflic acid [6402].

1-(3-Chloro-6-methoxy-2,4-dimethylphenyl)-1-propanone

[107076-12-0]

 $C_{12}H_{15}ClO_2$ mol.wt. 226.70

Synthesis

– Obtained by reaction of propionic anhydride with 4-chloro-3,5-dimethylanisole in the presence of aluminium chloride in refluxing carbon disulfide (55%) [7278].

m.p. 66.5–67.5° [7278].

1-(5-Chloro-2,4-dihydroxy-3-propylphenyl)-1-propanone

[612812-31-4]

 $C_{12}H_{15}ClO_3$ mol.wt. 242.70

Synthesis

– Preparation by heating a mixture of 4-chloro-2-propyl-resorcinol, sodium propionate and triflic acid [7459].

4-Hydroxy-3-(1-oxopropyl)propionanilide

[91641-62-2]

 $C_{12}H_{15}NO_3$ mol.wt. 221.26

Syntheses

– Obtained by Fries rearrangement of p-aminophenol dipropionate (m.p. 165°) with aluminium chloride at 140° for 1 h (60%) [7460].

– Also refer to: [7283].

m.p. 125° [7460].

2-Methoxy-5-(1-oxopropyl)acetanilide $C_{12}H_{15}NO_3$ mol.wt. 221.26

Synthesis

– Obtained by reaction of acetic anhydride with 3-amino-4-methoxypropionophenone at r.t. for 12 h [7002].

m.p. 134–138° [7002].

3-Methoxy-4-(1-oxopropyl)acetanilide $C_{12}H_{15}NO_3$ mol.wt. 221.26

Synthesis

– Refer to: [6927].

1-(2,4,6-Trihydroxy-3-nitro-5-propylphenyl)-1-propanone

[119691-98-4]

 $C_{12}H_{15}NO_6$

mol.wt. 269.25

Synthesis

– Obtained by reaction of fuming nitric acid with 3'-propyl-2',4',6'-trihydroxypropionophenone in acetic acid at 60° (30–40%) [6561].

m.p. 100–102° [6561];

¹H NMR [6561], IR [6561], MS [6561].**1-(3,4,5-Trimethoxy-2-nitrophenyl)-1-propanone** $C_{12}H_{15}NO_6$

mol.wt. 269.25

Synthesis

– Obtained from ethyl α-(nitrotrimethylgallyl)propionate by boiling a short time with dilute sulfuric acid [7461].

heavy brown oil [7461].

1-(2-Ethyl-6-hydroxy-4-methylphenyl)-1-propanone $C_{12}H_{16}O_2$

mol.wt. 192.26

Syntheses

– Preparation by Fries rearrangement of 3-ethyl-5-methyl-phenyl propionate (b.p.₂₈ 142°) with aluminium chloride,

- without solvent at 130° for 2 h (78%) [6480];
- in nitrobenzene at 25° for 6 h (80%) [6480].

– To see (12i) [6407].

b.p.₃ 240° [6480].**1-(3-Ethyl-4-hydroxy-5-methylphenyl)-1-propanone** $C_{12}H_{16}O_2$

mol.wt. 192.26

Synthesis

– Obtained by Fries rearrangement of 2-methyl-6-ethyl-phenyl propionate with aluminium chloride at 120° (73%) [7304].

m.p. 101–102° [7304].

1-(5-Ethyl-2-hydroxy-3-methylphenyl)-1-propanoneC₁₂H₁₆O₂ mol.wt. 192.26**Synthesis**

– Obtained by Fries rearrangement of 2-methyl-4-ethylphenyl propionate with aluminium chloride at 110° (71%) [7304].

b.p.₁₄ 152–154° [7304].**1-(2-Ethyl-3-methoxyphenyl)-1-propanone**[17055-42-4] C₁₂H₁₆O₂ mol.wt. 192.26**Syntheses**

– Preparation by reaction of 2-ethyl-3-methoxybenzotrile with ethylmagnesium bromide (60%) [7130] or ethyl-magnesium iodide (69%) [7129].

– Also refer to: [7462].

b.p._{0.2} 82–84° [7130], b.p.₂ 142° [7129].**1-(2-Ethyl-6-methoxyphenyl)-1-propanone**[38463-02-4] C₁₂H₁₆O₂ mol.wt. 192.26**Synthesis**

– Obtained from o-bromoanisole by treatment with sodium amide and diethyl ketone in THF at 65° for 6 h (30%) [7463].

¹H NMR [7463], IR [7463].**1-(3-Ethyl-4-methoxyphenyl)-1-propanone**[2129-07-9] C₁₂H₁₆O₂ mol.wt. 192.26**Syntheses**

– Preparation by Friedel–Crafts acylation of 2-ethylanisole with propionyl chloride in the presence of aluminium chloride in carbon disulfide [7350], (81%) [7464].

b.p.₃ 145–147° [7464].

BIOLOGICAL ACTIVITY: Antiinflammatory [7350].

Semicarbazone C₁₃H₁₉N₃O₂ mol.wt. 249.31 (m.p. 175°) [7464].**2,4-Dinitrophenylhydrazone** C₁₈H₂₀N₄O₅ mol.wt. 372.38 (m.p. 155°) [7464].

1-(4-Ethyl-2-methoxyphenyl)-1-propanoneC₁₂H₁₆O₂ mol.wt. 192.26

Synthesis

– Preparation by reaction of dimethyl sulfate with 4-ethyl-2-hydroxypropiophenone in the presence of 10% aqueous sodium hydroxide at r.t. (87%) [7290].

b.p.₂₉ 215° [7290].**1-[2-Hydroxy-4-(1-methylethyl)phenyl]-1-propanone**C₁₂H₁₆O₂ mol.wt. 192.26

Synthesis

– Refer to: [6350].

N.B.: Ion (1⁻), radical ion (1⁻) [72051-84-4], ESR spectrum [6350].

1-[2-Hydroxy-5-(1-methylethyl)phenyl]-1-propanoneC₁₂H₁₆O₂ mol.wt. 192.26

Synthesis

– Refer to: [6646].

Hydrazone [70136-41-3] C₁₂H₁₈N₂O mol.wt. 206.29 [6646].

1-[4-Hydroxy-3-(1-methylethyl)phenyl]-1-propanone[1807-41-6] C₁₂H₁₆O₂ mol.wt. 192.26

Syntheses

– Preparation by Fries rearrangement of o-isopropylphenyl propionate with aluminium chloride in nitrobenzene at r.t. for 3 days, then at 50–60° for 3–4 h (64%) [7465].

– Refer to: [7289].

m.p. 123° [7465].

1-(2-Hydroxy-3-propylphenyl)-1-propanoneC₁₂H₁₆O₂ mol.wt. 192.26

Syntheses

– Obtained (poor yield) by Fries rearrangement of 2-propyl-phenyl propionate (b.p.₁₁ 120°)

[7466] with aluminium chloride at 130–135° for 30 min (15%) [7466] or at 120° according to [6961], (87%) [7467].

N.B.: The compound obtained by [7467] is in reality the *para* isomer, 4-hydroxy-3-propyl-propiofenone.

b.p.₁₃ 142° [7466], b.p.₃ 164° [7467]. Boiling points incoherents.

m.p. 78–79° [7467], 43° [7466].

One of the reported melting points is obviously wrong.

1-(2-Hydroxy-4-propylphenyl)-1-propanone

C₁₂H₁₆O₂ mol.wt. 192.26

Synthesis

– Preparation by reaction of propionic acid with m-propyl-phenol in the presence of zinc chloride for 5 h at 180° (Nencki reaction) (38%) [7468].

b.p._{0,7} 90° [7468], b.p.₁₃ 124–125° [7468].

1-(2-Hydroxy-5-propylphenyl)-1-propanone

C₁₂H₁₆O₂ mol.wt. 192.26

Syntheses

– Preparation by Fries rearrangement of p-propylphenyl propionate (b.p. 254–256°) [6575] with aluminium chloride for 2 h at 100° and the reaction terminated at 120° (83%) [6575] or at 120° according to [6961], (61%) [7467].

b.p.₃ 115–118° [7467], b.p. 270° [6575].

1-(4-Hydroxy-3-propylphenyl)-1-propanone

[194792-41-1] C₁₂H₁₆O₂ mol.wt. 192.26

Syntheses

– Preparation by Fries rearrangement of 2-propylphenyl propionate (b.p._{1,3-1,4} 84–86°) [7469], (b.p.₁₁ 120°) [7466], (b.p. 245°) [6575] with aluminium chloride at 120° according to [6961] (87%) [7467], for 2 h at 100° and the reaction terminated at 120° (70%) [6575], for 30 min at 130–135° (63%) [7466] or for 3 h at 140–150° (51%) [7469].

– Also obtained by reaction of propionyl chloride with 2-propylphenol in the presence of aluminium chloride in nitrobenzene at r.t. overnight (Behn's method) [7470].

– Also refer to: [7289,7452,7471].

b.p.₃ 164° [7467];

m.p. 80–81° [7470], 78–79° [7467], 77–78° [7469], 77° [6575], 75° [7466];

¹H NMR [7469], ¹³C NMR [7469].

1-(2-Methoxy-3,4-dimethylphenyl)-1-propanone[107075-91-2] $C_{12}H_{16}O_2$ mol.wt. 192.26

Synthesis

– Refer to: [7292].

1-(2-Methoxy-3,5-dimethylphenyl)-1-propanone[5384-04-3] $C_{12}H_{16}O_2$ mol.wt. 192.26

Syntheses

– Preparation by reaction of dimethyl sulfate with 3,5-di-methyl-2-hydroxypropiophenone in methanol in the presence of aqueous sodium hydroxide [6981].

– Also refer to: [7292].

b.p.₁₃ 154° [6981];m.p. -17° [6981]; $n_D^{20} = 1.523$ [6981].**1-(2-Methoxy-3,6-dimethylphenyl)-1-propanone**[107075-92-3] $C_{12}H_{16}O_2$ mol.wt. 192.26

1-(4-Methoxy-2,3-dimethylphenyl)-1-propanone

[90852-26-9] C₁₂H₁₆O₂ mol.wt. 192.26

Syntheses

- Refer to: [7473] (Japanese patent).

1-(4-Methoxy-2,5-dimethylphenyl)-1-propanone

[36871-56-4] C₁₂H₁₆O₂ mol.wt. 192.26

Syntheses

- Preparation by reaction of dimethyl sulfate with 4-hydroxy-2,5-dimethylpropiophenone in methanolic sodium hydroxide solution [6980].
- Also refer to: [7292].

IR [6980].

1-(4-Methoxy-2,6-dimethylphenyl)-1-propanone

[107075-90-1] C₁₂H₁₆O₂ mol.wt. 192.26

Syntheses

- Refer to: [7292,7472].

b.p.₁₅ 154° [7472]; m.p. 76° [7472].

1-(4-Methoxy-3,5-dimethylphenyl)-1-propanone

[5384-11-2] C₁₂H₁₆O₂ mol.wt. 192.26

Syntheses

- Preparation by reaction of dimethyl sulfate with 3,5-di-methyl-4-hydroxypropiophenone in methanol in the presence of 20% potassium hydroxide (90%) [6981].
- Also refer to: [7292,7474].

b.p.₁₂ 154–156° [6981]; m.p. 27° [6981].

1-(2,4-Dihydroxy-3-propylphenyl)-1-propanone

[79558-49-9]

 $C_{12}H_{16}O_3$ mol.wt. 208.26

Syntheses

- Preparation by reaction of propionitrile with 2-propyl-resorcinol (Hoesch reaction) (80%) [7451].
 - Also obtained by reaction of hydrogen with 3-allyl-resorpiophenone,
 - in the presence of $PdCl_2$ in ethanol for 1 h [7451];
 - in the presence of 5% Pd/C in MTBE (tert-butyl methyl ether) (quantitative yield) [6766];
 - in the presence of Raney nickel at r.t. for 4.5 h at 60 psi of hydrogen (18%) [7450].
 - Preparation by reaction of propionic acid with 2-propylresorcinol in the presence of hydrobromic acid [7475].
 - Also obtained by heating a mixture of 2-propylresorcinol, sodium propionate and triflic acid (TfOH) [7459].
 - Also refer to: [7452,7476–7483].
- m.p. 109–110° [7451]; MS [7450].

1-(2,4-Dihydroxy-5-propylphenyl)-1-propanone $C_{12}H_{16}O_3$ mol.wt. 208.26

Syntheses

- Preparation by Fries rearrangement of 4-propyl-resorcinol dipropionate in the presence of aluminium chloride (2 equiv) without solvent at 60–70° for 3–4 h or in nitrobenzene at 110° for 5 h [7383].
 - Preparation by reaction of propionitrile with 4-propyl-resorcinol (Hoesch reaction) (80%) [7115].
- b.p._{9,5} 190–195° [7383]; m.p. 82° [7115,7484], 73–74° [7383].

1-(2,6-Dihydroxy-3-propylphenyl)-1-propanone $C_{12}H_{16}O_3$ mol.wt. 208.26

Synthesis

- Obtained by catalytic reduction of 2,6-dipropionylresorcinol with Pd in acetic acid [7383].
- m.p. 92° [7383].

1-(3,6-Dihydroxy-2-propylphenyl)-1-propanone[28885-63-4] $C_{12}H_{16}O_3$ mol.wt. 208.26

Synthesis

– Obtained by catalytic hydrogenation of 2-allyl-3,6-di-hydroxypropiophenone [7454] over Pd/C in ethanol with hydrogen at 1 atmosphere for 3.5 h (89%) [6787].

m.p. 114–114.5° [6787], 114° [7454]; 1H NMR [6787], MS [6787].

1-(2,3-Dimethoxy-5-methylphenyl)-1-propanone[108439-93-6] $C_{12}H_{16}O_3$ mol.wt. 208.26

Syntheses

– Preparation by reaction of 2,3-dimethoxy-5-methylbenzoyl chloride with zinc ethyl iodide (prepared according to [7309] in toluene at r.t. for 2 h (70%) [7110]).

– Obtained by reaction of 2,3-dimethoxy-5-methylbenzoyl chloride and ethylmagnesium bromide [7370]. **N.B.:** Analysis showed that the oil had a composition corresponding to a mixture of about equal parts of 2,3-dimethoxy-5-methylpropiophenone and 2-ethyl-3-methoxy-5-methylpropiophenone. This oil by distillation in vacuo gave no apparent separation [7370].

– Also refer to: [6351,7285].

oil [7370];

b.p.₁ 100–102° [7370], b.p._{0.2} 103–105° [6351], b.p._{0.2-0.3} 104–105° [7110];

1-(2,4-Dimethoxy-3-methylphenyl)-1-propanone[77942-13-3] $C_{12}H_{16}O_3$ mol.wt. 208.26

Syntheses

– Preparation by methylation of 2,4-dihydroxy-3-methyl-propiophenone [6530] with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 48 h (86%) [7111].

– This dimethyl ether can be obtained by reaction of propionyl chloride with 2,6-dimethoxytoluene, according to the procedure used to prepare the acetyl derivative (92–99%) [7485,7486].

– Also refer to: [7112].

m.p. 40–41° [7111]; 1H NMR [7111], IR [7111], UV [7111], MS [7111].

1-(2,4-Dimethoxy-5-methylphenyl)-1-propanone

[77942-24-6]

 $C_{12}H_{16}O_3$ mol.wt. 208.26

Synthesis

– Preparation by reaction of propionyl chloride with 1,3-dimethoxy-4-methylbenzene in the presence of stannic chloride in carbon disulfide (80%) [7111].

m.p. 72.5–73.5° [7111]; 1H NMR [7111], IR [7111], UV [7111], MS [7111].

1-(2,4-Dimethoxy-6-methylphenyl)-1-propanone $C_{12}H_{16}O_3$ mol.wt. 208.26

Synthesis

– Obtained by reaction of dimethyl sulfate with 2,4-di-hydroxy-6-methylpropiophenone in the presence of aqueous sodium hydroxide [6744].

m.p. 42–43° [6744].

1-(2,5-Dimethoxy-4-methylphenyl)-1-propanone

[13720-53-1]

 $C_{12}H_{16}O_3$ mol.wt. 208.26

Syntheses

– Preparation by reaction of propionyl chloride with 2,5-dimethoxytoluene in the presence of aluminium chloride in carbon disulfide (75%) [7281].
– Also refer to: [7487].

m.p. 76–77° [7281].

1-(4,5-Dimethoxy-2-methylphenyl)-1-propanone

[3307-02-6]

 $C_{12}H_{16}O_3$ mol.wt. 208.26

Synthesis

– Preparation by reaction of propionyl chloride with homoveratrole (3,4-dimethoxytoluene) in carbon disulfide in the presence of aluminium chloride (82%) [7488].

b.p._s 165° [7488]; m.p. 55° [6351], 40° [7488]. One of the reported melting points is obviously wrong.

1H NMR (Sadtlar: standard n° 49336M), IR (Sadtlar: standard n° 76409K).

1-(3-Ethoxy-4-methoxyphenyl)-1-propanone[833-53-4] $C_{12}H_{16}O_3$ mol.wt. 208.26

Syntheses

- Obtained by ethylation of 3-hydroxy-4-methoxy-propionophenone formed from guaiacol propionate by Fries reaction [6850].
 - Also prepared by oxidation of the secondary alcohol obtained from 3-ethoxy-4-methoxybenzaldehyde and ethylmagnesium iodide [6850].
 - Also obtained by hydration of 3-ethoxy-4-methoxy-1-propynylbenzene [7489].
- m.p. 66–67° [6850], 65–65.7° [7489].

1-[3-(Ethoxymethyl)-4-hydroxyphenyl]-1-propanone[136715-22-5] $C_{12}H_{16}O_3$ mol.wt. 208.26

Synthesis

- Preparation [7392] (Czech patent).
- USE: Pharmaceutical intermediate [7392].

1-[5-(Ethoxymethyl)-2-hydroxyphenyl]-1-propanone[100257-32-7] $C_{12}H_{16}O_3$ mol.wt. 208.26

Synthesis

- Obtained by reaction of 95% ethanol with 5-chloromethyl-2-hydroxypropionophenone in the presence of iron and concentrated hydrochloric acid at r.t. for 2 h (56%) [6986].
- b.p.₄ 145–147° [6986]; m.p. 31.5–34° [6986].

1-(4-Ethyl-3-hydroxy-5-methoxyphenyl)-1-propanone $C_{12}H_{16}O_3$ mol.wt. 208.26

Synthesis

- Refer to: [7434].

1-(2-Hydroxy-6-methoxy-3,4-dimethylphenyl)-1-propanone[185207-93-6] $C_{12}H_{16}O_3$ mol.wt. 208.26

Syntheses

- Refer to: [7490,7491].

1-[2-Hydroxy-4-(1-methylethoxy)phenyl]-1-propanone

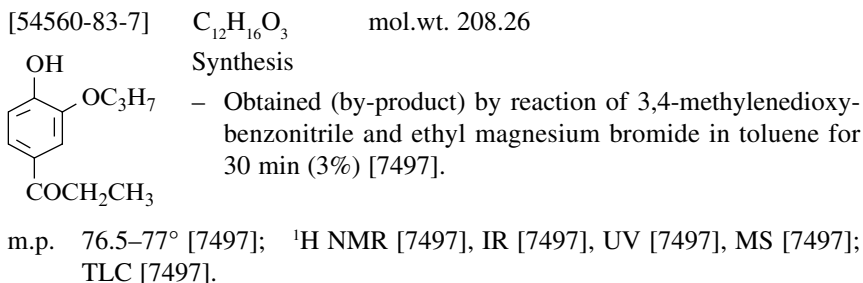

Oxime [214398-51-3] $C_{12}H_{17}NO_3$ mol.wt. 223.27.

USE: Spectrophotometric reagent for iron [7492].

1-(2-Hydroxy-4-propoxyphenyl)-1-propanone

Oxime [77697-21-3] $C_{12}H_{17}NO_3$ mol.wt. 223.27.

USE: For spectrophotometric determination of various metals: copper [7493,7494], molybdenum [7495] or vanadium [7496].

1-(3-Hydroxy-4-propoxyphenyl)-1-propanone**1-(4-Hydroxy-3-propoxyphenyl)-1-propanone**

1-[4-(Ethoxymethoxy)-2-hydroxyphenyl]-1-propanone

[124300-17-0]

 $C_{12}H_{16}O_4$ mol.wt. 224.26

Syntheses

– Obtained by reaction of ethoxymethyl chloride with respropiofenone in the presence of potassium carbonate in acetone at 60° for 3 h (37%) [6757].

- Also obtained by treatment of 4-ethoxymethoxy-2-hydroxy- α -(hydroxymethyl) propiophenone (pale yellow oil) with 4% aqueous sodium carbonate in refluxing ethanol for 1.5 h (36%) [6757].

pale yellow oil [6757]; 1H NMR [6757], IR [6757], UV [6757]; TLC [6757].

1-(2-Hydroxy-3,4-dimethoxy-6-methylphenyl)-1-propanone

[81421-70-7]

 $C_{12}H_{16}O_4$ mol.wt. 224.26

Syntheses

– Obtained by Friedel–Crafts acylation of 3,4,5-trimethoxy-toluene with propionyl chloride in the presence of aluminium chloride,

- in carbon tetrachloride at r.t. for 1.3 h (30%) [7388];
- in ethyl ether, first at 10° for 1 h, then at r.t. overnight (68%) [7120].

Isolation from natural sources

- From *Juniperus sabina* (Cupressaceae) [7387].
- Obtained by alkaline degradation of 8-Methoxycoumarsabin with potassium hydroxide in refluxing methanol for 2 h (41%) [7388]. 8-Methoxycoumarsabin (3,5-dimethyl-4,7,8-tri-methoxycoumarin) (m.p. 125–126°) was isolated from the leaves of *Juniperus sabina* (Cupressaceae).

m.p. 104–106° [7120,7387], 103–104° [7388]; 1H NMR [7120,7387,7388], ^{13}C NMR [7387], IR [7387,7388], UV [7387,7388].

IR [7326].

USE: 3D QSAR study of hypolipidemic asarones by comparative molecular surface analysis [7519].

1-(3,4,5-Trimethoxyphenyl)-1-propanone

[5658-50-4]

C₁₂H₁₆O₄

mol.wt. 224.26

Syntheses

- Obtained by reaction of 5% ethanolic potassium hydroxide with 2-(3,4,5-trimethoxybenzoyl)-2-methylacetic acid ethyl ester (m.p. 40°) at 60° for 1 h (76%) [7520], (73%) [7521].
- Also obtained by oxidation of ethyl-(3,4,5-trimethoxy-phenyl)carbinol with DDQ in dioxane at 20° for 14 h (89%) [7522].
- Also obtained by reaction of ethylmagnesium bromide with 3,4,5-trimethoxybenzonitrile (56%) [7349] or with 3,4,5-trimethoxybenzamide [6591] or 3,4,5-trimethoxybenzaldehyde (83%) [7523] or still with 3,4,5-trimethoxybenzoyl chloride (87%) [7524].
- Also obtained by reaction of diethylcadmium with 3,4,5-trimethoxybenzoyl chloride [7525].
- Also obtained by reaction of ethyllithium with 3,4,5-trimethoxy-N,N-dimethylbenzamide (51%) [7526].
- Also obtained by bubbling ozone through the warm solution of 3-(3,4,5-trimethoxyphenyl)-pentene(2) in 70% acetic acid for 4 h (45%) [7527], (60%) [7528].
- Also obtained by oxidation of 1-(3,4,5-trimethoxyphenyl)propane with DDQ in wet dioxane/silica gel under sonication (65%) [7093,7512].
- Also obtained by oxidation of 1-(3,4,5-trimethoxyphenyl)-1-propanol with Jones reagent [7529,7530].
- Also refer to: [6828,7340,7343,7411,7531-7536], (74-84%) [7537], (66%) [7538,7539].

 $C_{13}H_{14}O_5$ mol.wt. 250.24

Syntheses

– Obtained (poor yield) by saponification of the residual mixture (m.p. 165–185°) obtained in Fries rearrangement of 4-methylumbelliferone propionate (m.p. 150°), after 8-propionyl and 6-propionyl derivatives separation (4%) [6800].

– Also obtained by hydrolysis of 6-propionyl-4-methyl-umbelliferone (m.p. 228°) with sodium hydroxide [6800].

m.p. 164–166° [6800].

1-[2,3-Bis(acetyloxy)-4-hydroxyphenyl]-1-propanone[161583-88-6] $C_{13}H_{14}O_6$ mol.wt. 266.25

Syntheses

- Obtained by enzymatic deacetylation of 2,3,4-triacetoxy-propiofenone (m.p. 75–76°) with two lipases in various solvents [7552] (see table below).
- Also refer to: [7553].

Solvent	With PPL ^a (yield %)	With CCL ^b (yield %)
THF	70	50
Acetone	20	20
DIPE	65	65

N.B.: ^aPPL = porcine pancreas lipase ^bCCL = candida cylindracea lipase
 m.p. 68–70° [7552]; ¹H NMR [7552], IR [7552], UV [7552], MS [7552];
 TLC [7552].

1-[2,4-Bis(acetyloxy)-6-hydroxyphenyl]-1-propanone[22665-89-0] $C_{13}H_{14}O_6$ mol.wt. 266.25

Synthesis

- Obtained (poor yield) by reaction of acetic anhydride with phloropropiofenone in the presence of pyridine at 95° for 2 h (7%) [6629].

m.p. 69–70° [6629];
 IR [6629,7554]; TLC [6629].

1-[2,6-Bis(acetyloxy)-4-hydroxyphenyl]-1-propanone[145747-21-3] $C_{13}H_{14}O_6$ mol.wt. 266.25

Syntheses

- Obtained by enzymatic deacetylation of 2,4,6-triacetoxy-propiofenone (m.p. 56–57°) [6565] with two lipases in various solvents [7552] (see table below).
- Also obtained by regioselective deacetylation of 2,4,6-tri-acetoxypropiofenone with PPL in THF/n-butanol at 42–45° (60%) [7555].
- Also refer to: [7553].

Solvent	With PPL ^a (yield %)	With CCL ^b (yield %)
THF	60	35
Acetone	35	30
DIPE	50	20

N.B.: ^aPPL = porcine pancreas lipase ^bCCL = candida cylindracea lipase
 m.p. 110–114° [7552]; ¹H NMR [7552], MS [7552]; TLC [7552].

4,6-Dihydroxy-5-(1-oxopropyl)-1,3-benzenedicarboxylic acid dimethyl ester

4,6-Dihydroxy-5-propionylisophthalic acid dimethyl ester

[13936-94-2]

 $C_{13}H_{14}O_7$ mol.wt. 282.25

Synthesis

– Obtained by reaction of propionyl chloride with dimethyl resorcinol-4,6-dicarboxylate in the presence of aluminium chloride in nitrobenzene for 3 h, then at r.t. overnight (75%) [6809].

m.p. 112–113° [6809].

2-Ethyl-3-methoxy-5-(1-oxopropyl)benzonitrile

[105838-23-1]

 $C_{13}H_{15}NO_2$ mol.wt. 217.20

Synthesis

– Preparation by reaction of ethylmagnesium bromide with 4,5-dimethoxyisophthalonitrile (75%) [6973].

m.p. 110° [6973].

1-[2-Hydroxy-5-methyl-3-(2-propenyl)phenyl]-1-propanone

[108293-74-9]

 $C_{13}H_{16}O_2$ mol.wt. 204.27

Synthesis

– Obtained by thermal Claisen rearrangement of 2-(allyloxy)-5-methylpropiophenone [7447] at 190° for 20 h in an argon atmosphere (80%) [7556].

m.p. 40–41° [7556]; 1H NMR [7556], MS [7556].**1-[4-Hydroxy-3-methyl-5-(2-propenyl)phenyl]-1-propanone**

[5551-29-1]

 $C_{13}H_{16}O_2$ mol.wt. 204.27

Synthesis

– Preparation by thermal Claisen rearrangement of 4-(allyloxy)-3-methylpropiophenone (b.p.₂₅ 185°) in refluxing N,N-diethylaniline for 7 h (95%) [7557].

b.p.₂₅ 215° [7557]; m.p. 74° [7557].

1-[4-Hydroxy-3-(2-methyl-2-propenyl)phenyl]-1-propanone[98017-40-4] $C_{13}H_{16}O_2$ mol.wt. 204.27

Synthesis

– Obtained by thermal Claisen rearrangement of 4-(β -methallyloxy)propiophenone (m.p. 39°) in boiling dimethylaniline for 5–6 h (70–75%) [7448].

b.p.₁₅ 197–198° [7448]; m.p. 75° [7448].**1-[3-(Cyclopropylmethyl)-2,4-dihydroxyphenyl]-1-propanone**[194792-34-2] $C_{13}H_{16}O_3$ mol.wt. 220.27

Synthesis

– Refer to: [7452].

1-[2-Hydroxy-4-methoxy-5-(2-propenyl)phenyl]-1-propanone[869562-75-4] $C_{13}H_{16}O_3$ mol.wt. 220.27

Synthesis

– Refer to: [7558].

1-[2-Hydroxy-5-methoxy-3-(2-propenyl)phenyl]-1-propanone[102569-09-5] $C_{13}H_{16}O_3$ mol.wt. 220.27

Synthesis

– Refer to: [7559].

1-[2-Hydroxy-6-methoxy-3-(2-propenyl)phenyl]-1-propanone[17488-54-9] $C_{13}H_{16}O_3$ mol.wt. 220.27

Syntheses

- Preparation by partial methylation of 3-allyl-2,6-di-hydroxypropiophenone with dimethyl sulfate (60%) [7153].
- Also obtained by isomerization of 2-(allyloxy)-6-methoxypropiophenone by distillation at a high pressure and long storage or by heating in a sealed tube for 24 h at 215–220° (Claisen rearrangement) (30%) [7153].

b.p.₂ 126–130° [7153];m.p. 99–101° [7153]; $n_D^{20} = 1.5524$ [7153].

1-[4-Hydroxy-2-methoxy-5-(2-propenyl)phenyl]-1-propanone

[152719-59-0]

 $C_{13}H_{16}O_3$ mol.wt. 220.27

Syntheses

- Preparation by thermal Claisen rearrangement of 2-methoxy-4-(allyloxy)propiophenone (2-O-methyl-4-O-allylrespropiophenone) by heating at 200° for 2 h (80%) [7451].
- Also refer to: [7449].

m.p. 132–133° [7451].

1-[2-Methoxy-4-(2-propenyloxy)phenyl]-1-propanone $C_{13}H_{16}O_3$ mol.wt. 220.27

Synthesis

- Obtained by reaction of dimethyl sulfate with 4-(allyloxy)-2-hydroxypropiophenone in the presence of 20% potassium hydroxide in acetone [7451].

m.p. 31° [7451].

1-[2-Methoxy-6-(2-propenyloxy)phenyl]-1-propanone

[17488-72-1]

 $C_{13}H_{16}O_3$ mol.wt. 220.27

Synthesis

- Preparation by reaction of allyl bromide with 2-hydroxy-6-methoxypropiophenone in acetone in the presence of potassium carbonate (76%) [7153].

b.p.₁ 142–144° [7153].**4-Hydroxy-3-(1-oxopropyl)phenylacetic acid ethyl ester**

[108994-28-1]

 $C_{13}H_{16}O_4$ mol.wt. 236.27

Synthesis

- Preparation by reaction of ethanol with 4-hydroxy-3-(1-oxopropyl)phenylacetonitrile in the presence of hydrogen chloride, first at 0° for 2 h, then at reflux for 2 h (91%) [6942].

m.p. 35–37° [6942].

1-[2-Methoxy-5-(1-oxopropoxy)phenyl]-1-propanone[80427-25-4] $C_{13}H_{16}O_4$ mol.wt. 236.27

Synthesis

– Obtained by reaction of propionyl chloride with 4-(propionyloxy)anisole in the presence of stannic chloride in nitromethane at 20° for 48 h (56%) [7143].

m.p. 115° [7143]; IR [7143], UV [7143].

5-Ethyl-2,4-dihydroxy-3-(1-oxopropyl)benzoic acid methyl ester[106214-15-7] $C_{13}H_{16}O_5$ mol.wt. 252.27

Syntheses

– Obtained by Fries rearrangement of methyl 2,4-di-propionyloxy-5-ethylbenzoate (m.p. 89°) with aluminium chloride at 110–120° for 1 h (33%) [6450].

– Also obtained by Friedel–Crafts acylation of methyl 2,4-di-hydroxy-5-ethylbenzoate with propionic anhydride in the presence of aluminium chloride in nitrobenzene, first at 25–30° for 20 h, then at 105° for 4 h [6450].

m.p. 91° [6450].

2-[4,5-Dimethoxy-2-(1-oxopropyl)phenoxy]acetic acid $C_{13}H_{16}O_6$ mol.wt. 268.27

Synthesis

– Obtained by treatment of ethyl α -(2-propionyl-4,5-dimethoxyphenoxy)acetate with 10% aqueous sodium hydroxide on a steam bath, then at r.t. overnight [7400].

m.p. 138–140° [7400].

1-[3-Bromo-5-(1,1-dimethylethyl)-2-hydroxyphenyl]-1-propanone[22362-64-7] $C_{13}H_{17}BrO_2$ mol.wt. 285.18

Syntheses

– Preparation by adding a solution of 5-tert-butyl-2-hydroxy-propiofenone in an acetic acid and hydrochloric acid ($d = 1.19$) mixture to an aqueous solution of 0.2 N potassium bromate and potassium bromide, then stirring 24 h after the addition of ketone (97%) [7560,7561].

- Also obtained by Fries rearrangement of 2-bromo-4-tert-butylphenyl propionate (b.p.₃ 128°) [7562] with aluminium chloride without solvent at 110° for 2h (68%) [7562] or at 20° for 8 days (24%) [7560,7561].

b.p.₃ 165° [7562]; m.p. 125° [7560,7561];

¹H NMR (Sadtlar: standard n° 16616M), IR (Sadtlar: standard n° 44742) [7560,7561],

UV [6359,7560,7561]; TLC [6353].

1-[3-Bromo-5-(1,1-dimethylethyl)-4-hydroxyphenyl]-1-propanone

[20683-42-5]

C₁₃H₁₇BrO₂

mol.wt. 285.18

Syntheses

– Preparation by reaction of potassium bromate and potassium bromide on the 3-tert-butyl-4-hydroxypropiophenone according to the procedure [6352], (97%) [7560,7561].

m.p. 70° [7560,7561];

¹H NMR (Sadtlar: standard n° 16615M),

IR (Sadtlar: standard n° 44736) [7560,7561],

UV [6357,7560,7561]; TLC [6353].

1-[5-Bromo-3-(1,1-dimethylethyl)-2-hydroxyphenyl]-1-propanone

[35154-19-9]

C₁₃H₁₇BrO₂

mol.wt. 285.18

Syntheses

– Preparation by reaction of potassium bromate and potassium bromide on the 3-tert-butyl-2-hydroxy-propiophenone according to the procedure [6352], (93%) [7560,7561].

m.p. 96° [7560,7561];

¹H NMR (Sadtlar: standard n° 16613M), IR (Sadtlar: standard n° 44734) [7560,7561],

UV [7560,7561]; TLC [6353].

1-[5-Bromo-4-(1,1-dimethylethyl)-2-hydroxyphenyl]-1-propanone

[35154-28-0]

C₁₃H₁₇BrO₂

mol.wt. 285.18

Syntheses

– Preparation by reaction of potassium bromate and potassium bromide on the 4-tert-butyl-2-hydroxy-propiophenone according to the procedure [6352], (82%) [7560,7561].

– Also obtained by Fries rearrangement of 4-bromo-3-tert-butylphenyl propionate [6351].

m.p. 47° [7560,7561]; ¹H NMR (Sadler: standard n° 18462M) [7560,7561], IR (Sadler: standard n° 44739) [7560,7561], UV [7560,7561]; TLC [6353].

1-[3-Chloro-5-(1,1-dimethylethyl)-2-hydroxyphenyl]-1-propanone

[51233-86-4]

C₁₃H₁₇ClO₂ mol.wt. 240.73

Syntheses

– Preparation by Fries rearrangement of 2-chloro-4-tert-butylphenyl propionate [6351] (b.p.₁₀ 129°) [7563],

- with aluminium chloride (1.5 mol) at 110° (80%) [7563];
- with titanium tetrachloride (1.5 mol) at 140° for 15 min (28%) [6466].

b.p.₁₀ 142° [7563]; m.p. 113° [6351,6466];

¹H NMR (Sadler: standard n° 20028M), IR (Sadler: standard n° 47037) [6466],

UV [6466].

1-[4-(Chloromethyl)-2-hydroxy-3-propylphenyl]-1-propanone

[107223-72-3]

C₁₃H₁₇ClO₂ mol.wt. 240.73

Syntheses

– Obtained by reaction of ethyl chloroformate with 1-[4-[(dimethylamino)methyl]-2-hydroxy-3-propylphenyl]-1-propanone in toluene, first in an ice-water bath for 2 h, then at r.t. for 16 h (75%) [7564].

– Also refer to: [7565].

m.p. 41–44° [7564].

1-[2-Hydroxy-4-(4-morpholinyl)phenyl]-1-propanone

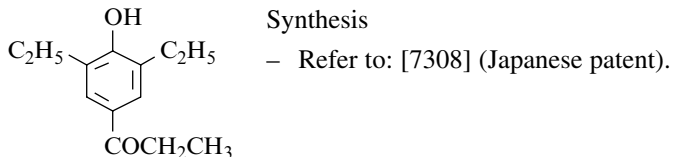

[404009-42-3]

C₁₃H₁₇NO₃ mol.wt. 235.28

Synthesis

1-[5-(1,1-Dimethylethyl)-2-hydroxyphenyl]-1-propanone

[22362-63-6]

 $C_{13}H_{18}O_2$

mol.wt. 206.28

Syntheses

– Obtained by Fries rearrangement of various propionic esters and experimental conditions [7561],

- from 4-tert-butylphenyl propionate (*classic reaction*),
 - in nitrobenzene at 50° for 5–6 h with titanium tetrachloride (93%) [7106] or aluminium chloride (50%) [7560],
 - in nitromethane at 20° for 192 h with titanium tetrachloride (78%) [7560], stannic chloride (70%) [6570,7560], aluminium chloride (60%) [6466] and ferric chloride (45%) [7560];
 - without solvent in the presence of aluminium chloride at 120° for 1 h and at 140° or 180° for 15 min (41–43%) [6466,7573];
- from 2-tert-butylphenyl propionate (*reaction with intermolecular migration of tert-butyl group*). Cf. [7561,7571,7572,7574–7577];
 - in nitromethane with aluminium chloride at 20° for 72 h (92%) [6570] or 168–192 h (45–60%) [6570,6586,7560],
 - in nitromethane with other catalysts at 20° for 168–192 h: Gallium chloride (73–74%) [6570], zirconium chloride (63–71%) [6570,6586,7560] and ferric chloride or stannic chloride (49–53%) [6570,6586,7560];
- from di-tert-butyl or tri-tert-butylphenyl propionates in nitromethane at 20° using various catalysts (*reactions with migration of an o-tert-butyl group and sometimes elimination of these*).

Esters	Catalysts	Reaction times (h)	Yield (%)	Reference
2,4-Di-tert-butylphenyl propionate	$SnCl_4$	144	59	[6570,7712]
	$AlCl_3$	168	54	[6570]
2,6-Di-tert-butylphenyl propionate ^a	$AlCl_3$	240	50	[7712]
2,4,6-Tri-tert-butylphenyl propionate ^b	$SbCl_5$	2	16	[7712]

^aCf. Fries rearrangement of 2-tert-butylphenyl propionate.

^bformation of a very important tar.

- Also obtained by Fries rearrangement of phenyl propionate with aluminium chloride in nitromethane in the presence of tert-butyl chloride at 20° for 24 h (63%) [6570]. (*There are simultaneously acylation and alkylation of the aromatic ring*).
- Also obtained by Friedel–Crafts acylation of p-tert-butylphenol with propionyl chloride in nitromethane in the presence of aluminium chloride at 20° for 120 h (66%) [6466].

- Also obtained by demethylation of 5-tert-butyl-2-methoxypropiofenone in the presence of a 47% hydrobromic acid/57% hydriodic acid mixture in refluxing acetic acid (70%) [7106].
- Also obtained by alkylation of o-hydroxypropiofenone with tert-butyl chloride in nitromethane in the presence of aluminium chloride at 20° for 40 h (79%) [6570].
- Also obtained from 3,5-di-tert-butyl-2-hydroxypropiofenone after total elimination of the tert-butyl group in 3' position by action of aluminium chloride in nitromethane at 20° for 72 h (98%) [6570].

Note: Ion (1⁻), radical ion (1⁻) [69858-31-7], ESR spectrum [6350].

1-(2-Ethyl-3-methoxy-5-methylphenyl)-1-propanone

C₁₃H₁₈O₂ mol.wt. 206.28

Synthesis

- Obtained by reaction of 2,3-dimethoxy-5-methylbenzonitrile and ethylmagnesium bromide [7370]. **N.B.:** Analysis showed that the oil had a composition corresponding to a mixture of about equal parts of 2,3-dimethoxy-5-methyl-propiofenone and 2-ethyl-3-methoxy-5-methylpropiofenone. This oil by distillation in vacuo gave no apparent separation [7370].

oil [7370]; b.p.₁ 100–102° [7370].

1-[2-Hydroxy-3-methyl-6-(1-methylethyl)phenyl]-1-propanone

C₁₃H₁₈O₂ mol.wt. 206.28

Synthesis

- Obtained by Fries rearrangement of carvacryl propionate (b.p.₃ 121°) with aluminium chloride at 120° (71%) [7578], Cf. (11i) [6407].

b.p.₆ 164° [7578].

1-[2-Hydroxy-4-methyl-3-(1-methylethyl)phenyl]-1-propanone

[129375-02-6]

C₁₃H₁₈O₂ mol.wt. 206.28

Synthesis

- Preparation by Fries rearrangement of 3-methyl-2-iso-propylphenyl propionate with aluminium chloride in nitromethane at 20° for 170 h (98%) [7026].

b.p.₁₁ 143–144° [7026];

m.p. 47–48° [7026];

1-[2-Hydroxy-5-methyl-3-(1-methylethyl)phenyl]-1-propanone

[129375-04-8]

C₁₃H₁₈O₂ mol.wt. 206.28

Syntheses

– Preparation by Fries rearrangement of 2-isopropyl-4-methylphenyl propionate with titanium tetrachloride at 100° for 2 h (95%) [7026].

– Also obtained by treatment of 2-hydroxy-3-isopropyl-6-methylpropiophenone with aluminium chloride (1.4 equiv) without solvent at 100° for 2 h (28%) [7026].

– Also obtained (by-product) by Fries rearrangement of two esters with aluminium chloride (1.4 equiv) without solvent at 100° for 2 h [7026]:

Esters	Ketone (%)
2-Isopropyl-5-methylphenyl propionate	16
4-Isopropyl-3-methylphenyl propionate	8

– Also refer to: [7031].

b.p.₁₅ 148–149° [7026];

m.p. 28–29° [7026];

¹H NMR (Sadtler: standard n° 52741M) [7026],

IR (Sadtler: standard n° 79800K) [7026], UV [7026], MS [7026].

1-[2-Hydroxy-6-methyl-3-(1-methylethyl)phenyl]-1-propanone

[121194-61-4]

C₁₃H₁₈O₂

mol.wt. 206.28

Syntheses

– Preparation by Fries rearrangement of thymyl propionate (b.p.₁₉ 180°) [7579] with aluminium chloride [7580], at 120° (83%) [7579] Cf. (*13i*) [6407] or titanium tetrachloride at 120° for 1 h (79%) [7031].

– Also obtained by Friedel–Crafts acylation of thymol with propionic acid in the presence of aluminium chloride at reflux for 12 h (82%) [7581].

N.B.: Two reported boiling points (117–118°/11 mbar [7581] and 161°/6 mbar [7579]) are obviously erroneous, since they correspond to a mixture of products, not containing the expected compound.

b.p.₁₁ 117–118° [7580,7581], b.p.₁₄ 156–157° [7031], b.p.₆ 161° [7579];

m.p. 39° [7031]; ¹H NMR (Sadtler: standard n° 52706M) [7031],

IR (Sadtler: standard n° 79763K) [7031], UV [7031], MS [7031].

1-[2-Hydroxy-6-methyl-4-(1-methylethyl)phenyl]-1-propanone

[121194-63-6]

C₁₃H₁₈O₂

mol.wt. 206.28

Syntheses

– Preparation by Fries rearrangement of 3-isopropyl-5-methylphenyl propionate,

• with titanium tetrachloride at 120° for 1 h (94%) [7031];

• with aluminium chloride at 120° for 1 h (94%) [7031] or at 100° for 2 h (76%) [7026].

– Also obtained by Fries rearrangement of 2-isopropyl-3-methylphenyl propionate with aluminium chloride (1.4 equiv) at 100° for 2 h (53%) [7026].

b.p.₁₄ 164° [7031]; m.p. 23° [7031];

¹H NMR (Sadtler: standard n° 52705M) [7031], IR (Sadtler: standard n° 79762K) [7031],

UV [7031], MS [7031].

1-[4-Hydroxy-2-methyl-3-(1-methylethyl)phenyl]-1-propanone[129375-03-7] $C_{13}H_{18}O_2$ mol.wt. 206.28

Synthesis

– Obtained (poor yield) by Fries rearrangement of 3-methyl-2-isopropylphenyl propionate with aluminium chloride in nitromethane at 20° for 170 h (1%) [7026].

m.p. 91° [7026];

 1H NMR (Sadtler: standard n° 52740M) [7026],

IR (Sadtler: standard n° 79799K) [7026], UV [7026], MS [7026].

1-[4-Hydroxy-2-methyl-5-(1-methylethyl)phenyl]-1-propanone[37847-36-2] $C_{13}H_{18}O_2$ mol.wt. 206.28

Syntheses

– Preparation by Fries rearrangement of 2-isopropyl-5-methylphenyl propionate (thymyl propionate) (b.p.₁₃ 133.5–134.5°) [7302] with aluminium chloride,

- in nitrobenzene, first in an ice bath, then at r.t. for 24 h [7582], (90%) [6961], (85%) [7302];
- without solvent at 100° for 2 h (35%) [7026].

– Also obtained by demethylation of 4-methoxy-2-methyl-5-isopropylpropionophenone (b.p.₁₅ 169–171°) with boiling pyridinium chloride for 37 min (60%) [7583].

– Also obtained by reaction of propionyl chloride with thymol in nitrobenzene in the presence of aluminium chloride [7470].

– Also obtained (by-product) by Fries rearrangement of 3-methyl-4-isopropylphenyl propionate with aluminium chloride (1.4 equiv) without solvent at 100° for 2 h (17%) [7026].

– Also refer to: [7031,7584].

b.p.₁₃ 195–200° [7583], b.p.₁₃ 196–200° [7585], b.p.₁₅ 200° [7470];

m.p. 113° [6351,7302], 112° [6961,7470], 111° [7583,7585];

 1H NMR (Sadtler: standard n° 52707M), IR (Sadtler: standard n° 79764K).**1-[4-Hydroxy-5-methyl-2-(1-methylethyl)phenyl]-1-propanone** $C_{13}H_{18}O_2$ mol.wt. 206.28

Syntheses

– Preparation by Fries rearrangement of 2-methyl-5-isopropylphenyl propionate (carvacryl propionate) (b.p._{12.5} 135–136.5°) with aluminium chloride in nitrobenzene, first in an ice bath, then at r.t. or at 30° for 24 h (86–87%) [6961,7302].

- Also obtained by reaction of propionyl chloride with carvacrol in the presence of aluminium chloride in nitrobenzene, first at $<50^\circ$, then at r.t. for 24 h (quantitative yield) [7586] or simply at r.t. for 24 h (12%) [7587].
- Also refer to: [7067].

b.p.₁₅ 201° [7586];

m.p. 110° [7302,7586], 76° [6961,7587]. One of the reported melting points is obviously wrong.

1-[6-Hydroxy-2-methyl-3-(1-methylethyl)phenyl]-1-propanone

[121194-67-0] $C_{13}H_{18}O_2$ mol.wt. 206.28

Synthesis

– Preparation by treatment of 3-tert-butyl-2-hydroxy-6-methyl-5-isopropylpropiophenone with aluminium chloride in nitromethane at 20° for 24 h (99%) [7031].

N.B.: The structure of this ketone previously reported in the literature [7588] ($150^\circ/15$ mbar) is wrong. The procedure described by these authors leads to 2-hydroxy-4-methyl-5-isopropylpropiophenone instead of the titled ketone.

m.p. 70° [7031];

1H NMR (Sadler: standard n $^\circ$ 52703M) [7031], IR (Sadler: standard n $^\circ$ 79760K) [7031],

UV [7031], MS [7031].

1-[2-Hydroxy-5-(1-methylpropyl)phenyl]-1-propanone

[131867-27-1] $C_{13}H_{18}O_2$ mol.wt. 206.28

Synthesis

– Preparation by reaction of propionic acid with p-sec-butylphenol in the presence of boron trifluoride (71%) [6509].

b.p.₆ $134-137^\circ$ [6509];

$n_D^{25} = 1.5251$ [6509].

1-[4-Hydroxy-3-(1-methylpropyl)phenyl]-1-propanone

[16648-74-1] $C_{13}H_{18}O_2$ mol.wt. 206.28

Synthesis

– Preparation by Fries rearrangement of 2-sec-butylphenyl propionate with aluminium chloride in nitrobenzene at 50° for 24 h [7589].

m.p. $110-112^\circ$ [7589].

USE: Fungicide [7590].

1-(4-Methoxy-2,3,5-trimethylphenyl)-1-propanone[107076-00-6] $C_{13}H_{18}O_2$ mol.wt. 206.28

Synthesis

– Refer to: [7292].

1-(4-Methoxy-2,3,6-trimethylphenyl)-1-propanone[107076-01-7] $C_{13}H_{18}O_2$ mol.wt. 206.28

Syntheses

– Preparation from 2,3,5-trimethylanisole and propionyl chloride [7591] according to the procedures [7592,7593].

– Also refer to: [7292].

m.p. 56–57° [7591]; 1H NMR [7591], IR [7591], MS [7591].**1-(4-Butoxy-2-hydroxyphenyl)-1-propanone**[178693-81-7] $C_{13}H_{18}O_3$ mol.wt. 222.28

Syntheses

– Refer to: [7568,7569,7594,7595].

USE: As indicator for determination of Fe (III) [7569,7595].

Oxime [161140-14-3] $C_{13}H_{19}NO_3$ mol.wt. 237.30.

USE: Analytical reagent for Ni (II) [7594,7596–7598], Cu (II) [7594,7599] and Mo (VI) [7600].

1-(5-Butyl-2,4-dihydroxyphenyl)-1-propanone $C_{13}H_{18}O_3$ mol.wt. 222.28

Synthesis

– Preparation by reaction of propionitrile with 4-butyl-resorcinol (Hoesch reaction) (79%) [7115].

m.p. 62–63° [7115].

1-(2,4-Dimethoxy-3,5-dimethylphenyl)-1-propanone[20935-63-1] $C_{13}H_{18}O_3$ mol.wt. 222.28

Syntheses

– Preparation by reaction of propionyl chloride with 1,3-dimethoxy-2,4-dimethylbenzene in the presence of,

- stannic chloride in carbon disulfide (87%) [7111];
- aluminium chloride in carbon disulfide (80%) [7601].

oil [7111]; b.p._{0.5} 120° [7111], b.p.₁₂ 155–158° [7601];¹H NMR [7111], IR [7111,7601], UV [7111,7601],

MS [7111].

1-[2-(1,1-Dimethylethoxy)-6-hydroxyphenyl]-1-propanone[868731-80-0] $C_{13}H_{18}O_3$ mol.wt. 222.28

Synthesis

– Refer to: [6816].

1-[5-(1,1-Dimethylethyl)-2,4-dihydroxyphenyl]-1-propanone[95102-26-4] $C_{13}H_{18}O_3$ mol.wt. 222.28

Syntheses

– Preparation from various methods [7602,7603] (Japanese patents),

- by Fries rearrangement of 4-tert-butylresorcinol propionate with aluminium chloride in nitrobenzene;
- by reaction of propionitrile with 4-tert-butylresorcinol (Hoesch reaction);
- by alkylation of resorpiophenone with tert-butyl chloride.

1-(2-Ethyl-4,5-dimethoxyphenyl)-1-propanone[92156-94-0] $C_{13}H_{18}O_3$ mol.wt. 222.28

Syntheses

– Preparation by reaction of 1,2-dimethoxy-4-ethylbenzene,

- with propionyl chloride in the presence of aluminium chloride in methylene chloride, first between -5° and 0° , then at r.t. for 4 h (78%) [7604];
- with propionic anhydride in the presence of iodine (66%) [7381].

b.p.₂ 95–101° [7381]; m.p. 43–44° [7604]; ¹H NMR [7381,7604], IR [7381,7604].

1-(4-Ethyl-2,5-dimethoxyphenyl)-1-propanone

[153756-50-4]

C₁₃H₁₈O₃ mol.wt. 222.28

Synthesis

- Obtained by acylation of 2-ethyl-1,4-dimethoxybenzene with propionic acid in the presence of trifluoroacetic anhydride [7605].

1-(4-Ethyl-3,5-dimethoxyphenyl)-1-propanone

[184963-81-3]

C₁₃H₁₈O₃ mol.wt. 222.28

Syntheses

- Obtained by reaction of ethylmagnesium bromide with 3,4,5-trimethoxybenzotrile (20%) [6973].
- Also refer to: [7433,7434].

m.p. 72° [6973].

Oxime C₁₃H₁₉NO₃ mol.wt. 237.3 (m.p. 94–95°) [6973].

1-(5-Ethyl-2,4-dimethoxyphenyl)-1-propanone

[158153-03-8]

C₁₃H₁₈O₃ mol.wt. 222.28

Synthesis

- Refer to: [7384].

1-[4-Hydroxy-3-methoxy-5-(1-methylethyl)phenyl]-1-propanone

[83569-68-0]

C₁₃H₁₈O₃ mol.wt. 222.28

Syntheses

- Preparation by reaction of propionic anhydride with 1,2-dimethoxy-3-isopropylbenzene (b.p.₃ 80–84°) in the presence of aluminium chloride in methylene chloride under nitrogen, first at 0° then at r.t. for 4 h (83%) [7606].

- Preparation by reaction of propionic acid with 6-isopropyl-guaiacol in the presence of boron trifluoride for 90 min at 70° (60%) [7607].
 - Preparation by reaction of dimethyl sulfate with 3,4-dihydroxy-5-isopropylpropiophenone in the presence of potassium carbonate in acetone at r.t. for 2 h (95%) [7606].
- m.p. 87.5–88° [7606], 87–88° [7607]; ¹H NMR [7606], IR [7606].

1-(2-Hydroxy-6-methoxy-3-propylphenyl)-1-propanone

[17488-55-0]

C₁₃H₁₈O₃ mol.wt. 222.28

Synthesis

- Preparation by hydrogenation of 3-allyl-2-hydroxy-6-methoxypropiophenone over Pd/C (80%) [7153].

m.p. 77–78° [7153].

1-(4-Hydroxy-3-methoxy-5-propylphenyl)-1-propanone

C₁₃H₁₈O₃ mol.wt. 222.28

Synthesis

- Preparation by reaction of propionic acid with 6-propyl-guaiacol in the presence of boron trifluoride for 90 min at 70° (70%) [7607].

m.p. 85–86° [7607].

1-[4-Hydroxy-3-[(1-methylethoxy)methyl]phenyl]-1-propanone

[136715-23-6]

C₁₃H₁₈O₃ mol.wt. 222.28

Synthesis

- Refer to: [7392].

1-[4-Hydroxy-3-(propoxymethyl)phenyl]-1-propanone

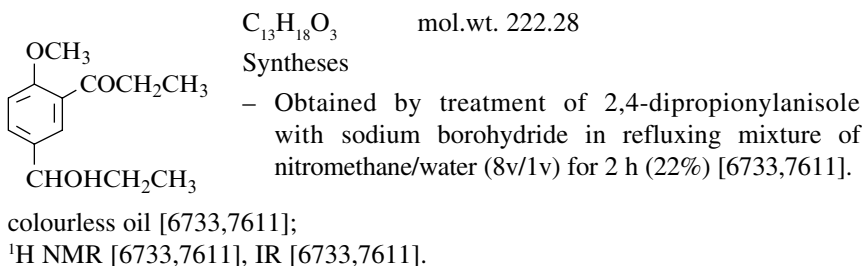

[114477-32-6]

C₁₃H₁₈O₃ mol.wt. 222.28

Syntheses

- Obtained by reaction of 1-propanol with 3-(chloromethyl)-4-hydroxypropiophenone in the presence of sodium hydrogenocarbonate [6982].
- Also refer to: [7392, 7608–7610].

1-[3-(1-Hydroxypropyl)-4-methoxyphenyl]-1-propanone**1-[5-(1-Hydroxypropyl)-2-methoxyphenyl]-1-propanone****1-[4-(2-Ethoxyethoxy)-2-hydroxyphenyl]-1-propanone****1-[2-Hydroxy-4-(2-hydroxybutoxy)phenyl]-1-propanone**

1-(2,3,4-Trimethoxy-6-methylphenyl)-1-propanone

[81421-71-8]

 $C_{13}H_{18}O_4$ mol.wt. 238.28**Synthesis**

– Obtained by reaction of propionyl chloride with 3,4,5-tri-methoxytoluene (m.p. 35–36°) in the presence of aluminium chloride in carbon tetrachloride at r.t. (55%) (impure ketone) [7388].

1-(2,3,5-Trimethoxy-4-methylphenyl)-1-propanone

[383187-40-4]

 $C_{13}H_{18}O_4$ mol.wt. 238.28**Synthesis**

– Preparation by reaction of dimethyl sulfate with 2-hydroxy-3,5-dimethoxy-4-methylpropiophenone in acetone for 40 h at r.t. (99%) [7498].

1-(3-Ethoxy-2-hydroxy-4,6-dimethoxyphenyl)-1-propanone

[89880-49-9]

 $C_{13}H_{18}O_5$ mol.wt. 254.28**Synthesis**

– Obtained (by-product) by reaction of propionyl chloride with 1,2,3,5-tetramethoxybenzene in the presence of aluminium chloride in ethyl ether at r.t. for 20 h (16%) [7543].

m.p. 100.5–101.5° [7543]; 1H NMR [7543], IR [7543].

1-(2,3,4,6-Tetramethoxyphenyl)-1-propanone

[89880-48-8]

 $C_{13}H_{18}O_5$ mol.wt. 254.28**Syntheses**

– Obtained by reaction of propionyl chloride with 1,2,3,5-tetramethoxybenzene in the presence of aluminium chloride in carbon disulfide [7541] or in ethyl ether (45%) [7543].

– Also obtained by reaction of dimethyl sulfate with 2-hydroxy-3,4,6-trimethoxypropiophenone in the presence of potassium carbonate in refluxing acetone [7541], (94%) [7543].

– Also refer to: [7442].

m.p. 55–56° [7541], 50–52° [7543]; 1H NMR [7543], IR [7543].

C₁₄H₁₈O₆ mol.wt. 282.29

Syntheses

– Obtained by treatment of 1-(2-hydroxy-4,6-di-methoxy-3-propionylphenyl)-1-propanone with a mixture of m-chloroperbenzoic acid and trifluoroacetic acid in refluxing methylene chloride for 2 h (31%) [7438].

– Also refer to: [7439].

m.p. 120° [7438];

¹H NMR [7438], ¹³C NMR [7438]; TLC [7438].

2-[4,5-Dimethoxy-2-(1-oxopropyl)phenoxy]propanoic acid

C₁₄H₁₈O₆, 0.5 H₂O mol.wt. 291.30

Synthesis

– Obtained by treatment of ethyl α-(2-propionyl-4,5-dimethoxyphenoxy)propionate with 10% aqueous sodium hydroxide on a steam bath, then at r.t. overnight (91%) [7400].

m.p. 100–104° [7400].

1-[3-Bromo-5-(1,1-dimethylethyl)-4-methoxyphenyl]-1-propanone

[35154-10-0]

 $C_{14}H_{19}BrO_2$ mol.wt. 299.22

Synthesis

– Obtained by reaction of dimethyl sulfate with 3-bromo-5-tert-butyl-4-hydroxypropio-phenone (81%) [7560].

colourless oil [7560]; b.p.₁₅ 172° [7560]; IR [7560], UV [7560].

2,4-Dinitrophenylhydrazone $C_{20}H_{23}BrN_4O_5$ mol.wt. 479.33[35154-12-2] (*E*) ¹H NMR [7627], UV [7627] and[35154-11-1] (*Z*) ¹H NMR [7627], UV [7627].

syn (m.p. 160°) (red crystals) [7560,7627] and

anti (m.p. 188°) (yellow crystals) [7560,7627].

1-[5-Bromo-3-(1,1-dimethylethyl)-2-methoxyphenyl]-1-propanone

[35154-21-3]

 $C_{14}H_{19}BrO_2$ mol.wt. 299.22

Synthesis

– Obtained by reaction of dimethyl sulfate with 5-bromo-3-tert-butyl-2-hydroxypropio-phenone (60%) [7560].

colourless oil [7560]; b.p.₁₈ 190° [7560]; IR [7560], UV [7560].

2,4-Dinitrophenylhydrazone [35154-22-4] $C_{20}H_{23}BrN_4O_5$ mol.wt. 479.33

(m.p. 181°) [7560].

1-[5-Bromo-4-(1,1-dimethylethyl)-2-methoxyphenyl]-1-propanone

[35155-00-1]

 $C_{14}H_{19}BrO_2$ mol.wt. 299.22

Synthesis

– Preparation by reaction of dimethyl sulfate with 5-bromo-4-tert-butyl-2-hydroxypropio-phenone (99%) [7560].

m.p. 98° [7560];

¹H NMR (Sadler: standard 18463M), IR (Sadler: standard 44740) [7560],

UV [7560].

2,4-Dinitrophenylhydrazone [35155-01-2] $C_{20}H_{23}BrN_4O_5$ mol.wt. 479.33
(m.p. 155–156°) [7560].

1-[2,3,4-Trihydroxy-5-(4-morpholinomethyl)phenyl]-1-propanone

[73044-15-2] $C_{14}H_{19}NO_5$ mol.wt. 281.31

Synthesis

– Preparation by reaction of equimolar amounts of 2,3,4-tri-hydroxypropiophenone, morpholine and formaldehyde in alcoholic solution (Mannich reaction) [7628].

USE: Antioxidizing agent and antiradiation [7628].

1-(3,5-Diethyl-4-methoxyphenyl)-1-propanone

[104008-43-7] $C_{14}H_{20}O_2$ mol.wt. 220.31

Synthesis

– Refer to: [7308] (Japanese patent).

1-[3-(1,1-Dimethylethyl)-2-hydroxy-5-methylphenyl]-1-propanone

[133903-09-0] $C_{14}H_{20}O_2$ mol.wt. 220.31

Syntheses

– The reaction of $[AlMe(dbmp)_2]$ (Hdbmp = 2, 6-di-tert-butyl-4-methylphenol) with $O:C(Cl)Et$ leads to acylation of one of the dbmp ligands and affords $[AlMe(dbmp)(bhmp)]$ (SM). (Hbhmp = 3-tert-butyl-2-hydroxy-5-methyl-propiophenone). Hydrolysis of SM yields uncomplexed Hbhmp, the titled ketone [7629].

– Also refer to: [7630].

1H NMR [7629], ^{13}C NMR [7629], IR [7629]; X-ray crystallography [7629].

1-[3-(1,1-Dimethylethyl)-2-hydroxy-6-methylphenyl]-1-propanone

[137937-38-3] $C_{14}H_{20}O_2$ mol.wt. 220.31

Syntheses

– Preparation by Fries rearrangement of 2-tert-butyl-5-methylphenyl propionate (b.p.₁₉ 152°) [7631],

- with titanium tetrachloride in chlorobenzene at 100° for 2 h (55%) [7011] or in ethylene dichloride at 20° for 7 days (16%) [7025];
- with aluminium chloride at 110° for 2 h (80%) or in nitrobenzene at 25° for 6 h (82%) [7631].

b.p.₈ 108° [7631]; m.p. 70° [7011], 68° [7025];

¹H NMR (Sadtler: standard n° 57887M) [7011],

IR (Sadtler: standard n° 84935K) [7011,7025], UV [7011,7025], MS [7011],

Absolute X-ray crystal structure data [7011,7632].

1-[3-(1,1-Dimethylethyl)-4-hydroxy-5-methylphenyl]-1-propanone

[52069-29-1]

C₁₄H₂₀O₂ mol.wt. 220.31

Syntheses

– Preparation [7308].

– Also refer to: [7633,7634] (Japanese patent).

BIOLOGICAL ACTIVITY: Lipoxygenase inhibitor [7308].

1-[3-(1,1-Dimethylethyl)-6-hydroxy-2-methylphenyl]-1-propanone

[51451-25-3]

C₁₄H₂₀O₂ mol.wt. 220.31

Synthesis

– Described as being obtained by Fries rearrangement of 2-tert-butyl-5-methylphenyl propionate with titanium tetrachloride in ethylene dichloride at 20° for 7 days (16%) (compound **3e**) [7025].

m.p. 68° [7025];

¹H NMR [7025], IR (Sadtler: standard n° 47035) [7025], UV [7025].

N.B.: After examination of ¹H NMR spectra, the title ketone was formulated as 1-[3-(1,1-dimethyl-ethyl)-6-hydroxy-2-methylphenyl]-1-propanone [7025]. This contradicted some results with respect to the mobility of the tert-butyl group [6586,7560,7571]. So, a structural analysis from X-ray data has been realized [7632] and has led to the formula 1-[3-(1,1-Dimethylethyl)-2-hydroxy-6-methylphenyl]-1-propanone (compound **5**) [7011], (compound **2e**) in the paper [7025].

1-[5-(1,1-Dimethylethyl)-2-hydroxy-3-methylphenyl]-1-propanone

[51233-85-3]

C₁₄H₂₀O₂ mol.wt. 220.31

Syntheses

– Preparation by Fries rearrangement of 4-tert-butyl-2-methylphenyl propionate in the presence of aluminium chloride in nitromethane at 20° for 7 days (83%) [6466].

- Preparation by Friedel–Crafts alkylation of 2-hydroxy-3-methylpropiophenone with tert-butyl chloride in nitromethane in the presence of aluminium chloride at 20° for 24 h (78%) [6466].

m.p. 67° [6466];

¹H NMR (Sadler: standard n° 20029M), IR (Sadler: standard n° 47038) [6466], UV [6466].

1-[5-(1,1-Dimethylethyl)-4-hydroxy-2-methylphenyl]-1-propanone

[51451-24-2]

C₁₄H₂₀O₂ mol.wt. 220.31

Synthesis

- Preparation by Fries rearrangement of 2-tert-butyl-5-methyl-phenyl propionate with titanium tetrachloride in nitromethane at r.t. for 24 h (31%) [7025].

m.p. 133° [7025];

¹H NMR (Sadler: standard n° 20027M) [7025],

IR (Sadler: standard n° 47036) [7025], UV [7025].

1-[3-(1,1-Dimethylethyl)-4-methoxyphenyl]-1-propanone

[35154-05-3]

C₁₄H₂₀O₂ mol.wt. 220.31

Synthesis

- Preparation by reaction of dimethyl sulfate with 3-tert-butyl-4-hydroxypropiophenone (quantitative yield) [7560].

b.p.₂₀ 167° [7560]; m.p. 66–67° [7560];

¹H NMR (Sadler: standard 18460M),

IR (Sadler: standard 44737) [7560], UV [7560].

2,4-Dinitrophenylhydrazones C₂₀H₂₄N₄O₅ mol.wt. 400.48

[35154-07-5] (*E*) ¹H NMR [7627] and [35154-06-4] (*Z*) ¹H NMR [7627];

syn (m.p. 162°) (red crystals) [7560,7627]; anti (m.p. 178°) (yellow crystals) [7560,7627].

1-[5-(1,1-Dimethylethyl)-2-methoxyphenyl]-1-propanone

[35155-04-5]

C₁₄H₂₀O₂ mol.wt. 220.31

Synthesis

- Preparation by reaction of dimethyl sulfate with 5-tert-butyl-2-hydroxypropiophenone [7560].

b.p.₁₅ 166–167° [7560]; m.p. 46° [7560];

IR [7560], UV [7560].

1-[2-Hydroxy-5-(1,1-dimethylpropyl)phenyl]-1-propanone
 $C_{14}H_{20}O_2$ mol.wt. 220.31

Syntheses

- Obtained by Fries rearrangement of p-tert-amylphenol propionate (b.p.₂₀ 118°) with aluminium chloride at 120° for 1 h (45%) [7573], Cf. (10i) [6407].
- Also obtained by reaction of propionic acid with p-tert-amyl-phenol in the presence of boron trifluoride at 70–80° for 2 h [6363].

yellow amber-coloured oil [6363];

b.p.₃₀ 110° [7573], b.p.₂₄ 206–209° [6363]. One of the reported boiling points is obviously wrong. $n_D^{24} = 1.5320$ [6363].

1-[4-Methoxy-2-methyl-5-(1-methylethyl)phenyl]-1-propanone
 $C_{14}H_{20}O_2$ mol.wt. 220.31

Syntheses

- Preparation by reaction of dimethyl sulfate with 4-hydroxy-2-methyl-5-isopropylpropiophenone in the presence of aqueous sodium hydroxide (76%) [7582].
 - Also obtained by reaction of propionyl chloride with 2-iso-propyl-5-methylanisole in the presence of aluminium chloride in carbon disulfide [7583].
 - Also refer to: [7319].
- b.p.₁₅ 169–171° [7583], b.p.₂₀ 169–171° [7582].

1-(2,4-Dihydroxy-5-pentylphenyl)-1-propanone
 $C_{14}H_{20}O_3$ mol.wt. 236.31

Syntheses

- Preparation by reaction of propionitrile with 4-amyl-resorcinol (Hoesch reaction) [7484], (83%) [7115].
- b.p.₆ 192–195° [7484];
m.p. 52–53° [7115,7484].

1-[3,4-Dimethoxy-5-(1-methylethyl)phenyl]-1-propanone

[83569-69-1]

 $C_{14}H_{20}O_3$ mol.wt. 236.31

Syntheses

- Preparation by reaction of propionyl chloride with 1,2-dimethoxy-3-isopropylbenzene,

- in the presence of ferric chloride in refluxing carbon disulfide (56%) [7635];
 - in the presence of aluminium chloride in methylene chloride at r.t. (71%) [7635].
- Also obtained by reaction of dimethyl sulfate with 4-hydroxy-5-methoxy-3-isopropyl-propionophenone in the presence of potassium carbonate in acetone at r.t. for 2 h (95%) [7606].

b.p._{0.04} 113–116° [7635], b.p._{0.5} 130–132° [7606];

$n_D^{20} = 1.5257$ [7635], $n_D^{24} = 1.531$ [7606];

¹H NMR [7606], IR [7606,7635].

1-(2,3-Dimethoxy-5-propylphenyl)-1-propanone

$C_{14}H_{20}O_3$ mol.wt. 236.31

Synthesis

– Obtained by reaction of ethylmagnesium bromide with 2,3-dimethoxy-5-propylbenzotrile (15%) [6973].

b.p._{0.5} 121–124° [6973].

1-[5-(1,1-Dimethylpropyl)-2,4-dihydroxyphenyl]-1-propanone

[95102-28-6]

$C_{14}H_{20}O_3$ mol.wt. 236.31

Syntheses

– Refer to: [7602,7603] (Japanese patents).

1-[2-Hydroxy-4-(3-methylbutoxy)phenyl]-1-propanone

[37456-35-2]

$C_{14}H_{20}O_3$ mol.wt. 236.31

Syntheses

– Obtained by reaction of isoamyl bromide with respropionophenone in the presence of potassium carbonate in refluxing acetone for 3 days (45%) [7636].

– Also refer to: [7637,7638].

N.B.: The name of this ketone, called 2-(3-methylbutoxy)-4-hydroxypropionophenone (7b) was erroneous [7636] (page 82).

m.p. 43–44° [7636];

¹H NMR [7636], MS [7636]; TLC [7636].

1-[4-Hydroxy-3-[(1-methylpropoxy)methyl]phenyl]-1-propanone

[136715-26-9]

 $C_{14}H_{20}O_3$ mol.wt. 236.31

Synthesis

– Preparation by reaction of 4-hydroxy-3-(chloromethyl)-propiophenone with 2-butanol in the presence of sodium bicarbonate at 30–40° [7392].

1-[2-Hydroxy-4-(pentyloxy)phenyl]-1-propanone

[63411-91-6]

 $C_{14}H_{20}O_3$ mol.wt. 236.31

Synthesis

– Preparation by reaction of a pentyl halide (unspecified) with respropiophenone in the presence of potassium carbonate in refluxing acetone for 5 h (64%) [6380].

viscous oil, purified by preparative TLC [6380];

1H NMR [6380], IR [6380]; TLC [6380].

1-[2,4-Dimethoxy-5-(1-hydroxypropyl)phenyl]-1-propanone $C_{14}H_{20}O_4$ mol.wt. 252.31

Syntheses

– Obtained by treatment of 4,6-dipropionyl-1,3-dimethoxy-benzene with sodium borohydride in a mixture of nitromethane/water (8v/1v) for 24 h at 20° (48%) [6733,7611].

m.p. 134° [6733,7611];

1H NMR [6733,7611], IR [6733,7611].

1-[2,6-Dimethoxy-3-(1-hydroxypropyl)phenyl]-1-propanone $C_{14}H_{20}O_4$ mol.wt. 252.31

Syntheses

– Obtained by treatment of 2,4-dipropionyl-1,3-dimethoxy-benzene with sodium borohydride in a mixture of nitromethane/water (8v/1v) for 24 h at 20° (88%) [6733,7611].

m.p. 58° [6733,7611];

1H NMR [6733,7611], IR [6733,7611].

2,4-Dinitrophenylhydrazone $C_{20}H_{24}N_4O_7$ mol.wt. 432.48 (m.p. 257°) [6733];

IR [6733], UV [6733].

1-[6-Methoxy-2-(methoxymethoxy)-3,4-dimethylphenyl]-1-propanone

[185207-91-4]

 $C_{14}H_{20}O_4$ mol.wt. 252.31

Syntheses

– Refer to: [7490,7491] (Japanese patents).

1-[2,4,6-Trihydroxy-3-(3-methylbutyl)phenyl]-1-propanone

[96756-27-3]

 $C_{14}H_{20}O_4$ mol.wt. 252.31

Syntheses

– Preparation by hydrogenation of 2,4,6-trihydroxy-3-iso-pentenylpropiophenone in the presence of PtO_2 at r.t. for 1 h (86%) [6880].

– Also obtained by reaction of propionic acid with C-isoamyl-phloroglucinol in the presence of boron trifluoride at 28–30° for 24 h (63%) [7639].

USE: Fungicide [6880].

m.p. 175° (table 1) and 180° (table 2) [7639], 173° [6880];

 1H NMR [6880], IR [6880], UV [6880], MS [6880].**1-(2,4,6-Trihydroxy-3-pentylphenyl)-1-propanone**

[66711-60-2]

 $C_{14}H_{20}O_4$ mol.wt. 252.31

Syntheses

– Obtained by Friedel–Crafts acylation of 2,4,6-trihydroxy-pentylbenzene with propionyl chloride in a carbon disulfide/nitrobenzene solution in the presence of aluminium chloride, first at r.t., then at 30–35° for 6 h (58%) [6880].

– Also refer to: [7640].

USE: Fungicide [7640].

m.p. 166° [6880]; 1H NMR [6880], IR [6880], UV [6880], MS [6880].**1-[3-(Aminomethyl)-5-(1,1-dimethylethyl)-2-hydroxyphenyl]-1-propanone**

[75060-92-3]

 $C_{14}H_{21}NO_2$ mol.wt. 235.33

Syntheses

– Refer to: [7106,7641].

– Also refer to: [7642–7653].

USE: Antioxidizing agent [7654].

BIOLOGICAL ACTIVITY: Antiinflammatory [7654–7659]; antiarteriosclerotic agent [7641]; atherosclerosis [7660]; heart infarction inhibition [7661]; anti-hypertensive [7662]; antiallergic [7663].

Hydrochloride (*ONO-3144*) [75060-66-1] $C_{14}H_{21}NO_2$, HCl mol. wt. 271.79.

– For syntheses, refer to: [7106,7641,7648,7662].

Note: Ion (1^-) [118464-88-3] [7654].

BIOLOGICAL ACTIVITY: Antiinflammatory [7106,7654]; antiarteriosclerotic agent [7641].

1-(5-Bromo-2-hydroxy-3-iodo-4-phenoxyphenyl)-1-propanone

[245407-13-0] $C_{15}H_{12}BrIO_3$ mol.wt. 447.07

Syntheses

– Obtained by oxidation of 5-bromo-2,4-dihydroxy-propiofenone [6368] with phenyliodonium diacetate (PIDA) under three conditions (compound **4h**) [6452]:

- (a) (*basic*): in the presence of potassium hydroxide in methanol at 0° and stirring overnight (38%).
- (b) (*neutral*): in refluxing methanol (10%).
- (c) (*acidic*): in refluxing acetic acid (20%).

m.p. $146-147^\circ$ [6452]; 1H NMR [6452], IR [6452], MS [6452]; TLC [6452].

1-(2-Hydroxy-3-iodo-5-nitro-4-phenoxyphenyl)-1-propanone

[245407-11-8] $C_{15}H_{12}INO_5$ mol.wt. 413.17

Syntheses

– Obtained by oxidation of 2,4-dihydroxy-5-nitro-propiofenone [6555] with phenyliodonium diacetate (PIDA) under three conditions (compound **4g**) [6452]:

- (a) (*basic*): in the presence of potassium hydroxide in methanol at 0° and stirring overnight (48%).
- (b) (*neutral*): in refluxing methanol (27%).
- (c) (*acidic*): in refluxing acetic acid (41%).

m.p. $190-192^\circ$ [6452]; 1H NMR [6452], IR [6452], MS [6452]; TLC [6452].

1-(3-Bromo-4,6-dihydroxy[1,1'-biphenyl]-2-yl)-1-propanone

[860152-45-0] $C_{15}H_{13}BrO_3$ mol.wt. 321.17

Synthesis

– Refer to: [7664].

1-[3-[(4-Bromophenyl)sulfonyl]-4-hydroxyphenyl]-1-propanone

[67474-16-2]

 $C_{15}H_{13}BrO_4S$ mol.wt. 369.24**Synthesis**

– Preparation by treatment of 4-propionylphenyl p-bromophenylsulfonate (1 mol) with aluminium chloride (3 mol) at 140° for 3–4 h (84–100%) [7665].

m.p. 105–106° [7665].

BIOLOGICAL ACTIVITY: Bactericide (no data) [7665].

1-[3-[(4-Chlorophenyl)sulfonyl]-4-hydroxyphenyl]-1-propanone

[67474-15-1]

 $C_{15}H_{13}ClO_4S$ mol.wt. 324.78**Synthesis**

– Preparation by treatment of 4-propionylphenyl p-chlorophenylsulfonate (1 mol) with aluminium chloride (3 mol) at 140° for 3–4 h (84–100%) [7665].

m.p. 68–70° [7665].

BIOLOGICAL ACTIVITY: Bactericide (no data) [7665].

1-(2-Hydroxy-3-iodo-4-phenoxyphenyl)-1-propanone

[245407-09-4]

 $C_{15}H_{13}IO_3$ mol.wt. 368.17**Syntheses**

– Obtained by oxidation of respropiofenone [6734] with phenyliodonium diacetate (PIDA) under three conditions (compound **4e**) [6452]:

- (*basic*): in the presence of potassium hydroxide in methanol at 0° and stirring overnight (68%).
- (*neutral*): in refluxing methanol (40%).
- (*acidic*): in refluxing acetic acid (55%).

m.p. 136–138° [6452]; 1H NMR [6452]; IR [6452]; TLC [6452].**1-[4-Hydroxy-3-[(4-iodophenyl)sulfonyl]phenyl]-1-propanone**

[67474-17-3]

 $C_{15}H_{13}IO_4S$ mol.wt. 416.24**Synthesis**

– Preparation by treatment of 4-propionylphenyl p-iodophenylsulfonate (1 mol) with aluminium chloride (3 mol) in nitrobenzene at 100–110° (84–100%) [7665].

BIOLOGICAL ACTIVITY: Bactericide (no data) [7665].

m.p. 135° [7665].

1-(4-Hydroxy-5-nitro[1,1'-biphenyl]-3-yl)-1-propanone

[92554-09-1]

 $C_{15}H_{13}NO_4$ mol.wt. 271.27

Synthesis

- Obtained by reaction of concentrated nitric acid with 2-hydroxy-5-phenylpropiophenone in concentrated sulfuric acid between -5° and 0° [7666].

m.p. $55-60^\circ$ [7666].**1-[2,4-Dihydroxy-5-[(4-nitrophenyl)azo]phenyl]-1-propanone**

[65412-16-0]

 $C_{15}H_{13}N_3O_5$ mol.wt. 315.29

Synthesis

- Refer to: [7667].

USE: Dye for polypropylene fibres [7667].

1-(2-Hydroxy[1,1'-biphenyl]-3-yl)-1-propanone $C_{15}H_{14}O_2$ mol.wt. 226.27

Syntheses

- Obtained (by-product) by Fries rearrangement of o-xenyl propionate,

- with aluminium chloride at 160° for 30–45 min (8%) [7668], (4%) [7669];
- with titanium tetrachloride in nitromethane at 20° for 24 h (10%) [7561].

b.p._{3,5} $183-185^\circ$ [7668]; $n_D^{20} = 1.6145$ [7561]; IR [7561], UV [7561].**1-(3-Hydroxy[1,1'-biphenyl]-4-yl)-1-propanone**

[108478-15-5]

 $C_{15}H_{14}O_2$ mol.wt. 226.27

Syntheses

- Preparation by Fries rearrangement of 3-hydroxybiphenyl propionate (b.p.₂ $160-165^\circ$) [7668,7670] with aluminium chloride (71–74%) [7668,7671].
- Preparation by Friedel–Crafts acylation of 3-methoxy-biphenyl with propionyl chloride in the presence of aluminium chloride, first in refluxing methylene chloride for 11 h, then at r.t. for 11 h (71%) [7671].
- Also obtained by ether cleavage of 3-methoxy-4-propionylbiphenyl with aluminium chloride in refluxing methylene chloride overnight (53%) [7671].

- Also obtained (poor yield) by heating diethyl propionylmalonate and 2-phenyl-3-yn-2-ol together for 1.5 h, the final temperature was 230° (7%) [7672].

m.p. 113–113.5° [7672], 110.5–111° [7671], 109° [7668,7670];
IR [7672], UV [7672].

1-(4-Hydroxy[1,1'-biphenyl]-3-yl)-1-propanone

2-Hydroxy-5-phenylpropiophenone

USE: Plasticizer for vinyl chloride-vinylene chloride polymers [7673].

1-(4'-Hydroxy[1,1'-biphenyl]-4-yl)-1-propanone

- Obtained by Fries rearrangement of 4-(propionyloxy)biphenyl (m.p. 93°) with aluminium chloride in nitrobenzene, first at 20° for 12 h, then at 60° for 1 h (38%) [7674].
 - Also obtained by treatment of 4-methoxy-4'-propionylbiphenyl with 48% hydrobromic acid in boiling acetic acid for 7–8 h (70%) [7675].
- m.p. 179° [7674], 174° [7675].

Benzoate $C_{22}H_{18}O_3$ mol.wt. 330.38.

- Preparation by reaction of benzoyl chloride with 4-hydroxy-4'-propionylbiphenyl in the presence of pyridine (82%) [7675].
- m.p. 167–168° [7675].

1-(6-Hydroxy[1,1'-biphenyl]-3-yl)-1-propanone

- Preparation by Fries rearrangement of o-xenyl propionate (2-hydroxydiphenyl propionate),

- with aluminium chloride [7603], at 120° for 5 h [7676] or 160° for 30–45 min [7668], (46%) [7669];
- with titanium tetrachloride in nitromethane at 20° for 24 h (22%) [7561].

- Also obtained by direct condensation of o-hydroxydiphenyl with propionic acid in the presence of boron trifluoride for 2–3 h between 65° and 85° [6819].
- Also obtained by treatment of 5-propionyl-2-methoxydiphenyl (m.p. 92°) with boiling pyridinium chloride [7677].
- Also refer to: [7602,7670].

m.p. 154° [6819], 151–152° [7668], 150° [7561], 148–149° [7677], 148° [7676], 147.5–148° [7669];
IR [7561], UV [7561].

1-(2,5-Dihydroxy[1,1'-biphenyl]-4-yl)-1-propanone

$C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

- Obtained (by-product) by Friedel–Crafts acylation of 2,5-dimethoxydiphenyl (b.p.₄ 147–149°) with propionyl chloride or propionic anhydride in the presence of aluminium chloride (15%) [7668].

b.p.₆ 220–230° [7668]; m.p. 138–139° [7668].

1-(3,6-Dihydroxy[1,1'-biphenyl]-2-yl)-1-propanone

6-Propionyl-2,5-dihydroxydiphenyl

$C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

- Obtained by direct propionylation of 2,5-dimethoxydiphenyl, but total demethylation took place at the same time (15%) [7668].

1-(2-Hydroxy-3-phenoxyphenyl)-1-propanone

[307000-30-2]

$C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

- Refer to: [7678].

USE: For inhibiting development of body odours in cosmetic compositions [7679–7683].

1-(2-Hydroxy-4-phenoxyphenyl)-1-propanone[479580-94-4] $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

USE: For inhibiting development of body odours in cosmetic compositions [7679–7683].

1-(4-Hydroxy-3-phenoxyphenyl)-1-propanone[307000-51-7] $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

**1-[4-Hydroxy-3-(phenylsulfonyl)phenyl]-1-propanone**[67474-13-9] $C_{15}H_{14}O_4S$ mol.wt. 290.34

Synthesis

BIOLOGICAL ACTIVITY: Bactericide (no data) [7665].

m.p. 64° [7665].

1-(3,4-Dihydroxyphenyl)-1-propanone 3-phenylphosphonate

2-Hydroxy-5-propionylphenyl hydrogen phenylphosphonate

 $C_{15}H_{15}O_5P$ mol.wt. 306.25

Synthesis

m.p. 163–164.5° [6822]; IR [6822]; pK_a [6822].

1-[2-Hydroxy-3,5-bis(1-methylethyl)phenyl]-1-propanone-2,2,3,3,3-*d*₅C₁₅H₁₇D₅O₂ mol.wt. 239.37

Synthesis

Ion (1⁻), radical ion (1⁻) [57209-24-2], ESR spectrum [6350].**1-[4-(3-Bromopropoxy)-2-hydroxy-3-(2-propenyl)phenyl]-1-propanone**

[194792-40-0]

C₁₅H₁₉BrO₃ mol.wt. 327.22

Synthesis

**1-[4-(3-Chloro-2-hydroxypropoxy)-2-hydroxy-3-(2-propenyl)phenyl]-1-propanone**

[63360-15-6]

C₁₅H₁₉ClO₄ mol.wt. 298.77

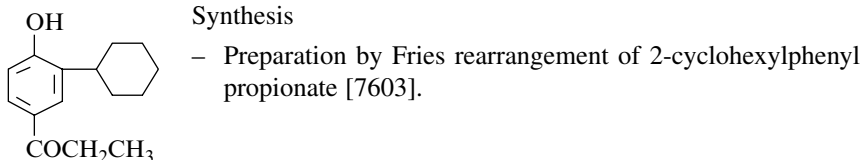

Syntheses

**1-(3-Cyclohexyl-4-hydroxyphenyl)-1-propanone**

[95185-71-0]

C₁₅H₂₀O₂ mol.wt. 232.32

Synthesis

USE: As colour developer [7603].

1-(5,6,7,8,9,10-Hexahydro-1-hydroxy-2-benzocyclooctenyl)-1-propanone

[936642-86-3]

C₁₅H₂₀O₂ mol.wt. 232.32

Synthesis

Colourless liquid [7570]; b.p._{0.1} 120–130° [7570];¹H NMR [7570], ¹³C NMR [7570], IR [7570], MS [7570]; GLC [7570].

1-(5-Cyclohexyl-2,4-dihydroxyphenyl)-1-propanone

[159977-37-4]

 $C_{15}H_{20}O_3$ mol.wt. 248.32

Synthesis

– Preparation by reaction of propionic acid with 4-cyclohexyl-resorcinol in the presence of boron trifluoride etherate at 125° for 15 min (80%) [6737].

m.p. 72–73° [6737]; IR [6737], UV [6737].

1-[3-(Cyclohexyloxy)-4-hydroxyphenyl]-1-propanone

[137053-40-8]

 $C_{15}H_{20}O_3$ mol.wt. 248.32

Synthesis

– Preparation [7616] (Czech patent).

USE: As pharmaceutical intermediate [7616].

1-[4-(Cyclohexyloxy)-2-hydroxyphenyl]-1-propanone

[101002-35-1]

 $C_{15}H_{20}O_3$ mol.wt. 248.32

Syntheses

– Obtained by Fries rearrangement of 3-(cyclohexyloxy)-phenyl propionate [7685].
 – Also obtained by reaction of cyclohexyl bromide with respropiofenone in the presence of potassium carbonate in refluxing acetone [7237].

m.p. 80–81° [7237].

Oxime [101002-22-6] $C_{15}H_{21}NO_3$ mol.wt. 263.34 [7686] (m.p. 65–69°) [7237,7687].

– As lipoxygenase inhibitor [7685]; antiallergic and antiinflammatory agent [7688].

1-[3-[(Cyclopentyloxy)methyl]-4-hydroxyphenyl]-1-propanone

[154783-68-3]

 $C_{15}H_{20}O_3$ mol.wt. 248.32

Synthesis

– Refer to: [7689] (Czech patent).

2-[4,5-Dimethoxy-2-(1-oxopropyl)phenoxy]acetic acid ethyl ester $C_{15}H_{20}O_6$ mol.wt. 296.32**Synthesis**

– Obtained by reaction of ethyl bromoacetate with 2-hydroxy-4,5-dimethoxypropiofenone in the presence of potassium hydroxide in refluxing acetone (96%) [7400].

m.p. 112–114° [7400].

1-[2-Hydroxy-4-(β-D-glucopyranosyloxy)phenyl]-1-propanone $C_{15}H_{20}O_8$ mol.wt. 328.32**Synthesis**

– Preparation by treatment of its tetraacetate (m.p. 129–130°) with boiling methanolic 0.2 M sodium methoxide for 3 min (75%) [6731].

m.p. (monohydrate) 144–145° [6731]; $(\alpha)_D^{25} = -51.4^\circ$ (c = 2 in DMF) [6731]; (anhydrous) 79–181° [6731]; $(\alpha)_D^{20} = -53.2^\circ$ (c = 2 in DMF) [6731]; paper chromatography [6731].

**1-[4-Hydroxy-2-(β-D-glucopyranosyloxy)phenyl]-1-propanone (Trihydrate)** $C_{15}H_{20}O_8, 3 H_2O$ mol.wt. 382.36**Synthesis**

– Obtained by treatment of its pentaacetate (m.p. 110–112°) with boiling methanolic 0.2 M sodium methoxide for 3 min (50%) [6731].

m.p. 69–70° [6731]; paper chromatography [6731]; $(\alpha)_D^{30} = -74.5^\circ$ (c = 1 in water) [6731].

1-[4-(3-Bromopropoxy)-2-hydroxy-3-propyl]-1-propanone

[194608-83-8]

 $C_{15}H_{21}BrO_3$ mol.wt. 329.23**Syntheses**

– Preparation by reaction of 1,3-dibromopropane with 2,4-dihydroxy-3-propylpropiofenone in the presence of potassium carbonate and potassium iodide in refluxing acetone [7452,7478].

– Also refer to: [7480,7483].

1-[5-[(6-Chlorohexyl)oxy]-2-hydroxyphenyl]-1-propanone[140439-50-5] $C_{15}H_{21}ClO_3$ mol.wt. 284.78**Synthesis**

– Preparation by reaction of 1-bromo-6-chlorohexane with 2,5-dihydroxypropiophenone in the presence of potassium carbonate in refluxing 2-butanone for 16 h (83%) [6789].

yellow solid [6789]; 1H NMR [6789].

1-[4-(3-Chloro-2-hydroxypropoxy)-2-hydroxy-3-propylphenyl]-1-propanone[69076-30-8] $C_{15}H_{21}ClO_4$ mol.wt. 300.78**Synthesis**

– Preparation by reaction of epichlorohydrin with 2,4-dihydroxy-3-propylpropiophenone, according to the method [7690] (quantitative yield) [7482].

oily solid [7482].

1-(2-Fluoro-4-hydroxy-3,5-dipropylphenyl)-1-propanone[449779-85-5] $C_{15}H_{21}FO_2$ mol.wt. 252.33**Synthesis**

– Refer to: [7479].

1-[2-Hydroxy-4-(2-morpholinoethoxy)phenyl]-1-propanone (Hydrochloride)[20800-11-7] $C_{15}H_{21}NO_4 \cdot HCl$ mol.wt. 315.80**Synthesis**

– Obtained by adding a solution of o-hydroxy-propiophenone and sodium ethoxide in ethanol to morpholine hydrochloride and the mixture refluxed 3 h [7691].

m.p. 193–195° [7691]; LD_{50} [7691].

1-[2,3,4-Trihydroxy-5-(1-piperidinylmethyl)phenyl]-1-propanone

[73044-16-3]

 $C_{15}H_{21}NO_4$ mol.wt. 279.34**Synthesis**

– Preparation by reaction of equimolar amounts of 2,3,4-trihydroxypropiophenone, piperidine and formaldehyde in alcoholic solution (Mannich reaction) [7628].

USE: Antioxidizing agent and antiradiation [7628].

1-[3-(1,1-Dimethylethyl)-2-hydroxy-5,6-dimethylphenyl]-1-propanone

[121194-64-7]

 $C_{15}H_{22}O_2$ mol.wt. 234.34**Synthesis**

– Preparation by Fries rearrangement of 2-tert-butyl-4,5-di-methylphenyl propionate with titanium tetrachloride in chlorobenzene at 100° for 2 h (52%) [7031].

m.p. 56° [7031];

1H NMR (Sadler: standard n° 52743M) [7031],

IR (Sadler: standard n° 79802K) [7031], UV [7031], MS [7031].

1-[3-(1,1-Dimethylethyl)-2-methoxy-4-methylphenyl]-1-propanone $C_{15}H_{22}O_2$ mol.wt. 234.34**Synthesis**

– Refer to: [7472].

b.p.₁₅ 180° [7472]; m.p. 72° [7472].

1-[3-(1,1-Dimethylethyl)-2-methoxy-6-methylphenyl]-1-propanone $C_{15}H_{22}O_2$ mol.wt. 234.34**Synthesis**

– Preparation by reaction of dimethyl sulfate with 3-tert-butyl-2-hydroxy-6-methylpropiophenone [6351].

1H NMR (Sadler: standard n° 57888M), IR (Sadler: standard n° 84936K).

1-[2-Hydroxy-3,5-bis(1-methylethyl)phenyl]-1-propanone[57139-00-1] $C_{15}H_{22}O_2$ mol.wt. 234.34

Note: Ion (1^-), radical ion (1^-) [57139-00-1], ESR spectrum [6350].

1-(2-Hydroxy-3,4-dipropylphenyl)-1-propanone[936642-84-1] $C_{15}H_{22}O_2$ mol.wt. 234.34

White solid [7570]; b.p., $120-130^\circ$ [7570];

1H NMR [7570], ^{13}C NMR [7570], IR [7570], MS [7570]; GLC [7570].

1-(2-Hydroxy-3,5-dipropylphenyl)-1-propanone[92729-83-4] $C_{15}H_{22}O_2$ mol.wt. 234.34

amber-coloured oil [7466]; b.p., $154-155^\circ$ [7466], b.p. $295-298^\circ$ [6575];

$n_D^{26} = 1.5217$ [7466].

1-(4-Hydroxy-3,5-dipropylphenyl)-1-propanone[449779-75-3] $C_{15}H_{22}O_2$ mol.wt. 234.34

white solid [6402]; 1H NMR [6402], MS [6402].

1-(2,4-Dihydroxy-3,5-dipropylphenyl)-1-propanone

[449779-73-1]

 $C_{15}H_{22}O_3$ mol.wt. 250.34

Syntheses

- Preparation by heating a mixture of 1,3-dihydroxy-2,4-di-propylbenzene, sodium propionate and triflic acid (TfOH) (75%) [7459].
- Also refer to: [7479].

1-(2,5-Dihydroxy-3,4-dipropylphenyl)-1-propanone

[873222-90-3]

 $C_{15}H_{22}O_3$ mol.wt. 250.34

Synthesis

- Obtained by catalytic cocyclization of 4-octyne, ethyl vinyl ketone and carbon monoxide (20 atmospheres) in the presence of $[Cp^*RuCl_2]_2$ in DMF at 140° for 20 h (54%) [7692].

yellow solid [7692]; m.p. 116–117° [7692];

 1H NMR [7692], ^{13}C NMR [7692], IR [7692], MS [7692]; TLC [7692].**1-(2,4-Dihydroxy-5-hexylphenyl)-1-propanone** $C_{15}H_{22}O_3$ mol.wt. 250.34

Synthesis

- Preparation by reaction of propionitrile with 4-hexyl-resorcinol (Hoesch reaction) (67%) [7115].

m.p. 50–51° [7115,7484].

1-[4-(1,1-Dimethylethyl)-2,5-dimethoxyphenyl]-1-propanone

[120350-19-8]

 $C_{15}H_{22}O_3$ mol.wt. 250.34

Synthesis

- Preparation by reaction of propionyl chloride with 2-tert-butylhydroquinone dimethyl ether in the presence of aluminium chloride in carbon disulfide [7336].

 1H NMR [7336], IR [7336], UV [7336], MS [7336].**1-[4-Methoxy-3-(3-methylbutoxy)phenyl]-1-propanone** $C_{15}H_{22}O_3$ mol.wt. 250.34

Synthesis

- Obtained by treatment of 2-isopentyloxy-1-methoxy-4-(1-propynyl)benzene with aqueous-ethanolic sulfuric acid [7693].

m.p. 64.5–65° [7693].

4-Nitrophenylhydrazone $C_{21}H_{27}N_3O_4$ mol.wt. 385.46 (m.p. 106–108°)[7693].

2,4-Dinitrophenylhydrazone $C_{21}H_{26}N_4O_6$ mol.wt. 430.46 (m.p. 136–137°)[7693].

1-(3-Hexyl-2,4,6-trihydroxyphenyl)-1-propanone

[66711-55-5] $C_{15}H_{22}O_4$ mol.wt. 266.34

Synthesis

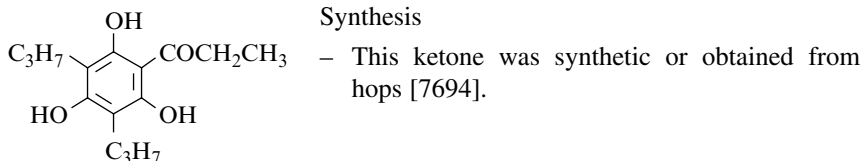

USE: Fungicide [7640].

1-(2,4,6-Trihydroxy-3,5-dipropylphenyl)-1-propanone

[54556-10-4] $C_{15}H_{22}O_4$ mol.wt. 266.34

Synthesis

1-[3,4-Bis(ethoxymethoxy)-2-hydroxyphenyl]-1-propanone

[124300-26-1] $C_{15}H_{22}O_6$ mol.wt. 298.34

Synthesis

pale yellow oil [6757]; 1H NMR [6757]; TLC [6757].

1-[4-[(Dimethylamino)methyl]-2-hydroxy-3-propylphenyl]-1-propanone

[107223-71-2] $C_{15}H_{23}NO_2$ mol.wt. 249.35

Synthesis

b.p._{0.2} 105–112° [7564].

1-[2,4-Dihydroxy-5-[(6-nitro-2-benzothiazolyl)azo]phenyl]-1-propanone

[65412-18-2]

 $C_{16}H_{12}N_4O_5S$ mol.wt. 372.36

Synthesis

– Refer to: [7667].

USE: Dye for polypropylene fibres [7667].

1-[5-(2-Benzothiazolylazo)-2,4-dihydroxyphenyl]-1-propanone

[65412-17-1]

 $C_{16}H_{13}N_3O_3S$ mol.wt. 327.36

Synthesis

– Refer to: [7667].

USE: Dye for polypropylene fibres [7667].

1-[4-[(2,4-Dichlorophenyl)methoxy]-2-hydroxyphenyl]-1-propanone

[63411-96-1]

 $C_{16}H_{14}Cl_2O_3$ mol.wt. 325.19

Synthesis

– Obtained by reaction of a 2,4-dichlorobenzyl halide (unspecified) with respropiophenone in the presence of potassium carbonate in refluxing acetone for 5 h (43%) [6380].

m.p. 109–110° [6380]; 1H NMR [6380], IR [6380]; TLC [6380].**1-[4-[(3,4-Dichlorophenyl)methoxy]-2-hydroxyphenyl]-1-propanone**

[63411-95-0]

 $C_{16}H_{14}Cl_2O_3$ mol.wt. 325.19

Synthesis

– Obtained by reaction of a 3,4-dichlorobenzyl halide (unspecified) with respropiophenone in the presence of potassium carbonate in refluxing acetone for 5 h (55%) [6380].

m.p. 126–127° [6380]; 1H NMR [6380], IR [6380]; TLC [6380].

1-[4-(Benzoyloxy)-2-hydroxyphenyl]-1-propanoneC₁₆H₁₄O₄ mol.wt. 270.28

Synthesis

– Obtained (by-product) by action of potassium hydroxide with 2,4-di(benzoyloxy) propiophenone in pyridine at 50° for 5 min [6762].

b.p._{0.4} 210–220° [6762]; m.p. 80° [6762].**1-[2-(Benzoyloxy)-4,6-dihydroxyphenyl]-1-propanone**C₁₆H₁₄O₅ mol.wt. 286.28

Syntheses

– Obtained by reaction of benzoyl chloride with phloropropiophenone in the presence of 1.5% aqueous potassium hydroxide (8%) [6873].
– Also refer to: [6743].

m.p. 191–192° [6873].

N.B.: A mixture of the two monobenzoates (see below its isomer) melts at about 167°.

1-[4-(Benzoyloxy)-2,6-dihydroxyphenyl]-1-propanoneC₁₆H₁₄O₅ mol.wt. 286.28

Syntheses

– Obtained by reaction of benzoyl chloride with phloropropiophenone in the presence of 1.5% aqueous potassium hydroxide (19%) [6873].
– Also refer to: [6743].

m.p. 193° [6743,6873].

N.B.: A mixture of the two monobenzoates (see above its isomer) melts at about 167°.

1-(3'-Chloro-2'-methoxy[1,1'-biphenyl]-4-yl)-1-propanoneC₁₆H₁₅ClO₂ mol.wt. 274.75

Synthesis

– Obtained (by-product) by reaction of propionyl chloride with 3-chloro-2-methoxybiphenyl in the presence of aluminium chloride, in mixture with its 3-propionyl isomer (major product). Total yield (73%) [7695].

b.p.₂₀ 230–235° [7695].

1-(5-Chloro-6-methoxy[1,1'-biphenyl]-3-yl)-1-propanone
 $C_{16}H_{15}ClO_2$ mol.wt. 274.75
Synthesis

- Obtained (major product) by reaction of propionyl chloride with 3-chloro-2-methoxybiphenyl in the presence of aluminium chloride, in mixture with its 4'-propionyl isomer (minor product). Total yield (73%) [7695].

 b.p.₂₀ 230–235° [7695].
1-(5'-Fluoro-2'-methoxy[1,1'-biphenyl]-4-yl)-1-propanone

[864287-73-0]

 $C_{16}H_{15}FO_2$ mol.wt. 258.29
Synthesis

- Refer to: [7696].

light-yellow crystals [7696];

¹H NMR [7696], ¹³C NMR [7696], MS [7696].**1-[2,4-Dihydroxy-5-[(2-methoxyphenyl)azo]phenyl]-1-propanone**

[65412-10-4]

 $C_{16}H_{16}N_2O_4$ mol.wt. 300.31
Synthesis

- Refer to: [7667].

USE: Dye for polypropylene fibres [7667].

1-[2,4,6-Trihydroxy-3-methyl-5-(phenylazo)phenyl]-1-propanone (E)
 $C_{16}H_{16}N_2O_4$ mol.wt. 300.31
Syntheses

- Preparation by reaction of 1,3-diphenyltriazeno (diazoaminobenzene) with 2,4,6-trihydroxy-3-methylpropionone [7260,7697].

m.p. 211° [7260,7697].

1-[2-Hydroxy-3-(phenylmethyl)phenyl]-1-propanone $C_{16}H_{16}O_2$ mol.wt. 240.30

Synthesis

– Obtained by Fries rearrangement of 2-benzylphenyl propionate with aluminium chloride [6351].

m.p. 53° [6351];

 1H NMR (Sadler: standard n° 29909M).**1-[2-Hydroxy-5-(phenylmethyl)phenyl]-1-propanone** $C_{16}H_{16}O_2$ mol.wt. 240.30

Syntheses

– Obtained by alkylation of 2-hydroxypropiophenone with benzyl chloride in the presence of zinc chloride, at reflux (21%) [7698].

– Also obtained by Fries rearrangement of 4-benzylphenyl propionate (b.p.₂₀ 205°) with aluminium chloride [7699].

b.p._{0.6} 148–150° [7698]; $n_D^{24.5} = 1.5601$ [7698]; m.p. 75–76° [7699].**1-[4-Hydroxy-3-(phenylmethyl)phenyl]-1-propanone** $C_{16}H_{16}O_2$ mol.wt. 240.30

Syntheses

– Obtained by Fries rearrangement of 2-benzylphenyl propionate (b.p.₂₅ 203°) [7699] with aluminium chloride [6351,7699].

– Also obtained by alkylation of 4-hydroxypropiophenone with benzyl chloride in the presence of zinc chloride, at reflux (18%) [7698].

b.p.₁ 216–220° [7698]; m.p. 157° [6351,7698], 153° [7699]; 1H NMR (Sadler: standard n° 28217M), IR (Sadler: standard n° 55289).**1-(3-Methoxy[1,1'-biphenyl]-4-yl)-1-propanone** $C_{16}H_{16}O_2$ mol.wt. 240.30

Syntheses

– Preparation by reaction of propionyl chloride with 3-methoxybiphenyl [7671].

– Also obtained by reaction of ethylmagnesium bromide with 3-methoxybiphenyl-4-carbonitrile [7671].

m.p. 68.5–69° [7671].

1-(3'-Methoxy[1,1'-biphenyl]-4-yl)-1-propanone
 $C_{16}H_{16}O_2$ mol.wt. 240.30
Synthesis

– Preparation by reaction of propionyl chloride with 3-methoxybiphenyl in the presence of aluminium chloride in refluxing methylene chloride for 11 h (92%) [7671].

m.p. 87–88° [7671].

1-(4'-Methoxy[1,1'-biphenyl]-4-yl)-1-propanone

[56116-76-8]

 $C_{16}H_{16}O_2$ mol.wt. 240.30
Syntheses

– Obtained by reaction of propionyl chloride with 4-methoxybiphenyl in the presence of aluminium chloride,

- in carbon disulfide (30%) [7675];
- in nitrobenzene, first at 0°, then at r.t. overnight (26%) [7674].

– Also refer to: [7700–7702].

m.p. 149° [7674].

1-(5-Methoxy[1,1'-biphenyl]-2-yl)-1-propanone
 $C_{16}H_{16}O_2$ mol.wt. 240.30
Syntheses

– Preparation by reaction of propionic anhydride with 3-methoxybiphenyl in the presence of aluminium chloride in carbon disulfide [7668,7670].

– Also obtained by reaction of ethylmagnesium bromide with 5-methoxybiphenyl-2-carbonitrile [7671].

b.p._{2,5} 171.5–173° [7671]; m.p. 72° [7668,7670].

1-(6-Methoxy[1,1'-biphenyl]-3-yl)-1-propanone
 $C_{16}H_{16}O_2$ mol.wt. 240.30
Syntheses

– Obtained by reaction of propionyl chloride [7677] or propionic anhydride [7668,7670] with 2-methoxybiphenyl in the presence of aluminium chloride.

m.p. 93–94° [7668,7670], 92° [7677].

1-[2,4-Dihydroxy-3-(phenylmethyl)phenyl]-1-propanoneC₁₆H₁₆O₃ mol.wt. 256.30

Syntheses

- Obtained by O-debenzylation of 2-hydroxy-3-benzyl-4-benzyloxypropiofenone with concentrated hydrochloric acid in refluxing acetic acid for 2 h (27%) [7703].
- Also obtained by reaction of propionitrile with 2-benzylresorcinol (Hoesch reaction) (12%) [7703].
- m.p. 157–158° [7703].

1-[2,4-Dihydroxy-5-(phenylmethyl)phenyl]-1-propanoneC₁₆H₁₆O₃ mol.wt. 256.30

Synthesis

- Obtained by Fries rearrangement of 2,4-dihydroxy-diphenylmethane dipropionate (b.p.₁₆ 240°) with aluminium chloride [7699].
- m.p. 92° [7699].

1-[2-Hydroxy-4-(phenylmethoxy)phenyl]-1-propanone

[63411-94-9]

C₁₆H₁₆O₃ mol.wt. 256.30

Syntheses

- Preparation by partial benzylation of resorpiophenone with benzyl halide (unspecified) [6380] or with benzyl chloride [7135],
- in the presence of potassium carbonate in refluxing acetone for 2 h (75%) [7135], for 5 h (45%) [6380] or for 8 h (47%) [7703];
 - in the presence of methanolic potassium hydroxide, first at r.t. overnight, then at reflux for 5 h [7703].

m.p. 113–114° [6380,7703], 112–114° [7135];

[40662-81-5]

 $C_{17}H_{26}O_2$ mol.wt. 262.39

Syntheses

– Preparation by Fries rearrangement of 2,4-di-tert-butyl-phenyl propionate in nitromethane,

- with titanium tetrachloride at 20° for a week (69%) [7712];
 - with stannic chloride at 20° for 24 h (50%) [6570,7712].
- Also obtained by Fries rearrangement of 2,6-di-tert-butyl-phenyl propionate with titanium tetrachloride in nitromethane at 20° for a week (17%) [7712]. There is a tert-butyl group migration on the ring.
- Also obtained by Fries rearrangement of 2,4,6-tri-tert-butylphenyl propionate in nitromethane,
- with titanium tetrachloride at 20° for 8 days (25%) [7712];
 - with antimony pentachloride at 20° for 2 h (38%) [7712].

In these above two reactions, there are tert-butyl group eliminations.

- Also obtained (by-product) by Fries rearrangement of 2-tert-butylphenyl propionate in the presence of aluminium bromide, antimony pentachloride, antimony pentafluoride or boron trifluoride in nitromethane at 20° for 24 h (5–8%) [7576].

b.p.₁₈₋₂₀ 155–156° [7712]; m.p. 68° [7712];

$^1\text{H NMR}$ (Sadtlter: standard n° 16617M), IR (Sadtlter: standard n° 44743) [7712], UV [7712].

Notes: Radical ion (1^-) [72051-72-0], ESR spectrum [6350]; radical ion (1^-) [65282-38-4], ESR spectrum [7711].

1-[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl]-1-propanone

[14035-34-8]

$\text{C}_{17}\text{H}_{26}\text{O}_2$ mol.wt. 262.39

Syntheses

- Preparation by Friedel–Crafts acylation of 2,6-di-tert-butylphenol with propionyl chloride in the presence of aluminium chloride,
 - at 0° for 45 min [7713] according to the procedure [7714];
 - at -10° for 1–13 min (92%) [7715];
 - at 20° for 20 min, followed by hydrolysis of the formed keto ester (85%, m.p. $46.5\text{--}47.5^\circ$) [7716].
- Preparation by Friedel–Crafts acylation of 2,6-di-tert-butylphenol with propionyl chloride in the presence of titanium tetrachloride in ethylene dichloride [7717].
- Preparation by Fries rearrangement of 2,6-di-tert-butylphenyl propionate with titanium tetrachloride in nitromethane at 20° for a week (66%) [7712].
- Also obtained by hydrolysis of 2,6-di-tert-butyl-4-ethylmethoxymethylenequinone (m.p. $98\text{--}101^\circ$) with hydrochloric acid (98%) [7718].
- Also obtained by oxidation of (3,5-di-tert-butyl-4-hydroxyphenyl)-ethylcarbinol with DDQ in dioxane at r.t. for 16 h (94%) [7306].
- Also obtained from 4-bromo-2,6-di-tert-butyl-4-(1-hydroxypropyl)-2,5-cyclohexadienone (m.p. 51°) [7719],
 - by treatment with 80% aqueous acetic acid or ethanol at 60° for 15 min (92%) [7719];
 - by treatment in petroleum ether at r.t. for 48 h (92%) [7719];
 - by treatment with pyridine in methanol at r.t. for 6 h (18%) [7720];
 - by treatment with 5% methanolic sulfuric acid at r.t. for 18 h in the presence of silver nitrate (19%) or without this one (9%) [7721].
- Also obtained from 2,6-di-tert-butyl-4-(1-methoxypropyl)phenol (m.p. 45°) by bromine oxidation on heating in 80% aqueous acetic acid at 60° for 15 min (64%) [7718].
- Also obtained by treatment of 4-bromo-2,6-di-tert-butyl-4-(1-bromopropyl)-2,5-cyclohexadienone (m.p. $75\text{--}77^\circ$) with a water-petroleum ether mixture (69%) [7719].
- Also obtained from 2,6-di-tert-butyl-4-(1-hydroxypropyl)phenol (m.p. 77°) by bromine oxidation on heating in 80% aqueous acetic acid (37%) or in petroleum ether with ice cooling (21%) [7719].
- Also obtained from 2,6-di-tert-butyl-4-ethylmethylenequinone (m.p. 37°) by bromine oxidation on heating in 80% aqueous acetic acid at 80° for 15 min (25%) [7719].

- Also obtained (trace) by oxidation of 2,6-di-tert-butyl-4-propylphenol with cumene hydroperoxide in the presence of cobalt phthalate in cumene under air bubbling at 80–100° for 100 h (<4%) [7722].
- Also refer to: [6485,7723–7730].

m.p. 137° [7712,7718,7719], 136–137° [7713,7716,7721], 136° [7722], 134–135° [7715];

C₁₈H₂₀O₅ mol.wt. 316.35

Synthesis

– Preparation by reaction of benzyl chloride with 2,6-di-hydroxy-3,4-dimethoxypropiophenone in N,N-dimethyl-formamide in the presence of potassium carbonate at 150–160° for 10–20 min, followed by treatment of the dibenzyl ether obtained by concentrated hydrochloric acid in acetic acid at r.t. for 2–3 h (85%) [7442].

m.p. 111.5–113° [7442]; ¹H NMR [7442].

1-[2-Hydroxy-4,6-dimethoxy-3-(phenylmethoxy)phenyl]-1-propanone

[293744-03-3]

 $C_{18}H_{20}O_5$ mol.wt. 316.35**Syntheses**

– Preparation by reaction of benzyl bromide with 2,3-dihydroxy-4,6-dimethoxypropio-phenone in the presence of Hünig base in methylene chloride for 1 day (71%) [7436,7437].

m.p. 68° [7436,7437].

1-[3-Hydroxy-4,6-dimethoxy-2-(phenylmethoxy)phenyl]-1-propanone

[293744-04-4]

 $C_{18}H_{20}O_5$ mol.wt. 316.35**Syntheses**

– Obtained (by-product) by reaction of benzyl bromide with 2,3-dihydroxy-4,6-dimethoxy-propio-phenone in the presence of Hünig base in methylene chloride for 1 day (9%) [7436,7437].

m.p. 132° [7436,7437].

1-[6-Hydroxy-3,4-dimethoxy-2-[(4-methylphenyl)sulfonyl]oxy]phenyl]-1-propanone

[134081-85-9]

 $C_{18}H_{20}O_7S$ mol.wt. 380.42**Synthesis**

– Preparation by partial demethylation of 3,4,6-tri-methoxy-2-(tosyloxy)propio-phenone (m.p. 121–123°) with aluminium bromide in acetonitrile at r.t. for 2–3 h (88%) [7442].

m.p. 120.5–121° [7442]; 1H NMR [7442].**1-[2-Hydroxy-4,6-bis(methoxymethoxy)-3-(3-methyl-2-butenyl)phenyl]-1-propanone**

[199166-83-1]

 $C_{18}H_{26}O_6$ mol.wt. 338.40**Synthesis**

– Refer to: [7735].

USE: Preparation of flavones and naphthalenes as estrogens [7735].

1-[3,5-Bis(1,1-dimethylethyl)-2-methoxyphenyl]-1-propanone

[40662-83-7]

 $C_{18}H_{28}O_2$ mol.wt. 276.42

Synthesis

– Obtained by reaction of methyl iodide with the sodium salt of 3,5-di-tert-butyl-2-hydroxypropiofenone in THF [7712].

b.p.₁₅ 163° [7712]; m.p. 55° [7712];

¹H NMR (Sadler: standard n° 16618M), IR (Sadler: standard n° 44744) [7712], UV [7712].

1-[3,5-Bis(1,1-dimethylethyl)-4-methoxyphenyl]-1-propanone

[40662-88-2]

 $C_{18}H_{28}O_2$ mol.wt. 276.42

Synthesis

– Preparation by reaction of dimethyl sulfate with 3,5-di-tert-butyl-4-hydroxypropiofenone in the presence of sodium hydroxide in dilute methanol [7712].

yellow oil [7712]; $n_D^{20} = 1.5165$ [7712]; IR [7712], UV [7712].**1-(2-Hydroxy-5-nonylphenyl)-1-propanone**

[908130-90-5]

 $C_{18}H_{28}O_2$ mol.wt. 276.42

Synthesis

– Obtained by acylation of 4-nonylanisole in the presence of aluminium halide or boron halide [7736].

1-(4-Hydroxy-3-nonylphenyl)-1-propanone

[104557-28-0]

 $C_{18}H_{28}O_2$ mol.wt. 276.42

Synthesis

– Refer to: [7737] (Japanese patent).

1-[4-[(1,1-Dimethylethyl)dimethylsilyloxy]-2-hydroxy-3-propylphenyl]-1-propanone

[194854-84-7]

 $C_{18}H_{30}O_3Si$ mol.wt. 322.52

Syntheses

– Refer to: [7476,7477].

N-(5-Cyano-2-pyridinyl)-N'-[(1R,2R)-2-[6-fluoro-2-hydroxy-3-(1-oxopropyl)phenyl]-cyclopropyl]-urea

[231957-52-1]

C₁₉H₁₇FN₄O₃ mol.wt. 368.37

Synthesis

– Refer to: [6990].

N-(5-Cyano-2-pyridinyl)-N'-[(1S,2S)-2-[6-fluoro-2-hydroxy-3-(1-oxopropyl)phenyl]-cyclopropyl]-urea (MIV 150)

[231957-54-3]

C₁₉H₁₇FN₄O₃ mol.wt. 368.37

Syntheses

– Refer to: [6522,6990,7734,7738].

¹H NMR [6522].

1-(2,2'-Diethyl-5'-hydroxy[1,1'-biphenyl]-4-yl)-1-propanone

[540495-32-7]

C₁₉H₂₂O₂ mol.wt. 282.32

Synthesis

– Refer to: [7289].

1-(5'-Hydroxy-2'-methyl-2-propyl[1,1'-biphenyl]-4-yl)-1-propanone

[540495-19-0]

C₁₉H₂₂O₂ mol.wt. 282.32

Synthesis

– Refer to: [7289].

1-[2-[(3,7-Dimethyl-2,6-octadienyl)oxy]-4-hydroxyphenyl]-1-propanone (E)

[87108-26-7]

C₁₉H₂₆O₃
mol.wt. 302.42

Synthesis

– Refer to: [7617]
(Japanese patent).**1-[2,4,6-Trihydroxy-3,5-bis(3-methyl-2-butenyl)phenyl]-1-propanone**

[50874-47-0]

C₁₉H₂₆O₄ mol.wt. 318.41

Syntheses

– Obtained by reaction of 1-bromo-3-methyl-2-butene with phloropropiophenone in the presence of the weakly basic resin DeAcidite H-IP (OH⁻ form) in boiling benzene for 16 h (12%) [7739]. The yield was similar to the one obtained by using 2-methyl-3-buten-2-ol and a Lewis acid but the isolation was simpler.

– Also refer to: [7740].

m.p. 83° [7739].

1-(5-Decyl-2-hydroxyphenyl)-1-propanone

[102020-39-3]

C₁₉H₃₀O₂ mol.wt. 290.45

Synthesis

– Preparation by reaction of propionic acid with 4-decylphenol (m.p. 55–56.5°) in the presence of boron trifluoride (81%) [6509].

b.p.₁ 161–165° [6509]; n_D²⁵ = 1.5072 [6509].**1-[4-(Decyloxy)-2-hydroxyphenyl]-1-propanone**

[101002-30-6]

C₁₉H₃₀O₃ mol.wt. 306.45

Syntheses

– Obtained by Fries rearrangement of 3-(decyloxy)phenyl propionate [7685].
– Also obtained by reaction of n-decyl bromide with resorpiophenone in the presence of potassium carbonate in refluxing acetone [7237].

– Also refer to: [7688].

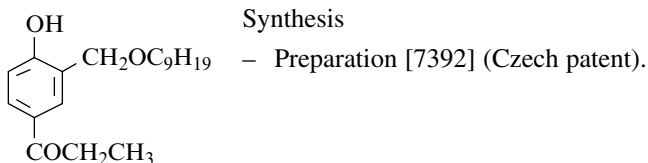

m.p. 30° [7237].

Oxime [101002-16-8] $C_{19}H_{31}NO_3$ mol.wt. 321.46 (m.p. 58–59°)
[7237,7641,7686].

USE: Antiallergic and antiinflammatory agent [7688], lipoxygenase inhibitor [7685].

1-[4-Hydroxy-3-[(nonyloxy)methyl]phenyl]-1-propanone

[136715-28-1] $C_{19}H_{30}O_3$ mol.wt. 306.45

USE: As pharmaceutical intermediate [7392].

1-(4'-Hydroxy-3',5-dimethoxy-6-propionyloxy[1,1'-biphenyl]-3-yl)-1-propanone

4'-Hydroxy-3'-(4-hydroxy-3-methoxyphenyl)-5'-methoxypropiofenone 4'-propionate
3,3'-Dimethoxy-4-hydroxy-2'-propionoxy-5'-propionylbiphenyl

[18592-99-9] $C_{20}H_{22}O_6$ mol.wt. 358.39

¹H NMR [7161], IR [7161], UV [7161].

1-[2'-Ethyl-5'-hydroxy-2-(1-methylethyl)[1,1'-biphenyl]-4-yl]-1-propanone

[540495-43-0] $C_{20}H_{24}O_2$ mol.wt. 296.41

1-(2'-Ethyl-5'-hydroxy-2-propyl[1,1'-biphenyl]-4-yl)-1-propanone

[540495-37-2] $C_{20}H_{24}O_2$ mol.wt. 296.41

1-[4-Hydroxy-2-methyl-5-(1-methylethyl)-3-(phenylmethyl)phenyl]-1-propanone[102168-44-5] $C_{20}H_{24}O_2$ mol.wt. 296.41

Synthesis

– Obtained (by-product) by benzylation of propionyl-4-thymol (m.p. 111°) with benzyl chloride in the presence of zinc chloride in refluxing chloroform for 22 h (4%) [7585].

b.p.₂₂ 244–246° [7585]; $n_D^{22} = 1.5640$ [7585].**1-[3-[(Decyloxy)methyl]-4-hydroxyphenyl]-1-propanone**[136715-29-2] $C_{20}H_{32}O_3$ mol.wt. 320.47

Synthesis

– Preparation [7392] (Czech patent).

USE: As pharmaceutical intermediate [7392].

1-[2,4-Dihydroxy-5-[[4-(phenylazo)phenyl]azo]phenyl]-1-propanone[65561-66-2] $C_{21}H_{18}N_4O_3$ mol.wt. 374.40

Synthesis

– Preparation, refer to: [7742,7743].

USE: For dyeing nickel-containing polypropylene fibres [7742,7743].

1-(3'-Hydroxy[1,1':2',1''-terphenyl]-4'-yl)-1-propanone[777067-73-9] $C_{21}H_{18}O_2$ mol.wt. 302.37

Synthesis

– Obtained by treatment of 2,3-dichloro-6-propionylphenol (3.2 mmol) in dioxane with cesium carbonate (5 mmol), phenylboronic acid (4.8 mmol), tris(dibenzylideneacetone)-dipalladium (0) (0.1 mmol) and a 20% solution of tricyclo-hexylphosphine (0.25 mmol) in toluene. The resulting mixture was heated at 80° for 24 h (48%) [6385].

m.p. 129–130° [6385]; 1H NMR [6385].**Oxime** $C_{21}H_{19}NO_2$ mol.wt. 317.39 (m.p. 220–221°) [6385].

4-[[3-Hydroxy-4-(1-oxopropyl)-2-propylphenyl]methoxy]benzeneacetonitrile

[107223-73-4]

 $C_{21}H_{23}NO_3$ mol.wt. 337.42

Synthesis

– Obtained by adding 1-[4-(chloromethyl)-2-hydroxy-3-propylphenyl]-1-propanone, then sodium iodide to a solution of 4-hydroxybenzeneacetonitrile and potassium tert-butoxide in DMF cooled with an ice-water bath, then stirring at r.t. for 24 h (51%) [7564].

m.p. 122–126° [7564].

1-[2-Hydroxy-3-propyl-4-[[4-(1H-tetrazol-5-ylmethyl)phenoxy]methyl]phenyl]-1-propanone

[107223-61-0]

 $C_{21}H_{24}N_4O_3$ mol.wt; 380.45

Synthesis

– Obtained by reaction of sodium azide with 4-[[4-propionyl-2-propyl-3-hydroxyphenyl]methoxy]benzene-acetonitrile in the presence of ammonium chloride in DMF at 105° for 20 h (32%) [7564].

m.p. 162–166° [7564].

4-[[3-Hydroxy-4-(1-oxopropyl)-2-propylphenoxy]methyl]-3-methoxybenzoic acid

[118683-25-3]

 $C_{21}H_{24}O_6$ mol.wt. 372.42

Synthesis

– Preparation from the substituted 2-propyl-resorcinol intermediate described in [7744], (compound **56**) [7481].

m.p. 217–218° [7481].

1-(2'-Ethyl-5'-methoxy-2-propylphenyl[1,1'-biphenyl]-4-yl)-1-propanone

[888009-25-4]

 $C_{21}H_{26}O_2$ mol.wt. 310.44

Synthesis

– In a four-step process from 1-(4-hydroxy-3-propylphenyl)-1-propanone [7741].

1-[5-[(1*RS*,2*SR*)-1-Ethyl-2-(4-hydroxyphenyl)butyl]-2-hydroxyphenyl]-1-propanone (3-Propionylhexestrol)

$C_{21}H_{26}O_3$ mol.wt. 326.44

Synthesis

– Obtained by treatment of its dimethyl ether with refluxing pyridinium chloride for 20 min [7745].

m.p. 168° [7745].

1-[5-(1,1-Dimethylethyl)-4',6-dihydroxy-3',5'-dimethoxy[1,1'-biphenyl]-3-yl]-1-propanone

[75482-12-1]

$C_{21}H_{26}O_5$ mol.wt. 358.43

Synthesis

– Obtained by oxidative coupling of 2,6-dimethoxy-phenol and 2,6-di-tert-butyl-4-propionylphenoxy radical (SM) in 1,2-dimethoxyethane under nitrogen at less than -10° , followed by treatment with boron trifluoride etherate (39%) [7409]. SM was prepared using a published procedure [7713].

m.p. 102° [7409]; 1H NMR [7409], MS [7409].

1-(4-Dodecyl-2-hydroxyphenyl)-1-propanone

$C_{21}H_{34}O_2$ mol.wt. 318.50

Synthesis

Oxime [101002-26-0] $C_{21}H_{35}NO_2$ mol.wt. 333.51 [7685].

1-(5-Dodecyl-2-hydroxyphenyl)-1-propanone

$C_{21}H_{34}O_2$ mol.wt. 318.50

Synthesis

Hydrazone [70136-42-4] $C_{21}H_{36}N_2O$ mol.wt. 332.53 [6646].

1-(5-sec-Dodecyl-2-hydroxyphenyl)-1-propanone

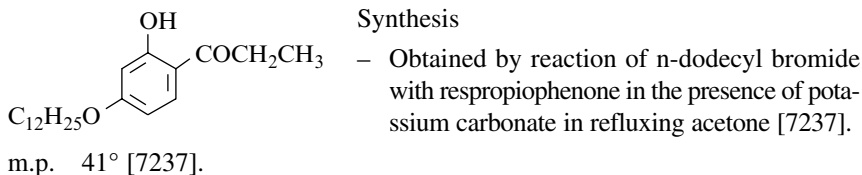

Oxime [37769-66-7] $C_{21}H_{35}NO_2$ mol.wt. 333.51

– extg. agents, for copper from iron-contg. aq. solns. [7746].

Synthesis

– Obtained by reaction of α-acetobromoglucose (α-ABG) with respropiophenone in the presence of silver oxide in quinoline for 2 h (50%) [6731].

m.p. 129–130° [6731];

 $(\alpha)_D^{20} = -25.6^\circ$ (c = 2 in chloroform) [6731].

1-[2-Hydroxy-6-[(2,3,4,6-tetra-O-acetyl-β-D-glucopyranosyl)oxy]phenyl]-1-propanone

[190777-99-2]

C₂₃H₂₈O₁₂ mol.wt. 496.47

Syntheses

– Preparation by treatment of 2,6-dihydroxypropio-phenone with cadmium carbonate in refluxing toluene for 1 h with removal of the generated water with a Dean-stark apparatus. Then, adding aceto-bromoglucose and the whole heated at reflux for 15 h (55%) [6813].

– Also refer to: [7749].

m.p. 175.5–177.5° [6813]; ¹H NMR [6813], IR [6813], FAB-MS [6813].

Na salt [6813].

1-[5-[(1*RS*,2*SR*)-1-Ethyl-2-(4-methoxyphenyl)butyl]-2-methoxyphenyl]-1-propanone

C₂₃H₃₀O₃ mol.wt. 354.49

Synthesis

– Obtained by reaction of propionyl chloride with hexestrol dimethyl ether in the presence of aluminium chloride in nitrobenzene, first at 0°, then at r.t. for 3 h [7745].

b.p.₁₈ 280° [7745]; m.p. 96° [7745].

4-Hydroxy-7-[2-hydroxy-3-[3-hydroxy-4-(1-oxopropyl)-2-propylphenoxy]propoxy]-3-nitro-2*H*-1-benzopyran-2-one

[69076-17-1]

C₂₄H₂₅NO₁₀ mol.wt. 447.58

Syntheses

– Preparation by method H (compound **169**) (83%) [7482].

– Also refer to: [7112,7453].

m.p. 121° [7482].

[63360-36-1]

C₃₁H₃₀O₈ mol.wt. 530.57

Syntheses

– Preparation by method E (compound **114**) (25%) [7482].

– Also refer to: [7112,7453,7684].

m.p. 117° [7482].

6-[3-Hydroxy-4-(1-oxopropyl)-2-propylphenoxy]hexanoic acid diphenylmethyl ester

[106627-30-9]

C₃₁H₃₆O₅ mol.wt. 488.62

Synthesis

– This ketone (compound **43**) was synthesized from 2,4-dihydroxy-3-propyl-propio-phenone according to the method C (56%) [7450].

¹H NMR [7450].

1-[3,5-Bis(diphenylmethyl)-2,4,6-trihydroxyphenyl]-1-propanone

[105630-20-4]

 $C_{35}H_{30}O_4$ mol.wt. 514.62

Synthesis

– Obtained by reaction of 2,4,6-trihydroxypropiofenone with diphenylcarbinol in dioxan in the presence of boron trifluoride etherate at 60–70° for 4 h (11%) [6886].

m.p. 249–250° [6886]; 1H NMR [6886],
IR [6886], UV [6886]; TLC [6886].

1-[3,5-Bis(diphenylmethyl)-2,4,6-trimethoxyphenyl]-1-propanone

[105630-21-5]

 $C_{38}H_{36}O_4$ mol.wt. 556.70

Synthesis

– Obtained by reaction of dimethyl sulfate with 3,5-bis-(diphenylmethyl)-2,4,6-trihydroxypropiofenone in the presence of potassium carbonate in refluxing acetone for 10 h [6886].

m.p. 198–199° [6886]; 1H NMR [6886], UV [6886]; TLC [6886].

23.2 Naphthalene Derivatives**1-(3-Bromo-4-hydroxy-1-naphthalenyl)-1-propanone** $C_{13}H_{11}BrO_2$ mol.wt. 279.13

Synthesis

– Obtained by reaction of bromine with 4-propionyl-1-naphthol in chloroform [7756].

m.p. 111° [7756].

1-(4-Bromo-1-hydroxy-2-naphthalenyl)-1-propanone $C_{13}H_{11}BrO_2$ mol.wt. 279.13

Syntheses

– Preparation by reaction of bromine with 2-propionyl-1-naphthol in acetic acid [7757].

- Also obtained by reaction of bromine with 4,4'-dihydroxy-3,3'-dipropionyldinaphthyl trisulfide (m.p. 190°) in acetic acid [7758].
- Also refer to: [6730,7759,7760].
m.p. 98–99° [7759], 98° [6730,7758], 97° [7757].

1-(7-Bromo-3,4-dihydroxy-2-naphthalenyl)-1-propanone

[52749-67-4]

C₁₃H₁₁BrO₃ mol.wt. 295.13

Syntheses

- Obtained by irradiation of 6-bromo-1,2-naphthoquinone and propionaldehyde in benzene with a 300 W high-pressure mercury arc lamp between 15° and 20° for 2–10 days [7761], (26%) [7762].

m.p. 143–144.5° [7762]; ¹H NMR [7762], IR [7762].

1-(4-Chloro-1-hydroxy-2-naphthalenyl)-1-propanone

C₁₃H₁₁ClO₂ mol.wt. 234.68

Syntheses

- Obtained by Fries rearrangement of 4-chloro-1-naphthyl propionate with aluminium chloride on heating in a water bath for 1.5 h (61%) [7763].

- Also obtained by action of chlorine with 4,4'-dihydroxy-3,3'-dipropionyldinaphthyl trisulfide (m.p. 190°) in acetic acid [7758].
- Also obtained by action of sulfuryl chloride with 2-propionyl- α -naphthol in the presence of bismuth chloride in ethyl ether [7758].
- Also obtained by action of chlorine with 2-propionyl- α -naphthol in acetic acid [7758].

m.p. 93° [7758], 90–91° [7763].

1-(3-Hydroxy-4-nitroso-2-naphthalenyl)-1-propanone

[256335-72-5]

C₁₃H₁₁NO₃ mol.wt. 229.24

Synthesis

- Refer to: [7764] (Japanese patent).

1-(6-Hydroxy-5-nitroso-2-naphthalenyl)-1-propanone

[219661-16-2]

 $C_{13}H_{11}NO_3$ mol.wt. 229.24

Syntheses

– Refer to: [7765,7766].

1-(1-Hydroxy-4-nitro-2-naphthalenyl)-1-propanone $C_{13}H_{11}NO_4$ mol.wt. 245.23

Syntheses

- Preparation by reaction of fuming nitric acid ($d = 1.5$) with 2-propionyl-1-naphthol (85%) [7760].
- Also obtained by reaction of fuming nitric acid with 2,4-di-propionyl-1-naphthol in acetic acid [7767].
- Also obtained by reaction of fuming nitric acid with 4-acetyl-2-propionyl-1-naphthol in acetic acid [7767].
- Also obtained by reaction of nitric acid ($d = 1.42$) with 2-propionyl- α -naphthol in acetic acid [7758].
- Also obtained by action of nitric acid ($d = 1.42$) with 4,4'-dihydroxy-3,3'-dipropionyl-dinaphthyl trisulfide (m.p. 190°) in acetic acid [7758].
- Also refer to: [7759].

m.p. $162-163^\circ$ [7759], 162° [7760], 158° [7758].**1-(4-Hydroxy-3-nitro-1-naphthalenyl)-1-propanone** $C_{13}H_{11}NO_4$ mol.wt. 245.23

Syntheses

- Obtained by reaction of fuming nitric acid with 4-propionyl-1-naphthol [7756] or with 2,4-dipropionyl-1-naphthol in acetic acid [7767].

m.p. 100° [7756].**1-(1-Hydroxy-2-naphthalenyl)-1-propanone**

[24490-31-1]

 $C_{13}H_{12}O_2$ mol.wt. 200.24

Syntheses

- Preparation by Fries rearrangement of α -naphthyl propionate,
 - in the presence of aluminium chloride (40%) [7768], first at 100° for 2 h, then at 120° for 1 h (54%) [7769];

- in the presence of stannic chloride (100%) [7768], at 55° for 16 h (73%) [7770];
 - in the presence of zinc chloride (100%) [7768];
 - in the presence of a catalytic amount of scandium triflate—Sc(OTf)₃— (5 mol%) in toluene at 100° for 6 h [7771], (89%) [7772,7773].
- Preparation by reaction of propionic acid with α -naphthol,
- in the presence of zinc chloride (Nencki reaction) [6376,6730], (65%) [7760], (48%) [7759];
 - in the presence of boron trifluoride [6819,7774], at 70° for 2 h (83%) [7775] at 100° for 5 h (80%) [7639], at 28–30° for 18 h (65%) [7639] or at r.t. (20%) [7776];
 - in the presence of polyphosphoric acid at 100° for 15 min (42%) [7777];
 - in the presence of hafnium triflate (20 mol %) in toluene-nitromethane at 100° for 6 h (80%) [7778].
- Also obtained by reaction of propionyl chloride with α -naphthol,
- in the presence of a catalytic amount of scandium triflate—Sc(OTf)₃— (5 mol%) in toluene/nitromethane at 100° for 6 h (98%) [7772,7779];
 - in the presence of zinc chloride in nitrobenzene (22%) [7756].
- Also obtained by boiling a 4-hydroxy-3-(1-oxopropyl)-1-naphthalenesulfonic acid and concentrated sulfuric acid mixture, followed by distillation [7757].
- Also obtained by heating 4-propionyl- α -naphthol, 2,4-dipropionyl- α -naphthol or 4-acetyl-2-propionyl- α -naphthol with zinc chloride in acetic acid or propionic acid on a sand bath for 3 h [7767].
- Also obtained by dye-sensitized photooxidation of enolic tautomer of 1-(3,4-dihydro-1-hydroxy-2-naphthalenyl)-1-propanone [134643-89-3] (19–24%) [7780].
- Also refer to: [6684,7781–7785].
- m.p. 86° [7775,7777], 85–87° [7776], 85° [7760], 84–85° [7772], 83–84° [7769], 82° [6819,7639,7770], 81–82° [7759], 81° [6376,6730,7757];
¹H NMR [7772], ¹³C NMR [7772], IR [7772];
 fluorescence spectrum data [6960].

Oxime (2-Pronapox) [21660-75-3] $C_{13}H_{13}NO_2$
 mol.wt. 215.25 [7786–7789].

1-(2-Hydroxy-1-naphthalenyl)-1-propanone

[33828-93-2] $C_{13}H_{12}O_2$ mol.wt. 200.24

Syntheses

- Preparation by Fries rearrangement of β -naphthyl propionate (m.p. 46–47°) [7790], in the presence of aluminium chloride,
- first in boiling carbon disulfide for 1 h, then at 120° for 4 h after solvent elimination [7791], (72%) [7792];
- in nitrobenzene at r.t. for 48 h (66%) [7793];
- in tetrachloroethane at higher temperatures (60–100%) [7790].

- Preparation by reaction of propionic acid with β -naphthol in the presence of boron trifluoride [6819,7774], at 28–30° for 18 h (75%) or at 100° for 5 h (85%) [7639].
- Preparation by reaction of propionic anhydride with β -naphthol in the presence of aluminium chloride in ethylene dichloride (95%) [7300].
- Also obtained by treatment of 2-methoxynaphthalene with propionyl chloride in refluxing carbon disulfide for 2 h (30%) [7794].
- Also refer to: [7795–7797].

b.p.₁₃ 171–175° [7793];

m.p. 82–84° [7791], 78.8–79.8° [7794], 72° [6819], 71° [7639], 70–72° [7793], 70–71° [7792], 64–66° [7790]. There is a large dispersion of melting points pointed out in literature.

¹³C NMR [7794], ¹⁷O NMR [7798]; MNDO heat of formation [7799].

Oxime [350026-68-5] C₁₃H₁₃NO₂ mol.wt. 215.25 (m.p. 112–116°) [7797].
