Clerc priest at Montmorot (Jura, France,
1899-1985) who in 1944 gave a home to the
Martin brothers, young Parisians refugees.*

Robert Martin

Foreword

It is my great pleasure to write a foreword for Dr. R. Martin's handbook on Fries rearrangement and their aromatic hydroxyketones products. The present work is the result of numerous years of experience in compiling and editing data.

I have known Dr. Martin since my arrival at the Curie Institute in the 1990s and his enthusiasm was most encouraging, setting a good example of passion for chemistry. Although being retired from industry, he deliberately came to work in our team, not only for bibliographical work but also for working at the bench.

In this work, special effort has been made to select material suitable to meet the needs of chemists who do not benefit from unlimited time for specialized research in the field of hydroxyacetophenones and hydroxybenzophenones. These compounds are precursors of substituted aromatic derivatives which are often not straightforwardly obtained but have many potential applications in fine and medicinal chemistry.

I recognize that it represented a huge effort for Dr. Martin to produce such an exhaustive compilation within the limits set to him by the economy of space. This work will primarily be of great value to professional chemists, from physicists to pharmacists, who are often called upon to solve problems about the synthesis of this kind of aromatic compounds.

In this handbook set, the reader will find four independent parts which successively cover the topics of monoaryl and polyarylphenols in Volume 1, hydroxyacetophenones in Volume 2, substituted hydroxyacetophenones in Volume 3 and hydroxypropiophenones, hydroxyisobutyrophenones and hydroxypivalophenones in Volume 4.

For such needs as described above, this compilation will supply helpful and easy-to-read information, even in our computerized era.

Dr. Jean-Claude Florent
Director of the CNRS/Institut Curie Research Unit "Conception,
Synthesis and Targeting of Biomolecules"
Institut Curie, Paris

Preface

Aromatic hydroxyketones are widely used as starting materials in organic synthesis to obtain medicines, dyes, perfumes, plastics, explosives, preservatives, etc. and, what is more, many of them also offer very specific uses.

This Handbook contains information on Hydroxybenzophenones, Hydroxyacetophenones, Hydroxypropiophenones, Hydroxyisobutyrophenones, Hydroxypivalophenones and numerous methylethers, collecting more than 6,000 ketones of which an indicated preparation as well as their physico-chemical and spectrochemical data are presented. This updated study now also covers the literature from 1890 until December 2008, including *circa* 8,500 references.

Aromatic Hydroxyketones: Preparation and Physical Properties is presented in dictionary style, with a logical classification of the ketones, which makes the information easily available for consultation. Ketones are classified methodically. As a result, they are easily accessible to the reader from three tables provided at the end of Volume 4: the molecular formula index, the Chemical Abstracts Registry Numbers and the usual names index.

This is the reason why it seemed interesting to update the contents of the four previous volumes and regroup them into one big handbook set. In this format, it will be more convenient for its main users, academics and industrial chemists.

Robert Martin
Institute Curie, France

Acknowledgements

I wish to express my heartfelt thanks to Dr. Pierre Demerseman who accepted me in his Laboratory at Institut Curie in 1987, and kindly revised my manuscript.

I am also grateful to Dr. Jean-Pierre Buisson, always so amiable and efficient, whose knowledge of word-processing largely contributed to the final page-setting of this work.

My thanks are also directed to Prof. Claude Monneret, formerly Head of the Chemical Department at Institut Curie, who has always been so benevolent to me.

I acknowledge as well his successor to the management of the laboratory, Dr. Jean-Claude Florent, who maintains the tradition and always welcomes me with much kindness, and all his collaborators for their warm welcome at each of my visits. The foreword of this Handbook was also written by Dr. Jean-Claude Florent. I most appreciate this mark of kindness.

I thank my son Serge Martin for friendly advice on the English edition of this book. Moreover, Mr. Serge Martin was a constant aid to me as regards data processing.

Various friends who readily agreed to translate foreign publications are also to be acknowledged here, in particular Dr. Jean Burkhard who has been of invaluable help for translating German papers over the last 30 years. The diverse abbreviations used in ancient reviews – particularly *Chemisches Zentralblatt* – had no secrets for him. Unfortunately, he left us in 2001 at the age of 91.

In this connection, thanks are due to Mrs. Feiga Weisbuch for her precious assistance as regards Rumanian and Russian texts, Mrs. Elisabeth Matarasso-Tchiroukhine as regards German and Russian texts as well as to Miss Marie-Françoise Liachenko, Drs. Daniel Dauzonne and Frédéric Schmidt. I wish to express my thanks to Mrs. Mireille Guyonneau, Mrs. Françoise Boucheron and my grandson Julien Martin for their contribution to my bibliographic research.

Before closing, I would like to remember my dear departed. My affectionate thoughts are turned towards Prof. Léon Denivelle who transmitted to me his passion for aromatic organic chemistry in 1945, and Prof. Albert Kirrmann who accepted me among his students in 1961 and was always so amiable and well-disposed whenever I went to him. I cannot mention without emotion Prof. Albert Saint-Maixen who largely communicated to me his knowledge of analytical chemistry.

I also have a personal thought towards my friends from the industry who left us too soon. I am particularly thankful to Drs. Henri Barbier, Félix Lepors and Henri Ruelleux (SPCA, Ltd.) who gave me the practical means to carry out my work on aromatic hydroxyketones. In this firm, I started my research on the Fries reaction. I also wish to acknowledge the late Dr. François Krausz who, at that time, made me benefit from his precious advice.

Last but not least, I am in debt beyond words to Angèle, my life for almost 60 years. Without her unfailing affection, support and understanding, nothing had been possible.

Short Biography

Robert Martin graduated as engineer from CNAM, then as doctor-engineer and doctor es sciences (Ph.D.) from Paris University. He studied with professors Léon Denivelle and Albert Kirrmann.

After having worked in the pharmaceutical industry, Robert Martin completed his career of organic chemist at a Research Laboratory of the French CNRS, located in the Curie Institute in Paris.

He has been studying the Fries reaction since 1956 without interruption. He has prepared a considerable number of aromatic hydroxyketones. A large part of these are included in the reference NMR and IR spectra collection of Sadtler (Philadelphia, USA).

His research on aromatic hydroxyketones gave rise to about 40 publications between 1963 and 1992, some of them in collaboration with Mainz University (Germany) and others with Institut Curie (Paris).

In 1992, he published a review on the Fries reaction in *Organic preparations and Procedures International*. This was followed by two books dealing with aromatic hydroxyketones, published by Kluwer in 1997 and 2000, then a third book by Springer in 2005.

For his various works concerning aromatic hydroxyketones he received the silver gilt medal from the Société d'Encouragement à l'Industrie Nationale in 1985.

Contents

Volume 1

Part I Monoaroylphenols

1 Unsubstituted Hydroxybenzophenones (Class of METHANONES)	3
1.1 Monohydroxybenzophenones	3
1.2 Dihydroxybenzophenones.....	11
1.2.1 Hydroxy Groups Located on One Ring	11
1.2.2 Hydroxy Groups Located on Both Rings.....	17
Symmetrical ketones	17
Asymmetric ketones.....	19
1.3 Trihydroxybenzophenones.....	22
1.3.1 Hydroxy Groups Located on One Ring	22
1.3.2 Hydroxy Groups Located on Both Rings.....	24
1.4 Tetrahydroxybenzophenones	28
1.4.1 Hydroxy Groups Located on One Ring	28
1.4.2 Hydroxy Groups Located on Both Rings.....	28
Symmetrical ketones	28
Asymmetric ketones.....	30
1.5 Pentahydroxybenzophenones.....	35
1.5.1 Hydroxy Groups Located on One Ring	35
1.5.2 Hydroxy Groups Located on Both Rings.....	35
1.6 Hexahydroxybenzophenones	39
Symmetrical ketones.....	39
Asymmetric ketones.....	40
2 Substituted Hydroxybenzophenones (Class of METHANONES)	43
2.1 Monohydroxybenzophenones	43
2.1.1 Substituents Located on the Hydroxylated Ring	43
2.1.2 Substituents Located on the Other Ring	143
2.1.3 Substituents Located on Both Rings	190

2.2	Dihydroxybenzophenones.....	364
2.2.1	Hydroxy Groups Located on the Same Ring	364
2.2.1.1	Substituents Located on the Hydroxylated Ring.....	364
2.2.1.2	Substituents Located on the Other Ring	392
2.2.1.3	Substituents Located on Both Rings	409
2.2.2	Hydroxy Groups Located on Both Rings.....	423
2.2.2.1	Substituents Located on One Ring.....	423
2.2.2.2	Substituents Located on Both Rings	441
	Symmetrical ketones.....	441
	Asymmetric ketones	452
2.3	Trihydroxybenzophenones.....	464
2.3.1	Hydroxy Groups Located on the Same Ring	464
2.3.1.1	Substituents Located on the Hydroxylated Ring.....	464
2.3.1.2	Substituents Located on the Other Ring	466
2.3.2	Hydroxy Groups Located on Both Rings.....	471
2.3.2.1	Substituents Located on One Ring.....	471
2.3.2.2	Substituents Located on Both Rings	480
2.4	Tetrahydroxybenzophenones	489
2.4.1	Hydroxy Groups Located on One Ring	489
2.4.2	Hydroxy Groups Located on Both Rings.....	489
2.4.2.1	Substituents Located on One Ring.....	489
2.4.2.2	Substituents Located on Both Rings	494
	Symmetrical ketones.....	494
	Asymmetric ketones	494
2.5	Pentahydroxybenzophenones.....	496
2.5.1	Hydroxy Groups Located on One Ring	496
2.5.2	Hydroxy Groups Located on Both Rings.....	496
2.5.2.1	Substituents Located on One Ring.....	496
2.5.2.2	Substituents Located on Both Rings	499
2.6	Hexahydroxybenzophenone.....	500
3	Polyphenyl Phenyl Methanones (Class of METHANONES).....	501
3.1	Biphenyl Phenyl Methanones	501
3.1.1	Monohydroxylated Ketones	501
3.1.2	Dihydroxylated Ketones	508
3.2	Terphenyl Phenyl Methanones.....	511
4	Cyclohexyl Phenyl Methanones (Class of METHANONES).....	513

4.2	Dihydroxylated Ketones	519
4.3	Trihydroxylated Ketones.....	520

Part II Diaroylphenols and Polyaroylphenols

5 Phenols with One Benzoyl Group and One or Several Acetyl Groups (Class of ETHANONES)	523
5.1 Monohydroxylated Ketones	523
5.2 Dihydroxylated Ketones	525
5.2.1 Symmetrical Ketones	525
5.2.2 Asymmetric Ketones.....	525
5.3 Trihydroxylated Ketone	528
5.4 Tetrahydroxylated Ketone	528
6 Phenols with Two or Several Benzoyl Groups (Class of METHANONES)	529
6.1 Monohydroxylated Ketones	529
6.1.1 Symmetrical Ketones	529
6.1.2 Asymmetric Ketones.....	532
6.2 Di- and Polyhydroxylated Ketones	534
6.2.1 Symmetrical Ketones	534
6.2.2 Asymmetric Ketones.....	543

Part III Miscellaneous Related Compounds (Class OF METHANONES)

7 Miscellaneous Related Compounds	549
7.1 Diphenyl Derivatives.....	549
7.2 Diphenylmethane Derivatives	551
7.3 Diphenylethane Derivative.....	553
7.4 Diphenylpropane Derivatives.....	554
7.5 Diphenyl Oxide Derivatives	554
7.6 Diphenyl Sulfoxide Derivatives	556
7.7 Diphenyl Sulfone Derivatives	557
7.8 Other Acylated Compounds.....	559

Monoaroylphenols

Chapter 1

Unsubstituted Hydroxybenzophenones

(Class of METHANONES)

1.1 Monohydroxybenzophenones

(2-Hydroxyphenyl)phenylmethanone

[117-99-7]

$C_{13}H_{10}O_2$ mol.wt. 198.22

Syntheses

- Preparation by Friedel–Crafts acylation of benzene in the presence of aluminium chloride,
 - with 2-hydroxybenzoyl chloride (salicylic acid chloride) [1], (52%) [2], (39%) [3], at temperature $<60^\circ$ [4];
 - with o-anisoyl chloride [5–12], (65%) [13], (57%) [14], (53%) [15], (37%) [16], (30%) [17]. Demethylation occurred during the Friedel–Crafts acylation, especially in the presence of ferric chloride at $130\text{--}140^\circ$ [5];
 - with 2-ethoxybenzoyl chloride in a boiling water bath (42%) [13].
- Preparation by dealkylation,
- of 2-methoxybenzophenone,
 - with aluminium bromide in refluxing benzene for 4 h (96%) [18];
 - with 48% hydrobromic acid in boiling acetic acid for 2 h [19];
 - with boron tribromide in methylene chloride at r.t. for 12 h [20], according to [21];
 - of 5-tert-butyl-2-methoxybenzophenone with aluminium chloride in benzene at $65\text{--}70^\circ$ for 45 h (79%) [9,22]. The starting keto ether was obtained by reaction of benzoyl chloride with 4-tert-butylanisole in the presence of zinc chloride in refluxing tetrachloroethane for 40 h [22];
 - of 5-tert-butyl-2-hydroxybenzophenone with aluminium chloride in benzene at $65\text{--}70^\circ$ for 45 h (63%) [9].

- Preparation by Fries rearrangement of phenyl benzoate,
 - with aluminium chloride [23],
without solvent
 - at 200° for 20 min [20] or for 15 min (26%) [24], at 190° for 7 h (26%) [25], at 140° (24%) [26] or at 140° for 15 min (27%) [27], at 130° for 1 h, then at 160° for 1 h (30%) [28], between 100° and 150° for 3 h (minor product) [29], or at 63° for 4 h (<2%) [30],*with solvent*
 - in nitrobenzene at 98° for 5 h (<9%) or at 120° for 2 h (15%) [31];
 - with an aluminium chloride and sodium chloride mixture at 140–200° (37%) [26];
 - with aluminium bromide in chlorobenzene at 110° for 15 min (2%) or for 4 h (20%) [32];
 - with aluminium iodide in refluxing acetonitrile (82°) for 10 h (23%) [33];
 - with boron trifluoride-etherate in the presence of phenol in refluxing benzene for 3 h (68%) [34];
 - with ferric chloride in a boiling water bath for 6 h [35];
 - with titanium tetrachloride in nitrobenzene at 60° for 18 h (7%) [27] or in refluxing nitromethane for 30 min (15%) [36];
 - with TFMS (trifluoromethanesulfonic acid) in tetrachloroethane at 170° for 24 h in a sealed tube (39%) [37];
 - with Nafion-H, a polymeric perfluorinated resin sulfonic acid, in refluxing nitrobenzene for 12 h (24%) [38];
 - with Nafion-XR, a H⁺-form ion exchange resin, at 150° for 4 h (23%) [39];
 - with polyphosphoric acid at 100° (1%) [40];
 - with K10 montmorillonite, in refluxing N,N-dimethylformamide for 8 h (17%) [41] or in the presence of Na-exchanged montmorillonite clay as catalyst for 5 h at 140° (24%) [42].
- Preparation by saponification of 2-(benzyloxy)benzophenone [43], with sodium hydroxide in refluxing dilute ethanol for 1 h [44] or for 10–15 min (45%) [45] or with potassium hydroxide [46] in methanol at 15° for 24 h (70%) [47]. The starting keto ester was obtained by oxidation of 2-benzylphenyl benzoate with chromium trioxide in boiling acetic acid [43], of 2,3-diphenyl-benzofuran [44,45] and of 2-(4-methylphenyl)-3-phenylbenzofuran or 2-(4-methoxyphenyl)-3-phenylbenzofuran [46]. The starting keto ester can be also obtained by photooxidation of 2,3-diphenylbenzofuran in chloroform in the presence of methylene blue as initiator [47].
- Also obtained by reaction of benzotrichloride with phenol in the presence of aqueous sodium hydroxide in a water bath (14%) [48], (1%) [49].
- Preparation by reaction between phenylloxymagnesium bromide complexed with HMPT and benzaldehyde in refluxing benzene for 48 h (30%) [50].
- Also obtained by reaction of salicylaldehyde with iodobenzene by using a catalyst system of palladium chloride/lithium chloride in the presence of sodium carbonate in N,N-dimethyl-formamide at 100° for 3.5 h (91%) [51].

- Also obtained by reduction of *o*-hydroxybenzophenone 2,4-dinitrophenylhydrazone with stannous chloride dihydrate in the presence of concentrated hydrochloric acid in boiling dilute acetic acid for 1 h (73%) [52].
- Also obtained (poor yields) by action of benzoic acid with phenol,
 - in the presence of polyphosphoric acid at 100° (1%) [40];
 - in the presence of Amberlyst-15 in refluxing chlorobenzene for 48 h (10%) [53].
- Also obtained by action of benzoyl chloride,
 - with phenol in the presence of aluminium chloride or titanium tetrachloride in nitrobenzene at 60° for 18 h (6–7%) [54];
 - with phenyl borate in the presence of aluminium chloride in refluxing carbon disulfide for 2 h (6%) [55].
- Also obtained (poor yield) by diazotization of 2-aminobenzophenone, followed by hydrolysis of the diazonium salt formed^T [7,56], (6%) [57] or by thermal decomposition of 2-benzoyl-benzenediazonium fluoborate in dilute sulfuric acid between 25° and 50° (37%) [17]; ^TIn these conditions, the fluorenone was the major compound formed [7].
- Also obtained (poor yield) from *o*-bromophenyl benzoate on treatment with *n*-butyllithium in a mixture of ethyl ether, hexane and tetrahydrofuran at –70° for 2 h, followed by treatment with saturated aqueous ammonium chloride (7%) [58,59].
- Also obtained (poor yield) by pyrolysis of *o*-(allyloxy)benzophenone at 750°, under pressure of 1×10^{-3} Torr, for 2 h (8%) [60].
- Also obtained by cleavage of phenylindoxazene with fuming hydriodic acid (*d*=1.70) in the presence of red phosphorous at 140–160° for 6–7 h. The intermediate compound formed (2-hydroxybenzophenone imine), unstable, gave by hydrolysis the expected ketone [61].
- Preparation from thioxanthen-9-one 10,10-dioxide (SM) by a three-steps synthesis: refluxing SM in 2% sodium hydroxide–65% dioxane–water solution for 4 h gave the 2-(2-hydroxybenzoyl)-phenylsulfinic acid (25%). The former, by reaction with mercuric chloride in refluxing aqueous acetic acid for 4 h, led to the 2-chloromercuri-2'-hydroxybenzophenone (69%). Removal of the chloromercury group was achieved with concentrated hydrochloric acid in refluxing ethanol for 2 h (91%) [62].
- Also obtained by heating xanthone with lead monoxide [7].
- Also obtained by action of an alkaline solution of sulfur on 4-nitrodiphenylmethane [63].
- Also obtained by photo-Fries rearrangement of phenyl benzoate,
 - in methanol (3%) [64], (48%) [65], using 3000 Å lamp (35%) or using 2537 Å lamp (41%) [66];
 - in isopropanol (35%) [66], (<4%) [64];
 - in butanol (48%) [66];
 - in ethanol at 30° for 3 days (20%) [67] or at r.t. for 70 h (18%) [68];
 - in water (50%) [69]. Adding amylose, α -cyclodextrin or β -cyclodextrin does not improve the yield (45%, 34% and 18% yields, respectively) [69], although in the presence of β -cyclodextrin, a 99% yield has been obtained [65]; in water

- in the presence of soluble starch (67%) [69] or in the presence of SDS (sodium dodecyl sulfate), a micelle, was obtained a 74% yield [70];
- in hexane in the presence of zeolites for 1 h (92–98%) [71];
 - in benzene for 12–24 h (55%) [65] or at 52° for 8 h (13%) [72];
 - in cyclohexane at 55° for 24 h (11%) [72];
 - in pentane (14%) [64]. Adding silica gel does not improve the yield (12%);
 - in dioxane at 61° for 24 h (13%) [72];
 - in ethyl ether (11%) [66];
 - without solvent on K10 montmorillonite using microwave radiations (640 W, 10 min) (25%) [41].
- Also obtained by photo-Fries rearrangement of phenyl salicylate in ethanol for 76 h (19%) [68].
- Also refer to: [58,60,73–87].

(3-Hydroxyphenyl)phenylmethanone

[13020-57-0]

C₁₃H₁₀O₂

mol.wt. 198.22

Syntheses

- Preparation by aromatization of 5-benzoyl-2-cyclohexenone,
- in the presence of 10% Pd/C in refluxing xylene for 6 h (60%) [118];
 - in the presence of lithium bromide and cupric bromide in refluxing acetonitrile for 1 h (75%) [118].
- Preparation by reaction of m-anisoyl chloride with benzene in the presence of excess aluminium chloride first at 20°, then at reflux for 2 h (95%) [119].
- Preparation by demethylation of m-methoxybenzophenone (SM),

- with boron tribromide in methylene chloride (55–60%). SM was obtained by condensation of m-methoxybenzoyl chloride with benzene in the presence of aluminium chloride [3];
 - with aluminium bromide in refluxing benzene for 2 h (89%) [18];
 - with 48% hydrobromic acid [13] in refluxing acetic acid [19], for 6 h (60%) [120]. SM was prepared by a two-steps synthesis: first, formation of 3-methoxybenzhydrol (SM1) by condensation of a Grignard reagent (prepared from m-iodoanisole) with benzaldehyde. Then, oxidation of SM1 by adding a solution of potassium dichromate in dilute sulfuric acid in an hot solution of SM1 in acetic acid and heating for 15 min in a water bath (60%) [120].
 - Preparation by reductive deamination of 2-amino-5-hydroxybenzophenone [121].
 - Preparation by diazotization of m-aminobenzophenone, itself obtained by reduction of m-nitro-benzophenone [11,122].
 - Also obtained by treatment of m-bromophenol in tetrahydrofuran with tert-butyllithium in pentane for 15 min at -78° under argon, after which a solution of phenyl-N,O-dimethylhydroxamide in tetrahydrofuran was slowly added (68%). – Refer to: Chem. Abstr., **119**, 49010t (1993)^T.
 - Also refer to: [123].

 IR [124].

(4-Hydroxyphenyl)phenylmethanone

[1137-42-4]

C₁₃H₁₀O₂

mol.wt. 198.22

Syntheses

- Preparation by condensation of benzotrichloride,
 - with phenol in the presence of aluminium chloride in carbon disulfide at 0° (90%) [125] or in the presence of zinc oxide in a water bath [126];
 - with p-bromophenol in 30% sodium hydroxide solution at 80 – 85° (81%) [127]. There is substitution of the bromine atom by the benzoyl group.
- Preparation by Fries rearrangement of phenyl benzoate,
 - with aluminium chloride [128], (55%) [129],
 - without solvent*
 - at 140° (usually for 15 min), (quantitative yield) [130], 88–91% [131,132], (69%) [26], (65%) [24], at 63° for 4 h (19%) [30], at 130° for 1 h and at 160° for 1 h (9%) [28],
 - with solvent*
 - in nitrobenzene at 98° for 5 h (64%) [31], at 120° for 2 h (54%) [31] or at 45° for 3 h (4%) [133];
 - in refluxing ethylene dichloride (84°) for 1.5 h (37%) [134];
 - with an aluminium chloride and sodium chloride mixture, at 140 – 200° (50%) [26];
 - with aluminium iodide in refluxing acetonitrile (82°) for 10 h (46%) [33];

- with aluminium bromide in chlorobenzene at 110° for 4 h (17%) [32];
 - with ferric chloride in a boiling water bath for 6 h (28%) [35];
 - with titanium tetrachloride at 60° for 18 h (83%) [27] or in refluxing nitromethane for 30 min (36%) [36];
 - with stannic chloride at 120° for 18 h (7%) [14];
 - with hydrofluoric acid at 55° for 4 h (70%) [135];
 - with polyphosphoric acid at 80° for 2.5 h (25%) [136], at 100° (6%) [40] or in a boiling water bath for 30 min (6%) [137];
 - with Nafion-H, a polymeric perfluorinated resin sulfonic acid, in refluxing nitrobenzene for 12 h (48%) [38];
 - with Nafion-XR, a H⁺-form ion exchange resin, at 150° for 4 h under nitrogen (33%) [39];
 - with ion-exchanged stratified clay catalyst, in the presence of phenol, at 180° for 4 h (45%) [138];
 - with K 10 Montmorillonite as catalyst for 5 h at 140° (80%) [42].
- Preparation by dealkylation,
- of p-methoxybenzophenone,
 - with aluminium bromide in refluxing benzene for 4 h (95%) [18];
 - with aluminium chloride at 200–210° for 1.5 h [139];
 - with 48% hydrobromic acid in refluxing acetic acid (good yield) [19], for 12 h [140];
 - with hydrochloric acid by heating between 145° and 150° during 3–4 h [122]. There is elimination of methyl chloride;
 - of p-ethoxybenzophenone,
 - with aluminium bromide in refluxing benzene for 4 h [18];
 - with aluminium chloride [141]. The starting keto ether [141] was obtained by Friedel–Crafts acylation of phenetole with benzoyl chloride in the presence of aluminium chloride according to [139];
 - with hydrobromic acid in boiling acetic acid for 2 days [142];
 - of 3-tert-butyl-4-hydroxybenzophenone with aluminium chloride in refluxing benzene [143].
- Preparation by reaction of benzoyl chloride,
- with phenol,
 - in the presence of aluminium chloride at 100–130° (77%) [26] or at 75° (19%) [144];
 - in the presence of aluminium chloride in nitrobenzene at 60° (92%) [26], at 60° for 18 h (88%) [54] or at 45° for 3 h (22%) [133];
 - in the presence of aluminium chloride in ethylene dichloride at 85° (5%) [26];
 - in the presence of aluminium chloride in boiling carbon disulfide [145], (10%) [122];
 - in the presence of titanium tetrachloride in nitrobenzene at 60° (76%) [26] or at 60° for 18 h (87%) [54];
 - in the presence of zinc chloride (10%) [122] according to [146];

- with phenyl borate in the presence of aluminium chloride in refluxing carbon disulfide for 2 h (45%) [55];
- with p-nonylphenol in the presence of aluminium chloride at 160° for 30 min (57%) [147].
- Also obtained by reaction of benzoic acid with phenol, in the presence of polyphosphoric acid at 75° (91%) [26], at 75° for 3 h (51%) [148] or at 75° for 20 h (46%) [148]; in a boiling water bath for 10 min (<4%) [137]; at 100° (9%) [40] or at 100° for 20 min (16%) [149]; at 160° for 30 min (30%) [148]; in the presence of boron trifluoride at 100° for 1 h (52%) [150]; in the presence of stannic chloride at 120° for 18 h (20%) [14]; in the presence of trifluoromethanesulfonic acid, in a tube stoppered, at r.t. for 1 h [151]; in the presence of sulfophenyl group-containing polysiloxanes at 180° for 20 h (52%) [152]; in the presence of Amberlyst-15 in refluxing chlorobenzene for 48 h (9%) [53].
- Also obtained by reaction of p-(benzoyloxy)benzophenone with phenol in the presence of aluminium chloride in refluxing ethylene dichloride for 4 h (91%) [134].
- Preparation by diazotization of p-aminobenzophenone, followed by hydrolysis of the diazonium salt obtained [6,61,122,142], (54%) [15].
- Also obtained by oxidation of p-hydroxydiphenylcarbinol with DDQ (2,3-dichloro-5,6-dicyano-benzoquinone) in dioxane at r.t. for 15 min (82%) [153].
- Also obtained by reduction of p-hydroxybenzophenone 2,4-dinitrophenylhydrazone with stannous chloride dihydrate in the presence of concentrated hydrochloric acid in boiling acetic acid for 1 h (93%) [52].
- Also obtained during the particular Fries rearrangements of some aryl esters during which there is usually an elimination of alkyl group,
 - Also obtained by Fries rearrangement of p-nonylphenyl benzoate with aluminium chloride at 130–135° for 4 h (51%) [147];
 - Also obtained by Fries rearrangement of p-tert-butylphenyl benzoate with hydrofluoric acid at 55° for 1 h (26%) and at 25° for 2 h (15%) [135] or with aluminium chloride at 140° (major product) [154];
 - Also obtained (by-product) by Fries rearrangement of phenyl o-benzoyloxybenzoate with aluminium chloride at 180° for 3 h (26%) [155].
- Preparation by heating at 120–130° during 12 h a mixture of phenol, benzanilide imidochloride and aluminium chloride. The keto anil obtained was hydrolyzed with ice-cold hydrochloric acid (21%) [156]. The same reaction using anisole gave a 43% yield [156].
- Preparation by saponification,
 - of p-(benzoyloxy)benzophenone, with 10% sodium hydroxide at reflux for 3 h (good yield) [134];

with potassium hydroxide in ethanol [146,157,158], (51%) [128,159].

The starting keto ester was obtained by reaction of benzoyl chloride with phenyl benzoate in the presence of zinc chloride at 175–180° [128,157,159] or by reaction of benzotrichloride with the same ester in the presence of zinc oxide [157]. This same keto ester (m.p. 112°5) can be also prepared by heating a benzoyl chloride/phenol mixture in the presence of zinc powder [158];

- of p-(carbomethoxyoxy)benzophenone with N sodium hydroxide solution at reflux for 15 min [160].
- Also obtained by hydrolysis of,
 - p-(chloroacetoxy)benzophenone with fuming nitric acid at r.t. for several days (27%) [161];
 - p-benzoylphenyl 5-benzoylsalicylate [155].
- Also obtained by cleavage of benzaurine on heating its dilute aqueous sodium hydroxide solution (1%) in a water bath with bubbling air (44%) [162].
- Also obtained by photo-Fries rearrangement of phenyl benzoate,
 - in isopropanol (41–42%) [64,66];
 - in methanol (40%) [66], irradiation for 1 h (37–43%) [71] or for 12–24 h (30%) [65];
 - in butanol (36%) [66];
 - in ethanol, at 30° for 3 days (28%) [67] or at r.t. for 70 h (16%) [68];
 - in water for 24 h (16%) [69]; adding soluble starch, amylose or α or β -cyclodextrin does not improve the yield (18–20%) [69]; in water, in the presence of SDS (sodium dodecyl sulfate), a micelle, one obtains a 23% yield [70];
 - in benzene for 12–24 h (30%) [65], 1 h (37–43%) [71] or at 52° for 8 h (20%) [72];
 - in hexane for 1 h (37–43%) [71];
 - in pentane (13%) [64]; adding silica gel does not improve the yield (10%) [64];
 - in cyclohexane at 55° for 24 h (29%) [72];
 - in dioxane at 61° for 24 h (23%) [72];
 - in ethyl ether (22%) [66].
- Also refer to: [79,84,163–168].
- N.B.:** K salt [169,170].

1.2 Dihydroxybenzophenones

1.2.1 Hydroxy Groups Located on One Ring

(2,3-Dihydroxyphenyl)phenylmethanone

[52870-68-5]

C₁₃H₁₀O₃

mol.wt. 214.22

Syntheses

- Preparation by hydrolytic rearrangement of 2-benzoylacetyl-2,5-dimethoxytetrahydrofuran with refluxing 0.1 N hydrochloric acid in aqueous dioxane (95%) [178].
 - Preparation by reaction of benzoic acid with pyrocatechol in the presence of Amberlyst-15 in refluxing chlorobenzene for 9 h (68%) [53].
 - Preparation by refluxing 2,3-dimethoxybenzophenone with hydrobromic acid (d = 1.5) and acetic acid for 8 h [179].
 - Also refer to: [180–182].
- m.p. 65° [179], 64–65° [178]; Spectra (NA).

(2,4-Dihydroxyphenyl)phenylmethanone

(Resbenzophenone, Benzoresorcinol, Uvinul 400)

[131-56-6]

C₁₃H₁₀O₃

mol.wt. 214.22

Syntheses

- Obtained by condensation of benzanilide with resorcinol in the presence of zinc chloride and phosphorous oxychloride at 130–140° for 1 h (25%) [183].
- Also obtained by condensation of benzamide with resorcinol in the presence of zinc chloride and phosphorous oxychloride at 100–140° for 1 h (22%) [183].
- The condensation of benzanilide imidochloride with resorcinol in the presence of aluminium chloride in ethyl ether gave a keto anil (92%). Which, by hydrolysis

with concentrated hydrochloric acid in refluxing ethanol for 3 h yielded the expected ketone (89%) [156].

- Also obtained by condensation of benzoic acid with resorcinol,
 - in the presence of hydrofluoric acid at 75° for 4 h in an autoclave (99%) [184];
 - in the presence of boron trifluoride at 160° for 2 h in a sealed tube (69%) [185] or in nitrobenzene at 80° for 30 min (96%) [186];
 - in the presence of stannic chloride at 140–150° for 30 min (30%) [183];
 - in the presence of zinc chloride (Nencki reaction), between 150° and 170° (for usually 15–30 min) [187–191], (20%) [192], (5%) [183];
 - in the presence of zinc chloride and phosphorous oxychloride at 65° for 3 h [193];
 - in the presence of zinc chloride and a mixture of polyphosphoric acid/85% phosphoric acid (60:40) at 40°. Then, during 1.5 h, phosphorous trichloride was added and the mixture heated at 60° for 16 h (91%) [194];
 - in the presence of phosphorous pentoxide at 120–130° for 15 min (poor yield) [183];
 - in the presence of Amberlite IR-120 at 160° for 2–3 h (25%) [195];
Always by condensation of benzoic acid with resorcinol, but with stirring and azeotropic removal of water, in refluxing chlorobenzene (130°);
 - in the presence of ion exchange resins,
 - Dowex-50W-X-8 for 53 h (69%) [53];
 - Amberlyst-15 for 6 h (67%) [53], for 24 h (62%) [196]; the same reaction carried out in refluxing p-chlorotoluene (162°) for 2 h gave 59% yield [53];
 - Nafion-117 for 6 h (46%) [53] or for 24 h (45%) [196];
 - in the presence of Zeolite-H-beta for 72 h (42%) [53] or for 24 h (20%) [196]; the same reaction carried out in refluxing p-chlorotoluene (162°) for 16–18 h gave 70% yield [53] or in refluxing n-butylbenzene for 3 h under nitrogen gave 88% yield [53] and 40% yield [196];
 - in the presence of polyphosphoric acid or silicotungstic acid for 23 h (19%) [53];
 - in the presence of methanesulfonic acid for 23 h (17%) [53,196];
 - in the presence of phosphoric acid for 24 h (9%) [53,196].
- Also obtained by reaction of benzoyl chloride with resorcinol [197],
 - in the presence of zinc chloride and hydrochloric acid gas in chlorobenzene at 120° for 7 h (86%) [198] or without hydrochloric acid (72%) [198];
 - in the presence of aluminium chloride in ethylene dichloride at 65° for 5 h (75%) [199];
 - in the presence of aluminium chloride in nitrobenzene at r.t. for 48 h (70%) [200] or first at r.t., then at 70° for 5 h (83%) [201,202];
 - in the presence of aluminium chloride in refluxing carbon disulfide [145], for 4 h [203];

- in the presence of Nafion-XR, a H⁺-form ion exchange resin, for 4 h under nitrogen at 160° [204] or at 150° (70%) [39].
- Preparation by demethylation of 2,4-dimethoxybenzophenone with aluminium bromide in refluxing benzene for 4 h (98%) [18]. Also obtained by using aluminium chloride in refluxing carbon disulfide for 30 min (3%) [205].
- Preparation by Fries rearrangement of,
 - resorcinol monobenzoate, with zinc chloride in the presence of hydrochloric acid gas in chlorobenzene at 120° for 7 h (88%) [198]; with aluminium chloride at 180° for 2 h (68%) [155]; with Nafion-XR, a H⁺-form ion exchange resin, at 150–160° for 4 h under nitrogen (72%) [39,204];
 - resorcinol dibenzoate with aluminium chloride between 100° and 150° [145].
- Preparation by condensation of benzoic anhydride with resorcinol,
 - in the presence of a few drops of concentrated sulfuric acid at 130° for some min (60%) [206];
 - in the presence of Amberlite IR-120, a cation exchange resin (sulfonic acid type), at 160° for 2–3 h (30%) [195];
 - in the presence of Zeokarb 225 at 160° for 2–3 h (30%) [195].
- Also obtained by decarboxylation,
- of 5-benzoyl-2,4-dihydroxybenzoic acid with dilute hydrochloric acid at 160–170° in a sealed tube [207] or by heating in a sealed tube [208];
- of 3-benzoyl-2,6-dihydroxybenzoic acid with a few drops of concentrated hydrochloric acid in boiling dilute acetic acid for 15–18 h [209].
- Also obtained by saponification of 2,4-di(benzoyloxy)benzophenone with 10% sodium hydroxide in refluxing ethanol for 2 h [203] or with potassium hydroxide in ethanol [210]. The starting diester was prepared by Fries rearrangement of resorcinol dibenzoate with zinc chloride at 100–120° [210].
- Also obtained by condensation of benzotrichloride with resorcinol,
 - in hot water [188] or in water at 65° for 4 h (42%) [202];
 - in 50% aqueous methanol at 70–80° (90%) [211] or in dilute methanol at 50° for 3 h (87%) [201,202];
 - in 50% aqueous isopropanol at 70–80° (90%) [211] or in dilute isopropanol between 30° and 80° for 2–4 h (80–84%) [202];
 - in 50% aqueous acetic acid solution (89%) [211] or in dilute acetic acid between 30° and 80° for 2–4 h (80–84%) [202];
 - in 50% aqueous dioxane solution (82%) [211] or in dilute dioxane between 30° and 80° for 2–4 h (80–84%) [202];
 - in ethanol [212] or in dilute ethanol between 30° and 80° for 2–4 h (80–84%) [202];
 - in dilute ethylcellosolve between 30° and 80° for 2–4 h (80–84%) [202];

- in hydrofluoric acid in the presence of water at -10° for 4 h, then at r.t. overnight (96%) [213]. The same reaction carried out in the presence of methanol or octanol at -10° , then at r.t. for 4 h yielded 96% and 93%, respectively [213].
 - Preparation by reaction of benzonitrile with resorcinol (Hoesch reaction) in the presence of zinc chloride and hydrochloric gas at 50° for 8 h (93%) [214] or during 12 days (89%) [215–217], or in ethyl ether at $<5^{\circ}$ for 3 h, then at 5° for 20 h (35%) [201,202].
 - Also obtained by treatment of resorcinol with phenyl benzoate in the presence of boron trifluoride-etherate in refluxing benzene for 3 h (40%) [34].
 - Also obtained from β -(4-benzoyl-3-hydroxyphenoxy)propionic acid by boiling for 5 min with 10% aqueous sodium hydroxide [218].
 - Also obtained by photo-Fries rearrangement of resorcinol monobenzoate [219].
 - Preparation by reaction of di(carbomethoxy)- β -resorcylic acid chloride with benzene in the presence of aluminium chloride at 60 – 70° for 1 h, then at 80° for 1 h (70%) [220].
 - Also refer to: [78,84,146,168,221–233].
- m.p. 148° [155], 146° [203], 145° [190,200,234–237],

(2,5-Dihydroxyphenyl)phenylmethanone (*Quinbenzophenone*)

[2050-37-5]

 $\text{C}_{13}\text{H}_{10}\text{O}_3$

mol.wt. 214.22

Syntheses

- Preparation by Fries rearrangement of hydroquinone dibenzoate with aluminium chloride [249,250], (good yield) [251], at 140° for 1 h (33%) [252], at 190 – 200° for 1 h 30 min (50%) [253] or at 200° for 20 min [20].
- Preparation by oxidation of 5-(benzoyloxy)-2,3-diphenyl-benzofuran with chromium trioxide in boiling acetic acid for 2 h, followed by saponification of the keto ester formed with boiling 8% sodium hydroxide in ethanol [254].
- Also obtained by hydrolysis of quinbenzophenone monobenzoate—5-(benzoyloxy)-2-hydroxy-benzophenone—(easily obtained by Fries rearrangement of hydroquinone mono or dibenzoate), with concentrated sulfuric acid at r.t. for overnight [252] or with 85% sulfuric acid [253].
- Also obtained by saponification of 2,5-di(benzoyloxy)benzophenone with alcoholic potassium hydroxide [255].

- Also obtained by reaction of benzoic acid with hydroquinone in the presence of boron trifluoride at 160° for 1 h in a sealed tube (61%) [185].
 - Preparation by demethylation,
 - of 2-hydroxy-5-methoxybenzophenone with hydriodic acid in refluxing acetic acid and acetic anhydride mixture for 1.5 h (87%) [256];
 - of 2,5-dimethoxybenzophenone (SM), with boiling hydriodic acid [257]; with an excess of hydrobromic acid [173]; with boron tribromide in methylene chloride at 22° (78%) [258] or at r.t. for 12 h [20], according to [21]. SM was obtained by acylation of hydroquinone dimethyl ether with benzoyl chloride in methylene chloride in the presence of aluminium chloride at 0° (85%) [258].
 - Preparation by reaction of phenyl benzoate with hydroquinone in the presence of boron trifluoride-etherate in refluxing benzene for 3 h (60%) [34].
 - Also obtained by daylight irradiation of a 1,4-benzoquinone/benzaldehyde mixture [255] in benzene under nitrogen for 5 days (60%) [259].
 - Also obtained by irradiation of α -hydroxybenzyl-1,4-benzoquinone in benzene for 4 days (65%) [260].
 - Also refer to: [115,260–267].
- m.p. 125–126° [256], 125° [249,250,253,255], 124–126° [257], 124–125° [252,254], 124° [185], 123–124° [260], 122° [173], 121–123° [259];
¹H NMR (Sadtler: standard n° 30288 M) [260],
 IR (Sadtler: standard n° 57333) [260], UV [109–111];
 TLC [116,259]; pK_a [115].

(2,6-Dihydroxyphenyl)phenylmethanone

[63411-81-4]

C₁₃H₁₀O₃

mol.wt. 214.22

Synthesis

- Preparation by treatment of 8-benzoyl-7-hydroxy-4-methyl-coumarin (8-benzoyl-4-methylumbelliferone) [268,269] or of 8-benzoyl-7-hydroxy-4-phenylcoumarin (8-benzoyl-4-phenylumbelliferone) [192] with refluxing aqueous sodium hydroxide (64–78%) [268], (48%) [192].
 - Also refer to: [270].
- m.p. 135° [113,192,268]; ¹H NMR [98], UV [113].

(3,4-Dihydroxyphenyl)phenylmethanone

[10425-11-3]

C₁₃H₁₀O₃

mol.wt. 214.22

Syntheses

- Preparation by Fries rearrangement of pyrocatechol dibenzoate,

- in the presence of aluminium chloride in nitrobenzene at 100° for 4 h (quantitative yield) [271] or heated on a steam bath for 6 h [272];
 - in the presence of Nafion-XR, a H⁺-form ion exchange resin, at 175° for 4 h under nitrogen (38%) [39].
- Preparation in two steps by condensation of pyrocatechol with benzanilide imidochloride after acidic hydrolysis of the intermediate keto anil (30%) [156].
 - Also obtained by demethylation,
 - of 3-hydroxy-4-methoxybenzophenone with boiling hydriodic acid (90%) [273];
 - of 3,4-dimethoxybenzophenone with boiling hydriodic acid [273] or with aluminium chloride in refluxing benzene for 6 h (64%) [274].
 - Also obtained by reaction of benzoyl chloride with pyrocatechol dibenzoate in the presence of zinc chloride, followed by saponification of the 3,4-di(benzoyloxy) benzophenone formed with a boiling ethanolic sodium hydroxide solution [146].
 - Also obtained by reaction of benzoyl chloride with pyrocatechol in the presence of phosphorous trichloride [275].
 - Preparation by condensation of benzoic anhydride with pyrocatechol in the presence of zinc chloride at 180° for 5–6 h [276].
 - Preparation by adding 30% hydrogen peroxide solution to the solution of 3-formyl-4-hydroxy-benzophenone in 10% sodium hydroxide and stirring the mixture at r.t. for 2 h (Dakin oxidation) (42%) [277].
 - Also obtained by hydrolysis of 3-(benzoyloxy)-4-hydroxybenzophenone by heating gently with 50% sulfuric acid for 2 h (74%) [278].
 - Also refer to: [232,279–283].
- m.p. 148–149° [274], 147–148° [272], 145° [146],
 134° [156,271,273,276,278], 133–134° [277];
 hemihydrate [146], monohydrate [273,278];
 Spectra (NA); pK_a [272]; molecular orbital studies [284].

(3,5-Dihydroxyphenyl)phenylmethanone

C₁₃H₁₀O₃ mol.wt. 214.22

Syntheses

- Preparation by reaction of diphenylcadmium with 3,5-di-acetoxybenzoyl chloride in refluxing benzene for 1 h. The keto ester obtained (66%) by saponification with refluxing 5% sodium hydroxide for 4–5 h gave the expected ketone (53%) [285].
 - Also obtained by heating a mixture of 3,5-dicarbomethoxybenzoyl chloride and benzene in the presence of aluminium chloride, first at 70–75° for 1 h and at 75–80° for 45 min (37%). -Refer to: Chem. Abstr., 7, 2563² (1913)^T.
- m.p. 160–162°^T, 148° (anhydrous) [285], 84° (monohydrate) [285];
 Spectra (NA).

1.2.2 Hydroxy Groups Located on Both Rings

Symmetrical ketones

Bis(2-hydroxyphenyl)methanone

[835-11-0] $C_{13}H_{10}O_3$ mol.wt. 214.22

Syntheses

- Preparation by diazotization of 4,4'-diamino-2,2'-di-hydroxybenzophenone in diluted hydrochloric acid, followed by treatment with 50% phosphorous acid at 0° for 1 h, then at r.t. for 24 h (34%) [286].
- Also obtained by Fries rearrangement of phenyl o-hydroxybenzoate with aluminium chloride at 200° for 20 min [20].
- Also obtained from xanthone,
 - by heating with potassium hydroxide in ethanol at 180° for 4 h in a sealed tube [287,288];
 - by fusion with anhydrous potassium hydroxide [173,289], at 205–210° for 20 min [74], (64%) [290] or by heating at 200° (45%) [291].
- Also obtained by photo-Fries rearrangement of phenyl salicylate (salol) [219] or of phenyl carbonate in ethanol for 150 h (4%) [68].
- Also obtained by demethylation of 2,2'-dimethoxybenzophenone,
 - with boron trichloride in methylene chloride first at -70°, then at r.t. for 8 h (97%) [292];
 - with boron tribromide in methylene chloride at r.t. for 12 h [20], according to [21].
- Also obtained by hydrolysis of 2,2'-dihydroxybenzophenone ditosylate by treatment with 0.5 N sodium hydroxide in dilute methanol at r.t. for 8 days (98%) [293].
- Also refer to: [84,93,294–302].

N.B.: Ba, NH₄ [289] and K salts [288,289].

m.p. 62–63° [290], 59°5 [173], 59–60° [287,289,300,301],

55–57° [291], 54–56° [286]; b.p._{0.15} 128–132° [291];

¹H NMR [98,303], EPR [98], IR [291], UV [219,291], MS [114];

pK_a [115]; polarographic analysis [304]; HPLC [245].

Bis(3-hydroxyphenyl)methanone

[611-80-3] $C_{13}H_{10}O_3$ mol.wt. 214.22

Synthesis

- Preparation from 3,3'-dinitrobenzophenone by reduction, diazotization of 3,3'-diaminobenzo-phenone obtained (m.p. 173–174°) [305], followed by hydrolysis of the diazonium salt obtained [288,301,305,306,307].

– Also refer to: [308,309].

m.p. 163–164° [305], 162–163° [300,301]; IR [124].

Bis(4-hydroxyphenyl)methanone

[611-99-4]

C₁₃H₁₀O₃

mol.wt. 214.22

Syntheses

– Preparation by demethylation of 4,4'-dimethoxy-benzophenone with aluminium bromide in refluxing benzene for 4 h (88%) [18].

- Also obtained by complete dealkylation of 4,4'-diethoxybenzophenone with hydrobromic acid in boiling acetic acid for 2 days [142].
- Preparation by hydrolysis of 4,4'-dichlorobenzophenone with aqueous sodium hydroxide in the presence of cuprous chloride or cupric chloride in an autoclave at 230–240° for 2 h (95–98%). The same reaction using cuprous oxide at 200° for 2 h gave a 82% yield [310,311]. Other methods using copper compounds for hydrolysis of the 4,4'-dichlorobenzophenone in the presence of sodium hydroxide [312,313], for 1 h at 270° in a steel autoclave (98–99%) [314].
- Preparation by Fries rearrangement of phenyl p-anisate (phenyl p-methoxybenzoate) with aluminium chloride at 140° (80%) [132] or at 160° [315].
- Also obtained by reaction of p-hydroxybenzoic acid with phenol,
 - in the presence of zinc chloride and a mixture of polyphosphoric acid/85% phosphoric acid (60:40) at 40°. Then, during 1.5 h, phosphorous trichloride was added and the mixture heated at 60° for 16 h (90%) [194];
 - in the presence of hydrofluoric acid at 75° in an autoclave (88%) [184];
 - in the presence of boron trifluoride in hydrofluoric acid (84%) [316] or in nitrobenzene at 80° for 30 min (67%) [186];
 - in the presence of polyphosphoric acid in a boiling water bath for 30 min (20%) [137] or at 100° for 20 min (47%) [149];
 - in the presence of trifluoromethanesulfonic acid at r.t. for overnight (93%) [151];
 - by heating in the presence of stannic chloride for 10 h [317].
- Also obtained by treatment of 4,4'-diphenoxybenzophenone with 16.7% sodium hydroxide at 300° for 30 min (57%) [318].
- Also obtained (poor yield) by Fries rearrangement of oxalic acid diphenyl ester with hydrofluoric acid in carbon tetrachloride at 80° for 4 h in an autoclave (<7%) [319].
- Also obtained by reaction of salicylic acid with phenol in the presence of stannic chloride (by-product) [317,320].

N.B.: According to Michael [317], the formation of this ketone was due to the presence of a small amount of p-hydroxybenzoic in the commercial salicylic acid used [321]. In contrast, Baeyer [320] claimed that this reaction proceeds via a transposition.

- Also obtained by oxidation of 4,4'-di-(benzoyloxy)diphenylmethane with chromium trioxide in refluxing acetic acid for 8 h, followed by saponification of the 4,4'-di-(benzoyloxy)benzophenone formed with potassium hydroxide in refluxing ethanol [301,322–324].
- Preparation by acylation of phenol with p-(trichloromethyl)phenyl p-(trichloromethyl)benzoate in methylene chloride in the presence of aluminium chloride at 0–5° over 1 h, then at r.t. for 1 h (yield 83%), followed by alkaline hydrolysis of the resulting keto ester (93–95%) [325].
- Also obtained by melting phenolphthalein,
 - with potassium hydroxide (75%) [326], according to [327];
 - with sodium hydroxide [190,328], (quantitative yield) [329].
- Also obtained by reduction of 4-hydroxy-4'-nitrobenzophenone with stannous chloride in the presence of hydrochloric acid, followed by diazotization of the 4-amino-4'-hydroxybenzophenone formed and hydrolysis of the diazonium salt obtained [322].
- Also obtained on treatment of aurin (p-rosolic acid) with water at high temperature, between 220° and 250° [163] or at >270° [330].
- Also obtained by treatment of rosaniline with water at high temperature (>270°) [330,331].
- Also obtained by reaction of carbon tetrachloride with phenol in the presence of zinc chloride at 120° (36%) [332].
- Also obtained by hydrogenation of 4,4'-dihydroxy-3,3',5,5'-tetraiodobenzophenone in ethanol in the presence of 10% Pd/C and sodium acetate (66%) [333].
- Also refer to: [84,334–336].

N.B.: Na [88,314] and K salts [337].

m.p. 218° [151], 213°5 [142], 213–214° [18,333], 210°4–212° [194],
 210–213° [316], 210–212° [338],

 gel permeation chromatography [247].

Asymmetric ketones

(2-Hydroxyphenyl)(3-hydroxyphenyl)methanone

$C_{13}H_{10}O_3$ mol.wt. 214.22

Syntheses

- Preparation by diazotization of 2,3'-diaminobenzophenone followed by hydrolysis of the obtained diazonium salt [301].

- Also obtained by Fries rearrangement of phenyl m-methoxy-benzoate (phenyl m-anisate) with aluminium chloride at 120° or 160° for 2 h [340].
 - Also obtained (poor yield) by reaction of m-methoxybenzoyl chloride with phenol in the presence of aluminium chloride in nitrobenzene at 160° for 45 min (4%) [341].
 - Preparation by demethylation of 2,3'-dimethoxybenzophenone in the presence of aluminium chloride in refluxing chlorobenzene for 1 h (86%) [341].
 - Also refer to: [342,343].
- m.p. 127° [340], 126° [301], 124–127° [341], 121–122° [300];
¹H NMR [341], IR [341], UV [341].

(2-Hydroxyphenyl)(4-hydroxyphenyl)methanone

[606-12-2]

C₁₃H₁₀O₃ mol.wt. 214.22

Syntheses

- Preparation by diazotization of 2,4'-diamino-2',4'-di-hydroxybenzophenone, followed by decomposition of the diazonium salt obtained in the presence of 50% hypo-phosphorous acid (57%) [286].
- Preparation from 2-hydroxy-4'-nitrobenzophenone by reduction with stannous chloride and hydrochloric acid, followed by diazotization of the 4-amino-2'-hydroxybenzophenone formed and hydrolysis of the diazonium salt obtained [322].
- Preparation by hydrolysis of 2,4'-dichlorobenzophenone with sodium hydroxide for 1 h at 270° in a steel autoclave (98–99%) [314].
- Preparation by diazotization of 2,4'-diaminobenzophenone, followed by hydrolysis of the diazonium salt obtained [301].
- Also obtained by condensation of salicylic acid with phenol,
 - in the presence of stannic chloride at 115–125° (major product) [9,190,212,317,320,322,336,344];
 - in the presence of zinc chloride (poor yield) [317];
 - in the presence of hydrofluoric acid at 75° in an autoclave [184];
 - in the presence of boron trifluoride in nitrobenzene at 80° for 30 min (83%) [186];
 - in the presence of polyphosphoric acid at 100° for 20 min (2%) [149].
- Also obtained by Fries rearrangement,
 - of phenyl o-methoxybenzoate with aluminium chloride at 120–160° for 2 h [340], with aluminium chloride in the presence of phenol at 180° for 3 h (44%) [155];
 - of phenyl salicylate (salol), with aluminium chloride at 120–160° for 2 h [340], at 140° for 3 h (75%) [345] or at 180–182° for 3 h (53%) [155]; with stannic chloride at 115–120° for 18 h (54%) [14];

- of phenyl *o*-(benzoyloxy)benzoate with aluminium chloride in the presence of phenol at 180° for 3 h (36%) [155];
 - of *o*-(nicotinyloxy)phenyl benzoate with aluminium chloride at 140–145° for 2 h (by-product) (9%) [346].
- Preparation by dealkylation of 5-*tert*-butyl-2,4'-dimethoxybenzophenone with aluminium chloride in benzene at 65–70° for 45 h (75%) [9].
 - Preparation by reaction of hydrobromic acid (*d* = 1.49) with 2,4'-di(4-methoxybenzoyloxy)-benzophenone in refluxing acetic acid for 2 h (86%) [19].
 - Also obtained by hydrolysis of *p*-(salicyloyl)phenyl salicylate [346].
 - Also obtained by treatment of 4-acetoxy-2'-methoxybenzophenone with aluminium chloride at 153–155° for 2 h (19%) [155]. There is simultaneously demethylation and hydrolysis of the acetoxy group.
 - Also obtained by decarboxylation of 2-hydroxy-5-(salicyloyl)benzophenone by melting with potassium hydroxide (63%) [14].
 - Also obtained by photo-Fries rearrangement,
 - of phenyl salicylate (salol) [219], in ethanol for 76 h (22%) [68];
 - of phenyl carbonate in ethanol for 150 h (11%) [68].
- Also refer to: [84,347–349].

N.B.: Na salt [88,314].

(3-Hydroxyphenyl)(4-hydroxyphenyl)methanone

[611-81-4]

C₁₃H₁₀O₃

mol.wt. 214.22

Syntheses

- Obtained by Fries rearrangement of phenyl *m*-anisate without solvent in the presence of aluminium chloride for 2 h between 120° and 160° [340].
- Also obtained by reaction of *m*-hydroxybenzoic acid with phenol,
 - in the presence of polyphosphoric acid for 20 min at 100° (7%) [149];
 - in hydrofluoric acid at 30° under a pressure of 30 psi boron trifluoride in an autoclave for 4 h [350], (89%) [351].
- Also obtained by reaction of *m*-methoxybenzoyl chloride with phenol in the presence of aluminium chloride in nitrobenzene at 160° for 45 min (12%) [341].

- Preparation by diazotization of 3,4'-diaminobenzophenone (m.p. 121–122°) [305], followed by hydrolysis of the diazonium salt obtained [301,305].
 - Preparation by demethylation of 3,4'-dimethoxybenzophenone with 48% hydrobromic acid in a acetic anhydride/acetic acid mixture (1:1) for 15 h at reflux (quantitative yield) [352].
 - Also refer to: [353–355].
- m.p. 203° [351], 200° [305], 198° [300], 197° [301], 196–197° [340],
195–200° [341], 195° [149], 193–194° [352];
Spectra (NA).

1.3 Trihydroxybenzophenones

1.3.1 Hydroxy Groups Located on One Ring

Phenyl(2,3,4-trihydroxyphenyl)methanone (*Alizarine Yellow A*)

[1143-72-2]

 $C_{13}H_{10}O_4$

mol.wt. 230.22

Syntheses

- Preparation by reaction of benzoic acid with pyrogallol,
 - in the presence of zinc chloride during 3 h at 145° [190,344,356];
 - in the presence of Amberlyst-15 (a strongly acid ion exchanger) in chlorobenzene during 10 h at 131–132° (60%) [357];
 - in the presence of Amberlite IR-120 or Zeokarb 225 (cation exchange resins, sulfonic acid type) during 3 h at 160° (14%) [195];
 - in the presence of boron trifluoride in ethyl ether at 0° (44%) [358,359].
- Preparation by reaction of benzoic anhydride with pyrogallol [195,344,356],
 - in the presence of concentrated sulfuric acid or polyphosphoric acid during 15 min at reflux (14%) [195];
 - in the presence of zinc chloride at 145° [344,356];
 - in the presence of Amberlite IR 120 or Zeokarb 225 during 3 h at 160° (16%) [195].
- Preparation by reaction of benzoyl chloride with pyrogallol [39,344,356],
 - in the presence of Nafion-XR, a H⁺-form ion exchange resin, during 4 h at 150° under nitrogen (78%) [39];
 - in the presence of zinc chloride at 145° [344,356].
- Preparation by reaction of benzotrichloride with pyrogallol [360], in the presence of zinc chloride at 145° [344,361].
- Preparation by reaction of 2,3,4-triacetoxybenzoyl chloride with benzene in the presence of aluminium chloride at 40° for 4 h (55%) [362].

- Preparation in two steps by condensation of pyrogallol with benzanilide imidochloride after acidic hydrolysis of the intermediate keto anil (31%) [156].
- Also obtained by hydrolysis of gallacetophenone monobenzoate in the presence of concentrated sulfuric acid during 4 h into a cooling system (10%) [363].
- Preparation by Fries rearrangement of,
 - 2,3-dihydroxyphenyl benzoate with Nafion-XR during 4 h at 150° under nitrogen (81%) [39];
 - pyrogallol tribenzoate with aluminium chloride during 2 h at 160–170° (15%) [363].
- Also refer to: [267,280,281,364–368].

N.B.: K, Pb and Na salts are obtained according to [344].

m.p. 146° [358,359], 141–143° [195], 140–141° [156,344], 140° [363],

m.p. and Spectra (NA).

Phenyl(2,4,5-trihydroxyphenyl)methanone

[14894-91-8] $C_{13}H_{10}O_4$ mol.wt. 230.22

Synthesis

m.p. 129°1 [256]; Spectra (NA).

Phenyl(2,4,6-trihydroxyphenyl)methanone (*Phlorbenzophenone*)

[3555-86-0] $C_{13}H_{10}O_4$ mol.wt. 230.22

Syntheses

- Preparation by reaction of benzonitrile with phloroglucinol in the presence of zinc chloride and hydrochloric acid in ethyl ether at r.t. for overnight, followed by hydrolysis of the ketimine salt formed with dilute sulfuric acid [370], (65%) [371] (Hoesch reaction).

- Preparation in two steps by condensation of phloroglucinol with benzanilide imidochloride after acidic hydrolysis of the intermediate keto anil (39%) [156].
- Preparation by reaction of benzoyl chloride with phloroglucinol in the presence of aluminium chloride in a ethyl ether/nitrobenzene mixture [372].
- Preparation by condensation of benzoyl chloride with 1,3,5-trimethoxybenzene, followed by demethylation [373].
- Also obtained by reaction of phenyl benzoate with phloroglucinol in the presence of boron trifluoride-etherate in refluxing benzene for 3 h (25%) [34].
- Preparation by demethylation of 2,4,6-trimethoxybenzophenone with hydriodic acid ($d = 1.7$) in acetic anhydride at 115–120° for 4 h (83%) [374].
- Also refer to: [166,167,375,376].

Isolation from natural sources

- From *Helichrysum triplinerve* (Asteraceae) [377];
- From *genus Leontonyx* [378].

m.p. 170–171° [374], 165° [34,156,363,371], 164–165° [372], 164° [370];
¹H NMR [374], UV [370].

Phenyl(3,4,5-trihydroxyphenyl)methanone

[60487-86-7]

C₁₃H₁₀O₄ mol.wt. 230.22

Synthesis

- Preparation by reaction of tri(carbomethoxy) galloyl chloride with benzene in the presence of aluminium chloride at 70–80° for 1.5 h, followed by saponification of the keto ester formed with N sodium hydroxide in a water bath for 15 min (65%) [160].
- Also refer to: [220,379].

m.p. 177–178° [160]; Spectra (NA).

1.3.2 Hydroxy Groups Located on Both Rings

(2,3-Dihydroxyphenyl)(4-hydroxyphenyl)methanone

[129726-78-9]

C₁₃H₁₀O₄ mol.wt. 230.22

Synthesis

- Preparation by total demethylation of 2,3,4'-trimethoxy-benzophenone with hydrobromic acid ($d = 1.5$) in refluxing acetic acid [179].
- m.p. 169° [179]; Spectra (NA).

(2,4-Dihydroxyphenyl)(2-hydroxyphenyl)methanone

[13087-18-8]

 $C_{13}H_{10}O_4$ mol.wt. 230.22

Syntheses

- Preparation by diazotization of 4,4'-diamino-2,2'-di-hydroxybenzophenone, followed by treatment of the diazonium salt formed with 50% hypophosphorous acid (26%) [286].
 - Also obtained (poor yield) by action of salicylic acid on resorcinol at 195–200° for 15 h, without a dehydrating agent [190,317,336,344] or in the presence of zinc chloride and phosphorous oxychloride (40%) [380].
 - Also obtained (poor yield) by condensation of o-acetoxybenzoxonitrile with resorcinol in the presence of zinc chloride and hydrochloric acid in ethyl ether at 0° (Hoesch reaction), followed by hydrolysis of the intermediate compound obtained with boiling 0.5 N sodium hydroxide (<5%) [381]. In this reaction, the major compound was 3-hydroxyxanthone (18%).
 - Also refer to: [84,226] and [382] (Japanese patent).
- m.p. 134–135° [380], 133–134° [317,336,381], 132–133° [286], 130–132° [190,237];
 UV [190,303,380], MS [114]; TLC [116];
 paper chromatography [383].

(2,4-Dihydroxyphenyl)(3-hydroxyphenyl)methanone

[837-60-5]

 $C_{13}H_{10}O_4$ mol.wt. 230.22

Synthesis

- Preparation by total demethylation of 2,3',4'-trimethoxy-benzophenone,
 - with 60% hydrobromic acid in refluxing acetic acid for 6 h [341,343], (87%) [291];
 - with aluminium chloride in boiling chloroform for 2.5 h [291].
 - Also refer to: [293,384,385].
- m.p. 178–182° [291], 178–180° [385];
 1H NMR [341], IR [291,385], UV [291,385], MS [385].

(2,4-Dihydroxyphenyl)(4-hydroxyphenyl)methanone

[1470-79-7]

 $C_{13}H_{10}O_4$ mol.wt. 230.22

Syntheses

- Preparation by reaction of 4-hydroxybenzoic acid with resorcinol,
 - in the presence of zinc chloride at 160° (Nencki reaction) [188,190];
 - in the presence of zinc chloride and phosphorous oxychloride for 4 days at r.t. (78%) [191];

- in the presence of zinc chloride and a mixture of polyphosphoric acid/85% phosphoric acid (60:40) at 27°. Then, during 2 h, phosphorous trichloride was added between 27° and 37° and the mixture heated at 60° for 16 h (quantitative yield) [194];
 - in the presence of hydrofluoric acid at 75° in an autoclave [184].
- Preparation by reaction of β-resorcylic acid with phenol in the presence of zinc chloride and a mixture of polyphosphoric acid/85% phosphoric acid (60:40) at 27° [194], (40%) [380]. Then, during 2 h, phosphorous trichloride was added between 27° and 37° and the mixture heated at 60° for 16 h [194].
- Also refer to: [298,386–393].
- m.p. 203°4–204° [194], 200–201° [188,191], 200° [190,237], 199–200° [380];
 dihydrate [188]; IR [394], UV [190,380,394], MS [114];
 TLC [116], paper chromatography [383].

(2,5-Dihydroxyphenyl)(2-hydroxyphenyl)methanone

[183106-13-0]

C₁₃H₁₀O₄ mol.wt. 230.22

Syntheses

- Preparation by total demethylation of 2,2',5-trimethoxy-benzophenone with boron tribromide in methylene chloride at 0° under nitrogen atmosphere for 3 h (85%) [395].
 - Preparation by condensation of salicylic acid with hydroquinone in the presence of zinc chloride for 45 min at 125–140° (Nencki reaction). – Refer to: Chem. Abstr., **44**, 1271f (1950)^T.
- m.p. 149–150° [395], 98°^T. One of the reported melting points is obviously wrong.

¹H NMR [395], IR [395], UV [395], MS [395]; TLC [395].

(2,5-Dihydroxyphenyl)(4-hydroxyphenyl)methanone

[120506-56-1]

C₁₃H₁₀O₄ mol.wt. 230.22

Syntheses

- Preparation by heating a mixture of 4-hydroxybenzoic acid and hydroquinone in nitrobenzene in the presence of boron trifluoride at 80° for 30 min (64%) [186]. **N.B.:** In the patent, this compound was erroneously called 3',4,5'-tri-hydroxybenzophenone (assay 5, table page 3) [186].
 - Preparation by Friedel–Crafts acylation of hydroquinone dimethyl ether with p-anisoyl chloride (AlCl₃/CS₂/ 3 h at r.t.), followed by demethylation (AlCl₃/Toluene/ 1 h at 120°) (65%). –Refer to: Chem. Abstr., **44**, 1271f (1950)^T.
- m.p. 162°^T; Spectra (NA).

(2,6-Dihydroxyphenyl)(2-hydroxyphenyl)methanone[82-69-9] $C_{13}H_{10}O_4$ mol.wt. 230.22

Synthesis

- Preparation by hydrolysis of 7-hydroxy-8-(o-hydroxy-benzoyl)-4-methylcoumarin with sodium hydroxide in dilute ethanol (52%).
- Refer to: Chem. Abstr., **114**, 42490n (1991)^T.

m.p. 155^{oT}; IR^T.**(2,6-Dihydroxyphenyl)(3-hydroxyphenyl)methanone**[21554-76-7] $C_{13}H_{10}O_4$ mol.wt. 230.22

Synthesis

- Preparation by demethylation of 2,3',6-trimethoxybenzophenone in the presence of aluminium chloride in refluxing chlorobenzene for 1 h (47%) [341].
- Also refer to: [342,343].

m.p. 124–125^o [341]; IR [341], UV [341].**(2,6-Dihydroxyphenyl)(4-hydroxyphenyl)methanone**[131425-90-6] $C_{13}H_{10}O_4$ mol.wt. 230.22

Synthesis

- Preparation by hydrolysis of 7-hydroxy-8-(p-hydroxy-benzoyl)-4-methylcoumarin (SM) with sodium hydroxide in refluxing dilute ethanol (57%). SM was obtained by Fries rearrangement of 7-(p-methoxybenzoyloxy)-4-methylcoumarin with aluminium chloride, first at 190^o, then at 200^o for 1.5 h (52%, m.p. 181^o).
- Refer to: Chem. Abstr., **114**, 42490n (11991)^T.

m.p. 170^{oT}; IR^T.**(3,4-Dihydroxyphenyl)(4-hydroxyphenyl)methanone** $C_{13}H_{10}O_4$ mol.wt. 230.22

Synthesis

- Preparation by Friedel–Crafts acylation of pyrocatechol dimethyl ether with p-anisoyl-chloride (AlCl₃/CS₂/ 3 h at r.t.), followed by demethylation (AlCl₃/toluene/ 1 h at 120^o) (65%).
- Refer to: Chem. Abstr., **44**, 1271f (1950)^T.

m.p. 205^{oT}; Spectra (NA).

(3,5-Dihydroxyphenyl)(4-hydroxyphenyl)methanone

[129020-58-2]

 $C_{13}H_{10}O_4$ mol.wt. 230.22

Synthesis

– Refer to: [396].

m.p. and Spectra (NA).

1.4 Tetrahydroxybenzophenones**1.4.1 Hydroxy Groups Located on One Ring****Phenyl(2,3,4,6-tetrahydroxyphenyl)methanone**

[198879-06-0]

 $C_{13}H_{10}O_5$ mol.wt. 246.22

Synthesis

– Preparation by Friedel–Crafts acylation of 1,2,3,5-tetra-hydroxybenzene with benzoyl chloride (46%).

– Refer to: Chem. Abstr., **128**, 3540y (1998)^T.m.p. (NA); ¹H NMR^T, ¹³C NMR^T, MS^T.**1.4.2 Hydroxy Groups Located on Both Rings***Symmetrical ketones***Bis(2,3-dihydroxyphenyl)methanone**

[35042-50-3]

 $C_{13}H_{10}O_5$ mol.wt. 246.22

Synthesis

– Preparation by demethylation of 2'-hydroxy-2,3,3'-tri-methoxybenzophenone with 48% hydrobromic acid in refluxing acetic acid for 5 h (78%) [397].

m.p. 121–122° [397,398]; IR [397], UV [397].

Bis(2,4-dihydroxyphenyl)methanone (Uvinul-D-50)

[131-55-5]

 $C_{13}H_{10}O_5$ mol.wt. 246.22

Syntheses

– Obtained (small amount) by melting a fluorescein chloride/sodium hydroxide mixture in the presence of a very few water at 230–240° for 2–3 h [399,400].

- Preparation by reaction of phosgene with resorcinol in the
 - Presence of zirconium chloride in nitrobenzene at 70° (74%) [401].
 - Preparation by Fries rearrangement of 3-hydroxyphenyl 2,4-dihydroxybenzoate with zirconium chloride in nitrobenzene at 70° (94%) [401].
 - Preparation by reaction of β -resorcylic acid with resorcinol,
 - in the presence of zinc chloride and phosphorous oxychloride at 80–90° for 45 min, or at r.t. for 48 h (75%) [402], in sulfolane for 2 h at 50° (92%) [403];
 - in the presence of zinc chloride and a mixture of polyphosphoric acid/85% phosphoric acid (60:40) at 60° for 1 h. Then, during 1.5 h, phosphorous trichloride was added and the mixture heated at 60° for 8.5 h (85%) [194];
 - in the presence of boron trifluoride in nitrobenzene at 80° for 30 min (59%) [186].
 - Preparation by condensation of 2,4-diacetoxybenzoxynitrile with resorcinol in the presence of zinc chloride and hydrochloric acid in ethyl ether (Hoesch reaction). The 2,4-diacetoxy-2',4'-di-hydroxybenzophenone imine hydrochloride thus formed (m.p. 195° (d)) was hydrolyzed with boiling 25% aqueous sulfuric acid for 15 min [381], (33%) [404].
 - Also refer to: [78,79,84,225,227,228,235,387,405–408].
- m.p. 201° [235], 200–201° [194], 198° [236], 196–198° [402,404], 193–195° [113,399];
 UV [113,235,236,240–242];
 TLC [116]; HPLC [186]; vapour pressure [236];
 gel permeation chromatography [247].

Bis(2,5-dihydroxyphenyl)methanone $C_{13}H_{10}O_5$ mol.wt. 246.22

Syntheses

– Obtained by gently heating b-isoeuxanthone (2,7-di-hydroxyxanthone) with anhydrous potassium hydroxide [287].

- This benzophenone can be obtained by total dealkylation of its tetramethyl ether by the usual methods. This one (m.p. 109°) was prepared by reaction of dimethylgentisic acid chloride (2,5-dimethoxybenzoyl chloride) with hydroquinone dimethyl ether (2,5-dimethoxybenzene) in the presence of aluminium chloride in carbon disulfide [409].

N.B.: Pb salt [287].

m.p. and Spectra (NA).

Bis(3,4-dihydroxyphenyl)methanone

(2,3-Dihydroxyphenyl)(2,5-dihydroxyphenyl)methanone

[35040-37-0]

$C_{13}H_{10}O_5$

mol.wt. 246.22

Synthesis

– Preparation by demethylation of 2-hydroxy-2',3',5'-tri-methoxybenzophenone with 48% hydrobromic acid in refluxing acetic acid for 4 h (64%) [397].

m.p. 190–191° [397]; 1H NMR [397], IR [397].

(2,3-Dihydroxyphenyl)(2,6-dihydroxyphenyl)methanone

[25577-01-9]

$C_{13}H_{10}O_5$

mol.wt. 246.22

Syntheses

– Preparation by reaction of boron tribromide with 2,2',3'-tris[(ethoxycarbonyloxy)-6-methoxybenzophenone (SM) in methylene chloride at r.t. for 5 h under nitrogen (61%) [412]. SM was obtained by

reaction of ethyl chloroformate with 2,2',3'-trihydroxy-6-methoxybenzophenone in the presence of potassium carbonate in refluxing acetone for 5–6 h (91%).

- Also obtained (by-product) by demethylation of 2,2',3',6-tetramethoxybenzophenone with boron tribromide in benzene at r.t. for 5 h (16%) [412].

m.p. 173–174° [412]; ¹H NMR [412], IR [412], UV [412], MS [412].

(2,3-Dihydroxyphenyl)(3,4-dihydroxyphenyl)methanone

[37728-15-7]

C₁₃H₁₀O₅

mol.wt. 246.22

Syntheses

- Preparation by reaction of 2,3-dihydroxybenzoic acid with pyrocatechol in the presence of freshly fused zinc chloride and phosphorous oxychloride at 65–70° for 3 h (32%) [398].
 - Preparation by Friedel–Crafts acylation of veratrole with 2,3-dimethoxybenzoyl chloride in the presence of aluminium chloride at 30–40° for 16 h. The 2,3,3',4'-tetramethoxybenzophenone formed was demethylated by heating with pyridinium chloride [281].
 - Also refer to: [79,280,411].
- m.p. 200° [281], 141–142° [398]. One of the reported melting points is obviously wrong. UV [398].

(2,4-Dihydroxyphenyl)(2,5-dihydroxyphenyl)methanone

[61234-44-4]

C₁₃H₁₀O₅

mol.wt. 246.22

Syntheses

- Preparation by demethylation of 2,4,5'-trihydroxy-2'-methoxybenzophenone with hydrobromic acid in boiling acetic acid for 2 h (79%) [413].
 - Preparation [414] according to [415].
 - Also refer to: [343].
- m.p. 237° [413]; Spectra (NA).

1.5.1 Hydroxy Groups Located on One Ring

Only one ketone possible, not yet described.

1.5.2 Hydroxy Groups Located on Both Rings

(2,3-Dihydroxyphenyl)(3,4,5-trihydroxyphenyl)methanone

[114415-01-9]

$C_{13}H_{10}O_6$ mol.wt. 262.22

Synthesis

– Preparation by reaction of gallic acid with pyrocatechol in chlorobenzene in the presence of methanesulfonic acid for 6 h between 65° and 75° (90%) or by using boron trifluoride-etherate instead of methanesulfonic acid as catalyst (10%).

- Refer to: Chem. Abstr., **108**, 204327v (1988).
m.p. and Spectra (NA).

(2,4-Dihydroxyphenyl)(2,3,4-trihydroxyphenyl)methanone

[92379-42-5]

$C_{13}H_{10}O_6$ mol.wt. 262.22

Syntheses

- Preparation by reaction of 2,3,4-trihydroxybenzoic acid with resorcinol,
 - in the presence of zinc chloride and phosphorous oxychloride at 70–80° for 1.5 h (65%) [402];
 - in the presence of zinc chloride and a mixture of polyphosphoric acid/85% phosphoric acid (60:40) at 27°. Then, during 2 h, phosphorous trichloride was added between 27° and 37° and the mixture heated at 60° for 16 h [194].
- Preparation by reaction of β -resorcylic acid with pyrogallol,
 - in the presence of zinc chloride and phosphorous oxychloride at 70–80° for 1 h [402], in sulfolane at 50° for 2 h [403];
 - in the presence of zinc chloride and a mixture of polyphosphoric acid/85% phosphoric acid (60:40) at 27°. Then, during 2 h, phosphorous trichloride was added between 27° and 37° and the mixture heated at 60° for 16 h [194];
 - in the presence of boron trifluoride in tetrachloroethane at 110° for 1 h [420].
- Also obtained by condensation of 2,4-diacetoxybenzoxonitrile with pyrogallol in the presence of zinc chloride and hydrochloric acid in ethyl ether (Hoesch reaction).

The intermediate compound obtained was hydrolyzed in boiling water for 2 h (22%) [381].

– Also refer to: [298,391,425,426,434–437].

m.p. 187–188° [402], 187° [381]; dihydrate [381];

Spectra (NA); TLC [116].

(2,4-Dihydroxyphenyl)(3,4,5-trihydroxyphenyl)methanone

[10425-09-9]

$C_{13}H_{10}O_6$ mol.wt. 262.22

Syntheses

– Preparation by reaction of gallic acid with resorcinol in the presence of zinc chloride at 145° for 3 h [190] (Nencki reaction).

– Preparation by condensation of 2,4-dihydroxybenzoic acid with pyrogallol in the presence of zinc chloride for 45 min at 125–140° (Nencki reaction).

– Refer to: Chem. Abstr., **44**, 1271f (1950)^T.

– Also refer to: [280,281].

m.p. 253°^T, 243–245° [190,237]; UV [190]; TLC [116].

(2,5-Dihydroxyphenyl)(3,4,5-trihydroxyphenyl)methanone

$C_{13}H_{10}O_6$ mol.wt. 262.22

Synthesis

– Preparation by the Friedel–Crafts reaction.

– Refer to: Chem. Abstr., **65**, 18519h (1966)^T.

m.p. (NA); UV^T.

(2,6-Dihydroxyphenyl)(2,3,4-trihydroxyphenyl)methanone

[112232-16-3]

$C_{13}H_{10}O_6$ mol.wt. 262.22

Synthesis

– Refer to: [438] (Japanese patent).

m.p. and Spectra (NA).

(2,6-Dihydroxyphenyl)(2,4,6-trihydroxyphenyl)methanone

$C_{13}H_{10}O_6$ mol.wt. 262.22

Synthesis

– Obtained (poor yield) by treatment of 1,3,8-trihydroxy-xanthone (m.p. 265°) with aqueous potassium hydroxide for 30 min at 240–250° (6%).

– Refer to: Chem. Abstr., **50**, 15523^b (1956)^T.

m.p. 162°^T; Spectra (NA).

Substituted Hydroxybenzophenones

(Class of METHANONES)

2.1 Monohydroxybenzophenones

2.1.1 Substituents Located on the Hydroxylated Ring

Phenyl(2,3,5-trichloro-6-hydroxyphenyl)methanone

[7396-96-5] $C_{13}H_7Cl_3O_2$ mol.wt. 301.56

Synthesis

– Preparation by Fries rearrangement of 2,4,5-trichlorophenyl benzoate with aluminium chloride for 30 min at 150–160° [458].

m.p. 143–144° [458]; Spectra (NA).

(3-Hydroxy-2,4,6-triiodophenyl)phenylmethanone

[91692-34-1] $C_{13}H_7I_3O_2$ mol.wt. 575.91

Syntheses

- Preparation by treating a solution of 3-hydroxybenzo-phenone in methanolic sodium hydroxide with iodine mono-chloride in aqueous sodium chloride (75%) [120,459].
- Also obtained by iodination of 3-hydroxybenzophenone with iodine monochloride [460].

m.p. 190° [120,459]; Spectra (NA).

(3-Bromo-5-fluoro-4-hydroxyphenyl)phenylmethanone

[579-15-7] $C_{13}H_8BrFO_2$ mol.wt. 295.11

Synthesis

– Preparation by reaction of bromine with 3-fluoro-4-hydroxybenzophenone in acetic acid [461].

m.p. 187° [461]; Spectra (NA).

(3,5-Dibromo-2-hydroxyphenyl)phenylmethanone

[111277-24-8]

 $C_{13}H_8Br_2O_2$ mol.wt. 356.01
Syntheses

– Preparation by adding a solution of bromine in chloroform to a solution of 2-hydroxybenzophenone in ethanol [35,61,127,462].

- Preparation by Friedel–Crafts acylation of benzene with 3,5-dibromo-2-hydroxybenzoyl chloride in the presence of aluminium chloride in a steam bath for 1 h (70%) [462] or at 80° (>80%) [463].
- Also obtained (poor yield) by alkaline condensation of benzotrichloride with 2,4-dibromophenol in 30% aqueous sodium hydroxide solution at 80–85° (8%) [127].
- Also refer to: [73,464,465].

m.p. 129–130° [463], 128–129° [127], 126° [35,61], 121–122° [462];
Spectra (NA).

(3,5-Dibromo-4-hydroxyphenyl)phenylmethanone

[26733-16-4]

 $C_{13}H_8Br_2O_2$ mol.wt. 356.01
Syntheses

– Preparation by reaction of bromine with 4-hydroxybenzo-phenone in acetic acid [140,169,466], in chloroform [127] or in water [140].

- Preparation by adding a 5% solution of bromine in potassium bromide to a solution of 4-hydroxybenzophenone in dilute aqueous potassium hydroxide at 5° [140].
- Also obtained by treatment of a mixture of sodium acetate and 4-methoxybenzophenone with bromine in a sealed tube at 140° [140].
- Preparation by Fries rearrangement of 2,6-dibromophenyl benzoate with aluminium chloride without solvent at 120° for 3 h (40%) [467].
- Also obtained (poor yield) by alkaline condensation of benzotrichloride with 2,4,6-tribromophenol in 30% aqueous sodium hydroxide solution at 90–95° (2%) [127].
- Also refer to: [468].

N.B.: K salt [169].

m.p. 178° [467], 155° [140], 152–153° [466], 151–152° [169], 150–152° [127];
MS [177]; voltammetric studies [469].

(2-Chloro-4-fluoro-6-hydroxyphenyl)phenylmethanone

[169781-84-4]

 $C_{13}H_8ClFO_2$ mol.wt. 250.66
Syntheses

– Obtained by Fries rearrangement of 3-chloro-5-fluorophenyl benzoate with aluminium chloride at 200° for 20 min [20].

- Also obtained by demethylation of 2-chloro-4-fluoro-6-methoxybenzophenone with boron tribromide in methylene chloride at r.t. for 12 h [20], according to [21].
m.p. and Spectra (NA).

(5-Chloro-2-hydroxy-3-nitrophenyl)phenylmethanone

[85052-26-2]

 $C_{13}H_8ClNO_4$ mol.wt. 277.66

Synthesis

- Preparation by nitration of 5-chloro-2-hydroxybenzo-phenone,
 - with 26% nitric acid in acetic acid at r.t. for 12 h (50%) [470];
 - with nitric acid (d = 1.38) in acetic acid and methylene chloride at r.t. for overnight [471];
 - with 60% nitric acid in the presence of one drop of concentrated sulfuric acid at r.t. for 25 min (89%) [472].
- Also refer to: [473].

m.p. 70°5–71° [470], 68–70° [471], 56–58° [472];

 1H NMR [472], IR [470,472], MS [472].**(5-Chloro-2-hydroxy-4-nitrophenyl)phenylmethanone**

[66306-91-0]

 $C_{13}H_8ClNO_4$ mol.wt. 277.66

Synthesis

– Refer to: [474].

m.p. and Spectra (NA).

(2,3-Dichloro-4-hydroxyphenyl)phenylmethanone

[62967-12-8]

 $C_{13}H_8Cl_2O_2$ mol.wt. 267.11

Synthesis

- Preparation by demethylation of 2,3-dichloro-4-methoxy-benzophenone (SM),
 - with aluminium chloride, in refluxing methylene chloride overnight [475] or in refluxing benzene for 5 h [476];
 - with pyridinium chloride at 180° for 2 h (99%) [477].

SM was obtained by Friedel–Crafts acylation of 2,3-dichloroanisole with benzoyl chloride in the presence of aluminium chloride in methylene chloride [475], first at 0° for 30 min, then at r.t. for 6 h (42%) [477] or in ethylene dichloride for 2 h [476].

m.p. 123–126° [475]; Spectra (NA).

(2,4-Dichloro-6-hydroxyphenyl)phenylmethanone

[34199-75-2]

 $C_{13}H_8Cl_2O_2$ mol.wt. 267.11

Synthesis

– Preparation by Fries rearrangement of 3,5-dichlorophenyl benzoate with aluminium chloride for 30 min at 150–160° [458].

m.p. 156–157° [458]; Spectra (NA).

(2,5-Dichloro-4-hydroxyphenyl)phenylmethanone

[123574-94-7]

 $C_{13}H_8Cl_2O_2$ mol.wt. 267.11

Synthesis

– Preparation by Friedel–Crafts acylation of 2,5-dichloro-phenol with benzoyl chloride in the presence of aluminium chloride in refluxing ethylene dichloride for 33 h (61%) [478].

– Also refer to: [479].

m.p. 161–163° [478]; 1H NMR [478], IR [478], MS [478].**(2,6-Dichloro-4-hydroxyphenyl)phenylmethanone**

[34183-13-6]

 $C_{13}H_8Cl_2O_2$ mol.wt. 267.11

Synthesis

– Obtained by Fries rearrangement of 3,5-dichlorophenyl benzoate with aluminium chloride in chlorobenzene at 140–150° for 20 min or in nitrobenzene at 75° for 24 h [480].

m.p. 135–136° [480]; Spectra (NA).

(3,4-Dichloro-2-hydroxyphenyl)phenylmethanone

[54923-64-7]

 $C_{13}H_8Cl_2O_2$ mol.wt. 267.11

Synthesis

– Obtained by chromic oxidation (CrO_3) of 6,7-dichloro-3-phenylbenzofuran, followed by saponification of obtained keto ester [481].

m.p. 141°5 [481]; IR [481].

(3,4-Dichloro-5-hydroxyphenyl)phenylmethanone

[113730-38-4]

 $C_{13}H_8Cl_2O_2$ mol.wt. 267.11

Synthesis

– Preparation by demethylation of 3,4-dichloro-5-methoxy-benzophenone with boron tribromide in methylene chloride at 5° for 1 h, then at r.t. for 20 min (98%) [482].

m.p. 177° [482]; hemihydrate [482]; ¹H NMR [482].

(3,5-Dichloro-2-hydroxyphenyl)phenylmethanone

[7396-92-1]

 $C_{13}H_8Cl_2O_2$ mol.wt. 267.11

Syntheses

- Preparation by adding aluminium chloride into a solution of 3,5-dichloro-2-hydroxybenzoyl chloride in benzene and heating at 60° for 3–4 h (60–70%) [483].
- Also obtained by chromic oxidation (CrO_3) of 5,7-dichloro-3-phenylbenzofuran, followed by saponification of the obtained keto ester [481].
- Preparation by reaction of benzoyl chloride with 2,4-dichlorophenol in the presence of aluminium chloride at 180° for 23 min (46%) [484].
- Preparation by Fries rearrangement of 2,4-dichlorophenyl benzoate (SM) with aluminium chloride at 140° for 30 min (quantitative yield). SM was obtained by heating benzoyl chloride with aluminium tris(2,4-dichlorophenoxide) in a water bath for 30 min [485].
- Also refer to: [464,486–488].

m.p. 116° [483], 115° [481], 114–115° [485], 113–114° [484]; IR [481], UV [241].

(3,5-Dichloro-4-hydroxyphenyl)phenylmethanone

[34183-06-7]

 $C_{13}H_8Cl_2O_2$ mol.wt. 267.11

Syntheses

- Preparation by Fries rearrangement of 2,6-dichlorophenyl benzoate with aluminium chloride,
- without solvent at 154° for 2.5 h (71%) [489];
 - in chlorobenzene at 140–150° for 20 min [480];
 - in nitrobenzene at 75° for 24 h [480].
- Preparation by demethylation of 3,5-dichloro-4-methoxybenzophenone with 48% hydrobromic acid in refluxing acetic acid [140].
- Preparation by passing chlorine into a solution of p-hydroxybenzophenone and sodium acetate in acetic acid during some hours [140].

- Also obtained by Fries rearrangement of 4-tert-butyl-2,6-dichlorophenyl benzoate with aluminium chloride at 140° (sole isolated reaction product). There is a total dealkylation [154].
 - Also refer to: [298].
- m.p. 149–150° [480], 148° [140], 145–146° [489]; Spectra (NA).

(4,5-Dichloro-2-hydroxyphenyl)phenylmethanone

[58430-25-4]

C₁₃H₈Cl₂O₂ mol.wt. 267.11

Synthesis

- Preparation by Friedel–Crafts acylation of 3,4-dichloro-phenol with benzoyl chloride in the presence of aluminium chloride at 180° for 35 min [75].

m.p. 115–116° [75]; Spectra (NA).

(2,5-Difluoro-4-hydroxyphenyl)phenylmethanone

[179018-49-6]

C₁₃H₈F₂O₂ mol.wt. 234.20

Synthesis

- Preparation by Fries rearrangement of 2,5-difluorophenyl benzoate with aluminium chloride at 160° for 2 h [490,491].

m.p. (NA); MS [490,491].

(3,5-Difluoro-2-hydroxyphenyl)phenylmethanone

[183280-20-8]

C₁₃H₈F₂O₂ mol.wt. 234.20

Synthesis

- Preparation by Fries rearrangement of 2,4-difluorophenyl benzoate with aluminium chloride at 150–180° for 20 min (35%) [492].

m.p. 83°5 [492]; ¹H NMR [492], UV [492], MS [492].

(3,5-Difluoro-4-hydroxyphenyl)phenylmethanone

[179018-48-5]

C₁₃H₈F₂O₂ mol.wt. 234.20

Synthesis

- Preparation by Fries rearrangement of 2,6-difluorophenyl benzoate with aluminium chloride at 160° for 2 h [490,491].

m.p. (NA); MS [490,491].

(2-Hydroxy-3,5-diiodophenyl)phenylmethanoneC₁₃H₈I₂O₂ mol.wt. 450.01

Synthesis

- Preparation by reaction of 3,5-diiodosalicylic acid chloride with benzene in the presence of aluminium chloride in carbon disulfide at 50° [493].
- Also refer to: [464,494].

m.p. 116° [493]; Spectra (NA).

(4-Hydroxy-3,5-diiodophenyl)phenylmethanone[70036-74-7] C₁₃H₈I₂O₂ mol.wt. 450.01

Synthesis

- Preparation by treatment of 4-hydroxybenzophenone with iodine monochloride,
 - in the presence of sodium acetate in acetic acid [140];
 - at steam bath temperature [460,495].
- m.p. 145° [140]; Spectra (NA).

(2-Hydroxy-3,5-dinitrophenyl)phenylmethanoneC₁₃H₈N₂O₆ mol.wt. 288.22

Synthesis

- Obtained by action of potassium hydroxide with 2-bromo-3,5-dinitrobenzophenone (SM) in ethanol. SM was prepared by Friedel-Crafts acylation of benzene with 2-bromo-3,5-dinitrobenzoyl chloride in the presence of aluminium chloride (97%, m.p. 153–154°). Refer to: Chem. Abstr., **20**, 1229^s (1926)^T.
- **N.B.:** K salt, m.p. 180–200° (d)^T.

(4-Hydroxy-3,5-dinitrophenyl)phenylmethanoneC₁₃H₈N₂O₆ mol.wt. 288.22

Syntheses

- Preparation by heating a solution of 4-hydroxybenzo-phenone in nitric acid (d = 1.4) at 40° for 30 min [140].
- Preparation by reaction of 10% aqueous sodium hydroxide with 4-chloro-3,5-dinitrobenzophenone

(SM) in refluxing ethanol for 20 min (75%). SM was prepared from p-chlorobenzoic acid by a three-step synthesis: at first, nitration of this acid with nitric acid/concentrated sulfuric acid at 140° for 1.5 h. The 4-chloro-3,5-dinitrobenzoic acid formed (95%, m.p. 159°), on treatment with phosphorous pentachloride in refluxing benzene gave the 4-chloro-3,5-dinitrobenzoyl chloride. Then, by adding aluminium chloride to the reaction mixture and heating this one in a water bath for 30 min, SM was obtained (90%, m.p. 118°) [496].

m.p. 138° [140], 136° [496]; Spectra (NA).

(3-Bromo-2-hydroxyphenyl)phenylmethanone

[147321-82-2] $C_{13}H_9BrO_2$ mol.wt. 277.11

Synthesis

– Refer to: [497].

m.p. and Spectra (NA); TLC [497]; HPLC [497].

(3-Bromo-4-hydroxyphenyl)phenylmethanone

[89899-44-5] $C_{13}H_9BrO_2$ mol.wt. 277.11

Syntheses

- Preparation by bromination of p-hydroxybenzophenone with bromine [466], in acetic acid [140,169] or in chloroform [127].
- Preparation by demethylation of 3-bromo-4-methoxy-benzophenone (SM) with 48% hydrobromic acid in refluxing acetic acid. SM was prepared by reaction of bromine with 4-methoxybenzophenone in the presence of sodium acetate in acetic acid at 100° for 6 h [140].
- Also obtained (poor yield) by aqueous alkaline condensation of benzotrichloride with 4-bromo-phenol or 2,4-dibromophenol in 30% sodium hydroxide solution at 80–85° (<3%) [127].
- Also obtained (poor yield) by reaction of benzoyl chloride with o-bromophenol in the presence of ferric chloride [466].
- Also refer to: [429,498].

N.B.: K salt [169].

m.p. 183° [140], 182–183° [127], 180–181° [169,466]; Spectra (NA); polarographic study [499]; voltammetric study [500]; TLC [497]; HPLC [497].

(4-Bromo-2-hydroxyphenyl)phenylmethanone

[6723-04-2] $C_{13}H_9BrO_2$ mol.wt. 277.11

Syntheses

- Preparation by oxidation of 6-bromo-2,3-diphenylbenzo-furan with chromium trioxide in boiling

acetic acid, followed by saponification of the obtained keto ester—(2-benzoyloxy)-4-bromobenzophenone—with sodium hydroxide in refluxing ethanol [44,501], (70%) [502].

- Also obtained by Fries rearrangement of m-bromophenyl benzoate with aluminium chloride [23], at 200° for 20 min [20].
- Also obtained by demethylation of 4-bromo-2-methoxybenzophenone with boron tribromide in methylene chloride at r.t. for 12 h [20], according to [21].
m.p. 83° [501,502], 79° [44]; IR [44,103,501], UV [503].

(5-Bromo-2-hydroxyphenyl)phenylmethanone

[55082-33-2]

C₁₃H₉BrO₂

mol.wt. 277.11

Syntheses

- Preparation by Fries rearrangement of p-bromophenyl benzoate with aluminium chloride without solvent at 150° for 15 min (42%) [462].
- Preparation by oxidation of 5-bromo-2,3-diphenylbenzo-furan with chromium trioxide in boiling acetic acid, followed by saponification of the obtained keto ester—2-(benzoyloxy)-5-bromobenzophenone—with sodium hydroxide [44] with potassium hydroxide in refluxing ethanol (65%) [504].
- Also obtained (poor yield) by alkaline condensation of benzotrichloride with p-bromophenol or 2,4-dibromophenol in 30% aqueous sodium hydroxide solution at 80–85° (2%) [127].
- Also refer to: [505].
m.p. 111–112° [462], 110° [504], 109° [44]; IR [44].

(2-Chloro-4-hydroxyphenyl)phenylmethanone

[81375-00-0]

C₁₃H₉ClO₂

mol.wt. 232.67

Syntheses

- Preparation by Fries rearrangement of 3-chlorophenyl benzoate without solvent,
 - with aluminium chloride for 2 h at 150° (25%) [506] or at 160° [490,491] or for 15 min at 175° (8%) [36];
 - with titanium tetrachloride for 15 min at 175° (17%) [36].
- Preparation by diazotization of 4-amino-2-chlorobenzophenone, followed by hydrolysis of the diazonium salt so obtained (66%) [6].
m.p. 118–119° [506], 115° [6]; MS [490,491].

(2-Chloro-6-hydroxyphenyl)phenylmethanone[81374-99-4] $C_{13}H_9ClO_2$ mol.wt. 232.67**Synthesis**

– Obtained by reaction of sodium iodide with 2-chloro-6-methoxybenzophenone (SM) in the presence of trimethyl-silyl chloride in acetonitrile into an autoclave at 130° for 24 h (36%). SM was prepared from 2-amino-6-chlorotoluene by a five-step synthesis [6].

m.p. 105° [6]; ^{13}C NMR [6].

(3-Chloro-2-hydroxyphenyl)phenylmethanone[35582-86-6] $C_{13}H_9ClO_2$ mol.wt. 232.67**Syntheses**

- Preparation by decarboxylation of 2-(3-chloro-2-hydroxy-benzoyl)benzoic acid in quinoline at 250° during 15 min in the presence of silver carbonate (80%) [507,508].
- Also obtained from o-chlorophenol,
- by reaction with benzoyl chloride in the presence of aluminium chloride in tetrachloroethane for 3 h at 120–130° (17%) [508];
 - by reaction with benzoic acid in the presence of Amberlyst-15 in refluxing chlorobenzene during 70 h (18%) [53].
- Also obtained by chromic oxidation (CrO_3) of 7-chloro-3-phenylbenzofuran, followed by saponification of the obtained keto ester [481].
- Also obtained (by-product) by Fries rearrangement of 2-chlorophenyl benzoate with aluminium chloride without solvent at 152–155° for 2 h (6%) [506].
- Also refer to: [82,83,509,510].
- m.p. 95° [506], 93° [481], 92°5–93° [508], 91°7–92°5 [507]; IR [481,507], UV [507].

(3-Chloro-4-hydroxyphenyl)phenylmethanone[55191-20-3] $C_{13}H_9ClO_2$ mol.wt. 232.67**Syntheses**

- Preparation by Fries rearrangement of o-chlorophenyl benzoate with aluminium chloride without solvent for 2 h at 152–155° (88%) [506] or at 160° [490,491].
- Also obtained by Fries rearrangement of 4-tert-butyl-2-chlorophenyl benzoate with aluminium chloride without solvent for 10 min at 140° (28%) [154].
- Preparation by condensation of benzoyl chloride,
- with 2-chlorophenol in the presence of aluminium chloride in tetrachloroethane for 3 h at 120–130° [507,508], (46%) [508] or by heating in the presence of ferric chloride without solvent [511];

- with 2-chloroanisole in the presence of aluminium chloride in tetrachloroethane for 3 h at 120–130° (48%) [508].
 - Preparation by heating 3-chloro-4-methoxybenzophenone in the presence of aluminium chloride in tetrachloroethane for 1 h at 100–110° (98%) [508].
 - Also obtained by reaction of benzotrichloride (1 mol) with o-chlorophenol (1 mol) in the presence of water (1 mol) in solution of hydrofluoric acid (85%) [213].
 - Also refer to: [512,513].
- m.p. 182° [506], 181° [213], 180–181° [508], 179°6–181°3 [507], 179–180° [154], 176° [511]; IR [507], MS [490,491,514].

(4-Chloro-2-hydroxyphenyl)phenylmethanone

[2985-80-0]

C₁₃H₉ClO₂

mol.wt. 232.67

Syntheses

- Preparation by Fries rearrangement of m-chlorophenyl benzoate,
 - with aluminium chloride [23,117], without solvent, at 140° for 1 h (54%) [96], at 150° for 2 h (58%) [506], at 175° for 15 min (80%) [36] or at 200° for 20 min [20];
 - with titanium tetrachloride for 15 min at 175° (67%) [36].
 - Also obtained by degradation of 6-chloro-2,3-diphenylbenzofuran with chromium trioxide in boiling acetic acid during 40 min or 2 h, followed by saponification of the 2-benzoyloxy-4-chloro-benzophenone so formed with 2 N or 4 N sodium hydroxide in refluxing aqueous ethanol for 1 h or 15 min [44,515].
 - Preparation by reaction of 4-chloro-2-methoxybenzoyl chloride (SM) with benzene in the presence of aluminium chloride at r.t. [6] according to [14]. SM was obtained from 2-amino-4-chlorotoluene by a four-step synthesis.
 - Also obtained by demethylation of 4-chloro-2-methoxybenzophenone with boron tribromide in methylene chloride at r.t. for 12 h [20], according to [21].
 - Also refer to: [84,481,516].
- m.p. 77° [506], 76–77° [515], 74°5 [44], 74° [6,96];
¹H NMR [99], IR [44,106,107,515], UV [99,109–111];
 pK_a [96,115]; polarographic study [117]; TLC [116].

(5-Chloro-2-hydroxyphenyl)phenylmethanone (*Light Absorber HCB*)

[85-19-8]

C₁₃H₉ClO₂

mol.wt. 232.67

Syntheses

- Preparation by Fries rearrangement of p-chlorophenyl benzoate with aluminium chloride [23],
- without solvent [517], at 180° for 10 min (85%) [518], at 155–157° for 2 h (90%) [506], at 130–140° for 1 h [8], (72%) [519] or at 100–150° for 0.5–3 h (68%) [29];

- in refluxing chlorobenzene for 4 h (14%) [520].
 - Preparation by photo-Fries rearrangement of p-chlorophenyl benzoate in benzene, in cyclohexane or in isopropanol at 53–54° for 19 h (51%, 37% and 29% yields, respectively) [72].
 - Preparation from p-chlorophenol,
 - by reaction with benzoyl chloride in the presence of aluminium chloride without solvent at 180–195° for 35 min (87%) [484], in boiling carbon disulfide [145] or in tetrachloroethane at 120–130° for 3 h (10%) [508];
 - by reaction with benzoic acid in the presence of boron trifluoride at 180° for 4 h, in a sealed tube (70%) [521].
 - Preparation by reaction of benzoyl chloride with p-chloroanisole in the presence of aluminium chloride in tetrachloroethane at 120–130° for 3 h (60%) [508].
 - Preparation by reaction of chromium trioxide with 5-chloro-2,3-diphenylbenzofuran in refluxing acetic acid, followed by alkaline hydrolysis of the keto ester so obtained [44], (quantitative yield) [45,522].
 - Preparation from 2-chlorothioxanthen-9-one 10,10-dioxide (SM) by a three-step synthesis: SM by refluxing in a solution of 2% sodium hydroxide in dioxane/water mixture (65:35) for 4 h gave the 2-(2-hydroxy-5-chlorobenzoyl) phenylsulfonic acid (37%). The former, by reaction with mercuric chloride in refluxing aqueous acetic acid for 4 h, led to the 2-chloromercuri-2'-hydroxy-5'-chloro-benzophenone (74%). Removal of the chloromercury group was achieved with concentrated hydrochloric acid in refluxing ethanol for 2 h (84%) [62].
 - Also obtained by reaction of 5-chloro-2-hydroxybenzaldehyde with iodobenzene by using a catalyst system of palladium chloride/lithium chloride in the presence of sodium carbonate in N,N-dimethylformamide at 100° for 6 h (51%) [51].
 - Also refer to: [8,73,75,77,82,83,89,225,472,523–530].
- m.p. 97° [506], 96–97° [519], 96° [518], 95°5–96° [96], 95–95°5 [508], 95° [44], 94–95° [45,520,522], 94° [145,236,521], 93°7–95° [72], 93–94° [62,517], 93° [89], 82–85° [29];
- b.p._{0.3} 147–149° [521];
- ¹H NMR [51,99], EPR [98], IR [44,62,72,89,106,107],
- UV [99,109–111,236,240,241], MS [51]; p*K*_a [96,115,531]; TLC [116]; polarographic study [117]; vapour pressure [236].

(2-Fluoro-4-hydroxyphenyl)phenylmethanone

[179018-47-4]

C₁₃H₉FO₂ mol.wt. 216.21

Synthesis

- Preparation by Fries rearrangement of m-fluorophenyl benzoate with aluminium chloride at 160° for 2 h [490,491].

m.p. (NA); MS [490,491].

(2-Fluoro-5-hydroxyphenyl)phenylmethanone[145300-05-6] $C_{13}H_9FO_2$ mol.wt. 216.21

Synthesis

- Preparation by aromatization of 5-benzoyl-4-fluoro-3-cyclo-hexenone in the presence of cupric bromide and lithium bromide in refluxing acetonitrile during 1 h (70%) [118].

m.p. 102° [118]; 1H NMR [118], IR [118].**(3-Fluoro-2-hydroxyphenyl)phenylmethanone**[183280-19-5] $C_{13}H_9FO_2$ mol.wt. 216.21

Synthesis

- Preparation by Fries rearrangement of o-fluorophenyl benzoate with aluminium chloride at 150–180° for 20 min (25%) [492].

m.p. 56° [492]; 1H NMR [492], UV [492], MS [492].**(3-Fluoro-4-hydroxyphenyl)phenylmethanone**[365-14-0] $C_{13}H_9FO_2$ mol.wt. 216.21

Syntheses

- Preparation by demethylation of 3-fluoro-4-methoxy-benzophenone with refluxing pyridinium chloride for 30 min [461].
- Preparation by Fries rearrangement of o-fluorophenyl benzoate with aluminium chloride at 160° for 2 h [490,491].

m.p. 123° [461]; MS [490,491].

(4-Fluoro-2-hydroxyphenyl)phenylmethanone[169781-83-3] $C_{13}H_9FO_2$ mol.wt. 216.21

Syntheses

- Obtained by Fries rearrangement of m-fluorophenyl benzoate with aluminium chloride at 200° for 20 min [20].
- Also obtained by demethylation of 4-fluoro-2-methoxy-benzophenone with boron tribromide in methylene chloride at r.t. for 12 h [20], according to [21].

m.p. and Spectra (NA).

(5-Fluoro-2-hydroxyphenyl)phenylmethanone

[362-47-0]

 $C_{13}H_9FO_2$ mol.wt. 216.21

Syntheses

- Preparation by demethylation of 5-fluoro-2-methoxybenzophenone with refluxing pyridinium chloride [532].
 - Preparation by Fries rearrangement of p-fluorophenyl benzoate with aluminium chloride [23].
 - Also refer to: [525].
- m.p. 77° [532]; Spectra (NA).

(4-Hydroxy-3-iodophenyl)phenylmethanone

[170744-87-3]

 $C_{13}H_9IO_2$ mol.wt. 324.12

Syntheses

- Preparation by demethylation of 3-iodo-4-methoxybenzophenone with 48% hydrobromic acid in refluxing acetic acid [140].
 - Preparation by treating an alkaline solution of 4-hydroxybenzophenone with 5% iodine in aqueous solution of potassium bromide [140].
 - Preparation by reaction of iodine monochloride with 4-hydroxybenzophenone in acetic acid solution at r.t. [495].
 - Also refer to: [533].
- m.p. 184° [140]; Spectra (NA).

(2-Hydroxy-3-nitrophenyl)phenylmethanone

[182499-95-2]

 $C_{13}H_9NO_4$ mol.wt. 243.22

Synthesis

- Obtained by reaction of a 68% nitric acid/96% sulfuric acid mixture with o-hydroxybenzophenone first at 10°, then at r.t. for 2 h (32%) [492].
 - Also refer to: [534].
- m.p. 88° [492]; 1H NMR [492], UV [492], MS [492].

(2-Hydroxy-4-nitrophenyl)phenylmethanone

[1834-88-4]

 $C_{13}H_9NO_4$ mol.wt. 243.22

Syntheses

- Preparation by oxidation of 6-nitro-2,3-diphenylbenzofuran with chromium trioxide in acetic acid, followed by saponification of the keto

ester so obtained (2-benzoyloxy-4-nitrobenzophenone) in the presence of 2 N sodium hydroxide in refluxing ethanol for 15 min (60%) [535].

- Preparation by reaction of 2-hydroxy-4-nitrobenzoyl chloride with benzene in the presence of aluminium chloride in nitrobenzene at 100–110° for 2.5 h (60%) [536].
- Also obtained (poor yield) by Fries rearrangement of m-nitrophenyl benzoate with aluminium chloride at 170° for 2 h (11%) [536].
- Also obtained (poor yield) by reaction of benzoyl chloride with m-nitrophenol in the presence of aluminium chloride at 170° for 2 h (10%) [537].

m.p. 115° [89], 114–115° [535], 112–113° [96,536], 108° [537];

¹H NMR [99], IR [103,104], UV [99,109–111];

pK_a [96,104,115,538]; TLC [116].

(2-Hydroxy-5-nitrophenyl)phenylmethanone

[18803-19-5]

C₁₃H₉NO₄

mol.wt. 243.22

Syntheses

- Preparation by nitration of o-hydroxybenzophenone,
 - with 65% nitric acid in acetic acid at r.t. for 24 h (32%) [96];
 - with a 68% nitric acid/96% sulfuric acid mixture first at <10°, then at r.t. for 2 h (32%) [492].
- Preparation by reaction of potassium hydroxide with 2-chloro-5-nitrobenzophenone,
 - in the presence of a few water at 150–160° for 5–6 h (quantitative yield) [539], (56%) [8];
 - in refluxing aqueous ethylene glycol (135°) for 6 h (17%) (by-product) [523].
- Preparation by oxidation of 5-nitro-2,3-diphenylbenzofuran with chromium trioxide in acetic acid, followed by saponification of the keto ester obtained—2-(benzoyloxy)-5-nitrobenzophenone—with 2 N sodium hydroxide in refluxing ethanol [535].
- Also obtained (by-product) by diazotization of 2-amino-5-nitrobenzophenone (4%). The 2-nitrofluorenone was the major compound obtained (75%) [539].
- Also obtained (poor yield) by Fries rearrangement of p-nitrophenyl benzoate with aluminium chloride in nitrobenzene at 170° for 1 h (4%) [540].
- Preparation from 2-nitrothioxanthen-9-one 10,10-dioxide (SM) by a three-step synthesis: SM by refluxing in a solution of 2% sodium hydroxide in dioxane/water mixture (65:35) for 2 h, gave the 2-(2-hydroxy-5-nitrobenzoyl)phenylsulfonic acid (89%). The former by reaction with mercuric chloride in refluxing aqueous acetic acid for 4 h led to the 2-chloromercuri-2'-hydroxy-5'-nitrobenzophenone (82%). Removal of the chloromercury group was achieved with concentrated hydrochloric acid in refluxing ethanol for 2 h (84%) [62].

- Also obtained by reaction of 2-hydroxy-5-nitrobenzaldehyde with iodobenzene by using a catalyst system of palladium chloride/lithium chloride in the presence of sodium carbonate in N,N-di-methylformamide at 120° for 22 h (58%) [51].
- Preparation by dealkylation of 2-(2-hydroxyethoxy)-5-nitrobenzophenone (SM) in methylene chloride with boron tribromide at r.t. for 18 h (94%) [523]. SM was obtained by reaction of potassium hydroxide with 2-chloro-5-nitrobenzophenone in refluxing aqueous ethylene glycol (135°) for 6 h (65%).
- Also refer to: [429,541–547].

m.p. 128–129° [523], 126°5 [492], 124–124°5 [539], 124° [96,535],
123–124° [62], 122–124° [540], 122–123° [8];

¹H NMR [51,98,99], UV [99,109–111], MS [51];

pK_a [96,115,538]; TLC [116].

(3-Hydroxy-4-nitrophenyl)phenylmethanone

[182499-94-1]

C₁₃H₉NO₄

mol.wt. 243.22

Synthesis

– Refer to: [534].

m.p. and Spectra (NA).

(4-Hydroxy-2-nitrophenyl)phenylmethanone

C₁₃H₉NO₄

mol.wt. 243.22

Synthesis

– Obtained (poor yield) by Fries rearrangement of m-nitro-phenyl benzoate with titanium tetrachloride in benzene or in nitromethane at 40° for 25 h (3%) [36].

m.p. and Spectra (NA).

(4-Hydroxy-3-nitrophenyl)phenylmethanone

[5464-98-2]

C₁₃H₉NO₄

mol.wt. 243.22

Syntheses

- Preparation by treatment of 4-methylamino-3-nitrobenzo-phenone with boiling 10% aqueous sodium hydroxide for 48 h (52%) [548].
- Preparation by demethylation of 4-methoxy-3-nitrobenzo-phenone with 48% hydrobromic acid in refluxing acetic acid [140].
- Preparation by nitration of 4-hydroxybenzophenone with nitric acid (d = 1.5) in an acetic acid and anhydride acetic mixture at 50–60° [140] or with nitric acid (d = 1.4) at 0° for 2 h [140].
- Also obtained (poor yield) by Fries rearrangement of o-nitrophenyl benzoate with aluminium chloride in nitrobenzene at 165–175° for 1 h (<4%) [540].

- Also obtained from 4-bromo-3-nitrobenzophenone (m.p. 124°) by heating with a mixture of sodium acetate and acetamide at 175–200° for 2 h (good yield) [549].
- Also refer to: [36,550,551].

m.p. 120–121° [549], 94° [140], 91–92° [540], 90° [548]. One of the reported melting points is obviously wrong. Spectra (NA).

(2-Amino-4-chloro-5-hydroxyphenyl)phenylmethanone

[62492-59-5] $C_{13}H_{10}ClNO_2$ mol.wt. 247.68

Synthesis

- Preparation by demethylation of 2-amino-4-chloro-5-methoxybenzophenone with boron tribromide in methylene chloride at r.t. for 4 h (86%) [552].

m.p. 165–167° [552]; 1H NMR [552].

(2-Amino-5-chloro-3-hydroxyphenyl)phenylmethanone

[28363-58-8] $C_{13}H_{10}ClNO_2$ mol.wt. 247.68

Synthesis

- Obtained by hydrolysis of 2-benzoyl-4-chloro-6-hydroxy-benzanilide with refluxing 2 N aqueous sodium hydroxide for 5 h (80–82%) [552,553].
- Also refer to: [554].

m.p. 166–168° [553], 166–167° [552]; 1H NMR [553].

(2-Amino-5-chloro-4-hydroxyphenyl)phenylmethanone

[62492-60-8] $C_{13}H_{10}ClNO_2$ mol.wt. 247.68

Synthesis

- Preparation by adding acetic anhydride to an ice cooled solution of 2-amino-5-chloro-4-methoxybenzophenone in 57% aqueous hydriodic acid and heating the resulting mixture at reflux for 12 h (75%) [552].

m.p. 151–153° [552]; 1H NMR [552]; TLC [552].

(3-Amino-5-chloro-2-hydroxyphenyl)phenylmethanone

[85052-43-3] $C_{13}H_{10}ClNO_2$ mol.wt. 247.68

Synthesis

- Obtained from 5-chloro-2-hydroxy-3-nitrobenzophenone,
 - by reduction with stannous chloride and hydrochloric acid in refluxing methanol for 6 h [471];

- by hydrogenation in the presence of 10% Pd/C in a chloroform/ethanol mixture for 2 h [472].

m.p. 94–95° [471], 93–95° [472]; ¹H NMR [472], IR [472], MS [472]; TLC [472].

(3-Amino-5-chloro-2-hydroxyphenyl)phenylmethanone (Hydrochloride)

[85052-44-4]

C₁₃H₁₀ClNO₂·HCl mol.wt. 284.15

Synthesis

- Obtained by treatment of 3-amino-5-chloro-2-hydroxy-benzophenone with 2 N hydrochloric acid (27%) [472].

m.p. and Spectra (NA).

(3-Amino-5-fluoro-2-hydroxyphenyl)phenylmethanone

C₁₃H₁₀FNO₂ mol.wt. 231.23

Synthesis

- Refer to: [472].

m.p. and Spectra (NA).

(2-Amino-3-hydroxy-5-nitrophenyl)phenylmethanone

[60302-91-2]

C₁₃H₁₀N₂O₄ mol.wt. 258.23

Synthesis

- Not yet described.

Isolation from natural source

- Major metabolite appearing mainly as conjugated compound, in the urine of rabbits fed nitrazepam. It was isolated after enzymatic hydrolysis with β-glucuro-nidase. -Refer to: Chem. Abstr., **85**, 116484v (1976)^T; **90**, 197343b (1979)^T.

m.p. (NA); ¹H NMR^T, IR^T, UV^T, MS^T.

(2-Amino-3-hydroxyphenyl)phenylmethanone

C₁₃H₁₁NO₂ mol.wt. 213.24

Synthesis

- Preparation by treatment of 4-benzoyl-2,3-dihydrobenzoxazol-2-one (SM) with refluxing 20% hydrochloric acid for 10 h (68%). SM was obtained by UV light irradiation of N-benzoyl-2,3-dihydrobenzoxazol-2-one in acetonitrile for 48 h (21%) [555].

m.p. 129°5–130°5 [555]; Spectra (NA).

(2-Amino-4-hydroxyphenyl)phenylmethanoneC₁₃H₁₁NO₂ mol.wt. 213.24

Synthesis

– Refer to: [396].

m.p. and Spectra (NA).

(2-Amino-5-hydroxyphenyl)phenylmethanone

[17562-32-2]

C₁₃H₁₁NO₂ mol.wt. 213.24

Syntheses

– Preparation by demethylation of 2-amino-5-methoxy-benzophenone with boiling 48% hydrobromic acid [556], for 8 h (85%) [557].

– Also obtained by UV light irradiation of 3-phenyl-2,1-benz-isoxazole in 66% sulfuric acid at 80–90° (88–95%) [121].

– Also obtained by heating N-benzoyl-p-methoxyaniline with bismuth chloride (5 mol excess) at 200–230° for 3 min (72%) [558].

m.p. 127–128° [556,557], 127° [121]; UV [558], MS [558]; TLC [558].

(3-Amino-4-hydroxyphenyl)phenylmethanone

[42404-41-1]

C₁₃H₁₁NO₂ mol.wt. 213.24

Syntheses

– Preparation by hydrolysis of 3-(acetylamino)-4-hydroxy-benzophenone with refluxing 10 N hydrochloric acid for 30 min (80%) [559].

– Preparation by hydrolysis of 3-benzamido-4-hydroxy-benzophenone (SM) with concentrated hydrochloric acid in refluxing acetic acid for 16 h (50%). SM was obtained by Fries rearrangement of 2-benzamidophenyl benzoate with aluminum chloride for 3 h at 160° under nitrogen (20%, m.p. 210°) [560].

m.p. 164–165° [559], 154° [560]; ¹H NMR [559], IR [559].**(3-Amino-4-hydroxyphenyl)phenylmethanone (Hydrochloride)**

[87855-75-2]

C₁₃H₁₁NO₂·HCl mol.wt. 249.70

Synthesis

– Refer to: [555,561] (Japanese patents).

m.p. and Spectra (NA).

(4-Amino-2-hydroxyphenyl)phenylmethanone

[3333-96-8]

 $C_{13}H_{11}NO_2$

mol.wt. 213.24

Syntheses

- Obtained by hydrolysis of 4-acetamido-2-hydroxybenzo-phenone,
 - with boiling 5 N hydrochloric acid [562];
 - with refluxing 48% hydrobromic acid [557].
 - Preparation by hydrolysis of 4-benzamido-2-hydroxybenzophenone (SM) with concentrated hydrochloric acid in refluxing acetic acid for 16 h (61%). SM was obtained by Fries rearrangement of 3-benzamidophenyl benzoate with aluminium chloride for 3 h at 160° (27%, m.p. 155°) [560].
 - Also refer to: [563].
- m.p. 127–128° [557], 125° [560,562]; Spectra (NA).

(4-Amino-3-hydroxyphenyl)phenylmethanone

[31684-63-6]

 $C_{13}H_{11}NO_2$

mol.wt. 213.24

Synthesis

- Preparation from 6-benzoyl-2(3*H*)-benzoxazolinone,
 - by alkaline hydrolysis with boiling 10% aqueous sodium hydroxide solution for 4 h (90–100%) [559,564,565], (80%) [566];
 - by treatment with refluxing 20% hydrochloric acid during 40 h (88%) [555].
- m.p. 164° [559,565,566], 134–135° [555]. One of the reported melting points is obviously wrong. ¹H NMR [559], IR [559], MS [564].

(5-Amino-2-hydroxyphenyl)phenylmethanone

[119798-76-4]

 $C_{13}H_{11}NO_2$

mol.wt. 213.24

Syntheses

- Preparation by hydrolysis of 5-benzamido-2-hydroxy-benzophenone (SM) with concentrated hydrochloric acid in refluxing acetic acid for 16 h (71%). SM was obtained by Fries rearrangement of 4-benzamidophenyl benzoate with aluminium chloride for 3 h at 160° under nitrogen (40%, m.p. 168°) [560].
 - Also obtained from the corresponding hydrochloride by treatment with sodium carbonate in aqueous solution [567].
- m.p. 107° [560,567]; Spectra (NA).

(5-Amino-2-hydroxyphenyl)phenylmethanone (Hydrochloride)C₁₃H₁₁NO₂·HCl mol.wt. 249.70

Synthesis

- Obtained by electrolytic reduction of m-nitrobenzophenone in concentrated sulfuric acid for 30 h, followed by action of hydrochloric acid gas in ethyl ether on the amino ketone so obtained [567].

m.p. and Spectra (NA).

[2-Hydroxy-5-(trifluoromethyl)phenyl]phenylmethanone[72083-16-0] C₁₄H₉F₃O₂ mol.wt. 266.22

Syntheses

- Preparation by adding phenylmagnesium bromide to 2-methoxy-5-(trifluoromethyl)benzotrile, followed by hydrolysis of the intermediate imino compound formed, then demethylation of 2-methoxy-5-(trifluoromethyl)-benzophenone so obtained [568].
- Preparation by demethylation of 2-methoxy-5-(trifluoromethyl)benzophenone with boron trichloride in methylene chloride at -60° for 1 h, then at r.t. [569].

m.p. 84–85° [569]; Spectra (NA).

Phenyl(3,5,6-trifluoro-2-hydroxy-4-methoxyphenyl)methanone[32541-21-2] C₁₄H₉F₃O₃ mol.wt. 282.22

Synthesis

- Preparation by partial demethylation of 2,4-dimethoxy-3,5,6-trifluorobenzophenone in methylene chloride in the presence of aluminum chloride at 20° for 3–6 h (94%) [570].

m.p. 56–58° [570]; ¹H NMR [570], IR [570], UV [570].**(2-Bromo-6-hydroxy-3-methoxy-4-nitrophenyl)phenylmethanone**[40990-74-7] C₁₄H₁₀BrNO₅ mol.wt. 352.14

Syntheses

- Preparation by saponification of 2-(benzoyloxy)-6-bromo-5-methoxy-4-nitrobenzophenone (SM) with potassium hydroxide in ethanol (71%). SM was obtained by oxidation of 4-bromo-5-methoxy-6-nitro-2,3-diphenylbenzofuran with chromium trioxide in boiling acetic acid for 30 min [571].
- Also obtained by hydrolysis of 6-bromo-5-methoxy-4-nitro-2-(4-nitrobenzoyloxy)benzophenone [571].

m.p. 126° [571]; Spectra (NA).

(2,4-Dibromo-6-hydroxy-3-methoxyphenyl)phenylmethanone

[40990-66-7]

 $C_{14}H_{10}Br_2O_3$ mol.wt. 386.04

Synthesis

- Preparation by saponification of 2-(benzoyloxy)-4,6-di-bromo-5-methoxybenzophenone (SM) with potassium hydroxide in ethanol (65%). SM was obtained by oxidation of 4,6-dibromo-5-methoxy-2,3-diphenylbenzofuran with chromium trioxide in refluxing acetic acid for 30 min [571].

m.p. 138° [571]; Spectra (NA).

(3,5-Dichloro-2-hydroxy-4-methoxyphenyl)phenylmethanone

[158547-83-2]

 $C_{14}H_{10}Cl_2O_3$ mol.wt. 297.14

Synthesis

- Formation (trace) by 30 min UV light irradiation of oxybenzone in chlorinated water containing 5 ppm Cl [572].

m.p. (NA); MS [572]; GC [572].

(3-Bromo-2-hydroxy-5-methylphenyl)phenylmethanone

[6723-09-7]

 $C_{14}H_{11}BrO_2$ mol.wt. 291.14

Synthesis

- Preparation by bromination of 2-hydroxy-5-methylbenzophenone [502], in aqueous acetic acid (86%) [573].
- Also refer to: [574-577].

m.p. 82° [501], 80-82° [502], 77-78° [573]; IR [103].

(3-Bromo-4-hydroxy-5-methylphenyl)phenylmethanone $C_{14}H_{11}BrO_2$ mol.wt. 291.14

Synthesis

- Preparation by action of bromine on 4-hydroxy-3-methyl-benzophenone in acetic acid [578].

m.p. 130-131° [578]; Spectra (NA).

(4-Bromo-2-hydroxy-3-methylphenyl)phenylmethanone[6758-89-0] $C_{14}H_{11}BrO_2$ mol.wt. 291.14

Synthesis

– Obtained by chromic oxidation (CrO_3) of 6-bromo-7-methyl-2,3-diphenylbenzofuran, followed by alkaline hydrolysis of keto ester so obtained [501,502].

m.p. 96° [501,502]; IR [103,501], UV [503].**(4-Bromo-2-hydroxy-5-methylphenyl)phenylmethanone**[6723-07-5] $C_{14}H_{11}BrO_2$ mol.wt. 291.14

Synthesis

– Preparation by reaction of chromium trioxide with 6-bromo-5-methyl-2,3-diphenylbenzofuran in acetic acid, followed by saponification of the keto ester formed (2-benzoyloxy-4-bromo-5-methylbenzophenone) with sodium hydroxide in ethanol [501], (73%) [502].

m.p. 122° [501,502]; 1H NMR [100], IR [100], UV [503].**(5-Bromo-2-hydroxy-3-methylphenyl)phenylmethanone**[6723-13-3] $C_{14}H_{11}BrO_2$ mol.wt. 291.14

Synthesis

– Preparation by bromination of 2-hydroxy-3-methylbenzophenone [501], in chloroform [502].

m.p. 83° [501,502]; IR [103,106,107,501].**(4-Bromo-2-hydroxy-3-methoxyphenyl)phenylmethanone**[65202-49-5] $C_{14}H_{11}BrO_3$ mol.wt. 307.14

Synthesis

– Preparation by saponification of 2-(benzoyloxy)-4-bromo-3-methoxybenzophenone (SM) with potassium hydroxide in boiling ethanol (70%). SM was obtained by oxidation of 6-bromo-7-methoxy-2,3-diphenylbenzofuran with chromium trioxide in boiling acetic acid (65%) [579].

m.p. $240-243^\circ$ [579]; Spectra (NA).

(5-Bromo-2-hydroxy-4-methoxyphenyl)phenylmethanone

[3286-93-9]

 $C_{14}H_{11}BrO_3$

mol.wt. 307.14

**Synthesis**

– Preparation from 2-(benzoyloxy)-5-bromo-4-methoxy-benzophenone (SM) by treatment with potassium hydroxide in refluxing ethanol for 1 h (68%). SM was obtained by oxidation of 5-bromo-6-methoxy-2,3-di-phenylbenzofuran with chromium trioxide in refluxing acetic acid for 30 min [571].

m.p. 125° [571]; Spectra (NA).

(3-Chloro-2-hydroxy-5-methylphenyl)phenylmethanone $C_{14}H_{11}ClO_2$

mol.wt. 246.69

**Syntheses**

- Preparation by Fries rearrangement of 2-chloro-4-methyl-phenyl benzoate with aluminium chloride without solvent,
- at 140° for 10 min (92%) [132];
 - at 120–130° for 1 h (67%) [519];
 - at 160° for 15 min (14%) [580] (here, by using an old aluminium chloride).
- Also obtained by action of aluminium chloride with esters mixtures^T without solvent at 150° for 15 min [580],

^T2-chloro-4-methylphenyl benzoate and p-tolyl acetate (50% yield);

^Tp-tolyl benzoate and 2-chloro-4-methylphenyl acetate (40% yield);

^T2-chloro-4-methylphenyl benzoate and mesityl acetate (14% yield).

m.p. 81° [519], 71° [132,580]; Spectra (NA).

(3-Chloro-4-hydroxy-5-methylphenyl)phenylmethanone

[34183-08-9]

 $C_{14}H_{11}ClO_2$

mol.wt. 246.69

**Synthesis**

- Preparation by Fries rearrangement of 2-chloro-6-methyl-phenyl benzoate with aluminium chloride,
- in chlorobenzene at 140–150° for 20 min or in nitrobenzene at 75° for 24 h [480];
 - without solvent at 160° for 45 min (45%) [581].

m.p. 126–127° [480]; Spectra (NA).

(4-Chloro-2-hydroxy-5-methylphenyl)phenylmethanone

[33561-92-1]

C₁₄H₁₁ClO₂ mol.wt. 246.69

Syntheses

- Obtained by Fries rearrangement of 3-chloro-4-methyl-phenyl benzoate with aluminium chloride at 200° for 20 min [20].
 - Also obtained by demethylation of 4-chloro-2-methoxy-5-methylbenzophenone with borontribromide in methylene chloride at r.t. for 12 h [20], according to [21].
 - Also obtained by oxidation of 6-chloro-5-methyl-2,3-diphenylbenzofuran with chromium trioxide in boiling acetic acid for 2 h, followed by saponification of the 2-(benzoyloxy)-4-chloro-5-methyl-benzophenone formed with 2 N sodium hydroxide in boiling ethanol for 15 min [515].
 - Also refer to: [107,582].
- m.p. 108–109° [515]; IR [107,515,582].

(5-Chloro-2-hydroxy-3-methylphenyl)phenylmethanone

[53347-30-1]

C₁₄H₁₁ClO₂ mol.wt. 246.69

Synthesis

- Refer to: [83] (compound **7e**) and [82,583].

m.p. and Spectra (NA).

(5-Chloro-2-hydroxy-4-methylphenyl)phenylmethanone

[68751-90-6]

C₁₄H₁₁ClO₂ mol.wt. 246.69

Syntheses

- Preparation by Fries rearrangement of 4-chloro-3-methyl-phenyl benzoate in the presence of,
 - aluminium chloride [23] without solvent at 140° for 10 min (quantitative yield) [132];
 - Nafion-XR, a H⁺-form ion exchange resin, at 175° for 4 h (37%) [39,204].
 - Preparation by oxidation of 5-chloro-6-methyl-2,3-diphenylbenzofuran with chromium trioxide in boiling acetic acid for 40 min, followed by saponification of the keto ester so obtained with 4 N sodium hydroxide in refluxing ethanol for 1 h [44].
 - Also obtained by reaction of benzoyl chloride with 4-chloro-3-methylphenol in the presence of Nafion-XR at 175° for 4 h (28%) [39].
 - Also refer to: [77,584,585].
- m.p. 142° [132], 140° [44]; IR [44].

[3-(Chloromethyl)-4-hydroxyphenyl]phenylmethanone

[14898-76-1]

 $C_{14}H_{11}ClO_2$ mol.wt. 246.69

Syntheses

- Preparation by passing hydrogen chloride through a mixture of 40% formaldehyde solution, concentrated hydrochloric acid and p-hydroxybenzophenone in acetic acid at r.t. for 2 h (64%) [277].
- Other chloromethylation process [586], (73%) [164].
- Also refer to: [587].

m.p. 156° (d) [277]; Spectra (NA).

[5-(Chloromethyl)-2-hydroxyphenyl]phenylmethanone

[120973-82-2]

 $C_{14}H_{11}ClO_2$ mol.wt. 246.69

Synthesis

- Refer to: [588].

m.p. and Spectra (NA).

(2-Chloro-6-hydroxy-4-methoxyphenyl)phenylmethanone

[136741-50-9]

 $C_{14}H_{11}ClO_3$ mol.wt. 262.69

Synthesis

- Preparation by reaction of benzoyl chloride with 5-chlororesorcinol dimethyl ether in the presence of aluminium chloride in ethylene dichloride (72%) [589].

m.p. 96–98° [589]; Spectra (NA).

(3-Chloro-2-hydroxy-4-methoxyphenyl)phenylmethanone

[158547-82-1]

 $C_{14}H_{11}ClO_3$ mol.wt. 262.69

Synthesis

- Formation (trace) by 30 min UV light irradiation of oxybenzone in chlorinated water containing 5 ppm Cl [572].

m.p. (NA); MS [572]; GC [572].

(5-Chloro-2-hydroxy-4-methoxyphenyl)phenylmethanone

[3286-91-7]

 $C_{14}H_{11}ClO_3$ mol.wt. 262.69

Syntheses

- Preparation by reaction of benzoyl chloride with 4-chlororesorcinol dimethyl ether in the presence of aluminium chloride in ethylene dichloride (66%) [589].
- Formation (trace) by 30 min UV light irradiation of oxybenzone in chlorinated water containing 5 ppm Cl [572].

m.p. 118–119° [589]; 1H NMR [589], IR [589], MS [572,589]; GC [572].

(2-Hydroxy-3-methyl-4-nitrophenyl)phenylmethanone

[4072-22-4]

 $C_{14}H_{11}NO_4$ mol.wt. 257.25

Synthesis

- Preparation by oxidation of 7-methyl-6-nitro-2,3-diphenyl-benzofuran with chromium trioxide in acetic acid, followed by saponification of the keto ester so formed—the 2-(benzoyloxy)-3-methyl-4-nitrobenzophenone—with sodium hydroxide in boiling dilute ethanol (70%) [590].

m.p. 98° [590], 97° [89]; 1H NMR [100], IR [100,103,107,582], UV [503].

(2-Hydroxy-3-methyl-5-nitrophenyl)phenylmethanone

[18619-93-7]

 $C_{14}H_{11}NO_4$ mol.wt. 257.25

Synthesis

- Preparation by reaction of nitric acid (d = 1.42) with 2-hydroxy-3-methylbenzophenone in acetic acid under stirring overnight at r.t. (70%) [590].

m.p. 122° [590]; IR [103].

(2-Hydroxy-4-methyl-5-nitrophenyl)phenylmethanone

[68430-99-9]

 $C_{14}H_{11}NO_4$ mol.wt. 257.25

Synthesis

- Refer to: [591].

m.p. and Spectra (NA).

(2-Hydroxy-5-methyl-3-nitrophenyl)phenylmethanone[4072-26-8] $C_{14}H_{11}NO_4$ mol.wt. 257.25**Synthesis**

- Preparation by nitration of 2-hydroxy-5-methylbenzo-phenone with nitric acid ($d = 1.42$) in acetic acid overnight at r.t. (82%) [590] or at 32° [592].
- Also refer to: [574,593].

m.p. 68° [89], $67-68^\circ$ [590]; IR [103].**(2-Hydroxy-5-methyl-4-nitrophenyl)phenylmethanone**[4072-24-6] $C_{14}H_{11}NO_4$ mol.wt. 257.25**Synthesis**

- Preparation by oxidation of 5-methyl-6-nitro-2,3-diphenyl-benzofuran with chromium trioxide in acetic acid, followed by saponification of the keto ester so formed—the 2-(benzoyloxy)-5-methyl-4-nitrobenzophenone—with sodium hydroxide in boiling dilute ethanol (86%) [590].

m.p. 92° [89,590]; IR [103,107,582].**(4-Hydroxy-3-methyl-5-nitrophenyl)phenylmethanone**[103555-87-9] $C_{14}H_{11}NO_4$ mol.wt. 257.25**Synthesis**

- Preparation from o-methylanisole in three steps: at first, acylation of o-methylanisole with benzoyl chloride in the presence of ferric chloride during 3 h at 20° . Then, demethylation of the 4-methoxy-3-methylbenzophenone so formed by treatment with refluxing 55% hydriodic acid for 10 h and subsequent nitration of the 4-hydroxy-3-methylbenzophenone so obtained with a concentrated nitric acid/concentrated sulfuric acid mixture with ice cooling (57%) [594].

m.p. and Spectra (NA).

(2-Hydroxy-3-methoxy-6-nitrophenyl)phenylmethanone[65202-46-2] $C_{14}H_{11}NO_5$ mol.wt. 273.25**Synthesis**

- Preparation by saponification of 2-(benzoyloxy)-3-methoxy-6-nitrobenzophenone (SM) with potassium hydroxide in boiling ethanol (70%). SM was obtained by oxidation of 7-methoxy-4-nitro-2,3-diphenylbenzofuran with chromium trioxide in boiling acetic acid (80%) [579].

m.p. $72-73^\circ$ [579]; Spectra (NA).

(2-Hydroxy-4-methoxy-5-nitrophenyl)phenylmethanone

[41123-21-1]

 $C_{14}H_{11}NO_5$ mol.wt. 273.25

Synthesis

– Preparation by saponification of 2-(benzoyloxy)-4-methoxy-5-nitrobenzophenone (SM) with potassium hydroxide in ethanol (67%). SM was obtained by oxidation of 6-methoxy-5-nitro-2,3-diphenylbenzofuran with chromium trioxide in boiling acetic acid for 30 min [571].

m.p. 132° [571]; 1H NMR [98].

(2-Hydroxy-5-methoxy-4-nitrophenyl)phenylmethanone

[40990-72-5]

 $C_{14}H_{11}NO_5$ mol.wt. 273.25

Synthesis

– Preparation by saponification of 2-(benzoyloxy)-5-methoxy-4-nitrobenzophenone (SM) with potassium hydroxide in ethanol (78%). SM was obtained by oxidation of 5-methoxy-6-nitro-2,3-diphenylbenzofuran with chromium trioxide in boiling acetic acid for 30 min [571].

m.p. 102° [571]; Spectra (NA).

(2-Hydroxy-3-methylphenyl)phenylmethanone

[4072-08-6]

 $C_{14}H_{12}O_2$ mol.wt. 212.25

Syntheses

- Preparation by reaction of 2-hydroxy-3-methylbenzoyl chloride with benzene in the presence of aluminium chloride at 40–50° for 4 h (72%) [595], (23%) [92].
- Preparation by oxidation of 7-methyl-2,3-diphenylbenzofuran with chromium trioxide in refluxing acetic acid for 40 min, followed by hydrolysis of the keto ester so obtained (2-benzoyloxy-3-methylbenzophenone) with 4 N sodium hydroxide in refluxing ethanol for 1 h [44], (50%) [590].
- Preparation by reaction of benzoic acid with o-cresol in the presence of Amberlyst-15 in refluxing chlorobenzene for 47 h (50%) [53].
- Also obtained (by-product) by Fries rearrangement of o-tolyl benzoate in the presence of aluminium chloride in refluxing chlorobenzene for 4 h (<6%) [596].
- Also obtained (poor yield) by reaction of benzoyl chloride with o-tolyl borate in the presence of aluminium chloride in refluxing carbon disulfide for 2 h (2%) [55].
- Preparation by reaction between (o-tolyloxy)magnesium bromide complexed with HMPT and benzaldehyde in refluxing benzene for 48 h (54%) [50].

- Also refer to: [597].
yellow oil [50];
m.p. 48° [89], 47–48° [590], 47° [44];

(2-Hydroxy-4-methylphenyl)phenylmethanone

[3098-18-8]

C₁₄H₁₂O₂

mol.wt. 212.25

Syntheses

- Preparation by Friedel–Crafts acylation of m-cresol,
 - with benzoic acid in the presence of boron trifluoride at 160° for 2 h (94%) [150] or in the presence of Amberlyst-15 in refluxing chlorobenzene for 65 h (37%) [53];
 - with benzoyl chloride in the presence of aluminium chloride at 75° [144], in nitrobenzene at 60° for 18 h (8%) [54] or with titanium tetrachloride in the same conditions (17%) [54].
- Preparation by Fries rearrangement of m-tolyl benzoate,
 - in the presence of aluminium chloride,
 - without solvent*
at 200° for 5 min (81%) [598] or 20 min [20], at 175° for 15 min (95%) [132], (82%) [36], (31%) [599], at 140–150° [600], at 140° for 15 min (89%) [27], at 130–134° for 24 h (18%) [4] at 90° for a short time (50%) [601], at 60–70° for 1 h (40%) [602],
 - with solvent*
in nitrobenzene, at 60–63° for 13–18 h (15%) [27,31,603];
 - in the presence of titanium tetrachloride,
 - without solvent*
at 175° for 15 min (75%) [36], at 140° for 15 min (82%) [27],
 - with solvent*
in nitrobenzene at 60° for 18 h (27%) [27].
- Preparation from 2-methoxy-4-methylbenzophenone by demethylation,
 - with refluxing pyridinium chloride for 1 h (74%) [604];
 - with boron tribromide in methylene chloride at r.t. for 12 h [20], according to [21].
- Preparation by dehydrogenation of 6-benzoyl-3-methyl-2-cyclohexen-1-one by heating at reflux for 30 min in the presence of 5% Pd/BaSO₄ catalyst [605].
- Preparation by oxidation of various substituted benzofurans^T with chromium trioxide in boiling acetic acid, followed by saponification of the keto ester so formed (good yields), ^T6-methyl-2,3-diphenylbenzofuran [44,606], 6-methyl-

3-phenyl-2-(4-methoxyphenyl)-benzofuran or 6-methyl-3-phenyl-2-(4-methylphenyl) benzofuran [46].

- Also obtained by isomerization of 4-hydroxy-2-methylbenzophenone with aluminium chloride at 180–190° for 20 min (92%) [132].
- Also obtained by condensation of m-cresol with benzotrichloride in the presence of aqueous sodium hydroxide in a water bath for 4 h (7%) [48].
- Also obtained (poor yield) by diazotization of 2-amino-4-methylbenzophenone, followed by hydrolysis of the diazonium salt so obtained (18%) [607].
- Also obtained by reaction of benzoyl chloride with m-tolyl borate in the presence of aluminium chloride in refluxing carbon disulfide for 2 h (19%) [55].
- Also obtained by photo-Fries rearrangement of m-tolyl benzoate,
 - in water in the presence of sodium dodecyl sulfate (a micelle) for 7 h under nitrogen (73%) [70];
 - in ethanol or in the presence of β -cyclodextrin solid for 12–24 h (29% and 96% yields, respectively) [65].
- Preparation by reaction of 2-methoxy-4-methylbenzoyl chloride with benzene in the presence of aluminium chloride in tetrachloroethane [6], according to [14].
- Also refer to: [76,226,608].

(2-Hydroxy-5-methylphenyl)phenylmethanone

[1470-57-1]

C₁₄H₁₂O₂ mol.wt. 212.25

Syntheses

– Preparation by Fries rearrangement of p-tolyl benzoate,

- with aluminium chloride [23],

without solvent

at 180° for 10 min (80%) [518], at <150° for 8 min (94%) [132], at 140° (71%) [97], according to [462], at 140° for 10–15 min (quantitative yield) [132], (88%) [27], (80%) [599], at 140° for 20 min, then for a short time at 200° (94%) [601,610], at 140° for 1 h [96], at 130–140° for 1 h (88%) [519] or at 130° for 30 min (55%) [611],

with solvent

- in refluxing *o*-dichlorobenzene for 3 h or in refluxing *p*-chlorotoluene for 1 h (89%) [520];
- in refluxing 1,2,4-trichlorobenzene for 1 h (85%) [520];
- in refluxing chlorobenzene for 1 h (63%) [520] or for 4 h (82%) [520], (37%) [596];
- in refluxing nitromethane for 30 min (12%) [36];
- with titanium tetrachloride,

without solvent

at 140° for 15 min (78%) [27],

with solvent

in refluxing nitromethane for 10 min (41%) [36];

- with beryllium chloride at 145–150° for 30 min, then at 160° for a short time (69%) [612,613];
 - with Nafion-XR, a H⁺-form ion exchange resin, at 150° for 4 h under nitrogen (52%) [39];
 - with Nafion-H, a polymeric perfluorinated resin sulfonic acid in refluxing nitrobenzene for 12 h (70%) [38];
 - with hydrofluoric acid at 55° for 4 h or 6 h (52% and 76% yields, respectively) [135].
- Preparation by photo-Fries rearrangement of *p*-tolyl benzoate,
- in water in the presence of sodium dodecyl sulfate (a micelle) for 7 h under nitrogen (95%) [70];
 - in benzene at 55° for 19 h (53%) [72];
 - in pentane (37%) or in the presence of silica gel (42%) [64];
 - in isopropanol at 57° for 20 h (34%) [72];
 - in cyclohexane at 52° for 23 h (25%) [72];
 - in dioxane at 63° for 24 h (20%) [72];
 - in ethanol in the presence of sulfuric acid for 70 h [614].
- Preparation by condensation of benzotrichloride with *p*-cresol,
- in the presence of aluminium chloride in carbon disulfide for 2 h (75%) [125]. The 6,12-diphenyl-2,8-dimethyl-6,12-epoxy-6*H*,12*H*-dibenzo[b,f][1,5]dioxocin, an intermediate compound, was also formed under these conditions (29%). This “dioxocin”, by hydrolysis with concentrated sulfuric acid at r.t., gave the expected ketone (91%) [125];
 - in the presence of aqueous sodium hydroxide in a water bath for 4 h (33%) [48] or in 32–40% aqueous sodium hydroxide at 70–80° (67%) [615].
- Preparation by Friedel–Crafts acylation of *p*-cresol with benzoyl chloride,
- in the presence of aluminium chloride,
- without solvent*
- at 180° for 30 min (64–72%) [616],

with solvent

in tetrachloroethane at 100–110° for 4 h (80%) [15,617];

in nitrobenzene at 60° for 18 h (33%) [54];

in carbon disulfide, in addition with ethyl iodide, by heating in a water bath [190]. An intermediate compound develops at the start of reaction (4-methylphenetole);

- in the presence of titanium tetrachloride, in nitrobenzene at 60° for 18 h (51%) [54].
 - Preparation by reaction of chromium trioxide with 2,3-diphenyl-5-methylbenzofuran in acetic acid at 60° for 2.5 h [43], at 80° for 3 h [606] or at reflux for 40 min [44], followed by saponification of the keto ester formed with sodium hydroxide [43,44], (74%) [606].

The same ketone was also obtained by chromic oxidation of 5-methyl-2-(4-methylphenyl)-3-phenylbenzofuran or of 5-methyl-2-(4-methoxyphenyl)-3-phenylbenzofuran, followed by saponification of the keto ester so formed with potassium hydroxide [46].
 - Preparation by diazotization of 2-amino-5-methylbenzophenone, followed by hydrolysis of the diazonium salt so obtained (25%) [607].
 - Also obtained by reaction of benzoyl chloride,
 - with p-methylanisole in the presence of aluminium chloride in carbon disulfide [618];
 - with p-methylphenetole in the presence of aluminium chloride, followed by treatment of the 2-ethoxy-5-methylbenzophenone so formed with aluminium chloride in carbon disulfide at 60–70° for 8 h [141,619], according to [139];
 - with p-tolyl borate in the presence of aluminium chloride in refluxing carbon disulfide for 2 h (15%) [55].
 - Also obtained (poor yield) by photo-Fries rearrangement of 2-methoxy-4-methylphenyl benzoate (creosol benzoate) in benzene or ethanol for 4 h (6–7%) [620].
 - As an historical curiosity, this compound has also been obtained by Fries rearrangement of p-tolyl benzoate with aluminium chloride in the presence of another aromatic compounds, at 150° for 15 min [580]: mesitol (83%); 2,6-dimethylphenyl acetate (53%); 2-chloro-4-methylphenyl acetate (20–34%); mesityl acetate (18%).
 - Also refer to: [36,38,73,77,78,82,83,530,574,592,615,621–628].

(2-Hydroxy-6-methylphenyl)phenylmethanone

[50597-28-9] $C_{14}H_{12}O_2$ mol.wt. 212.25

Syntheses

- Preparation from 4-methyl-2,3-diphenylbenzofuran by oxidation with chromium trioxide in acetic acid at 60° for 3 h, followed by saponification of the keto ester so formed with 10% sodium hydroxide in boiling ethanol [632,633].
 - Preparation by Fries rearrangement of m-cresyl benzoate with trifluoromethane-sulfonic acid in a sealed tube at 170° for 24 h (49%) [37].
 - Also obtained from 2-methyl-6-nitroaniline by a eight-step synthesis. The final step consists in making to react sodium iodide and trimethylsilyl chloride with 2-methoxy-6-methylbenzophenone in acetonitrile at 130° for 24 h into an autoclave (15%) [6].
 - Also obtained by photo-Fries rearrangement of m-cresyl benzoate in ethanol for 24 h (25%) and in the presence of β -cyclodextrin (34%) [65].
- m.p. 73° [6], 57–63° [632]; ^{13}C NMR [6], MS [6].

(3-Hydroxy-2-methylphenyl)phenylmethanone

[74167-87-6] $C_{14}H_{12}O_2$ mol.wt. 212.25

Synthesis

- Preparation by diazotization of 3-amino-2-methylbenzophenone, followed by hydrolysis of the diazonium salt obtained (56%) [119], according to [634].
- m.p. 123° [119]; Spectra (NA).

(3-Hydroxy-4-methylphenyl)phenylmethanone

$C_{14}H_{12}O_2$ mol.wt. 212.25

Synthesis

- Preparation by diazotization of 3-amino-4-methylbenzo-phenone, followed by hydrolysis of the diazonium salt obtained (76%) [635].
- m.p. 132–133° [635]; Spectra (NA).

(4-Hydroxy-2-methylphenyl)phenylmethanone

[10425-07-7]

 $C_{14}H_{12}O_2$

mol.wt. 212.25

Syntheses

– Preparation by Fries rearrangement of m-tolyl benzoate,

- in the presence of aluminium chloride,

without solvent

at 60–70° for 1 h, then at r.t. for 24 h (62%) [602]; at 90° for a short time (32%) [601]; at 120° for 80 min (40%) [132]; at 130–134° for 24 h (21%) [4] or at 160° for 2 h [490,491],

with solvent

in nitrobenzene at 25–30° for 90 h (45%) [31]; at 60° for 5 h (60%) [132], (47%) [603], for 13 h (51%) [603] or for 18 h (67%) [27]; or at 62–63° for 18 h (42%) [31];

in chlorobenzene at reflux for 4 h (46%) [596];

in nitromethane at reflux for 30 min (33%) [36];

- in the presence of titanium tetrachloride, in refluxing nitromethane for 30 min (44%) [36];
 - in the presence of Nafion-XR, a H⁺-form ion exchange resin, at 150° for 4 h (67%) [39].
- Also obtained from p-benzoylthymol by elimination of isopropyl group with aluminium chloride in chlorobenzene at r.t. for 20 h, then at 50° for 4 h (80%) [636].
- Preparation by demethylation of 4-methoxy-2-methylbenzophenone with refluxing pyridinium chloride for 1 h (74%) [604].
- Also obtained by condensation of benzotrichloride with m-cresol in the presence of aqueous sodium hydroxide in a water bath for 4 h (6%) [48].
- Preparation by reaction of benzoyl chloride with m-cresol in the presence of aluminium chloride or titanium tetrachloride in nitrobenzene at 60° for 18 h (67% and 61% yields, respectively) [54]. The same reaction with aluminium chloride without solvent at 75° gave a 10% yield [144].
- Also obtained (poor yield) by reaction of benzoyl chloride with m-tolyl borate in the presence of aluminium chloride in refluxing carbon disulfide for 2 h (5%) [55].
- Preparation by acylation of m-tolyl benzoate with benzoyl chloride in the presence of zinc chloride at 130° for 1 h, followed by saponification of the p-keto ester so formed with sodium hydroxide in boiling ethanol [637].
- Also obtained by photo-Fries rearrangement of m-tolyl benzoate in ethanol during 24 h (30%) [65].

m.p. 135–136° [4], 130° [6], 129° [27,144,601–604],

128° [48,636,637]; b.p.₁₅ 235–240° [602], b.p.₁₃ 220–240° [601], b.p.₁₇ 230–240° [604];

¹H NMR (Sadler: standard n° 20030 M), ¹³C NMR [6],

IR (Sadler: standard n° 47039), UV [31,602], MS [490,491].

(4-Hydroxy-3-methylphenyl)phenylmethanone

[5326-42-1]

 $C_{14}H_{12}O_2$ mol.wt. 212.25

Syntheses

– Preparation by Fries rearrangement of o-tolyl benzoate,

- with aluminium chloride,

without solvent

at 160° for 1 h [164], (90–91%) [601,638] or 2 h [490,491]; at 140° for 15 min (quantitative yield) [132], (86%) [27], (70%) [639], (10%) [599] and for 4 h [573],

with solvent

in nitrobenzene at 60° for 18 h (91%) [27], in phenyl ether at 170° for 30 min (68%) [640], in refluxing nitromethane for 30 min (60%) [36] or in refluxing chlorobenzene for 4 h (45%) [596];

- with titanium tetrachloride, in nitrobenzene at 60° for 18 h (89%) [27] or in refluxing nitromethane for 30 min (86%) [36];
 - with Nafion-XR, a H⁺-form ion exchange resin, at 175° for 4 h under nitrogen (45%) [39].
- Also obtained by photo-Fries rearrangement of o-tolyl benzoate in ethanol between 60 and 75 h (20%) [641].
- Preparation by Friedel–Crafts acylation of o-cresol with benzoyl chloride,
- in the presence of aluminium chloride in nitrobenzene at 60° for 18 h (90%) [54] or without solvent [642], at 75° (31%) [144];
 - in the presence of titanium tetrachloride in nitrobenzene at 60° for 18 h (87%) [54].
- Also obtained by reaction of benzoyl chloride,
- with o-bromotoluene in the presence of aluminium chloride at 75° for 5 h (38%) [144];
 - with o-tolyl borate in the presence of aluminium chloride in refluxing carbon disulfide for 2 h (51%) [55];
 - with o-tolyl benzoate in the presence of zinc chloride at 130° for 1 h, followed by saponification of the p-keto ester formed with sodium hydroxide in boiling ethanol [643].
- Also obtained by treatment of p-benzoylcarvacrol with aluminium chloride in chlorobenzene, first at r.t. for 20 h, then at 50° for 4 h (68%) [636].
- Also obtained by reaction of benzotrichloride with o-cresol in the presence of aqueous sodium hydroxide at 80° several hours [644] or in a water bath for 4 h (22%) [48].
- Also obtained by heating a mixture of benzoic acid and o-cresol in the presence of Tonsil [645].

- Preparation by diazotization of 4-amino-3-methylbenzophenone, followed by hydrolysis of the resulting diazonium salt (76%) [635].
- Also refer to: [646,647].

m.p. 174–175° [635], 173–175° [490,491], 173–174° [599,601,641], 173° [27,144,636,640], 172–173° [48], 172–172°5 [643], 172° [132,573,645], 170–171° [644], 169° [639], 163° [642];

b.p._{12–15} 240–260° [599,601,638]; Spectra (NA).

(2-Hydroxy-3-methoxyphenyl)phenylmethanone

[65202-31-5]

C₁₄H₁₂O₃ mol.wt. 228.25

Syntheses

- Preparation by saponification of 2-benzoyloxy-3-methoxy-benzophenone (SM) with potassium hydroxide in refluxing ethanol for 1 h (73%) [579]. SM was obtained by oxidation of 7-methoxy-2,3-diphenylbenzofuran with chromium trioxide in refluxing acetic acid for 30 min (78%).
- Preparation by reaction of phenylmagnesium bromide with 2-hydroxy-3-methoxybenzotrile in ethyl ether in a water bath for 2.5 h (88%) [648].
- Also obtained by reaction of 2-hydroxy-3-methoxybenzaldehyde with iodobenzene by using a catalyst system of palladium chloride/lithium chloride in the presence of sodium carbonate in

N,N-dimethylformamide at 100° for 8 h (70%) [51].

b.p.₃ 220–225° [648]; m.p. 59° [648]; ¹H NMR [51], MS [51].

(2-Hydroxy-4-methoxyphenyl)phenylmethanone (*Cyasorb UV-9, Oxybenzone, Sumisorb 110*)

[131-57-7]

C₁₄H₁₂O₃ mol.wt. 228.25

Syntheses

- Preparation by partial methylation of 2,4-dihydroxy-benzophenone [649,650],
 - with methyl iodide in the presence of sodium hydroxide [189];
 - with a methyl halide [651];
 - with dimethyl sulfate in the presence of sodium hydroxide [189] or alkaline solution [212,652].
- Also obtained by partial demethylation of 2,4-dimethoxybenzophenone (SM),
 - with aluminium chloride in refluxing carbon disulfide for 30 min [85,146,188,653], (42%) [205]. SM was prepared by reaction of benzoyl chloride with resorcinol dimethyl ether in the presence of aluminium chloride (good yield) [205];
 - with aluminium chloride in nitrobenzene [85,654];
 - with aluminium chloride or aluminium bromide in chlorobenzene at 90–95° (good yield) [655];

- with excess beryllium chloride in refluxing toluene for 3 h (90%) [395];
- in refluxing 40% hydrobromic acid for 5 h [85].
- Preparation by Friedel–Crafts acylation of resorcinol dimethyl ether with benzoyl chloride,
 - in the presence of aluminium chloride in ethylene dichloride (85%) [589] or in ethyl ether [656];
 - in the presence of aluminium chloride in a chlorobenzene/ N,N-dimethylformamide mixture (22:1) at 115° [235,657], (74%) [215];
 - in the presence of a zinc chloride/aluminium chloride mixture in ethylene dichloride, first between 0° and 5°, then at 10° for 1 h and at 65° for 6 h (71%) [658].
- Preparation by saponification of 2-(benzoyloxy)-4-methoxybenzophenone (SM) with sodium hydroxide [44] or potassium hydroxide [238] in refluxing ethanol for 1 h. SM was obtained by oxidation of 6 methoxy-2,3-diphenylbenzofuran with chromium trioxide in boiling acetic acid for 30–40 min [44].
- Preparation by Fries rearrangement of m-methoxyphenyl benzoate,
 - in the presence of aluminium chloride [23];
 - in the presence of hydrochloric acid and a small amount of ferric chloride (60%) [659].
- Preparation by reaction of benzotrichloride with resorcinol monomethyl ether in hydrofluoric acid in the presence of water at 0°, then at r.t. for 7 h (55%) [213].
- Preparation by Friedel–Crafts acylation of resorcinol monomethyl ether with benzoyl chloride,
 - in the presence of boron trichloride in benzene, first at –10°, then at reflux for 10 h (85%) [660];
 - in the presence of titanium tetrachloride in benzene, first at –10°, then at reflux for 14 h (77%) [660];
 - in the presence of iron powder at 240–260° for 2 h (50%) [661];
 - in the presence of ferric chloride-nitromethane complex at 185–195° for 20 min (51%) [661].
- Preparation by reaction of benzoyl chloride with resorcinol dimethyl ether,
 - in chlorobenzene in the presence of titanium tetrachloride for 1 h at 120° (78%) [662];
 - without solvent or in o-dichlorobenzene, in the presence of ferric chloride, at 160–200° for 7–11 h (by-product) [663].
- Also obtained from β -(2-benzoyl-5-methoxyphenoxy)propionic acid by heating on a steam bath with a 10% aqueous sodium hydroxide solution for some minutes [218].
- Preparation from 2-iodo-5-methoxyphenyl benzoate by rearrangement on treatment with n-butyl-lithium in a mixture of ethyl ether, hexane and tetrahydrofuran at –70° for 2 h, then treatment with saturated aqueous ammonium chloride solution (<16%) [58].
- Also obtained by reaction of benzoic acid with resorcinol monomethyl ether,

- in the presence of polyphosphoric acid on a water bath for 20 min (27%) [626];
 - in the presence of boron trifluoride at 80° for 30 min (59%) [186].
- Also refer to: [73,75,77,84,87,194,221,222,225,226,228,231,233,530,572,598,625,664–673].

(2-Hydroxy-4-methoxyphenyl)phenylmethanone-¹⁴C

[17655-53-7]

C₁₄H₁₂O₃ mol.wt. 230.25

Synthesis

– Refer to: [676].

m.p. and Spectra (NA).

(2-Hydroxy-5-methoxyphenyl)phenylmethanone (UV 9)

[14770-96-8]

C₁₄H₁₂O₃ mol.wt. 228.25

Syntheses

– Preparation by Friedel–Crafts acylation of hydroquinone dimethyl ether with benzoyl chloride in the presence of aluminium chloride [173], in carbon disulfide first at 25° for 48 h, then at 50° for 30 min (55%) [256] or at r.t. for 48 h (by-product) [409], (10%) [677].

– Also obtained by selective demethylation of 2,5-dimethoxybenzophenone (SM),

- with hydriodic acid [257,409];
- with excess beryllium chloride in refluxing toluene for 3 h (90%) [395];
- with aluminium chloride [678], in nitromethane at 20° for 24 h (65%) [679] or in benzene under nitrogen at 80° for 12 h (90%) [258,680].

N.B.: SM was prepared by reaction of benzoyl chloride with hydroquinone dimethyl ether, either in the presence of stannic chloride in nitromethane at 20° for 1 h (78–94%) [679] or in the presence of aluminium chloride in carbon disulfide at r.t. for 48 h (78%) [677], (74–82%) [409].

- Preparation by partial methylation of 2,5-dihydroxybenzophenone with dimethyl sulfate in the presence of sodium hydroxide in dilute ethanol at 80–90° for 30 min (33%) [681].
 - Also obtained by Fries rearrangement of p-methoxyphenyl benzoate with titanium tetrachloride without solvent at 120° for 1 h (20–35%) [679].
 - Preparation by oxidation of 5-methoxy-2,3-diphenylbenzofuran with chromium trioxide in boiling acetic acid for 30–40 min, followed by saponification of the keto ester formed, the 2-(benzoyloxy)-5-methoxybenzophenone with sodium hydroxide in refluxing ethanol for 1 h [44,682]. The same result was obtained by using 5-methoxy-2-(4-methoxyphenyl)-3-phenylbenzofuran or 5-methoxy-2-(4-methylphenyl)-3-phenylbenzofuran [46].
 - Also obtained (poor yield) by UV light irradiation of 2,5-dimethoxybenzophenone in carbon tetrachloride for 400 h (3%) [678].
 - Also refer to: [20,530,671,683,684].
- m.p. 84–85° [256], 84° [173,679], 83° [680], 83–84° [205],
 82–85° [257], 82–84° [395], 82–83° [96], 81°–82° [681],
 81–82° [678], 81° [44,46,682], 78° [409,677];
¹H NMR (Sadtlar: standard n° 30289 M) [98,99,395,678],
 EPR [98], IR (Sadtlar: standard n° 57334) [44,395,678,679],

(2-Hydroxy-6-methoxyphenyl)phenylmethanone

[20034-63-3]

C₁₄H₁₂O₃

mol.wt. 228.25

Syntheses

- Preparation from 2-iodo-3-methoxyphenyl benzoate by rearrangement on treatment with n-butyllithium in a mixture of ethyl ether, hexane and tetrahydrofuran at –70° for 2 h, followed by treatment with saturated aqueous ammonium chloride (51%) [58].
 - Also obtained by Fries rearrangement of m-methoxyphenyl benzoate in the presence of trifluoro-methanesulfonic acid in tetrachloroethane at 170° for 24 h in a sealed tube (78%) [37].
 - Preparation by partial methylation of 2,6-dihydroxybenzophenone with dimethyl sulfate,
 - in the presence of potassium carbonate in refluxing acetone for 7 h [270];
 - in the presence of potassium hydroxide in benzene in a water bath for 1 h (61%) [269].
 - Preparation by partial demethylation of 2,6-dimethoxybenzophenone with aluminium chloride in benzene at 0° for 2 h (43%) [269].
 - Also refer to: [171,685].
- m.p. 140–141° [269], 140° [270], 106–107° [58]. There is discrepancy between the two melting points.
¹H NMR [58], IR [58], MS [58]; TLC [269].

(3-Hydroxy-4-methoxyphenyl)phenylmethanone

[66476-03-7]

 $C_{14}H_{12}O_3$ mol.wt. 228.25

Syntheses

- Preparation from 3-(benzoyloxy)-4-methoxybenzophenone (SM) (m.p. 95°5–96°5) [686] by saponification [162] with sodium hydroxide in refluxing ethanol (good yield) [273,686] or with potassium hydroxide in refluxing methanol (98%) [687]. SM was obtained by Friedel–Crafts acylation of guaiacol benzoate with benzoyl chloride in the presence of zinc chloride [162,273,686] or in the presence of stannic chloride in nitromethane for 1 h at 20° (82%) [687].
- Preparation by partial methylation of 3,4-dihydroxybenzophenone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 90 min (70%) [274].
- Also refer to: [688,689].

m.p. 132°5–133° [274], 131–132° [162,273,686], 117° [687];

 1H NMR (Sadtlar: standard n° 28215 M) [274],

IR (Sadtlar: standard n° 55287) [687], UV [274,687].

(4-Hydroxy-2-methoxyphenyl)phenylmethanone

[21112-64-1]

 $C_{14}H_{12}O_3$ mol.wt. 228.25

Syntheses

- Preparation by saponification of 4-(benzoyloxy)-2-methoxybenzophenone (SM) with potassium hydroxide in refluxing aqueous ethanol for 1 h (95%) [238]. SM was obtained from resbenzophenone by a two-step synthesis (4-O-benzoylation and 2-O-methylation).
- Also obtained from β -(4-benzoyl-3-methoxyphenoxy)propionic acid by heating with 10% aqueous sodium hydroxide [189,218].

m.p. 124° [189,218], 123°5–124°5 [238]; 1H NMR (Sadtlar: standard n° 28221 M), IR (Sadtlar: standard n° 55293) [238], UV [238].**(4-Hydroxy-3-methoxyphenyl)phenylmethanone**

[51439-89-5]

 $C_{14}H_{12}O_3$ mol.wt. 228.25

Syntheses

- Preparation by decarboxylation of 2-(4-hydroxy-3-methoxy-benzoyl)benzoic acid in the presence of cupric acetate mono-hydrate in quinoline at 250–254° for 35 min (72%) [690].
- Also obtained by Friedel–Crafts acylation,
 - of veratrole with benzoyl chloride in the presence of aluminium chloride in carbon disulfide overnight at r.t. [691];
 - of guaiacol with benzoic acid in the presence of polyphosphoric acid at 120° for 1 h [490,491].

- Also obtained by cleavage of 3,3'-dimethoxybenzaurine^T on heating its dilute aqueous sodium hydroxide solution (1%) in a water bath with air bubbling [162].

N.B.: ^TSynonyms: 4-hydroxy-3,3'-dimethoxyfuchsonone and 4-[(4-hydroxy-3-methoxyphenyl)-phenylmethylene]-3-methoxy-2,5-cyclohexadien-1-one.

- Also refer to: [688,689].

m.p. 100–101°⁵ [690], 97–98° [162,691]; IR [690,692], UV [690], MS [490,491].

(5-Hydroxy-2-methoxyphenyl)phenylmethanone

[80427-34-5]

C₁₄H₁₂O₃ mol.wt. 228.25

Synthesis

- Preparation by acylation of p-methoxyphenyl benzoate with benzoyl chloride in the presence of stannic chloride in nitromethane at 20° for 2 days, followed by saponification of the resulting keto ester—5-(benzoyloxy)-2-methoxy-benzophenone—with sodium hydroxide in refluxing methanol for 1 h (90%) [679].
- Also claimed to be obtained by partial demethylation of 2,5-dimethoxybenzophenone with hydriodic acid [409]. Nevertheless, the structure of this compound was erroneous. In that case, it probably was its isomer the 2-hydroxy-5-methoxybenzophenone [257].

m.p. 111° [679], 78° [409]. One of the reported melting points is obviously wrong.

¹H NMR (Sadtler: standard n° 30290 M), IR (Sadtler: standard n° 57335) [679], UV [679].

(2-Amino-4-hydroxy-6-methylphenyl)phenylmethanone

[54439-89-3]

C₁₄H₁₃NO₂ mol.wt. 227.26

Synthesis

- Preparation from 3'-methyl-5-phenyl-3,5'-diisoxazolyl-methane by performing hydrogenolysis and subsequent hydrolysis with hydrochloric acid (86%) [693].

m.p. 162° [693]; ¹H NMR [693], MS [693].

(3-Amino-2-hydroxy-5-methylphenyl)phenylmethanone

C₁₄H₁₃NO₂ mol.wt. 227.26

Synthesis

- Refer to: [472].

m.p. and Spectra (NA).

(4-Amino-2-hydroxy-6-methylphenyl)phenylmethanone

[54439-92-8]

 $C_{14}H_{13}NO_2$

mol.wt. 227.26

Synthesis

– Obtained (trace) from 5-methyl-3'-phenyl-3,5'-diisoxazolyl-methane by performing hydrogenolysis and subsequent hydrolysis with hydrochloric acid [693].

m.p. 125° [693]; 1H NMR [693], MS [693].

[3-Hydroxy-4-(methylamino)phenyl]phenylmethanone

[54903-59-2]

 $C_{14}H_{13}NO_2$

mol.wt. 227.26

Synthesis

– Preparation from 6-benzoyl-3-methylbenzoxazolinone by alkaline hydrolysis with boiling 10% aqueous sodium hydroxide solution [564], (90–100%) [565], 85% [566].

m.p. 165° [565,566]; Spectra (NA).

(3-Ethynyl-4-hydroxyphenyl)phenylmethanone

[183589-15-3]

 $C_{15}H_{10}O_2$

mol.wt. 222.24

Synthesis

– Obtained by treatment of p-benzoyl-o-[(trimethylsilyl)-ethynyl]phenol in methanol in the presence of potassium fluoride at 25° for 1 h (75%) [533].

m.p. 145–146° [533]; 1H NMR [533], ^{13}C NMR [533], IR [533], MS [533].

(3,5-Dibromo-2-hydroxy-4,6-dimethoxyphenyl)phenylmethanone $C_{15}H_{12}Br_2O_4$

mol.wt. 416.07

Synthesis

– Preparation by reaction of bromine with monobromo-hydrocotoin in chloroform [694].

m.p. 95° [694]; Spectra (NA).

[2-(Acetyloxy)-4-hydroxyphenyl]phenylmethanone

[145747-24-6]

 $C_{15}H_{12}O_4$ mol.wt. 256.26

Synthesis

- Obtained by enzymatic deacetylation of 2,4-diacetoxy-benzophenone in the presence of porcine pancreas lipase in a tetrahydrofuran/n-butanol mixture at 40–45° (70%) [695].

m.p. and Spectra (NA).

[4-(Acetyloxy)-2-hydroxyphenyl]phenylmethanone

[18803-24-2]

 $C_{15}H_{12}O_4$ mol.wt. 256.26

Syntheses

- Preparation by partial hydrolysis of 2,4-diacetoxy-benzophenone in the presence of trifluoroacetic acid containing 5% of water at 65° for 5 min (98%) [696].
- Preparation by reaction of acetyl chloride (1 equiv) with resbenzophenone [697].
- Also refer to: [96,99,109,116].

m.p. 93°–94° [697], 92–93° [96]; 1H NMR [99], UV [99,109]; TLC [116]; pK_a [96].

(3-Bromo-2-hydroxy-4,5-dimethylphenyl)phenylmethanone

[143815-12-7]

 $C_{15}H_{13}BrO_2$ mol.wt. 305.17

Syntheses

- Preparation by Fries rearrangement of 2-bromo-4,5-di-methylphenyl benzoate with aluminium chloride without solvent at 140° for 2 h (24%) [698].
- Preparation by reaction of bromine with 2-hydroxy-4,5-di-methylbenzophenone in boiling acetic acid [578].

m.p. 134–135° [578,698]; 1H NMR (Sadtlar: standard n° 59390 M) [698], IR (Sadtlar: standard n° 86546 K) [698], UV [698], MS [698].

(3-Bromo-2-hydroxy-5,6-dimethylphenyl)phenylmethanone

[143815-11-6]

 $C_{15}H_{13}BrO_2$ mol.wt. 305.17

Syntheses

- Preparation by Fries rearrangement of 2-bromo-4,5-di-methylphenyl benzoate with titanium tetrachloride without solvent at 140° for 2 h (60%) [698].

- Also obtained (by-product) by Fries rearrangement of 2-bromo-4,5-dimethylphenyl benzoate with aluminium chloride without solvent at 140° for 2 h (10%) [698].

m.p. 157–158° [698]; ¹H NMR (Sadtler: standard n° 59392 M) [698], IR (Sadtler: standard n° 86548 K) [698], UV [698], MS [698].

(3-Bromo-4-hydroxy-2,5-dimethylphenyl)phenylmethanone

$C_{15}H_{13}BrO_2$ mol.wt. 305.17

Synthesis

- Preparation by reaction of bromine with 4-hydroxy-2,5-di-methylbenzophenone in acetic acid [578].

m.p. 115–116° [578]; Spectra (NA).

(3-Bromo-6-hydroxy-2,5-dimethylphenyl)phenylmethanone

$C_{15}H_{13}BrO_2$ mol.wt. 305.17

Synthesis

- Preparation by bromination of 2-hydroxy-3,6-dimethyl-benzophenone in chloroform [501,502].

m.p. 133° [501,502]; IR [103,501].

(4-Bromo-2-hydroxy-3,6-dimethylphenyl)phenylmethanone

[6721-06-8]

$C_{15}H_{13}BrO_2$ mol.wt. 305.17

Synthesis

- Obtained by chromic oxidation (CrO_3) of 6-bromo-4,7-di-methyl-2,3-diphenylbenzofuran, followed by saponification of the keto ester so obtained [501,502].

m.p. 117° [501,502]; IR [103,501], UV [503].

(4-Bromo-6-hydroxy-2,3-dimethylphenyl)phenylmethanone

[143815-13-8]

$C_{15}H_{13}BrO_2$ mol.wt. 305.17

Synthesis

- Obtained (by-product) by Fries rearrangement of 2-bromo-4,5-dimethylphenyl benzoate with aluminium chloride without solvent at 140° for 2 h (22%) [698].

m.p. 194–195° [698]; ¹H NMR (Sadtler: standard n° 59394 M) [698], IR (Sadtler: standard n° 86550 K) [698], UV [698], MS [698].

[4-(2-Bromoethoxy)-2-hydroxyphenyl]phenylmethanone

[18902-63-1]

 $C_{15}H_{13}BrO_3$ mol.wt. 321.17

Synthesis

– Preparation by reaction of ethylene dibromide with resbenzophenone,

- in the presence of sodium hydroxide in refluxing dilute ethanol for 15 h (47%) [238,699];
- in the presence of sodium methoxide in diisobutylketone between 130° and 140° (78%) [700].

– Also refer to: [701–703].

m.p. 90–95° [700], 87–88° and 97–98° [238,699]; double melting point (two allotropic forms); Spectra (NA).

(3-Bromo-2-hydroxy-4,6-dimethoxyphenyl)phenylmethanone $C_{15}H_{13}BrO_4$ mol.wt. 337.17

Synthesis

– Preparation by reaction of bromine with hydrocotoin in chloroform [694].

m.p. 147° [694]; Spectra (NA).

(3-Chloro-6-hydroxy-2,4-dimethylphenyl)phenylmethanone

[34174-02-2]

 $C_{15}H_{13}ClO_2$ mol.wt. 260.72

Synthesis

– Preparation by Fries rearrangement of 4-chloro-3,5-di-methylphenyl benzoate with aluminium chloride for 30 min at 150–160° [458].

m.p. 203–204° [458]; Spectra (NA).

(4-Chloro-2-hydroxy-3,6-dimethylphenyl)phenylmethanone

[33561-94-3]

 $C_{15}H_{13}ClO_2$ mol.wt. 260.72

Synthesis

– Obtained by oxidation of 6-chloro-4,7-dimethyl-2,3-di-phenylbenzofuran with chromium trioxide in boiling acetic acid for 2 h, followed by saponification of the resulting 2-(benzoyloxy)-4-chloro-3,6-dimethylbenzophenone with 2 N sodium hydroxide in boiling ethanol for 15 min [515].

m.p. 102° [515]; IR [515].

(5-Chloro-2-hydroxy-3,4-dimethoxyphenyl)phenylmethanone

[140665-35-6]

 $C_{15}H_{13}ClO_4$ mol.wt. 292.72

Synthesis

– Preparation by reaction of sulfonyl chloride with 2-hydroxy-3,4-dimethoxybenzophenone in methylene chloride overnight at r.t. (70%) [704].

m.p. 84–85° [704]; 1H NMR [704], IR [704], MS [704].

(2-Hydroxy-3,6-dimethyl-4-nitrophenyl)phenylmethanone

[18619-94-8]

 $C_{15}H_{13}NO_4$ mol.wt. 271.27

Synthesis

– Refer to: [103,107,108,582].

m.p. (NA); IR [103,107,108,582].

(2-Hydroxy-3,6-dimethyl-5-nitrophenyl)phenylmethanone

[18619-95-9]

 $C_{15}H_{13}NO_4$ mol.wt. 271.27

Synthesis

– Refer to: [103].

m.p. (NA); IR [103].

(3-Hydroxy-4,6-dimethyl-2-nitrophenyl)phenylmethanone

[20010-69-9]

 $C_{15}H_{13}NO_4$ mol.wt. 271.27

Synthesis

– Obtained by treatment of 5-amino-2,4-dimethylbenzo-phenone (SM) in nitric acid ($d = 1.34$) with an aqueous sodium nitrite solution between 0° and 10°, then at r.t. for 2 h and at 50° for 3 h

(43%). SM was prepared by acylation of 2,4-dimethylacetamide with benzoyl chloride in carbon disulfide in the presence of aluminium chloride (62%, m.p. 101°) [705].

m.p. 119°5–120° [705]; Spectra (NA).

(4-Hydroxy-2,6-dimethyl-3-nitrophenyl)phenylmethanone

[100923-75-9]

 $C_{15}H_{13}NO_4$ mol.wt. 271.27

Synthesis

– Refer to: [706].

m.p. (NA); 1H NMR [706,707], ^{13}C NMR [708], IR [706].**(3-Ethyl-2-hydroxyphenyl)phenylmethanone**

[56394-91-3]

 $C_{15}H_{14}O_2$ mol.wt. 226.27

Synthesis

– Preparation by reaction of 3-ethylsalicylic acid chloride (3-ethyl-2-hydroxybenzoyl chloride) with benzene in the presence of aluminium chloride overnight at 100° (58%) [92,709–711].– Preparation by Fries rearrangement of o-ethylphenyl benzoate (SM) with aluminium chloride at $160\text{--}170^\circ$ for 30 min (61%). SM was obtained by reaction of benzoyl chloride with aluminium tris(o-ethylphenoxide) [485].b.p._{0,14} $123\text{--}126^\circ$ [709,710], b.p._{0,4} $123\text{--}126^\circ$ [92,711],b.p.₃ $165\text{--}167$ [485]; $n_D^{22} = 1.6081$ [709,710]; IR [709,710].**(3-Ethyl-4-hydroxyphenyl)phenylmethanone**

[67217-94-1]

 $C_{15}H_{14}O_2$ mol.wt. 226.27

Syntheses

– Preparation by decarboxylation of 2-(3'-ethyl-4'-hydroxy-benzoyl)benzoic acid in the presence of cupric acetate in refluxing quinoline (254°) for 40 min (98%) [712].– Also obtained (by-product) by Fries rearrangement of o-ethylphenyl benzoate with aluminium chloride at $160\text{--}170^\circ$ for 30 min (12%) [485].m.p. $138\text{--}140^\circ$ [712], 136° [485]; Spectra (NA).**(4-Ethyl-2-hydroxyphenyl)phenylmethanone**

[78473-50-4]

 $C_{15}H_{14}O_2$ mol.wt. 226.27

Synthesis

– Preparation by Fries rearrangement of m-methylphenyl benzoate in the presence of aluminium chloride without solvent at 140° for 4 h [713].

– Also refer to: [714].

oil [713]; b.p. and Spectra (NA).

(5-Ethyl-2-hydroxyphenyl)phenylmethanone

[3132-42-1]

 $C_{15}H_{14}O_2$ mol.wt. 226.27**Syntheses**

- Preparation by Fries rearrangement of p-ethylphenyl benzoate with aluminium chloride at 140° for 4 h [713].
 - Preparation by reaction of benzoyl chloride with p-ethylphenol in the presence of aluminium chloride in tetra-chloroethane at 105° for 22 h (60%) [92].
 - Preparation by condensation of benzotrichloride with p-ethylphenol in the presence of 32–40% aqueous sodium hydroxide at 70–80° (70%) [615].
 - Also refer to: [715,716].
- m.p. 74° [713], 69°5–70° [615], 69–72° [92];
¹H NMR [615], IR [615], UV [615], MS [615];
 gas chromatography study [631].

(2-Hydroxy-3,4-dimethylphenyl)phenylmethanone

[14770-98-0]

 $C_{15}H_{14}O_2$ mol.wt. 226.27**Syntheses**

- Preparation by Fries rearrangement of 2,3-dimethylphenyl benzoate in the presence of aluminium chloride at 180° for 10 min (60%) [518].
 - Preparation by oxidation of 6,7-dimethyl-2,3-diphenylbenzofuran with chromium trioxide in boiling acetic acid, followed by saponification of the keto ester so obtained (2-benzoyloxy-3,4-di-methylbenzophenone) [44,682,717].
 - Also refer to: [76].
- m.p. 45° [717], 42° [44,518,682,718]; IR [44,717].

(2-Hydroxy-3,5-dimethylphenyl)phenylmethanone

[16762-34-8]

 $C_{15}H_{14}O_2$ mol.wt. 226.27**Syntheses**

- Preparation by Fries rearrangement of 2,4-dimethylphenyl benzoate in the presence of aluminium chloride (major product) [719], at 130–140° for 4 h (50%) [720], at 140–160° for 20 min (83%) [721] or at 180° for 10 min (75%) [518].
- Preparation by chromic oxidation of various substituted 5,7-dimethylbenzofurans (5,7-dimethyl-2,3-diphenylbenzofuran [44]; 5,7-dimethyl-2-(4-methylphenyl)-3-phenylbenzofuran [46] and 2-(4-methoxyphenyl)-5,7-dimethyl-3-phenylbenzofuran [46]), followed by saponification of the resulting keto esters.

- Preparation by Friedel–Crafts acylation of 2,4-dimethylanisole or of 2,4-dimethylphenetole with benzoyl chloride in the presence of aluminium chloride in refluxing carbon disulfide (10% and 30% yields, respectively) [719].
- Preparation by reaction of benzoyl chloride with 2,4-dimethylphenol in the presence of aluminium chloride in nitrobenzene at 50–60° for 18 h (27%) [721].
- Also refer to: [4].

oil [44,46]; m.p. 40–41° [720,722];

b.p.₂₀ 202° [719], b.p.₁₂ 198–200° [518], b.p.₁₇ 192–194° [720]; IR [44].

(2-Hydroxy-3,6-dimethylphenyl)phenylmethanone

[4072-17-7]

C₁₅H₁₄O₂ mol.wt. 226.27

Synthesis

- Preparation by oxidation of 4,7-dimethyl-2,3-diphenyl-benzofuran with chromium trioxide in acetic acid at 60°, followed by hydrolysis of the keto ester so obtained (2-benzoyloxy-3,6-dimethylbenzophenone) with 10% sodium hydroxide [632,723].
- Also refer to: [76,633].

m.p. 104° [89,609,723], 103–104° [632];

IR [89,103,723], UV [609].

(2-Hydroxy-4,5-dimethylphenyl)phenylmethanone

[4072-14-4]

C₁₅H₁₄O₂ mol.wt. 226.27

Syntheses

- Preparation by reaction of chromium trioxide with 5,6-dimethyl-2,3-diphenylbenzofuran [44,606] or 5,6-di-methyl-2-(4-methylphenyl)-3-phenylbenzofuran [46] in acetic acid, followed by saponification of the keto ester so formed (2-benzoyloxy-4,5-dimethylbenzophenone).
- Preparation by Fries rearrangement of 3,4-dimethylphenyl benzoate without solvent, in the presence of,
 - aluminium chloride between 120° and 150° (quantitative yield) [724] or at 140° for 20 min (66%) [462];
 - titanium tetrachloride at 140° for 2 h (75%) [698].
- Also obtained by isomerization of 2-hydroxy-4,6-dimethylbenzophenone in the presence of aluminium chloride between 140° and 180° for several hours (quantitative yield) [724]. There is a methyl group migration.
- Preparation by reaction of benzoyl chloride with 3,4-dimethylphenyl benzoate in the presence of zinc chloride at 110°, followed by saponification of the keto ester formed (2-benzoyloxy-4,5-di-methylbenzophenone) with sodium hydroxide in boiling ethanol [725].

- Preparation by reaction of pyridinium chloride with 2-methoxy-4,5-dimethylbenzophenone by boiling for 50 min [726].
- Also obtained by reaction of benzoyl chloride with 4-methylthymol methyl ether (4,5-dimethyl-2-isopropylanisole) in the presence of aluminium chloride in carbon disulfide at r.t. for 23 h [726].
- Preparation by saponification of 2-benzoyloxy-4,5-dimethylbenzophenone with potassium hydroxide in refluxing ethanol for 1 h (64%) [504].
- Also obtained from 3,4-dimethylbenzophenone by nitration with nitric acid in acetic anhydride at 70°, then at 5° overnight. The diene obtained (2-benzoyl-4,5-dimethyl-4-nitro-1,4-dihydrophenyl acetate as cis and trans mixture) was added to a concentrated solution of sodium methoxide in methanol [727].
- Also obtained (by-product) by reaction of aluminium chloride with 2-bromo-4,5-dimethylphenyl benzoate without solvent at 140° for 2 h (7%) [698].
- Also obtained (by-product) by treatment of 2-bromo-4,5-dimethylbenzophenone with 25% aqueous ammonium hydroxide in ethanol into an autoclave at 180–190° for 5 h under 40 atmospheres (15%) [728].
- Preparation by reaction of 3,4-xylenol with benzoic acid in the presence of boron trifluoride-ethyl ether complex, at 128–129° for 7 min, followed by treatment of the difluoroboroxy chelate formed with boiling aqueous ethanol for 15 min (63%) [729].
- Also refer to: [504,730,731].

m.p. 112–113°5 [727], 111° [89,724], 110–111° [462,606,698,725,728,729], 110° [726], 108° [44,46];

(2-Hydroxy-4,6-dimethylphenyl)phenylmethanone

[2929-45-5]

C₁₅H₁₄O₂ mol.wt. 226.27

Syntheses

- Preparation by reaction of benzoyl chloride with 3,5-di-methylphenol in the presence of aluminium chloride in nitromethane at 25° for 3 h, then at reflux for 1 h [102], (45%) [732].
- Preparation by Fries rearrangement of 3,5-dimethylphenyl benzoate with aluminium chloride [6,632,733], without solvent between 120° and 150° (quantitative yield) [724], (55%) [733] or in nitrobenzene at 62–63° for 18 h (80%) [31].
- Preparation by oxidation of 4,6-dimethyl-2,3-diphenylbenzofuran with chromium trioxide in acetic acid at 60°, followed by saponification of the keto ester so obtained (2-(benzoyloxy)-4,6-di-methylbenzophenone) with 10% sodium hydroxide in boiling ethanol [632].
- Also obtained by reaction of benzoic acid with 3,5-dimethylphenol in the presence of boron trifluoride in a sealed tube at 160° for 2 h (58%) [150].

- Also obtained (by-product) by treatment of 2-bromo-4,5-dimethylphenyl benzoate with aluminium chloride at 140° for 2 h (8%) [698].
- Also refer to: [4,37,76,633,734].
- m.p. 143–143°5 [31], 143° [724], 142–143° [732], 142° [150,632], 141–142° [698],

(4-Hydroxy-2,3-dimethylphenyl)phenylmethanone

[107931-09-9]

C₁₅H₁₄O₂

mol.wt. 226.27

Synthesis

– Preparation by demethylation of 2,3-dimethyl-4-methoxy-benzophenone (SM) with pyridinium chloride at 180° for 2 h. SM was prepared by reaction of phenylmagnesium bromide with 2,3-dimethyl-4-methoxybenzaldehyde in ethyl ether at 0° for 30 min [477].

m.p. and Spectra (NA).

(4-Hydroxy-2,5-dimethylphenyl)phenylmethanone

[62262-03-7]

C₁₅H₁₄O₂

mol.wt. 226.27

Syntheses

- Preparation by Friedel–Crafts acylation of 2,5-dimethyl-phenyl benzoate with benzoyl chloride in the presence of zinc chloride, followed by saponification of the p-keto ester so obtained with sodium hydroxide in boiling ethanol (quantitative yield) [725].
- Preparation by reaction of hydriodic acid with 4-methoxy-2,5-dimethylbenzophenone in boiling acetic acid (56%) [719].
- Also obtained (by-product) by Fries rearrangement of 2,5-dimethylphenyl benzoate with aluminium chloride at 130–140° for 4 h [719].
- Also refer to: [734].
- m.p. 166–167° [719,738]; Spectra (NA).

(4-Hydroxy-2,6-dimethylphenyl)phenylmethanone

[81375-01-1]

 $C_{15}H_{14}O_2$ mol.wt. 226.27**Syntheses**

- Preparation by reaction of sodium iodide with 4-benzyloxy-2,6-dimethylbenzophenone (SM) in the presence of trimethylsilyl chloride in acetonitrile into an autoclave at 130° for 24 h (60%).
- SM was prepared from 4-bromo-3,5-di-methylphenol by a four-step synthesis [6].
- Preparation by diazotization of 4-amino-2,6-dimethylbenzophenone, followed by hydrolysis of the diazonium salt obtained (34%) [732].
- Also refer to [706,739].

m.p. 115° [6,732]; b.p._{0.01} 153–155° [6];¹H NMR [706,707,732], ¹³C NMR [6,708], IR [706,732].**(4-Hydroxy-3,5-dimethylphenyl)phenylmethanone**

[5336-56-1]

 $C_{15}H_{14}O_2$ mol.wt. 226.27**Syntheses**

- Preparation by decarboxylation of 2-(4-hydroxy-3,5-di-methylbenzoyl)benzoic acid in the presence of cupric acetate monohydrate in refluxing quinoline for 30 min (98%) [740].
- Preparation by demethylation of 4-methoxy-3,5-dimethyl-benzophenone (SM) with aluminium chloride without solvent at 100–110° for 3 h [741]. SM was obtained by Friedel–Crafts acylation of 2,6-dimethylanisole with benzoyl chloride according to usual method.
- Preparation by Fries rearrangement of 2,6-dimethylphenyl benzoate with aluminium chloride without solvent [742], at 130–140° (46%) [743].
- Also obtained by photo-Fries rearrangement of 2,6-dimethylphenyl benzoate in isopropanol at 26° for 24 h (33%) [64,72] or in pentane in the presence of silica gel (23%) [64].
- Also obtained (poor yield) by reaction of cumene hydroperoxide with 4-benzyl-2,6-dimethyl-phenol and air bubbling in the presence of cobalt phthalate in cumene at 80–100° for 100 h (6%) [744].
- Also refer to: [4,429,745–747].

m.p. 145° [742], 143°3–144°5 [740], 143° [744], 142–142°5 [743], 141–142° [741], 139–141°6 [72];

¹H NMR [742].

(5-Hydroxy-2,4-dimethylphenyl)phenylmethanoneC₁₅H₁₄O₂ mol.wt. 226.27**Syntheses**

- Preparation by Friedel–Crafts acylation of 2,4-dimethyl-phenyl benzoate with benzoyl chloride in the presence of zinc chloride in boiling chloroform, followed by saponification of the 5-(benzoyloxy)-2,4-dimethyl-benzophenone so obtained with sodium hydroxide in refluxing ethanol (45%) [748].
 - Also obtained (poor yield) by Fries rearrangement of 2,4-dimethylphenyl benzoate with aluminium chloride without solvent at 130–140° for 4 h (4%) [720].
 - Obtained (by-product) by Friedel–Crafts acylation,
 - of 2,4-dimethylanisole with benzoyl chloride in the presence of aluminium chloride in refluxing carbon disulfide for 3–5 h (8%) [719];
 - of 2,4-dimethylphenetole with benzoyl chloride in the presence of aluminium chloride in boiling carbon disulfide [719].
 - Preparation by demethylation of 2,4-dimethyl-5-methoxybenzophenone,
 - with hydriodic acid (d = 1.7) in boiling acetic acid at 130–140° for 2 h (70%) [719];
 - with aluminium chloride in boiling carbon disulfide for 8 h (32%) [719].
- m.p. 145–146° [748], 140–141° [719,720]; Spectra (NA).

(6-Hydroxy-2,3-dimethylphenyl)phenylmethanone

[108478-10-0]

C₁₅H₁₄O₂ mol.wt. 226.27**Syntheses**

- Preparation by oxidation of 4,5-dimethyl-2,3-diphenyl-benzofuran with chromium trioxide in acetic acid, followed by alkaline hydrolysis of the resulting keto ester with refluxing 10% sodium hydroxide in ethanol for 2 h [632].
 - Also obtained by saponification of 2,3-dimethyl-6-benzoyl-oxybenzophenone with refluxing 10% sodium hydroxide for 30 min [632].
 - Preparation by debromination of 3-bromo-2-hydroxy-5,6-dimethylbenzophenone in the presence of copper powder in caproic acid at 220° for 15 min (82%) [698].
 - Also obtained (poor yield) by Fries rearrangement of 3,4-dimethylphenyl benzoate with titanium tetrachloride without solvent at 140° for 2 h (5%) [698].
 - Also refer to: [633].
- m.p. 124–125° [698], 114–115° [632];
¹H NMR (Sadler: standard n° 59393 M) [698],
 IR (Sadler: standard n° 86549 K) [698], UV [698], MS [698].

(4-Ethoxy-2-hydroxyphenyl)phenylmethanone

[15889-70-0]

C₁₅H₁₄O₃ mol.wt. 242.27

Syntheses

- Preparation by reaction of ethyl bromide with resbenzo-phenone, in the presence of sodium hydroxide in dilute ethanol, first at 30–40° for 1 h, then at 65–75° for 16 h (35%) [189].
- Preparation by reaction of ethyl p-toluenesulfonate with resbenzophenone in the presence of potassium carbonate in boiling water for 8 h (75%) [201,202].
- Preparation by Friedel–Crafts acylation of 1,3-diethoxybenzene with benzoyl chloride in the presence of a zinc chloride/aluminium chloride mixture, first between 0° and 5°, then at 10° for 1 h and finally at 65° for 6 h [658].
- Also refer to: [222,655,667].

m.p. 54°5 [189], 50–52° [201,202]; Spectra (NA).

(2-Hydroxy-3-methoxy-5-methylphenyl)phenylmethanone

[17603-92-8]

C₁₅H₁₄O₃ mol.wt. 242.27

Synthesis

- Preparation by photo-Fries rearrangement of 2-methoxy-4-methylphenyl benzoate in benzene or in ethanol during 4 h (40% and 63% yields, respectively) [620].

m.p. (NA); ¹H NMR [620], IR [620].**(2-Hydroxy-3-methoxy-6-methylphenyl)phenylmethanone**

[129103-91-9]

C₁₅H₁₄O₃ mol.wt. 242.27

Synthesis

- Preparation from 2-iodo-6-methoxy-3-methylphenyl benzoate by rearrangement on treatment with n-butyllithium in a mixture of ethyl ether, hexane and tetrahydrofuran at –70° for 2 h, then treatment with saturated aqueous ammonium chloride (55%) [58].

m.p. 128–129°5 [58]; ¹H NMR [58], IR [58].**(2-Hydroxy-4-methoxy-3-methylphenyl)phenylmethanone**

[83803-88-7]

C₁₅H₁₄O₃ mol.wt. 242.27

Syntheses

- Preparation by methylation of 2,4-dihydroxy-3-methyl-benzophenone with methyl iodide in the presence of potassium carbonate in refluxing acetone for 2 h [749].

- Also obtained by methylation of resbenzophenone with methyl iodide in the presence of potassium hydroxide in methanol at 0° (26%) [750]. There is an introduction of one methyl group on the nucleus.
 - Also obtained by methylation of resbenzophenone [649] according to the method [751].
 - Also refer to: [221].
- m.p. 125° [649,749,750], 124–125° [113];
UV [113].

(2-Hydroxy-4-methoxy-5-methylphenyl)phenylmethanone

[59954-97-1]

C₁₅H₁₄O₃

mol.wt. 242.27

Syntheses

- Preparation by reaction of benzoyl chloride with 4-methyl-resorcinol dimethyl ether in the presence of aluminium chloride in ethylene dichloride (97%) [589].
 - Preparation by oxidation of 6-methoxy-5-methyl-2,3-di-phenylbenzofuran with chromium trioxide in refluxing acetic acid, followed by alkaline hydrolysis of the keto ester so obtained (2-benzoyloxy-4-methoxy-5-methylbenzophenone) with potassium hydroxide in refluxing ethanol (73%) [752].
- m.p. 188° [752], 88–89° [589]. One of the reported melting points is obviously wrong. Spectra (NA).

(2-Hydroxy-4-methoxy-6-methylphenyl)phenylmethanone

[23573-43-5]

C₁₅H₁₄O₃

mol.wt. 242.27

Syntheses

- Preparation by partial methylation of 2,4-dihydroxy-6-methylbenzophenone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 4 h (74%) [753].
 - Also obtained by UV light irradiation of 3-methoxy-5-methyl-phenyl benzoate in ethanol at 20° for 70 h (21%) [754].
- m.p. 93–94° [753], 87–88° [754]; ¹H NMR [643,754], IR [754], UV [754].

(2-Hydroxy-5-methoxy-4-methylphenyl)phenylmethanone

[59954-92-6]

C₁₅H₁₄O₃

mol.wt. 242.27

Synthesis

- Preparation by oxidation of 5-methoxy-6-methyl-2,3-di-phenylbenzofuran with chromium trioxide in refluxing acetic acid for 30 min, followed by alkaline hydrolysis of the resulting keto ester (2-benzoyloxy-5-methoxy-4-methyl-benzophenone) with potassium hydroxide in refluxing ethanol (75%) [752].
- m.p. 114° [752]; Spectra (NA).

(2-Hydroxy-6-methoxy-4-methylphenyl)phenylmethanone

[23565-66-4]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Obtained by UV light irradiation of 3-methoxy-5-methyl-phenyl benzoate in ethanol at 20° for 70 h (13%) [754].

m.p. 70–71° [754]; 1H NMR [754], IR [754], UV [754].

(4-Hydroxy-2-methoxy-6-methylphenyl)phenylmethanone

[23565-67-5]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Obtained by UV light irradiation of 3-methoxy-5-methyl-phenyl benzoate in ethanol at 20° for 70 h (8%) [754].

m.p. 123–124° [754]; 1H NMR [754], IR [754], UV [754].

(5-Hydroxy-4-methoxy-2-methylphenyl)phenylmethanone $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Preparation by saponification of 5-(benzoyloxy)-4-methoxy-2-methylbenzophenone (SM) (m.p. 95–96°) with sodium hydroxide in boiling dilute ethanol (quantitative yield). SM was

obtained by condensation of benzoyl chloride with creosol benzoate in the presence of zinc chloride [755].

m.p. 150° [755]; Spectra (NA).

(2-Hydroxy-3,4-dimethoxyphenyl)phenylmethanone

[7508-32-9]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Syntheses

– Preparation by reaction of benzoyl chloride with pyrogallol trimethyl ether,

- in the presence of aluminium chloride in ethylene dichloride between 0° and 5°, then at r.t. for 3 h and finally at reflux for 1 h (96%) [704] or for 2 h (47%) [598] and also in refluxing methylene chloride for 2 h (22%) [756].

N.B.: This benzophenone is, by mistake, named, 2-hydroxy-3,4-dimethoxybenzaldehyde (synthetic example 20, compound **a**, page 39), in the patent PCT Int. Appl. WO 96 05,188 of 22 February 1996 [598].

- in the presence of zinc chloride (good yield) [686], at 100° for 1 h [757];
- in the presence of mercuric chloride instead of aluminium chloride without solvent at 115° (reflux) for 1–3 h (40%) [758,759].

- Preparation by reaction of methyl iodide with 2,3,4-trihydroxybenzophenone monosodium salt in the presence of sodium carbonate at 160° for 6 h [344]. By using lead salt instead of sodium salt in the same conditions, the yield was decreased.
 - Also obtained by reaction of methyl iodide with 2,3,4-trihydroxybenzophenone in the presence of lithium carbonate in N,N-dimethylformamide at 30° for 15 h under nitrogen (17%) [369].
 - Also obtained by reaction of dimethyl sulfate with 2,3-dihydroxy-4-methoxybenzophenone or with 2,4-dihydroxy-3-methoxybenzophenone in the presence of alkali [379].
- m.p. 185–187° [369]. This melting point is obviously wrong. 132–134° [704], 131° [344,756], 130–131° [686,757], 127–128° [598], 120–121° [379]; ¹H NMR [369,598,704], ¹³C NMR [369], IR [704], UV [369], MS [369,704]; p*K*_a [369].

(2-Hydroxy-4,5-dimethoxyphenyl)phenylmethanone

[36896-99-8]

C₁₅H₁₄O₄

mol.wt. 258.27

Syntheses

- Preparation by partial methylation of 2,5-dihydroxy-4-methoxybenzophenone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone [656,760].
 - Preparation by partial demethylation of 2,4,5-trimethoxybenzophenone with aluminium chloride in boiling carbon disulfide for 1 h [761,762].
 - Also obtained by Friedel–Crafts acylation of 1,2,4-trimethoxybenzene with benzoyl chloride in the presence of aluminium chloride,
 - in carbon disulfide (by-product) [763], (15%) [761,762];
 - in ethylene dichloride between 0° and 5°, then at r.t. for 4 h and finally at reflux for 2 h (97%) [704].
 - Preparation by reaction of benzoyl chloride with 3,4-dimethoxyphenol in the presence of boron trichloride in methylene chloride at r.t. for 2.5 h (51%) [598].
- N.B.:** This benzophenone is, by mistake named, 2-hydroxy-4,5-dimethoxybenzaldehyde (synthetic example 1, compound **h**, page 21), in the patent PCT Int. Appl. WO 96 05,188 of 22 February 1996 [598].
- Also obtained from O-methylalbergin (6,7-dimethoxy-4-phenylcoumarin) (SM) by oxidation with neutral permanganate. SM was prepared by methylation of albergin (6-hydroxy-7-methoxy-4-phenylcoumarin), itself isolated from *Dalbergia sissoo* [764].
 - Also refer to: [530,670].
- m.p. 109–110° [656,704], 106–107° [760–762], 104–105° [598]; ¹H NMR [598,704,760], IR [704], MS [704].

(2-Hydroxy-4,6-dimethoxyphenyl)phenylmethanone (*Hydrocotoin*)

[34425-64-4]

 $C_{15}H_{14}O_4$

mol.wt. 258.27

Syntheses

- Preparation from 2-bromo-3,5-dimethoxyphenyl benzoate on treatment with *sec*-butyllithium in a mixture of ethyl ether, hexane and tetrahydrofuran at -70° for 2 h, followed by treatment with saturated aqueous ammonium chloride (47%) [58].
- Preparation by Friedel–Crafts acylation of phloroglucinol trimethyl ether with benzoyl chloride in the presence of aluminium chloride [753], in ethyl ether for 8 h [416].
- Preparation by action of boron trichloride with 2,4,6-trimethoxybenzophenone in methylene chloride for 30 min at r.t. under nitrogen (92%) [171].
- Preparation by heating a mixture of benzoyl chloride and 3,5-dimethoxyphenyl benzoate in the presence of zinc chloride in benzene, followed by saponification of the keto ester so formed [220,765].
- Also obtained (poor yield) by reaction of benzonitrile with phloroglucinol dimethyl ether in the presence of zinc chloride and hydrochloric acid in ethyl ether (Hoesch reaction) [653], (3%) [766].
- Also obtained from 5,7-dimethoxy-4-phenylcoumarin,
 - by oxidation with potassium permanganate in acetone for 30 min (<5%) [767];
 - by ozonolysis in a mixture of carbon tetrachloride and chloroform (25%) [767].
- Also obtained (poor yield) by UV light irradiation of 2,4,6-trimethoxybenzophenone in carbon tetrachloride for 500 h (3%) [678].
- Also refer to: [379,686,768–770].

Isolation from natural sources

- From the heartwood of *Allanblackia fluoribunda* Oliver (Guttiferae; subfamily Clusioideae) [171];
- From the Paracotobark or *Aniba pseudocoto* Rusby (Kostermans) (Lauraceae) [694,771];
- From the *Coto* bark (Lauraceae) [772].

m.p. $99-100^\circ$ [753], 98° [447,694,766,773,774], $97-98^\circ$ [678], $96-98^\circ$ [171], $96-97^\circ$ [58], $95-96^\circ$ [767], $93-95^\circ$ [765]; 1H NMR [58,171,416,678], IR [171], UV [171,767], MS [58,171]; GLC [678].

(4-Hydroxy-2,6-dimethoxyphenyl)phenylmethanone

$C_{15}H_{14}O_4$ mol.wt. 258.27

Syntheses

- Preparation by saponification of 4-(benzoyloxy)-2,6-di-methoxybenzophenone with 10% potassium hydroxide in methanol at r.t. for 2 h [775].
 - Also obtained by reaction of benzonitrile with phloroglucinol dimethyl ether in the presence of zinc chloride and hydrochloric acid (14%) (Hoesch reaction) [766].
 - Also refer to: [379].
- m.p. 178–179° [775], 177° [766]; Spectra (NA).

[2-Hydroxy-4-(2-hydroxyethoxy)phenyl]phenylmethanone

[16909-78-7]

$C_{15}H_{14}O_4$ mol.wt. 258.27

Syntheses

- Preparation by reaction of ethylene chlorohydrin (2-chloroethanol) with resbenzophenone,
 - in the presence of sodium hydroxide, in boiling water for 6 h (40%) [238] or in water at 70° for 18 h (91%) [776];
 - in the presence of sodium carbonate in refluxing dilute ethanol for 16 h (58%) [777].
 - Preparation by reaction of ethylene carbonate with resbenzophenone,
 - in the presence of a quaternary ammonium salt (for example benzyltriethylammonium chloride) at 140–150° [778], for 11 h (93%) [779];
 - in the presence of an alkaline metal or alkaline earth metal salt as catalyst (sodium ethylenediamine tetraacetate (0.02 mol); calcium citrate monohydrate (0.02 mol); sodium nitriloacetate (0.02 mol); sodium oleate (0.05 mol); sodium stearate (0.05 mol)), for 7–8 h at 155° (92–93% yields) [780];
 - in the presence of sodium methoxide in diisobutylketone for 50 min at 140° [700].
 - Preparation by treatment of resbenzophenone with ethylene oxide,
 - in methanol in the presence of sodium methoxide in autoclave at 150°, under 16.4 atmospheres, for 6 h (54%) [777];
 - in the presence of aqueous potassium hydroxide at 105–110° into an autoclave (<90 psig) under nitrogen (99%) [781].
 - Also refer to: [782–788] and also [789–793] (Japanese patents).
- m.p. 93°5–95°5 [794], 92–93° [777], 91°5–97°5, this gap of 6° C appears in the patent U.S. US 4,978,797 [781], 91–92° [238], 89–90° [93]; UV [93]; gel chromatography [247]; pK_a [93]; TLC [116].

[2-Hydroxy-3-(hydroxymethyl)-4-methoxyphenyl]phenylmethanone

[80604-76-8]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Synthesis

- Obtained by adding a 27% solution of formaldehyde to a solution of 2-hydroxy-4-methoxybenzophenone in aqueous sodium hydroxide and tetrahydrofuran then stirring the mixture at r.t. for 5.5 h (31%) [795,796].
- Also refer to: [665].

m.p. and Spectra (NA).

[2-Hydroxy-5-(hydroxymethyl)-4-methoxyphenyl]phenylmethanone

[80501-48-0]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Synthesis

- Preparation by adding a 37% solution of formaldehyde to a solution of 2-hydroxy-4-methoxybenzophenone in aqueous sodium hydroxide and tetrahydrofuran then stirring the mixture at r.t. for 24 h (75%) [795]. In the same conditions, but using a 27% solution of formaldehyde and stirring the mixture at r.t. for 5.5 h, the keto alcohol was obtained in a yield of only 47% [795,796].
- Also refer to: [665,797].

m.p. and Spectra (NA).

(2-Amino-3-hydroxy-4,6-dimethylphenyl)phenylmethanone $C_{15}H_{15}NO_2$ mol.wt. 241.29

Synthesis

- Preparation by reduction of 2-nitro-3-hydroxy-4,6-dimethyl-benzophenone with sodium hydrosulfite in dilute ethanol (67%) [705].

m.p. 125° [705]; Spectra (NA).

[4,5-Dichloro-3-hydroxy-2-(2-propenyl)phenyl]phenylmethanone

[113730-42-0]

 $C_{16}H_{12}Cl_2O_2$ mol.wt. 307.18

Synthesis

- Obtained by heating 5-(allyloxy)-3,4-dichlorobenzophenone at 235° for 8 min (67%) (Claisen rearrangement) [482].

m.p. 105° [482]; 1H NMR [482].

[4-Hydroxy-3-(2-propenyl)phenyl]phenylmethanone

[73720-75-9]

C₁₆H₁₄O₂ mol.wt. 238.29

Synthesis

– Preparation by Claisen rearrangement of 4-(allyloxy)-benzophenone in refluxing phenyl ether for 1 h (73%) [798] or in diethylaniline at 207–218° for 3.5 h (47%) [799].

– Also refer to: [429].

m.p. 129–130°6 [798]; UV [798].

[2-Hydroxy-4-(1-propenyloxy)phenyl]phenylmethanoneC₁₆H₁₄O₃ mol.wt. 254.29

Synthesis

– Obtained (poor yield) by reaction of epichlorohydrin with resbenzophenone in the presence of aqueous potassium hydroxide at r.t. for 18 h (<6%) [800].

m.p. 97–98°5 [800]; Spectra (NA).

[2-Hydroxy-4-(2-propenyloxy)phenyl]phenylmethanone

[2549-87-3]

C₁₆H₁₄O₃ mol.wt. 254.29

Synthesis

– Preparation by reaction of allyl chloride (3-chloro-propene) with resbenzophenone (90%), according to [801].

m.p. 65–68° [801]; Spectra (NA); TLC [116].

[2-Hydroxy-4-(oxiranylmethoxy)phenyl]phenylmethanone

[19389-82-3]

C₁₆H₁₄O₄ mol.wt. 270.28

Synthesis

– Preparation by reaction of epichlorohydrin with 2,4-dihydroxybenzophenone in the presence of an aqueous potassium hydroxide solution at 88° for 2 h [802].

m.p. 99–100° [803], 98°5–99° [802]; IR [802], UV [802]; TLC [116].

[2-Hydroxy-3-(1-methylethyl)phenyl]phenylmethanone[33621-54-4] $C_{16}H_{16}O_2$ mol.wt. 240.30

Synthesis

- Preparation by oxidation of 7-isopropyl-2,3-diphenyl-benzofuran with chromium trioxide in acetic acid at 70° for 2 h, followed by alkaline hydrolysis of the resulting keto ester (2-benzoyloxy-3-isopropylbenzophenone) in boiling dilute ethanol for 15 min [717].

Yellow liquid [717]; b.p.₃₋₅ 170–175° [717]; IR [717].**[2-Hydroxy-5-(1-methylethyl)phenyl]phenylmethanone**[20401-89-2] $C_{16}H_{16}O_2$ mol.wt. 240.30

Syntheses

- Preparation by Fries rearrangement of p-isopropylphenyl benzoate with aluminium chloride [117].
- Also obtained by photo-Fries rearrangement of p-isopropyl-phenyl benzoate in pentane, with or without silica gel (32–35%) [64].

m.p. (NA); ¹H NMR [99], IR [99]; TLC [116]; polarographic study [117].**[4-Hydroxy-3-(1-methylethyl)phenyl]phenylmethanone**[83938-73-2] $C_{16}H_{16}O_2$ mol.wt. 240.30

Synthesis

- Preparation by decarboxylation of 2-(4-hydroxy-3-iso-propylbenzoyl)benzoic acid in the presence of cupric acetate monohydrate in refluxing quinoline for 45 min (97%) [804].

m.p. 134°1–135°2 [804]; ¹H NMR [804], IR [804], UV [804].**(2-Hydroxy-3-propylphenyl)phenylmethanone**[108294-70-8] $C_{16}H_{16}O_2$ mol.wt. 240.30

Synthesis

- Preparation by reaction of 2-hydroxy-3-propylbenzoyl chloride with benzene in the presence of aluminium chloride in refluxing carbon disulfide (42%) [92].

m.p. 34–35° [92]; Spectra (NA).

(4-Hydroxy-3-propylphenyl)phenylmethanone[183013-50-5] $C_{16}H_{16}O_2$ mol.wt. 240.30

Synthesis

– Preparation by catalytic hydrogenation of 3-allyl-4-hydroxy-benzophenone (SM). SM was obtained by reaction of allyl bromide with 4-hydroxybenzophenone in the presence of potassium carbonate, followed by Claisen rearrangement of the 4-(allyloxy)benzophenone so formed [168].

m.p. and Spectra (NA).

(2-Hydroxy-3,4,6-trimethylphenyl)phenylmethanone[33621-48-6] $C_{16}H_{16}O_2$ mol.wt. 240.30

Synthesis

– Obtained by oxidation of 2,3-diphenyl-4,6,7-trimethyl-benzofuran with chromium trioxide in acetic acid at 65° for 1.5 h, then saponification of the resulting keto ester, the 2-(benzoyloxy)-3,4,6-trimethylbenzophenone, with 10% sodium hydroxide in boiling dilute ethanol for 30 min [723].

– Also refer to: [76].

m.p. 102° [723]; IR [723].

(2-Hydroxy-3,5,6-trimethylphenyl)phenylmethanone[33634-16-1] $C_{16}H_{16}O_2$ mol.wt. 240.30

Synthesis

– Obtained by oxidation of 2,3-diphenyl-4,5,7-trimethyl-benzofuran with chromium trioxide in acetic acid at 65° for 1.5 h, then saponification of the resulting keto ester, the 2-(benzoyloxy)-3,5,6-trimethylbenzophenone, with 10% sodium hydroxide in boiling dilute ethanol for 30 min [723].

m.p. 127° [723]; IR [723].

(4-Ethyl-2-hydroxy-5-methoxyphenyl)phenylmethanone[59623-15-3] $C_{16}H_{16}O_3$ mol.wt. 256.30

Synthesis

– Preparation by saponification of 2-(benzoyloxy)-4-ethyl-5-methoxybenzophenone (SM) with potassium hydroxide in refluxing ethanol for 1 h (73%). SM was obtained by oxidation of 6-ethyl-5-methoxy-2,3-diphenylbenzofuran with chromium trioxide in refluxing acetic acid for 30 min (80%, m.p. 140°) [370].

m.p. 124° [370]; Spectra (NA).

(5-Ethyl-2-hydroxy-4-methoxyphenyl)phenylmethanone

[59623-21-1]

 $C_{16}H_{16}O_3$ mol.wt. 256.30

Synthesis

– Preparation by saponification of 2-(benzoyloxy)-5-ethyl-4-methoxybenzophenone (SM) with potassium hydroxide in refluxing ethanol for 1 h (67%). SM was obtained by oxidation of 5-ethyl-6-methoxy-2,3-diphenylbenzofuran with chromium trioxide in refluxing acetic acid for 30 min (64%, m.p. 181°) [370].

m.p. 170° [370]; Spectra (NA).

[2-Hydroxy-4-(1-methylethoxy)phenyl]phenylmethanone $C_{16}H_{16}O_3$ mol.wt. 256.30

Syntheses

- Preparation by reaction of isopropyl bromide with resbenzophenone in the presence of potassium hydroxide in dilute ethanol at 75–80° for 15 h (38%) [800].
- Preparation by Friedel–Crafts acylation of 1,3-diisopropoxybenzene with benzoyl chloride in the presence of a zinc chloride/aluminium chloride mixture, first between 0° and 5°, then at 10° for 1 h and finally at 65° for 6 h [658].

m.p. 42–42.5 [800]; Spectra (NA).

(2-Hydroxy-4-propoxyphenyl)phenylmethanone

[3088-11-7]

 $C_{16}H_{16}O_3$ mol.wt. 256.30

Synthesis

- Preparation by reaction of n-propyl bromide with resbenzophenone in the presence of sodium hydroxide in dilute ethanol at 70–80° for 13 h (30%) [189].

– Also refer to: [222].

m.p. 67° [189]; Spectra (NA).

(2-Hydroxy-5-propoxyphenyl)phenylmethanone $C_{16}H_{16}O_3$ mol.wt. 256.30

Synthesis

- Preparation by reaction of n-propyl bromide with 2,5-di-hydroxybenzophenone in the presence of sodium hydroxide in dilute ethanol at 70–80° for 28 h (25%) [681].

m.p. and Spectra (NA).

(5-Ethoxy-2-hydroxy-4-methoxyphenyl)phenylmethanone

[52811-38-8]

 $C_{16}H_{16}O_4$ mol.wt. 272.30

Synthesis

- Preparation by partial ethylation of 2,5-dihydroxy-4-methoxybenzophenone with diethyl sulfate in the presence of potassium carbonate in refluxing acetone for 5 h (75%) [763].

m.p. 100–102° [763]; 1H NMR [763], IR [763], UV [763].**(2-Hydroxy-4,6-dimethoxy-3-methylphenyl)phenylmethanone** $C_{16}H_{16}O_4$ mol.wt. 272.30

Syntheses

- Preparation by reaction of methyl iodide with 2,4,6-tri-hydroxy-3-methylbenzophenone or with 2,6-dihydroxy-4-methoxy-3-methylbenzophenone in the presence of potassium carbonate in boiling acetone for 8 h [805,806].
- Preparation by reaction of diazomethane with 2,4,6-trihydroxy-3-methylbenzophenone in ethyl ether (86%) [806].
- Also refer to: [807,808].

Isolation from natural source

- From the leaves of *Leptospermum luehmannii* (F. M. Bailey) (Myrtaceae) (minor product) [171,449,806,809].

m.p. 137° [806,809], 136–137° [805]; 1H NMR [806], UV [806].**(2-Hydroxy-4,6-dimethoxy-5-methylphenyl)phenylmethanone** $C_{16}H_{16}O_4$ mol.wt. 272.30

Synthesis

- Not yet described.

Isolation from natural source

- From the leaves or rhizomes of *Agonis luehmannii* (now *Leptospermum luehmannii*) (F. M. Bailey) (Myrtaceae) (major product) [171,449,806,809].

m.p. 110° [806], 104° [809];

 1H NMR [806], IR [806], UV [806]; GC [806].**[2-Hydroxy-4-(2-hydroxypropoxy)phenyl]phenylmethanone**

[22546-86-7]

 $C_{16}H_{16}O_4$ mol.wt. 272.30

Synthesis

- Preparation by reaction of propylene oxide with resbenzophenone

in the presence of aqueous potassium hydroxide into an autoclave (140°) under nitrogen (66%) [781].

m.p. 78–80° [781]; Spectra (NA).

[2-Hydroxy-4-(2-methoxyethoxy)phenyl]phenylmethanone

[27992-95-6]

$C_{16}H_{16}O_4$ mol.wt. 272.30

Syntheses

- Preparation by reaction of 2-methoxyethyl chloride (2-chloroethyl methyl ether) with resbenzophenone (91%), according to [801].
- Preparation by reaction of 2-methoxyethylene bromide with 2,4-dihydroxybenzophenone in the presence of sodium carbonate in acetone at 50–55° (74%) [810].

m.p. 40–41° [801]; Spectra (NA).

[2-Hydroxy-3,5-di(hydroxymethyl)-4-methoxyphenyl]phenylmethanone

[80501-47-9]

$C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

- Obtained (poor yield) by adding a 27% solution of formaldehyde to a solution of 2-hydroxy-4-methoxy-benzophenone in aqueous sodium hydroxide and tetrahydrofuran then stirring the mixture at r.t. for 5.5 h (3%) [795,796].

m.p. and Spectra (NA).

(2-Hydroxy-3,4,5-trimethoxyphenyl)phenylmethanone

[42833-88-5]

$C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

- Preparation by reaction of benzoyl chloride with 1,2,3,4-tetramethoxybenzene in the presence of aluminium chloride in ethyl ether for 22 h [416].

m.p. (NA); 1H NMR [416].

[3-[(Dimethylamino)methyl]-4-hydroxyphenyl]phenylmethanone (Hydrochloride)

[82506-20-5]

$C_{16}H_{17}NO_2 \cdot HCl$ mol.wt. 291.78

Synthesis

- Preparation by aminomethylation of p-hydroxy-benzophenone with dimethylamine and formaline in water at 35–40° for 4 h (52%) [811].

m.p. 77° [811]; 1H NMR [811], IR [811].

[2,3-Bis(acetyloxy)-4-hydroxyphenyl]phenylmethanone

[177703-36-5]

 $C_{17}H_{14}O_6$ mol.wt. 314.29

Synthesis

– Obtained by action of acetic anhydride with 2,3,4-tri-hydroxybenzophenone in the presence of lithium carbonate in N,N-dimethylformamide at r.t. for 15 h under nitrogen (12%) [369].

m.p. (NA); 1H NMR [369].**[3,4-Bis(acetyloxy)-2-hydroxyphenyl]phenylmethanone**

[177703-35-4]

 $C_{17}H_{14}O_6$ mol.wt. 314.29

Synthesis

– Obtained by action of acetic anhydride with 2,3,4-tri-hydroxybenzophenone in the presence of lithium carbonate in N,N-dimethylformamide at r.t. for 15 h under nitrogen (28%) [369].

m.p. (NA); 1H NMR [369].**[3-(2-Butenyl)-4-hydroxyphenyl]phenylmethanone**

[96825-03-5]

 $C_{17}H_{16}O_2$ mol.wt. 252.31

Synthesis

– Preparation by condensation of p-hydroxybenzo-phenone with 1,3-butadiene in the presence of orthophosphoric acid in petroleum ether at 30–35° for 24 h (77%) [769].

m.p. 104–106° [769]; 1H NMR [769].**[4-Hydroxy-3-(1-methyl-2-propenyl)phenyl]phenylmethanone**

[73720-57-7]

 $C_{17}H_{16}O_2$ mol.wt. 252.31

Synthesis

– Preparation by Claisen rearrangement of 4-(γ -methallyloxy)benzophenone [799].

– Also refer to: [457].

m.p. and Spectra (NA).

[4-Hydroxy-3-(2-methyl-2-propenyl)phenyl]phenylmethanone

[112005-09-1]

 $C_{17}H_{16}O_2$ mol.wt. 252.31

Synthesis

- Preparation by heating 4-(β -methylallyloxy)-benzophenone in diethylaniline for 3.5 h between 207° and 218° (73%) (Claisen rearrangement) [799].
- Also refer to: [457].

m.p. 131–133° [799]; 1H NMR [799].**[2-Hydroxy-6-methoxy-3-(2-propenyl)phenyl]phenylmethanone** $C_{17}H_{16}O_3$ mol.wt. 268.31

Syntheses

- Preparation by Claisen rearrangement of 2-allyloxy-6-methoxybenzophenone in boiling diethylaniline for 40 min (40%) [269].

- Also obtained (by-product) by partial methylation of 3-allyl-2,6-dihydroxybenzophenone with dimethyl sulfate in boiling benzene in the presence of potassium hydroxide for 10 h (16%) [269].

b.p.₃ 192–194° [269]; $d_4^{20} = 0.888$ [269]; $n_D^{20} = 1.5960$ [269]; TLC [269]; Spectra (NA).**[6-Hydroxy-2-methoxy-3-(2-propenyl)phenyl]phenylmethanone** $C_{17}H_{16}O_3$ mol.wt. 268.31

Syntheses

- Preparation by partial methylation of 3-allyl-2,6-dihydroxybenzophenone with dimethyl sulfate in boiling benzene in the presence of potassium hydroxide for 10 h (50%) [269].

- Obtained (by-product) by Claisen rearrangement of 2-allyloxy-6-methoxybenzophenone in boiling diethylaniline for 40 min (10%) [269].

yellow oil [269]; b.p. and Spectra (NA); TLC [269].

[3-Bromo-2-hydroxy-6-methyl-5-(1-methylethyl)phenyl]phenylmethanone

[143815-17-2]

C₁₇H₁₇BrO₂ mol.wt. 333.22

Synthesis

– Preparation by Fries rearrangement of 2-bromo-5-methyl-4-isopropylphenyl benzoate with titanium tetrachloride without solvent at 140° for 2 h (62%) [698].

m.p. 119–120° [698]; ¹H NMR (Sadler: standard n° 59400 M) [698], IR (Sadler: standard n° 86556 K) [698], UV [698], MS [698].

[3-Bromo-6-hydroxy-2-methyl-5-(1-methylethyl)phenyl]phenylmethanone

[16846-17-6]

C₁₇H₁₇BrO₂ mol.wt. 333.22

Synthesis

– Preparation by bromination of 2-hydroxy-6-methyl-3-iso-propylbenzophenone [501], with bromine in chloroform at r.t. for 6 h [812].

m.p. 129° [501], 128–129° [812], 74° [735]. One of the reported melting points is obviously wrong.

¹H NMR [735], IR [103,501,735], UV [735]; pK_a [735]; polarographic study [117].

[4-Bromo-2-hydroxy-6-methyl-3-(1-methylethyl)phenyl]phenylmethanone

[16846-13-2]

C₁₇H₁₇BrO₂ mol.wt. 333.22

Synthesis

– Preparation by reaction of chromium trioxide with 6-bromo-4-methyl-2,3-diphenyl-7-iso-propylbenzofuran in boiling acetic acid, followed by saponification of the keto ester

so formed [501], by action of potassium hydroxide in ethanol in a water bath for 1 h [812].

m.p. 91° [501,812]; IR [103,813].

[3-Chloro-5-(1,1-dimethylethyl)-2-hydroxyphenyl]phenylmethanoneC₁₇H₁₇ClO₂ mol.wt. 288.77

Synthesis

– Obtained (poor yields) by photo-Fries rearrangement of two substituted phenyl esters^T in benzene [154], ^T4-tert-butyl-2-chlorophenyl benzoate (7%);

^T4-tert-butyl-2,6-dichlorophenyl benzoate (11%). In this case, one chlorine atom was eliminated.

m.p. 55–59° [154]; b.p._{0.2} 150° [154]; Spectra (NA).

[5-Chloro-3-(1,1-dimethylethyl)-2-hydroxyphenyl]phenylmethanone[52196-47-1] $C_{17}H_{17}ClO_2$ mol.wt. 288.77

Synthesis

– Refer to: [531].

m.p. and Spectra (NA); pK_a [531].**[4-(Chloromethyl)-2-hydroxy-3-propylphenyl]phenylmethanone**[97582-40-6] $C_{17}H_{17}ClO_2$ mol.wt. 288.77

Synthesis

– Preparation by reaction of ethyl chloroformate with 4-(dimethylamino)methyl-2-hydroxy-3-propylbenzo-phenone in toluene cooled with an ice water bath for 2 h, then at r.t. for 16 h (55%) [814].

– Also refer to: [168,815].

m.p. 47–49° [814]; Spectra (NA); HPLC [814].

[5-(1,1-Dimethylethyl)-2-hydroxy-3-nitrophenyl]phenylmethanone[85052-33-1] $C_{17}H_{17}NO_4$ mol.wt. 299.33

Synthesis

– Preparation by reaction of a concentrated nitric acid/concentrated sulfuric acid mixture with 5-tert-butyl-2-hydroxybenzophenone in methylene chloride at 5° for 30 min (42%) [472].

m.p. (NA); 1H NMR [472], MS [472].**[2-Hydroxy-6-methyl-3-(1-methylethyl)-4-nitrophenyl]phenylmethanone** $C_{17}H_{17}NO_4$ mol.wt. 299.33

Synthesis

– Refer to: [103,503].

m.p. (NA); IR [103], UV [503].

[2-Hydroxy-6-methyl-3-(1-methylethyl)-5-nitrophenyl]phenylmethanone $C_{17}H_{17}NO_4$ mol.wt. 299.33

Synthesis

– Refer to: [103].

m.p. (NA); IR [103].

[3-(1,1-Dimethylethyl)-2-hydroxyphenyl]phenylmethanone

[24248-99-5]

C₁₇H₁₈O₂ mol.wt. 254.33

Syntheses

- Preparation by oxidation of 7-tert-butyl-2,3-diphenyl-benzofuran with chromium trioxide in acetic acid at 70° for 2 h, followed by alkaline hydrolysis of the keto ester obtained (2-benzoyloxy-3-tert-butylbenzophenone) in boiling diluted ethanol for 15 min [717].
- Also obtained by photo-Fries rearrangement of 2-tert-butylphenyl benzoate in benzene (35%) [143].
- Also obtained by reaction between (o-tert-butylphenoxy)magnesium bromide complexed with HMPT and benzaldehyde in refluxing benzene for 48 h (18%) [50].
- Also refer to: [597].

pale yellow viscous oil [143], m.p. 55° [717], 53° [50]; b.p._{0.01} 92° [143]; ¹H NMR [50,143], IR [50,143,717], MS [50].

[3-(1,1-Dimethylethyl)-4-hydroxyphenyl]phenylmethanone

[16928-03-3]

C₁₇H₁₈O₂ mol.wt. 254.33

Syntheses

- Obtained by partial dealkylation of 3,5-di-tert-butyl-4-hydroxybenzophenone by UV light irradiation in cyclohexane (50%) [143].
- Also obtained by photo-Fries rearrangement of 2-tert-butylphenyl benzoate in benzene (20%) [143].
- Preparation by Friedel-Crafts acylation of o-tert-butylphenol with benzoyl chloride in ethylene dichloride in the presence of titanium tetrachloride, first with ice cooling, then for 5 h at r.t. (44%) [816].

m.p. 179–180° [143]; ¹H NMR [143], IR [143].

[4-(1,1-Dimethylethyl)-2-hydroxyphenyl]phenylmethanone

[39000-51-6]

C₁₇H₁₈O₂ mol.wt. 254.33

Syntheses

- Obtained by Fries rearrangement in hydrofluoric acid,
 - of m-tert-butylphenyl benzoate at 25° for 2 h (37%) [135];
 - of 3,5-di-tert-butylphenyl benzoate at 55° for 4 h (10%) [135].
- m.p. 81–82° [135]; Spectra (NA).

[5-(1,1-Dimethylethyl)-2-hydroxyphenyl]phenylmethanone

[10425-05-5]

C₁₇H₁₈O₂ mol.wt. 254.33

Syntheses

– Preparation by Fries rearrangement of p-tert-butylphenyl benzoate with,

- titanium tetrachloride without solvent at 140° for 15 min (47%) [24] or in nitromethane at r.t. for 7 days (29%) [24];
 - aluminium chloride without solvent at 180° for 15 min (35%) [24].
- Preparation by demethylation of 5-tert-butyl-2-methoxybenzophenone in the presence of,
- in a refluxing mixture of 47% hydrobromic acid (2 vol) and 57% hydriodic acid (1 vol) in acetic acid (10 vol) (89%) [817];
 - aluminium chloride in benzene at 50–60° for 5 h (63%) [9].
- Also obtained by UV light irradiation of two substituted phenyl esters in benzene: p-tert-butylphenyl benzoate (45%) [154], 2-chloro-4-tert-butylphenyl benzoate. In this last case, there is an elimination of chlorine atom (21%) [154].
- Also obtained by photo-Fries rearrangement of p-tert-butylphenyl benzoate in ethanol for 10 h or in ethyl ether [818].
- Preparation by reaction of benzotrichloride with p-tert-butylphenol in the presence of 30% aqueous sodium hydroxide at 75–80° for 30 min, and hydrolysis of the resulting ester as a side product by steam distillation (56–65%) [97,615].
- Preparation by treatment of o-hydroxybenzophenone at 120° with a mixture of isobutylene/nitrogen (1:1) or with tert-butyl chloride in the presence a macroreticular acid ion exchanger as catalyst (Wofatit OK 80) for 1 h (52%) [819].
- Also refer to: [79,87,472,597,820].

m.p. 67–68° [9], 67° [24,154], 63–65° [97], 52–53° [615];

[33829-50-4]

C₁₇H₁₈O₂ mol.wt. 254.33

Synthesis

– Refer to: [100].

m.p. (NA); ¹H NMR [100], IR [100], UV [100].

[2-Hydroxy-4-methyl-5-(1-methylethyl)phenyl]phenylmethanone

[108974-20-5]

 $C_{17}H_{18}O_2$ mol.wt. 254.33

Syntheses

- Preparation by Fries rearrangement of p-thymyl benzoate with titanium tetrachloride at 140° for 2 h (82%) [698].
- Claimed to be prepared by two methods:
 - by reaction of 2-methoxy-4-methyl-5-isopropyl-benzoyl chloride (SM1) with benzene in the presence of aluminium chloride at 80° for 3 h, then at r.t. for 20 h (33%) [821];
 - from 2-methoxy-4-methyl-5-isopropylbenzophenone (SM2) by heating with pyridinium chloride for 1 h [821].

However, the structures of SM1 and SM2 were incorrect.

N.B.: All the results of reference [821] were erroneous. Only the first route was correct. The 1H NMR spectra confirms the above structure [698].

m.p. 152° [821] (this melting point is incompatible with a non-vicinal ortho-acylphenol structure), 48–49° [698]; b.p.₂₀ 282–287° [821];

1H NMR (Sadtlar: standard n° 59398 M) [698], IR (Sadtlar: standard n° 86554 K) [698], UV [698], MS [698].

[2-Hydroxy-6-methyl-3-(1-methylethyl)phenyl]phenylmethanone

[4072-16-6]

 $C_{17}H_{18}O_2$ mol.wt. 254.33

Syntheses

- Obtained by oxidation of 4-methyl-7-isopropyl-2,3-di-phenylbenzofuran with chromium trioxide in refluxing acetic acid (82%) [43,812], followed by saponification of the keto ester so formed [43,632,812].
- Obtained by refluxing mixture of benzoic acid/thymol/aluminium chloride for 12 h (76%) [822] (no reproductive reaction).
- Also refer to: [633].

m.p. 104° [735], 97° [89,501,609,632,812], 44° [822]. One of the reported melting points is obviously wrong.

1H NMR [100,735], IR [100,103,107,108,582,735,813],

UV [100,735]; polarographic study [117]; pK_a [735].

[2-Hydroxy-6-methyl-4-(1-methylethyl)phenyl]phenylmethanoneC₁₇H₁₈O₂ mol.wt. 254.33**Synthesis**

- Preparation (compound **II-f**) by saponification of 2-(benzoyloxy)-6-methyl-4-isopropylbenzophenone, itself obtained by chromic oxidation of 4-methyl-6-isopropyl-2,3-diphenylbenzofuran [633].

m.p. 80–83° [633]; IR [633].

[4-Hydroxy-2-methyl-5-(1-methylethyl)phenyl]phenylmethanone

[28178-94-1]

C₁₇H₁₈O₂ mol.wt. 254.33**Syntheses**

- Preparation by reaction of benzoyl chloride with thymol in the presence of aluminium chloride [812], (98%) [823], in nitrobenzene at r.t. overnight (good yield) [372].
- Preparation by demethylation of 4-methoxy-2-methyl-5-isopropylbenzophenone with pyridinium chloride at 205–215° for 1.5 h (95%) [824] or 15 min [825].
- Preparation by Fries rearrangement of thymyl benzoate with aluminium chloride in nitrobenzene at 60° for 5 h (70%) [132] or at 50° in the same conditions (21%) [131].
- Also obtained by reaction of benzotrichloride with thymol in the presence of stannic chloride at 60–65° for 15 h (20%) [823].
- Also obtained by saponification of 4-(benzoyloxy)-2-methyl-5-isopropylbenzophenone (SM) with sodium hydroxide in boiling ethanol [812]. SM was obtained by oxidation of 4-desylthymyl benzoate with chromium trioxide in boiling acetic acid.
- Also obtained (by-product) from p-thymyl benzoate by heating with aluminium chloride [826].
- Also refer to: [204,827] (Japanese patent).

m.p. 154° [824], 153° [132,372,812,825], 152°5 [826],

150–150°5 [823], 138–144° [131];

Spectra (NA).

[4-Hydroxy-5-methyl-2-(1-methylethyl)phenyl]phenylmethanone

[99821-75-7]

C₁₇H₁₈O₂ mol.wt. 254.33**Syntheses**

- Preparation by Fries rearrangement of 2-methyl-5-isopropyl-phenyl benzoate,
 - in the presence of aluminium chloride in nitrobenzene at 60° for 5 h (60%) [132];
 - in the presence of Nafion-XR, a H⁺-form ion exchange resin, at 150° for 4 h under nitrogen (31%) [39].

- Also obtained by reaction of benzoyl chloride with carvacrol,
 - in the presence of Nafion-XR at 150° for 4 h under nitrogen (20%) [39];
 - in the presence of aluminium chloride in nitrobenzene at r.t. for 48 h (4%) [828].
- Also refer to: [204] (Japanese patent).
m.p. 172–173° [132], 126° [828]. One of the reported melting points is obviously wrong. Spectra (NA).

[6-Hydroxy-2-methyl-3-(1-methylethyl)phenyl]phenylmethanone

[108974-21-6]

C₁₇H₁₈O₂ mol.wt. 254.33

Syntheses

- Preparation from 3-bromo-2-hydroxy-6-methyl-5-iso-propylbenzophenone (SM1) by reductive removal of bromine with copper powder in caproic acid at 220° for 15 min

(83%) [698]. SM1 was obtained from p-thymol by a three-step synthesis (bromination, esterification and Fries rearrangement with titanium tetrachloride).

- Also obtained (by-product) by Fries rearrangement of p-thymyl benzoate with titanium tetrachloride at 140° for 2 h (10%) [698].
- Claimed to be prepared by heating 6-methoxy-2-methyl-3-isopropylbenzophenone (SM2) with pyridinium chloride at reflux for 1.5 h (85%) [821]. SM2 was obtained by Friedel–Crafts acylation of 3-methyl-4-isopropylanisole with benzoyl chloride in the presence of aluminium chloride in carbon disulfide at r.t. The structure of SM2 was erroneous. The true structure of SM2 must be the 2-methoxy-4-methyl-5-isopropylbenzophenone.

N.B.: All the results of reference [821] were erroneous. Only the first route was correct. The ¹H NMR spectra confirms the above structure [698].

m.p. 142–143° [698]; yellow viscous oil [821]; b.p.₁₄ 207° [821]; n_D^{25.5} = 1.5950 [821]; ¹H NMR (Sadtler: standard n° 59401 M) [698], IR (Sadtler: standard n° 86557 K) [698], UV [698], MS [698].

[2-Hydroxy-5-(1-methylpropyl)phenyl]phenylmethanone

[59746-97-3]

C₁₇H₁₈O₂ mol.wt. 254.33

Synthesis

- Preparation by reaction of benzotrichloride with 4-sec-butylphenol in hydrofluoric acid in the presence of water at –10°, then between 0° and –10° for 2 h, at r.t. for 7 h and at 80° for 30 min into an autoclave (60%) [213].

yellow oil [213]; b.p.₁ 150–155° [213]; Spectra (NA).

[4-Hydroxy-3-(1-methylpropyl)phenyl]phenylmethanone

[124979-07-3]

C₁₇H₁₈O₂ mol.wt. 254.33**Synthesis**

– Preparation by Friedel–Crafts acylation of 2-sec-butylphenol—2-(1-methylpropyl)phenol—with benzoyl chloride in ethylene dichloride in the presence of titanium tetrachloride, first at 0°, then at r.t. [816].

m.p. 95–96° [816]; Spectra (NA).

(4-Butoxy-2-hydroxyphenyl)phenylmethanone

[15131-43-8]

C₁₇H₁₈O₃ mol.wt. 270.33**Syntheses**

– Preparation by reaction of n-butyl bromide with resbenzophenone,

- in the presence of sodium hydroxide in dilute ethanol in a water bath (40%) [189];
- in the presence of potassium carbonate in cyclohexanone at 145° for 6 h (72%) [202], (48%) [201].

– Preparation by alkylation of resbenzophenone with a butyl halide [651].

– Preparation by Friedel–Crafts acylation of 1,3-di-n-butoxybenzene with benzoyl chloride,

- in the presence of a zinc chloride/aluminium chloride mixture, first between 0° and 5°, then at 10° for 1 h and at 65° for 6 h [658];
- in the presence of aluminium chloride in chlorobenzene at 90° [222].

– Preparation by partial dealkylation of 4-butoxy-2-methoxybenzophenone or 2,4-dibutoxy-benzophenone with aluminium chloride in chlorobenzene at 80–100° [655].

– Also refer to: [78,231,235,667,829].

m.p. 56–57° [189], 52–53° [201], 50–53° [202]; UV [235]; TLC [116]; p*K*_a [531].

(5-Butoxy-2-hydroxyphenyl)phenylmethanoneC₁₇H₁₈O₃ mol.wt. 270.33**Synthesis**

– Obtained by reaction of n-butyl bromide with 2,5-di-hydroxybenzophenone in the presence of sodium hydroxide in dilute ethanol at 80–85° for 35 h (21%) [681].

m.p. 42° [681]; Spectra (NA).

(2-Hydroxy-6-methyl-4-propoxyphenyl)phenylmethanone

[172479-19-5]

 $C_{17}H_{18}O_3$ mol.wt. 270.33

Synthesis

– Prepared by standard techniques [830].

m.p. (NA); UV [830].

[2-Hydroxy-4-(1-methylpropoxy)phenyl]phenylmethanone $C_{17}H_{18}O_3$ mol.wt. 270.33

Synthesis

– Preparation by reaction of sec-butyl bromide with resbenzophenone in the presence of potassium hydroxide in dilute ethanol at 80–90° for 20 h (29%) [800].

m.p. 41° [800]; Spectra (NA).

[2-Hydroxy-4-(2-methylpropoxy)phenyl]phenylmethanone $C_{17}H_{18}O_3$ mol.wt. 270.33

Synthesis

– Preparation by reaction of isobutyl bromide with resbenzophenone in the presence of potassium hydroxide in dilute ethanol at 80–92° for 18 h (23%) [800].

m.p. 100–100°5 [800]; Spectra (NA).

[3-Amino-5-(1,1-dimethylethyl)-2-hydroxyphenyl]phenylmethanone[85052-51-3] $C_{17}H_{19}NO_2$ mol.wt. 269.34

Synthesis

– Preparation by reduction of 5-tert-butyl-2-hydroxy-3-nitro-benzophenone with titanium trichloride in a benzene/tetrahydrofuran mixture for 2 h at r.t. (34%) [472].

m.p. 123–124° [472]; 1H NMR [472], IR [472], MS [472]; TLC [472].

[3-Amino-5-(1,1-dimethylethyl)-2-hydroxyphenyl]phenylmethanone*(Hydrochloride)*[85069-31-4] $C_{17}H_{19}NO_2 \cdot HCl$ mol.wt. 305.81

Synthesis

– Obtained by treatment of 3-amino-5-tert-butyl-2-hydroxy-benzophenone with 2 N hydrochloric acid [472].

m.p. and Spectra (NA).

[4-Hydroxy-3-(3-methyl-2-butenyl)phenyl]phenylmethanone[63565-02-6] $C_{18}H_{18}O_2$ mol.wt. 266.34

Synthesis

– Obtained (poor yield) by reaction of prenyl bromide with p-hydroxybenzophenone,

- in the presence of sodium methoxide in refluxing methanol for 4 h (8%) [831];
- in the presence of silver oxide in dioxane at r.t. for 2 h (13%) [832].

m.p. 77° [831], 76–77° [832]; 1H NMR [831], IR [831], UV [831].

[2-Hydroxy-4-[(3-methyl-2-butenyl)oxy]phenyl]phenylmethanone[63564-99-8] $C_{18}H_{18}O_3$ mol.wt. 282.34

Synthesis

– Obtained by reaction of prenyl bromide with resbenzophenone,

- in the presence of potassium carbonate in refluxing acetone for 4 h (30%) [831];
- in the presence of sodium methoxide in refluxing methanol for 4 h [831].

m.p. 82° [831]; 1H NMR [831], IR [831], UV [831].

[2-(1,1-Dimethylethyl)-4-hydroxy-6-methylphenyl]phenylmethanone

[133721-73-0]

C₁₈H₂₀O₂ mol.wt. 268.36

Synthesis

– Obtained by treating a solution of 2-(tert-butyl)-4-[[tert-butyl]dimethylsilyloxy]-6-methylbenzophenone in ethanol with 2 N aqueous hydrochloric acid for 1 h at 75° in a sealed tube (94%) [833].

m.p. 150–152° [833]; ¹H NMR [833], IR [833], MS [833].

[3-(1,1-Dimethylethyl)-2-hydroxy-5-methylphenyl]phenylmethanone

[52196-46-0]

C₁₈H₂₀O₂ mol.wt. 268.36

Synthesis

– The reaction of benzoyl chloride with a pentane solution of [AlMe(dbmp)₂] leads to acylation of one of the dbmp ligands and affords [AlMe(dbmp)(bhmbp)]. Hydrolysis of this complex with a saturated solution of ammonium chloride gave the attempted ketone (75%) [834].

N.B.: Hdbmp = 2,6-di-tert-butyl-4-methylphenol;

Hbhmbp = 3-tert-butyl-2-hydroxy-5-methylbenzophenone.

m.p. >240° [834]; ¹H NMR [834], ¹³C NMR [834]; IR [834], MS [834]; pK_a [531].

[3-(1,1-Dimethylethyl)-2-hydroxy-6-methylphenyl]phenylmethanone

[14963-84-9]

C₁₈H₂₀O₂ mol.wt. 268.36

Synthesis

– Preparation by saponification of 2-(benzyloxy)-3-tert-butyl-6-methylbenzophenone (SM) with sodium hydroxide in boiling ethanol for 2 h. SM was obtained by oxidation of

7-tert-butyl-4-methyl-2,3-diphenylbenzofuran with chromium trioxide in acetic acid at 60° (m.p. 127°) [633].

– Also refer to: [117,609].

m.p. 125–126° [735], 77° [633]. One of the reported melting points is obviously wrong.

¹H NMR [735], IR [735,813], UV [735]; pK_a [735]; polarographic study [117].

[5-(1,1-dimethylpropyl)-2-hydroxyphenyl]phenylmethanone

[110701-33-2]

 $C_{18}H_{20}O_2$ mol.wt. 268.36

Synthesis

- Preparation by reaction of benzotrichloride with p-tert-pentylphenol in the presence of 30% aqueous sodium hydroxide at 75–80° for 30 min, and hydrolysis of the resulting ester as a side product (43%) [97].

m.p. 37–38° [97]; b.p.₂ 164–167° [97]; ¹H NMR [97], ¹³C NMR [97], IR [97].**[2-Hydroxy-5,6-dimethyl-3-(1-methylethyl)phenyl]phenylmethanone**

m.p. 74° [735]; 1H NMR [735], IR [735], UV [735]; pK_a [735]; polarographic study [117].

[4-Hydroxy-3,5-bis(1-methylethyl)phenyl]phenylmethanone

[738-15-8]

 $C_{19}H_{22}O_2$ mol.wt. 282.38

Synthesis

– Obtained by photo-Fries rearrangement of 2,6-di-isopropylphenyl benzoate (SM) in isopropyl alcohol (56%) [64,72], of SM absorbed on a silica gel-pentane (40%) or on dry silica gel (70%) [64].

m.p. 113°5–114° [72] (a phase change occurred at 98°5); Spectra (NA).

[4-(Hexyloxy)-2-hydroxyphenyl]phenylmethanone

[3293-97-8]

 $C_{19}H_{22}O_3$ mol.wt. 298.38

Synthesis

– Obtained by reaction of n-hexyl bromide with resbenzo-phenone,

- in the presence of sodium hydroxide in dilute ethanol in a water bath for 18–23 h (15%) [189];
- in the presence of potassium carbonate in refluxing acetone for 20 h [738].

m.p. 55°5 [189], 52° [738]; UV [243].

[5-(Benzoyloxy)-3,4-dichloro-2-hydroxyphenyl]phenylmethanone $C_{20}H_{12}Cl_2O_4$ mol.wt. 387.22

Synthesis

– Obtained by reaction of 2,3-dichloro-1,4-benzoquinone with benzaldehyde in the presence of benzoyl peroxide at 80° or in the absence of benzoyl peroxide at 155° [840].

m.p. and Spectra (NA).

[2,3-Dichloro-4-hydroxy-5-(phenylmethoxy)phenyl]phenylmethanone

[103843-60-3]

 $C_{20}H_{14}Cl_2O_3$ mol.wt. 373.23**Synthesis**

- Preparation by reaction of benzyl bromide with 2,3-di-chloro-4,5-dihydroxybenzophenone in the presence of sodium hydride in N,N-dimethylformamide at r.t. for 10–15 min (77%) [841,842].

m.p. 171–173° [841,842]; 1H NMR [841,842], IR [841,842].**[2,3-Dichloro-5-hydroxy-4-(phenylmethoxy)phenyl]phenylmethanone**

[103843-65-8]

 $C_{20}H_{14}Cl_2O_3$ mol.wt. 373.23**Synthesis**

- Obtained by reaction of benzyl bromide with 2,3-di-chloro-4,5-dihydroxybenzophenone in the presence of sodium hydride in N,N-dimethylformamide at 100° for 2 h (34%) [841].
- Also refer to: [842].

m.p. 111–112° [841]; 1H NMR [841], IR [841].**[2-(Benzoyloxy)-4-hydroxyphenyl]phenylmethanone** $C_{20}H_{14}O_4$ mol.wt. 318.33**Synthesis**

- Preparation from 2,4-dihydroxybenzophenone as starting material via the 2-hydroxy-4-methoxymethoxy-benzophenone and 2-benzoyloxy-4-methoxymethoxy-benzophenone [429].

m.p. and Spectra (NA).

[3-(Benzoyloxy)-2-hydroxyphenyl]phenylmethanone

[97971-72-7]

 $C_{20}H_{14}O_4$ mol.wt. 318.33**Synthesis**

- Obtained by photo-Fries rearrangement of 1,2-di-(benzoyloxy)benzene in benzene for 8 h under nitrogen (15%) [843].

m.p. 74° [843]; 1H NMR [843].

[3-(Benzoyloxy)-4-hydroxyphenyl]phenylmethanone

[76346-15-1]

 $C_{20}H_{14}O_4$ mol.wt. 318.33

Synthesis

- Obtained (poor yield) by reaction of benzoyl peroxide with p-hydroxybenzophenone [144] in refluxing chloroform for 16 h (9%) [278].

m.p. 109–110° [278]; Spectra (NA); TLC [278].

[4-(Benzoyloxy)-2-hydroxyphenyl]phenylmethanone

[18803-25-3]

 $C_{20}H_{14}O_4$ mol.wt. 318.33

Syntheses

- Preparation by photo-Fries rearrangement of resorcinol dibenzoate in benzene for 8 h under nitrogen (35%) [843].
- Also obtained by reaction of benzoyl chloride,
 - with resbenzophenone [697], in the presence of sodium hydroxide in refluxing ethanol/ethyl ether mixture for 6 h (22%) [238];
 - with resorcinol [197].

m.p. 94°5–95°5 [844], 93°5–94°5 [238], 90° [697], 84° [96], 77–80° [843]; 1H NMR [99], UV [99]; pK_a [96]; TLC [116].**[5-(Benzoyloxy)-2-hydroxyphenyl]phenylmethanone**

[97971-74-9]

 $C_{20}H_{14}O_4$ mol.wt. 318.33

Syntheses

- Obtained by Fries rearrangement,
 - of quinol monobenzoate in the presence of aluminium chloride (3.3 mol) at 140° for 1 h (14%) [252];
 - of quinol dibenzoate in the presence of aluminium chloride (2 mol) at 190–200° for 1.5 h [253] or (3.3 mol or 5.5 mol of catalyst) at 140° for 1 h (33%) [252];
 - of p-methoxyphenyl benzoate in the presence of aluminium chloride (3.3 mol) at 130–132° for 1 h or at 150–155° for 1 h (<9%) [845].
- Preparation by photo-Fries rearrangement of quinol dibenzoate in benzene for 8 h under nitrogen (30%) [843].

m.p. 213–214° [843], 96° [253], 94–95° [252]. There is a discrepancy between the different melting points indicated in literature. 94–96° are more likely, due to chelation.

 1H NMR [843].

Phenyl 5-benzoyl-2-hydroxybenzoate 5-Benzoyl-2-hydroxybenzoic acid phenyl ester

[124208-60-2]

 $C_{20}H_{14}O_4$ mol.wt. 318.33

Synthesis

– Obtained by Fries rearrangement of phenyl 2-benzoyl-oxybenzoate with aluminium chloride without solvent at 142–145° for 2 h (31%) or in nitrobenzene as a solvent at r.t. for 2 days (17%) [155].

m.p. 82–84° [155]; Spectra (NA).

[2-Hydroxy-4-[(4-nitrophenyl)methoxy]phenyl]phenylmethanone

[36419-36-0]

 $C_{20}H_{15}NO_5$ mol.wt. 349.34

Synthesis

– Refer to: [235].

m.p. 172° [235]; UV [235].

[2-Hydroxy-4-(methylphenoxy)phenyl]phenylmethanone

[35698-46-5]

 $C_{20}H_{16}O_3$ mol.wt. 304.35

Synthesis

– Preparation by reaction of benzotrichloride with 3-hydroxy-4'-methyl-diphenyl ether in solution of 2.5 N sodium hydroxide in the presence of potassium iodide at 80° [839].

m.p. 82–85° [839]; UV [839].

[2-Hydroxy-4-(phenylmethoxy)phenyl]phenylmethanone

[6079-76-1]

 $C_{20}H_{16}O_3$ mol.wt. 304.35

Synthesis

– Preparation by reaction of benzyl chloride with 2,4-dihydroxybenzophenone (resbenzophenone),

- in the presence of potassium carbonate in refluxing acetone [738], (34%) [846];
- in the presence of potassium carbonate and potassium iodide in N,N-dimethylformamide at 100° for 1.5 h (95%) [801].

– Also refer to: [228,847,848].

m.p. 121–122° [801], 120–121° [738,846,849]; Spectra (NA).

(2-Hydroxy-5,6-dimethyl-3-pentylphenyl)phenylmethanone[26881-03-8] $C_{20}H_{24}O_2$ mol.wt. 296.41

Synthesis

– Refer to: [117,609].

m.p. 85° [735]; 1H NMR [735], IR [735], UV [735]; pK_a [735]; polarographic study [117].

[4-(Heptyloxy)-2-hydroxyphenyl]phenylmethanone (Uvistat 247)[3550-43-4] $C_{20}H_{24}O_3$ mol.wt. 312.41

Synthesis

– Obtained by reaction of n-heptyl bromide with resbenzophenone,

- in the presence of potassium hydroxide in dilute ethanol at 85–95° for 22 h (13%) [800];
- in the presence of potassium carbonate in refluxing acetone for 20 h [738].

– Also refer to: [850–853].

m.p. 40° [738,800]; Spectra (NA); gel permeation chromatography [247].

[4-Hydroxy-3-(phenylethynyl)phenyl]phenylmethanone[183589-17-5] $C_{21}H_{14}O_2$ mol.wt. 298.34

Synthesis

– Obtained by treatment of p-benzoyl-o-(phenyl-ethynyl)phenyl acetate in acetone in the presence of 2 N hydrochloric acid at 60° for 16 h (40%) [533].

m.p. 139–140° [533]; 1H NMR [533], ^{13}C NMR [533], IR [533], MS [533].

[2-Hydroxy-5-(1-phenylethyl)phenyl]phenylmethanone[125182-23-2] $C_{21}H_{18}O_2$ mol.wt. 302.37

Synthesis

– Preparation by treatment of o-hydroxybenzophenone at 120° with styrene under nitrogen in the presence of a macroreticular acid ion exchanger as catalyst (Wofatit OK 80) for 1–2 h (90%) [819].

b.p._{0.15} 200–210° [819]; Spectra (NA).

[2-Hydroxy-3-nitro-5-(1,1,3,3-tetramethylbutyl)phenyl]phenylmethanoneC₂₁H₂₅NO₄ mol.wt. 355.44**Synthesis**

- Obtained by reaction of 65% nitric acid with 2-hydroxy-5-tert-octylbenzophenone in acetic acid at 20° [854].

oil [854]; b.p. and Spectra (NA).

[2,4-Bis(1,1-dimethylethyl)-6-hydroxyphenyl]phenylmethanone

[13113-73-0]

C₂₁H₂₆O₂ mol.wt. 310.44**Synthesis**

- Obtained by photo-Fries rearrangement of 3,5-di-tert-butylphenyl benzoate,
 - in benzene [105], (29%) [855]; after 27.5 h, it had decreased to 8% [855];
 - in ethanol for 3 h (48%) [818];
 - in isopropanol for 3 h (37%) and 52% after 6 h; after 17 h, it had decreased to 16% [818];
 - in a mixture of ethanol/ethyl ether (9:1) for 3 h (34%) [818];
 - in N,N-dimethylformamide for 3 h (9%); (16%) after 1 h [818];
 - in n-hexane and tetrahydrofuran for 3 h (8% and 12% yields, respectively) [818];
 - in dioxane and glyme (1,2-dimethoxyethane) for 3 h (2% and 5% yields, respectively) [818].
 - Also refer to: [79].
- m.p. 202°5 [855]; ¹H NMR [105], IR [105].

[3,5-Bis(1,1-dimethylethyl)-2-hydroxyphenyl]phenylmethanone

[24242-58-8]

C₂₁H₂₆O₂ mol.wt. 310.44**Syntheses**

- Obtained from (3,5-di-tert-butyl-2-hydroxyphenyl)-phenylcarbinol by oxidation with DDQ (2,3-dichloro-5,6-dicyanobenzoquinone) in dioxane at r.t. for 16 h (71%) [153].
 - Also obtained by photo-Fries rearrangement of 2,4-di-tert-butylphenyl benzoate in benzene under nitrogen (32%) [143].
 - Preparation by treatment of o-hydroxybenzophenone at 120° with a mixture of isobutylene/nitrogen (1:1) or with tert-butyl chloride in the presence of a macroreticular acid ion exchanger as catalyst (Wofatit OK 80) for 10 h (80%) [819].
- b.p._{0,15} 140–145° [819]; m.p. 61–62° [143], 60–62° [153];
¹H NMR [143], IR [143].

[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl]phenylmethanone

[7175-89-5]

 $C_{21}H_{26}O_2$

mol.wt. 310.44

Syntheses

- Preparation by reaction of benzoyl chloride with 2,6-di-tert-butylphenol in the presence of aluminium chloride [856], (93%) [857], 70% [858], (50–55%) [859,860].
- Preparation by reaction of benzoic acid with 2,6-di-tert-butylphenol in the presence of trifluoroacetic anhydride at r.t. [861], for 3 h (65%) [862].
- Preparation by oxidation of (3,5-di-tert-butyl-4-hydroxyphenyl)phenylcarbinol with 2,3-dichloro-5,6-dicyanobenzoquinone (DDQ) in dioxane at r.t. for 15 min (95%) [153].
- Preparation by reaction of benzoyl chloride with sodium 2,6-di-tert-butylphenoxide (SM) in dioxane between 60° and 80° (24%) [863]. SM was obtained by reaction of sodium with 2,6-di-tert-butylphenol in methanol, then solvent elimination at 80°.
- Also obtained by basic hydrolysis of α (3,5-di-tert-butyl-4-hydroxyphenyl)benzyl benzoate with potassium hydroxide in refluxing dilute ethanol for 30 min (90%) [863].
- Also refer to: [143].

m.p. 132–134° [861,862], 125°5–126°5 [858], 125–126° [863], 124–125° [859,860], 123–124° [857]; $^1\text{H NMR}$ [858,862], IR [858,860].

[2-Hydroxy-5-(1,1,3,3-tetramethylbutyl)phenyl]phenylmethanone

[4090-99-7]

 $C_{21}H_{26}O_2$

mol.wt. 310.44

Syntheses

- Preparation by photo-Fries rearrangement of p-tert-octyl-phenyl benzoate (45%) [854] according to [154].
- Preparation by reaction of benzotrichloride with p-tert-octylphenol in the presence of 30% aqueous sodium hydroxide at 75–80° for 30 min, and hydrolysis of the resulting ester as a side product (61%) [615], (44%) [97]. The same reaction was carried out in the presence of sodium iodide, during 2.5 h at 80° (39%) [864].
- Preparation by reaction between (p-octylphenoxy)magnesium bromide complexed with HMPT and benzaldehyde in refluxing benzene for 48 h (36%) [50].

yellow oil [50]; m.p. 34–35° [615]; b.p._{2.5} 176–179° [97], b.p.₁ 140° [864]; $^1\text{H NMR}$ [50,97,615], $^{13}\text{C NMR}$ [97], IR [50,97,615], UV [615,864], MS [50,615]; gas chromatography study [631].

[2-Hydroxy-4-(isooctyloxy)phenyl]phenylmethanone

[33059-05-1]

 $C_{21}H_{26}O_3$ mol.wt. 326.44

Synthesis

– Preparation by reaction of isooctyl chloride with resbenzophenone in the presence of sodium carbonate and sodium iodide in acetone for 4 h at 150° (97%) [865].

m.p. and Spectra (NA).

[2-Hydroxy-4-(octyloxy)phenyl]phenylmethanone (*Octabenzone*, *Cyasorb UV 531*)

[1843-05-6]

 $C_{21}H_{26}O_3$ mol.wt. 326.44

Syntheses

- Preparation by reaction of n-octyl chloride with 2,4-dihydroxybenzophenone,
- in the presence of a mixture of sodium carbonate, triethylamine and potassium iodide in refluxing butanol for 15 h (90%) [866];
 - in the presence of potassium carbonate in cyclohexanone at 145° for 5 h (66%) [201,202];
 - in the presence of potassium hydroxide and antimony triiodide in diethylene glycol at 150° for 1 h (93%) [801];
 - in the presence of sodium bicarbonate and potassium iodide in 1-methylpyrrolidone for 2 h at 150° (96%) [867].
- Preparation by reaction of n-octyl bromide with 2,4-dihydroxybenzophenone,
- in the presence of potassium carbonate,
 - in water at 110–115° for 4 h (84%) [868];
 - in cyclohexanone at 110° for 6 h (75%) [202];
 - in methyl isobutyl ketone at 110° for 10 h (70%) [202];
 - in methyl n-hexyl ketone at 161° for 4 h (71%) [202];
 - in acetone at 58° for 20 h (54%) [202] or in refluxing acetone for 16 h [869].
 - in the presence of sodium hydroxide,
 - in dilute ethanol in a water bath for 18–23 h (13–15%) [189];
 - in cyclohexanone at 145° for 5 h (51%) [202].
- Preparation by alkylation of resbenzophenone with an octyl halide [651].
- Preparation by reaction of n-octyl p-toluenesulfonate with 2,4-dihydroxybenzophenone,
- in the presence of potassium carbonate in boiling water for 5 h (74%) [201,202];
 - in the presence of sodium carbonate in boiling water for 8 h (63%) [202];
 - in the presence of potassium hydroxide in boiling water for 8 h (61%) [202].

- Preparation by reaction of n-octyl benzenesulfonate with 2,4-dihydroxybenzophenone in the presence of potassium carbonate in boiling water for 8 h (66%) [202].
- Preparation by reaction of benzoyl chloride with resorcinol dioctyl ether in chlorobenzene in the presence of titanium tetrachloride for 1 h at 120° (69%) [662].
- Also refer to: [77,224,226,228,231,235,667–669,802,837,852,870–880].

m.p. 50° [235], 48–50° [801], 48–49° [662], 47–48° [201,202], 45–46° [189,869,881]; ¹H NMR [99], IR [201,202], UV [99,201,202,235,243]; TLC [116,244]; gel permeation chromatography [247].

[2-Hydroxy-5-(octyloxy)phenyl]phenylmethanone

[4998-51-0]

C₂₁H₂₆O₃ mol.wt. 326.44

Synthesis

- Obtained (poor yield) by reaction of n-octyl bromide with 2,5-dihydroxybenzophenone in the presence of sodium hydroxide in dilute ethanol at 90–95° for 50 h (7%) [681].

m.p. 26–27° [681]; Spectra (NA).

[4-[(2-Ethylhexyl)oxy]-2-hydroxyphenyl]phenylmethanone (*Dastib 242*)

[2549-90-8]

C₂₁H₂₆O₃ mol.wt. 326.44

Synthesis

- Preparation by reaction of 1-chloro-2-ethylhexane with resbenzophenone in the presence of barium hydroxide and arsenic tribromide in dimethyl sulfoxide at 80° for 3 h (93%) [801].

b.p.₁ 213–216° [801]; ¹H NMR [99], UV [99]; gel permeation chromatography [246,247].

[6-Hydroxy-4-methoxy-3-methyl-2-(phenylmethoxy)phenyl]phenylmethanone

[74627-93-3]

C₂₂H₂₀O₄ mol.wt. 348.40

Synthesis

- Preparation by partial methylation of 2-benzyloxy-3-methyl-4,6-dihydroxybenzophenone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 10 min (96%) [838].

colourless oil [838]; b.p. (NA); ¹H NMR [838]; TLC [838].

(2-Hydroxy-5-isononylphenyl)phenylmethanone

[59802-03-8]

 $C_{22}H_{28}O_2$ mol.wt. 324.46

Synthesis

- Preparation by reaction of benzotrichloride with 4-iso-nonylphenol in hydrofluoric acid in the presence of water at -10° , then between -10° and 0° for 2 h, at r.t. for 7 h and at 80° for 30 min into an autoclave [213].

yellow oil [213]; b.p.₁ 190° [213]; Spectra (NA).**(2-Hydroxy-5-nonylphenyl)phenylmethanone**

[58085-73-7]

 $C_{22}H_{28}O_2$ mol.wt. 324.46

Syntheses

- Preparation by Fries rearrangement of p-nonylphenyl benzoate with aluminium chloride [882], without solvent at $140-145^\circ$ for 30–50 min (52%) [147].
- Preparation by Friedel–Crafts acylation of p-nonylphenol with benzoyl chloride in the presence of aluminium chloride in ethylene dichloride at 160° for 30–60 min (37%) [147].
- Preparation by reaction of benzotrichloride with p-nonylphenol in the presence of 30% aqueous sodium hydroxide (60–70%) [883], at $75-80^\circ$ for 30 min, and hydrolysis of the ester formed as a side product (42%) [97].
- Also refer to: [884,885].

m.p. $35-36^\circ$ [97]; b.p.₅ $205-208^\circ$ [97]; TLC [886], GC [886], HPLC [886]. 1H NMR [97,147], ^{13}C NMR [97], IR [97,147].**(2-Hydroxy-5-tert-nonylphenyl)phenylmethanone**

 $C_{25}H_{34}O_3$ mol.wt. 382.54

Syntheses

– Preparation by reaction of 1-bromododecane (dodecyl bromide or lauryl bromide) with resbenzophenone in the presence of potassium carbonate in refluxing acetone for 16 h [869] or for 20 h [738].

- Preparation by alkylation of resbenzophenone with a dodecyl halide [651].
- Also refer to: [78,228,667,829,892–894].

m.p. 49–50° [869] 48° [738]; EPR [98], IR [394], UV [394];
TLC [116]; gel permeation chromatography [247].

[2-Hydroxy-4-(phenylmethoxy)-3-(phenylmethyl)phenyl]phenylmethanone

$C_{27}H_{22}O_3$ mol.wt. 394.47

Synthesis

- Preparation by reaction of benzyl chloride with 3-benzyl-2,4-dihydroxybenzophenone in the presence of potassium carbonate in refluxing acetone for 8 h (31%) [846].

m.p. 92–93° [846]; Spectra (NA).

[2-Hydroxy-4-(4-nonylphenoxy)phenyl]phenylmethanone

[35698-50-1]

$C_{28}H_{32}O_3$ mol.wt. 416.56

Synthesis

- Refer to: [839] (compound **8**).

m.p. (NA); UV [839].

[2-Hydroxy-3,5-bis(3-methyl-2-butenyl)-4-[(3-methyl-2-butenyl)oxy]phenyl]phenylmethanone

[63565-03-7]

$C_{28}H_{34}O_3$ mol.wt. 418.58

Synthesis

- Obtained (poor yield) by reaction of prenyl bromide with resbenzophenone in the presence of sodium methoxide in refluxing methanol for 4 h (<2%) [831].

m.p. 98° [831]; ¹H NMR [831], IR [831], UV [831].

[2-Hydroxy-3-(3-methyl-2-butenyl)-4,6-bis[(3-methyl-2-butenyl)oxy]phenyl]phenylmethanone

[63565-08-2]

$C_{28}H_{34}O_4$ mol.wt. 434.58

Synthesis

- Obtained by reaction of prenyl bromide with 2,4,6-trihydroxybenzophenone in the presence of potassium carbonate in refluxing acetone for 4 h (21%) [831].

m.p. 112° [831]; ¹H NMR [831], IR [831], UV [831].

[2-Hydroxy-3,5-bis(1-phenylethyl)phenyl]phenylmethanone

[125182-24-3]

 $C_{29}H_{26}O_2$ mol.wt. 406.52

Synthesis

– Preparation by treatment of o-hydroxybenzophenone at 120° with styrene under nitrogen in the presence of a macroreticular acid ion exchanger as catalyst (Wofatit OK 80) for 3–4 h (80%) [819].

b.p._{0.15} 220–225° [819]; Spectra (NA).**[5-(1,1-Dimethylethyl)-4-(dodecyloxy)-2-hydroxyphenyl]phenylmethanone** $C_{29}H_{42}O_3$ mol.wt. 438.65

Synthesis

– Preparation by selective alkylation of 5-tert-butyl-2,4-dihydroxybenzophenone with dodecyl bromide in refluxing methyl ethyl ketone in the presence of potassium carbonate [835].

m.p. 74°5–75°5 [835,836]; Spectra (NA).

[4-(Hexadecyloxy)-2-hydroxyphenyl]phenylmethanone

[3457-17-8]

 $C_{29}H_{42}O_3$ mol.wt. 438.65

Synthesis

– Obtained by partial alkylation of resbenzophenone with hexadecyl bromide (cetyl bromide) in the presence of potassium carbonate in refluxing acetone for 20 h [738].

– Also refer to: [405] and [895] (Japanese patent).

m.p. 50° [738]; Spectra (NA).

[5-(Hexadecyloxy)-2-hydroxyphenyl]phenylmethanone

[131664-12-5]

 $C_{29}H_{42}O_3$ mol.wt. 438.65

Synthesis

– Refer to: [896] (Japanese patent).

m.p. and Spectra (NA).

[2-Hydroxy-4-(octadecanoyloxy)phenyl]phenylmethanone*Octadecanoic acid, 4-benzoyl-3-hydroxyphenyl ester*

[65953-50-6]

 $C_{31}H_{44}O_4$ mol.wt. 480.69

Synthesis

– Refer to: [243].

m.p. (NA); UV [243].

[2-Hydroxy-4-(octadecyloxy)phenyl]phenylmethanone

[3457-13-4]

 $C_{31}H_{46}O_3$ mol.wt. 466.70

Syntheses

– Preparation by reaction of stearyl chloride (octadecyl chloride or 1-chlorooctadecane) with resbenzophenone in the presence of

sodium hydroxide and phosphorous triiodide in aqueous diethylene glycol at 175° for 1.5 h (94%) [801].

– Preparation by alkylation of resbenzophenone with an octadecyl halide [651].

– Also refer to: [667].

m.p. 55–56° [801]; Spectra (NA); TLC [116].

[2-Hydroxy-4-(nonadecyloxy)phenyl]phenylmethanone $C_{32}H_{48}O_3$ mol.wt. 480.73

Synthesis

– Obtained by partial alkylation of resbenzophenone with nonadecyl bromide in the presence of potassium carbonate in refluxing acetone for 20 h [738].

m.p. 53° [738]; Spectra (NA).

[2-Hydroxy-3,5-bis(3-methyl-2-butenyl)-4,6-bis[[4-methylphenyl]sulfonyl]oxy]phenyl]phenylmethanone

[83611-03-4]

 $C_{37}H_{38}O_8S_2$ mol.wt. 674.84

Synthesis

– Obtained by ditosylation of 2,4,6-trihydroxy-3,5-diprenylbenzophenone with p-toluenesulfonyl chloride in the presence of potassium carbonate in refluxing acetone for 8 h (39%) [373].

m.p. 57° [373]; 1H NMR [373].

2.1.2 Substituents Located on the Other Ring

(2-Hydroxyphenyl)(2,3,4,5,6-pentafluorophenyl)methanone

[32541-24-5]

 $C_{13}H_5F_5O_2$ mol.wt. 288.17

Synthesis

– Preparation by demethylation of 2,3,4,5,6-pentafluoro-2'-methoxybenzophenone (SM) in methylene chloride in the presence of aluminium chloride at 20° for 3–6 h (68%) [570]. SM was obtained in two steps: first, preparation of 2'-methoxy-2,3,4,5,6-pentafluorobenzhydrol by condensation of o-methoxybenzaldehyde with pentafluorophenylmagnesium bromide in boiling ethyl ether for 2 h (96%). Then, this “benzhydrol” was oxidized with chromium trioxide in acetic acid at 20° for 20 h (95%) [570].

m.p. 78–79° [570]; 1H NMR [570], IR [570], UV [570].

(3-Bromo-4-chlorophenyl)(4-hydroxyphenyl)methanone

[78930-23-1]

 $C_{13}H_8BrClO_2$ mol.wt. 311.56

Synthesis

– Preparation by reaction of 3-bromo-4-chlorobenzoyl chloride with phenol in the presence of aluminium chloride [165].

m.p. 193–194° [165]; Spectra (NA).

(4-Bromo-2-fluorophenyl)(4-hydroxyphenyl)methanone

[192443-11-1]

 $C_{13}H_8BrFO_2$ mol.wt. 295.11

Synthesis

– Preparation by demethylation of 4-bromo-2-fluoro-4'-methoxybenzophenone (SM) with 62% aqueous hydrobromic acid in refluxing acetic acid (98%). SM was obtained by Friedel–Crafts acylation of anisole with 4-bromo-2-fluorobenzoyl chloride in nitrobenzene in the presence of aluminium chloride, first at temperature <6°, then at r.t. overnight (88%, m.p. 93–94°). –Refer to: Chem. Abstr., **127**, 108921f (1997)^f.

m.p. (NA); MS^f.

(2,4-Dibromophenyl)(2-hydroxyphenyl)methanone

 $C_{13}H_8Br_2O_2$ mol.wt. 356.01

Synthesis

– Refer to: [87].

m.p. and Spectra (NA).

(4-Chloro-3-iodophenyl)(4-hydroxyphenyl)methanone

[83888-75-9]

 $C_{13}H_8ClIO_2$ mol.wt. 358.56

Synthesis

– Preparation by reaction of 4-chloro-3-iodobenzoyl chloride with phenol in the presence of aluminium chloride [165].

m.p. 191–192° [165]; Spectra (NA).

(2-Chloro-4-nitrophenyl)(2-hydroxyphenyl)methanone

[72090-64-3]

 $C_{13}H_8ClNO_4$ mol.wt. 277.66

Synthesis

– Obtained by Fries rearrangement of phenyl 2-chloro-4-nitrobenzoate with aluminium chloride without solvent at 120° or at 160° [897].

m.p. and Spectra (NA).

(2-Chloro-4-nitrophenyl)(4-hydroxyphenyl)methanone

[72103-42-5]

 $C_{13}H_8ClNO_4$ mol.wt. 277.66

Synthesis

– Obtained by Fries rearrangement of phenyl 2-chloro-4-nitrobenzoate with aluminium chloride without solvent at 120° or at 160° [897].

m.p. and Spectra (NA).

(2-Chloro-5-nitrophenyl)(2-hydroxyphenyl)methanone

[72090-65-4]

 $C_{13}H_8ClNO_4$ mol.wt. 277.66

Synthesis

– Obtained by Fries rearrangement of phenyl 2-chloro-5-nitrobenzoate with aluminium chloride without solvent at 120° or at 160° [897].

m.p. and Spectra (NA).

(2-Chloro-5-nitrophenyl)(4-hydroxyphenyl)methanone

[72090-66-5]

 $C_{13}H_8ClNO_4$ mol.wt. 277.66

Synthesis

– Obtained by Fries rearrangement of phenyl 2-chloro-5-nitrobenzoate with aluminium chloride without solvent at 120° or at 160° [897].

m.p. and Spectra (NA).

(4-Chloro-3-nitrophenyl)(4-hydroxyphenyl)methanone

[93958-85-1]

 $C_{13}H_8ClNO_4$ mol.wt. 277.66

Synthesis

– Preparation by demethylation of 4-chloro-4'-methoxy-3-nitrobenzophenone with pyridinium chloride at 220–230° for 30 min (55%) [898].

m.p. 185° [898]; IR [898].

(2,4-Dichlorophenyl)(2-hydroxyphenyl)methanone

[46795-43-1]

 $C_{13}H_8Cl_2O_2$ mol.wt. 267.11

Synthesis

– Refer to: [87] (compound VI-A).

m.p. and Spectra (NA).

(2,4-Dichlorophenyl)(3-hydroxyphenyl)methanone

[62810-56-4]

 $C_{13}H_8Cl_2O_2$ mol.wt. 267.11

Syntheses

- Preparation by reaction of m-anisoyl chloride with m-di-chlorobenzene in the presence of excess aluminium chloride first at 20°, then at reflux for 2 h (71%) [119,899].
- Preparation by demethylation of 2,4-dichloro-3'-methoxybenzophenone with aluminium chloride in refluxing chlorobenzene [900].
- Also obtained by diazotization of 3'-amino-2,4-dichlorobenzophenone followed by hydrolysis of the diazonium salt so obtained [900].

m.p. 135° [119,899], 70° [900]. One of the reported melting points is obviously wrong.

Spectra (NA).

(2,4-Dichlorophenyl)(4-hydroxyphenyl)methanone

[34183-01-2]

 $C_{13}H_8Cl_2O_2$ mol.wt. 267.11

Syntheses

- Preparation by reaction of 2,4-dichlorobenzoyl chloride with phenol in the presence of aluminium chloride [165].
- Preparation by reaction of 2,4-dichlorobenzotrichloride with phenol,
 - in hydrofluoric acid in the presence of water at –10°, then at 15° overnight and at 80° for 30 min [213];
 - in methylene chloride in the presence of aluminium chloride, first at 0–3° for 30 min, then at 20° for 3 h (52%) [901].

- Preparation by Fries rearrangement of phenyl 2,4-dichlorobenzoate with aluminium chloride in chlorobenzene at 140–150° for 20 min or in nitrobenzene at 75° for 24 h [480].

m.p. 140–141° [480], 134–135° [165], 132–135° [901]; Spectra (NA).

(2,6-Dichlorophenyl)(4-hydroxyphenyl)methanone

[61002-53-7] $C_{13}H_8Cl_2O_2$ mol.wt. 267.11

Synthesis

- Refer to: [902].

m.p. and Spectra (NA).

(3,4-Dichlorophenyl)(3-hydroxyphenyl)methanone

[62810-54-2] $C_{13}H_8Cl_2O_2$ mol.wt. 267.11

Syntheses

- Preparation by reaction of m-anisoyl chloride with o-di-chlorobenzene in the presence of excess aluminium chloride first at 20°, then at reflux for 2 h (41%) [119,899].
- Preparation by demethylation of 3,4-dichloro-3'-methoxybenzophenone with aluminium chloride in refluxing chlorobenzene [900].

m.p. 140° [900], 130° [119,899]; Spectra (NA).

(3,4-Dichlorophenyl)(4-hydroxyphenyl)methanone

[60013-02-7] $C_{13}H_8Cl_2O_2$ mol.wt. 267.11

Syntheses

- Preparation by reaction of 3,4-dichlorobenzoyl chloride,
 - with phenol in the presence of aluminium chloride [165];
 - with phenetole in the presence of aluminium chloride in carbon disulfide at r.t. overnight (40%) [903];
 - with anisole in the presence of aluminium chloride at 70° for 4 h, followed by demethylation of the obtained ketone with 48% hydrobromic acid in refluxing acetic acid for 47 h [904].
- Preparation by dealkylation of 3,4-dichloro-4'-ethoxybenzophenone with aluminium chloride in refluxing carbon disulfide [903].

m.p. 172–174° [903], 158°–170° [165]. A typing error probably occurred in the published data.

Spectra (NA).

(3,5-Dichlorophenyl)(4-hydroxyphenyl)methanone

m.p. 110° [900]; Spectra (NA).

(3-Bromophenyl)(4-hydroxyphenyl)methanoneC₁₃H₉BrO₂ mol.wt. 277.11

Synthesis

- Preparation by dealkylation of 3-bromo-4'-ethoxy-benzophenone (SM) with hydrobromic acid (d = 1.49) in boiling acetic acid for 2 days.

SM was obtained by action of m-bromobenzoyl chloride with phenetole in carbon disulfide in the presence of aluminium chloride at 55° (80%, m.p. 79°5).

–Refer to: Chem. Abstr., **17**, 3497^s (1923)^T.

m.p. 171°^T; Spectra (NA).

(4-Bromophenyl)(2-hydroxyphenyl)methanone

[2038-92-8]

C₁₃H₉BrO₂ mol.wt. 277.11

Syntheses

- Preparation by Fries rearrangement of phenyl p-bromo-benzoate [909], with aluminium chloride at 140° for 30 min (23%) [485].
- Preparation by reaction of o-methoxybenzoyl chloride with bromobenzene in the presence of aluminium chloride (Friedel–Crafts) [910].
- Preparation by diazotization of 2-amino-4'-bromobenzophenone, followed by hydrolysis of the diazonium salt so obtained (28%) [911]. The 3-bromofluorenone was the major compound obtained.

m.p. 98° [910,911], 90–92° [485]; ¹H NMR [910], IR [910].

(4-Bromophenyl)(3-hydroxyphenyl)methanone

[62810-46-2]

C₁₃H₉BrO₂ mol.wt. 277.11

Syntheses

- Preparation by reaction of m-anisoyl chloride with bromo-benzene in the presence of an excess of aluminium chloride: first at 20°, then at reflux for 2 h (65%) [119,899].
- Preparation by Friedel–Crafts acylation of bromobenzene with m-nitrobenzoyl chloride, reduction of the obtained 4-bromo-3'-nitrobenzophenone and diazotization of the resulting 3-amino-4'-bromobenzophenone, followed by hydrolysis of the diazonium salt [900].
- Preparation by demethylation of 4-bromo-3'-methoxybenzophenone with aluminium chloride in refluxing chlorobenzene [900].
- Also refer to: [912].

m.p. 170° [900], 167° [119,899]; Spectra (NA).

(4-Bromophenyl)(4-hydroxyphenyl)methanone

[4369-50-0]

 $C_{13}H_9BrO_2$

mol.wt. 277.11

Syntheses

- Preparation by reaction of p-bromobenzoyl chloride with phenol in the presence of aluminium chloride [165].
- Preparation by isomerization of 2-hydroxy-4'-bromobenzophenone with trifluoromethanesulfonic acid at 110° for 3 h (42%) [909].
- Preparation by Fries rearrangement of phenyl p-bromobenzoate with aluminium chloride without solvent at 140° for 30 min (47%) [485] or in nitrobenzene at 60° for 40 h (67%) [913–915].
- Also obtained by reaction of hydrobromic acid with 4-bromo-4'-ethoxybenzophenone in refluxing acetic acid [142].
- Also obtained by diazotization of 4-amino-4'-bromobenzophenone, followed by hydrolysis of the obtained diazonium salt [916].
- Preparation by demethylation of 4-bromo-4'-methoxybenzophenone (SM) with aluminium chloride in refluxing benzene for 8 h. SM was obtained by Friedel–Crafts acylation of anisole with p-bromobenzoyl chloride [917].
- Also refer to: [512,513,902,918].

m.p. 192–193° [913–915], 191° [142,485,916], 187°5–191° [165]; IR [917]; TLC [917].

(2-Chlorophenyl)(2-hydroxyphenyl)methanone

[70288-96-9]

 $C_{13}H_9ClO_2$

mol.wt. 232.67

Syntheses

- Obtained by total dealkylation of 5-tert-butyl-2'-chloro-2-methoxybenzophenone with aluminium chloride in benzene at 65–70° for 45 h (60–80%) [22], (73%) [9].
- Also obtained by Fries rearrangement of phenyl o-chlorobenzoate (SM) with aluminium chloride [23,897], at 140° for 30 min (32%) [485]. SM was prepared by heating o-chlorobenzoyl chloride with aluminium tris(phenoxide) in a water bath for 30 min [485].
- Also obtained (poor yield) by reaction of o-chlorobenzoyl chloride with phenyl borate in the presence of aluminium chloride in tetrachloroethane at 100° (3%) [55].
- Also refer to: [29,850].

m.p. 92° [485], 58–59° [9,22]. There is a discrepancy between the two melting points. Spectra (NA).

(2-Chlorophenyl)(3-hydroxyphenyl)methanone[62810-53-1] $C_{13}H_9ClO_2$ mol.wt. 232.67

Synthesis

- Preparation by demethylation of 2-chloro-3'-methoxy-benzophenone with aluminium chloride in refluxing chlorobenzene [900].

m.p. 126° [900]; Spectra (NA).

(2-Chlorophenyl)(4-hydroxyphenyl)methanone[55270-71-8] $C_{13}H_9ClO_2$ mol.wt. 232.67

Syntheses

- Preparation by Fries rearrangement of phenyl o-chloro-benzoate in the presence of aluminium chloride [897,919,920], without solvent for 2 h at 160° [920] or in nitrobenzene at 60° (31%) [919].
- Preparation by Fries rearrangement of phenyl o-chlorobenzoate (SM) with aluminium chloride at 140° for 30 min (56%). SM was obtained by heating o-chlorobenzoyl chloride with aluminium tris(phenoxide) in a water bath for 30 min [485].
- Preparation by reaction of o-chlorobenzoyl chloride,
 - with phenyl borate in the presence of aluminium chloride in tetrachloroethane at 100° (57%) [55];
 - with phenol trimethylsilyl ether in the presence of aluminium chloride in refluxing methylene chloride for 2 h (54%) [921].
- Also obtained by reaction of o-chlorobenzoic acid with phenol in the presence of polyphosphoric acid for 20 min at 100° (13%) [149].
- Also obtained (trace) by reaction of EKONOL^(TM), an aromatic polyester, behaves as a Friedel-Crafts acylating reagent, with chlorobenzene in triflic acid solution at 25° for 18 h (1%) [922].
- Also refer to: [542,902].

m.p. 165° [920], 128° [55], 119–121° [919], 118° [149], 112° [485], 102–104° [921];

There is a discrepancy between the various melting points.

Spectra (NA); HPLC [922].

(3-Chlorophenyl)(2-hydroxyphenyl)methanone[72090-60-9] $C_{13}H_9ClO_2$ mol.wt. 232.67

Syntheses

- Preparation by heating a mixture of 3-(3-chlorobenzoyl)-4-methoxybenzoic acid and pyridinium chloride at 200° for 20 h (65%) [923]. There are simultaneous demethylation and decarboxylation.

- Also obtained by Fries rearrangement of phenyl m-chlorobenzoate,
 - with aluminium chloride between 120° and 160° [924];
 - in the presence of Nafion-H, a polymeric perfluorinated resin sulfonic acid, in refluxing nitrobenzene for 12 h (21%) [38].
- m.p. 89° [924], 87° [923]; ¹H NMR [38], ¹³C NMR [38], IR [923].

(3-Chlorophenyl)(3-hydroxyphenyl)methanone

[62810-42-8]

C₁₃H₉ClO₂

mol.wt. 232.67

Synthesis

- Preparation by demethylation of 3-chloro-3'-methoxy-benzophenone with aluminium chloride in refluxing chlorobenzene (81%) [900].

m.p. 104° [900]; Spectra (NA).

(3-Chlorophenyl)(4-hydroxyphenyl)methanone

[61002-52-6]

C₁₃H₉ClO₂

mol.wt. 232.67

Syntheses

- Preparation by Fries rearrangement of phenyl m-chloro-benzoate,
 - in the presence of aluminium chloride without solvent at 120° or at 160° [924];
 - in the presence of Nafion-H, a polymeric perfluorinated resin sulfonic acid, in refluxing nitrobenzene for 12 h (54%) [38].
- Also obtained (poor yield) by reaction of m-chlorobenzoic acid with phenol in the presence of polyphosphoric acid at 100° for 20 min (5%) [149].
- Also obtained by reaction of ethyl nitrite with 2-amino-5-chloro-4'-hydroxybenzophenone in refluxing ethanol (elimination of amino group) [925].
- Also refer to: [542,897,902].

m.p. 172° [924], 169° [149], 161° [925]; ¹H NMR [38], ¹³C NMR [38].

(4-Chlorophenyl)(2-hydroxyphenyl)methanone

[2985-79-7]

C₁₃H₉ClO₂

mol.wt. 232.67

Syntheses

- Preparation by Fries rearrangement of phenyl p-chloro-benzoate,
 - with aluminium chloride without solvent between 120° and 160° [28,926], (29%) [28], at 200° for 20 min [20] or in refluxing chlorobenzene for 10 h (53%) [28];
 - with trifluoromethanesulfonic acid at 45–55° (6%) [927].
- Preparation by reaction of 2-hydroxybenzoyl chloride with chlorobenzene in the presence of aluminium chloride in refluxing carbon disulfide (72%) [92].

- Also obtained by photo-Fries rearrangement of phenyl p-chlorobenzoate in cyclohexane or in benzene between 46° and 52° (42–49%) [72].
 - Also obtained by reaction of p-chlorobenzoyl chloride with phenyl borate in the presence of aluminium chloride in tetrachloroethane at 100° (18%) [55].
 - Preparation by treatment of 5-tert-butyl-4'-chloro-2-methoxybenzophenone with aluminium chloride in benzene at 65–70° during 45 h (60–80%) [9,927].
 - Also obtained by reaction of salicylaldehyde with p-iodochlorobenzene by using a catalyst system of palladium chloride/lithium chloride in the presence of sodium carbonate in N,N-dimethyl-formamide at 100° for 2 h (57%) [51].
 - Also obtained by demethylation of 4-chloro-2'-methoxybenzophenone with boron tribromide in methylene chloride at r.t. for 12 h [20], according to [21].
 - Also refer to: [77].
- m.p. 77–78° [926], 75–76° [72], 74–75° [9,22], 70–72° [92], 68–71° [5]; ¹H NMR [51], MS [51].

(4-Chlorophenyl)(3-hydroxyphenyl)methanone

[62810-39-3]

C₁₃H₉ClO₂

mol.wt. 232.67

Synthesis

- Preparation by diazotization of 3-amino-4'-chlorobenzophenone (SM), followed by hydrolysis of the diazonium salt obtained (81%) [900], (84%) [634]. SM was obtained by Friedel–Crafts acylation of chlorobenzene with m-nitro-benzoyl chloride, followed by reduction of the resulting 4-chloro-3'-nitrobenzophenone [900].
 - Also refer to: [928].
- m.p. 154–155° [634], 154° [900]; Spectra (NA).

(4-Chlorophenyl)(4-hydroxyphenyl)methanone

[42019-78-3]

C₁₃H₉ClO₂

mol.wt. 232.67

Syntheses

- Preparation by Fries rearrangement of phenyl p-chloro-benzoate,
 - in the presence of aluminium chloride, without solvent, at 160° for 5 min [490,491], between 120° and 160° (good yield) [926] or at 130° for 1 h, then at 160° for 1 h (10%) [28] or in refluxing chlorobenzene for 10 h (52%) [28];
 - in the presence of trifluoromethanesulfonic acid at 45–55° (94%) [927].
- Preparation by reaction of p-chlorobenzotrichloride with phenol in hydrofluoric acid in the presence of water at 0°, then at r.t. overnight (91%) [213].
- Also obtained by reaction of p-chlorobenzoyl chloride,
 - with phenol in the presence of aluminium chloride [165];
 - with anisole in the presence of aluminium chloride [929], at 70° for 4 h [904]. The 4'-chloro-4-methoxybenzophenone so formed [929], (67%) [904], gave

the expected ketone by demethylation with 48% hydrobromic acid in refluxing acetic acid for 47 h [904] or with aluminium chloride in refluxing chlorobenzene for 1.5 h [929];

- with phenyl borate in the presence of aluminium chloride in tetrachloroethane at 100° (32%) [55].
- Also obtained by reaction of p-chlorobenzoic acid with phenol,
- in the presence of hydrofluoric acid for 6 h at 75° in an autoclave under pressure (74%) [930];
 - in the presence of polyphosphoric acid at 100° for 20 min (2%) [149];
 - in the presence of a trifluoromethanesulfonic acid at r.t. for one day [151].
- Also obtained by reaction of p-hydroxybenzoic acid with chlorobenzene in the presence of trifluoromethanesulfonic acid at 100° for 5 days (50%) [151].
- Preparation by Friedel–Crafts acylation of chlorobenzene with p-anisoyl chloride in the presence of aluminium chloride at 120° for 3 h (50–70%) [931].
- Preparation by diazotization of 4-amino-4'-chlorobenzophenone [932], followed by hydrolysis of the diazonium salt so obtained [142].
- Also obtained by reaction of EKONOL^(TM), an aromatic polyester as Friedel–Crafts reagent, with chlorobenzene in triflic acid solution at 25° for 18 h (28%) [922]. Similar results can be obtained using hydrofluoric acid/boron trifluoride or aluminium chloride in place of triflic acid [922].
- Also obtained (poor yield) by photo-Fries rearrangement of phenyl p-chlorobenzoate in benzene at 52° for 19 h (14%) or in cyclohexane at 46° for 19 h (6%) [72].
- Also obtained from 4-chloro-4'-fluorobenzophenone by reaction under nitrogen with potassium hydroxide in aqueous dimethyl sulfoxide at 60° for 18 h [170].
- Also refer to: [366,902,933–943].

N.B.: K salt [170].

m.p. 179–181° [165], 179°5 [170], 179°2 [142], 179° [149,213], 178°5–180°5 [930], 175–176° [926], 173–175° [931], 172°5–173°8 [72], 170–171° [28];

b.p.₁₃ 257° [142]; TLC [931]; HPLC [922];

¹H NMR [151,931], ¹³C NMR [922], MS [922,931].

(4-Chlorophenyl)(4-hydroxyphenyl)methanone-¹⁴C

[60044-21-5]

C₁₃H₉ClO₂

mol.wt. 234.67

Synthesis

– Preparation by demethylation of ¹⁴C-4'-chloro-4-methoxybenzophenone (SM) with 48% hydrobromic acid in refluxing acetic acid for 48 h (74%). SM was obtained by reaction of ¹⁴C-p-chlorobenzoyl chloride with anisole in the presence of aluminium chloride at 50° for 3 h (82%) [944].

m.p. and Spectra (NA).

(2-Fluorophenyl)(2-hydroxyphenyl)methanone

m.p. and Spectra (NA).

(2-Fluorophenyl)(4-hydroxyphenyl)methanone

– Obtained (trace) by reaction of EKONOLTM, an aromatic polyester as Friedel–Crafts reagent, with fluorobenzene in triflic acid solution at 75° for 2 h or at 25° for 18 h (1%) [922].

m.p. and Spectra (NA); HPLC [922].

(3-Fluorophenyl)(3-hydroxyphenyl)methanone

– Preparation by demethylation of 3-fluoro-3'-methoxy-benzophenone with aluminium chloride in refluxing chlorobenzene [900].

m.p. 64° [900]; Spectra (NA).

(3-Fluorophenyl)(4-hydroxyphenyl)methanone

– Refer to: Chem. Abstr., **127**, 34137f (1997).

m.p. and Spectra (NA).

(4-Fluorophenyl)(2-hydroxyphenyl)methanone

- Preparation by Fries rearrangement of phenyl p-fluoro-benzoate with aluminium chloride,
 - without solvent at 200° for 20 min [20];
 - in nitrobenzene at 140–145° for 3 h (35%) [909].
- Also obtained by demethylation of 4-fluoro-2'-methoxybenzophenone with boron tribromide in methylene chloride at r.t. for 12 h [20], according to [21].

- Also obtained (by-product) by reaction of p-fluorobenzoic acid with phenol in the presence of hydrofluoric acid for 6 h at 75° in an autoclave under pressure (5%) [930].
- Also refer to: [945].
m.p. and Spectra (NA).

(4-Fluorophenyl)(3-hydroxyphenyl)methanone

[62810-47-3]

C₁₃H₉FO₂ mol.wt. 216.21

Syntheses

- Preparation by reaction of m-anisoyl chloride with fluoro-benzene in the presence of an excess of aluminium chloride: first at 20°, then at reflux for 2 h (43%) [119].
- Preparation by reaction of m-hydroxybenzoic acid with fluorobenzene in the presence of a hydrofluoric acid/boron trifluoride mixture at r.t. for 6 h into an autoclave under 30 psig of boron trifluoride (61%) [350].
- Preparation by diazotization of 3-amino-4'-fluorobenzophenone followed by hydrolysis of the obtained diazonium salt [900].
- Preparation by demethylation of 4-fluoro-3'-methoxybenzophenone with aluminium chloride in refluxing chlorobenzene [900].
- Also refer to: [899,946,947].

m.p. 105° [900,947], 103° [119,899], 102° [946], 99–99°5 [350];
¹H NMR [350], ¹³C NMR [350], ¹⁹F NMR [350].

(4-Fluorophenyl)(4-hydroxyphenyl)methanone

[25913-05-7]

C₁₃H₉FO₂ mol.wt. 216.21

Syntheses

- Preparation by reaction of p-fluorobenzoyl chloride with phenol,
 - in the presence of aluminium chloride [165];
 - in the presence of boron trifluoride in hydrofluoric acid (83%) [316].
- Preparation by isomerization of 4-fluoro-2'-hydroxybenzophenone,
 - with trifluoromethanesulfonic acid at 120° for 5 h (75%) or with perfluoroethanesulfonic acid at 120° for 3 h (53%) [909];
 - by dissolution in toluene at 110° and the resultant solution cooled to 3° (97%) [945].
- Preparation by Fries rearrangement of phenyl p-fluorobenzoate,
 - with hydrofluoric acid between –10° and 0° (63%) [948];
 - with aluminium chloride without solvent at 160° for 5 min [490,491] or in nitrobenzene at 140–145° for 3 h (65%) [909].

- Preparation by reaction of p-fluorobenzoic acid with phenol,
 - in the presence of hydrofluoric acid for 6 h at 75° in an autoclave under pressure (90%) [930];
 - in the presence of boron trifluoride in hydrofluoric acid (64%) [316];
 - in the presence of trifluoromethanesulfonic acid overnight at r.t. (77%) [151].
- Also obtained by reaction of EKONOLTM, an aromatic polyester, behaves as a Friedel–Crafts acylating reagent, with fluorobenzene in triflic acid solution at 75° for 2 h (74%) or at 25° for 18 h (67%) [922]. Similar results can be obtained using hydrofluoric acid/boron trifluoride or aluminium chloride in place of triflic acid [922].
- Preparation by reaction of 4,4'-difluorobenzophenone (1 mol) with potassium hydroxide (2 mol) in aqueous dimethyl sulfoxide at 60° for 18 h (81%) [170].
- Also refer to: [350,512,935,943,945,949–956].

N.B.: Na [949] and K salts [170,337].

m.p. 170°6–172° [316], 169°5–171°5 [165], 169–171° [957], 168° [170], 166°5–168°5 [151];

¹H NMR [151,316], ¹³C NMR [922], IR [151,316], MS [922,930];
GLC [316]; HPLC [922].

(4-Hydroxyphenyl)(4-iodophenyl)methanone

[113275-52-8]

C₁₃H₉IO₂ mol.wt. 324.12

Synthesis

– Refer to: [512].

m.p. and Spectra (NA).

(2-Hydroxyphenyl)(2-nitrophenyl)methanone

[22293-32-9]

C₁₃H₉NO₄ mol.wt. 243.22

Synthesis

– Obtained by photo-Fries rearrangement of phenyl o-nitro-benzoate in ethanol during 60–75 h (23%) [641].

– Also refer to: [897].

m.p. 104° [641]; IR [641], UV [641].

(2-Hydroxyphenyl)(3-nitrophenyl)methanone

[36412-61-0]

C₁₃H₉NO₄ mol.wt. 243.22

Syntheses

– Preparation by diazotization of 2-amino-3'-nitrobenzophenone followed by thermal decomposition of the 2-(3'-nitrobenzoyl)benzenediazonium fluoborate formed with 0.05 M sulfuric acid at 45° or 65° (67%) [17].

- Also obtained (poor yield) by Fries rearrangement of phenyl m-nitrobenzoate with aluminium chloride at 120° or 160° for 2 h (5%) [897,958].
- Also obtained by reaction of m-nitrobenzoyl chloride with anisole in the presence of aluminium chloride in refluxing carbon disulfide for 2 h (16%) [959]. In this reaction, 4-methoxy-3'-nitrobenzophenone was the major product.
- Also refer to: [960].
m.p. 101° [958], 96–97° [17], 93°5–94°5 [959]; IR [959], UV [959].

(2-Hydroxyphenyl)(4-nitrophenyl)methanone

[68223-20-1]

C₁₃H₉NO₄

mol.wt. 243.22

Syntheses

- Obtained by Fries rearrangement of phenyl p-nitrobenzoate with aluminium chloride [897],
 - without solvent at 160° (26%) [28], (15%) [961];
 - in refluxing chlorobenzene (8%) [28].
- Also obtained (by-product) by Fries rearrangement of phenyl p-nitrobenzoate (SM) with aluminium chloride at 140° for 30 min (16%). SM was obtained by heating p-nitrobenzoyl chloride with aluminium tris(phenoxide) in a water bath for 30 min [485].
- Also obtained by photo-Fries rearrangement of phenyl p-nitrobenzoate in ethanol during 60–75 h (19%) [641].
- Also obtained (by-product) by reaction of p-nitrobenzoyl chloride with phenetole in the presence of aluminium chloride in carbon disulfide [322,683,962].
- Also refer to: [963].
m.p. 114° [961], 112° [641], 111–113° [322], 111° [485], 108–110° [28];
IR [641], UV [641].

(3-Hydroxyphenyl)(4-nitrophenyl)methanone

[147029-77-4]

C₁₃H₉NO₄

mol.wt. 243.22

Synthesis

- Preparation by demethylation of 3-methoxy-4'-nitro-benzophenone with 62% hydrobromic acid in refluxing acetic acid for 4 h (70%) [964].
m.p. 117° [964]; Spectra (NA).

(4-Hydroxyphenyl)(2-nitrophenyl)methanone

[61101-88-0]

 $C_{13}H_9NO_4$ mol.wt. 243.22

Syntheses

- Preparation by reaction of o-nitrobenzoyl chloride with (trimethylsilyl)phenol in the presence of stannic chloride in refluxing methylene chloride for 2 h (56%) [921].
- Also obtained (trace) by reaction of o-nitrobenzoic acid in the presence of polyphosphoric acid at 100° for 20 min (0.1%) [149].
- Also refer to: [897].

m.p. 165–167° [921], 122° [149]. There is a discrepancy between the two melting points.

Spectra (NA).

(4-Hydroxyphenyl)(3-nitrophenyl)methanone

[72090-63-2]

 $C_{13}H_9NO_4$ mol.wt. 243.22

Syntheses

- Preparation by acylation of phenetole with m-nitrobenzoyl chloride in ethyl ether in the presence of aluminium chloride, then dealkylation of the 4-ethoxy-3'-nitrobenzophenone so formed with the same catalyst [141], in boiling carbon disulfide (60–70°) for 8 h [619] according to [139].
- Preparation by Fries rearrangement of phenyl m-nitrobenzoate with aluminium chloride [897] without solvent at 120° or at 160° for 2 h (32%) [958].
- Also obtained (poor yield) by reaction of m-nitrobenzoyl chloride with phenyl borate in the presence of aluminium chloride in tetrachloroethane at 100° (9%) [55].
- Also obtained (trace) by reaction of m-nitrobenzoic acid with phenol in the presence of polyphosphoric acid at 100° for 20 min (1%) [149].
- Also refer to: [366,965,966].

m.p. 173° [619,958], 171° [149]; Spectra (NA); cryoscopic study [141].

(4-Hydroxyphenyl)(4-nitrophenyl)methanone

[18920-70-2]

 $C_{13}H_9NO_4$ mol.wt. 243.22

Syntheses

- Obtained by Fries rearrangement of phenyl p-nitrobenzoate with aluminium chloride [897],
 - without solvent at 140° for 30 min (52%) [485], at 120° for 2 h (21%) [961] or first at 130° for 1 h, then at 160° for 1 h (2%) [28];
 - in refluxing chlorobenzene for 5 h (24%) [28].

N.B.: Phenyl p-nitrobenzoate failed to undergo the Fries rearrangement in the presence of aluminium chloride [74].

- Preparation by dealkylation,
 - of 4-methoxy-4'-nitrobenzophenone with aluminium chloride in boiling carbon disulfide or without solvent at 100–120° [322];
 - of 4-ethoxy-4'-nitrobenzophenone with aluminium chloride [141], in boiling carbon disulfide or without solvent at 100–120° [322].
- Preparation by reaction of p-nitrobenzoyl chloride with phenetole in the presence of aluminium chloride in ethyl ether [141] or in carbon disulfide. Simultaneous deethylation take place during the reaction [322].
- Also obtained (trace) by reaction of p-nitrobenzoic acid with phenol in the presence of polyphosphoric acid at 100° for 20 min [149].
- Also refer to: [366,902,967].

N.B.: Na salt [963].

m.p. 193–195° [28], 192° [961], 190–192° [322], 190° [149,485];

IR [124]; cryoscopic study [141].

(2-Amino-5-chlorophenyl)(2-hydroxyphenyl)methanone

[62492-57-3]

$C_{13}H_{10}ClNO_2$ mol.wt. 247.68

Synthesis

- Preparation by demethylation of 2-amino-5-chloro-2'-methoxybenzophenone with boron tribromide in methylene chloride at r.t. for 4 h (88%) [552].

m.p. 74–76° [552]; 1H NMR [552].

(2-Amino-5-chlorophenyl)(3-hydroxyphenyl)methanone

[62492-58-4]

$C_{13}H_{10}ClNO_2$ mol.wt. 247.68

Synthesis

- Preparation by demethylation of 2-amino-5-chloro-3'-methoxybenzophenone with boron tribromide in methylene chloride at r.t. for 4 h (84%) [552].

m.p. 190–192° [552]; 1H NMR [552].

(2-Amino-5-chlorophenyl)(4-hydroxyphenyl)methanone

[784-41-8]

$C_{13}H_{10}ClNO_2$ mol.wt. 247.68

Syntheses

- Preparation by cleavage of 5-chloro-3-(p-hydroxyphenyl)-2,1-benzisoxazole (other name: 5-chloro-3-(p-hydroxy-phenyl)anthranil) (SM),
 - by heating at reflux with aluminium iodide for 50 min (87%) [968];

- by reaction with concentrated hydrochloric acid and an excess of tin in boiling ethanol or acetic acid. SM (m.p. 241°) was prepared by condensation of o-nitrobenzaldehyde with phenol in the presence of hydrogen chloride or phosphorous oxychloride in cold acetic acid [925];
 - by hydrogenation in the presence of 10% Pd/C in ethyl acetate between 40° and 60° at a pressure of 3 atmospheres (quantitative yield) [969].
- Preparation by demethylation of 2-amino-5-chloro-4'-methoxybenzophenone with boron tribromide in methylene chloride at r.t. for 4 h (80%) [552].
- m.p. 174° [925], 173–175° [969], 172–173° [968], 166–168° [552];
¹H NMR [552].

(4-Amino-3-nitrophenyl)(4-hydroxyphenyl)methanone

[60014-09-7]

C₁₃H₁₀N₂O₄

mol.wt. 258.23

Synthesis

- Preparation by reaction of ammonia with 4-chloro-4'-hydroxy-3-nitrobenzophenone in dimethyl sulfoxide at 100° for 6 h (72%) [898].
- Also refer to: [970].
- m.p. 218° [898]; IR [898], MS [898].

(2-Aminophenyl)(2-hydroxyphenyl)methanone

[13134-93-5]

C₁₃H₁₁NO₂

mol.wt. 213.24

Syntheses

- Preparation by demethylation of 2-amino-2'-methoxybenzophenone (SM),
- with concentrated hydrobromic acid in refluxing acetic acid for 24 h (85%) [971];
 - with aluminium chloride in refluxing benzene for 1 h (94%) [972]. SM was obtained according to [973].
- Also obtained by action of an excess ammonia on the 2,2'-dihydroxybenzophenone in ethanol [344].
- m.p. 222° [344]; red oil [971], yellow [972];
¹H NMR [972], IR [972], MS [972]; TLC [972].

(2-Aminophenyl)(2-hydroxyphenyl)methanone (Hydrochloride)

$C_{13}H_{11}NO_2 \cdot HCl$ mol.wt. 249.70

Synthesis

– Obtained from the corresponding amine [344].

m.p. 242° [344]; Spectra (NA).

(2-Aminophenyl)(3-hydroxyphenyl)methanone

[38824-12-3]

$C_{13}H_{11}NO_2$ mol.wt. 213.24

Synthesis

– Refer to: [974].

m.p. and Spectra (NA).

(3-Aminophenyl)(2-hydroxyphenyl)methanone

[35486-64-7]

$C_{13}H_{11}NO_2$ mol.wt. 213.24

Synthesis

– Preparation by reduction of 2-hydroxy-3'-nitrobenzophenone with ammonium ferrous sulfate (86%) [959].

– Also refer to: [974,975].

m.p. 119–120° [959]; IR [959], UV [959].

(4-Aminophenyl)(2-hydroxyphenyl)methanone

[13134-94-6]

$C_{13}H_{11}NO_2$ mol.wt. 213.24

Synthesis

– Preparation by hydrogenation of 2-hydroxy-4'-nitrobenzophenone in the presence of Raney nickel in methanol (89%) [962].

– Also refer to: [563].

m.p. 138–139° [962]; Spectra (NA).

(4-Aminophenyl)(4-hydroxyphenyl)methanone

[14963-34-9]

$C_{13}H_{11}NO_2$ mol.wt. 213.24

Synthesis

– Obtained by heating 4-hydroxy-4'-nitrodiphenylmethane (SM), sulfur and sodium hydroxide in 50% ethanol in a boiling water bath for 7 h (60%) [112]. In this reaction, oxidation of the methylene group to a carbonyl group occurred together

with reduction of the nitro group. The oxidizing agent for the methylene group was the tetrasulfide [63]. SM was obtained by diazotization of 4-amino-4'-nitrodiphenylmethane (83%), according to [976].

– Also refer to: [176].

m.p. 184° [112]; UV [112,176].

(3,4-Diaminophenyl)(4-hydroxyphenyl)methanone

[93958-45-3]

$C_{13}H_{12}N_2O_2$ mol.wt. 228.25

Synthesis

– Preparation by catalytic hydrogenation of 4-amino-4'-hydroxy-3-nitrobenzophenone in the presence of Raney nickel in ethanol in a Paar hydrogenator at 3 kg/cm² pressure for 4 h [898].

solid mass [898]; m.p. and Spectra (NA).

(2-Hydroxyphenyl)[2-(trifluoromethyl)phenyl]methanone

[205319-41-1]

$C_{14}H_9F_3O_2$ mol.wt. 266.22

Synthesis

– Refer to: Chem. Abstr., **128**, 257232e (1998).

m.p. and Spectra (NA).

(3-Hydroxyphenyl)[3-(trifluoromethyl)phenyl]methanone

[62810-48-4]

$C_{14}H_9F_3O_2$ mol.wt. 266.22

Synthesis

– Preparation by demethylation of 3-methoxy-3'-(trifluoro-methyl)benzophenone with refluxing pyridinium chloride or with 48% hydrobromic acid [900].

m.p. 78° [900]; Spectra (NA).

(3-Hydroxyphenyl)[4-(trifluoromethyl)phenyl]methanone

[21084-29-7]

$C_{14}H_9F_3O_2$ mol.wt. 266.22

Syntheses

– Preparation by demethylation of 3-methoxy-4'-(trifluoro-methyl)benzophenone with refluxing pyridinium chloride for 90 min (72%) or with 48% hydrobromic acid [900].

– Preparation by dealkylation of 4-(trifluoromethyl)-3'-ethoxybenzophenone with pyridinium bromide at 210° for 0.5 h [977].

m.p. 130° [900], 127–128° [977]; Spectra (NA).

(4-Hydroxyphenyl)[2-(trifluoromethyl)phenyl]methanone

[190728-32-6]

 $C_{14}H_9F_3O_2$ mol.wt. 266.22

Synthesis

– Refer to: Chem. Abstr., **127**, 34137f (1997).

m.p. and Spectra (NA).

(4-Hydroxyphenyl)[3-(trifluoromethyl)phenyl]methanone

[732-55-8]

 $C_{14}H_9F_3O_2$ mol.wt. 266.22

Syntheses

- Preparation by reaction of m-(trifluoromethyl)benzoyl fluoride with phenol in hydrofluoric acid at 100° for 6 h under 5 atmospheres (92%) [978].
- Preparation by reaction of m-(trifluoromethyl)benzoyl chloride with phenetole in the presence of aluminium chloride in carbon disulfide between 0° and 5°, then at r.t. for overnight (21%) [903].

m.p. 144–145° [903]; Spectra (NA).

(4-Hydroxyphenyl)[4-(trifluoromethyl)phenyl]methanone

[21084-27-5]

 $C_{14}H_9F_3O_2$ mol.wt. 266.22

Syntheses

- Preparation by reaction of p-(trifluoromethyl)benzoyl chloride with phenol in the presence of aluminium chloride [165].
- Also obtained from 4-fluoro-4'-(trifluoromethyl)benzophenone by reaction under nitrogen with potassium hydroxide in aqueous dimethyl sulfoxide at 60° for 18 h [170].
- Preparation by dealkylation of 4-(trifluoromethyl)-4'-ethoxybenzophenone with pyridinium bromide at 210° for 0.5 h (77%) [977].
- Also refer to: [512,943].

N.B.: K salt [170].

m.p. 147° [170], 144–145° [977], 142–143° [165]; Spectra (NA).

(2,3-Dichloro-4-methoxyphenyl)(4-hydroxyphenyl)methanone

[92285-27-3]

 $C_{14}H_{10}Cl_2O_3$ mol.wt. 297.14

Synthesis

- Preparation by adding 2,3-dichloro-4-methoxy-4'-nitrobenzophenone in a mixture of acetaldoxime and sodium

hydroxide in *N,N*-dimethylformamide cooled in an ice bath, and the mixture stirred overnight at r.t. (75%) [979].

m.p. 215–217° [979]; Spectra (NA).

(3,5-Dichloro-2-methoxyphenyl)(2-hydroxyphenyl)methanone

$C_{14}H_{10}Cl_2O_3$ mol.wt. 297.14

Synthesis

– Preparation from 2-iodophenyl 3,5-dichloro-2-methoxybenzoate on treatment with *n*-butyllithium in a mixture of ethyl ether, hexane and tetrahydrofuran at -70° for 2 h, followed by treatment with saturated aqueous ammonium chloride (68%) [58].

pale yellow oil [58]; b.p. (NA); 1H NMR [58], IR [58], MS [58].

(3,5-Dichloro-4-methoxyphenyl)(2-hydroxyphenyl)methanone

[129103-88-4]

$C_{14}H_{10}Cl_2O_3$ mol.wt. 297.14

Synthesis

N.B.: This benzophenone was mentioned in the [Chem. Abstr., **113**, 131832x (1990)]. It has never been prepared by authors [58]. The paper actually concerns the 3,5-di-chloro-2'-hydroxy-2-methoxybenzophenone or (3,5-dichloro-2-methoxyphenyl)(2-hydroxyphenyl)-methanone. In entry 6 (table 1) of the paper [58], $R_3 = H$, but this information was not indicated in this one [980].

m.p. and Spectra (NA).

(2-Chloro-4-methylphenyl)(4-hydroxyphenyl)methanone

[98155-82-9]

$C_{14}H_{11}ClO_2$ mol.wt. 246.69

Synthesis

– Refer to: [901] (compound **33**).

m.p. and Spectra (NA).

(3-Chloro-4-methylphenyl)(4-hydroxyphenyl)methanone

[83885-15-8]

$C_{14}H_{11}ClO_2$ mol.wt. 246.69

Synthesis

– Preparation by reaction of 3-chloro-4-methylbenzoyl chloride with phenol in the presence of aluminium chloride [165].

m.p. 153–154° [165]; Spectra (NA).

(4-Chloro-2-methylphenyl)(4-hydroxyphenyl)methanone

[98155-76-1]

 $C_{14}H_{11}ClO_2$ mol.wt. 246.69

Synthesis

– Refer to: [901] (compound **9**).

m.p. and Spectra (NA).

(4-Chloro-3-methylphenyl)(4-hydroxyphenyl)methanone

[83885-20-5]

 $C_{14}H_{11}ClO_2$ mol.wt. 246.69

Synthesis

– Preparation by reaction of 4-chloro-3-methylbenzoyl chloride with phenol in the presence of aluminium chloride [165].

m.p. 154–156° [165]; Spectra (NA).

(3-Chloro-4-methoxyphenyl)(4-hydroxyphenyl)methanone

[83885-14-7]

 $C_{14}H_{11}ClO_3$ mol.wt. 262.69

Synthesis

– Preparation by reaction of 3-chloro-4-methoxybenzoyl chloride with phenol in the presence of aluminium chloride [165].

m.p. 167–168° [165]; Spectra (NA).

(3-Fluoro-4-methylphenyl)(3-hydroxyphenyl)methanone

[62810-52-0]

 $C_{14}H_{11}FO_2$ mol.wt. 230.24

Synthesis

– Preparation by diazotization of 3'-amino-3-fluoro-4-methyl-benzophenone followed by hydrolysis of the diazonium salt obtained [900].

m.p. 120° [900]; Spectra (NA).

(2-Hydroxyphenyl)(2-methylphenyl)methanone

[51974-19-7]

 $C_{14}H_{12}O_2$ mol.wt. 212.25

Syntheses

– Preparation by hydrogenation of 5-chloro-2-hydroxy-2'-methylbenzophenone in ethanolic solution in the presence of 10% Pd/C and potassium acetate at r.t. under atmosphere pressure (98%) [29].

- Also obtained by photo-Fries rearrangement of phenyl o-toluate in methanol or isopropanol (36–39%) and in benzene or ethyl ether (22%) [66].
- Also obtained (by-product) by diazotization of 2-amino-2'-methylbenzophenone with sodium nitrite in 5 N hydrochloric acid (3%). 1-methylfluorenone was the major product obtained in this reaction [981].
oil [29]; m.p. 65–67° [981]; ¹H NMR [29].

(2-Hydroxyphenyl)(3-methylphenyl)methanone

[33785-66-9]

C₁₄H₁₂O₂ mol.wt. 212.25

Syntheses

- Preparation from 2-methylthioxanthen-9-one 10,10-dioxide (SM) by a three-step synthesis: SM, by refluxing in 2% sodium hydroxide-65% dioxane-water solution for 18 h gave the 2-(2-hydroxybenzoyl)-4-methylphenylsulfonic acid (72%). The former, by reaction with mercuric chloride in refluxing acetic acid for 4 h led to the 2-chloromercuri-2'-hydroxy-5-methylbenzophenone (74%). Removal of the chloromercury group was achieved with concentrated hydrochloric acid in refluxing ethanol for 2 h (82%) [62].
- Also obtained by Fries rearrangement of phenyl m-toluate in the presence of aluminium chloride in refluxing carbon disulfide, then elimination of the solvent and heating at 150° for 3 h (20%) [62].
- Also obtained by reaction of m-toluoyl chloride with phenyl borate in the presence of aluminium chloride in tetrachloroethane at 100° (13%) [55].
oil [62]; b.p._{0.9} 140–141° [62]; ¹H NMR [62], IR [62].

(2-Hydroxyphenyl)(4-methylphenyl)methanone

[19434-30-1]

C₁₄H₁₂O₂ mol.wt. 212.25

Syntheses

- Preparation by reaction of pyridinium chloride on the 2-methoxy-4'-methylbenzophenone (SM) at reflux (33%). SM was obtained by reaction of p-tolunitrile on the o-methoxyphenylmagnesium bromide in ethyl ether (44%) [982].
- Preparation by Fries rearrangement of phenyl p-methylbenzoate,
 - with aluminium chloride in refluxing chlorobenzene for 10 h (40%) or without solvent, at 160° (22%) [28] or at 180° for 10 min (15%) [518];
 - with Nafion-H, a polymeric perfluorinated resin sulfonic acid, in refluxing nitrobenzene for 12 h (18%) [38].
- Also obtained by reaction of aluminium chloride with 5-tert-butyl-2-methoxy-4'-methyl-benzophenone in benzene at 65–70° for 45 h (60–80%) [9,22].
- Also obtained by reaction of 2-methoxybenzoyl chloride with toluene in the presence of aluminium chloride [5,9], (72%) [13], (47%) [17].

- Demethylation occurred during the Friedel–Crafts acylation, especially in the presence of ferric chloride at 130–140° [5].
 - Also obtained by thermal decomposition of 2-(4'-methylbenzoyl)benzenediazonium fluoborate in 0.05 M sulfuric acid at 25° (36%) [17].
 - Also refer to: [60].
- m.p. 61° [13], 61–63° [982], 61–62° [17], 58–60° [28], 40° [518], 39–40° [9,22]. There is a discrepancy between the various melting points.
¹H NMR [38], ¹³C NMR [38].

(3-Hydroxyphenyl)(2-methylphenyl)methanone

[147029-78-5] C₁₄H₁₂O₂ mol.wt. 212.25

Synthesis

- Preparation by condensation of the Grignard reagent of anisole with o-toluoyl chloride, followed by demethylation of the resulting methyl ether (excellent yield) [964].

m.p. 112° [964]; Spectra (NA).

(3-Hydroxyphenyl)(4-methylphenyl)methanone

[62810-49-5] C₁₄H₁₂O₂ mol.wt. 212.25

Syntheses

- Preparation by reaction of m-anisoyl chloride with toluene in the presence of an excess of aluminium chloride: first at 20°, then at reflux for 2 h (78%) [119,899].
 - Preparation by diazotization of 3-amino-4'-methyl-benzophenone followed by hydrolysis of the diazonium salt obtained [900].
 - Also obtained by demethylation of 3-methoxy-4'-methylbenzophenone with aluminium chloride in refluxing chlorobenzene [900].
- m.p. 126° [119,899], 121° [900]; Spectra (NA).

(4-Hydroxyphenyl)(2-methylphenyl)methanone

[52981-01-8] C₁₄H₁₂O₂ mol.wt. 212.25

Syntheses

- Preparation by reaction of o-toluic acid with phenol in the presence of polyphosphoric acid at 100° for 20 min (47%) [149].
 - Also obtained by photo-Fries rearrangement of phenyl o-toluate in methanol or isopropanol (21%) and in ethyl ether or benzene (6–8%) [66].
- m.p. 96° [149]; Spectra (NA).

(4-Hydroxyphenyl)(3-methylphenyl)methanone

[71372-37-7]

C₁₄H₁₂O₂ mol.wt. 212.25

Syntheses

- Preparation by Fries rearrangement of phenyl m-toluate in the presence of aluminium chloride in refluxing carbon disulfide for 2 h, then elimination of the solvent and heating at 150° for 3 h (major product) [62].
 - Preparation by reaction of m-toluoyl chloride with phenetole in the presence of aluminium chloride in carbon disulfide between 0° and 5° for 8 h, then at r.t. overnight (50%) [903].
 - Also obtained by reaction of m-toluic acid with phenol in the presence of polyphosphoric acid at 100° for 20 min (19%) [149].
 - Also obtained (poor yield) by reaction of m-toluoyl chloride with phenyl borate in the presence of aluminium chloride in tetrachloroethane at 100° (5%) [55].
- m.p. 166° [149], 165–166° [62], 163–164° [903]; Spectra (NA).

(4-Hydroxyphenyl)(4-methylphenyl)methanone

[134-92-9]

C₁₄H₁₂O₂ mol.wt. 212.25

Syntheses

- Preparation by reaction of p-methylbenzoyl chloride with phenol in the presence of aluminium chloride [165].
 - Preparation by reaction of p-toluic acid with phenol in the presence of polyphosphoric acid at 100° for 20 min (24%) [149].
 - Preparation by Fries rearrangement of phenyl p-toluate,
 - with aluminium chloride without solvent at 130° for 1 h, then 160° for 1 h (20%) or in refluxing chlorobenzene for 7.5 h (57%) [28];
 - with Nafion-H, a polymeric perfluorinated resin sulfonic acid, in refluxing nitrobenzene for 12 h (45%) [38].
 - Preparation by diazotization of 4-amino-4'-methylbenzophenone, followed by hydrolysis of the diazonium salt obtained (50%) [983].
 - Also refer to: [984–988].
- m.p. 171–173° [165], 170° [149], 166–167° [983], 161–162° [28];
¹H NMR [38], ¹³C NMR [38].

(4-Hydroxyphenyl)[4-(methylthio)phenyl]methanone

[83888-61-3]

C₁₄H₁₂O₂S mol.wt. 244.31

Synthesis

- Preparation by reaction of p-(methylthio)benzoyl chloride with phenol in the presence of aluminium chloride [165].
- m.p. 133–134° [165]; Spectra (NA).

(2-Hydroxyphenyl)(2-methoxyphenyl)methanone

[21147-18-2]

 $C_{14}H_{12}O_3$ mol.wt. 228.25**Syntheses**

- Preparation from 2-iodophenyl 2-methoxybenzoate by treatment with *n*-butyllithium in a mixture of ethyl ether, hexane and tetrahydrofuran at -70° for 2 h, followed by treatment with saturated aqueous ammonium chloride (93%) [58].
 - Preparation by hydrogenolysis of 2-(benzyloxy)-2'-methoxybenzophenone (SM) in ethyl acetate in the presence of 10% Pd/C at r.t. under atmospheric pressure (91%). SM was obtained by reaction of 2-(benzyloxy)benzaldehyde with 2-methoxyphenylmagnesium bromide in tetrahydrofuran [29].
 - Also obtained by partial demethylation of 2,2'-dimethoxybenzophenone with boron trichloride in methylene chloride: first at -70° , then at r.t. for 30 min. From 2,2'-dimethoxybenzophenone, one methyl group is lost rapidly and a second somewhat more slowly [292].
 - Also obtained (poor yield) by Fries rearrangement of phenyl *o*-anisate with aluminium chloride at 160° [897].
 - Preparation by partial methylation of 2,2'-dihydroxybenzophenone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 5 h [989].
 - Also refer to: [287].
- oil [29,58]; m.p. 77° [989]; 1H NMR [29,58], IR [58], MS [58,114].

(2-Hydroxyphenyl)(3-methoxyphenyl)methanone

[21554-73-4]

 $C_{14}H_{12}O_3$ mol.wt. 228.25**Syntheses**

- Preparation from 2-methoxythioxanthen-9-one 10,10-dioxide (SM) by a three-step synthesis: SM by refluxing in 2% sodium hydroxide-65% dioxane-water solution for 18 h gave the 2-(2-hydroxybenzoyl)-4-methoxyphenylsulfonic acid (68%). The former by reaction with mercuric chloride in refluxing aqueous acetic acid for 4 h led to the 2-chloromercuri-2'-hydroxy-5-methoxybenzophenone (68%). Removal of the chloromercury group was achieved with concentrated hydrochloric acid in refluxing ethanol for 2 h (83%) [62].
- Also obtained by Fries rearrangement of phenyl *m*-anisate in the presence of aluminium chloride in refluxing carbon disulfide for 2 h, then elimination of the solvent and heating at 150° for 3 h (34%) [62].
- Also obtained by selective demethylation of 2,3'-dimethoxybenzophenone in the presence of boron trichloride in methylene chloride at r.t. for 30 min [341,343].
- Also obtained (poor yield) by reaction of 3-methoxybenzoyl chloride with anisole in the presence of aluminium chloride in refluxing carbon disulfide for 2 h [341].

– Also refer to: [897].

light yellow oil [62]; m.p. 40–42° [341]; b.p._{0.5} 148–149° [62];
¹H NMR [62,341], IR [62,341], UV [341].

(2-Hydroxyphenyl)(4-methoxyphenyl)methanone

[18733-07-8]

C₁₄H₁₂O₃ mol.wt. 228.25

Syntheses

- Preparation from 2-iodophenyl p-anisate on treatment with n-butyllithium in a mixture of ethyl ether, hexane and tetrahydrofuran at –70° for 2 h, followed by treatment with saturated aqueous ammonium chloride (<18%) [58].
 - Preparation by Fries rearrangement of phenyl p-anisate in the presence of aluminium chloride [897].
 - Also obtained by reaction of salicylaldehyde with p-iodoanisole by using a catalyst system of palladium chloride/lithium chloride in the presence of sodium carbonate in N,N-dimethyl-formamide at 100° for 6 h (81%) [51].
 - Preparation by partial demethylation of 2,4'-dimethoxybenzophenone with aluminium chloride in chlorobenzene at 80–100° [655].
 - Also refer to: [626].
- m.p. (NA); ¹H NMR [51], UV [235], MS [51].

(3-Hydroxyphenyl)(4-methoxyphenyl)methanone

[103203-53-8]

C₁₄H₁₂O₃ mol.wt. 228.25

Syntheses

- Obtained by saponification of 3-acetoxy-4'-methoxy-benzophenone with 2 N sodium hydroxide in refluxing dilute ethanol for 30 min (98%). The starting material was obtained by Friedel–Crafts acylation of anisole with m-acetoxybenzoyl chloride in the presence of aluminium chloride in carbon disulfide at 5° for 20 h (15%) [990].
 - Also obtained by selective demethylation of 3,4'-dimethoxybenzophenone in the presence of boron trichloride in methylene chloride at r.t. for 30 min [341].
- m.p. 133° [990], 130–133° [341]; Spectra (NA).

(4-Hydroxyphenyl)(2-methoxyphenyl)methanone

[72090-61-0]

C₁₄H₁₂O₃ mol.wt. 228.25

Syntheses

- Preparation by reaction of o-methoxybenzoic acid with phenol in the presence of polyphosphoric acid at 100° for 20 min (61%) [149] or at 75–85° for 3 h (56%) [346].

- Preparation by Fries rearrangement of phenyl o-methoxy-benzoate with polyphosphoric acid at 100° for 20 min (43%) [991].
- Also refer to: [155,897,992,993].

N.B.: Na salt [88].

m.p. 152–153° [991], 149° [149], 147–149° [346];

¹H NMR (Sadtler: standard n° 38490 M),

IR (Sadtler: standard n° 65528 K), UV [991].

(4-Hydroxyphenyl)(3-methoxyphenyl)methanone

[72090-62-1]

C₁₄H₁₂O₃

mol.wt. 228.25

Syntheses

- Preparation by Fries rearrangement of phenyl m-anisate in the presence of aluminium chloride in refluxing carbon disulfide for 2 h, then elimination of the solvent and heating at 150° for 3 h (major product) [62].
- Preparation by reaction of m-methoxybenzoyl chloride with phenetole in the presence of aluminium chloride in carbon disulfide between 0° and 5°, then at r.t. overnight (51%) [903].
- Also obtained by reaction of m-methoxybenzoic acid with phenol in the presence of polyphosphoric acid at 100° for 20 min (15%) [149].
- Also refer to: [897].

m.p. 141–142° [903], 138° [149], 137–138° [62]; Spectra (NA).

(4-Hydroxyphenyl)(4-methoxyphenyl)methanone

[61002-54-8]

C₁₄H₁₂O₃

mol.wt. 228.25

Syntheses

- Preparation by reduction of 4-methoxy-4'-nitro-benzophenone with stannous chloride and hydrochloric acid, followed by diazotization of the resulting 4-amino-4'-methoxybenzophenone and hydrolysis of the diazonium salt [322].
- Preparation by Fries rearrangement of phenyl p-anisate,
 - with aluminium chloride, without solvent at 120° or at 160° [315]; in nitromethane at 20° for 170 h (35%) [991]; in nitrobenzene at 75° for 6 h (49%) [991] or at 80° for 1 h (21%) [994];
 - with titanium tetrachloride, without solvent at 95–100° for 30 min (11%) [991]; in nitromethane at 20° for 170 h (76%) [991];
 - with stannic chloride in nitromethane at 20° for 170 h (14%) [991];
 - with polyphosphoric acid in a water bath for 30 min (43%) [137].

- Also obtained by reaction of p-anisic acid with phenol in the presence of polyphosphoric acid by heating in a water bath for 30 min (34%) [137] or at 100° for 20 min (75%) [149].
- Also obtained by reaction of p-hydroxybenzoic acid with anisole,
 - in the presence of polyphosphoric acid in a boiling water bath for 20 min (25%) [137];
 - in the presence of zinc chloride and a mixture of polyphosphoric acid/85% phosphoric acid (60:40) at 40°. Then, during 1.5 h, phosphorous trichloride was added and the mixture heated at 60° for 16 h (91%) [194];
 - in the presence of boron trifluoride in nitrobenzene at 80° for 30 min (74%) [186].
- Preparation by Friedel–Crafts acylation,
 - of phenol with p-methoxybenzoyl chloride in the presence of aluminium chloride [165];
 - of anisole with p-(acetoxy)benzoyl chloride in the presence of aluminium chloride in carbon disulfide at 15° for 1 h. The saponification of the 4-(acetoxy)-4'-methoxybenzophenone formed with sodium hydroxide in refluxing dilute ethanol for 30 min gave the expected ketone (95%) [990].
- Preparation by hydrolysis of 4-(4-anisoyloxy)-4'-methoxybenzophenone with concentrated sulfuric acid on standing for 10 min (79%) [137].
- Preparation from 4-fluoro-4'-methoxybenzophenone by reaction under nitrogen with potassium hydroxide in aqueous dimethyl sulfoxide at 60° for 18 h [170].
- Also refer to: [309,897,902,918,943,992,993,995–999].

N.B.: Na [88] and K salts [170].

m.p. 155° [170], 154° [990], 153–154° [994], 151–152° [322], 151° [137,149,991], 150°6–151°8 [194], 150–151° [315], 114°5–145°5 [165]. A typing error probably occurred in the published data.

¹H NMR (Sadtler: standard n° 38498 M), IR (Sadtler: standard n° 65536 K), UV [991].

[2-(Acetyloxy)phenyl](4-hydroxyphenyl)methanone

[145723-29-1]

C₁₅H₁₂O₄ mol.wt. 256.26

Synthesis

– Obtained by photooxygenation of 3-(4-hydroxyphenyl)-2-methylbenzofuran in methylene chloride at 5° (60%) [1000].

m.p. 125–126° [1000]; ¹H NMR [1000], ¹³C NMR [1000], IR [1000], UV [1000].

[4-(2-Bromoethoxy)phenyl](4-hydroxyphenyl)methanone

[79578-62-4]

 $C_{15}H_{13}BrO_3$ mol.wt. 321.17

Synthesis

– Preparation by reaction of β -bromophenetole [1001], in solution of a polyphosphoric acid/85% phosphoric acid/zinc chloride mixture. The solution was heated to 50–60°, phosphorous trichloride was added during 1 h and the mixture heated for 20 h at 70° (74%) [1002].

m.p. 139–142° [1002], 136–138° [1001]; 1H NMR [1002], IR [1002], MS [1002].

(2,3-Dimethyl-5-nitrophenyl)(2-hydroxyphenyl)methanone

[110969-51-2]

 $C_{15}H_{13}NO_4$ mol.wt. 271.27

Synthesis

– Obtained by Fries rearrangement of phenyl 2,3-dimethyl-5-nitrobenzoate with aluminium chloride without solvent at 160° for 2 h (17%) [1003].

m.p. 126° [1003]; 1H NMR [1003], IR [1003], UV [1003].

(2,3-Dimethyl-5-nitrophenyl)(4-hydroxyphenyl)methanone

[110969-52-3]

 $C_{15}H_{13}NO_4$ mol.wt. 271.27

Synthesis

– Preparation by Fries rearrangement of phenyl 2,3-dimethyl-5-nitrobenzoate with aluminium chloride without solvent at 160° for 2 h (55%) [1003].

m.p. 212° [1003]; 1H NMR [1003], IR [1003], UV [1003].

(2,3-Dimethylphenyl)(4-hydroxyphenyl)methanone

[134994-27-7]

 $C_{15}H_{14}O_2$ mol.wt. 226.27

Synthesis

– Refer to: [513].

m.p. and Spectra (NA).

(2,4-Dimethylphenyl)(2-hydroxyphenyl)methanone

[143824-87-7]

 $C_{15}H_{14}O_2$ mol.wt. 226.27

Synthesis

– Preparation by reaction of salicylic acid with m-xylene in hydrofluoric acid at 60° for 4 h in an autoclave (79%) [1004].

m.p. and Spectra (NA).

(2,4-Dimethylphenyl)(3-hydroxyphenyl)methanone

[74167-90-1]

 $C_{15}H_{14}O_2$ mol.wt. 226.27

Syntheses

- Preparation by reaction of m-anisoyl chloride with m-xylene in the presence of excess aluminium chloride at first at 20°, then at reflux for 2 h (79%) [119,899].
 - Preparation by Friedel–Crafts acylation of m-xylene with m-nitrobenzoyl chloride, reduction of the 2,4-dimethyl-3'-nitrobenzophenone so obtained and diazotization of the 3'-amino-2,4-dimethylbenzophenone formed, followed by hydrolysis of the diazonium salt [900].
 - Also refer to: [912].
- m.p. 116° [119,899]; Spectra (NA).

(2,4-Dimethylphenyl)(4-hydroxyphenyl)methanone

[116173-30-9]

 $C_{15}H_{14}O_2$ mol.wt. 226.27

Synthesis

- Obtained by reaction of EKONOL^(TM), an aromatic polyester as Friedel–Crafts reagent, with m-xylene in triflic acid solution at 25° for 18 h (90%) [922]. Similar results can be obtained using hydrofluoric acid/boron trifluoride or aluminium chloride in place of triflic acid [922].
 - Also refer to: [997] (Japanese patent).
- m.p. (NA); ¹³C NMR [922], MS [922]; HPLC [922].

(2,5-Dimethylphenyl)(2-hydroxyphenyl)methanone $C_{15}H_{14}O_2$ mol.wt. 226.27

Synthesis

- Obtained by reaction of salicylic acid with p-xylene in hydrofluoric acid at 60° for 4 h in an autoclave (18%) [1004].
- m.p. and Spectra (NA).

(2,6-Dimethylphenyl)(4-hydroxyphenyl)methanone

[61002-55-9]

 $C_{15}H_{14}O_2$ mol.wt. 226.27

Synthesis

- Preparation by Friedel–Crafts acylation of anisole with 2,6-dimethylbenzoyl chloride in the presence of aluminium chloride [902].
- m.p. 155° [902]; Spectra (NA).

(3,4-Dimethylphenyl)(3-hydroxyphenyl)methanone

[62810-57-5]

 $C_{15}H_{14}O_2$ mol.wt. 226.27

Synthesis

– Preparation by diazotization of 3'-amino-3,4-dimethyl-benzophenone followed by hydrolysis of the diazonium salt so obtained [900].

m.p. 116° [900]; Spectra (NA).

(3,4-Dimethylphenyl)(4-hydroxyphenyl)methanone $C_{15}H_{14}O_2$ mol.wt. 226.27

Syntheses

- Preparation by reaction of 3,4-dimethylbenzoyl chloride with phenol in the presence of aluminium chloride [165].
- Preparation by Friedel–Crafts acylation of o-xylene with p-anisoyl chloride in the presence of aluminium chloride in a boiling water bath for 1 h (major product, 40% yield) [1005].
- Preparation by demethylation of 3,4-dimethyl-4'-methoxybenzophenone with boiling pyridinium chloride (80%) [1005].

m.p. 131° [1005]; b.p.₁₇ 265–266° [1005]; Spectra (NA).**(3,5-Dimethylphenyl)(4-hydroxyphenyl)methanone** $C_{15}H_{14}O_2$ mol.wt. 226.27

Synthesis

– Preparation by Friedel–Crafts acylation of anisole with 3,5-dimethylbenzoyl chloride, followed by demethylation of the resulting 4'-methoxy-3,5-dimethylbenzophenone with pyridinium bromide [429].

m.p. and Spectra (NA).

(4-Ethylphenyl)(2-hydroxyphenyl)methanone

[82520-51-2]

 $C_{15}H_{14}O_2$ mol.wt. 226.27

Synthesis

- Obtained (by-product) by action of o-anisoyl chloride with ethylbenzene [5],
 - in the presence of aluminium chloride between 25° and 60° for 2 h;
 - in the presence of ferric chloride at 130–140° for 5 h.
- b.p., 165–167° [5]; $d_4^{20} = 1.1203$ [5]; $n_D^{20} = 1.6072$ [5]; Spectra (NA).

(4-Ethylphenyl)(4-hydroxyphenyl)methanone

[83888-76-0]

 $C_{15}H_{14}O_2$ mol.wt. 226.27

Synthesis

– Preparation by reaction of p-ethylbenzoyl chloride with phenol in the presence of aluminium chloride [165].

m.p. 99–100° [165]; Spectra (NA).

(4-Ethoxyphenyl)(4-hydroxyphenyl)methanone

[13380-65-9]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Obtained (by-product) by action of ethyl iodide with 4,4'-dihydroxybenzophenone in the presence of potassium hydroxide in refluxing ethanol for 3 h [323].
– Also refer to: [1006–1009].

m.p. 146–147° [323]; Spectra (NA).

(4-Hydroxyphenyl)(2-methoxy-5-methylphenyl)methanone $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Refer to: [683].

m.p. 160° [683]; Spectra (NA).

(2,3-Dimethoxyphenyl)(2-hydroxyphenyl)methanone

[129103-87-3]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Synthesis

– Preparation from 2-iodophenyl 2,3-dimethoxybenzoate by rearrangement with n-butyllithium in a mixture of ethyl ether, hexane and tetrahydrofuran at –70° for 2 h, then treatment with saturated aqueous ammonium chloride (quantitative yield) [58].

m.p. 75–77° [58]; 1H NMR [58], MS [58].**(2,4-Dimethoxyphenyl)(2-hydroxyphenyl)methanone**

[108475-95-2]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Synthesis

– Obtained, in mixture with 2-hydroxy-2',4'-dimethoxybenzophenone, by reaction of

2-methoxybenzoyl chloride with resorcinol dimethyl ether in ethyl ether in the presence of aluminium chloride for 8 h at r.t. (total yield: 65%) [1010,1011].

– Also refer to: [684].

m.p. (NA); ^1H NMR [1010,1011].

(2,4-Dimethoxyphenyl)(3-hydroxyphenyl)methanone

$\text{C}_{15}\text{H}_{14}\text{O}_4$ mol.wt. 258.27

Synthesis

– Preparation by saponification of 3'-(acetyloxy)-2,4-di-methoxybenzophenone (SM) with sodium hydroxide in refluxing dilute ethanol for 30 min [990]. SM was obtained by Friedel–Crafts acylation of resorcinol dimethyl ether with m-acetoxybenzoyl chloride in the presence of aluminium chloride in carbon disulfide at 0° for 20 h (10%).

m.p. 163° [990]; Spectra (NA).

(2,4-Dimethoxyphenyl)(4-hydroxyphenyl)methanone

[41351-30-8]

$\text{C}_{15}\text{H}_{14}\text{O}_4$ mol.wt. 258.27

Syntheses

- Preparation by Friedel–Crafts acylation of resorcinol dimethyl ether with p-hydroxybenzoic acid,
 - in the presence of zinc chloride and phosphorous oxychloride at $60\text{--}65^\circ$ for 1.5 h (71%) [1012] or in nitrobenzene at 60° for 2–3 h [1013], (64%) [1014], according to the method [626];
 - in the presence of polyphosphoric acid [429].
- Also obtained [610] according to the method of [1015].
- Also refer to: [592,625,1016,1017].

N.B.: Cs salt [1013,1017].

m.p. $138\text{--}139^\circ$ [1014], $135\text{--}137^\circ$ [1013], $134\text{--}136^\circ$ [1012];

^1H NMR [1012–1014], ^{13}C NMR [1014],

IR [1012–1014]; TLC [1012].

(2,5-Dimethoxyphenyl)(2-hydroxyphenyl)methanone

[183106-14-1]

$\text{C}_{15}\text{H}_{14}\text{O}_4$ mol.wt. 258.27

Synthesis

- Obtained by partial demethylation of 2,2',5-trimethoxybenzophenone,
 - with boron tribromide in methylene chloride at 0° for 1.5 h (50%) [395];

- with boron trichloride in methylene chloride at 0° for 3 h (50%) [395];
- with boron trifluoride-etherate in refluxing benzene for 6 h (40%) or in refluxing toluene for 4 h (40%) [395];
- with beryllium chloride in refluxing benzene for 8–10 h (60%) or in refluxing toluene for 5 h (60%) [395].

N.B.: In these experiments, only the reactions using boron halides were carried out under nitrogen atmosphere.

m.p. 98–100° [395]; ¹H NMR [395], IR [395], UV [395], MS [395].

(2,6-Dimethoxyphenyl)(2-hydroxyphenyl)methanone

[129103-86-2]

C₁₅H₁₄O₄ mol.wt. 258.27

Synthesis

- Preparation from 2-iodophenyl 2,6-dimethoxybenzoate by rearrangement with n-butyllithium in a mixture of ethyl ether, hexane and tetrahydrofuran at –70° for 2 h, then treatment with saturated aqueous ammonium chloride (quantitative yield) [58].

m.p. 120°5–121°5 [58]; ¹H NMR [58], IR [58], MS [58].

(3,4-Dimethoxyphenyl)(2-hydroxyphenyl)methanone

[183106-12-9]

C₁₅H₁₄O₄ mol.wt. 258.27

Synthesis

- Preparation by selective demethylation of 2',3,4-tri-methoxybenzophenone with excess beryllium chloride in refluxing toluene for 3.5 h (92%) [395].

m.p. 76–78° [395]; ¹H NMR [395], IR [395], UV [395], MS [395]; TLC [395].

(3,4-Dimethoxyphenyl)(4-hydroxyphenyl)methanone

[26955-00-0]

C₁₅H₁₄O₄ mol.wt. 258.27

Synthesis

- Obtained by condensation of veratric acid with phenol [1018].

– Also refer to: [1019].

m.p. 166–167° [1018]; Spectra (NA).

(3,5-Dimethoxyphenyl)(4-hydroxyphenyl)methanone
 $C_{15}H_{14}O_4$ mol.wt. 258.27
Synthesis

– Preparation by Friedel–Crafts acylation of phenol with 3,5-dimethoxybenzoyl chloride [429].

m.p. and Spectra (NA).

(2-Hydroxyphenyl)[2-(methoxymethoxy)phenyl]methanone

[59410-99-0]

 $C_{15}H_{14}O_4$ mol.wt. 258.27
**Synthesis**

– Preparation by reaction of dimethoxymethane with 2,2'-di-hydroxybenzophenone in the presence of p-toluenesulfonic acid and a “Linde” type 3 Å molecular sieve in refluxing methylene chloride overnight under nitrogen (69%) [1020].

m.p. 43°5 [1020]; 1H NMR [1020].

(2-Hydroxyphenyl)[4-(methoxymethoxy)phenyl]methanone

[31772-30-2]

 $C_{15}H_{14}O_4$ mol.wt. 258.27
**Synthesis**

– Preparation by reaction of chloromethyl methyl ether with 2,4'-dihydroxybenzophenone monosodium salt (4') in toluene at r.t. overnight (64%) [1021].

oil [1021]; b.p. (NA); IR [1021].

[4-(Dimethylamino)phenyl](3-hydroxyphenyl)methanone
 $C_{15}H_{15}NO_2$ mol.wt. 241.29
**Synthesis**

– Preparation by heating 3-methoxycarbonyloxybenzoic acid anilide and N,N-dimethylaniline in the presence of phosphorous oxychloride on a water bath for 4 h (50%) [1022].

m.p. 185–187° [1022]; Spectra (NA).

[4-(Dimethylamino)phenyl](4-hydroxyphenyl)methanone

[102827-03-2]

 $C_{15}H_{15}NO_2$ mol.wt. 241.29

Syntheses

– Preparation by demethylation of 4-(dimethylamino)-4'-methoxybenzophenone (SM) with aluminiumbromide in refluxing benzene for 4 h (95%) [18]. SM was obtained by condensation of N-(p-anisoyl)aniline with dimethylaniline [1023].

– Preparation by heating p-methylcarbonatobenzanilide and N,N-dimethylaniline in the presence of phosphorous oxychloride on a water bath for 4 h (60%) [1022].

– Also obtained by treating benzophenone-4,4'-bis(trimethylammonium chloride) with sodium methoxide in refluxing methanol for 3 h [1024].

m.p. 200° [18], 199–200° [1022,1023], 198–200° [1024]; Spectra (NA).

[2-(Acetyloxy)-5-methoxyphenyl](2-hydroxyphenyl)methanone

[83570-59-6]

 $C_{16}H_{14}O_5$ mol.wt. 286.28

Synthesis

– Obtained by adding silica gel to a solution of 2'-acetoxy-2-hydroxy-5-methoxybenzophenone in ethyl ether, then elimination of the solvent, and the resulting powder allowed to stand at r.t. during 42 h (75%) [1025]. There is a transacylation on silica gel.

m.p. 70–73° [1025]; 1H NMR [1025], IR [1025].

(2-Hydroxyphenyl)[4-(1-methylethyl)phenyl]methanone

[35839-45-3]

 $C_{16}H_{16}O_2$ mol.wt. 240.30

Synthesis

– Preparation by reaction of salicyloyl chloride with cumene in nitrobenzene in the presence of aluminium chloride, first between 4° and 8° for 50 min, then at 40° for 3 h and at r.t. overnight (60%) [889,891].

– Also refer to: [890].

b.p._{2.25} 165–167° [889,891]; Spectra (NA).

(4-Hydroxyphenyl)(4-propylphenyl)methanone

[64357-90-0]

C₁₆H₁₆O₂ mol.wt. 240.30

Synthesis

- Preparation by Friedel–Crafts acylation of phenol with p-propylbenzoyl chloride [175].

m.p. (NA); IR [174,175].

(2-Hydroxyphenyl)(2,4,6-trimethylphenyl)methanone

[46863-20-1]

C₁₆H₁₆O₂ mol.wt. 240.30

Syntheses

- Obtained by photo-Fries rearrangement of phenyl mesitoate (phenyl 2,4,6-trimethylbenzoate),
 - in methanol (39%) or in methanol in the presence of β-cyclodextrin (99%) [65];
 - in pentane (19%) [64];
 - in benzene at 40° for 332 h (9%) or in hexane at 40° for 109 h (6%) [72].
- Also obtained from mesityl o-methoxyphenyl ketone (2'-methoxy-2,4,6-trimethylbenzophenone) by cleavage of methoxy group with hydriodic acid or with a binary mixture prepared from magnesium and iodine in refluxing toluene/butyl ether solution (poor yield) [1026].
- Preparation by reaction of 2-methoxybenzoyl chloride with mesitylene in the presence of aluminium chloride in benzene (65%) [102].

m.p. 94–95° [102], 82° [94,95], 81–83° [72], 81–82° [1026];

¹H NMR [94,95,101,102], ¹³C NMR [101],

IR [94,95,102,1026]; thermal behaviour [94,95].

(3-Hydroxyphenyl)(2,4,6-trimethylphenyl)methanone

[76981-50-5]

C₁₆H₁₆O₂ mol.wt. 240.30

Syntheses

- Preparation by reaction of m-anisoyl chloride with mesitylene (1,3,5-trimethylbenzene) in the presence of an excess of aluminium chloride: first at 20°, then at reflux for 2 h (82%) [119].
- Preparation by Friedel–Crafts acylation of mesitylene with m-anisoyl chloride, followed by demethylation of the 3'-methoxy-2,4,6-trimethylbenzophenone so obtained with pyridinium bromide [429].

m.p. 130° [119]; Spectra (NA).

(4-Hydroxyphenyl)(2,4,6-trimethylphenyl)methanone

[2004-55-9]

C₁₆H₁₆O₂ mol.wt. 240.30

Syntheses

- Preparation by Friedel–Crafts acylation of phenol with mesitoyl chloride in the presence of aluminium chloride in carbon disulfide [174,175].
 - Also obtained by photo-Fries rearrangement of phenyl mesitoate (phenyl 2,4,6-trimethylbenzoate),
 - in methanol (46%) [65];
 - in pentane (24%) [64];
 - in benzene at 40° for 332 h (12%) [72];
 - in hexane at 40° for 109 h (11%) [72].
- m.p. 167–168° [72]; ¹H NMR [72], IR [72,174,175], UV [72].

(2-Hydroxyphenyl)(2,3,4-trimethoxyphenyl)methanone

[147188-09-8]

C₁₆H₁₆O₅ mol.wt. 288.30

Synthesis

- Obtained, in mixture with 2-hydroxy-2',3,4-trimethoxy-benzophenone, by reaction of 2-methoxybenzoyl chloride with pyrogallol trimethyl ether in ethyl ether in the presence of aluminium chloride for 8 h at r.t. (total yield: 56–59%) [1010,1011].
 - Also refer to: [1027].
- m.p. (NA); ¹H NMR [1010].

(2-Hydroxyphenyl)(2,4,5-trimethoxyphenyl)methanone

[147188-07-6]

C₁₆H₁₆O₅ mol.wt. 288.30

Synthesis

- Obtained, in mixture with 2-hydroxy-2',4,5-trimethoxy-benzophenone, by reaction of 2-methoxybenzoyl chloride with 1,2,4-trimethoxybenzene in ethyl ether in the presence of aluminium chloride for 8 h at r.t. (total yield: 56%) [1010].
 - Also refer to: [1011].
- m.p. (NA); ¹H NMR [1010].

(2-Hydroxyphenyl)(2,4,6-trimethoxyphenyl)methanone

[147188-05-4]

 $C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

- Obtained, in mixture with 2-hydroxy-2',4,6-trimethoxy-benzophenone, by reaction of 2-methoxybenzoyl chloride with phloroglucinol trimethyl ether in ethyl ether in the presence of aluminium chloride for 8 h at r.t. (total yield: 59%) [1010].
- Also refer to: [1011].

m.p. (NA); 1H NMR [1010].**(3-Hydroxyphenyl)(2,4,6-trimethoxyphenyl)methanone** $C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

- Preparation by reaction of m-hydroxybenzocyanide with phloroglucinol trimethyl ether (Hoesch reaction) [429].

m.p. and Spectra (NA).

(4-Hydroxyphenyl)(2,4,6-trimethoxyphenyl)methanone

[41351-32-0]

 $C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

- Refer to: [429].

m.p. and Spectra (NA).

(4-Hydroxyphenyl)(3,4,5-trimethoxyphenyl)methanone

[14938-63-7]

 $C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

- Preparation by Friedel–Crafts acylation of phenol with 3,4,5-trimethoxybenzoyl chloride in nitrobenzene in the presence of aluminium chloride, first at 10°, then for 24 h at r.t. (45%) [1028].

m.p. 120° [1028]; Spectra (NA).

(4-Butylphenyl)(4-hydroxyphenyl)methanone

[190728-33-7]

 $C_{17}H_{18}O_2$ mol.wt. 254.33

Synthesis

– Refer to: Chem. Abstr., **127**, 34137f (1997).

m.p. and Spectra (NA).

[4-(1,1-Dimethylethyl)phenyl](2-hydroxyphenyl)methanone $C_{17}H_{18}O_2$ mol.wt. 254.33

Synthesis

– Refer to: [84].

m.p. and Spectra (NA).

[4-(1,1-Dimethylethyl)phenyl](4-hydroxyphenyl)methanone

[55044-96-7]

 $C_{17}H_{18}O_2$ mol.wt. 254.33

Synthesis

– Preparation by reaction of p-tert-butylbenzoyl chloride with phenol in the presence of aluminium chloride [165].

m.p. 130–131° [165]; Spectra (NA).

[4-(1,1-Dimethylethoxy)phenyl](4-hydroxyphenyl)methanone $C_{17}H_{18}O_3$ mol.wt. 270.33

Synthesis

– Obtained by decomposition of the benzophenone-4,4'-bis(trimethylammonium chloride) with sodium tert-butoxide in refluxing alcohol for 3 h [1024].

m.p. 85° [1024]; Spectra (NA).

(4-Hydroxyphenyl)(4-pentylphenyl)methanone

[64357-91-1]

 $C_{18}H_{20}O_2$ mol.wt. 268.36

Synthesis

– Preparation by reaction of 4-pentylbenzoyl chloride with phenol in the presence of aluminium chloride in carbon disulfide [174,175].

m.p. (NA); IR [174,175].

(3-Hydroxyphenyl)[4-methoxy-2-methyl-5-(1-methylethyl)phenyl]methanone

[109250-48-8]

 $C_{18}H_{20}O_3$ mol.wt. 284.36

Synthesis

– Obtained by saponification of 3'-acetoxy-4-methoxy-2-methyl-5-isopropylbenzophenone (SM) with sodium hydroxide in dilute ethanol at reflux for 30 min (73%).

SM was prepared by Friedel–Crafts acylation of thymol methyl ether with m-acetoxybenzoyl chloride in the presence of aluminium chloride in carbon disulfide at 0° for 20 h (12%) [990].

m.p. 106° [990]; Spectra (NA).

(4-Hydroxyphenyl)[4-methoxy-2-methyl-5-(1-methylethyl)phenyl]methanone

[109250-49-9]

 $C_{18}H_{20}O_3$ mol.wt. 284.36

Synthesis

– Obtained by saponification of 4'-acetoxy-4-methoxy-2-methyl-5-isopropylbenzophenone (SM) with sodium hydroxide in dilute ethanol at reflux for

30 min (80%). SM was prepared by Friedel–Crafts acylation of thymol methyl ether with p-acetoxy-benzoyl chloride in the presence of aluminium chloride in carbon disulfide at 15° for 3 h (17%) [990].

b.p.₁₆ 265–268° [990]; m.p. 65° [990]; Spectra (NA).

(4-Hydroxyphenyl)[6-methoxy-2-methyl-3-(1-methylethyl)phenyl]methanone

[109250-50-2]

 $C_{18}H_{20}O_3$ mol.wt. 284.36

Synthesis

– Obtained by saponification of 4'-acetoxy-6-methoxy-2-methyl-3-isopropylbenzophenone (SM) with sodium hydroxide in dilute ethanol at reflux for

30 min (79%). SM was prepared by Friedel–Crafts acylation of p-thymol methyl ether (3-methyl-4-isopropylanisole) with p-acetoxybenzoyl chloride in the presence of aluminium chloride in carbon disulfide at 15° for 3 h (7%) [990].

b.p._{0,3} 212–213° [990]; Spectra (NA).

(2,4-Dimethoxy-3-propylphenyl)(2-hydroxyphenyl)methanone

[115296-03-2]

 $C_{18}H_{20}O_4$ mol.wt. 300.35

Synthesis

– Obtained (poor yield) by reaction of o-anisoyl chloride with 1,3-dimethoxy-2-propylbenzene

in methylene chloride in the presence of aluminium chloride, first at 0° for 2 h then at r.t. for 1 h (13%) [1029].

oil [1029]; b.p. and Spectra (NA).

(2-Hydroxyphenyl)(2-phenoxyphenyl)methanone

[194548-68-0]

$C_{19}H_{14}O_3$ mol.wt. 290.32

Synthesis

– Refer to: Chem. Abstr., **127**, 205428h (1997).

m.p. and Spectra (NA).

(3-Hydroxyphenyl)(4-phenoxyphenyl)methanone

[76981-53-8]

$C_{19}H_{14}O_3$ mol.wt. 290.32

Synthesis

– Preparation by reaction of m-anisoyl chloride with diphenyl oxide in the presence of an excess of aluminium chloride: first at 20°, then at reflux for 2 h (46%) [119].

m.p. 142° [119]; Spectra (NA).

(4-Hydroxyphenyl)(4-phenoxyphenyl)methanone

[78930-16-2]

$C_{19}H_{14}O_3$ mol.wt. 290.32

Synthesis

– Preparation from 4-fluoro-4'-phenoxy-benzophenone by reaction

under nitrogen with potassium hydroxide in aqueous dimethyl sulfoxide at 60° for 18 h [170].

– Also refer to: [943].

N.B.: K salt [170].

m.p. 143° [170]; Spectra (NA).

[2-[(6-Bromohexyl)oxy]phenyl](4-hydroxyphenyl)methanone

[31772-32-4]

$C_{19}H_{21}BrO_3$ mol.wt. 377.28

Synthesis

– Preparation by heating 2-(6-bromohexyloxy)-4'-methoxy-benzophenone in refluxing aqueous acetic acid in the presence of a few concentrated sulfuric acid for 15 min (95%) [1021].

oil [1021]; b.p. (NA); IR [1021].

[4-[(6-Bromohexyl)oxy]phenyl](2-hydroxyphenyl)methanoneC₁₉H₂₁BrO₃ mol.wt. 377.28**Synthesis**

– Preparation by reaction of 1,6-dibromohexane with 2,4'-dihydroxybenzophenone in ethanol in the presence of potassium hydroxide, first at r.t. for 1 h then at reflux for 40 min (63%) [1021].

yellow oil [1021]; b.p. (NA); IR [1021].

[4-[(7-Bromoheptyl)oxy]phenyl](2-hydroxyphenyl)methanoneC₂₀H₂₃BrO₃ mol.wt. 391.30**Synthesis**

– Preparation by reaction of 1,7-dibromoheptane with 2,4'-dihydroxybenzophenone in ethanol in the presence of potassium hydroxide, first at r.t. for 1 h then at reflux for 40 min [1021].

yellow oil [1021]; b.p. (NA); IR [1021].

[4-(Heptyloxy)phenyl](2-hydroxyphenyl)methanone

C₂₀H₂₄O₃ mol.wt. 312.41**Synthesis**

– Refer to: [852].

m.p. and Spectra (NA).

[4-[(8-Bromooctyl)oxy]phenyl](2-hydroxyphenyl)methanoneC₂₁H₂₅BrO₃ mol.wt. 405.33**Synthesis**

– Preparation by reaction of 1,8-dibromooctane with 2,4'-dihydroxybenzophenone in ethanol in the presence of potassium hydroxide, first at r.t. for 1 h, then at reflux for 40 min (57%) [1021].

yellow oil [1021]; b.p. (NA); IR [1021].

[4-[(9-Bromononyl)oxy]phenyl](2-hydroxyphenyl)methanoneC₂₂H₂₇BrO₃ mol.wt. 419.36**Synthesis**

- Preparation by reaction of 1,9-dibromononane with 2,4'-dihydroxybenzophenone in ethanol in the presence of potassium hydroxide, first at r.t. for 1 h, then at reflux for 40 min (74%) [1021].

yellow oil [1021]; b.p. (NA); IR [1021].

[4-[(10-Bromodecyl)oxy]phenyl](2-hydroxyphenyl)methanoneC₂₃H₂₉BrO₃ mol.wt. 433.39**Synthesis**

- Preparation by reaction of 1,10-dibromodecane with 2,4'-dihydroxybenzophenone in ethanol in the presence of potassium hydroxide, first at r.t. for 1 h, then at reflux for 40 min (68%) [1021].

yellow oil [1021]; b.p.₅ 138–141° [1021]; IR [1021].**[4-[(11-Bromoundecyl)oxy]phenyl](2-hydroxyphenyl)methanone**C₂₄H₃₁BrO₃ mol.wt. 447.41**Synthesis**

- Preparation by reaction of 1,11-dibromoundecane with 2,4'-dihydroxybenzophenone in ethanol in the presence of potassium hydroxide, first at r.t. for 1 h, then at reflux for 40 min (quantitative yield) [1021].

yellow oil [1021]; b.p. (NA); IR [1021].

[4-[(12-Bromododecyl)oxy]phenyl](2-hydroxyphenyl)methanoneC₂₅H₃₃BrO₃ mol.wt. 461.44**Synthesis**

- Preparation by reaction of 1,12-dibromododecane with 2,4'-dihydroxybenzophenone in ethanol in the presence of potassium hydroxide, first at r.t. for 1 h, then at reflux for 40 min (46%) [1021].

yellow crystals [1021]; m.p. (NA); IR [1021].

(4-Dodecylphenyl)(2-hydroxyphenyl)methanone

[35698-22-7]

 $C_{25}H_{34}O_2$ mol.wt. 366.54

Synthesis

– Obtained by reaction of 2-hydroxybenzoyl chloride with dodecylbenzene in nitrobenzene in the presence of aluminium chloride for 4 h at 40° then 16 h at r.t. (16%) [889,891].

b.p._{0.1} 175–195° [889,891]; Spectra (NA).**[4-(Hexadecyloxy)phenyl](4-hydroxyphenyl)methanone**

[129727-61-3]

 $C_{29}H_{42}O_3$ mol.wt. 438.65

Synthesis

– Refer to: [1030] (Japanese patent).

m.p. and Spectra (NA).

2.1.3 Substituents Located on Both Rings**(2,4-Dichlorophenyl)(2,3,5-trichloro-6-hydroxyphenyl)methanone**

[34171-61-4]

 $C_{13}H_5Cl_5O_2$ mol.wt. 370.45

Synthesis

– Preparation by Fries rearrangement of 2,4,5-trichlorophenyl 2,4-dichlorobenzoate with aluminium chloride for 30 min at 150–160° [458].

m.p. 81–82° [458]; Spectra (NA).

(3,4-Dichlorophenyl)(2,3,5-trichloro-6-hydroxyphenyl)methanone

[34171-60-3]

 $C_{13}H_5Cl_5O_2$ mol.wt. 370.45

Synthesis

– Preparation by Fries rearrangement of 2,4,5-trichlorophenyl 3,4-dichlorobenzoate with aluminium chloride for 30 min at 150–160° [458].

m.p. 217–218° [458]; Spectra (NA).

(4-Bromophenyl)(2,3,5-trichloro-6-hydroxyphenyl)methanone[34171-63-6] $C_{13}H_6BrCl_3O_2$ mol.wt. 380.45

Synthesis

– Preparation by Fries rearrangement of 2,4,5-trichlorophenyl p-bromobenzoate with aluminium chloride for 30 min at 150–160° [458].

m.p. 185–186° [458]; Spectra (NA).

(2-Chlorophenyl)(2,3,5-trichloro-6-hydroxyphenyl)methanone[34174-12-4] $C_{13}H_6Cl_4O_2$ mol.wt. 336.00

Synthesis

– Preparation by Fries rearrangement of 2,4,5-trichlorophenyl o-chlorobenzoate with aluminium chloride for 30 min at 150–160° [458].

m.p. 94–95° [458]; Spectra (NA).

(4-Chlorophenyl)(2,3,5-trichloro-6-hydroxyphenyl)methanone[34171-59-0] $C_{13}H_6Cl_4O_2$ mol.wt. 336.00

Synthesis

– Preparation by Fries rearrangement of 2,4,5-trichlorophenyl p-chlorobenzoate with aluminium chloride for 30 min at 150–160° [458].

m.p. 176–177° [458]; Spectra (NA).

(2,3-Dichloro-4-hydroxyphenyl)(2,4-dichlorophenyl)methanone[34183-05-6] $C_{13}H_6Cl_4O_2$ mol.wt. 336.00

Synthesis

– Obtained by Fries rearrangement of 2,3-dichlorophenyl 2,4-dichlorobenzoate with aluminium chloride in chlorobenzene for 20 min at 140–150° or in nitrobenzene for 24 h at 75° [480].

m.p. 164–165° [480]; Spectra (NA).

(2,3-Dichloro-4-hydroxyphenyl)(3,4-dichlorophenyl)methanone

[72482-75-8]

 $C_{13}H_6Cl_4O_2$ mol.wt. 336.00

Synthesis

– Preparation by demethylation of 2,3,3',4'-tetrachloro-4-methoxybenzophenone (SM) with aluminium chloride,

- in refluxing methylene chloride for overnight [475];
- in refluxing benzene for 5 h, then at r.t. for 18 h [476].

SM was obtained by Friedel–Crafts acylation of 2,3-dichloroanisole with 3,4-dichlorobenzoyl chloride in the presence of aluminium chloride in refluxing methylene chloride [475] or in ethylene dichloride at 60° for 1 h [476].

m.p. 179–180° [476]; Spectra (NA).

(2,4-Dichloro-6-hydroxyphenyl)(2,4-dichlorophenyl)methanone

[34174-05-5]

 $C_{13}H_6Cl_4O_2$ mol.wt. 336.00

Synthesis

– Preparation by Fries rearrangement of 3,5-dichlorophenyl 2,4-dichlorobenzoate with aluminium chloride for 30 min at 150–160° [458].

m.p. 105–106° [458]; Spectra (NA).

(2,4-Dichloro-6-hydroxyphenyl)(2,5-dichlorophenyl)methanone

[34174-09-9]

 $C_{13}H_6Cl_4O_2$ mol.wt. 336.00

Synthesis

– Preparation by Fries rearrangement of 3,5-dichlorophenyl 2,5-dichlorobenzoate with aluminium chloride for 30 min at 150–160° [458].

m.p. 107–108° [458]; Spectra (NA).

(2,4-Dichloro-6-hydroxyphenyl)(2,6-dichlorophenyl)methanone

[34786-96-4]

 $C_{13}H_6Cl_4O_2$ mol.wt. 336.00

Synthesis

– Preparation by Fries rearrangement of 3,5-dichlorophenyl 2,6-dichlorobenzoate with aluminium chloride for 30 min at 150–160° [458].

m.p. 110–111° [458]; Spectra (NA).

(2,4-Dichloro-6-hydroxyphenyl)(3,4-dichlorophenyl)methanone

[31656-23-2]

 $C_{13}H_6Cl_4O_2$ mol.wt. 336.00**Synthesis**

– Preparation by Fries rearrangement of 3,5-dichlorophenyl 3,4-dichlorobenzoate with aluminium chloride first 10 min at 140–150°, then for 30 min at 150–160° (80%) [458].

m.p. 138–139° [458]; Spectra (NA).

(2,5-Dichloro-4-hydroxyphenyl)(2,4-dichlorophenyl)methanone

[34183-04-5]

 $C_{13}H_6Cl_4O_2$ mol.wt. 336.00**Synthesis**

– Obtained by Fries rearrangement of 2,5-dichlorophenyl 2,4-dichlorobenzoate with aluminium chloride in chloro-benzene for 20 min at 140–150° or in nitrobenzene for 24 h at 75° [480].

m.p. 147–148° [480]; Spectra (NA).

(2,5-Dichloro-4-hydroxyphenyl)(3,4-dichlorophenyl)methanone

[34183-03-4]

 $C_{13}H_6Cl_4O_2$ mol.wt. 336.00**Synthesis**

– Obtained by Fries rearrangement of 2,5-dichlorophenyl 3,4-dichlorobenzoate with aluminium chloride for 20 min at 140–150° or in nitrobenzene for 24 h at 75° [480].

m.p. 160–161° [480]; Spectra (NA).

(2,6-Dichloro-4-hydroxyphenyl)(3,4-dichlorophenyl)methanone

[34183-00-1]

 $C_{13}H_6Cl_4O_2$ mol.wt. 336.00**Synthesis**

– Obtained by Fries rearrangement of 3,5-dichlorophenyl 3,4-dichlorobenzoate with aluminium chloride,

- in chlorobenzene for 20 min at 140–150° or in nitro-benzene for 24 h at 75° [480];
- without solvent, first for 10 min at 140–150°, then for 30 min at 150–160° (by-product) [458].

m.p. 180–181° [458,480]; Spectra (NA).

(3,5-Dichloro-4-hydroxyphenyl)(2,4-dichlorophenyl)methanone

[34182-98-4]

 $C_{13}H_6Cl_4O_2$ mol.wt. 336.00

Synthesis

– Preparation by Fries rearrangement of 2,6-dichlorophenyl 2,4-dichlorobenzoate with aluminium chloride in chloro-benzene at 140–150° for 20 min or in nitrobenzene at 75° for 24 h [480].

– Also refer to: [468] (Japanese patent).

m.p. 183°5–184°5 [480]; Spectra (NA).

(3,5-Dichloro-4-hydroxyphenyl)(3,4-dichlorophenyl)methanone

[34189-57-6]

 $C_{13}H_6Cl_4O_2$ mol.wt. 336.00

Synthesis

– Preparation by Fries rearrangement of 2,6-dichlorophenyl 3,4-dichlorobenzoate with aluminium chloride,

- in chlorobenzene for 20 min at 140–150° (89%) [480];
- in nitrobenzene for 24 h at 75° (89%) [480].

m.p. 202–203° [480]; Spectra (NA).

(3,6-Dichloro-2-hydroxyphenyl)(2,4-dichlorophenyl)methanone

[34171-57-8]

 $C_{13}H_6Cl_4O_2$ mol.wt. 336.00

Synthesis

– Preparation by Fries rearrangement of 2,5-dichlorophenyl 2,4-dichlorobenzoate with aluminium chloride for 30 min at 150–160° [458].

m.p. 115–116° [458]; Spectra (NA).

(4-Bromophenyl)(2,4-dichloro-6-hydroxyphenyl)methanone

[34174-06-6]

 $C_{13}H_7BrCl_2O_2$ mol.wt. 346.01

Synthesis

– Preparation by Fries rearrangement of 3,5-dichlorophenyl p-bromobenzoate with aluminium chloride for 30 min at 150–160° [458].

m.p. 157–158° [458]; Spectra (NA).

(4-Bromophenyl)(2,6-dichloro-4-hydroxyphenyl)methanone

[34183-12-5]

 $C_{13}H_7BrCl_2O_2$ mol.wt. 346.01

Synthesis

– Obtained by Fries rearrangement of 3,5-dichlorophenyl p-bromobenzoate with aluminium chloride in chloro-benzene for 20 min at 140–150° or in nitrobenzene for 24 h at 75° [480].

m.p. 147–148° [480]; Spectra (NA).

(4-Bromophenyl)(3,5-dichloro-4-hydroxyphenyl)methanone

[34183-07-8]

 $C_{13}H_7BrCl_2O_2$ mol.wt. 346.01

Synthesis

– Preparation by Fries rearrangement of 2,6-dichlorophenyl p-bromobenzoate with aluminium chloride in chloro-benzene for 20 min at 140–150° or in nitrobenzene for 24 h at 75° [480].

m.p. 173–174° [480]; Spectra (NA).

(4-Bromophenyl)(2,5-difluoro-4-hydroxyphenyl)methanone

[192437-36-8]

 $C_{13}H_7BrF_2O_2$ mol.wt. 313.10

Synthesis

- Preparation by demethylation of 4'-bromo-2,5-difluoro-4-methoxybenzophenone (SM) with 62% aqueous hydrobromic acid in refluxing acetic acid for 13 h (95%). SM was obtained by Friedel–Crafts acylation of 2,5-di-fluoroanisole with 4-bromobenzoyl chloride in nitrobenzene in the presence of aluminium chloride, first at temperature <6°, then at r.t. overnight (80%).
- Refer to: Chem. Abstr., **127**, 108766j (1997).
- Also refer to: Chem. Abstr., **127**, 108921f (1997).

m.p. and Spectra (NA).

(4-Chlorophenyl)(5-fluoro-2-hydroxy-3-nitrophenyl)methanone

[85052-27-3]

 $C_{13}H_7ClFNO_4$ mol.wt. 295.65

Synthesis

– Preparation by reaction of 60% nitric acid with 4'-chloro-5-fluoro-2-hydroxybenzophenone in acetic acid at r.t. for 30 min (84%) [472].

m.p. (NA); yellow crystals [472]; 1H NMR [472], IR [472], MS [472]; TLC [472].

(2,3-Dichloro-4-hydroxyphenyl)(2-fluorophenyl)methanone[72498-54-5] $C_{13}H_7Cl_2FO_2$ mol.wt. 285.10**Synthesis**

- Preparation by demethylation of 2,3-dichloro-2'-fluoro-4-methoxybenzophenone (SM) with aluminium chloride in refluxing benzene for 5 h [476], (89%) [1031] or in refluxing methylene chloride overnight [475]. SM was obtained by Friedel-Crafts acylation of 2,3-dichloroanisole with o-fluorobenzoyl chloride in the presence of aluminium chloride in refluxing methylene chloride [475] or in ethylene dichloride for 2 h [476].
 - Also refer to: [1032].
- m.p. 128–131° [476,1031]; Spectra (NA).

(2,3-Dichloro-4-hydroxyphenyl)(3-fluorophenyl)methanone[72482-40-7] $C_{13}H_7Cl_2FO_2$ mol.wt. 285.10**Syntheses**

- Preparation by demethylation of 2,3-dichloro-3'-fluoro-4-methoxybenzophenone (SM) with aluminium chloride in refluxing methylene chloride overnight. SM was obtained by Friedel-Crafts acylation of 2,3-dichloroanisole with m-fluorobenzoyl chloride in the presence of aluminium chloride in refluxing methylene chloride [475].
 - Preparation by reaction of m-fluorobenzoyl chloride with 2,3-dichloroanisole in the presence of aluminium chloride [476]. Here, in this process, there is simultaneously acylation and demethylation in one step.
- m.p. and Spectra (NA).

(2,3-Dichloro-4-hydroxyphenyl)(4-fluorophenyl)methanone[62967-10-6] $C_{13}H_7Cl_2FO_2$ mol.wt. 285.10**Synthesis**

- Preparation by demethylation of 2,3-dichloro-4'-fluoro-4-methoxybenzophenone (SM),
 - with aluminium chloride in refluxing methylene chloride overnight (72%) [475];
 - with pyridinium chloride at 200° for 1 h [476].
 SM was obtained by Friedel-Crafts acylation of 2,3-dichloroanisole with p-fluorobenzoyl chloride in the presence of aluminium chloride in methylene chloride first at 5°, then at reflux for 2 h (50%) [475] or in ethylene dichloride at 60° for 1 h [476].
 - Also refer to: [1031].
- m.p. 155–159° [475]; Spectra (NA).

(5-Chloro-2-hydroxy-3-nitrophenyl)(4-chlorophenyl)methanone

[85052-24-0]

 $C_{13}H_7Cl_2NO_4$ mol.wt. 312.11

Synthesis

– Preparation by reaction of 60% nitric acid with 4',5-di-chloro-2-hydroxybenzophenone in the presence of one drop of concentrated sulfuric acid at r.t. for 25 min (92%) [472].

m.p. (NA); crystals [472]; 1H NMR [472], IR [472], MS [472]; TLC [472].

(2,3-Dichloro-4-hydroxyphenyl)(4-nitrophenyl)methanone

[92285-28-4]

 $C_{13}H_7Cl_2NO_4$ mol.wt. 312.11

Synthesis

– Preparation by demethylation of 2,3-dichloro-4-methoxy-4'-nitrobenzophenone (SM) with aluminium

chloride in refluxing ethylene dichloride for 1.5 h (95%) [979] or in refluxing methylene chloride overnight [475]. SM was obtained by Friedel–Crafts acylation of 2,3-dichloroanisole with p-nitrobenzoyl chloride in the presence of aluminium chloride in refluxing methylene chloride [475].

m.p. 201–204° [979]; Spectra (NA).

(2-Chloro-4-hydroxyphenyl)(2,4-dichlorophenyl)methanone

[34294-62-7]

 $C_{13}H_7Cl_3O_2$ mol.wt. 301.56

Synthesis

– Obtained by Fries rearrangement of m-chlorophenyl 2,4-dichlorobenzoate with aluminium chloride in chloro-benzene for 20 min at 140–150° or in nitrobenzene for 24 h at 75° [480].

m.p. 163–164° [480]; Spectra (NA).

(3-Chloro-4-hydroxyphenyl)(2,4-dichlorophenyl)methanone

[34182-96-2]

 $C_{13}H_7Cl_3O_2$ mol.wt. 301.56

Synthesis

– Preparation by Fries rearrangement of o-chlorophenyl 2,4-dichlorobenzoate with aluminium chloride in chloro-benzene for 20 min at 140–150° or in nitrobenzene for 24 h at 75° [480].

m.p. 144–145° [480]; Spectra (NA).

(5-Chloro-2-hydroxyphenyl)(2,4-dichlorophenyl)methanone

[72089-86-2]

 $C_{13}H_7Cl_3O_2$ mol.wt. 301.56

Synthesis

- Preparation by Fries rearrangement of p-chlorophenyl 2,4-dichlorobenzoate with aluminium chloride at 190° for 15 min [569].

m.p. 96–97° [569]; Spectra (NA).

(5-Chloro-2-hydroxyphenyl)(3,4-dichlorophenyl)methanone $C_{13}H_7Cl_3O_2$ mol.wt. 301.56

Synthesis

- Preparation by reaction of 3,4-dichlorobenzoyl chloride with p-chlorophenol in the presence of aluminium chloride, first at 100° for 3 min, then at 178–180° for 23 min (53%) [484].

m.p. 92–92.5 [484]; Spectra (NA).

(2-Chlorophenyl)(2,3-dichloro-4-hydroxyphenyl)methanone

[72482-80-5]

 $C_{13}H_7Cl_3O_2$ mol.wt. 301.56

Synthesis

- Preparation by demethylation of 2,2',3-trichloro-4-methoxybenzophenone (SM) with aluminium chloride in refluxing benzene for 5 h, then at r.t. for 18 h.
- SM was obtained by reaction of o-chlorobenzoyl chloride with 2,3-dichloroanisole in ethylene dichloride in the presence of aluminium chloride at 60° for 1 h [476].

m.p. 74–77° [476]; Spectra (NA).

(2-Chlorophenyl)(2,4-dichloro-6-hydroxyphenyl)methanone

[34174-11-3]

 $C_{13}H_7Cl_3O_2$ mol.wt. 301.56

Synthesis

- Preparation by Fries rearrangement of 3,5-dichlorophenyl o-chlorobenzoate with aluminium chloride for 30 min at 150–160° [458].

m.p. 72–73° [458]; Spectra (NA).

(2-Chlorophenyl)(3,5-dichloro-2-hydroxyphenyl)methanoneC₁₃H₇Cl₃O₂ mol.wt. 301.56

Synthesis

– Preparation by reaction of o-chlorobenzoyl chloride with 2,4-dichlorophenol in the presence of aluminium chloride at 180° [484].

m.p. 92° [484]; Spectra (NA).

(2-Chlorophenyl)(3,5-dichloro-4-hydroxyphenyl)methanone

[34183-18-1]

C₁₃H₇Cl₃O₂ mol.wt. 301.56

Synthesis

– Preparation by Fries rearrangement of 2,6-dichlorophenyl o-chlorobenzoate with aluminium chloride in chlorobenzene for 20 min at 140–150° or in nitrobenzene for 24 h at 75° [480].

m.p. 162–163° [480]; Spectra (NA).

(3-Chlorophenyl)(2,3-dichloro-4-hydroxyphenyl)methanoneC₁₃H₇Cl₃O₂ mol.wt. 301.56

Synthesis

– Preparation by demethylation of 2,3,3'-trichloro-4-methoxy-benzophenone (SM) with aluminium chloride in refluxing methylene chloride overnight. SM was obtained by Friedel–Crafts acylation of 2,3-dichloroanisole with m-chloro-benzoyl chloride in the presence of aluminium chloride in refluxing methylene chloride [475].

m.p. and Spectra (NA).

(4-Chlorophenyl)(2,3-dichloro-4-hydroxyphenyl)methanone

[72498-76-1]

C₁₃H₇Cl₃O₂ mol.wt. 301.56

Synthesis

– Preparation by demethylation of 2,3,4'-trichloro-4-methoxybenzophenone (SM) with aluminium chloride in refluxing methylene chloride overnight. SM was obtained by Friedel–Crafts acylation of 2,3-dichloroanisole with p-chlorobenzoyl chloride in the presence of aluminium chloride in refluxing methylene chloride [475].

– Also refer to: [476].

m.p. and Spectra (NA).

(4-Chlorophenyl)(2,4-dichloro-6-hydroxyphenyl)methanone

[34171-58-9]

 $C_{13}H_7Cl_3O_2$ mol.wt. 301.56

Synthesis

– Preparation by Fries rearrangement of 3,5-dichlorophenyl p-chlorobenzoate with aluminium chloride for 30 min at 150–160° [458].

m.p. 161–162° [458]; Spectra (NA).

(4-Chlorophenyl)(2,6-dichloro-4-hydroxyphenyl)methanone

[34183-11-4]

 $C_{13}H_7Cl_3O_2$ mol.wt. 301.56

Synthesis

– Obtained by Fries rearrangement of 3,5-dichlorophenyl p-chlorobenzoate with aluminium chloride in chloro-benzene for 20 min at 140–150° or in nitrobenzene for 24 h at 75° [480].

m.p. 137°5–138° [480]; Spectra (NA).

(4-Chlorophenyl)(3,5-dichloro-4-hydroxyphenyl)methanone

[34182-97-3]

 $C_{13}H_7Cl_3O_2$ mol.wt. 301.56

Synthesis

– Preparation by Fries rearrangement of 2,6-dichlorophenyl p-chlorobenzoate with aluminium chloride in chloro-benzene for 20 min at 140–150° or in nitrobenzene for 24 h at 75° [480].

m.p. 179–180° [480]; Spectra (NA).

(2,6-Difluorophenyl)(3-fluoro-4-hydroxyphenyl)methanone

[161581-97-1]

 $C_{13}H_7F_3O_2$ mol.wt. 252.19

Synthesis

– Preparation by demethylation of 4-methoxy-2,3',6-tri-fluorobenzophenone (SM) with 62% aqueous hydrobromic acid in acetic acid at 125° (97%). SM (m.p. 79–83°) was obtained by Friedel–Crafts acylation of o-fluoroanisole with 2,6-difluorobenzoyl chloride in nitrobenzene in the presence of aluminium chloride [512].

m.p. (NA); MS [512].

(2-Bromophenyl)(5-chloro-2-hydroxyphenyl)methanone[92739-90-7] $C_{13}H_8BrClO_2$ mol.wt. 311.56

Synthesis

– Refer to: [1033].

m.p. and Spectra (NA).

(4-Bromophenyl)(3-chloro-4-hydroxyphenyl)methanone[161582-04-3] $C_{13}H_8BrClO_2$ mol.wt. 311.56

Synthesis

– Refer to: [512].

m.p. and Spectra (NA).

(3-Bromophenyl)(5-fluoro-2-hydroxyphenyl)methanone[62433-28-7] $C_{13}H_8BrFO_2$ mol.wt. 295.11

Synthesis

– Preparation by Fries rearrangement of p-fluorophenyl m-bromobenzoate with aluminium chloride at 130° for 2 h (91%) [1034].

m.p. 159–160° [1034]; Spectra (NA).

(4-Bromophenyl)(2-fluoro-4-hydroxyphenyl)methanone[161581-99-3] $C_{13}H_8BrFO_2$ mol.wt. 295.11

Synthesis

– Preparation by demethylation of 4'-bromo-2-fluoro-4-methoxybenzophenone (SM) with 62% aqueous hydrobromic acid in acetic acid at 125°. SM was obtained by Friedel–Crafts acylation of m-fluoroanisole with p-bromobenzoyl chloride in nitrobenzene in the presence of aluminium chloride [512].

– Also refer to: [1035] and Chem. Abstr., **127**, 108766j (1997).

m.p. (NA); MS [512].

(4-Bromophenyl)(3-fluoro-4-hydroxyphenyl)methanone

[161581-98-2]

 $C_{13}H_8BrFO_2$

mol.wt. 295.11

Synthesis

– Preparation by demethylation of 4'-bromo-3-fluoro-4-methoxybenzophenone (SM) with 62% aqueous hydrobromic acid in acetic acid at 125°. SM was obtained by Friedel–Crafts acylation of o-fluoroanisole with p-bromobenzoyl chloride in nitrobenzene in the presence of aluminium chloride [512].

– Also refer to: Chem. Abstr., **127**, 108766j (1997).

m.p. 183–184° [512]; Spectra (NA).

(3-Bromo-4-hydroxyphenyl)(4-bromophenyl)methanone

[161582-02-1]

 $C_{13}H_8Br_2O_2$

mol.wt. 356.01

Synthesis

– Refer to: [512].

m.p. and Spectra (NA).

(4-Chloro-2-hydroxyphenyl)(4-fluorophenyl)methanone

[169781-85-5]

 $C_{13}H_8ClFO_2$

mol.wt. 250.66

Syntheses

– Obtained by Fries rearrangement of m-chlorophenyl p-fluorobenzoate with aluminium chloride at 200° for 20 min [20].

– Also obtained by demethylation of 4-chloro-4'-fluoro-2-methoxybenzophenone with boron tribromide in methylene chloride at r.t. for 12 h [20], according to [21].

m.p. and Spectra (NA).

(5-Chloro-2-hydroxyphenyl)(2-fluorophenyl)methanone

[65185-33-3]

 $C_{13}H_8ClFO_2$

mol.wt. 250.66

Syntheses

– Preparation by Friedel–Crafts acylation of p-chlorophenol with o-fluorobenzoyl chloride in the presence of aluminium chloride at 195° for 25 min (70%) [523].

– Preparation by Fries rearrangement of p-chlorophenyl o-fluorobenzoate with aluminium chloride [23].

– Also refer to: [1036].

m.p. 76–80°5 [523]; Spectra (NA).

(5-Chloro-2-hydroxyphenyl)(3-fluorophenyl)methanone[62433-31-2] $C_{13}H_8ClFO_2$ mol.wt. 250.66

Synthesis

- Preparation by Fries rearrangement of p-chlorophenyl m-fluorobenzoate with aluminium chloride at 130° for 2 h (88%) [1034].

m.p. 153° [1034]; Spectra (NA).

(2-Chlorophenyl)(2-fluoro-4-hydroxyphenyl)methanone[87750-64-9] $C_{13}H_8ClFO_2$ mol.wt. 250.66

Synthesis

- Preparation by reaction of o-chlorobenzoyl chloride with m-fluorophenol in an hydrofluoric acid solution in the presence of boron trifluoride at 0° for 1 h [1037].

m.p. and Spectra (NA).

(2-Chlorophenyl)(4-fluoro-2-hydroxyphenyl)methanone[87750-63-8] $C_{13}H_8ClFO_2$ mol.wt. 250.66

Synthesis

- Preparation by reaction of o-chlorobenzoyl chloride with m-fluorophenol in an hydrofluoric acid solution in the presence of boron trifluoride at 0° for 1 h [1037].

m.p. and Spectra (NA).

(2-Chlorophenyl)(5-fluoro-2-hydroxyphenyl)methanone[2341-94-8] $C_{13}H_8ClFO_2$ mol.wt. 250.66

Synthesis

- Preparation by Fries rearrangement of p-fluorophenyl o-chlorobenzoate with aluminium chloride [23], at 130° for 2 h (95%) [1038].
- Also refer to: [1039].

m.p. 65° [1038]; Spectra (NA).

(3-Chlorophenyl)(5-fluoro-2-hydroxyphenyl)methanone[62666-38-0] $C_{13}H_8ClFO_2$ mol.wt. 250.66

Synthesis

- Preparation by Fries rearrangement of p-fluorophenyl m-chlorobenzoate with aluminium chloride [23].
- Also refer to: [1039].

m.p. and Spectra (NA).

(4-Chlorophenyl)(3-fluoro-4-hydroxyphenyl)methanone

[83885-18-1]

 $C_{13}H_8ClFO_2$ mol.wt. 250.66

Synthesis

– Preparation by reaction of p-chlorobenzoyl chloride with o-fluorophenol in the presence of aluminium chloride [165].

m.p. 173–176°5 [165]; Spectra (NA).

(4-Chlorophenyl)(4-fluoro-2-hydroxyphenyl)methanone

[169781-86-6]

 $C_{13}H_8ClFO_2$ mol.wt. 250.66

Syntheses

– Obtained by Fries rearrangement of m-fluorophenyl p-chlorobenzoate with aluminium chloride at 200° for 20 min [20].

– Also obtained by demethylation of 4'-chloro-4-fluoro-2-methoxybenzophenone with boron tribromide in methylene chloride at r.t. for 12 h [20], according to [21].

m.p. and Spectra (NA).

(4-Chlorophenyl)(5-fluoro-2-hydroxyphenyl)methanone

[62433-26-5]

 $C_{13}H_8ClFO_2$ mol.wt. 250.66

Syntheses

– Preparation by Fries rearrangement of p-fluorophenyl p-chlorobenzoate,

- with titanium tetrachloride at 150° for 18 h (81%) [472];

- with aluminium chloride [23,1040], at 130° for 2 h (98%) [1034] or at 200° for 5 min [1041] or for 15 min (65%) [1042].

– Preparation by reaction of p-chlorobenzoyl chloride with p-fluorophenol in hydrofluoric acid in the presence of boron trifluoride at 80° for 20 h (74%) [1037].

N.B.: In the patent, this compound was erroneously named 3-fluoro-4'-chloro-2-hydroxybenzophenone (assay 21, page 13) [1037].

– Also refer to: [1033,1039,1043–1055].

m.p. 174° [1034], 67°6 [1042]. One of the reported melting points is obviously wrong.

¹H NMR [472], ¹³C NMR [1042], IR [472,1042], MS [472]; TLC [472]; HPLC [1056]; p*K*_a [1046].

(4-Chlorophenyl)(5-fluoro-2-hydroxyphenyl)methanone-¹⁴C

[82589-26-2]

 $C_{13}H_8ClFO_2$ mol.wt. 252.66

Synthesis

- Preparation by Fries rearrangement of p-fluorophenyl p-chloro-[carboxyl-¹⁴C]benzoate with aluminium chloride at 200° for 5 min (76%) (51.8 mCi/mmol) [1041].

m.p. and Spectra (NA).

(3-Chloro-4-hydroxyphenyl)(4-iodophenyl)methanone

[161582-03-2]

 $C_{13}H_8ClIO_2$ mol.wt. 358.56

Synthesis

- Refer to: [512].

m.p. and Spectra (NA).

(3-Chloro-4-hydroxyphenyl)(4-nitrophenyl)methanone $C_{13}H_8ClNO_4$ mol.wt. 277.66

Synthesis

- Obtained by Fries rearrangement of o-chlorophenyl p-nitrobenzoate with aluminium chloride at 120° for 2 h [1057].

m.p. 196° [1057]; Spectra (NA).

(4-Chloro-2-hydroxyphenyl)(3-nitrophenyl)methanone

[22293-33-0]

 $C_{13}H_8ClNO_4$ mol.wt. 277.66

Synthesis

- Obtained by photo-Fries rearrangement of m-chlorophenyl m-nitrobenzoate in ethanol for 60–75 h (35%) [641].

m.p. 126° [641]; IR [641], UV [641].

(4-Chloro-2-hydroxyphenyl)(4-nitrophenyl)methanone

[22359-51-9]

 $C_{13}H_8ClNO_4$ mol.wt. 277.66

Syntheses

- Preparation by Fries rearrangement of m-chlorophenyl p-nitrobenzoate with aluminium chloride at 120° for 2 h [1057].
- Also obtained by photo-Fries rearrangement of m-chlorophenyl p-nitrobenzoate in ethanol for 60–75 h (13%) [641].

m.p. 160° [1057], 117° [641]; IR [641], UV [641].

(5-Chloro-2-hydroxyphenyl)(3-nitrophenyl)methanone

[126260-47-7]

 $C_{13}H_8ClNO_4$ mol.wt. 277.66

Syntheses

- Obtained (poor yield) by Fries rearrangement of p-chloro-phenyl m-nitrobenzoate with aluminium chloride in refluxing chlorobenzene for 4 h (11%) [520].
- Obtained by photo-Fries rearrangement of p-chloro-phenyl m-nitrobenzoate in ethanol for 60–75 h (35%) [641].

m.p. 126° [641], 125–126° [520]; IR [641], UV [641].

(5-Chloro-2-hydroxyphenyl)(4-nitrophenyl)methanone

[84443-36-7]

 $C_{13}H_8ClNO_4$ mol.wt. 277.66

Syntheses

- Obtained by Fries rearrangement of p-chloro-phenyl p-nitrobenzoate,
 - with aluminium chloride at 120° for 2 h [1057];
 - with UV light irradiation in ethanol during 60–75 h (13%) [641].

- Also refer to: [1058].

m.p. 120° [1057], 117° [641]; Spectra (NA).

(2-Chlorophenyl)(2-hydroxy-5-nitrophenyl)methanone

[95263-98-2]

 $C_{13}H_8ClNO_4$ mol.wt. 277.66

Synthesis

- Obtained by alkaline degradation of nizofenone fumarate [1059].
- Also refer to: [545].

m.p. and Spectra (NA).

(4-Chlorophenyl)(2-hydroxy-5-nitrophenyl)methanone

[124071-26-7]

 $C_{13}H_8ClNO_4$ mol.wt. 277.66

Synthesis

- Preparation according to the method [539], (23%) [1060].

m.p. 170–172° [1060]; Spectra (NA).

(2-Chloro-5-hydroxyphenyl)(4-chlorophenyl)methanone

[62810-45-1]

 $C_{13}H_8Cl_2O_2$

mol.wt. 267.11

Syntheses

- Preparation by diazotization of 5-amino-2,4'-dichloro-benzophenone followed by hydrolysis of the diazonium salt so obtained [900].
- Also obtained by demethylation of 2,4'-dichloro-5-methoxy-benzophenone with aluminium chloride in refluxing chlorobenzene [900].

m.p. 172° [900]; Spectra (NA).

(3-Chloro-2-hydroxyphenyl)(3-chlorophenyl)methanone

[41796-26-3]

 $C_{13}H_8Cl_2O_2$

mol.wt. 267.11

Synthesis

- Refer to: [1061].

m.p. and Spectra (NA).

(3-Chloro-4-hydroxyphenyl)(2-chlorophenyl)methanone $C_{13}H_8Cl_2O_2$

mol.wt. 267.11

Synthesis

- Preparation by demethylation of 2',3-dichloro-4-methoxy-benzophenone with pyridinium chloride at reflux for 30 min [461].

m.p. 156° [461]; Spectra (NA).

(3-Chloro-4-hydroxyphenyl)(4-chlorophenyl)methanone

[34189-58-7]

 $C_{13}H_8Cl_2O_2$

mol.wt. 267.11

Syntheses

- Preparation by reaction of p-chlorobenzoyl chloride with o-chlorophenol in the presence of aluminium chloride [165].
- Preparation by demethylation of 3,4'-dichloro-4-methoxybenzophenone in refluxing pyridinium chloride for 30 min [461].
- Preparation by Friedel-Crafts acylation of chlorobenzene with 3-chloro-4-methoxybenzoyl chloride in the presence of aluminium chloride at 120° for 3 h (50–70%) [931].
- Preparation by Fries rearrangement of o-chlorophenyl p-chlorobenzoate with aluminium chloride in chlorobenzene at 140–150° for 20 min or in nitrobenzene at 75° for 24 h [480].

m.p. 178–179° [931], 176–177° [480], 168° [461], 52°–53° [165]. One of the reported melting points is obviously wrong.

¹H NMR [931], MS [931]; TLC [931].

(4-Chloro-2-hydroxyphenyl)(4-chlorophenyl)methanone

[60805-31-4]

 $C_{13}H_8Cl_2O_2$

mol.wt. 267.11

Syntheses

- Preparation by Friedel–Crafts acylation of chlorobenzene with 4-chloro-2-methoxybenzoyl chloride in the presence of aluminium chloride at 120° for 3 h (50–70%) [931].
 - Also obtained by Fries rearrangement of m-chlorophenyl p-chlorobenzoate with aluminium chloride at 200° for 20 min [20].
 - Also obtained by demethylation of 4,4'-dichloro-2-methoxybenzophenone with boron tribromide in methylene chloride at r.t. for 12 h [20], according to [21].
- m.p. 78–79° [931]; ¹H NMR [931], MS [931]; TLC [931].

(4-Chloro-3-hydroxyphenyl)(4-chlorophenyl)methanone

[60805-30-3]

 $C_{13}H_8Cl_2O_2$

mol.wt. 267.11

Synthesis

- Preparation by Friedel–Crafts acylation of chlorobenzene with 4-chloro-3-methoxybenzoyl chloride in the presence of aluminium chloride at 120° for 3 h (50–70%) [931].
- m.p. 160–162° [931]; ¹H NMR [931], MS [931]; TLC [931].

(5-Chloro-2-hydroxyphenyl)(2-chlorophenyl)methanone

[61785-35-1]

 $C_{13}H_8Cl_2O_2$

mol.wt. 267.11

Syntheses

- Preparation by reaction of o-chlorobenzoyl chloride with p-chlorophenol in the presence of aluminium chloride at 180° [484].
 - Preparation by Fries rearrangement of p-chlorophenyl o-chlorobenzoate with aluminium chloride [1062].
- Also refer to: [1033,1036,1063–1065].
- m.p. 107°9 [1062], 106°5–107°5 [484]; Spectra (NA).

(5-Chloro-2-hydroxyphenyl)(3-chlorophenyl)methanone

[61785-36-2]

 $C_{13}H_8Cl_2O_2$

mol.wt. 267.11

Synthesis

- Preparation by Fries rearrangement of p-chlorophenyl m-chlorobenzoate with aluminium chloride for 30 min at 160° (64%) [528].
- m.p. 72° [528]; Spectra (NA).

(5-Chloro-2-hydroxyphenyl)(4-chlorophenyl)methanone

[61785-37-3]

 $C_{13}H_8Cl_2O_2$

mol.wt. 267.11

**Synthesis**

- Obtained by Fries rearrangement of p-chlorophenyl p-chlorobenzoate with titanium tetrachloride at 150° for 18 h (23%) [472].
- Also refer to: [484,523,1066].

m.p. (NA); yellow crystals [472]; 1H NMR [472], IR [472], MS [472]; TLC [472]; HPLC [1056].

(2-Fluoro-4-hydroxyphenyl)(3-nitrophenyl)methanone

[194290-75-0]

 $C_{13}H_8FNO_4$

mol.wt. 247.20

**Synthesis**

- Obtained by Friedel–Crafts acylation of m-fluorophenol with m-nitrobenzoyl chloride in ethylene dichloride in the presence of aluminium chloride at r.t. for 4 h (general procedure C; compound **33 i**).
- Refer to: Chem. Abstr., **127**, 190681j (1997).

m.p. and Spectra (NA).

(2-Fluoro-5-hydroxyphenyl)(3-nitrophenyl)methanone

[194290-73-8]

 $C_{13}H_8FNO_4$

mol.wt. 247.20

**Synthesis**

- Obtained by Friedel–Crafts acylation of p-fluorophenol with m-nitrobenzoyl chloride in ethylene dichloride in the presence of aluminium chloride at r.t. for 4 h (General Procedure C; compound **33 h**).
- Refer to: Chem. Abstr., **127**, 190681j (1997).

m.p. and Spectra (NA).

(5-Fluoro-2-hydroxyphenyl)(2-nitrophenyl)methanone

[62433-27-6]

 $C_{13}H_8FNO_4$

mol.wt. 247.20

**Synthesis**

- Preparation by Fries rearrangement of p-fluorophenyl o-nitrobenzoate with aluminium chloride at 130° for 2 h (86%) [1034].

m.p. 123° [1034]; Spectra (NA).

(5-Fluoro-2-hydroxyphenyl)(4-nitrophenyl)methanone

[62433-30-1]

 $C_{13}H_8FNO_4$ mol.wt. 247.20

Synthesis

- Preparation by Fries rearrangement of p-fluorophenyl p-nitrobenzoate with aluminium chloride at 130° for 2 h (93%) [1034].

m.p. 141° [1034]; IR [1034].

(4-Fluoro-2-hydroxyphenyl)(4-fluorophenyl)methanone

[153411-29-1]

 $C_{13}H_8F_2O_2$ mol.wt. 234.20

Syntheses

- Obtained by Fries rearrangement of m-fluorophenyl p-fluorobenzoate with aluminium chloride at 200° for 20 min [20].
- Also obtained by demethylation of 4,4'-difluoro-2-methoxy benzophenone with boron tribromide in methylene chloride at r.t. for 12 h [20], according to [21].
- Also refer to: [1067].

m.p. and Spectra (NA).

(5-Fluoro-2-hydroxyphenyl)(2-fluorophenyl)methanone $C_{13}H_8F_2O_2$ mol.wt. 234.20

Synthesis

- Preparation by Fries rearrangement of p-fluorophenyl o-fluorobenzoate with aluminium chloride [23].

m.p. and Spectra (NA).

(5-Fluoro-2-hydroxyphenyl)(3-fluorophenyl)methanone $C_{13}H_8F_2O_2$ mol.wt. 234.20

Synthesis

- Preparation by Fries rearrangement of p-fluorophenyl m-fluorobenzoate with aluminium chloride [23].

m.p. and Spectra (NA).

(5-Fluoro-2-hydroxyphenyl)(4-fluorophenyl)methanone

[2559-64-0]

 $C_{13}H_8F_2O_2$ mol.wt. 234.20

Synthesis

- Preparation by Fries rearrangement of p-fluorophenyl p-fluorobenzoate with aluminium chloride [23], without solvent at 130° for 2 h (83%) [1038].
- Also refer to: [1068,1069].

b.p.₃₀ 205° [1038]; Spectra (NA).**(2-Hydroxy-4-nitrophenyl)(3-nitrophenyl)methanone**

[1834-89-5]

 $C_{13}H_8N_2O_6$ mol.wt. 288.22

Syntheses

- Obtained (trace) by reaction of m-nitrobenzoyl chloride with m-nitrophenol in the presence of aluminium chloride without solvent at 175–180° for 2.5 h (0.5%) [537].
- Also obtained (poor yield) by Fries rearrangement of m-nitrophenyl m-nitrobenzoate with aluminium chloride without solvent at 175° for 2 h (2%) [1070].

m.p. 158–159° [1070], 157–158° [537]; Spectra (NA).

(2-Hydroxy-5-nitrophenyl)(4-nitrophenyl)methanone $C_{13}H_8N_2O_6$ mol.wt. 288.22

Synthesis

- Obtained by photo-Fries rearrangement of p-nitrophenyl p-nitrobenzoate in benzene at 50° for 35 h (11%) [72].

m.p. 189° [72]; Spectra (NA).

(4-Hydroxy-3-nitrophenyl)(3-nitrophenyl)methanone

[37567-45-6]

 $C_{13}H_8N_2O_6$ mol.wt. 288.22

Syntheses

- Preparation by reaction of 48% hydrobromic acid with 3,3'-dinitro-4-methoxybenzophenone (SM) in refluxing acetic acid. SM was obtained from 3'-nitro-4-methoxybenzophenone by a two-step synthesis [140].
- Preparation by hydrolysis of 4-chloro-3,3'-dinitrobenzophenone with 5–15% sodium hydroxide at 155–160° for 1–1.5 h (97–98%) [1071].

m.p. 165° [140], 149°8–150°6 [1071]; Spectra (NA).

(4-Hydroxy-3-nitrophenyl)(4-nitrophenyl)methanone

[37567-41-2]

 $C_{13}H_8N_2O_6$

mol.wt. 288.22

Synthesis

– Preparation by hydrolysis of 4-chloro-3,4'-dinitro-benzophenone with 5–15% aqueous sodium hydroxide at 155–160° for 1–1.5 h (97–98%) [1071].

m.p. 154°5–154°8 [1071]; Spectra (NA).

(3-Amino-5-chloro-2-hydroxyphenyl)(4-fluorophenyl)methanone $C_{13}H_9ClFNO_2$

mol.wt. 265.67

Synthesis

– Refer to: [472].

m.p. and Spectra (NA).

(3-Amino-5-fluoro-2-hydroxyphenyl)(4-chlorophenyl)methanone

[85052-42-2]

 $C_{13}H_9ClFNO_2$

mol.wt. 265.67

Synthesis

– Preparation by hydrogenation of 4'-chloro-5-fluoro-2-hydroxy-3-nitrobenzophenone in the presence of 10% Pd/C in a chloroform/ethanol mixture for 2 h (82%) [472].

m.p. 124–127° [472]; 1H NMR [472], IR [472], MS [472]; TLC [472].**(3-Amino-5-fluoro-2-hydroxyphenyl)(4-chlorophenyl)methanone***(Hydrochloride)*

[85052-69-3]

 $C_{13}H_9ClFNO_2 \cdot HCl$

mol.wt. 302.14

Synthesis

– Obtained by reaction of hydrochloric acid with 3-amino-4'-chloro-5-fluoro-2-hydroxybenzophenone [472].

m.p. and Spectra (NA).

(3-Amino-5-chloro-2-hydroxyphenyl)(4-chlorophenyl)methanone[85052-41-1] $C_{13}H_9Cl_2NO_2$ mol.wt. 282.13

Synthesis

– Preparation by hydrogenation of 4',5-dichloro-2-hydroxy-3-nitrobenzophenone in the presence of 10% Pd/C in a chloroform/ethanol mixture for 2 h (21%) [472].

m.p. 91–94° (d) [472]; 1H NMR [472], IR [472], MS [472]; TLC [472].

(3-Amino-5-chloro-2-hydroxyphenyl)(4-chlorophenyl)methanone*(Hydrochloride)*[85052-68-2] $C_{13}H_9Cl_2NO_2, HCl$ mol.wt. 318.60

Synthesis

– Obtained by reaction of hydrochloric acid with 3-amino-4',5-dichloro-2-hydroxybenzophenone [472].

m.p. and Spectra (NA).

(3-Amino-5-fluoro-2-hydroxyphenyl)(4-fluorophenyl)methanone $C_{13}H_9F_2NO_2$ mol.wt. 249.22

Synthesis

– Refer to: [472].

m.p. and Spectra (NA).

(2-Amino-5-hydroxyphenyl)(2-chlorophenyl)methanone[61871-78-1] $C_{13}H_{10}ClNO_2$ mol.wt. 247.68

Synthesis

– Obtained by heating N-(o-chlorobenzoyl)-p-methoxyaniline with bismuth chloride (5 mol excess) at 180–200° for 3 min (80%) [558].

m.p. (NA); UV [558], MS [558]; TLC [558].

(4-Amino-3-hydroxyphenyl)(4-chlorophenyl)methanone[123172-45-2] $C_{13}H_{10}ClNO_2$ mol.wt. 247.68

Synthesis

– Preparation from 6-(p-chlorobenzoyl)benzoxazolinone by heating with sodium hydroxide (80%) [566].

m.p. 196–198° [566]; Spectra (NA).

(4-Amino-2-hydroxyphenyl)(4-nitrophenyl)methanone $C_{13}H_{10}N_2O_4$ mol.wt. 258.23

Synthesis

- Preparation by hydrolysis of 4-acetamido-2-hydroxy-4'-nitrobenzophenone with boiling 50% hydrochloric acid [562].

m.p. 228° [562]; Spectra (NA).

(3-Amino-4-hydroxyphenyl)(3-aminophenyl)methanone

[37567-47-8]

 $C_{13}H_{12}N_2O_2$ mol.wt. 228.25

Synthesis

- Preparation by hydrogenation of 4-hydroxy-3,3'-dinitro-benzophenone in the presence of Raney nickel in water at 90° for 1 h under 90 atmospheres (70%) [1071].

m.p. >178° (d) [1071]; Spectra (NA).

(3-Amino-4-hydroxyphenyl)(4-aminophenyl)methanone

 $C_{13}H_{12}N_2O_2$ mol.wt. 228.25

Synthesis

- Preparation by hydrogenation of 4-hydroxy-3,4'-di-nitrobenzophenone in the presence of Raney nickel in water at 90° for 1 h under 100 atmospheres (71%) [1071].

m.p. 191°5–191°8 [1071]; Spectra (NA).

(2,3,4,5,6-Pentafluorophenyl)(2,3,5-trifluoro-6-hydroxy-4-methoxyphenyl)methanone

[32541-22-3]

 $C_{14}H_4F_8O_3$ mol.wt. 372.17

Syntheses

- Preparation by partial demethylation of 2,4-dimethoxy-2',3,3',4',5,5',6,6'-octafluorobenzophenone (SM) in methylene chloride in the presence of aluminium chloride at 0–5° for 3–6 h (63%) [570].

SM was obtained by condensation of methyl 2,4-dimethoxy-3,5,6-trifluorobenzoate with pentafluorophenylmagnesium bromide in ethyl ether at 20° for 2 h (28%).

- Preparation by partial methylation of 2,4-dihydroxy-2',3,3',4',5,5',6,6'-octafluorobenzophenone with diazomethane in ethyl ether between –10° and 0° (70%) [570].

m.p. 68–69° [570]; ¹H NMR [570], IR [570], UV [570].

(2-Hydroxy-4-methoxyphenyl)(2,3,4,5,6-pentafluorophenyl)methanone

[32541-23-4]

 $C_{14}H_7F_5O_3$ mol.wt. 318.20

Synthesis

– Preparation by partial demethylation of 2',4'-dimethoxy-2,3,4,5,6-pentafluorobenzophenone (SM) in methylene chloride in the presence of aluminium chloride at 0–5° for 3–6 h (69%) [570]. SM was obtained in two steps: first, preparation of 2,4-dimethoxy-phenylbis(pentafluorophenyl)carbinol by condensation of methyl 2,4-dimethoxybenzoate with pentafluorophenylmagnesium bromide in ethyl ether at 20° for 2 h (37%). Then, this carbinol was treated with potassium fluoride in boiling acetone for 4 h (98%) [570].

m.p. 152°5–154° [570]; 1H NMR [570], IR [570], UV [570].

(5-Chloro-2-hydroxyphenyl)[2-(trifluoromethyl)phenyl]methanone $C_{14}H_8ClF_3O_2$ mol.wt. 300.66

Synthesis

– Preparation from 2-bromo-4-chloro-(2-methoxyethoxy)-methoxybenzene and o-(trifluoromethyl)benzaldehyde as the starting materials [624].

m.p. 71–72° [624]; Spectra (NA).

(5-Fluoro-2-hydroxyphenyl)[4-(trifluoromethyl)phenyl]methanone

[183280-21-9]

 $C_{14}H_8F_4O_2$ mol.wt. 284.21

Synthesis

– Preparation by demethylation of 5-fluoro-2-methoxy-4'-(trifluoromethyl)benzophenone with boron tribromide in methylene chloride under argon: first at 0°, then at r.t. for 12 h (98%) [492].

m.p. 58°5 [492]; 1H NMR [492], UV [492], MS [492].

(4-Bromophenyl)[2-(dibromomethyl)-4-hydroxyphenyl]methanone

[192443-53-1]

 $C_{14}H_9Br_3O_2$ mol.wt. 448.94

Synthesis

– Preparation by demethylation of 4'-bromo-2-dibromo-methyl-4-methoxybenzophenone (SM) with boron tribromide in methylene chloride at –78° (91%). SM was obtained by bromination of 4'-bromo-4-methoxy-2-methylbenzophenone with N-bromosuccinimide in carbon tetrachloride in the presence of few dibenzoyl peroxide under irradiation at r.t. (90%; MS).

– Refer to: Chem. Abstr., **127**, 108921f (1997)^T.

m.p. (NA); MS^T.

(3-Chloro-2-hydroxy-4-methoxyphenyl)(2,3-difluorophenyl)methanone

[72482-00-9]

 $C_{14}H_9ClF_2O_3$ mol.wt. 298.67

Synthesis

– Preparation by reaction of 2,3-difluorobenzoyl chloride with 2-chlororesorcinol dimethyl ether in ethylene dichloride in the presence of aluminium chloride: first at 5°, then at r.t. and at reflux for 30 min [476].

m.p. 161–162° [476]; Spectra (NA).

(3-Chloro-2-hydroxy-4-methoxyphenyl)(2,5-difluorophenyl)methanone

[72482-10-1]

 $C_{14}H_9ClF_2O_3$ mol.wt. 298.67

Synthesis

– Preparation by reaction of 2,5-difluorobenzoyl chloride with 2-chlororesorcinol dimethyl ether in ethylene dichloride in the presence of aluminium chloride: first at 5–10°, then at r.t. and at reflux for 30 min [476].

m.p. 178–180° [476]; Spectra (NA).

(5-Chloro-2-hydroxy-4-methoxyphenyl)(2,4-difluorophenyl)methanone

[136741-46-3]

 $C_{14}H_9ClF_2O_3$ mol.wt. 298.67

Synthesis

– Preparation by reaction of 2,4-difluorobenzoyl chloride with 4-chlororesorcinol dimethyl ether in the presence of aluminium chloride in ethylene dichloride (99%) [589].

m.p. 136–137° [589]; Spectra (NA).

(5-Chloro-2-hydroxy-4-methoxyphenyl)(2,6-difluorophenyl)methanone

[136741-45-2]

 $C_{14}H_9ClF_2O_3$ mol.wt. 298.67

Synthesis

– Preparation by reaction of 2,6-difluorobenzoyl chloride with 4-chlororesorcinol dimethyl ether in the presence of aluminium chloride in ethylene dichloride (92%) [589].

m.p. 132–133° [589]; Spectra (NA).

(2,6-Dichlorophenyl)(4-hydroxy-2-methyl-5-nitrophenyl)methanone

[183725-86-2]

 $C_{14}H_9Cl_2NO_4$ mol.wt. 326.14

Synthesis

– Preparation by demethylation of 2',6'-dichloro-4-methoxy-2-methyl-5-nitrobenzophenone with aluminium chloride in methylene chloride, first for 30 min at 20° and then for 1 h at 45° (73%) [1072].

m.p. 170° [1072]; Spectra (NA).

(3-Chloro-4-hydroxy-5-methylphenyl)(2,4-dichlorophenyl)methanone

[34182-99-5]

 $C_{14}H_9Cl_3O_2$ mol.wt. 315.58

Synthesis

– Preparation by Fries rearrangement of 2-chloro-6-methyl-phenyl 2,4-dichlorobenzoate with aluminium chloride in chlorobenzene for 20 min at 140–150° or in nitrobenzene for 24 h at 75° [480].

m.p. 168–170° [480]; Spectra (NA).

(3-Chloro-6-hydroxy-2-methylphenyl)(2,5-dichlorophenyl)methanone

[34174-13-5]

 $C_{14}H_9Cl_3O_2$ mol.wt. 315.58

Synthesis

– Preparation by Fries rearrangement of 4-chloro-3-methyl-phenyl 2,5-dichlorobenzoate with aluminium chloride for 30 min at 150–160° [458].

m.p. 122–123° [458]; Spectra (NA).

(2-Methylphenyl)(2,3,5-trichloro-6-hydroxyphenyl)methanone

[34171-64-7]

 $C_{14}H_9Cl_3O_2$ mol.wt. 315.58

Synthesis

– Preparation by Fries rearrangement of 2,4,5-trichlorophenyl o-toluate with aluminium chloride for 30 min at 150–160° [458].

m.p. 125–126° [458]; Spectra (NA).

(4-Methylphenyl)(2,3,5-trichloro-6-hydroxyphenyl)methanone

[34171-62-5]

 $C_{14}H_9Cl_3O_2$ mol.wt. 315.58

Synthesis

– Preparation by Fries rearrangement of 2,4,5-trichlorophenyl p-toluate with aluminium chloride for 30 min at 150–160° [458].

m.p. 141–142° [458]; Spectra (NA).

(2,6-Difluorophenyl)(4-hydroxy-3-methoxy-5-nitrophenyl)methanone

[134612-75-2]

 $C_{14}H_9F_2NO_5$ mol.wt. 309.23

Synthesis

– Preparation by nitration of 2',6'-difluoro-4-hydroxy-3-methoxybenzophenone with 65% nitric acid in acetic acid at 20° [1019].

m.p. 147–149° [1019]; Spectra (NA).

(3-Bromo-2-hydroxy-5-methylphenyl)(3-fluorophenyl)methanone $C_{14}H_{10}BrFO_2$ mol.wt. 309.13

Synthesis

– Preparation by treatment of 3'-fluoro-2-hydroxy-5-methyl-benzophenone sodium salt with bromine in aqueous potassium bromide solution [919].

m.p. 130–131° [919]; Spectra (NA).

(3-Bromophenyl)(3-fluoro-2-hydroxy-5-methylphenyl)methanone

[55270-81-0]

 $C_{14}H_{10}BrFO_2$ mol.wt. 309.13

Synthesis

– Not yet described. This compound was mentioned in the Chem. Abstr., **82**, 170585e (1975). Nevertheless, it is not described in the original paper [919].

m.p. and Spectra (NA).

(2-Bromo-5-nitrophenyl)(2-hydroxy-5-methylphenyl)methanone $C_{14}H_{10}BrNO_4$ mol.wt. 336.14

Synthesis

– Preparation by reaction of 2-bromo-5-nitrobenzoyl chloride with p-cresol methyl ether in the presence of aluminium chloride in carbon disulfide at r.t. for 1 h, then in a boiling water bath for 2–4 h (78%) [719].

m.p. 151–152° [719]; Spectra (NA).

(3,5-Dibromo-2-hydroxyphenyl)(4-methylphenyl)methanone

m.p. 132°5 [13]; Spectra (NA).

(2-Chloro-6-hydroxy-4-methoxyphenyl)(2-fluorophenyl)methanone

- Preparation by reaction of 2-fluorobenzoyl chloride with 5-chlororesorcinol dimethyl ether in the presence of aluminium chloride in refluxing ethylene dichloride (70%) [589], 96% [1031].
- Preparation by partial demethylation of 2-chloro-2'-fluoro-4,6-dimethoxybenzophenone (SM) in ethylene dichloride in the presence of aluminium chloride at reflux (90°) for 3 h [476]. SM was obtained by reaction of o-fluorobenzoyl chloride with 5-chlororesorcinol dimethyl ether in methylene chloride in the presence of aluminium chloride at r.t. for 4 h [476].

m.p. 111–113° [589], 108–110° [1031], 85–90° [476]; Spectra (NA).

(3-Chloro-2-hydroxy-4-methoxyphenyl)(2-fluorophenyl)methanone

- Preparation by reaction of o-fluorobenzoyl chloride with 2-chlororesorcinol dimethyl ether in the presence of aluminium chloride in refluxing ethylene dichloride for 30 min [476], (67%) [1031].

m.p. 132–133° [476,1031]; Spectra (NA).

(5-Chloro-2-hydroxy-4-methoxyphenyl)(2-fluorophenyl)methanone

- Preparation by reaction of 2-fluorobenzoyl chloride with the 4-chlororesorcinol dimethyl ether in the presence of aluminium chloride in ethylene dichloride (64%) [589].

m.p. 133–134° [589]; Spectra (NA).

(2-Chloro-4-nitrophenyl)(2-hydroxy-5-methylphenyl)methanoneC₁₄H₁₀ClNO₄ mol.wt. 291.69

Synthesis

- Preparation by demethylation of 2-chloro-2'-methoxy-5'-methyl-4-nitrobenzophenone with excess boiling pyridinium chloride for 30 min (57%) [1073].

m.p. 130° [1073]; Spectra (NA).

(2-Chloro-5-nitrophenyl)(2-hydroxy-5-methylphenyl)methanone[37883-98-0] C₁₄H₁₀ClNO₄ mol.wt. 291.69

Synthesis

- Refer to: [1073].

m.p. and Spectra (NA).

(5-Chloro-2-hydroxy-3-nitrophenyl)(4-methoxyphenyl)methanone[85052-28-4] C₁₄H₁₀ClNO₅ mol.wt. 307.69

Synthesis

- Preparation by reaction of 60% nitric acid with 5-chloro-2-hydroxy-4'-methoxybenzophenone in acetic acid at r.t. for 30 min (79%) [472].

m.p. (NA); ¹H NMR [472], IR [472], MS [472]; TLC [472].**(2-Chlorophenyl)(4-hydroxy-3-methoxy-5-nitrophenyl)methanone**[134612-76-3] C₁₄H₁₀ClNO₅ mol.wt. 307.69

Synthesis

- Preparation by nitration of 2'-chloro-4-hydroxy-3-methoxy-benzophenone with 65% nitric acid in acetic acid at 20° [1019].

m.p. 123–125° [1019]; Spectra (NA).

(3-Chlorophenyl)(4-hydroxy-3-methoxy-5-nitrophenyl)methanone[134612-77-4] C₁₄H₁₀ClNO₅ mol.wt. 307.69

Synthesis

- Preparation by nitration of 3'-chloro-4-hydroxy-3-methoxy-benzophenone with 65% nitric acid in acetic acid at 20° [1019].

m.p. 152–154° [1019]; Spectra (NA).

(4-Chlorophenyl)(4-hydroxy-3-methoxy-5-nitrophenyl)methanone

[134612-78-5]

 $C_{14}H_{10}ClNO_5$ mol.wt. 307.69

Synthesis

– Preparation by nitration of 4'-chloro-4-hydroxy-3-methoxybenzophenone with 65% nitric acid in acetic acid at 20° [1019].

m.p. 129–131° [1019]; Spectra (NA).

(3-Chloro-4-hydroxy-5-methylphenyl)(2-chlorophenyl)methanone

[34183-19-2]

 $C_{14}H_{10}Cl_2O_2$ mol.wt. 281.14

Synthesis

– Preparation by Fries rearrangement of 2-chloro-6-methyl-phenyl o-chlorobenzoate with aluminium chloride in chloro-benzene for 20 min at 140–150° or in nitrobenzene for 24 h at 75° [480].

m.p. 164–165° [480]; Spectra (NA).

(3-Chloro-4-hydroxy-5-methylphenyl)(4-chlorophenyl)methanone

[34183-09-0]

 $C_{14}H_{10}Cl_2O_2$ mol.wt. 281.14

Synthesis

– Preparation by Fries rearrangement of 2-chloro-6-methyl-phenyl p-chlorobenzoate with aluminium chloride in chloro-benzene for 20 min at 140–150° or in nitrobenzene for 24 h at 75° [480].

m.p. 138–139° [480]; Spectra (NA).

(5-Chloro-2-hydroxy-3-methylphenyl)(2-chlorophenyl)methanone

[86914-82-1]

 $C_{14}H_{10}Cl_2O_2$ mol.wt. 281.14

Synthesis

– Preparation by Fries rearrangement of 4-chloro-2-methyl-phenyl o-chlorobenzoate with aluminium chloride at 180° for 10 min [1074].

m.p. 87–88° [1074]; Spectra (NA).

(5-Chloro-2-hydroxy-3-methylphenyl)(3-chlorophenyl)methanone

[86914-87-6]

 $C_{14}H_{10}Cl_2O_2$ mol.wt. 281.14

Synthesis

– Preparation by Fries rearrangement of 4-chloro-2-methyl-phenyl m-chlorobenzoate with aluminium chloride at 180° for 10 min [1074].

m.p. 130–131° [1074]; Spectra (NA).

(5-Chloro-2-hydroxy-3-methylphenyl)(4-chlorophenyl)methanone

[86914-72-9]

 $C_{14}H_{10}Cl_2O_2$ mol.wt. 281.14

Synthesis

- Preparation by Fries rearrangement of 4-chloro-2-methyl-phenyl p-chlorobenzoate with aluminium chloride at 160° [1074].
- Also refer to: [1033,1075–1077].

m.p. 41–42° [1074]; Spectra (NA).

(5-Chloro-2-hydroxy-4-methylphenyl)(2-chlorophenyl)methanone $C_{14}H_{10}Cl_2O_2$ mol.wt. 281.14

Synthesis

m.p. 105° [461]; Spectra (NA).

(2,3-Dichloro-4-hydroxyphenyl)(2-methylphenyl)methanone

[72482-84-9]

 $C_{14}H_{10}Cl_2O_2$ mol.wt. 281.14

Synthesis

- Preparation by demethylation of 2,3-dichloro-4-methoxy-2'-methylbenzophenone (SM) with aluminium chloride in refluxing benzene for 5 h, then at r.t. for 18 h. SM was obtained by reaction of o-toluoyl chloride with 2,3-di-chloroanisole in ethylene dichloride in the presence of aluminium chloride at 60° for 1 h [476].

m.p. and Spectra (NA).

(2,3-Dichloro-4-hydroxyphenyl)(3-methylphenyl)methanone $C_{14}H_{10}Cl_2O_2$ mol.wt. 281.14

Synthesis

- Preparation by demethylation of 2,3-dichloro-4-methoxy-3'-methylbenzophenone (SM) with aluminium chloride in refluxing methylene chloride overnight. SM was obtained by Friedel–Crafts acylation of 2,3-dichloroanisole with m-toluoyl chloride in the presence of aluminium chloride in refluxing methylene chloride [475].

m.p. and Spectra (NA).

(2,3-Dichloro-4-hydroxyphenyl)(4-methylphenyl)methanone

[72498-72-7]

 $C_{14}H_{10}Cl_2O_2$ mol.wt. 281.14

Synthesis

– Preparation by demethylation of 2,3-dichloro-4-methoxy-4'-methylbenzophenone (SM) with aluminium chloride in refluxing methylene chloride overnight. SM was obtained by Friedel–Crafts acylation of 2,3-dichloroanisole with p-methylbenzoyl chloride in the presence of aluminium chloride in refluxing methylene chloride [475].

– Also refer to: [476].

m.p. and Spectra (NA).

(2,4-Dichloro-6-hydroxyphenyl)(2-methylphenyl)methanone

[34174-08-8]

 $C_{14}H_{10}Cl_2O_2$ mol.wt. 281.14

Synthesis

– Preparation by Fries rearrangement of 3,5-dichlorophenyl o-toluate with aluminium chloride for 30 min at 150–160° [458].

m.p. 117–118° [458]; Spectra (NA).

(2,4-Dichloro-6-hydroxyphenyl)(4-methylphenyl)methanone

[34174-07-7]

 $C_{14}H_{10}Cl_2O_2$ mol.wt. 281.14

Synthesis

– Preparation by Fries rearrangement of 3,5-dichloro-phenyl p-toluate with aluminium chloride for 30 min at 150–160° [458].

m.p. 177–178° [458]; Spectra (NA).

(2,6-Dichloro-4-hydroxyphenyl)(4-methylphenyl)methanone

[34183-14-7]

 $C_{14}H_{10}Cl_2O_2$ mol.wt. 281.14

Synthesis

– Obtained by Fries rearrangement of 3,5-dichlorophenyl p-toluate with aluminium chloride in chlorobenzene for 20 min at 140–150° or in nitrobenzene for 24 h at 75° [480].

m.p. 165–166° [480]; Spectra (NA).

(3,5-Dichloro-4-hydroxyphenyl)(2-methylphenyl)methanone

[34183-17-0]

 $C_{14}H_{10}Cl_2O_2$ mol.wt. 281.14

Synthesis

– Preparation by Fries rearrangement of 2,6-dichlorophenyl o-toluate with aluminium chloride in chlorobenzene at 140–150° for 20 min or in nitrobenzene at 75° for 24 h [480].

m.p. 163–164° [480]; Spectra (NA).

(3,5-Dichloro-4-hydroxyphenyl)(3-methylphenyl)methanone

[70036-75-8]

 $C_{14}H_{10}Cl_2O_2$ mol.wt. 281.14

Synthesis

– Refer to: [468] (Japanese patent).

m.p. and Spectra (NA).

(3,5-Dichloro-4-hydroxyphenyl)(4-methylphenyl)methanone

[34183-10-3]

 $C_{14}H_{10}Cl_2O_2$ mol.wt. 281.14

Synthesis

– Preparation by Fries rearrangement of 2,6-dichloro-phenyl p-toluate with aluminium chloride in chloro-benzene at 140–150° for 20 min or in nitrobenzene at 75° for 24 h [480].

m.p. 163–164° [480]; Spectra (NA).

(2,3-Dichlorophenyl)(2-hydroxy-5-methylphenyl)methanone

[77151-84-9]

 $C_{14}H_{10}Cl_2O_2$ mol.wt. 281.14

Synthesis

– Preparation by reaction of 2,3-dichlorobenzoyl chloride with p-cresol in the presence of aluminium chloride for 8 h at 190° [77].

m.p. and Spectra (NA).

(2,4-Dichlorophenyl)(2-hydroxy-4-methylphenyl)methanone

[59746-93-9]

 $C_{14}H_{10}Cl_2O_2$

mol.wt. 281.14

Synthesis

- Preparation by reaction of 2,4-dichlorobenzotrichloride with m-cresol in hydrofluoric acid in the presence of water at -10° , then at 15° overnight and at 80° for 30 min (87%) [213].

m.p. 83° [213]; Spectra (NA).**(2,4-Dichlorophenyl)(2-hydroxy-5-methylphenyl)methanone** $C_{14}H_{10}Cl_2O_2$

mol.wt. 281.14

Syntheses

- Preparation by demethylation of 2,4-dichloro-2'-methoxy-5'-methylbenzophenone with excess boiling pyridinium chloride for 30 min (72%) [1073].
- Preparation by Fries rearrangement of p-cresyl 2,4-dichloro-benzoate with aluminium chloride without solvent at 120° for 2 h [1078].
- Preparation by reaction of 2,4-dichlorobenzotrichloride with p-cresol in the presence of aluminium chloride in carbon disulfide at 0° (22–32% yields) [1079].
- Also obtained by sulfuric acid hydrolysis of 6,12-di(2,4-dichlorophenyl)-2,8-dimethyl-6,12-epoxy-6*H*,12*H*-dibenzo[b,f][1,5]dioxocin (56%) [1079].

m.p. $92^\circ 1-92^\circ 8$ [1079], $92-93^\circ$ [1078], $91-92^\circ$ [1073]; Spectra (NA).**(2,4-Dichlorophenyl)(3-hydroxy-2-methylphenyl)methanone**

[74167-88-7]

 $C_{14}H_{10}Cl_2O_2$

mol.wt. 281.14

Synthesis

- Preparation by diazotization of 3-amino-2',4'-dichloro-2-methylbenzophenone, followed by hydrolysis of the resulting diazonium salt (70%) [119], according to [634].

m.p. 98° [119]; Spectra (NA).**(2,4-Dichlorophenyl)(4-hydroxy-2-methylphenyl)methanone** $C_{14}H_{10}Cl_2O_2$

mol.wt. 281.14

Synthesis

- Obtained by Fries rearrangement of m-cresyl 2,4-di-chlorobenzoate with aluminium chloride without solvent at 120° for 2 h [1078].
- Also refer to: [901] (compound **11**).

m.p. 155° [1078]; Spectra (NA).

(2,4-Dichlorophenyl)(4-hydroxy-3-methylphenyl)methanoneC₁₄H₁₀Cl₂O₂ mol.wt. 281.14

Synthesis

- Preparation by Fries rearrangement of *o*-cresyl 2,4-di-chlorobenzoate with aluminium chloride without solvent at 120° for 2 h [1078].

m.p. 165° [1078]; Spectra (NA).

(2,6-Dichlorophenyl)(2-hydroxy-5-methylphenyl)methanone

[174186-21-1]

C₁₄H₁₀Cl₂O₂ mol.wt. 281.14

Syntheses

- Preparation by reaction of 2,6-dichlorobenzoyl chloride with *p*-cresol in the presence of aluminium chloride for 8 h at 190° [77].
- Preparation by Fries rearrangement of 4-methylphenyl 2,6-dichlorobenzoate with aluminium chloride in refluxing ethylene dichloride for 3 h (68%) [1080].

m.p. 139–141° [1080]; ¹H NMR [1080].**(3,4-Dichlorophenyl)(2-hydroxy-5-methylphenyl)methanone**C₁₄H₁₀Cl₂O₂ mol.wt. 281.14

Syntheses

- Preparation by Fries rearrangement of *p*-cresyl 3,4-dichloro-benzoate with aluminium chloride without solvent at 120° for 2 h [1078].
- Preparation by reaction of 3,4-dichlorobenzotrichloride in the presence of aluminium chloride in carbon disulfide at 0° (56%) [1079].
- Also obtained by sulfuric acid hydrolysis of the 6,12-di(3,4-dichlorophenyl)-2,8-dimethyl-6,12-epoxy-6*H*,12*H*-dibenzo[*b,f*][1,5]dioxocin (76%) [1079].

Synthesis

- Preparation by diazotization of 3-amino-3',4'-dichloro-2-methylbenzophenone, followed by hydrolysis of the resulting diazonium salt (48%) [119], according to [634].

m.p. 140° [119]; Spectra (NA).

(3,4-Dichlorophenyl)(4-hydroxy-2-methylphenyl)methanoneC₁₄H₁₀Cl₂O₂ mol.wt. 281.14

Synthesis

- Obtained by Fries rearrangement of m-cresyl 3,4-dichloro-benzoate with aluminium chloride without solvent at 120° for 2 h [1078].

m.p. 95° [1078]; Spectra (NA).

(3,4-Dichlorophenyl)(4-hydroxy-3-methylphenyl)methanoneC₁₄H₁₀Cl₂O₂ mol.wt. 281.14

Synthesis

- Preparation by Fries rearrangement of o-cresyl 3,4-dichlorobenzoate with aluminium chloride without solvent at 120° for 2 h [1078].

m.p. 209° [1078]; Spectra (NA).

[5-Chloro-2-hydroxy-3-(hydroxymethyl)phenyl](4-chlorophenyl)methanone

[95304-56-6]

C₁₄H₁₀Cl₂O₃ mol.wt. 297.14

Synthesis

- Refer to: [1081].

m.p. and Spectra (NA).

(5-Chloro-2-hydroxy-3-methoxyphenyl)(4-chlorophenyl)methanone

[95304-54-4]

C₁₄H₁₀Cl₂O₃ mol.wt. 297.14

Synthesis

- Refer to: [1081].

m.p. and Spectra (NA).

(5-Chloro-2-hydroxy-4-methoxyphenyl)(2-chlorophenyl)methanone

[136741-43-0]

C₁₄H₁₀Cl₂O₃ mol.wt. 297.14

Synthesis

- Preparation by reaction of 2-chlorobenzoyl chloride with 1-chloro-2,4-dimethoxybenzene in the presence of aluminium chloride in ethylene dichloride (77%) [589].

m.p. 98–99° [589]; Spectra (NA).

(5-Chloro-2-hydroxy-4-methoxyphenyl)(4-chlorophenyl)methanone

[87118-99-8]

 $C_{14}H_{10}Cl_2O_3$ mol.wt. 297.14**Synthesis**

- Preparation by reaction of p-chlorobenzoyl chloride with 1-chloro-2,4-dimethoxybenzene in the presence of aluminium chloride in methylene chloride at r.t. for 20 h (66%) [1082].

crystals [1082]; m.p. (NA); 1H NMR [1082], IR [1082], MS [1082]; TLC [1082].

(2,3-Dichloro-4-hydroxyphenyl)(4-methoxyphenyl)methanone

[78235-18-4]

 $C_{14}H_{10}Cl_2O_3$ mol.wt. 297.14**Synthesis**

- Preparation by selective demethylation of 2,3-di-chloro-4,4'-dimethoxybenzophenone (SM) with aluminium chloride in refluxing methylene chloride overnight. SM was obtained by Friedel-Crafts acylation of 2,3-dichloroanisole with p-methoxybenzoyl chloride in the presence of aluminium chloride in refluxing methylene chloride [475,979].
 - Also refer to: [967,1083].
- m.p. and Spectra (NA).

(3,5-Dichloro-4-hydroxyphenyl)(4-methoxyphenyl)methanone

[34183-20-5]

 $C_{14}H_{10}Cl_2O_3$ mol.wt. 297.14**Synthesis**

- Preparation by Fries rearrangement of 2,6-dichloro-phenyl p-anisate with aluminium chloride in chloro-benzene at 140–150° for 20 min or in nitrobenzene at 75° for 24 h [480].
- m.p. 239–240° [480]; Spectra (NA).

(2,3-Dichlorophenyl)(2-hydroxy-4-methoxyphenyl)methanone $C_{14}H_{10}Cl_2O_3$ mol.wt. 297.14**Synthesis**

- Preparation by reaction of 2,3-dichlorobenzoyl chloride with m-methoxyphenol in the presence of aluminium chloride for 8 h at 190° [77].

m.p. and Spectra (NA).

(2,4-Dichlorophenyl)(2-hydroxy-4-methoxyphenyl)methanoneC₁₄H₁₀Cl₂O₃ mol.wt. 297.14

Synthesis

– Preparation by partial demethylation of 2',4'-dichloro-2,4-dimethoxybenzophenone with aluminium chloride (or aluminium bromide) in chlorobenzene at 90–95° (good yields) [655].

m.p. and Spectra (NA).

(2,6-Dichlorophenyl)(2-hydroxy-4-methoxyphenyl)methanone[77156-44-6] C₁₄H₁₀Cl₂O₃ mol.wt. 297.14

Synthesis

– Preparation by reaction of 2,6-dichlorobenzoyl chloride with m-methoxyphenol in the presence of aluminium chloride for 8 h at 190° [77].

m.p. and Spectra (NA).

(2-Fluorophenyl)(4-hydroxy-3-methoxy-5-nitrophenyl)methanone[125629-31-4] C₁₄H₁₀FNO₅ mol.wt. 291.24

Synthesis

– Preparation by nitration of 2'-fluoro-4-hydroxy-3-methoxy-benzophenone with 65% nitric acid at 20° for 90 min (94%) [1019,1084].

m.p. 150–152° [1084], 127–129° [1019]; ¹H NMR [1084], MS [1084].**[2-(Fluoro-¹⁸F)phenyl](4-hydroxy-3-methoxy-5-nitrophenyl)methanone**[190585-66-1] C₁₄H₁₀FNO₅ mol.wt. 290.24

Synthesis

– Obtained by adding methyl iodide to a solution of 2'-[¹⁸F] fluoro-3,4-dihydroxy-5-nitrobenzophenone in N,N-di-methylformamide first treated with sodium hydride at 0° (90%). -Refer to: Chem. Abstr., **127**, 17465u (1997).

m.p. and Spectra (NA).

(3-Fluorophenyl)(4-hydroxy-3-methoxy-5-nitrophenyl)methanone

[134612-73-0]

 $C_{14}H_{10}FNO_5$ mol.wt. 291.24

Synthesis

– Preparation by nitration of 3'-fluoro-4-hydroxy-3-methoxy-benzophenone with 65% nitric acid in acetic acid at 20° [1019].

m.p. 168–170° [1019]; Spectra (NA).

(4-Fluorophenyl)(4-hydroxy-3-methoxy-5-nitrophenyl)methanone

[134612-74-1]

 $C_{14}H_{10}FNO_5$ mol.wt. 291.24

Synthesis

– Preparation by nitration of 4'-fluoro-4-hydroxy-3-methoxybenzophenone with 65% nitric acid in acetic acid at 20° [1019].

m.p. 126–128° [1019]; Spectra (NA).

(2,6-Difluorophenyl)(4-hydroxy-3-methoxyphenyl)methanone

[134612-34-3]

 $C_{14}H_{10}F_2O_3$ mol.wt. 264.23

Synthesis

– Preparation by reaction of 33% hydrobromic acid in acetic acid with 4-(benzyloxy)-2',6'-difluoro-3-methoxy-benzophenone in methylene chloride at 20–25° [1019].

m.p. 130–132° [1019]; Spectra (NA).

(2-Hydroxy-5-methyl-3-nitrophenyl)(3-nitrophenyl)methanone

[67246-06-4]

 $C_{14}H_{10}N_2O_6$ mol.wt. 302.24

Synthesis

– Obtained by reaction of nitric acid (d = 1.42) with 2-hydroxy-5-methylbenzophenone in acetic acid at 100° [592].

m.p. 118° [592]; 1H NMR [592].

(4-Hydroxy-3-methoxy-5-nitrophenyl)(2-nitrophenyl)methanone

[190522-98-6]

 $C_{14}H_{10}N_2O_7$ mol.wt. 318.24

Synthesis

- Preparation by reaction of 85% nitric acid with 4-hydroxy-3-methoxy-2'-nitrobenzophenone in acetic acid, first 15 min at 0°, then 1.5 h at 20° (77%).
- Refer to: Chem. Abstr., **127**, 17465u (1997)^T.

m.p. (NA); ¹H NMR^T, MS^T.**(2-Bromophenyl)(2-hydroxy-5-methylphenyl)methanone**

[55270-73-0]

 $C_{14}H_{11}BrO_2$ mol.wt. 291.14

Syntheses

- Preparation by reaction of 2-bromobenzoyl chloride with 4-methoxytoluene in the presence of aluminium chloride,
 - in refluxing carbon disulfide for 3 h (80%) [719];
 - without solvent for 1 h at 150° (68%) [919].
- Preparation by Fries rearrangement of 4-methylphenyl 2-bromobenzoate with aluminium chloride without solvent for 10 min at 140° (quantitative yield) [132].
- Preparation by demethylation of 2'-bromo-2-methoxy-5-methylbenzophenone with excess boiling pyridinium chloride for 1 h (87%) [1073].

m.p. 78°5 [719], 76–77° [132], 76° [1073], 75°5 [919]; Spectra (NA).

(3-Bromophenyl)(2-hydroxy-4-methylphenyl)methanone $C_{14}H_{11}BrO_2$ mol.wt. 291.14

Syntheses

- Preparation by reaction of m-bromobenzoic acid with m-cresol in the presence of alumina in methanesulfonic acid for 1 h at 140° (85%).
- Preparation by Fries rearrangement of m-cresyl m-bromo-benzoate with alumina in methanesulfonic acid for 2 h at 160° (70%). -Refer to: Chem. Abstr., **130**, 81248q (1999)^T.

m.p. 88°^T; ¹H NMR^T, IR^T, UV^T, MS^T.**(3-Bromophenyl)(2-hydroxy-5-methylphenyl)methanone**

[55270-77-4]

 $C_{14}H_{11}BrO_2$ mol.wt. 291.14

Synthesis

- Preparation by reaction of 3-bromobenzoyl chloride with 4-methoxytoluene in the presence of aluminium chloride without solvent for 1 h at 150° (20%) [919].

m.p. 88–89° [919]; Spectra (NA).

(3-Bromophenyl)(4-hydroxy-2-methylphenyl)methanone

$C_{14}H_{11}BrO_2$ mol.wt. 291.14

Synthesis

- Obtained by reaction of m-bromobenzoic acid with m-cresol in methanesulfonic acid with or without phosphorous pentoxide, for 12 h at 100° (30%).
- Refer to: Chem. Abstr., **130**, 81248q (1999).

m.p. and Spectra (NA).

(4-Bromophenyl)(2-hydroxy-4-methylphenyl)methanone

$C_{14}H_{11}BrO_2$ mol.wt. 291.14

Syntheses

- Preparation by acylation of m-cresol with p-bromo-benzoic acid in methanesulfonic acid in the presence of alumina for 40 min at 140° (80%).
- Preparation by Fries rearrangement of m-cresyl p-bromobenzoate with alumina in methanesulfonic acid for 2 h at 160° (83%). -Refer to: Chem. Abstr., **130**, 81248q (1999)^T.

m.p. 66°^T; ¹H NMR^T, IR^T, UV^T, MS^T.

(4-Bromophenyl)(2-hydroxy-5-methylphenyl)methanone

$C_{14}H_{11}BrO_2$ mol.wt. 291.14

Synthesis

- Preparation by Fries rearrangement of p-cresyl p-bromo-benzoate with aluminium chloride without solvent at 140° for 10 min (90%) [132].

m.p. 79° [132]; b.p.₁₁ 210° [132]; Spectra (NA).

(2-Bromophenyl)(2-hydroxy-4-methoxyphenyl)methanone

[183106-15-2]

$C_{14}H_{11}BrO_3$ mol.wt. 307.14

Synthesis

- Preparation by selective demethylation of 2'-bromo-2,4-di-methoxybenzophenone with excess beryllium chloride in refluxing toluene for 3.5 h (90%) [395].

m.p. 96–98° [395]; ¹H NMR [395], IR [395], UV [395], MS [395]; TLC [395].

(2-Bromophenyl)(2-hydroxy-5-methoxyphenyl)methanone

[183106-23-2]

 $C_{14}H_{11}BrO_3$ mol.wt. 307.14

Synthesis

- Preparation by selective demethylation of 2'-bromo-2,5-di-methoxybenzophenone with excess beryllium chloride in refluxing toluene for 3.5 h (90%) [395].

pale yellow oil [395]; b.p. (NA); 1H NMR [395], IR [395], UV [395], MS [395]; TLC [395].

(4-Bromophenyl)(2-hydroxy-4-methoxyphenyl)methanone $C_{14}H_{11}BrO_3$ mol.wt. 307.14

Synthesis

- Refer to: [222,655].

m.p. and Spectra (NA).

(3-Chloro-4-hydroxyphenyl)(2-methylphenyl)methanone $C_{14}H_{11}ClO_2$ mol.wt. 246.69

Synthesis

- Obtained by Friedel–Crafts acylation of o-chloroanisole with o-toluoyl chloride in the presence of aluminium chloride in tetrachloroethane at 120–130° for 3 h (25%) [508].

m.p. 128–129° [508]; Spectra (NA).

(3-Chloro-4-hydroxyphenyl)(3-methylphenyl)methanone $C_{14}H_{11}ClO_2$ mol.wt. 246.69

Syntheses

- Obtained (poor yield) by Friedel–Crafts acylation of o-chloroanisole with m-toluoyl chloride in the presence of aluminium chloride in tetrachloroethane at 120–130° for 1 h (14%) [508].
- Preparation by demethylation of 3-chloro-4-methoxy-3'-methylbenzophenone with aluminium chloride in tetrachloroethane at 100–110° for 1 h (quantitative yield) [508].

m.p. 145–146° [508]; Spectra (NA).

(5-Chloro-2-hydroxyphenyl)(2-methylphenyl)methanone

[52980-94-6]

 $C_{14}H_{11}ClO_2$ mol.wt. 246.69

Syntheses

- Preparation by Friedel–Crafts acylation of p-chloroanisole with o-toluoyl chloride in the presence of aluminium chloride in tetrachloroethane at 120–130° for 1 h (49%) [508] or at 150° for 7 h [624].
- Also obtained by reaction of o-toluoyl chloride with p-chlorophenol in the presence of aluminium chloride in tetrachloroethane at 120–130° for 2 h (19%) [508].
- Preparation by Fries rearrangement of p-chlorophenyl o-toluate with aluminium chloride at 100–150° for 0.5–3 h (71%) [29].
- Also refer to: [1085,1086].

m.p. 67°5–68° [508], 67–68° [29], 65–66° [624]; Spectra (NA).

[116544-78-6]

 $C_{14}H_{11}ClO_2$ mol.wt. 246.69

Synthesis

- Preparation by Fries rearrangement of p-chlorophenyl p-toluate with aluminium chloride at 180° for 10 min (75%) [518].

m.p. 90° [518]; ¹H NMR [518], IR [518].**(2-Chlorophenyl)(2-hydroxy-3-methylphenyl)methanone** $C_{14}H_{11}ClO_2$ mol.wt. 246.69

Synthesis

- Obtained (by-product) by Fries rearrangement of o-cresyl o-chlorobenzoate in the presence of aluminium chloride without solvent according to [722], (12%) [1087].

m.p. 72°3–72°8 [1087]; Spectra (NA).

(2-Chlorophenyl)(2-hydroxy-4-methylphenyl)methanone

[107623-97-2]

C₁₄H₁₁ClO₂

mol.wt. 246.69

Syntheses

- Preparation by Fries rearrangement of m-cresyl o-chloro-benzoate,
 - with polyphosphoric acid at 130° for 40 min (87%) [1088];
 - with aluminium chloride between 120° and 160° for 2 h [920].
 - Preparation by Friedel–Crafts acylation of m-cresol with o-chlorobenzoic acid in the presence of polyphosphoric acid at 110° for 4 h (77%) [1088].
 - Also obtained by isomerization of 2'-chloro-4-hydroxy-2-methylbenzophenone (para isomer) with polyphosphoric acid at 130° for 4 h (60%) [1088].
- m.p. 106° [920,1088]; ¹H NMR [1088], IR [1088], UV [1088].

(2-Chlorophenyl)(2-hydroxy-5-methylphenyl)methanone

[6280-52-0]

C₁₄H₁₁ClO₂

mol.wt. 246.69

Syntheses

- Preparation by Fries rearrangement of p-cresyl o-chloro-benzoate in the presence of aluminium chloride [23] without solvent at 120° and 160° [132,919,920], (71%) [1087].
 - Preparation by reaction of 2-chlorobenzotrichloride with p-cresol in the presence of aluminium chloride in carbon disulfide at 0° (57%) [1079].
 - Also obtained by sulfuric acid hydrolysis of 6,12-di(2-chlorophenyl)-2,8-dimethyl-6,12-epoxy-6*H*,12*H*-dibenzo[b,f][1,5]dioxocin (74%) [1079].
 - Preparation by reaction of o-chlorobenzoyl chloride with p-cresol in the presence of aluminium chloride at 100° for 4 min, then at 175° for 6 min (61%) [484].
 - Preparation by reaction of o-chlorobenzoic acid with p-cresol in the presence of 80% polyphosphoric acid at 190° for 3 h (46%) [923].
 - Preparation by demethylation of 2'-chloro-2-methoxy-5-methylbenzophenone with excess boiling pyridinium chloride for 1 h (91%) [1073].
 - Also refer to: [1063].
- m.p. 80° [920], 78° [132,923], 77–78° [484], 77° [1073], 76°3–77°2 [1087], 76–77° [1079], 75–77° [919]; b.p.₁₅ 195° [132], b.p.₁₋₂ 141–145° [1079]; IR [923].

(2-Chlorophenyl)(4-hydroxy-2-methylphenyl)methanone

[92103-15-6]

C₁₄H₁₁ClO₂

mol.wt. 246.69

Syntheses

- Preparation by Fries rearrangement of m-cresyl o-chloro-benzoate without solvent in the presence of,
 - aluminium chloride at 160° for 2 h [920];
 - polyphosphoric acid at 70° for 6 h (42%) [1089].

- Also obtained by Friedel–Crafts acylation of m-cresol with o-chlorobenzoic acid in the presence of polyphosphoric acid at 90° for 1 h (31%) [1089].
- Preparation by reaction of o-chlorobenzoyl chloride with m-tolyl borate in the presence of aluminium chloride in tetrachloroethane at 100° (31%) [55].
m.p. 159–160° [920], 153° [55,1089]; ¹H NMR [1089], IR [1089], UV [1089].

(2-Chlorophenyl)(4-hydroxy-3-methylphenyl)methanoneC₁₄H₁₁ClO₂ mol.wt. 246.69

Syntheses

- Preparation by action of o-chlorobenzoyl chloride with o-tolyl borate in the presence of aluminium chloride in tetrachloroethane at 100° (72%) [55].
- Preparation by Fries rearrangement of o-cresyl o-chloro-benzoate in the presence of aluminium chloride without solvent (35%) [1087], at 120° or 160° for 2 h [920].
m.p. 167°9–168°6 [1087], 167° [55], 162° [920]; Spectra (NA).

(3-Chlorophenyl)(2-hydroxy-3-methylphenyl)methanoneC₁₄H₁₁ClO₂ mol.wt. 246.69

Synthesis

- Obtained (by-product) by Fries rearrangement of o-cresyl m-chlorobenzoate in the presence of aluminium chloride without solvent according to [722], (17%) [1087].
m.p. 69°5–70°3 [1087]; Spectra (NA).

(3-Chlorophenyl)(2-hydroxy-4-methylphenyl)methanone

[67548-59-8]

C₁₄H₁₁ClO₂ mol.wt. 246.69

Synthesis

- Preparation by Fries rearrangement of m-cresyl m-chloro-benzoate in the presence of aluminium chloride,
 - without solvent at 120° and 160° [924];
 - in nitrobenzene at 62–63° for 72 h (28%) [31].
- Also refer to: [1090].
m.p. 89°5–90°5 [31], 89° [924]; Spectra (NA).

(3-Chlorophenyl)(2-hydroxy-5-methylphenyl)methanone

[6280-54-2]

 $C_{14}H_{11}ClO_2$ mol.wt. 246.69

Synthesis

- Preparation by Fries rearrangement of p-cresyl m-chloro-benzoate in the presence of,
 - aluminium chloride without solvent at 120° and 160° [919,924], (45%) [1087];
 - Nafion-H, a polymeric perfluorinated resin sulfonic acid, in refluxing nitrobenzene for 12 h (71%) [38].

m.p. 72° [924], 70°5–71°5 [1087], 70–71°5 [919], 69–70° [629];

 1H NMR [629], IR [629], UV [629]; pK_a [104,629]; polarographic study [117].**(3-Chlorophenyl)(4-hydroxy-2-methylphenyl)methanone** $C_{14}H_{11}ClO_2$ mol.wt. 246.69

Synthesis

- Obtained by Fries rearrangement of m-cresyl m-chloro-benzoate with aluminium chloride in nitrobenzene at 62–63° for 72 h (40%) [31] or without solvent at 120° or 160° [924].

m.p. 125–125°5 [31], 108° [924]. One of the reported melting points is obviously wrong.

Spectra (NA).

(3-Chlorophenyl)(4-hydroxy-3-methylphenyl)methanone $C_{14}H_{11}ClO_2$ mol.wt. 246.69

Synthesis

- Preparation by Fries rearrangement of o-cresyl m-chloro-benzoate with aluminium chloride without solvent according to [722], (55%) [1087] and at 120° or 160° [924].

m.p. 151°2–151°8 [1087], 149–150° [924]; Spectra (NA).

(4-Chlorophenyl)(2-hydroxy-3-methylphenyl)methanone

[6279-04-5]

 $C_{14}H_{11}ClO_2$ mol.wt. 246.69

Syntheses

- Obtained (by-product) by Fries rearrangement of o-cresyl p-chlorobenzoate in the presence of aluminium chloride without solvent (12%) [1087].

- Preparation by reaction of 3-methylsalicylic acid chloride (2-hydroxy-3-methylbenzoyl chloride) with chlorobenzene in the presence of aluminium chloride at 100° overnight (47%) [92,709–711,1091].
 - Also refer to: [1092,1093].
- m.p. 61°5–62° [1087], 61–63° [92,711], 55–58° [709,710,1091];
b.p._{0,5} 148–152° [709,710,711,1091]; Spectra (NA).

(4-Chlorophenyl)(2-hydroxy-4-methylphenyl)methanone

[107622-28-6]

C₁₄H₁₁ClO₂ mol.wt. 246.69

Syntheses

- Preparation by Fries rearrangement of m-cresyl p-chloro-benzoate with aluminium chloride between 120° and 160° (good yield) [926].
 - Preparation by reaction of p-chlorobenzoic acid with m-cresol in the presence of boron trifluoride at 160° for 2 h (70%) [150].
 - Also obtained by reaction of p-chlorobenzoyl chloride,
 - with m-tolyl borate in the presence of aluminium chloride in tetrachloroethane at 100° (26%) [55];
 - with m-cresol in the presence of aluminium chloride at 105° for 22 h (22%) [92].
- m.p. 83–84° [926], 81°5 [150], 80–81° [92]; Spectra (NA).

(4-Chlorophenyl)(2-hydroxy-5-methylphenyl)methanone

[6279-05-6]

C₁₄H₁₁ClO₂ mol.wt. 246.69

Syntheses

- Preparation by Friedel–Crafts acylation of p-cresol,
 - with p-chlorobenzoic acid in the presence of boron trifluoride at 160° for 5 h (89%) [150];
 - with p-chlorobenzoyl chloride in the presence of aluminium chloride without solvent (78%) [92,711], or in o-dichlorobenzene at 135° for 2 h (quantitative yield) [1094].
- Preparation by Fries rearrangement of p-cresyl p-chlorobenzoate with aluminium chloride without solvent at 120° and 160° [926], (51%) [1087].
- Also obtained by reaction of 4-chlorobenzotrichloride with p-cresol in the presence of aluminium chloride in carbon disulfide at 0° (28%) [1079].
- Also obtained by photo-Fries rearrangement of p-cresyl p-chlorobenzoate in methylene chloride (major product) [1095].
- Also obtained by sulfuric acid hydrolysis of 6,12-di(4-chlorophenyl)-2,8-dimethyl-6,12-epoxy-6H,12H-dibenzo[b,f][1,5]dioxocin (93%) [1079].

- Also obtained (poor yield) by diazotization of 2-amino-4'-chloro-5-methylbenzophenone and decomposition of the resulting diazonium salt in 0.1 M sulfuric acid at 60° (10%) [1096].
- Also refer to: [709,710,1091,1093,1097,1098].
- m.p. 71° [926], 69° [629], 68° [92], 66°9–67°6 [1087], 66°4–67°2 [1079], 66–67° [150]; b.p._{0,1} 168–174° [711], b.p._{0,25} 160–170° [150], b.p._{1–2} 143–145° [1079]; ¹H NMR [629,1094], IR [104,629,1094], UV [629]; pK_a [104,629]; polarographic study [117].

(4-Chlorophenyl)(3-hydroxy-2-methylphenyl)methanone

[74167-86-5] C₁₄H₁₁ClO₂ mol.wt. 246.69

Synthesis

- Preparation by diazotization of 3-amino-4'-chloro-2-methylbenzophenone, followed by hydrolysis of the diazonium salt so obtained (66%) [119], according to [634].

- Also refer to: [123,912].

m.p. 100° [119]; Spectra (NA).

(4-Chlorophenyl)(3-hydroxy-4-methylphenyl)methanone

[74177-55-2] C₁₄H₁₁ClO₂ mol.wt. 246.69

Synthesis

- Refer to: [119,912].

m.p. and Spectra (NA).

(4-Chlorophenyl)(4-hydroxy-2-methylphenyl)methanone

[61002-51-5] C₁₄H₁₁ClO₂ mol.wt. 246.69

Syntheses

- Preparation by Fries rearrangement of m-cresyl p-chloro-benzoate in the presence of aluminium chloride without solvent at 120° and 160° (good yield) [926].

- Also obtained by reaction of p-chlorobenzoyl chloride,

- with m-tolyl borate in the presence of aluminium chloride in tetrachloroethane at 100° (11%) [55];
- with m-cresol in the presence of aluminium chloride in nitrobenzene, first at 15° and at r.t. for 28 h [904].

- Also refer to: [902,1099].

m.p. 116–117° [926]; Spectra (NA).

(4-Chlorophenyl)(4-hydroxy-3-methylphenyl)methanone

[6279-06-7]

 $C_{14}H_{11}ClO_2$ mol.wt. 246.69

Syntheses

- Preparation by Fries rearrangement of o-cresyl p-chloro-benzoate with aluminium chloride without solvent at 120° and 160° (good yield) [926], (52%) [1087].
- Preparation by reaction of p-chlorobenzoyl chloride with o-tolyl borate in the presence of aluminium chloride in tetrachloroethane at 100° (47%) [55].
- Preparation by reaction of p-chlorobenzoyl chloride with o-cresol in the presence of aluminium chloride [165].

m.p. 211–211°5 [165], 210°5–211°5 [1087], 209–210° [926]; Spectra (NA).

(4-Chlorophenyl)(5-hydroxy-2-methylphenyl)methanone $C_{14}H_{11}ClO_2$ mol.wt. 246.69

Synthesis

- Preparation by diazotization of 5-amino-4'-chloro-2-methyl-benzophenone, followed by hydrolysis of the resulting diazonium salt (82%) [119], according to [634].

m.p. 188° [119]; Spectra (NA).

(5-Chloro-2-hydroxyphenyl)(2-methoxyphenyl)methanone

[159819-70-2]

 $C_{14}H_{11}ClO_3$ mol.wt. 262.69

Synthesis

- Preparation from 2-bromo-4-chloro-(2-methoxyethoxy)-methoxybenzene and o-anisaldehyde as the starting materials [624].

m.p. 94–95° [624]; Spectra (NA).

(5-Chloro-2-hydroxyphenyl)(4-methoxyphenyl)methanone

[85052-20-6]

 $C_{14}H_{11}ClO_3$ mol.wt. 262.69

Synthesis

- Preparation by reaction of p-anisoyl chloride with p-chloro-anisole in the presence of aluminium chloride in methylene chloride at r.t. for 18 h under nitrogen (41%) [472].

m.p. (NA); crystals [472]; ¹H NMR [472], IR [472], MS [472]; TLC [472].

(2-Chlorophenyl)(2-hydroxy-4-methoxyphenyl)methanone

[107517-49-7]

 $C_{14}H_{11}ClO_3$ mol.wt. 262.69

Syntheses

- Preparation by selective demethylation of 2'-chloro-2,4-di-methoxybenzophenone with excess beryllium chloride in refluxing toluene for 3 h (90%) [395].
 - Preparation by reaction of o-chlorobenzoyl chloride with resorcinol dimethyl ether in tetrachloroethane in the presence of aluminium chloride at 90° [222].
 - Also refer to: [78,666].
- m.p. 85–88° [222], 74–75° [395]; ¹H NMR [395], IR [395], UV [235,395]; TLC [395].

(2-Chlorophenyl)(2-hydroxy-5-methoxyphenyl)methanone

[183106-21-0]

 $C_{14}H_{11}ClO_3$ mol.wt. 262.69

Synthesis

- Preparation by selective demethylation of 2'-chloro-2,5-di-methoxybenzophenone with excess beryllium chloride in refluxing toluene for 3 h (90%) [395].
- pale yellow oil [395]; b.p. (NA); ¹H NMR [395], IR [395], UV [395], MS [395]; TLC [395].

(2-Chlorophenyl)(4-hydroxy-3-methoxyphenyl)methanone

[134612-35-4]

 $C_{14}H_{11}ClO_3$ mol.wt. 262.69

Synthesis

- Preparation by debenzoylation of 4-(benzyloxy)-2'-chloro-3-methoxybenzophenone with 33% hydrobromic acid/acetic acid in methylene chloride at 20–25° [1019].
- m.p. and Spectra (NA).

(3-Chlorophenyl)(2-hydroxy-4-methoxyphenyl)methanone

[96410-70-7]

 $C_{14}H_{11}ClO_3$ mol.wt. 262.69

Synthesis

- Preparation by reaction of m-chlorobenzonitrile with m-methoxyphenol in the presence of aluminium chloride for 8 h at 190°, followed by hydrolysis of the ketimine formed [77].
 - Also refer to: [1100–1103] (Japanese patents).
- m.p. and Spectra (NA).

(3-Chlorophenyl)(4-hydroxy-3-methoxyphenyl)methanone

[134612-36-5]

 $C_{14}H_{11}ClO_3$ mol.wt. 262.69

Synthesis

– Preparation by debenylation of 4-(benzyloxy)-3'-chloro-3-methoxybenzophenone with 33% hydrobromic acid/acetic acid in methylene chloride at 20–25° [1019].

m.p. 136–138° [1019]; Spectra (NA).

(4-Chlorophenyl)(2-hydroxy-4-methoxyphenyl)methanone

[85-28-9]

 $C_{14}H_{11}ClO_3$ mol.wt. 262.69

Syntheses

- Preparation by oxidation of 6-methoxy-2-phenyl-3-(4-chlorophenyl)benzofuran with chromium trioxide in boiling acetic acid for 40 min, followed by saponification of the resulting keto ester—2-(benzyloxy)-4'-chloro-4-methoxybenzophenone—with 4 N sodium hydroxide in refluxing ethanol for 1 h [44].
- Preparation by reaction of p-chlorobenzoyl chloride with resorcinol dimethyl ether,
- in the presence of aluminium chloride; in a chlorobenzene/N,N-dimethylformamide mixture (22:1) at 115° [235,657]; in tetrachloroethane first at r.t., then at 90° [222];
 - in the presence of titanium tetrachloride in chlorobenzene for 1 h at 120° (74%) [662];
 - in the presence of ferric chloride, without solvent or in o-dichlorobenzene, at 180–200° for 6–7 h (by-product) [663].
- Preparation by partial demethylation of 4'-chloro-2,4-dimethoxybenzophenone with aluminium chloride or aluminium bromide in chlorobenzene at 90–95° (good yield) [655].
- Preparation by Fries rearrangement of m-methoxyphenyl p-chlorobenzoate with aluminium chloride [23].
- Also refer to: [837] (Japanese patent) and [75,77,666,668,669,1104].
- m.p. 115° [662], 113° [663], 111° [44], 109–112° [222]; IR [44], UV [235].

(4-Chlorophenyl)(4-hydroxy-3-methoxyphenyl)methanone

[134612-37-6]

 $C_{14}H_{11}ClO_3$ mol.wt. 262.69

Synthesis

– Preparation by debenylation of 4-(benzyloxy)-4'-chloro-3-methoxybenzophenone with 33% hydrobromic acid/acetic acid in methylene chloride at 20–25° [1019].

m.p. 114–116° [1019]; Spectra (NA).

(5-Fluoro-2-hydroxyphenyl)(2-methylphenyl)methanoneC₁₄H₁₁FO₂ mol.wt. 230.24

Synthesis

– Preparation by Fries rearrangement of p-fluorophenyl o-toluate with aluminium chloride [23].

m.p. and Spectra (NA).

(5-Fluoro-2-hydroxyphenyl)(3-methylphenyl)methanone

[342-18-7]

C₁₄H₁₁FO₂ mol.wt. 230.24

Synthesis

– Preparation by Fries rearrangement of p-fluorophenyl m-toluate with aluminium chloride [23] without solvent at 130° for 2 h (92%) [1038].

b.p.₁₅ 185° [1038]; Spectra (NA).**(5-Fluoro-2-hydroxyphenyl)(4-methylphenyl)methanone**

[62433-29-8]

C₁₄H₁₁FO₂ mol.wt. 230.24

Synthesis

– Preparation by Fries rearrangement of p-fluorophenyl p-toluate with aluminium chloride at 150–180° for 20 min (92%) [492] or at 130° for 2 h (82%) [1034].

m.p. 89° [1034], 75–76° [492]; Spectra (NA).

(2-Fluorophenyl)(2-hydroxy-5-methylphenyl)methanone

[55270-76-3]

C₁₄H₁₁FO₂ mol.wt. 230.24

Synthesis

– Preparation by Fries rearrangement of p-cresyl 2-fluoro-benzoate with aluminium chloride [23] without solvent at 160° (36%) [919].

m.p. 72–73° [919]; Spectra (NA).

(3-Fluorophenyl)(2-hydroxy-5-methylphenyl)methanone

[55270-80-9]

C₁₄H₁₁FO₂ mol.wt. 230.24

Synthesis

– Preparation by reaction of 3-fluorobenzoyl chloride with 4-methoxytoluene in the presence of aluminium chloride at 150° for 1.5 h (21%) [919].

m.p. 31–34° [919]; b.p.₁₅ 70–74° [919]; n_D^{27.4} = 1.5946 [919]; Spectra (NA).

(4-Fluorophenyl)(2-hydroxy-4-methylphenyl)methanone

[108294-71-9]

 $C_{14}H_{11}FO_2$

mol.wt. 230.24

Synthesis

– Obtained (poor yield) by reaction of p-fluorobenzoyl chloride with m-cresol in the presence of aluminium chloride in tetrachloroethane at 105° for 22 h (9%) [92].

m.p. 78° [92]; Spectra (NA).

(4-Fluorophenyl)(4-hydroxy-2-methylphenyl)methanone

[32192-52-2]

 $C_{14}H_{11}FO_2$

mol.wt. 230.24

Synthesis

– Preparation by reaction of p-fluorobenzoyl chloride with m-cresol in nitrobenzene in the presence of aluminium chloride first at 0°, then at 60° for 20 h (33%) [1105].

m.p. 110–112° [1105]; 1H NMR [1105].**(5-Fluoro-2-hydroxyphenyl)(4-methoxyphenyl)methanone**

[727-93-5]

 $C_{14}H_{11}FO_3$

mol.wt. 246.24

Synthesis

– Preparation by Fries rearrangement of p-fluorophenyl p-anisate without solvent,

- with aluminium chloride at 130° for 2 h (60%) [1038];
- with titanium tetrachloride at 160° for 20 min (49%) [1106], according to [1107].

m.p. 79.5 [1106]; b.p.₃₀ 260° [1038]; 1H NMR [1106,1108], MS [1106,1108]; HPLC [1108].**(5-Fluoro-2-hydroxyphenyl)[4-(methoxy- ^{11}C)phenyl]methanone**

[161585-22-4]

 $C_{14}H_{11}FO_3$

mol.wt. 245.24

Synthesis

– Preparation by partial methylation of 2,4'-dihydroxy-5-fluorobenzophenone with [^{11}C]methyl iodide in N,N-dimethylformamide at -45° [1106].

m.p. (NA); 1H NMR [1106,1108], MS [1106,1108]; HPLC [1108].

(2-Fluorophenyl)(2-hydroxy-4-methoxyphenyl)methanone

[3119-88-8]

 $C_{14}H_{11}FO_3$ mol.wt. 246.24

Syntheses

- Preparation by reaction of 2-fluorobenzoyl chloride with resorcinol dimethyl ether in the presence of aluminium chloride in refluxing ethylene dichloride for 30 min (78%) [1031] or refluxing hexane for 8 h [239]. Titanium tetrachloride can also be used instead of aluminium chloride [239].
 - Preparation by selective demethylation of 2'-fluoro-2,4-dimethoxybenzophenone with excess beryllium chloride in refluxing toluene for 3 h (92%) [395].
- m.p. 149–150° (d) [395], 53–54° [1031], 49–50° [239]. One of the reported melting points is obviously wrong.
- ¹H NMR [395], IR [395], UV [395]; TLC [395]; vapour pressure [248].

(2-Fluorophenyl)(2-hydroxy-5-methoxyphenyl)methanone

[183106-19-6]

 $C_{14}H_{11}FO_3$ mol.wt. 246.24

Synthesis

- Preparation by selective demethylation of 2'-fluoro-2,5-di-methoxybenzophenone with excess beryllium chloride in refluxing toluene for 3.5 h (90%) [395].
- pale yellow oil [395]; b.p. (NA); ¹H NMR [395], IR [395], UV [395], MS [395]; TLC [395].

(2-Fluorophenyl)(4-hydroxy-3-methoxyphenyl)methanone

[125629-30-3]

 $C_{14}H_{11}FO_3$ mol.wt. 246.24

Synthesis

- Preparation by debenzoylation of 4-(benzyloxy)-2'-fluoro-3-methoxybenzophenone with 33% hydrobromic acid/acetic acid in methylene chloride at r.t. for 2 h [1019], (92%) [1084].
- m.p. 84–86° [1084]; ¹H NMR [1084], MS [1084].

(3-Fluorophenyl)(2-hydroxy-4-methoxyphenyl)methanone $C_{14}H_{11}FO_3$ mol.wt. 246.24

Synthesis

- Preparation by reaction of m-fluorobenzoyl chloride with resorcinol dimethyl ether in the presence of aluminium chloride or titanium tetrachloride in refluxing n-hexane for 8 h [239].
- m.p. 88°5–89°5 [239]; Spectra (NA); vapour pressure [248].

(3-Fluorophenyl)(2-hydroxy-5-methoxyphenyl)methanone

$C_{14}H_{11}FO_3$ mol.wt. 246.24

Synthesis

- Obtained by partial demethylation of 3'-fluoro-2,5-di-methoxybenzophenone with aluminium chloride in benzene at 80° [258].

m.p. and Spectra (NA).

(3-Fluorophenyl)(4-hydroxy-3-methoxyphenyl)methanone

[134612-32-1]

$C_{14}H_{11}FO_3$ mol.wt. 246.24

**Synthesis**

- Preparation by debenylation of 4-(benzyloxy)-3'-fluoro-3-methoxybenzophenone with 33% hydrobromic acid/acetic acid in methylene chloride at r.t. [1019].

m.p. 133–135° [1019]; Spectra (NA).

(4-Fluorophenyl)(2-hydroxy-4-methoxyphenyl)methanone

**Synthesis**

- Preparation by partial demethylation of 4'-fluoro-2,5-di-methoxybenzophenone with aluminium chloride in benzene under nitrogen at 80° for 12 h (66%) [258,680].

m.p. 93° [680]; 1H NMR [680], ^{13}C NMR [680], MS [680].

(4-Fluorophenyl)(4-hydroxy-3-methoxyphenyl)methanone

[134612-33-2]

 $C_{14}H_{11}FO_3$ mol.wt. 246.24

Synthesis

- Preparation by debenylation of 4-(benzyloxy)-4'-fluoro-3-methoxybenzophenone with 33% hydrobromic acid/acetic acid in methylene chloride at r.t. [1019].

m.p. 139–141° [1019]; Spectra (NA).

(2-Hydroxy-3-methylphenyl)(3-nitrophenyl)methanone $C_{14}H_{11}NO_4$ mol.wt. 257.25

Syntheses

- Obtained (poor yield) by Fries rearrangement of o-tolyl m-nitrobenzoate with aluminium chloride at 120° or at 160° for 2 h (<8%) [958].
- Also obtained (poor yield) by reaction of m-nitrobenzoyl chloride with o-tolyl borate in the presence of aluminium chloride in tetrachloroethane at 100° (3%) [55].

m.p. 115° [958]; Spectra (NA).

(2-Hydroxy-3-methylphenyl)(4-nitrophenyl)methanone

[65611-78-1]

 $C_{14}H_{11}NO_4$ mol.wt. 257.25

Syntheses

- Preparation by Fries rearrangement of o-tolyl p-nitrobenzoate with aluminium chloride at 120° [961].
- Preparation by reaction between (o-tolyl)magnesium bromide complexed with HMPT and p-nitrobenzaldehyde in refluxing benzene for 48 h (68%) [50].

m.p. 118° [961], 113° [50];

 1H NMR [50], IR [50], MS [50].**(2-Hydroxy-4-methylphenyl)(3-nitrophenyl)methanone** $C_{14}H_{11}NO_4$ mol.wt. 257.25

Syntheses

- Obtained by reaction of m-nitrobenzoyl chloride with m-tolyl borate in the presence of aluminium chloride in tetrachloro-ethane at 100° (25%) [55].
- Also obtained by Fries rearrangement of m-tolyl m-nitrobenzoate with aluminium chloride at 120° or at 160° for 2 h (15%) [958].

m.p. 132° [958]; Spectra (NA).

(2-Hydroxy-4-methylphenyl)(4-nitrophenyl)methanoneC₁₄H₁₁NO₄ mol.wt. 257.25

Synthesis

- Preparation by Fries rearrangement of m-tolyl p-nitro-benzoate with aluminium chloride at 120° for 2 h (major product) (<26%) [961].

m.p. 134° [961]; Spectra (NA).

(2-Hydroxy-5-methylphenyl)(3-nitrophenyl)methanone

[53669-31-1]

C₁₄H₁₁NO₄ mol.wt. 257.25

Syntheses

- Preparation by Fries rearrangement of p-cresyl m-nitro-benzoate with aluminium chloride without solvent at 120–160° for 2 h [629], (62%) [958] or in refluxing o-dichlorobenzene for 2 h (30%) [520] or in refluxing chlorobenzene for 3 h (22%) [520].
- Also obtained (by-product) by reaction of m-nitrobenzoyl chloride with p-methylanisole in the presence of aluminium chloride without solvent at 140° for 30 min (11%) [919] or in refluxing carbon disulfide [959].

m.p. 104–105° [958], 102–103° [629], 102° [959], 99–100° [520], 98–100° [919]; ¹H NMR [629], IR [104,629,959], UV [629,959]; pK_a [104,629].**(2-Hydroxy-5-methylphenyl)(4-nitrophenyl)methanone**

[53669-32-2]

C₁₄H₁₁NO₄ mol.wt. 257.25

Syntheses

- Preparation by deethylation of 2-ethoxy-5-methyl-4'-nitrobenzophenone (SM) in the presence of aluminium chloride in carbon disulfide at 60–70° for 8 h [141,619] according to [139]. SM was obtained by reaction of p-nitrobenzoyl chloride with p-methylphenetole in the presence of aluminium chloride.
- Preparation by Fries rearrangement of p-cresyl p-nitrobenzoate with aluminium chloride at 160° for 2 h (60%) [961] or at 140° for 30 min (52%) [485]. In this case, the starting ester was obtained by heating p-nitrobenzoyl chloride with aluminium tris(p-methylphenoxide) in a boiling water bath for 30 min [485].
- Also obtained by reaction of p-nitrobenzoyl chloride with p-methylanisole in the presence of aluminium chloride in boiling carbon disulfide during several hours (by-product) [683] or in ethylene dichloride first at 0–5°, then at 50° for 1 h [471].
- Also refer to: [471].

m.p. 149–150° [471], 143° [961], 142–143° [619,683], 142° [485]; IR [104]; pK_a [104]; cryoscopic study [141].

(2-Hydroxy-6-methylphenyl)(4-nitrophenyl)methanone

$C_{14}H_{11}NO_4$ mol.wt. 257.25

Synthesis

- Obtained (by-product) by Fries rearrangement of m-tolyl p-nitrobenzoate with aluminium chloride at 120° for 2 h (poor yield) [961].

m.p. 143° [961]; Spectra (NA).

(4-Hydroxy-2-methylphenyl)(3-nitrophenyl)methanone

[107558-23-6]

$C_{14}H_{11}NO_4$ mol.wt. 257.25

**Syntheses**

- Obtained by reaction of m-nitrobenzoyl chloride with m-tolyl borate in the presence of aluminium chloride in tetrachloroethane at 100° (17%) [55].
- Also obtained by Fries rearrangement of m-tolyl m-nitrobenzoate with aluminium chloride at 120° or at 160° for 2 h (10%) [958].

m.p. 200° [958]; Spectra (NA).

(2-Hydroxy-5-methoxyphenyl)(4-nitrophenyl)methanone

[80427-39-0]

C₁₄H₁₁NO₅ mol.wt. 273.25

Syntheses

– Preparation by Friedel–Crafts acylation of hydroquinone dimethyl ether with p-nitrobenzoyl chloride in the presence of stannic chloride in nitromethane at 20° for 1 h, followed by demethylation of the

resulting ketone (75%) with aluminium chloride in nitromethane at 20° for 24 h (64%) [679].

– Also obtained by Fries rearrangement of p-methoxyphenyl p-nitrobenzoate with titanium tetrachloride without solvent at 120° for 1 h (20–35%) [679].

m.p. 127° [679]; ¹H NMR (Sadler: standard n° 35276 M) [679],

IR (Sadler: standard n° 62644 K) [679], UV [679].

(4-Hydroxy-3-methoxyphenyl)(2-nitrophenyl)methanone

[190522-97-5]

 $C_{14}H_{11}NO_5$ mol.wt. 273.25

Synthesis

- Preparation by adding a solution of 30% hydrobromic acid to a solution of 4-(benzyloxy)-3-methoxy-2'-nitro-benzophenone in acetic acid, within 10 min at 0° and stirring for 1 h at 20° (98%). -Refer to: Chem. Abstr., **127**, 17465u (1997)^T.

m.p. (NA); ¹H NMR^T, MS^T.**(5-Hydroxy-2-methoxyphenyl)(4-nitrophenyl)methanone**

[80427-35-6]

 $C_{14}H_{11}NO_5$ mol.wt. 273.25

Syntheses

- Preparation by reaction of p-nitrobenzoyl chloride with hydroquinone monomethyl ether in the presence of aluminium chloride in carbon disulfide at 25° for 4 h (50%) [1110].
- Preparation by reaction of p-nitrobenzoyl chloride with p-methoxyphenyl p-nitrobenzoate in the presence of stannic chloride in nitromethane at 20° for 2 days (49%). The m-keto ester formed, the 4-methoxy-3-(4-nitrobenzoyl)phenyl 4-nitrobenzoate, (49%), gave the expected ketone by saponification with sodium hydroxide in refluxing methanol for 1 h (quantitative yield) [679].

m.p. 129° [679], 117° [1110]; ¹H NMR (Sadtler: standard n° 35277 M) [679], IR (Sadtler: standard n° 62645 K) [679], UV [679].**(3-Amino-5-chloro-2-hydroxyphenyl)(4-methylphenyl)methanone** $C_{14}H_{12}ClNO_2$ mol.wt. 261.71

m.p. 44° [1091], 44–46° [92]; b.p._{0.45} 148–151° [1091]; Spectra (NA).

(3,4-Dichlorophenyl)(5-ethyl-2-hydroxyphenyl)methanone

[61466-87-3]

 $C_{15}H_{12}Cl_2O_2$ mol.wt. 295.16

Synthesis

– Preparation by reaction of 3,4-dichlorobenzoyl chloride with p-ethylphenol in the presence of aluminium chloride in tetrachloroethane at 105° for 22 h (30%) [92], (17%) [1091].

m.p. 50° [1091]; b.p._{0.35} 175–177° [92,1091]; Spectra (NA).

(2,4-Dichlorophenyl)(2-hydroxy-4,6-dimethylphenyl)methanone

[34203-52-6]

 $C_{15}H_{12}Cl_2O_2$ mol.wt. 295.16

Synthesis

– Preparation by Fries rearrangement of 3,5-dimethyl-phenyl 2,4-dichlorobenzoate with aluminium chloride for 30 min at 150–160° [458].

m.p. 94–95° [458]; Spectra (NA).

(3,4-Dichlorophenyl)(4-hydroxy-2,6-dimethylphenyl)methanone

[34183-02-3]

 $C_{15}H_{12}Cl_2O_2$ mol.wt. 295.16

Synthesis

– Obtained by Fries rearrangement of 3,5-dimethylphenyl 3,4-dichlorobenzoate with aluminium chloride in chloro-benzene for 20 min at 140–150° or in nitrobenzene for 24 h at 75° [480].

m.p. 138–139° [480]; Spectra (NA).

(2,6-Dichlorophenyl)(2-hydroxy-4-methoxy-6-methylphenyl)methanone

[183726-73-0]

 $C_{15}H_{12}Cl_2O_3$ mol.wt. 311.16

Synthesis

– Refer to: [1072].

m.p. and Spectra (NA).

(2,6-Dichlorophenyl)(5-hydroxy-4-methoxy-2-methylphenyl)methanone

[183724-10-9]

 $C_{15}H_{12}Cl_2O_3$ mol.wt. 311.16**Synthesis**

- Preparation by partial demethylation of 2',6'-dichloro-4,5-dimethoxy-2-methylbenzophenone with 33% hydrobromic acid in acetic acid for 1.5 h at 75° (45%) [1072].

m.p. 152° [1072]; Spectra (NA).

(2,6-Dichlorophenyl)(2-hydroxy-4,5-dimethoxyphenyl)methanone

[183725-20-4]

 $C_{15}H_{12}Cl_2O_4$ mol.wt. 327.16**Syntheses**

- Preparation by Friedel–Crafts acylation of 3,4-dimethoxy-phenol with 2,6-dichlorobenzoyl chloride [1072].
- Preparation by partial demethylation of 2',6'-dichloro-2,4,5-trimethoxybenzophenone [1072].
- Preparation by diazotization of 2-amino-2',6'-dichloro-4,5-dimethoxybenzophenone (compound **3**) [1072].

m.p. 80° [1072]; Spectra (NA).

[4-Hydroxy-3-(methoxymethyl)-5-nitrophenyl](2-nitrophenyl)methanone $C_{15}H_{12}N_2O_7$ mol.wt. 332.27**Synthesis**

- Obtained by reaction of chloromethyl methyl ether in methylene chloride with 3,4-dihydroxy-2',5'-dinitro-benzophenone in tetrahydrofuran in the presence of N,N-diisopropylethylamine (Huenig's base) for 40 min at 0° (41%). -Refer to: Chem. Abstr., **127**, 17465u (1997)^f.

m.p. (NA); ¹H NMR^T.**(2,4-Dimethoxyphenyl)(4-hydroxy-3,5-dinitrophenyl)methanone**

[67246-02-0]

 $C_{15}H_{12}N_2O_8$ mol.wt. 348.27**Synthesis**

- Obtained by reaction of nitric acid (d = 1.42) with 4-hydroxy-2',4'-dimethoxybenzophenone in acetic acid at 32° [592].

m.p. 157° [592]; ¹H NMR [592].

(2-Hydroxy-4-methoxy-3,5-dinitrophenyl)(2-methoxyphenyl)methanone

[79204-71-0]

 $C_{15}H_{12}N_2O_8$ mol.wt. 348.27**Synthesis**

– Preparation by oxidation of 2,3-bis(2-methoxyphenyl)-5,7-dinitro-6-methoxybenzofuran with chromium trioxide in acetic acid, followed by saponification of the keto ester so formed with potassium hydroxide in ethanol (60%) [1117].

m.p. 120° [1117]; IR [1117].

(2-Hydroxy-4-methoxy-3,5-dinitrophenyl)(4-methoxyphenyl)methanone

[66666-08-8]

 $C_{15}H_{12}N_2O_8$ mol.wt. 348.27**Synthesis**

– Preparation by saponification of 2-(p-anisoyloxy)-4,4'-dimethoxy-3,5-dinitrobenzophenone (SM) with potassium hydroxide in refluxing ethanol for 1 h (70%). SM was obtained by oxidation of 5,7-di-nitro-6-methoxy-2,3-bis(p-methoxyphenyl)-benzofuran with chromium trioxide in refluxing acetic acid for 45 min (72%) [1116].

m.p. 140° [1116]; Spectra (NA).

(4-Bromophenyl)(5-ethyl-2-hydroxyphenyl)methanone

[108294-74-2]

 $C_{15}H_{13}BrO_2$ mol.wt. 305.17**Synthesis**

– Preparation by reaction of p-bromobenzoyl chloride with p-ethylphenol in the presence of aluminium chloride in tetrachloroethane at 105° for 22 h (45%) [92].

b.p._{0.95} 186° [92]; Spectra (NA).**(2-Bromophenyl)(2-hydroxy-3,5-dimethylphenyl)methanone**

[86914-81-0]

 $C_{15}H_{13}BrO_2$ mol.wt. 305.17**Synthesis**

– Preparation by Fries rearrangement of 2,4-dimethylphenyl o-bromobenzoate with aluminium chloride at 180° for 10 min [1074].

m.p. 86–89° [1074]; Spectra (NA).

(4-Bromophenyl)(2-hydroxy-4,6-dimethylphenyl)methanone

[34174-04-4]

 $C_{15}H_{13}BrO_2$

mol.wt. 305.17

Synthesis

– Preparation by Fries rearrangement of 3,5-dimethyl-phenyl p-bromobenzoate with aluminium chloride for 30 min at 150–160° [458].

m.p. 147–148° [458]; Spectra (NA).

(4-Bromophenyl)(4-hydroxy-2,6-dimethylphenyl)methanone

[34183-16-9]

 $C_{15}H_{13}BrO_2$

mol.wt. 305.17

Synthesis

– Obtained by Fries rearrangement of 3,5-dimethylphenyl p-bromobenzoate with aluminium chloride in chloro-benzene at 140–150° for 20 min or in nitrobenzene at 75° for 24 h [480].

m.p. 125–126° [480]; Spectra (NA).

(4-Chloro-2-hydroxy-5-methylphenyl)(2-methylphenyl)methanone

[170799-18-5]

 $C_{15}H_{13}ClO_2$

mol.wt. 260.72

Synthesis

– Preparation by Fries rearrangement of 3-chloro-4-methyl-phenyl o-toluate with aluminium chloride at 100–150° for 0.5–3 h (31%) [29].

m.p. 72–73° [29]; Spectra (NA).

(5-Chloro-2-hydroxy-3-methylphenyl)(2-methylphenyl)methanone

[86914-77-4]

 $C_{15}H_{13}ClO_2$

mol.wt. 260.72

Synthesis

– Preparation by Fries rearrangement of 4-chloro-2-methyl-phenyl o-toluate with aluminium chloride at 180° for 10 min [1074].

m.p. 38° [1074]; Spectra (NA).

(5-Chloro-2-hydroxy-3-methylphenyl)(3-methylphenyl)methanone[86914-90-1] $C_{15}H_{13}ClO_2$ mol.wt. 260.72

Synthesis

– Preparation by Fries rearrangement of 4-chloro-2-methyl-phenyl m-toluate with aluminium chloride at 180° for 10 min [1074].

m.p. 108–109° [1074]; Spectra (NA).

(5-Chloro-2-hydroxy-3-methylphenyl)(4-methylphenyl)methanone[86914-86-5] $C_{15}H_{13}ClO_2$ mol.wt. 260.72

Synthesis

– Preparation by Fries rearrangement of 4-chloro-2-methyl-phenyl p-toluate with aluminium chloride at 180° for 10 min [1074].

m.p. 76–77° [1074]; Spectra (NA).

(5-Chloro-2-hydroxy-4-methylphenyl)(2-methylphenyl)methanone[170799-04-9] $C_{15}H_{13}ClO_2$ mol.wt. 260.72

Synthesis

– Preparation by Fries rearrangement of 4-chloro-3-methyl-phenyl o-toluate with aluminium chloride at 100–150° for 0.5–3 h (76%) [29].

m.p. 57–58° [29]; Spectra (NA).

(3-Chloro-2-methylphenyl)(2-hydroxy-5-methylphenyl)methanone $C_{15}H_{13}ClO_2$ mol.wt. 260.72

Synthesis

– Preparation by reaction of 3-chloro-2-methylbenzoyl chloride with p-cresol in the presence of aluminium chloride for 8 h at 190° [77].

m.p. and Spectra (NA).

(2-Chlorophenyl)(5-ethyl-2-hydroxyphenyl)methanone[108294-72-0] $C_{15}H_{13}ClO_2$ mol.wt. 260.72

Synthesis

– Preparation by reaction of o-chlorobenzoyl chloride with p-ethylphenol in the presence of aluminium chloride in tetrachloroethane at 105° for 22 h (60%) [92].

b.p._{0.45} 138–140° [92]; Spectra (NA).

(3-Chlorophenyl)(5-ethyl-2-hydroxyphenyl)methanone

[61466-85-1]

 $C_{15}H_{13}ClO_2$ mol.wt. 260.72

Synthesis

- Preparation by reaction of m-chlorobenzoyl chloride with p-ethylphenol in the presence of aluminium chloride in tetrachloroethane at 105° for 22 h (66%) [92,1091].

b.p._{0.25} 153–156° [92,1091]; Spectra (NA).**(4-Chlorophenyl)(2-ethyl-4-hydroxyphenyl)methanone**

[61466-73-7]

 $C_{15}H_{13}ClO_2$ mol.wt. 260.72

Synthesis

- Obtained (by-product) by reaction of p-chlorobenzoyl chloride with m-ethylphenol in the presence of aluminium chloride in tetrachloroethane at 105° for 22 h (12%) [1091].
- Also refer to: [1093].

m.p. and Spectra (NA).

(4-Chlorophenyl)(3-ethyl-2-hydroxyphenyl)methanone

[61466-80-6]

 $C_{15}H_{13}ClO_2$ mol.wt. 260.72

Synthesis

- Preparation by reaction of 3-ethylsalicylic acid chloride (3-ethyl-2-hydroxybenzoyl chloride) with chlorobenzene in the presence of aluminium chloride at 100° overnight (31%) [92,711], (23%) [1091].

m.p. 72–73° [92,711,1091]; Spectra (NA).

(4-Chlorophenyl)(4-ethyl-2-hydroxyphenyl)methanone

[56394-72-0]

 $C_{15}H_{13}ClO_2$ mol.wt. 260.72

Syntheses

- Preparation by reaction of p-chlorobenzoyl chloride with m-ethylphenol in the presence of aluminium chloride in tetrachloroethane at 105° for 22 h (83%) [92,711], (48%) [709,1091].
- Obtained from the corresponding oxime (m.p. 159–161°) by treatment with sodium metabisulfite in refluxing ethanol for 40 h [1091].

m.p. 52° [92,711,1091]; b.p._{0.09} 155–160° [709]; Spectra (NA).

(4-Chlorophenyl)(5-ethyl-2-hydroxyphenyl)methanone

[56394-67-3]

 $C_{15}H_{13}ClO_2$ mol.wt. 260.72

Syntheses

- Preparation by reaction of p-chlorobenzoyl chloride with p-ethylphenol in the presence of aluminium chloride in tetrachloroethane at 105° for 22 h (72%) [92,711], (43–49%) [709,710,1091].
 - Preparation by Fries rearrangement of p-ethylphenyl p-chlorobenzoate with aluminium chloride in tetrachloroethane at 125° for 6 h [710].
 - Also refer to: [714].
- m.p. 41°–43° [92,711], 35–38° [710,1091];
 b.p._{0.09} 147–150° [711], b.p.₃ 150–160° [92], b.p._{0.3} 160–168° [709,710,1091]; Spectra (NA).

(2-Chlorophenyl)(2-hydroxy-4,5-dimethylphenyl)methanone

[170799-17-4]

 $C_{15}H_{13}ClO_2$ mol.wt. 260.72

Synthesis

- Preparation by Fries rearrangement of 3,4-dimethylphenyl o-chlorobenzoate with aluminium chloride at 100–150° for 0.5–3 h (58%) [29].
- m.p. 81–82° [29]; Spectra (NA).

(4-Chlorophenyl)(2-hydroxy-3,5-dimethylphenyl)methanone

[86914-84-3]

 $C_{15}H_{13}ClO_2$ mol.wt. 260.72

Synthesis

- Preparation by Fries rearrangement of 2,4-dimethylphenyl p-chlorobenzoate with aluminium chloride at 180° for 10 min [1074].
- m.p. 45–46° [1074]; Spectra (NA).

(4-Chlorophenyl)(2-hydroxy-4,6-dimethylphenyl)methanone

[34199-74-1]

 $C_{15}H_{13}ClO_2$ mol.wt. 260.72

Syntheses

- Preparation by reaction of p-chlorobenzoyl chloride with 3,5-dimethylanisole in the presence of stannic chloride in benzene, first between 0° and 5°, then at r.t. for 3 h.

The 4'-chloro-4,6-dimethyl-2-methoxybenzophenone obtained (27%) by demethylation with 48% hydrobromic acid gave the expected ketone [904].

- Preparation by Fries rearrangement of 3,5-dimethylphenyl p-chlorobenzoate with aluminium chloride for 30 min at 150–160° [458].

m.p. 132–133° [458]; Spectra (NA).

(4-Chlorophenyl)(4-hydroxy-2,6-dimethylphenyl)methanone

[34183-15-8]

$C_{15}H_{13}ClO_2$ mol.wt. 260.72

Syntheses

- Preparation by reaction of p-chlorobenzoyl chloride with 3,5-dimethylanisole in the presence of stannic chloride in benzene, first between 0° and –5°, then at r.t. for 3 h.

The 4-(p-chlorobenzoyl)-3,5-dimethylanisole obtained (40%) by demethylation with 48% hydrobromic acid gave the expected ketone [904].

- Also obtained by Fries rearrangement of 3,5-dimethylphenyl p-chlorobenzoate with aluminium chloride in chlorobenzene at 140–150° for 20 min or in nitrobenzene at 75° for 24 h [480].

m.p. 139–140° [480]; Spectra (NA).

(4-Chlorophenyl)(4-hydroxy-3,5-dimethylphenyl)methanone

[61002-59-3]

$C_{15}H_{13}ClO_2$ mol.wt. 260.72

Synthesis

- Preparation by Friedel–Crafts acylation of 2,6-dimethyl-anisole with p-chlorobenzoyl chloride in the presence of aluminium chloride [902].

N.B.: Na and K salts [1118].

m.p. 98° [902]; Spectra (NA).

(5-Chloro-2-hydroxy-4-methoxyphenyl)(4-methoxyphenyl)methanone

[136741-44-1]

$C_{15}H_{13}ClO_4$ mol.wt. 292.72

Synthesis

- Preparation by reaction of 4-methoxybenzoyl chloride with 4-chlororesorcinol dimethyl ether in the presence of aluminium chloride in ethylene dichloride (85%) [589].

m.p. 130–132° [589]; Spectra (NA).

(2-Chlorophenyl)(2-hydroxy-3,4-dimethoxyphenyl)methanone

[140665-36-7]

 $C_{15}H_{13}ClO_4$ mol.wt. 292.72

Synthesis

– Preparation by reaction of o-chlorobenzoyl chloride with 1,2,3-trimethoxybenzene in the presence of aluminium chloride in ethylene dichloride between 0° and 5°, then at r.t. for 3 h and at reflux for 1 h (86%) [704].

m.p. 115–117° [704]; Spectra (NA).

(2-Chlorophenyl)(2-hydroxy-4,5-dimethoxyphenyl)methanone

[140665-22-1]

 $C_{15}H_{13}ClO_4$ mol.wt. 292.72

Synthesis

– Preparation by reaction of o-chlorobenzoyl chloride with 1,2,4-trimethoxybenzene in the presence of aluminium chloride in ethylene dichloride between 0° and 5°, then at r.t. for 4 h and at reflux for 2 h (60%) [704].

m.p. 75–77° [704]; Spectra (NA).

(4-Chlorophenyl)(2-hydroxy-3,4-dimethoxyphenyl)methanone

[7508-29-4]

 $C_{15}H_{13}ClO_4$ mol.wt. 292.72

Synthesis

– Preparation by reaction of p-chlorobenzoyl chloride with 1,2,3-trimethoxybenzene in the presence of aluminium chloride in ethylene dichloride between 0° and 5°, then at r.t. for 3 h and at reflux for 1 h (54%) [704].

m.p. 148–149° [704]; Spectra (NA).

(4-Ethyl-2-hydroxyphenyl)(3-fluorophenyl)methanone

[61466-88-4]

 $C_{15}H_{13}FO_2$ mol.wt. 244.27

Synthesis

– Obtained (poor yield) by reaction of m-fluorobenzoyl chloride with m-ethylphenol in the presence of aluminium chloride in tetrachloroethane at 105° for 22 h [710,1091], (5%) [92].

oil [92]; m.p. <20° [710,1091]; $n_D^{22} = 1.5962$ [710,1091]; b.p. and Spectra (NA).

(4-Ethyl-2-hydroxyphenyl)(4-fluorophenyl)methanone

[56394-78-6]

 $C_{15}H_{13}FO_2$ mol.wt. 244.27

Synthesis

- Obtained by reaction of p-fluorobenzoyl chloride with m-ethylphenol in the presence of aluminium chloride in tetrachloroethane at 105° for 22 h (64%) [709], (41%) [710,1091], (5%) [92,711].

- Also refer to: [714].

m.p. 44–48° [92,709–711,1091];

b.p._{0.06} 129–132° [709,710,1091]; Spectra (NA).**(5-Ethyl-2-hydroxyphenyl)(4-fluorophenyl)methanone**

[108294-75-3]

 $C_{15}H_{13}FO_2$ mol.wt. 244.27

Synthesis

- Preparation by reaction of p-fluorobenzoyl chloride with p-ethylphenol in the presence of aluminium chloride in tetrachloroethane at 105° for 22 h (38%) [92].

m.p. 44–46° [92]; Spectra (NA).

(4-Fluorophenyl)(4-hydroxy-2,3-dimethylphenyl)methanone $C_{15}H_{13}FO_2$ mol.wt. 244.27

Synthesis

- Preparation by demethylation of 4'-fluoro-4-methoxy-2,3-dimethylbenzophenone (SM) with aluminium chloride in refluxing methylene chloride overnight. SM was obtained by Friedel–Crafts acylation of 2,3-dimethylanisole with p-fluorobenzoyl chloride in the presence of aluminium chloride in refluxing methylene chloride [475].

m.p. and Spectra (NA).

(4-Fluorophenyl)(4-hydroxy-3,5-dimethylphenyl)methanone

[102331-06-6]

 $C_{15}H_{13}FO_2$ mol.wt. 244.27

Synthesis

- Preparation by Fries rearrangement of 2,6-dimethylphenyl p-fluorobenzoate in the presence of aluminium chloride in o-dichlorobenzene at 150° (93%) [1119].

m.p. and Spectra (NA).

(2-Fluorophenyl)(2-hydroxy-4-methoxy-3-methylphenyl)methanone

[72483-03-5]

 $C_{15}H_{13}FO_3$ mol.wt. 260.26

Synthesis

– Preparation by reaction of o-fluorobenzoyl chloride with 2,6-dimethoxytoluene in the presence of aluminium chloride in refluxing ethylene dichloride for 30 min (93%) [476,1031].

m.p. 119–120° [1031], 118–120° [476]; Spectra (NA).

(2-Fluoro-6-methoxyphenyl)(2-hydroxy-6-methoxyphenyl)methanone

[129103-94-2]

 $C_{15}H_{13}FO_4$ mol.wt. 276.26

Synthesis

– Preparation from 2-iodo-3-methoxyphenyl 2-fluoro-6-methoxybenzoate by rearrangement on treatment with n-butyllithium in a mixture of ethyl ether, hexane and tetrahydrofuran at –100° followed by heating to –70°, then treatment with saturated aqueous ammonium chloride (88%) [58].

m.p. 79°5–80° [58]; 1H NMR [58], IR [58], MS [58].

(2-Fluorophenyl)(2-hydroxy-3,4-dimethoxyphenyl)methanone

[140665-37-8]

 $C_{15}H_{13}FO_4$ mol.wt. 276.26

Synthesis

– Preparation by reaction of o-fluorobenzoyl chloride with 1,2,3-trimethoxybenzene in the presence of aluminium chloride in ethylene dichloride between 0° and 5°, then at r.t. for 3 h and at reflux for 1 h (95%) [704].

m.p. 97–99° [704]; Spectra (NA).

(2-Fluorophenyl)(2-hydroxy-4,5-dimethoxyphenyl)methanone

[140665-23-2]

 $C_{15}H_{13}FO_4$ mol.wt. 276.26

Synthesis

– Preparation by reaction of o-fluorobenzoyl chloride with 1,2,4-trimethoxybenzene in the presence of aluminium chloride in ethylene dichloride between 0° and 5°, then at r.t. for 4 h and at reflux for 2 h (95%) [704].

m.p. 89–90° [704]; Spectra (NA).

(3-Fluorophenyl)(2-hydroxy-3,4-dimethoxyphenyl)methanone

[140665-38-9]

 $C_{15}H_{13}FO_4$ mol.wt. 276.26

Synthesis

– Preparation by reaction of m-fluorobenzoyl chloride with 1,2,3-trimethoxybenzene in the presence of aluminium chloride in ethylene dichloride between 0° and 5°, then at r.t. for 3 h and at reflux for 1 h (80%) [704].

m.p. 84–85° [704]; Spectra (NA).

(4-Fluorophenyl)(2-hydroxy-3,4-dimethoxyphenyl)methanone

[140665-39-0]

 $C_{15}H_{13}FO_4$ mol.wt. 276.26

Synthesis

– Preparation by reaction of p-fluorobenzoyl chloride with 1,2,3-trimethoxybenzene in the presence of aluminium chloride in ethylene dichloride between 0° and 5°, then at r.t. for 3 h and at reflux for 1 h (79%) [704].

m.p. 144–146° [704]; Spectra (NA).

(4-Fluorophenyl)(2-hydroxy-4,5-dimethoxyphenyl)methanone $C_{15}H_{13}FO_4$ mol.wt. 276.26

Synthesis

– Preparation by reaction of p-fluorobenzoyl chloride with 3,4-dimethoxyphenol in the presence of boron trichloride in a benzene/methylene chloride mixture at r.t. for 2 h [598].

m.p. (NA); orange solid [598]; 1H NMR [598].

(4-Ethyl-2-hydroxyphenyl)(4-nitrophenyl)methanone

[78473-49-1]

 $C_{15}H_{13}NO_4$ mol.wt. 271.27

Synthesis

– Refer to: [714].

m.p. and Spectra (NA).

(5-Ethyl-2-hydroxyphenyl)(4-nitrophenyl)methanone

[108294-76-4]

 $C_{15}H_{13}NO_4$ mol.wt. 271.27

Synthesis

– Preparation by reaction of p-nitrobenzoyl chloride with p-ethylphenol in the presence of aluminium chloride in tetrachloroethane at 105° for 22 h (63%) [92].

m.p. 100–101° [92]; Spectra (NA).

(4-Hydroxy-3,5-dimethylphenyl)(4-nitrophenyl)methanone

[85916-09-2]

 $C_{15}H_{13}NO_4$ mol.wt. 271.27

Synthesis

– Refer to: [1120].

m.p. and Spectra (NA).

(2-Hydroxy-4-methyl-5-nitrophenyl)(4-methylphenyl)methanone $C_{15}H_{13}NO_4$ mol.wt. 271.27

Synthesis

– Obtained by diazotization of 2-amino-4,4'-dimethyl-5-nitrobenzophenone, followed by hydrolysis of the diazonium salt so formed (24%) [1121].

m.p. 144° [1121]; Spectra (NA).

(4-Hydroxy-3-methyl-5-nitrophenyl)(2-methylphenyl)methanone

[103555-90-4]

 $C_{15}H_{13}NO_4$ mol.wt. 271.27

Synthesis

– Preparation from o-methylanisole in three steps: first, acylation of o-methylanisole with o-toluoyl chloride in the presence of ferric chloride during 3 h at 20°. Then, demethylation of 4-methoxy-2',

3-dimethylbenzophenone so formed by treatment with refluxing 55% hydriodic acid for 10 h and subsequent nitration of the obtained 4-hydroxy-2',3-dimethylbenzophenone with a concentrated nitric acid/concentrated sulfuric acid mixture under cooling [594].

m.p. and Spectra (NA).

(4-Hydroxy-3-methoxy-5-nitrophenyl)(2-methylphenyl)methanone

[134612-79-6]

 $C_{15}H_{13}NO_5$ mol.wt. 287.27

Synthesis

– Preparation by nitration of 4-hydroxy-3-methoxy-2'-methyl-benzophenone with 65% nitric acid in acetic acid at 20° [1019].

m.p. 125–127° [1019]; Spectra (NA).

(4-Hydroxy-3-methoxy-5-nitrophenyl)(4-methylphenyl)methanone

[134612-80-9]

 $C_{15}H_{13}NO_5$

mol.wt. 287.27

Synthesis

– Preparation by nitration of 4-hydroxy-3-methoxy-4'-methylbenzophenone with 65% nitric acid in acetic acid at 20° [1019].

m.p. 137–139° [1019]; Spectra (NA).

(2,4-Dimethoxyphenyl)(4-hydroxy-3-nitrophenyl)methanone

[67286-44-6]

 $C_{15}H_{13}NO_6$

mol.wt. 303.27

Synthesis

– Obtained by reaction of nitric acid (d = 1.42) with 4-hydroxy-2',4'-dimethoxybenzophenone in acetic acid at 12° (major product) [592].

m.p. 105° [592]; 1H NMR [592].**(3,4-Dimethoxyphenyl)(4-hydroxy-3-nitrophenyl)methanone**

[134612-83-2]

 $C_{15}H_{13}NO_6$

mol.wt. 303.27

Synthesis

– Refer to: [1019].

m.p. and Spectra (NA).

(2-Hydroxy-4,6-dimethoxyphenyl)(2-nitrophenyl)methanone

[61736-75-2]

 $C_{15}H_{13}NO_6$

mol.wt. 303.27

Syntheses

– Obtained by partial demethylation of 2,4,6-trimethoxy-2'-nitrobenzophenone with boron tribromide in methylene chloride at 0° for 10 min and at r.t. overnight (97%) [1122].

- Also obtained (poor yield) by reaction of o-nitrobenzoyl chloride with 3,5-dimethoxyphenol in the presence of aluminium chloride in ethyl ether, first at 0° for 3 h, then at 20° for 3 h (15%) [1123].
- Preparation by photo-Fries rearrangement of 3,5-dimethoxyphenyl o-nitrobenzoate in benzene for 1.5 h (quantitative yield) [1123].

m.p. 198–199° [1123], 133–135° [1122]. One of the reported melting points is obviously wrong.

1H NMR [1122,1123], IR [1122,1123], UV [1122,1123], MS [1122,1123].

(4-Hydroxy-2,6-dimethoxyphenyl)(2-nitrophenyl)methanone

[59190-66-8]

 $C_{15}H_{13}NO_6$ mol.wt. 303.27

Synthesis

– Obtained (poor yield) by reaction of o-nitrobenzoyl chloride with 3,5-dimethoxyphenol in the presence of aluminium chloride in ethyl ether, first at 0° for 3 h, then at 20° for 3 h (5%) [1123].

m.p. 175–177° [1123]; ¹H NMR [1123], IR [1123], UV [1123], MS [1123].

(2-Hydroxy-4-methoxy-5-nitrophenyl)(2-methoxyphenyl)methanone

[79204-64-1]

 $C_{15}H_{13}NO_6$ mol.wt. 303.27

Syntheses

– Obtained by oxidation of 6-methoxy-2-(2-methoxy-4-nitrophenyl)-3-(2-methoxyphenyl)-5-nitrobenzofuran with chromium trioxide in acetic acid, followed by saponification of the keto ester so formed (70%) with potassium hydroxide in boiling ethanol (75%) [1117].

– Also obtained by oxidation of 2,3-bis(2-methoxyphenyl)-6-methoxy-5-nitrobenzofuran with chromium trioxide in acetic acid, followed by saponification of the keto ester so formed (65%) with potassium hydroxide in boiling ethanol (60%) [1117].

m.p. 155° [1117]; IR [1117], MS [1117].

(2-Hydroxy-4-methoxy-5-nitrophenyl)(4-methoxyphenyl)methanone

[66666-07-7]

 $C_{15}H_{13}NO_6$ mol.wt. 303.27

Syntheses

– Obtained by reaction of nitric acid (d = 1.42) with 2-hydroxy-4,4'-dimethoxybenzophenone in acetic acid at 24° (major product) [592].

– Preparation by saponification of 2-(4-anisoyloxy)-4,4'-dimethoxy-5-nitrobenzophenone (SM) with potassium hydroxide in refluxing ethanol for 1 h (70%). SM was obtained by oxidation of 2,3-bis(4-methoxyphenyl)-6-methoxy-5-nitrobenzofuran with chromium trioxide in refluxing acetic acid for 45 min (75%) [1116].

m.p. 162° [592], 140° [1116]. One of the reported melting points is obviously wrong. Spectra (NA).

(4-Hydroxy-3-methoxy-5-nitrophenyl)(4-methoxyphenyl)methanone**(5-Hydroxy-4-methoxy-2-nitrophenyl)(4-methoxyphenyl)methanone****(2-Hydroxy-3-methylphenyl)(3-methylphenyl)methanone****(2-Hydroxy-4-methylphenyl)(3-methylphenyl)methanone****(2-Hydroxy-4-methylphenyl)(4-methylphenyl)methanone**

- Also obtained (poor yield) by diazotization of 2-amino-4,4'-dimethylbenzophenone, followed by hydrolysis of the diazonium salt so obtained (9%) [1121]. In this reaction, the major product was 3,6-dimethylfluorenone (70%).
- Also refer to: [1125].
m.p. 73–74° [1121]; Spectra (NA).

(2-Hydroxy-5-methylphenyl)(2-methylphenyl)methanone

[147029-79-6] $C_{15}H_{14}O_2$ mol.wt. 226.27

Syntheses

- Preparation by Fries rearrangement of p-tolyl o-toluate with aluminium chloride at 100–150° for 0.5–3 h (73%) [29].
- Preparation by condensation of the Grignard reagent of p-methylanisole with o-toluoyl chloride, followed by demethylation in acid medium of the resultant methyl ether (excellent yield) [964].
m.p. 95° [964], 94–95° [29]; Spectra (NA).

(2-Hydroxy-5-methylphenyl)(3-methylphenyl)methanone

[26880-98-8] $C_{15}H_{14}O_2$ mol.wt. 226.27

Synthesis

- Preparation by Fries rearrangement of p-tolyl m-toluate with aluminium chloride at 130° for 5 h (54%) [629].
m.p. 54–55° [629];
 1H NMR [629], IR [104,629], UV [629];
 pK_a [104,629]; polarographic study [117].

(2-Hydroxy-5-methylphenyl)(4-methylphenyl)methanone

[26880-95-5] $C_{15}H_{14}O_2$ mol.wt. 226.27

Synthesis

- Preparation by Fries rearrangement of p-tolyl p-toluate in the presence of,
 - aluminium chloride [117], (64%) [97], at 120° (82%) [1126] or at 180° for 10 min (85%) [518];
 - Nafion-H, a polymeric perfluorinated resin sulfonic acid, in refluxing nitrobenzene for 12 h (72%) [38].
- Also refer to: [1127].
m.p. 89°5–90° [1126], 88–88°5 [629], 88° [518], 63°5–65° [97]; 1H NMR [38,97,629], ^{13}C NMR [38,97],
IR [97,104,629], UV [629];
 pK_a [104,629]; polarographic study [117].

(3-Hydroxy-2-methylphenyl)(2-methylphenyl)methanone[50454-58-5] $C_{15}H_{14}O_2$ mol.wt. 226.27

Synthesis

– Refer to: [1128] (Japanese patent).

m.p. and Spectra (NA).

(3-Hydroxy-2-methylphenyl)(4-methylphenyl)methanone[74167-89-8] $C_{15}H_{14}O_2$ mol.wt. 226.27

Synthesis

– Preparation by diazotization of 3-amino-2,4'-dimethyl-benzophenone, followed by hydrolysis of the diazonium salt so obtained (85%) [119], according to [634].

– Also refer to: [912].

m.p. 102° [119]; Spectra (NA).

(4-Hydroxy-2-methylphenyl)(3-methylphenyl)methanone $C_{15}H_{14}O_2$ mol.wt. 226.27

Synthesis

– Obtained by action of m-toluoyl chloride with m-tolyl borate in the presence of aluminium chloride in tetrachloroethane at 100° (30%) [55].

m.p. 110° [55]; Spectra (NA).

(4-Hydroxy-2-methylphenyl)(4-methylphenyl)methanone $C_{15}H_{14}O_2$ mol.wt. 226.27

Synthesis

– Preparation by Fries rearrangement of m-cresyl p-toluate with aluminium chloride in nitrobenzene at 62–63° for 18 h (50%) [31].

m.p. 108–109° [31]; Spectra (NA).

(4-Hydroxy-3-methylphenyl)(2-methylphenyl)methanone[147029-76-3] $C_{15}H_{14}O_2$ mol.wt. 226.27

Synthesis

– Preparation by condensation of the Grignard reagent of o-methylanisole with o-toluoyl chloride, followed by demethylation in acid medium of the resultant methyl ether (excellent yield) [964].

m.p. 142° [964]; Spectra (NA).

(4-Hydroxy-3-methylphenyl)(3-methylphenyl)methanone

[62064-85-1]

 $C_{15}H_{14}O_2$ mol.wt. 226.27

Synthesis

– Obtained by reaction of m-toluoyl chloride with o-cresyl borate in the presence of aluminium chloride in tetra-chloroethane at 100° (21%) [55].

m.p. 158° [55]; Spectra (NA).

[4-Hydroxy-3-(hydroxymethyl)phenyl](3-methylphenyl)methanone

[62064-89-5]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Not yet described.

– **N.B.:** A metabolite of 3,3'-dimethyl-4-methoxy benzophenone (NK-049) in the rat [1129] (Japanese paper).

m.p. and Spectra (NA).

(2-Hydroxy-4-methoxyphenyl)(2-methylphenyl)methanone

[27847-83-2]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Refer to: [405].

m.p. and Spectra (NA).

(2-Hydroxy-4-methoxyphenyl)(4-methylphenyl)methanone (Mexenone)

[1641-17-4]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Syntheses

- Preparation by Friedel–Crafts acylation of m-methoxy-phenol with p-toluoyl chloride,
- in the presence of boron trichloride in benzene first at –10°, then at reflux for 10 h under nitrogen (80%) [660];
 - in the presence of titanium tetrachloride in benzene first at –10°, then at reflux for 14 h under nitrogen (73%) [660] or in chlorobenzene for 1 h at 120° (79%) [662].
- Preparation by reaction of p-toluoyl chloride with 1,3-dimethoxybenzene in the presence of aluminium chloride in a chlorobenzene/N,N-dimethylformamide mixture (22:1) at 115° [235,657].
- Also obtained by oxidation of 6-methoxy-3-(4-methylphenyl)-2-phenylbenzofuran with chromium trioxide in boiling acetic acid for 30–40 min, followed by saponification of the keto ester so formed [44,46].

– Also refer to: [77,222,241,655].

m.p. 98° [44,46], 95–96° [662], 95° [660]; IR [44], UV [235,240,241].

(4-Hydroxy-3-methoxyphenyl)(2-methylphenyl)methanone

[134612-38-7]

$C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Preparation by reaction of 33% hydrobromic acid in acetic acid with 4-(benzyloxy)-3-methoxy-2'-methylbenzophenone in methylene chloride at 20–25° [1019].

m.p. 103–105° [1019]; Spectra (NA).

(4-Hydroxy-3-methoxyphenyl)(4-methylphenyl)methanone

[134612-39-8]

$C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Preparation by reaction of 33% hydrobromic acid in acetic acid with 4-(benzyloxy)-3-methoxy-4'-methyl-benzophenone in methylene chloride at 20–25° [1019].

m.p. 103–105° [1019]; Spectra (NA).

(2-Hydroxy-3-methylphenyl)(4-methoxyphenyl)methanone

[65611-79-2]

$C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Preparation by reaction between (o-tolyl)oxy)magnesium bromide complexed with HMPT and p-methoxy-benzaldehyde in refluxing benzene for 48 h (47%) [50].

m.p. 52° [50]; 1H NMR [50], IR [50], MS [50].

(2-Hydroxy-4-methylphenyl)(4-methoxyphenyl)methanone

[108478-27-9]

$C_{15}H_{14}O_3$ mol.wt. 242.27

Syntheses

– Preparation by reaction of p-anisic acid with m-cresol in the presence of boron trifluoride at 160° for 1 h (81%) [150].

– Obtained by Fries rearrangement of m-cresyl p-anisate with aluminium chloride without solvent at 120° or at 160° [315].

m.p. 96–97° [150,315]; Spectra (NA).

(2-Hydroxy-5-methylphenyl)(2-methoxyphenyl)methanone

[53271-51-5]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Syntheses

– Obtained (poor yield) by Fries rearrangement of p-cresyl o-anisate with polyphosphoric acid at 100° for 20 min (4%) [991].

- Also obtained (poor yield) by Friedel–Crafts acylation of p-cresol with o-anisic acid in the presence of methane-sulfonic acid at 120° for 20 min (5%) [991].
- Also obtained by photo-Fries rearrangement of p-cresyl o-anisate in benzene during 72 h (53%) [1130].

yellow oil, very viscous [1130]; m.p. 60° [991];

 1H NMR (Sadtler: standard n° 38494 M) [1130],

IR (Sadtler: standard n° 65532 K) [991,1130], UV [991], MS [1130,1131].

(2-Hydroxy-5-methylphenyl)(3-methoxyphenyl)methanone

[26880-99-9]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Syntheses

- Preparation by photo-Fries rearrangement of p-tolyl m-anisate in methanol at 20° for 10 h (34%) [629].
- Preparation by acylating p-methylanisole with m-anisoyl chloride in the presence of aluminium chloride in carbon disulfide [1132].

m.p. 130–132° [629]; 1H NMR [629], IR [104,629], UV [629]; pK_a [104,629]; polarographic study [117].**(2-Hydroxy-5-methylphenyl)(4-methoxyphenyl)methanone**

[26880-96-6]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Syntheses

- Preparation by Fries rearrangement of p-tolyl p-anisate (without solvent),
 - with aluminium chloride at 120° for 1 h (26%) [991], at 120° or at 160° [315,629];
 - with titanium tetrachloride at 120° for 1 h (89%) [991].
- Preparation by oxidation of 2-phenyl-3-(4-methoxyphenyl)-5-methylbenzofuran with chromium trioxide in boiling acetic acid for 2 h, followed by saponification of the keto ester so formed with 10% sodium hydroxide in boiling ethanol for 15 min [1133].
- Obtained (by-product) by reaction of p-anisoyl chloride with p-methylanisole in the presence of aluminium chloride in boiling carbon disulfide [683].

m.p. 108–109° [315,629,683,1133], 107° [991];
¹H NMR (Sadler: standard n° 38493 M) [629,1133],
 IR (Sadler: standard n° 65531 K) [104,629,991,1133],
 UV [629,991], MS [1131]; p*K*_a [104,629]; polarographic study [117].

(4-Hydroxy-3-methylphenyl)(2-methoxyphenyl)methanone

[72324-24-4] C₁₅H₁₄O₃ mol.wt. 242.27

Syntheses

- Obtained by Fries rearrangement of o-cresyl o-anisate with polyphosphoric acid at 100° for 20 min (20%) [991].
- Preparation by reaction of o-anisic acid with o-cresol in the presence of methane-sulfonic acid at 120° for 20 min (48%) [991].

m.p. 137° [991]; ¹H NMR (Sadler: standard n° 38491 M),
 IR (Sadler: standard n° 65529 K) [991], UV [991], MS [1131].

(4-Hydroxy-3-methylphenyl)(4-methoxyphenyl)methanone

[72324-23-3] C₁₅H₁₄O₃ mol.wt. 242.27

Syntheses

- Preparation by Fries rearrangement of o-cresyl p-anisate,
 - with titanium tetrachloride in nitromethane at 20° for 170 h (84%) [991];
 - with aluminium chloride in nitromethane at 20° for 170 h (42%) [991] or at 75° for 6 h (60%) [991]. The same reaction carried out without solvent at 120° or at 160° gave the same product [315].
- Also obtained (via o-cresyl p-anisate) by heating a mixture of p-anisic acid and o-cresol in the presence of Tonsil [645].
- Also refer to: [995,996,999].

m.p. 188° [991], 186° [315], 143° [645]. One of the reported melting points is obviously wrong. ¹H NMR (Sadler: standard n° 38499 M),
 IR (Sadler: standard n° 65537 K) [991], UV [991], MS [1131].

[3-(Hydroxymethyl)phenyl](4-Hydroxy-3-methylphenyl)methanone

[62064-88-4] C₁₅H₁₄O₃ mol.wt. 242.27

Synthesis

- Not yet described.
- **N.B.:** A metabolite of 3,3'-dimethyl-4-methoxy-benzophenone (NK-049) in the rat [1129] (Japanese paper).

m.p. and Spectra (NA).

(2-Hydroxy-3-methoxyphenyl)(4-methoxyphenyl)methanone

[155645-18-4]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Synthesis

- Preparation by reaction of 2,3-dimethoxybenzoyl chloride with anisole (74%) [1134], according to the method [756].

m.p. 96° [1134]; Spectra (NA).

(2-Hydroxy-4-methoxyphenyl)(2-methoxyphenyl)methanone

[62495-36-7]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Syntheses

- Preparation by reaction of o-anisic acid with m-methoxy-phenol [1135] in the presence of zinc chloride and phosphorous oxychloride at 65–70° for 2 h (68%) [1136].
- Preparation by oxidation of 2,3-bis(2-methoxyphenyl)-6-methoxybenzofuran with chromium trioxide in refluxing acetic acid for 30 min, followed by saponification of the keto ester so formed (55%) with potassium hydroxide in refluxing ethanol for 1 h (50%) [1117].
- Preparation by selective demethylation of 2,2',4-trimethoxybenzophenone with excess beryllium chloride in refluxing toluene for 3 h (90%) [395].
- Also obtained, in mixture with 2,4-dimethoxy-2'-hydroxybenzophenone, by reaction of 2-methoxybenzoyl chloride with resorcinol dimethyl ether in ethyl ether in the presence of aluminium chloride for 8 h at r.t. (total yield: 65%) [1010,1011].

m.p. 92–93° [395], 91° [1135], 88°5–89° [1136], 80° [1117]; ¹H NMR [395,1010,1011,1135,1136],

IR [395,1117,1136], UV [395,1136], MS [1135]; TLC [395].

(2-Hydroxy-4-methoxyphenyl)(3-methoxyphenyl)methanone

[62495-37-8]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Syntheses

- Preparation by reaction of m-anisic acid with 3-methoxyphenol in the presence of zinc chloride and phosphorous oxychloride at 65–70° for 2 h (54%) [1136].
- Preparation by partial methylation of 2,4-dihydroxy-3'-methoxybenzophenone with methyl iodide in the presence of potassium carbonate in boiling acetone (69%) [1137].
- Preparation by selective demethylation of 2,3',4-trimethoxybenzophenone with excess beryllium chloride in refluxing toluene for 3 h (92%) [395].

clear oil [395]; b.p._{0.3} 165–170° [1136]; m.p. 66° [1137]; ¹H NMR [395, 1136], IR [395,1136], UV [395,1136]; TLC [395].

(2-Hydroxy-4-methoxyphenyl)(4-methoxyphenyl)methanone

[6131-38-0]

C₁₅H₁₄O₄ mol.wt. 258.27

Syntheses

- Preparation by reaction of p-methoxybenzoic acid (p-anisic acid) with resorcinol monomethyl ether in the presence of boron trifluoride [650].
 - Preparation by reaction of 2-hydroxy-4-methoxybenzoic acid with anisole in the presence of stannic chloride at 115–120° for 3–4 h [190,237,671].
 - Preparation by oxidation of 6-methoxy-3-(4-methoxyphenyl)-2-phenylbenzofuran with chromium trioxide, followed by saponification of the keto ester so formed—the 2-(benzoyloxy)-4,4'-dimethoxybenzophenone—with potassium hydroxide [44,46].
 - Preparation by partial methylation,
 - of 2,4-dihydroxy-4'-methoxybenzophenone; with methyl iodide in the presence of potassium carbonate in boiling acetone (88%) [1137]; with methyl bromide in the presence of potassium carbonate in refluxing acetone for 20 h [738];
 - of 2,4'-dihydroxy-4-methoxybenzophenone [610], with methyl iodide in the presence of potassium carbonate in acetone at r.t. [592];
 - of 2,4,4'-trihydroxybenzophenone with dimethyl sulfate in alkaline solution (40%) [380].
 - Preparation by selective demethylation of 2,4,4'-trimethoxybenzophenone with excess beryllium chloride in refluxing toluene for 3 h (90%) [395].
 - Preparation by reaction of p-anisoyl chloride with resorcinol dimethyl ether,
 - in chlorobenzene in the presence of titanium tetrachloride for 1 h at 120° (86%) [662];
 - in o-dichlorobenzene or without solvent, in the presence of ferric chloride between 180° and 200° for 6–7 h (by-product) [663].
 - Also refer to: [78,194,222,223,625,655,657,668,1016,1125,1138–1144].
- m.p. 144° [1139], 130° [113], 129–131° [190,237], 118° [592,610,1137], 117–118° [380,650], 115° [44,46], 111–112° [662], 110–112° [738], 110° [395]. There is a discrepancy between the various melting points.
¹H NMR [98,395,610], IR [44,395,610,650], UV [113,190,237,380,395,650,830], EPR [98]; TLC [395]; paper chromatography [383].

(2-Hydroxy-5-methoxyphenyl)(2-methoxyphenyl)methanone

[42833-51-2]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Syntheses

- Obtained by reaction of o-anisoyl chloride with hydroquinone dimethyl ether in the presence of aluminium chloride in ethyl ether for 19 h [416].
- Obtained by partial demethylation of 2,2',5-trimethoxy-benzophenone,

- with boron tribromide in methylene chloride at 0° for 1.5 h (50%) [395];
- with boron trichloride in methylene chloride at 0° for 3 h (50%) [395];
- with boron trifluoride-etherate in refluxing benzene for 6 h (60%) or in refluxing toluene for 4 h (60%) [395];
- with beryllium chloride in refluxing benzene for 8–10 h (40%) or in refluxing toluene for 5 h (40%) [395].

N.B.: In these experiments, only the reactions using boron halides were carried out under nitrogen atmosphere.

m.p. 100–101° [395]; 1H NMR [395,416], IR [395]; TLC [395].

(2-Hydroxy-5-methoxyphenyl)(3-methoxyphenyl)methanone

[183106-25-4]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Synthesis

- Preparation by selective demethylation of 2,3',5-tri-methoxybenzophenone with excess beryllium chloride in refluxing toluene for 4 h (90%) [395].

pale yellow oil [395]; b.p. (NA);

1H NMR [395], IR [395], UV [395], MS [395]; TLC [395].

(2-Hydroxy-5-methoxyphenyl)(4-methoxyphenyl)methanone

[16762-04-2]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Syntheses

- Obtained by Fries rearrangement of p-methoxyphenyl p-anisate with titanium tetrachloride without solvent at 120° for 1 h (20–35% yields) [679].
- Also obtained by partial demethylation of 2,4',5-tri-methoxybenzophenone (SM),
- with aluminium chloride in nitromethane at 20° for 24 h (27%). SM was prepared by Friedel–Crafts acylation of 1,4-dimethoxybenzene with p-anisoyl chloride in the presence of stannic chloride in nitromethane at 20° for 1 h (78–94%) [679];
- with excess beryllium chloride in refluxing toluene for 3 h (95%) [395].
- Also refer to: [46,1145].

m.p. 71° [679], 66–68° [395]; 1H NMR [395], IR [395,679], UV [395,679], MS [395]; TLC [395].

(2-Hydroxy-6-methoxyphenyl)(2-methoxyphenyl)methanone

[129103-90-8]

 $C_{15}H_{14}O_4$ mol.wt. 258.27**Synthesis**

– Preparation from 2-iodo-3-methoxyphenyl 2-methoxybenzoate by rearrangement on treatment with *n*-butyllithium in a mixture of ethyl ether, hexane and tetrahydrofuran at -70° for 2 h, then treatment with saturated aqueous ammonium chloride (81%) [58].

m.p. $83-83.5^\circ$ [58]; 1H NMR [58], IR [58], MS [58].

(5-Hydroxy-2-methoxyphenyl)(4-methoxyphenyl)methanone

[80427-36-7]

 $C_{15}H_{14}O_4$ mol.wt. 258.27**Synthesis**

– Preparation by reaction of *p*-methoxybenzoyl chloride with *p*-methoxyphenyl benzoate in the presence of stannic chloride in nitromethane at 20° for 2 days, followed by saponification of the *m*-keto ester so obtained—the 2,4'-dimethoxy-5-(4-methoxybenzoyloxy)benzophenone (73%)—with sodium hydroxide in refluxing methanol for 1 h (quantitative yield) [679].

oil [679]; b.p. (NA); 1H NMR [679], IR [679], UV [679].

[3-Hydroxy-4-(methylamino)phenyl](4-methoxyphenyl)methanone

[136134-37-7]

 $C_{15}H_{15}NO_3$ mol.wt. 257.29**Synthesis**

– Preparation from 6-(4-methoxybenzoyl)-3-methyl-benzoxazolinone by hydrolysis with 10% aqueous sodium hydroxide solution [564].

m.p. and Spectra (NA).

(2-Aminophenyl)(2-hydroxy-4,6-dimethoxyphenyl)methanone

[61736-72-9]

 $C_{15}H_{15}NO_4$ mol.wt. 273.29**Syntheses**

- Preparation by treatment of 2-hydroxy-4,6-dimethoxy-2'-nitrobenzophenone with a mixture of ammonium chloride and zinc moss in dilute ethanol at r.t. for 8 h (quantitative yield) [1123], (77%) [1122].
- Preparation by photo-Fries rearrangement of 3,5-dimethoxyphenyl 2-aminobenzoate in benzene for 12.5 h (45%) [1123].

m.p. $71-75^\circ$ [1123], $61-63^\circ$ [1122]; 1H NMR [1122,1123], IR [1122,1123], UV [1122,1123], MS [1122,1123].

(2-Bromophenyl)[5-chloro-2-hydroxy-3-(2-propenyl)phenyl]methanone

[93575-78-1]

 $C_{16}H_{12}BrClO_2$ mol.wt. 351.63

Synthesis

- Preparation by Fries rearrangement of 2-allyl-4-chloro-phenyl o-bromobenzoate with aluminium chloride at 160° for 15 min [1107].

oil [1107]; b.p. and Spectra (NA).

(4-Chlorophenyl)[5-fluoro-2-hydroxy-3-(2-propenyl)phenyl]methanone

[93575-77-0]

 $C_{16}H_{12}ClFO_2$ mol.wt. 290.72

Synthesis

- Preparation by Fries rearrangement of 2-allyl-4-fluorophenyl 4-chlorobenzoate with aluminium chloride at 160° for 15 min [1107].

m.p. 44–46° [1107]; Spectra (NA).

(5-Ethyl-2-hydroxyphenyl)[4-(trifluoromethyl)phenyl]methanone

[61750-29-6]

 $C_{16}H_{13}F_3O_2$ mol.wt. 294.27

Synthesis

- Preparation by demethylation of 5-ethyl-2-methoxy-4'-(trifluoromethyl)benzophenone (SM) by heating with 55% hydrobromic acid at 110–120° for 5 h. SM was obtained

by reaction of p-(trifluoromethyl)benzoyl chloride with p-ethylanisole in the presence of aluminium chloride in methylene chloride at r.t. overnight (92%) [710].

m.p. and Spectra (NA).

(2-Hydroxy-3,4-dimethoxyphenyl)[3-(trifluoromethyl)phenyl]methanone

[140665-42-5]

 $C_{16}H_{13}F_3O_4$ mol.wt. 326.27

Synthesis

- Obtained by reaction of m-(trifluoromethyl)benzoyl chloride with 1,2,3-trimethoxybenzene in the presence of aluminium chloride in ethylene dichloride between 0° and 5°, then at r.t. for 3 h and at reflux for 1 h (33%) [704].

m.p. 124–126° [704]; Spectra (NA).

[5-Chloro-2-hydroxy-3-(1-methylethyl)phenyl](4-chlorophenyl)methanone

[93575-39-4]

 $C_{16}H_{14}Cl_2O_2$ mol.wt. 309.19

Synthesis

- Preparation by Fries rearrangement of 4-chloro-2-isopropylphenyl 4-chlorobenzoate with aluminium chloride at 160° for 15 min [1107].

m.p. 54–55° [1107]; Spectra (NA).

(5-Chloro-2-hydroxy-3-propylphenyl)(4-chlorophenyl)methanone

[93575-68-9]

 $C_{16}H_{14}Cl_2O_2$ mol.wt. 309.19

Synthesis

- Preparation by Fries rearrangement of 4-chloro-2-propyl-phenyl p-chlorobenzoate with aluminium chloride at 160° for 15 min [1107].
- Also refer to: [1146].

m.p. 55–56° [1107]; Spectra (NA).

(3,5-Dichloro-4-hydroxyphenyl)(2,4,6-trimethylphenyl)methanone $C_{16}H_{14}Cl_2O_2$ mol.wt. 309.19

Synthesis

- Preparation by Fries rearrangement of 2,6-dichloro-phenyl mesitylenecarboxylate (2,6-dichlorophenyl 2,4,6-trimethylbenzoate) with aluminium chloride at 155° for 1 h (79%) [489].

m.p. 201°5–203° [489]; Spectra (NA).

(2,6-Dichlorophenyl)(4-hydroxy-2,3,6-trimethylphenyl)methanone

[183724-89-2]

 $C_{16}H_{14}Cl_2O_2$ mol.wt. 309.19

Synthesis

- Preparation by demethylation of 2',6'-dichloro-4-methoxy-2,3,6-trimethylbenzophenone with hydrobromic acid in acetic acid for 1.5 h at 75° [1072].

m.p. 122° [1072]; Spectra (NA).

(2,6-Dichlorophenyl)(2-hydroxy-3,4-dimethoxy-6-methylphenyl)methanone

[183726-43-4]

 $C_{16}H_{14}Cl_2O_4$ mol.wt. 341.19**Syntheses**

- Preparation by acylation of 3,4,5-trimethoxytoluene with 2,6-dichlorobenzoyl chloride in methylene chloride in the presence of aluminium chloride for 1 h at 0° and for 16 h at r.t. (30%) [1072].
- Also obtained by partial demethylation of 2',6'-dichloro-6-methyl-2,3,4-trimethoxybenzophenone with hydrobromic acid in acetic acid for 1.5 h at 75° [1072].

N.B.: K salt [1072]. m.p. 161° [1072]; Spectra (NA).

(4-Ethenylphenyl)(2-hydroxy-4-methoxyphenyl)methanone

[48177-42-0]

 $C_{16}H_{14}O_3$ mol.wt. 254.29**Synthesis**

- Preparation by reaction of aqueous potassium hydroxide with 2-hydroxy-4-methoxy-4'-(2-bromoethyl)benzophenone in the presence of hydroquinone in refluxing methanol for 1.5 h under nitrogen bubbling (30%) [1147].
 - Also refer to: [85].
- m.p. 69–71° [1147]; 1H NMR [1147], IR [1147], UV [1147], MS [1147].

[2-(Acetyloxy)phenyl](2-hydroxy-5-methoxyphenyl)methanone

[83570-58-5]

 $C_{16}H_{14}O_5$ mol.wt. 286.28**Synthesis**

- Obtained by UV light irradiation of p-methoxyphenyl o-acetoxybenzoate (p-methoxyphenyl acetylsalicylate) in benzene [1148], for 11 h (40%) [1025].
- yellow oil [1025]; b.p. (NA); 1H NMR [1025], IR [1025], UV [1025], MS [1025].

(5-Chloro-3-ethyl-2-hydroxyphenyl)(4-methylphenyl)methanone

[93575-40-7]

 $C_{16}H_{15}ClO_2$ mol.wt. 274.75**Synthesis**

- Preparation by Fries rearrangement of 4-chloro-2-ethyl-phenyl p-toluate with aluminium chloride at 160° for 15 min [1107].
- m.p. 53–55° [1107]; Spectra (NA).

(5-Chloro-2-hydroxy-3-methylphenyl)(3,4-dimethylphenyl)methanone

[86914-89-8]

 $C_{16}H_{15}ClO_2$ mol.wt. 274.75

Synthesis

– Preparation by Fries rearrangement of 4-chloro-2-methyl-phenyl 3,4-dimethylbenzoate with aluminium chloride at 180° for 10 min [1074].

m.p. 108° [1074]; Spectra (NA).

(5-Chloro-2-hydroxy-3-methylphenyl)(4-ethylphenyl)methanone

[86914-74-1]

 $C_{16}H_{15}ClO_2$ mol.wt. 274.75

Synthesis

– Preparation by Fries rearrangement of 4-chloro-2-methyl-phenyl 4-ethylbenzoate with aluminium chloride at 180–185° for 10 min [1074,1149].

m.p. 152–155° [1074,1149]; Spectra (NA).

(4-Chlorophenyl)(2-hydroxy-3-propylphenyl)methanone

[108294-79-7]

 $C_{16}H_{15}ClO_2$ mol.wt. 274.75

Synthesis

– Preparation by reaction of 2-hydroxy-3-propylbenzoyl chloride with chlorobenzene in the presence of aluminium chloride in refluxing carbon disulfide (35%) [92].

m.p. 68–70° [92]; Spectra (NA).

(4-Chlorophenyl)(2-hydroxy-5-propylphenyl)methanone

[61466-81-7]

 $C_{16}H_{15}ClO_2$ mol.wt. 274.75

Synthesis

– Preparation by reaction of p-chlorobenzoyl chloride with p-propylphenol in the presence of aluminium chloride in tetrachloroethane at 105° for 22 h (27–28%) [92,1091].

b.p._{0.02} 151–153° [92,1091]; Spectra (NA).

(4-Fluorophenyl)(2-hydroxy-4-propoxyphenyl)methanone
 $C_{16}H_{15}FO_3$ mol.wt. 274.29
Synthesis

– Preparation by partial alkylation of 4'-fluoro-2,4-di-hydroxybenzophenone with a propyl halide in the presence of an alkali [1109].

m.p. and Spectra (NA).

(2,3-Dimethyl-5-nitrophenyl)(2-hydroxy-3-methylphenyl)methanone

[110969-54-5]

 $C_{16}H_{15}NO_4$ mol.wt. 285.30
**Synthesis**

– Obtained (by-product) by Fries rearrangement of o-cresyl 2,3-dimethyl-5-nitrobenzoate with aluminium chloride at 160° for 2 h (<4%) [1003].

m.p. 104° [1003]; ¹H NMR [1003], IR [1003], UV [1003].

(2,3-Dimethyl-5-nitrophenyl)(2-hydroxy-4-methylphenyl)methanone

[110969-57-8]

 $C_{16}H_{15}NO_4$ mol.wt. 285.30
**Synthesis**

– Preparation by Fries rearrangement of m-cresyl 2,3-di-methyl-5-nitrobenzoate with aluminium chloride at 160° for 2 h (43%) [1003].

m.p. 158° [1003]; ¹H NMR [1003], IR [1003], UV [1003].

(2,3-Dimethyl-5-nitrophenyl)(2-hydroxy-5-methylphenyl)methanone

[110969-60-3]

 $C_{16}H_{15}NO_4$ mol.wt. 285.30
**Synthesis**

– Preparation by Fries rearrangement of p-cresyl 2,3-di-methyl-5-nitrobenzoate with aluminium chloride at 160° for 2 h (70%) [1003].

m.p. 165° [1003]; ¹H NMR [1003], IR [1003], UV [1003].

(2,3-Dimethyl-5-nitrophenyl)(4-hydroxy-2-methylphenyl)methanone

[110969-58-9]

 $C_{16}H_{15}NO_4$ mol.wt. 285.30
**Synthesis**

– Obtained (by-product) by Fries rearrangement of m-cresyl 2,3-dimethyl-5-nitrobenzoate with aluminium chloride at 160° for 2 h (12%) [1003].

m.p. 222° [1003]; ¹H NMR [1003], IR [1003], UV [1003].

(2,3-Dimethyl-5-nitrophenyl)(4-hydroxy-3-methylphenyl)methanone

[110969-55-6]

 $C_{16}H_{15}NO_4$

mol.wt. 285.30

Synthesis

– Preparation by Fries rearrangement of o-cresyl 2,3-di-methyl-5-nitrobenzoate with aluminium chloride at 160° for 2 h (56%) [1003].

m.p. 210° [1003]; 1H NMR [1003], IR [1003], UV [1003].**(2-Hydroxy-3-nitrophenyl)[4-(1-methylethyl)phenyl]methanone**

[35698-18-1]

 $C_{16}H_{15}NO_4$

mol.wt. 285.30

Synthesis

– Obtained by reaction of fuming nitric acid with 2-hydroxy-4'-isopropylbenzophenone in an acetic

acid/acetic anhydride mixture (4:3), first at 10° for 50 min, then at 20° for 40 min (19%) [889,891].

m.p. and Spectra (NA).

(2-Hydroxy-5-nitrophenyl)[4-(1-methylethyl)phenyl]methanone

[35698-19-2]

 $C_{16}H_{15}NO_4$

mol.wt. 285.30

Synthesis

– Obtained by reaction of fuming nitric acid with 2-hydroxy-4'-isopropylbenzophenone in an acetic acid/acetic anhydride mixture (4:3), first at 10° for 50 min, then at 20° for 40 min (10%) [889,891].

m.p. and Spectra (NA).

(4,5-Dimethoxy-2-nitrophenyl)(2-hydroxy-4-methoxyphenyl)methanone $C_{16}H_{15}NO_7$

mol.wt. 333.30

Synthesis

– Obtained by action of a mixture of nitric acid (d = 1.42)/concentrated sulfuric acid with 2-hydroxy-3',4,4'-trimethoxybenzophenone in acetic acid at 48–52° for 16 min [1150].

m.p. 211° [1150]; Spectra (NA).

(3,4-Dimethoxyphenyl)(4-hydroxy-3-methoxy-5-nitrophenyl)methanone

[134612-42-3]

 $C_{16}H_{15}NO_7$ mol.wt. 333.30

Synthesis

– Preparation by reaction of 65% nitric acid with 4-hydroxy-3,3',4'-trimethoxybenzophenone in acetic acid at 20° [1019].

m.p. 170–180° [1019]; Spectra (NA).

(2,4-Dimethylphenyl)(2-hydroxy-5-methylphenyl)methanone

[80018-48-0]

 $C_{16}H_{16}O_2$ mol.wt. 240.30

Synthesis

– Preparation by Fries rearrangement of p-cresyl 2,4-di-methylbenzoate with aluminium chloride [1062].

m.p. and Spectra (NA).

(2,4-Dimethylphenyl)(3-hydroxy-2-methylphenyl)methanone

[76981-57-2]

 $C_{16}H_{16}O_2$ mol.wt. 240.30

Synthesis

– Preparation by diazotization of 3-amino-2,2',4'-trimethyl-benzophenone, followed by hydrolysis of the diazonium salt so obtained (54%) [119], according to [634].

m.p. 124° [119]; Spectra (NA).

(2,6-Dimethylphenyl)(2-hydroxy-5-methylphenyl)methanone $C_{16}H_{16}O_2$ mol.wt. 240.30

Synthesis

– Obtained by Fries rearrangement of p-cresyl 2,6-dimethyl-benzoate in the presence of aluminium chloride, first in refluxing carbon disulfide for 2 h, then at 150° for 1 h after elimination of solvent (22%) [1151].

m.p. 89°7–90°7 [1151]; Spectra (NA).

(5-Ethyl-2-hydroxyphenyl)(2-methylphenyl)methanone

[170799-15-2]

 $C_{16}H_{16}O_2$ mol.wt. 240.30

Synthesis

- Preparation by Fries rearrangement of p-ethylphenyl o-toluate with aluminium chloride at 100–150° for 0.5–3 h (95%) [29].

oil [29]; b.p. and Spectra (NA).

(5-Ethyl-2-hydroxyphenyl)(4-methylphenyl)methanone

[61750-25-2]

 $C_{16}H_{16}O_2$ mol.wt. 240.30

Syntheses

- Preparation by reaction of p-methylbenzoyl chloride with p-ethylphenol in the presence of aluminium chloride in tetrachloroethane at 105° for 22 h (38%) [92].
- Preparation by Fries rearrangement of p-ethylphenyl p-toluate with aluminium chloride in tetrachloroethane at 125° for 6 h [710].

m.p. 49–51° [92,710]; Spectra (NA).

(2-Hydroxy-3,4-dimethylphenyl)(4-methylphenyl)methanone

[16762-05-3]

 $C_{16}H_{16}O_2$ mol.wt. 240.30

Syntheses

- Preparation by Fries rearrangement of 2,3-dimethyl-phenyl p-toluate with aluminium chloride at 180° for 10 min (55%) [518].
- Also obtained by degradation of 6,7-dimethyl-3-(4-methylphenyl)-2-phenylbenzofuran with chromium trioxide in boiling acetic acid, followed by saponification of the keto ester so obtained (2-benzoyloxy-3,4-dimethyl-4'-methylbenzophenone) [44,46].

m.p. 84° [44,46,518,718]; IR [44].

(2-Hydroxy-3,5-dimethylphenyl)(2-methylphenyl)methanone

[86914-79-6]

 $C_{16}H_{16}O_2$ mol.wt. 240.30

Synthesis

- Preparation by Fries rearrangement of 2,4-dimethylphenyl o-toluate with aluminium chloride at 180° for 10 min [1074].

oil [1074]; b.p. and Spectra (NA).

(2-Hydroxy-3,5-dimethylphenyl)(4-methylphenyl)methanone

[86914-85-4]

 $C_{16}H_{16}O_2$ mol.wt. 240.30

Syntheses

- Preparation by Fries rearrangement of 2,4-dimethylphenyl p-toluate with aluminium chloride at 180° for 10 min [1074], (60%) [518].
- Obtained by degradation of 5,7-dimethyl-3-(4-methyl-phenyl)-2-phenylbenzofuran in boiling acetic acid, followed by saponification of the keto ester so obtained (2-benzoyloxy-3,4',5-trimethyl-benzophenone) [44].

oil [44]; m.p. 55–56° [1074], 54° [518]; ¹H NMR [518], IR [44,518].**(2-Hydroxy-4,5-dimethylphenyl)(2-methylphenyl)methanone**

[93433-88-6]

 $C_{16}H_{16}O_2$ mol.wt. 240.30

Synthesis

- Preparation by Fries rearrangement of 3,4-dimethylphenyl o-toluate with aluminium chloride at 100–150° for 0.5–3 h (80%) [29].

m.p. 56–57° [29]; Spectra (NA).

(2-Hydroxy-4,6-dimethylphenyl)(2-methylphenyl)methanone

[62261-96-5]

 $C_{16}H_{16}O_2$ mol.wt. 240.30

Synthesis

- Refer to: [734].

m.p. and Spectra (NA).

(2-Hydroxy-4,6-dimethylphenyl)(4-methylphenyl)methanone

[62261-95-4]

 $C_{16}H_{16}O_2$ mol.wt. 240.30

Synthesis

- Refer to: [734].

m.p. and Spectra (NA).

(4-Ethylphenyl)(2-hydroxy-4-methoxyphenyl)methanoneC₁₆H₁₆O₃ mol.wt. 256.30

Synthesis

- Preparation by partial demethylation of 2,4-di-methoxy-4'-ethylbenzophenone with aluminium chloride in chlorobenzene at 80–100° [655].

- Also refer to: [222].

m.p. and Spectra (NA).

(2-Hydroxy-3,4-dimethylphenyl)(4-methoxyphenyl)methanone

[16762-06-4]

C₁₆H₁₆O₃ mol.wt. 256.30

Synthesis

- Preparation by oxidation of 6,7-dimethyl-2-phenyl-3-(4-methoxyphenyl)benzofuran with chromium trioxide in boiling acetic acid, followed by saponification of the keto ester so formed with sodium hydroxide [44] or potassium hydroxide [46] in refluxing ethanol.

m.p. 86° [44], 85° [46]; IR [44,46].

(2-Hydroxy-3,5-dimethylphenyl)(2-methoxyphenyl)methanone

[72324-22-2]

C₁₆H₁₆O₃ mol.wt. 256.30

Synthesis

- Obtained (poor yields) by reaction of o-anisic acid with 2,4-dimethylphenol,

- in the presence of methanesulfonic acid at 100° for 1 h (6%) [991];
- in the presence of butanesulfonic acid at 140° for 1 h (4%) [991].

m.p. 75° [991]; ¹H NMR (Sadtler: standard n° 38495 M), IR (Sadtler: standard n° 65533 K) [991], UV [991], MS [1131].

(2-Hydroxy-3,5-dimethylphenyl)(4-methoxyphenyl)methanone

[72324-20-0]

C₁₆H₁₆O₃ mol.wt. 256.30

Synthesis

- Preparation by Fries rearrangement of 2,4-dimethylphenyl p-anisate with titanium tetrachloride at 120° for 1 h (82%) [991].

m.p. 66° [991]; ¹H NMR (Sadtler: standard n° 38496 M), IR (Sadtler: standard n° 65534 K) [991], UV [991], MS [1131].

(2-Hydroxy-4,5-dimethylphenyl)(4-methoxyphenyl)methanone

[54921-19-6]

 $C_{16}H_{16}O_3$ mol.wt. 256.30

Synthesis

– Preparation by oxidation of 2-phenyl-3-(4-methoxy-phenyl)-5,6-dimethylbenzofuran with chromium trioxide in boiling acetic acid for 2 h, followed by saponification of the keto ester so formed with 10% sodium hydroxide in boiling ethanol for 15 min [1133].

m.p. 92–93° [1133]; 1H NMR [1133], IR [1133].

(4-Hydroxy-3,5-dimethylphenyl)(2-methoxyphenyl)methanone

[72324-21-1]

 $C_{16}H_{16}O_3$ mol.wt. 256.30

Synthesis

– Preparation by reaction of o-anisic acid with 2,6-dimethyl-phenol in the presence of methanesulfonic acid at 120° for 20 min (46%) [991].

m.p. 145° [991]; 1H NMR (Sadtlar: standard n° 38492 M), IR (Sadtlar: standard n° 65530 K) [991], UV [991], MS [1131].

(4-Hydroxy-3,5-dimethylphenyl)(4-methoxyphenyl)methanone

[72324-19-7]

 $C_{16}H_{16}O_3$ mol.wt. 256.30

Synthesis

– Preparation by Fries rearrangement of 2,6-dimethyl-phenyl p-anisate in nitromethane,

- in the presence of titanium tetrachloride at 20° for 170 h (82%) [991];
- in the presence of antimony pentachloride at 20° for 25 h (40%) [991].

– Also refer to: [996].

m.p. 125° [991]; 1H NMR (Sadtlar: standard n° 38500 M), IR (Sadtlar: standard n° 65538 K) [991], UV [991], MS [1131].

(2-Hydroxy-4-methylphenyl)(2-methoxy-4-methylphenyl)methanone

[54468-79-0]

 $C_{16}H_{16}O_3$ mol.wt. 256.30

Synthesis

– Obtained by oxidation of 6-methyl-2-phenyl-3-(2-methoxy-4-methylphenyl)benzofuran with chromium trioxide,

then saponification of the keto ester so formed, the 2-(benzoyloxy)-2'-methoxy-4,4'-dimethylbenzophenone [1152].

oil [1152]; b.p. (NA); IR [1152].

(2-Hydroxy-5-methylphenyl)(2-methoxy-5-methylphenyl)methanone

[32229-35-9]

 $C_{16}H_{16}O_3$ mol.wt. 256.30

Syntheses

- Obtained by Friedel–Crafts acylation of excess p-methoxy-toluene with 2-methoxy-5-methylbenzoyl chloride in the presence of aluminium chloride, first at 0° for 2 h, then at r.t. overnight and at reflux for 3 h (23%) [1153].
 - Also obtained (by-product) by Friedel–Crafts acylation of p-methoxytoluene with 2-methoxy-5-methylbenzoyl chloride in carbon disulfide in the presence of aluminium chloride, first at 0° for 5 h, then at r.t. overnight and at reflux for 2 h (10%) [1153].
 - Also refer to: [1154].
- m.p. 68–69° [1153,1154]; IR [1154], UV [1154].

(4-Hydroxy-3-methylphenyl)(4-methoxy-3-methylphenyl)methanone

[79002-05-4]

 $C_{16}H_{16}O_3$ mol.wt. 256.30

Synthesis

- Obtained by rapid degradation of 4-methoxy-3,3'-di-methylbenzophenone [41295-28-7] (an herbicide) in reductive flooded soils (main metabolite) [1155].
- m.p. and Spectra (NA).

(4-Ethoxy-2-hydroxyphenyl)(4-methoxyphenyl)methanone $C_{16}H_{16}O_4$ mol.wt. 272.30

Synthesis

- Preparation by partial demethylation of 2,4'-di-methoxy-4-ethoxybenzophenone with aluminium chloride in chlorobenzene at 80–100° [655].
 - Also refer to: [222].
- m.p. and Spectra (NA).

(4-Ethoxyphenyl)(2-hydroxy-4-methoxyphenyl)methanone $C_{16}H_{16}O_4$ mol.wt. 272.30

Syntheses

- Preparation by reaction of 2,4-dimethoxybenzoyl chloride with phenetole in the presence of aluminium

chloride in a chlorobenzene/*N,N*-di-methylformamide mixture (22:1) at 115° [235,657].

- Preparation by partial demethylation of 4'-ethoxy-2,4-dimethoxybenzophenone with aluminium chloride or aluminium bromide in chlorobenzene at 90–95° (good yield) [655].

m.p. (NA); UV [235].

(2-Hydroxy-3,4-dimethoxyphenyl)(2-methylphenyl)methanone

[140665-41-4]

$C_{16}H_{16}O_4$ mol.wt. 272.30

Synthesis

- Preparation by reaction of *o*-toluoyl chloride with 1,2,3-tri-methoxybenzene in the presence of aluminium chloride in ethylene dichloride between 0° and 5°, then at r.t. for 3 h and at reflux for 1 h (63%) [704].

m.p. 93–95° [704]; Spectra (NA).

(2-Hydroxy-4-methoxy-3-methylphenyl)(2-methoxyphenyl)methanone

[115296-09-8]

$C_{16}H_{16}O_4$ mol.wt. 272.30

Synthesis

- Preparation by reaction of *o*-anisoyl chloride with 3-methoxy-2-methylphenol in methylene chloride in the presence of aluminium chloride first at 0° for 2 h and at r.t. for 1 h (31%) [1029].

m.p. 111–115° [1029]; Spectra (NA).

(2-Hydroxy-4-methoxy-3-methylphenyl)(4-methoxyphenyl)methanone

$C_{16}H_{16}O_4$ mol.wt. 272.30

Synthesis

- Preparation by partial demethylation of 2,4,4'-tri-methoxy-3-methylbenzophenone with aluminium chloride in chlorobenzene at 80–100° [655].

- Also refer to: [222].

m.p. and Spectra (NA).

(2,3-Dimethoxyphenyl)(2-hydroxy-3-methoxyphenyl)methanone

[35040-42-7]

$C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

- Obtained by photo-Fries rearrangement of *o*-methoxy-phenyl 2,3-dimethoxybenzoate in ethanol at r.t. for 22 h (16%) [397].

m.p. 110–110°5 [397]; ¹H NMR [397], IR [397], UV [397].

(2,3-Dimethoxyphenyl)(2-hydroxy-4-methoxyphenyl)methanone

[147188-10-1]

 $C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

– Obtained, in mixture with 2'-hydroxy-2,3',4-tri-methoxybenzophenone, by reaction of 2,3-di-methoxybenzoyl chloride

with resorcinol dimethyl ether in ethyl ether in the presence of aluminium chloride for 8 h at r.t. (total yield: 54%) [1010].

– Also refer to: [1011,1027].

m.p. (NA); 1H NMR [1010].

(2,3-Dimethoxyphenyl)(2-hydroxy-5-methoxyphenyl)methanone

[35040-36-9]

 $C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

– Obtained by photo-Fries rearrangement of p-methoxy-phenyl 2,3-dimethoxybenzoate in ethanol at 30–40° for 9 h (42%) [397].

m.p. 74–76° [397]; 1H NMR [397], IR [397], UV [397].

(2,3-Dimethoxyphenyl)(4-hydroxy-3-methoxyphenyl)methanone

[35042-49-0]

 $C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

– Obtained (poor yield) by photo-Fries rearrangement of o-methoxyphenyl 2,3-dimethoxybenzoate in ethanol at r.t. for 22 h (<7%) [397].

m.p. 143–143°5 [397]; 1H NMR [397], IR [397], UV [397].

(2,4-Dimethoxyphenyl)(2-hydroxy-3-methoxyphenyl)methanone $C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

– Obtained, in mixture with 2-hydroxy-2',3',4-tri-methoxybenzophenone, by reaction of 2,3-di-methoxybenzoyl

chloride with resorcinol dimethyl ether in ethyl ether in the presence of aluminium chloride for 8 h at r.t. (total yield: 54%) [1010].

– Also refer to: [1011].

m.p. (NA); 1H NMR [1010].

(2,4-Dimethoxyphenyl)(2-hydroxy-4-methoxyphenyl)methanone

[4142-51-2]

 $C_{16}H_{16}O_5$ mol.wt. 288.30

Syntheses

– Preparation by reaction of 2,4-dimethoxybenzoic acid with m-methoxyphenol in the presence of boron trifluoride [650].

– Preparation by partial methylation of 2,2'-di-hydroxy-4,4'-dimethoxybenzophenone with methyl iodide in the presence of potassium carbonate in refluxing acetone for 12 h (68%) [1156].

– Preparation by treatment of a difluoroboron chelate (SM) in methanol at 50° for 10 min (95%) [1157,1158]. SM was obtained by reaction of 2,2',4,4'-tetramethoxybenzophenone with boron trifluoride-etherate in refluxing toluene (86%, m.p. 160–161°) [1157,1158].

N.B.: A mixture of products is obtained from aluminium chloride, induced cleavage of 2,2',4,4'-tetramethoxy-benzophenone [1159].

– Also obtained by reaction of 2,4-dimethoxybenzoyl chloride with resorcinol dimethyl ether in ethyl ether in the presence of aluminium chloride for 8 h at r.t. (52%) [1010].

– Also refer to: [222,1011,1136].

m.p. 110–111°5 [1156], 108–109° [1157,1158], 104–105° [650];

¹H NMR [1156,1158], IR [650,1010,1156,1158], UV [650], MS [1156].

(2,4-Dimethoxyphenyl)(2-hydroxy-5-methoxyphenyl)methanone

[169455-12-3]

 $C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

– Obtained, in mixture with 2'-hydroxy-2,4',5-trimethoxybenzophenone, by reaction of 2,4-dimethoxybenzoyl chloride with hydroquinone dimethyl ether in ethyl ether in the presence of aluminium chloride for 8 h at r.t. (total yield: 54%) [1010].

– Also refer to: [1011,1027].

m.p. (NA); ¹H NMR [1010].

(2,4-Dimethoxyphenyl)(2-hydroxy-6-methoxyphenyl)methanone

[147188-11-2]

 $C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

– Obtained, in mixture with 2'-hydroxy-2,4',6-trimethoxybenzophenone, by reaction of 2,4-dimethoxybenzoyl chloride with resorcinol dimethyl ether in ethyl ether in the presence of aluminium chloride for 8 h at r.t. (total yield: 52%) [1010].

– Also refer to: [1011,1027].

m.p. (NA); $^1\text{H NMR}$ [1010].

(2,5-Dimethoxyphenyl)(2-hydroxy-3-methoxyphenyl)methanone

[129168-52-1]

$\text{C}_{16}\text{H}_{16}\text{O}_5$ mol.wt. 288.30

Synthesis

– Preparation by Friedel–Crafts acylation of hydroquinone dimethyl ether with 2,3-dimethoxybenzoyl chloride in ethyl ether in the presence of aluminium chloride for 1 h at 45–50° (72%) [1160].

m.p. 100–100°5 [1160]; Spectra (NA).

(2,5-Dimethoxyphenyl)(2-hydroxy-4-methoxyphenyl)methanone

[62495-96-9]

$\text{C}_{16}\text{H}_{16}\text{O}_5$ mol.wt. 288.30

Syntheses

- Preparation by reaction of 2,5-dimethoxybenzoic acid with 3-methoxyphenol in the presence of zinc chloride and phosphorous oxychloride at 65–70° for 2 h (21%) [1136].
 - Also obtained, in mixture with 2-hydroxy-2',4',5-trimethoxybenzophenone, by reaction of 2,4-dimethoxybenzoyl chloride with hydroquinone dimethyl ether in ethyl ether in the presence of aluminium chloride for 8 h at r.t. (total yield: 54%) [1010].
 - Also refer to: [1011].
- m.p. 110° [1136]; $^1\text{H NMR}$ [1010,1136], IR [1136], UV [1136].

(2,6-Dimethoxyphenyl)(2-hydroxy-3-methoxyphenyl)methanone

[37570-57-3]

$\text{C}_{16}\text{H}_{16}\text{O}_5$ mol.wt. 288.30

Synthesis

- Obtained by demethylation of 2,2',3,6'-tetramethoxybenzophenone,
 - in the presence of boron trichloride in methylene chloride for 30 min (88%) (high selectivity) [1161];
 - in the presence of 40% aqueous hydrobromic acid in refluxing acetic acid for 2 h (17%) [1161].
- m.p. 146–148° [1161]; $^1\text{H NMR}$ [1161], IR [1161], MS [1161].

(2,6-Dimethoxyphenyl)(2-hydroxy-4-methoxyphenyl)methanone

[147188-12-3]

C₁₆H₁₆O₅ mol.wt. 288.30

Synthesis

– Obtained, in mixture with 2-hydroxy-2',4',6-trimethoxy-benzophenone, by reaction of 2,4-dimethoxybenzoyl chloride with resorcinol dimethyl ether in ethyl ether in the presence of aluminium chloride for 8 h at r.t. (total yield: 52%) [1010].

– Also refer to: [1011].

m.p. (NA); ¹H NMR [1010].

(2,6-Dimethoxyphenyl)(2-hydroxy-6-methoxyphenyl)methanone

[129103-93-1]

C₁₆H₁₆O₅ mol.wt. 288.30

Synthesis

– Obtained from 2-iodo-3-methoxyphenyl 2,6-dimethoxybenzoate by rearrangement on treatment with n-butyllithium in a mixture of ethyl ether, hexane and tetrahydrofuran at -100° followed by heating to -70° , then treatment with saturated aqueous ammonium chloride (9%) [58].

m.p. and Spectra (NA).

(3,4-Dimethoxyphenyl)(2-hydroxy-4-methoxyphenyl)methanone

[42045-60-3]

C₁₆H₁₆O₅ mol.wt. 288.30

Syntheses

– Obtained by reaction of methyl iodide with 2,4-di-hydroxy-3',4'-dimethoxybenzophenone in the presence of potassium carbonate in refluxing acetone [218], (89%) [1137].

– Also obtained from β -(5-methoxy-2-*veratroyl*phenoxy)propionic acid by heating with aqueous sodium hydroxide solution [218].

– Preparation by reaction of 3,4-dimethoxybenzoic acid with *m*-methoxyphenol in the presence of boron trifluoride [650].

– Preparation by reaction of *veratroyl* chloride,

- with resorcinol monomethyl ether in the presence of aluminium chloride in nitrobenzene, first at 0° for 3 h, then at 10 – 16° for 18 h [1150];
- with resorcinol dimethyl ether in the presence of aluminium chloride in refluxing carbon disulfide for 1 h (61%) [1162].

- Also obtained by condensation of ethyl m-methoxyphenoxypropionate with veratroyl chloride in the presence of aluminium chloride in nitrobenzene at 0° for 12 h [1150].
- Also refer to: [193,222,235,1136].

m.p. 141° [218,1150], 140–141° [1162], 140° [1137], 135–136° [650]; IR [650], UV [650].

(3,4-Dimethoxyphenyl)(4-hydroxy-2-methoxyphenyl)methanone

$C_{16}H_{16}O_5$ mol.wt. 288.30

Syntheses

- Obtained by reaction of veratroyl chloride with resorcinol monomethyl ether in the presence of aluminium chloride in nitrobenzene, first at 0° for 3 h, then at 10–16° for 18 h [1150].
- Also obtained from β -(3-methoxy-4-veratroylphenoxy)propionic acid on heating with an aqueous sodium hydroxide solution [218].

m.p. 179° [218], 175° [1150]; Spectra (NA).

(2-Hydroxy-3,4-dimethoxyphenyl)(2-methoxyphenyl)methanone

[147188-08-7]

$C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

- Obtained, in mixture with 2'-hydroxy-2,3,4-trimethoxy-benzophenone, by reaction of 2-methoxybenzoyl chloride with pyrogallol trimethyl ether in ethyl ether in the presence of aluminium chloride for 8 h at r.t. (total yield: 56–59%) [1010,1011].
- Also refer to: [1027].

m.p. (NA); 1H NMR [1010].

(2-Hydroxy-4,5-dimethoxyphenyl)(2-methoxyphenyl)methanone

[42833-48-7]

$C_{16}H_{16}O_5$ mol.wt. 288.30

Syntheses

- Obtained, in mixture with 2,4,5-trimethoxy-2'-hydroxy-benzophenone, by reaction of o-anisoyl chloride with 1,2,4-trimethoxybenzene in ethyl ether in the presence of aluminium chloride for 20 h at r.t. (total yield: 56%) [416,1010] or for 48 h at r.t. [1163].

- Also obtained from 2,5-dihydroxy-2',4-dimethoxybenzophenone on treatment with ethereal methanolic diazomethane for 4.5 h [416].
 - Also refer to: [1011].
- m.p. 104–105° [416], 98° [1163]; ¹H NMR [416,1010,1163], UV [416], MS [416].

(2-Hydroxy-4,5-dimethoxyphenyl)(3-methoxyphenyl)methanone

[51106-90-2]

C₁₆H₁₆O₅ mol.wt. 288.30

Synthesis

- Preparation by acylation of 1,2,4-trimethoxybenzene with m-anisoyl chloride in ethyl ether in the presence of aluminium chloride at r.t. for 48 h (35%) [1163].

m.p. 94° [1163]; ¹H NMR [1163].

(2-Hydroxy-4,5-dimethoxyphenyl)(4-methoxyphenyl)methanone

[58115-11-0]

C₁₆H₁₆O₅ mol.wt. 288.30

Synthesis

- Obtained (by-product) by condensation of p-anisoyl chloride with 1,2,4-trimethoxybenzene in the presence of aluminium chloride in refluxing carbon disulfide for 6 h [428,761] or at r.t. several days [762].

m.p. 127–128° [761,762], 124–125° [428]; Spectra (NA).

(2-Hydroxy-4,6-dimethoxyphenyl)(2-methoxyphenyl)methanone

[147188-04-3]

C₁₆H₁₆O₅ mol.wt. 288.30

Synthesis

- Obtained, in mixture with 2'-hydroxy-2,4,6-trimethoxybenzophenone, by reaction of 2-methoxybenzoyl chloride with phloroglucinol trimethyl ether in ethyl ether in the presence of aluminium chloride for 8 h at r.t. (total yield: 59%) [1010].

- Also refer to: [1011,1027].

m.p. (NA); ¹H NMR [1010].

(2-Hydroxy-4,6-dimethoxyphenyl)(3-methoxyphenyl)methanone

[21382-23-0]

 $C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

- Preparation by partial methylation of 2,3',4,6-tetra-hydroxybenzophenone or of 2,4,6-trihydroxy-3'-methoxybenzophenone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 6 h (45–50%) [422].

Isolation from natural source

- From fresh *Gentiana lutea* rhizome (Gentianaceae) [423].

m.p. 123–125° [422]; b.p._{0.1} 180–188° [422]; ¹H NMR [422], IR [422], UV [422].

(2-Hydroxy-4,6-dimethoxyphenyl)(4-methoxyphenyl)methanone

[97746-14-0]

 $C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

- Preparation by Friedel–Crafts acylation of 1,3,5-tri-methoxybenzene with p-methoxybenzoyl chloride in the presence of aluminium chloride in ethyl ether for 4 h (70%) [653].

m.p. 150–151° [653]; ¹H NMR [653].

(4-Hydroxy-3,5-dimethoxyphenyl)(4-methoxyphenyl)methanone

[54808-44-5]

 $C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

- Refer to: [334].

m.p. and Spectra (NA).

(2-Amino-4,5-dimethoxyphenyl)(2-hydroxy-4-methoxyphenyl)methanone (Hydrochloride) $C_{16}H_{17}NO_5 \cdot HCl$ mol.wt. 339.78

Synthesis

- Preparation by reduction of 2-hydroxy-2'-nitro-4,4',5'-trimethoxybenzophenone in ethanol with stannous chloride, tin foil and concentrated hydrochloric acid on a steam bath for 15 min [1150].

m.p. 240° [1150]; Spectra (NA).

[5-Chloro-2-hydroxy-3-(1-methyl-2-propenyl)phenyl](4-chlorophenyl) methanone

[93575-41-8]

 $C_{17}H_{14}Cl_2O_2$

mol.wt. 321.20

Synthesis

– Preparation by Fries rearrangement of 4-chloro-2-(1-methylallyl)phenyl p-chlorobenzoate with aluminium chloride at 160° for 15 min [1107].

m.p. 45–47° [1107]; Spectra (NA).

[5-(1,1-Dimethylethyl)-2-hydroxy-3-nitrophenyl](4-chlorophenyl) methanone $C_{17}H_{16}ClNO_4$

mol.wt. 333.77

Synthesis

– Preparation by reaction of a concentrated nitric acid/concentrated sulfuric acid mixture with 5-tert-butyl-4'-chloro-2-hydroxybenzophenone in methylene chloride at 5° for 30 min (43%) [472].

m.p. 96–98° [472]; 1H NMR [472]; TLC [472].**(3-Butyl-5-chloro-2-hydroxyphenyl)(4-chlorophenyl) methanone**

[93575-74-7]

 $C_{17}H_{16}Cl_2O_2$

mol.wt. 323.22

Synthesis

– Preparation by Fries rearrangement of 2-butyl-4-chloro-phenyl p-chlorobenzoate with aluminium chloride at 160° for 15 min [1107].

oil [1107]; b.p._{0.04} 168–170° [1107]; Spectra (NA).**[5-Chloro-3-(1,1-dimethylethyl)-2-hydroxyphenyl](4-chlorophenyl) methanone**

[93575-72-5]

 $C_{17}H_{16}Cl_2O_2$

mol.wt. 323.22

Synthesis

– Preparation by photo-Fries rearrangement of 2-tert-butyl-4-chlorophenyl p-chlorobenzoate in benzene under nitrogen for 32 h [1107].

m.p. 86°5–87° [1107]; Spectra (NA).

[5-Chloro-2-hydroxy-3-(2-methylpropyl)phenyl](4-chlorophenyl)methanone

[93575-75-8]

C₁₇H₁₆Cl₂O₂ mol.wt. 323.22

Synthesis

- Preparation by Fries rearrangement of 2-iso-butyl-4-chlorophenyl 4-chlorobenzoate with aluminium chloride at 160° for 15 min [1107].

m.p. 65–66° [1107]; Spectra (NA).

(2,4-Dichlorophenyl)[5-(1,1-dimethylethyl)-2-hydroxyphenyl]methanone

[61709-37-3]

C₁₇H₁₆Cl₂O₂ mol.wt. 323.22

Synthesis

- Preparation by demethylation of 5-tert-butyl-2',4'-di-chloro-2-methoxybenzophenone (SM) with aluminium chloride in methylene chloride at 10°. SM was obtained by Friedel–Crafts acylation of p-tert-butylanisole with 2,4-dichlorobenzoyl chloride in methylene chloride in the presence of aluminium chloride at 10° [1164].

– Also refer to: [1165].

m.p. 42–43° [1164]; Spectra (NA).

(2,6-Dichlorophenyl)[3-(1,1-dimethylethyl)-4-hydroxyphenyl]methanone

[124979-18-6]

C₁₇H₁₆Cl₂O₂ mol.wt. 323.22

Synthesis

- Preparation by Friedel–Crafts acylation of o-tert-butyl-phenol with 2,6-dichlorobenzoyl chloride in ethylene dichloride in the presence of titanium tetrachloride, first at 0°, then at r.t. [816].

m.p. 229–230° [816]; Spectra (NA).

(3,4-Dichlorophenyl)[5-(1,1-dimethylethyl)-2-hydroxyphenyl]methanoneC₁₇H₁₆Cl₂O₂ mol.wt. 323.22

Synthesis

- Obtained by photo-Fries rearrangement of p-tert-butylphenyl 3,4-dichlorobenzoate in benzene (37%) [154].

m.p. 110–111° [154]; Spectra (NA).

(2,4-Dichlorophenyl)[4-hydroxy-2-methyl-5-(1-methylethyl)phenyl]methanone

[72236-97-6]

 $C_{17}H_{16}Cl_2O_2$ mol.wt. 323.22

Synthesis

- Preparation by Fries rearrangement of the intermediate 5-methyl-2-isopropylphenyl 2,4-dichlorobenzoate formed in situ by reaction of 2,4-dichlorobenzoyl chloride with thymol in the presence of aluminium chloride in nitrobenzene at r.t. for 24 h (70%) [1166].

m.p. 132° [1166]; 1H NMR [1166].**(3,4-Dichlorophenyl)[4-hydroxy-2-methyl-5-(1-methylethyl)phenyl]methanone**

[72236-99-8]

 $C_{17}H_{16}Cl_2O_2$ mol.wt. 323.22

Synthesis

- Preparation by demethylation of 4-(3,4-dichloro-benzoyl)-5-methyl-2-isopropylanisole with boiling pyridinium chloride for 15 min (80%) [1166].

m.p. 133° [1166]; 1H NMR [1166].**(2,4-Dichlorophenyl)[2-hydroxy-5-(1-methylpropyl)phenyl]methanone**

[59746-94-0]

 $C_{17}H_{16}Cl_2O_2$ mol.wt. 323.22

Synthesis

- Preparation by reaction of 2,4-dichlorobenzotrichloride with 4-sec-butylphenol in hydrofluoric acid in the presence of water at -10° , then between 0° and -10° for 2 h, at r.t. for 7 h and at 80° for 30 min into an autoclave (68%) [213].

– Also refer to: [1165].

yellow oil [213]; b.p._{0.05} 170° [213]; Spectra (NA).**(2,5-Dichlorophenyl)[2-hydroxy-5-(1-methylpropyl)phenyl]methanone** $C_{17}H_{16}Cl_2O_2$ mol.wt. 323.22

[3-(1,1-Dimethylethyl)-4-hydroxyphenyl](2-fluorophenyl)methanone

[124979-11-9]

 $C_{17}H_{17}FO_2$

mol.wt. 272.32

Synthesis

- Preparation by Friedel–Crafts acylation of o-tert-butylphenol with o-fluorobenzoyl chloride in ethylene dichloride in the presence of titanium tetrachloride, first at 0° , then at r.t. [816].

m.p. 152–153° [816]; Spectra (NA).

[3-(1,1-Dimethylethyl)-4-hydroxyphenyl](4-fluorophenyl)methanone

[124979-09-5]

 $C_{17}H_{17}FO_2$

mol.wt. 272.32

Synthesis

- Preparation by Friedel–Crafts acylation of o-tert-butylphenol with p-fluorobenzoyl chloride in ethylene dichloride in the presence of titanium tetrachloride, first at 0° , then at r.t. [816].

m.p. 203–204° [816]; Spectra (NA).

(4-Butoxy-2-hydroxyphenyl)(4-fluorophenyl)methanone $C_{17}H_{17}FO_3$

mol.wt. 288.32

Synthesis

- Preparation by partial alkylation of 4'-fluoro-2,4-di-hydroxybenzophenone with a butyl halide in the presence of an alkali [1109].

m.p. and Spectra (NA).

(2-Fluoro-4,6-dimethoxyphenyl)(2-hydroxy-4,5-dimethoxyphenyl)methanone

[129103-95-3]

 $C_{17}H_{17}FO_6$ mol.wt. 336.32

Synthesis

- Preparation from 2-iodo-4,5-dimethoxyphenyl 2-fluoro-4,6-dimethoxybenzoate by rearrangement on treatment with sec-butyllithium in a mixture of ethyl ether, hexane and tetrahydrofuran at -100° followed by heating to -70° for 2 h, then treatment with saturated aqueous ammonium chloride (89%) [58].

m.p. $133-134^\circ$ [58]; 1H NMR [58], IR [58], MS [58].**(2,3-Dimethyl-5-nitrophenyl)(2-hydroxy-3,4-dimethylphenyl)methanone**

[110969-70-5]

 $C_{17}H_{17}NO_4$ mol.wt. 299.33

Synthesis

- Preparation by Fries rearrangement of 2,3-dimethylphenyl 2,3-dimethyl-5-nitrobenzoate with aluminium chloride at 160° for 2 h (56%) [1003].

m.p. 165° [1003]; 1H NMR [1003], IR [1003], UV [1003].**(2,3-Dimethyl-5-nitrophenyl)(2-hydroxy-3,5-dimethylphenyl)methanone**

[110969-73-8]

 $C_{17}H_{17}NO_4$ mol.wt. 299.33

Synthesis

- Preparation by Fries rearrangement of 2,4-dimethylphenyl 2,3-dimethyl-5-nitrobenzoate with aluminium chloride at 160° for 2 h (56%) [1003].

m.p. 133° [1003]; 1H NMR [1003], IR [1003], UV [1003].**(2,3-Dimethyl-5-nitrophenyl)(2-hydroxy-3,6-dimethylphenyl)methanone**

[110969-75-0]

 $C_{17}H_{17}NO_4$ mol.wt. 299.33

Synthesis

- Obtained by Fries rearrangement of 2,5-dimethylphenyl 2,3-dimethyl-5-nitrobenzoate with aluminium chloride at 160° for 2 h (20%) [1003].

m.p. 120° [1003]; 1H NMR [1003], IR [1003], UV [1003].

(2,3-Dimethyl-5-nitrophenyl)(2-hydroxy-4,5-dimethylphenyl)methanone

[110969-80-7]

 $C_{17}H_{17}NO_4$

mol.wt. 299.33

Synthesis

– Preparation by Fries rearrangement of 3,4-dimethylphenyl 2,3-dimethyl-5-nitrobenzoate with aluminium chloride at 160° for 2 h (60%) [1003].

m.p. 169° [1003]; 1H NMR [1003], IR [1003], UV [1003].

(2,3-Dimethyl-5-nitrophenyl)(2-hydroxy-4,6-dimethylphenyl)methanone

[110993-12-9]

 $C_{17}H_{17}NO_4$

mol.wt. 299.33

Synthesis

– Preparation by Fries rearrangement of 3,5-dimethylphenyl 2,3-dimethyl-5-nitrobenzoate with aluminium chloride at 160° for 2 h (70%) [1003].

m.p. 121° [1003]; 1H NMR [1003], IR [1003], UV [1003].

(2,3-Dimethyl-5-nitrophenyl)(4-hydroxy-2,3-dimethylphenyl)methanone

[110969-71-6]

 $C_{17}H_{17}NO_4$

mol.wt. 299.33

Synthesis

– Obtained by Fries rearrangement of 2,3-dimethylphenyl 2,3-dimethyl-5-nitrobenzoate with aluminium chloride at 160° for 2 h (12%) [1003].

m.p. 212° [1003]; 1H NMR [1003], IR [1003], UV [1003].

(2,3-Dimethyl-5-nitrophenyl)(4-hydroxy-2,5-dimethylphenyl)methanone

[110969-76-1]

 $C_{17}H_{17}NO_4$

mol.wt. 299.33

Synthesis

– Preparation by Fries rearrangement of 2,5-dimethylphenyl 2,3-dimethyl-5-nitrobenzoate with aluminium chloride at 160° for 2 h (30%) [1003].

m.p. 232° [1003]; 1H NMR [1003], IR [1003], UV [1003].

(2,3-Dimethyl-5-nitrophenyl)(4-hydroxy-3,5-dimethylphenyl)methanone

[110969-78-3]

 $C_{17}H_{17}NO_4$ mol.wt. 299.33

Synthesis

– Preparation by Fries rearrangement of 2,6-dimethylphenyl 2,3-dimethyl-5-nitrobenzoate with aluminium chloride at 160° for 2 h (55%) [1003].

m.p. 214° [1003]; 1H NMR [1003], IR [1003], UV [1003].

[5-(1,1-Dimethylethyl)-2-hydroxyphenyl](4-nitrophenyl)methanone $C_{17}H_{17}NO_4$ mol.wt. 299.33

Synthesis

– Obtained (poor yield) by photo-Fries rearrangement of p-tert-butylphenyl p-nitrobenzoate in benzene (10%) [154].

m.p. 102–103° [154]; Spectra (NA).

[3-Amino-4-(1,1-dimethylethyl)-2-hydroxyphenyl](4-chlorophenyl)methanone $C_{17}H_{18}ClNO_2$ mol.wt. 303.79

Synthesis

– Preparation by reduction of 4-tert-butyl-4'-chloro-2-hydroxy-3-nitrobenzophenone with titanium trichloride in a benzene/tetrahydrofuran mixture for 20 h at r.t. [472].

m.p. (NA); red oil [472]; 1H NMR [472], IR [472], MS [472]; TLC [472].

[3-Amino-4-(1,1-dimethylethyl)-2-hydroxyphenyl](4-chlorophenyl)methanone (Hydrochloride) $C_{17}H_{18}ClNO_2 \cdot HCl$ mol.wt. 340.25

Synthesis

– Obtained by reaction of concentrated hydrochloric acid with 3-amino-4-tert-butyl-4'-chloro-2-hydroxy-benzophenone (52%) [472].

m.p. 153–158° [472]; Spectra: see the corresponding amino base.

(2,4-Dimethylphenyl)(2-hydroxy-3,5-dimethylphenyl)methanone

[86914-80-9]

 $C_{17}H_{18}O_2$

mol.wt. 254.33

Synthesis

– Preparation by Fries rearrangement of 2,4-dimethylphenyl 2,4-dimethylbenzoate with aluminium chloride at 180° for 10 min [1074].

oil [1074]; b.p. and Spectra (NA).

(2,5-Dimethylphenyl)(2-hydroxy-3,5-dimethylphenyl)methanone

[86914-78-5]

 $C_{17}H_{18}O_2$

mol.wt. 254.33

Synthesis

– Preparation by Fries rearrangement of 2,4-dimethylphenyl 2,5-dimethylbenzoate with aluminium chloride at 180° for 10 min [1074].

oil [1074]; b.p. and Spectra (NA).

(3,4-Dimethylphenyl)(2-hydroxy-3,5-dimethylphenyl)methanone

[86914-88-7]

 $C_{17}H_{18}O_2$

mol.wt. 254.33

Synthesis

– Preparation by Fries rearrangement of 2,4-dimethylphenyl 3,4-dimethylbenzoate with aluminium chloride at 180° for 10 min [1074].

m.p. 68° [1074]; Spectra (NA).

(3-Ethyl-2-hydroxy-5-methylphenyl)(4-methylphenyl)methanone

[92739-95-2]

 $C_{17}H_{18}O_2$

mol.wt. 254.33

Synthesis

– Preparation by Fries rearrangement of 2-ethyl-4-methylphenyl p-toluate with aluminium chloride at 160° for 15 min [1107].

– Also refer to: [1076].

m.p. 38–39° [1107]; Spectra (NA).

[2-Hydroxy-5-(1-methylethyl)phenyl](2-methylphenyl)methanone

[170799-16-3]

 $C_{17}H_{18}O_2$ mol.wt. 254.33

Synthesis

- Preparation by Fries rearrangement of p-isopropylphenyl o-toluate with aluminium chloride at 100–150° for 0.5–3 h (98%) [29].

oil [29]; b.p. and Spectra (NA).

(2-Hydroxy-5-methylphenyl)(2,4,6-trimethylphenyl)methanone $C_{17}H_{18}O_2$ mol.wt. 254.33

Synthesis

- Preparation by Fries rearrangement of p-creosyl 2,4,6-tri-methylbenzoate with aluminium chloride at 150° for 2 h (63%) [1151].

m.p. 86° [1151]; Spectra (NA).

(2,6-Dimethylphenyl)(5-hydroxy-4-methoxy-2-methylphenyl)methanone $C_{17}H_{18}O_3$ mol.wt. 270.33

Synthesis

- Obtained by partial demethylation of 4,5-dimethoxy-2,2',6'-trimethylbenzophenone [1072].

m.p. and Spectra (NA).

(2-Hydroxy-4-propoxyphenyl)(2-methylphenyl)methanone

[172479-21-9]

 $C_{17}H_{18}O_3$ mol.wt. 270.33

Synthesis

- Prepared by standard techniques [830].

m.p. (NA); UV [830].

(2,4-Dimethylphenyl)(4-hydroxy-3,5-dimethoxyphenyl)methanone $C_{17}H_{18}O_4$ mol.wt. 286.33

Synthesis

- Preparation by Friedel–Crafts acylation of m-xylene with 3,4,5-trimethoxybenzoyl chloride [429].

m.p. and Spectra (NA).

(5-Ethyl-2-hydroxy-4-methoxyphenyl)(4-methoxyphenyl)methanone

[66666-17-9]

C₁₇H₁₈O₄ mol.wt. 286.33

Synthesis

– Preparation by saponification of 2-(p-anisoyloxy)-4,4'-dimethoxy-5-ethylbenzophenone (SM) with potassium hydroxide in refluxing ethanol for 1 h (81%). SM was obtained by oxidation of 5-ethyl-6-methoxy-2,3-bis(p-methoxyphenyl)benzofuran with chromium trioxide in refluxing acetic acid for 45 min [1116].

oil [1116]; b.p. and Spectra (NA).

(2,4-Dimethoxy-6-methylphenyl)(2-hydroxy-5-methoxyphenyl)methanone

[78044-92-5]

C₁₇H₁₈O₅ mol.wt. 302.33

Synthesis

– Obtained by photo-Fries rearrangement of p-methoxy-phenyl 2,4-dimethoxy-6-methylbenzoate in benzene for 4 h under nitrogen (37%) [1167].

m.p. 120–123° [1167]; ¹H NMR [1167], IR [1167], UV [1167], MS [1167].**(4-Ethoxyphenyl)(2-hydroxy-3,4-dimethoxyphenyl)methanone**

[69471-31-4]

C₁₇H₁₈O₅ mol.wt. 302.33

Synthesis

– Preparation by selective demethylation of 4'-ethoxy-2,3,4-trimethoxybenzophenone with aluminium chloride in nitrobenzene at 100° for 1 h (70%) [1168].

m.p. 113–114° [1168]; ¹H NMR [1168], IR [1168].**(2-Hydroxy-3,4-dimethoxyphenyl)(3-methoxy-4-methylphenyl)methanone**C₁₇H₁₈O₅ mol.wt. 302.33

Synthesis

– Obtained by Friedel–Crafts acylation of pyrogallol trimethyl ether with 3-methoxy-4-methylbenzoyl chloride in the presence of aluminium chloride in boiling carbon disulfide for 4 h (22%) [1169,1170].

m.p. 109° [1169,1170]; Spectra (NA).

[3-Hydroxy-2-methoxy-6-(methoxymethyl)phenyl](2-methoxyphenyl) methanone

[133386-99-9]

 $C_{17}H_{18}O_5$ mol.wt. 302.33

Synthesis

- Preparation from 4-hydroxy-3-methoxybenzyl methyl ether (SM) in two steps: first, direct lithiation of SM with n-butyl lithium in tetrahydrofuran at r.t., followed by quenching with o-anisaldehyde. Then, oxidation of the 8-(2-methoxyphenyl)-2,7-dimethoxybicyclo[4.2.0]octa-1,3,5-triene-3,8-diol so formed (good yield) [1171].

m.p. and Spectra (NA).

(2,3-Dimethoxyphenyl)(2-hydroxy-4,6-dimethoxyphenyl) methanone

[151417-67-3]

 $C_{17}H_{18}O_6$ mol.wt. 318.33

Synthesis

- Obtained, in mixture with 2'-hydroxy-2,3',4,6-tetra-methoxybenzophenone, by reaction of 2,3-dimethoxy-benzoyl chloride with 1,3,5-trimethoxybenzene in ethyl ether in the presence of aluminium chloride for 15 h at r.t. (total yield: 92%) [1011].

- Also refer to: [1027].

m.p. (NA); 1H NMR [1011].**(2,5-Dimethoxyphenyl)(2-hydroxy-3,6-dimethoxyphenyl) methanone**

[109092-84-4]

 $C_{17}H_{18}O_6$ mol.wt. 318.33

Synthesis

- Obtained by reaction of 2,3,6-trimethoxybenzoyl chloride with hydroquinone dimethyl ether in the presence of aluminium chloride in ethyl ether at r.t. for 2 days (17%) [1172] or for 1 h at 45–50°, then 20 h at r.t. (69%) [1160].

m.p. 115–116° [1172], 115° [1160]; Spectra (NA).

(2,5-Dimethoxyphenyl)(2-hydroxy-4,5-dimethoxyphenyl) methanone

[88133-95-3]

 $C_{17}H_{18}O_6$ mol.wt. 318.33

Synthesis

- Obtained by reaction of 2,5-dimethoxybenzoyl chloride with 1,2,4-trimethoxybenzene in the presence of aluminium chloride in ethyl ether for 30 h [1173], or for 1 h at 45–50°, then 20 h at r.t. (65–70%) [1160].

m.p. 97–98° [1173], 82°5–83° [1160]; 1H NMR [1173].

(2,5-Dimethoxyphenyl)(2-hydroxy-4,6-dimethoxyphenyl)methanone

[42833-59-0]

 $C_{17}H_{18}O_6$ mol.wt. 318.33

Synthesis

– Preparation by reaction of 2,5-dimethoxybenzoyl chloride with 1,3,5-trimethoxybenzene in the presence of aluminium chloride in ethyl ether for 28 h (minor product) [416], (52%, estimated, not isolated) [1160].

m.p. (NA); 1H NMR [416], MS [416].

(2,6-Dimethoxyphenyl)(2-hydroxy-3,4-dimethoxyphenyl)methanone

[42833-55-6]

 $C_{17}H_{18}O_6$ mol.wt. 318.33

Synthesis

– Obtained by reaction of 2,6-dimethoxybenzoyl chloride with 1,2,3-trimethoxybenzene in the presence of aluminium chloride in ethyl ether for 20 h [416].

m.p. (NA); 1H NMR [416], MS [416].

(2,6-Dimethoxyphenyl)(2-hydroxy-4,5-dimethoxyphenyl)methanone

[42833-53-4]

 $C_{17}H_{18}O_6$ mol.wt. 318.33

Synthesis

– Obtained by reaction of 2,6-dimethoxybenzoyl chloride with 1,2,4-trimethoxybenzene in the presence of aluminium chloride in ethyl ether at r.t. for 40 h [416].

m.p. (NA); 1H NMR [416], UV [416], MS [416].

(3,4-Dimethoxyphenyl)(2-hydroxy-4,5-dimethoxyphenyl)methanone $C_{17}H_{18}O_6$ mol.wt. 318.33

Synthesis

– Preparation by reaction of veratroyl chloride (3,4-dimethoxybenzoyl chloride) with hydroxy-hydroquinone trimethyl ether (1,2,4-trimethoxybenzene) in the presence of aluminium chloride,

- in ethyl ether at r.t. for 48 h [1136], (47%) [1174];
- in refluxing carbon disulfide for 8 h, then at r.t. for 12 h (37%) [1175].

m.p. 148–149° [1175], 145–146° [1174]; UV [1175].

(3,4-Dimethoxyphenyl)(2-hydroxy-4,6-dimethoxyphenyl)methanone

[62495-41-4]

 $C_{17}H_{18}O_6$ mol.wt. 318.33

Syntheses

- Preparation by reaction of 3,4-dimethoxybenzoyl chloride with 1,3,5-trimethoxybenzene in the presence of aluminium chloride in ethyl ether for 4 h (50%) [653].
- Preparation by reaction of 3,4-dimethoxybenzoyl chloride with 3,5-dimethoxyphenol in the presence of aluminium chloride in ethyl ether at r.t. for 48 h (49%) [1136].

m.p. 135–136° [653], 134° [1136]; 1H NMR [653,1136], IR [1136], UV [1136].**(3,5-Dimethoxyphenyl)(2-hydroxy-3,5-dimethoxyphenyl)methanone** $C_{17}H_{18}O_6$ mol.wt. 318.33

Synthesis

- Preparation by reaction of 3,5-dimethoxybenzoyl chloride with pyrogallol trimethyl ether in the presence of aluminium chloride in boiling carbon disulfide for 2 h (40%) [1176].

m.p. 123–124° [1176]; Spectra (NA).

(3,5-Dimethoxyphenyl)(2-hydroxy-4,6-dimethoxyphenyl)methanone

[53250-54-7]

 $C_{17}H_{18}O_6$ mol.wt. 318.33

Synthesis

- Obtained by reaction of 3,5-dimethoxybenzoyl chloride with phloroglucinol trimethyl ether in ethyl ether in the presence of aluminium chloride at 25° for 48 h (16%) [167].

m.p. 118° [167]; Spectra (NA).

[2-Hydroxy-4-(2-hydroxyethoxy)phenyl][4-(2-hydroxyethoxy)phenyl]methanone $C_{17}H_{18}O_6$ mol.wt. 318.33

Synthesis

- Refer to: [93,116].

m.p. 128° [93]; UV [93]; pK_a [93]; TLC [116].

(2-Hydroxy-3-methoxyphenyl)(2,4,6-trimethoxyphenyl)methanone

[6343-00-6]

 $C_{17}H_{18}O_6$ mol.wt. 318.33

Synthesis

- Obtained, in mixture with 2-hydroxy-2',3',4,6-tetra-methoxybenzophenone, by reaction of 2,3-dimethoxy-benzoyl chloride with 1,3,5-trimethoxybenzene in ethyl ether in the presence of aluminium chloride for 15 h at r.t. (total yield: 92%) [1011].

– Also refer to: [1027].

m.p. (NA); 1H NMR [1011].**(2-Hydroxy-4-methoxyphenyl)(3,4,5-trimethoxyphenyl)methanone**

[62495-39-0]

 $C_{17}H_{18}O_6$ mol.wt. 318.33

Synthesis

- Preparation by reaction of dimethyl sulfate with 2,4'-dihydroxy-3',4,5'-trimethoxybenzophenone in the presence of potassium carbonate in refluxing acetone for 30 min (57%) [1136].

m.p. 106–107° [1136]; 1H NMR [1136], IR [1136], UV [1136].**(2-Hydroxy-5-methoxyphenyl)(2,4,6-trimethoxyphenyl)methanone**

[42832-64-4]

 $C_{17}H_{18}O_6$ mol.wt. 318.33

Synthesis

- Obtained by reaction of 2,5-dimethoxybenzoyl chloride with 1,3,5-trimethoxybenzene in the presence of aluminium chloride in ethyl ether for 28 h (major product) [416], (30%, estimated, not isolated) [1160].

– Also refer to: [1072].

m.p. (NA); 1H NMR [416], MS [416].**(3-Hydroxy-4-methoxyphenyl)(3,4,5-trimethoxyphenyl)methanone***(Phenstatin)*

[203448-32-2]

 $C_{17}H_{18}O_6$ mol.wt. 318.33

Synthesis

- Obtained by deprotection of 3-[(tert-butyl)dimethyl-silyloxy]-3',4,4',5'-tetramethoxybenzophenone (SM) in

tetrahydrofuran with 1 M tetrabutyl-ammonium fluoride for 15 min under argon (83%), but only 30% overall yield [1177].

- SM was prepared in two steps: first, formation of N-[3-[(tert-butyldimethylsilyl)oxy]-4-methoxybenzoyl]morpholine (SM1) by action of 3-[(tert-butyldimethylsilyl)oxy]-4-methoxy-benzoyl chloride with morpholine in toluene for 4 h at r.t. under argon. Then, the amide SM1 was allowed to react with the lithium derivative prepared from 3,4,5-trimethoxybromobenzene [1178] and tert-butyllithium in tetrahydrofuran at -78° to give SM [1177].

m.p. $149-150^{\circ}$ [1177]; ^1H NMR [1177], ^{13}C NMR [1177], IR [1177], MS [1177]; crystal data [1177]; TLC [1177].

(4-Hydroxy-3-methoxyphenyl)(2,4,6-trimethoxyphenyl)methanone

$\text{C}_{17}\text{H}_{18}\text{O}_6$ mol.wt. 318.33

Synthesis

- Obtained by reaction of veratronitrile with phloroglucinol trimethyl ether (Hoesch reaction) (15%) [439].

m.p. 242° [439]; Spectra (NA).

(2-Hydroxy-3,4,5-trimethoxyphenyl)(2-methoxyphenyl)methanone

[42833-60-3]

$\text{C}_{17}\text{H}_{18}\text{O}_6$ mol.wt. 318.33

Synthesis

- Obtained by Friedel–Crafts acylation of 1,2,3,4-tetra-methoxybenzene with o-anisoyl chloride in the presence of aluminium chloride in ethyl ether for 44 h [416].

m.p. (NA); ^1H NMR [416], UV [416].

(4-Aminophenyl)[5-(1,1-dimethylethyl)-2-hydroxyphenyl]methanone

[98031-50-6]

$\text{C}_{17}\text{H}_{19}\text{NO}_2$ mol.wt. 269.34

Synthesis

- Obtained by photo-Fries rearrangement of p-tert-butylphenyl p-aminobenzoate in benzene (12%) [154].

m.p. $98-100^{\circ}$ [154]; Spectra (NA).

[3-(1,1-Dimethylethyl)-4-hydroxyphenyl][2-(trifluoromethyl)phenyl]methanone

[124979-17-5]

 $C_{18}H_{17}F_3O_2$

mol.wt. 322.33

Synthesis

– Preparation by Friedel–Crafts acylation of o-tert-butylphenol with o-(trifluoromethyl)benzoyl chloride in ethylene dichloride in the presence of titanium tetrachloride, first at 0°, then at r.t. [816].

m.p. 160–161° [816]; Spectra (NA).

(3-Chloro-4,6-dimethoxy-2-methylphenyl)(3-chloro-6-hydroxy-2,4-dimethoxyphenyl) methanone

[68048-21-5]

 $C_{18}H_{18}Cl_2O_6$

mol.wt. 401.24

Synthesis

– Preparation by hydrogenolysis of 6-(benzyloxy)-3,3'-dichloro-2,4,4',6'-tetramethoxy-2'-methyl-benzophenone (SM) under hydrogen in the presence of 10% Pd/C at 25°.

SM was obtained by condensation of 3-chloro-4,6-dimethoxy-2-methyl-benzoic acid with 4-chloro-3,5-dimethoxyphenol benzyl ether in the presence of trifluoroacetic anhydride in methylene under nitrogen for 80 min (50%) [1179].

m.p. 196–197° [1179]; 1H NMR [1179], IR [1179], MS [1179].**[2-Hydroxy-4-methoxy-3-(2-propenyl)phenyl](4-methoxyphenyl)methanone**

[74079-07-5]

 $C_{18}H_{18}O_4$

mol.wt. 298.34

Synthesis

– Obtained by heating 2-(allyloxy)-4,4'-di-methoxybenzophenone (SM) to 240° that which initiates exothermic heating to 290°

(60%) (Claisen rearrangement). SM was obtained by reaction of allyl bromide with resbenzophenone (90%) [1140].

m.p. and Spectra (NA).

[4-(Acetyloxy)-3,5-dimethoxyphenyl](2-hydroxy-4-methoxyphenyl)methanone

[62495-40-3]

 $C_{18}H_{18}O_7$

mol.wt. 346.34

Synthesis

– Preparation by reaction of acetic anhydride with 2,4'-dihydroxy-3',4,5'-trimethoxybenzophenone in the presence of pyridine at r.t. for 24 h (80%) [1136].

m.p. 124–125° [1136]; ¹H NMR [1136], IR [1136], UV [1136].

(3-Butyl-5-chloro-2-hydroxyphenyl)(4-methylphenyl)methanone

[92739-93-0] $C_{18}H_{19}ClO_2$ mol.wt. 302.80

Synthesis

– Preparation by Fries rearrangement of 2-n-butyl-4-chlorophenyl p-toluate with aluminium chloride at 160° for 15 min [1107].

oil [1107]; b.p._{0.108} 148–150° [1107]; Spectra (NA).

(5-Chloro-3-ethyl-2-hydroxyphenyl)[4-(1-methylethyl)phenyl]methanone

[93575-43-0] $C_{18}H_{19}ClO_2$ mol.wt. 302.80

Synthesis

– Preparation by Fries rearrangement of 4-chloro-2-ethylphenyl 4-isopropylbenzoate with aluminium chloride at 160° for 15 min [1107].

m.p. 42–43° [1107]; Spectra (NA).

[5-Chloro-2-hydroxy-3-(2-methylpropyl)phenyl](4-methylphenyl)methanone

[93575-76-9] $C_{18}H_{19}ClO_2$ mol.wt. 302.80

Synthesis

– Preparation by Fries rearrangement of 2-iso-butyl-4-chlorophenyl p-toluate with aluminium chloride at 160° for 15 min [1107].

m.p. 71–72° [1107]; Spectra (NA).

(3-Chloro-6-hydroxy-2,4-dimethoxyphenyl)(2,4-dimethoxy-6-methylphenyl)methanone

[68048-15-7] $C_{18}H_{19}ClO_6$ mol.wt. 366.80

Synthesis

– Preparation by hydrogenolysis of 6-(benzyloxy)-3-chloro-2,2',4,4'-tetramethoxy-6'-methylbenzophenone (SM) with hydrogen in ethyl acetate/tetrahydrofuran in

the presence of 10% Pd/C at 25°. SM was obtained by condensation of 2,4-dimethoxy-6-methylbenzoic anhydride with 4-chloro-3,5-dimethoxyphenol benzyl ether in the presence of trifluoroacetic anhydride in methylene chloride under nitrogen for 10 min (47%) [1179].

m.p. 140°5–142° [1179]; ¹H NMR [1179], IR [1179], MS [1179].

[3-(Aminomethyl)-5-(1,1-dimethylethyl)-2-hydroxyphenyl](4-bromophenyl) methanone

[75061-00-6]

 $C_{18}H_{20}BrNO_2$ mol.wt. 362.27

Synthesis

– Refer to: [817]; see the hydrochloride below.

m.p. and Spectra (NA).

[3-(Aminomethyl)-5-(1,1-dimethylethyl)-2-hydroxyphenyl](4-bromophenyl) methanone (Hydrochloride)

[75060-65-0]

 $C_{18}H_{20}BrNO_2 \cdot HCl$ mol.wt. 398.73

Synthesis

– Preparation by reaction of concentrated hydrochloric acid with 2-(4-bromo benzoyl)-4-tert-butyl-6-(N-chloroacetylaminomethyl)phenol in refluxing ethanol for 20 h (89%) [817].

m.p. 240–245° [817]; Spectra (NA).

[3-(1,1-Dimethylethyl)-4-hydroxyphenyl](4-methylphenyl)methanone

[124979-04-4]

 $C_{18}H_{20}O_2$ mol.wt. 268.36

Synthesis

– Preparation by Friedel–Crafts acylation of o-tert-butylphenol with p-toluyloyl chloride in ethylene dichloride in the presence of titanium tetrachloride, first at 0°, then at r.t. [816].

m.p. 209–210° [816]; Spectra (NA).

[5-(1,1-Dimethylethyl)-2-hydroxyphenyl](4-methylphenyl)methanone

[75919-94-7]

 $C_{18}H_{20}O_2$ mol.wt. 268.36

Synthesis

– Preparation by demethylation of 5-tert-butyl-2-methoxy-4'-methylbenzophenone with aluminium chloride in benzene between 50° and 60° for 5 h (85%) [9].

b.p.₁₂ 210–212° [9]; m.p. 94–95° [9]; Spectra (NA).

(2-Hydroxy-4,6-dimethylphenyl)(2,4,6-trimethylphenyl)methanone

[100923-74-8]

 $C_{18}H_{20}O_2$ mol.wt. 268.36

Synthesis

– Preparation by reaction of mesitoyl chloride with 3,5-dimethylphenol in the presence of aluminium chloride in refluxing nitromethane for 90 min (39%) [102].

m.p. 116–117° [102], 116° [94,95]; 1H NMR [94,95,101,102], ^{13}C NMR [101], IR [94,95,102]; thermal behaviour [94,95].

(4-Hydroxy-3,5-dimethylphenyl)(2,4,6-trimethylphenyl)methanone

[69795-00-2]

 $C_{18}H_{20}O_2$ mol.wt. 268.36

Synthesis

– Obtained by photo-Fries rearrangement of 2,6-di-methylphenyl mesitoate in pentane (5%), absorbed on a silica gel-pentane (18%) or on dry silica gel (37%) [64].

m.p. and Spectra (NA).

[4-Hydroxy-2-methyl-5-(1-methylethyl)phenyl](4-methylphenyl)methanone

[109250-36-4]

 $C_{18}H_{20}O_2$ mol.wt. 268.36

Synthesis

– Obtained by demethylation of 4-methoxy-2,4'-di-methyl-5-isopropylbenzophenone with refluxing pyridinium chloride [825].

m.p. 176° [825]; Spectra (NA).

[5-(1,1-Dimethylethyl)-2-hydroxyphenyl][4-(methylthio)phenyl]methanone

[75060-57-0]

 $C_{18}H_{20}O_2S$ mol.wt. 300.42

Synthesis

– Preparation by reaction of 30% methyl mercaptan with 2-(p-bromo benzoyl)-4-tert-butylphenol in the presence of sodium methoxide in refluxing methanol for 4 days (34%) [817].

m.p. 130–104° [817]. A typing error probably occurred in the published data. Spectra (NA).

(4-Butylphenyl)(2-hydroxy-4-methoxyphenyl)methanoneC₁₈H₂₀O₃ mol.wt. 284.36**Synthesis**

- Preparation by partial demethylation of 4'-butyl-2,4-dimethoxybenzophenone with aluminium chloride or aluminium bromide in chlorobenzene at 90–95° (good yield) [655].

m.p. and Spectra (NA).

[5-(1,1-Dimethylethyl)-2-hydroxyphenyl](4-methoxyphenyl)methanone

[116496-22-1]

C₁₈H₂₀O₃ mol.wt. 284.36**Syntheses**

- Preparation by partial demethylation of 5-tert-butyl-2,4'-dimethoxybenzophenone with aluminium chloride in benzene at 50–60° for 5 h (76%) [9].
- Preparation by treatment of 2-hydroxy-4'-methoxy-benzophenone at 120° with a mixture of isobutylene/nitrogen (1:1) in the presence of a macroreticular acid ion exchanger (Wofatit OK 80) as catalyst, for 3 h (60%) [819].

b.p.₁₂ 235° [9], b.p._{0.15} 180–190° [819];

m.p. 93–94° [9]; Spectra (NA).

[4-(1,1-Dimethylethyl)phenyl](2-hydroxy-4-methoxyphenyl)methanone

[50739-53-2]

C₁₈H₂₀O₃ mol.wt. 284.36**Synthesis**

- Preparation by reaction of p-tert-butylbenzoyl chloride with resorcinol dimethyl ether,
- in tetrachloroethane in the presence of aluminium chloride at 90° [222];
- in chlorobenzene in the presence of titanium tetrachloride for 1 h at 120° (75%) [662].
- Also refer to: [78,684].
- m.p. 75–77° [222], 73–75° [662]; UV [235].

[4-(1,1-Dimethylethyl)phenyl](2-hydroxy-5-methoxyphenyl)methanone

[162657-94-5]

C₁₈H₂₀O₃ mol.wt. 284.36**Synthesis**

- Preparation by partial demethylation of 4'-tert-butyl-2,5-dimethoxybenzophenone with aluminium chloride in benzene under nitrogen at 80° for 12 h (83%) [258,680].

viscous oil [680]; b.p. (NA); ¹H NMR [680], ¹³C NMR [680], MS [680].

(4-Ethoxy-2-hydroxyphenyl)(4-propylphenyl)methanoneC₁₈H₂₀O₃ mol.wt. 284.36

Synthesis

- Preparation by partial deethylation of 2,4-diethoxy-4'-propylbenzophenone with aluminium chloride in chlorobenzene at 80–100° [655].

– Also refer to: [78,222].

m.p. (NA); UV [235].

(2-Hydroxy-3,4-dimethylphenyl)(2-methoxy-3,4-dimethylphenyl)methanone

[54468-80-3]

C₁₈H₂₀O₃ mol.wt. 284.36

Synthesis

- Obtained by oxidation of 6,7-dimethyl-2-phenyl-3-(2-methoxy-3,4-dimethylphenyl)benzofuran with chromium trioxide, then saponification of the keto ester so formed, the 2-(benzoyloxy)-2'-methoxy-3,3',4,4'-tetramethylbenzophenone [1152].

oil [1152]; b.p. (NA); IR [1152].

(2-Hydroxy-4,5-dimethylphenyl)(2-methoxy-4,5-dimethylphenyl)methanone

[54468-82-5]

C₁₈H₂₀O₃ mol.wt. 284.36

Synthesis

- Obtained by oxidation of 5,6-dimethyl-2-phenyl-3-(2-methoxy-4,5-dimethylphenyl)benzofuran with chromium trioxide, then saponification of the obtained keto ester, the 2-(benzoyloxy)-2'-methoxy-4,4',5,5'-tetramethylbenzophenone [1152].

oil [1152]; b.p. (NA); IR [1152].

[2-Hydroxy-4-methyl-5-(1-methylethyl)phenyl](4-methoxyphenyl)methanone

[129375-12-8]

C₁₈H₂₀O₃ mol.wt. 284.36

Synthesis

- Preparation by Fries rearrangement of 3-methyl-4-isopropylphenyl p-methoxybenzoate with titanium tetrachloride in nitromethane at 20° for 170 h (66%) [1180].

m.p. 100° [1180];

$^1\text{H NMR}$ (Sadtlar: standard n° 52709 M) [1180],
 IR (Sadtlar: standard n° 79766 K) [1180], UV [1180], MS [1180].

(2,6-Dimethoxyphenyl)(3-hydroxy-6-methoxy-2,4-dimethylphenyl)methanone

[42594-58-1]

$\text{C}_{18}\text{H}_{20}\text{O}_5$ mol.wt. 316.35

Synthesis

– Preparation by hydrogenolysis of 3-(benzyloxy)-2',6,6'-tri-methoxy-2,4-dimethylbenzophenone with hydrogen in the presence of Pd/C in an ethyl acetate/methanol solution containing 70% perchloric acid (four drops) (96%) [1181].

m.p. 185–186° [1181];

$^1\text{H NMR}$ [1181], IR [1181], UV [1181], MS [1181].

(5-Ethoxy-2-hydroxy-4-methoxyphenyl)(3-ethoxyphenyl)methanone

[51106-93-5]

$\text{C}_{18}\text{H}_{20}\text{O}_5$ mol.wt. 316.35

Synthesis

– Obtained (by-product) by acylation of 2,5-diethoxy-anisole with m-ethoxybenzoyl chloride in ethyl ether in the presence of aluminium chloride at r.t. for 48 h (<2%) [1163].

m.p. 79–80° [1163]; $^1\text{H NMR}$ [1163].

(2,4-Dimethoxy-6-methylphenyl)(2-hydroxy-4,6-dimethoxyphenyl)methanone

[93904-08-6]

$\text{C}_{18}\text{H}_{20}\text{O}_6$ mol.wt. 332.35

Synthesis

– Obtained by partial methylation of griseophenone C,

- with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 24 h (45%) [1182];
- with diazomethane in an ethyl ether/tetrahydrofuran mixture at 0° during 40 h (quantitative yield) [1182].

m.p. 124–125° [1182]; IR [1182], UV [1182].

(4,5-Dimethoxy-2-methylphenyl)(2-hydroxy-4,5-dimethoxyphenyl)methanone

[101744-11-0]

C₁₈H₂₀O₆ mol.wt. 332.35

Syntheses

- Preparation by reaction of 2,4,5-trimethoxybenzoyl chloride with 4-methylveratrole in the presence of aluminium chloride in refluxing carbon disulfide for 8 h, then at r.t. for 12 h [1175].
- Preparation by reaction of 4,5-dimethoxy-2-methyl-benzoyl chloride with hydroxyhydroquinone trimethyl ether in the same conditions that previously [1175].

m.p. 138–139° [1175]; UV [1175].

(2,3-Dimethoxyphenyl)[3-hydroxy-2-methoxy-6-(methoxymethyl)phenyl]methanone

[133387-00-5]

C₁₈H₂₀O₆ mol.wt. 332.35

Synthesis

- Preparation from 4-hydroxy-3-methoxybenzyl methyl ether (SM) in two steps: first, direct lithiation of SM with n-butyl lithium in tetrahydrofuran at r.t., followed by quenching with 2,3-dimethoxybenzaldehyde. Then, oxidation of the 8-(2,3-dimethoxyphenyl)-2,7-di-methoxybicyclo[4.2.0]octa-1,3,5-triene-3,8-diol formed (good yield) [1171].

m.p. and Spectra (NA).

(2,4-Dimethoxyphenyl)[3-hydroxy-2-methoxy-6-(methoxymethyl)phenyl]methanone

[133386-98-8]

C₁₈H₂₀O₆ mol.wt. 332.35

Synthesis

- Preparation from 4-hydroxy-3-methoxybenzyl methyl ether (SM1) in two steps: first, direct lithiation of SM1 with n-butyl lithium in tetrahydrofuran at r.t., followed by quenching with 2,4-dimethoxybenzaldehyde. Then, oxidation of the 8-(2,4-dimethoxyphenyl)-2,7-dimethoxybicyclo[4.2.0]octa-1,3,5-triene-3,8-diol formed (SM2) (good yield) [1171]. Actually, SM2 was quantitatively converted back into the expected ketone by heating a toluene solution to reflux for 14 h [1171].

m.p. and Spectra (NA).

(2-Hydroxy-3-methoxy-6-methylphenyl)(2,4,5-trimethoxyphenyl)methanone

[129103-92-0]

 $C_{18}H_{20}O_6$ mol.wt. 332.35

Synthesis

- Preparation from 2-iodo-6-methoxy-3-methylphenyl 2,4,5-trimethoxybenzoate on treatment with n-butyl-lithium in a mixture of ethyl ether, hexane and tetrahydrofuran at -70° for 2 h, followed by treatment with saturated aqueous ammonium chloride (40%) [58].

m.p. 160–162° [58]; 1H NMR [58], IR [58], MS [58].**(2-Hydroxy-4-methoxy-6-methylphenyl)(2,4,6-trimethoxyphenyl)methanone**

[74628-37-8]

 $C_{18}H_{20}O_6$ mol.wt. 332.35

Synthesis

- Preparation by selective methylation of 2,4'-di-hydroxy-2',4,6'-trimethoxy-6-methylbenzo-phenone [1183], with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 23 h (85%) [1184].

m.p. 161–162° [1184]; 1H NMR [1184], MS [1184].**(2,3-Dimethoxyphenyl)(2-hydroxy-3,4,5-trimethoxyphenyl)methanone**

[42833-83-0]

 $C_{18}H_{20}O_7$ mol.wt. 348.35

Synthesis

- Obtained by reaction of 2,3-dimethoxybenzoyl chloride with 1,2,3,4-tetramethoxybenzene in the presence of aluminium chloride in ethyl ether for 42 h [416].

m.p. (NA); 1H NMR [416], UV [416], MS [416].**(2,3-Dimethoxyphenyl)(2-hydroxy-3,4,6-trimethoxyphenyl)methanone** $C_{18}H_{20}O_7$ mol.wt. 348.35

Synthesis

- Obtained by reaction of 2,3-dimethoxybenzoic acid with 1,2,3,5-tetramethoxybenzene in trifluoroacetic anhydride for 23 h at r.t. [1185].

m.p. and Spectra (NA); TLC [1185].

(2,3-Dimethoxyphenyl)(6-hydroxy-2,3,4-trimethoxyphenyl)methanone

[22804-59-7]

 $C_{18}H_{20}O_7$ mol.wt. 348.35

Synthesis

- Obtained by condensation of 2,3-dimethoxybenzoic acid with 1-acetoxy-3,4,5-trimethoxybenzene in trifluoroacetic anhydride, followed by hydrolysis of the reaction mixture (26%) [1186].

m.p. 110°8–111°2 [1186]; 1H NMR [1186], UV [1186].**(2,5-Dimethoxyphenyl)(2-hydroxy-3,4,5-trimethoxyphenyl)methanone**

[129168-53-2]

 $C_{18}H_{20}O_7$ mol.wt. 348.35

Syntheses

- Preparation by reaction of 2,5-dimethoxybenzoyl chloride with 1,2,3,4-tetramethoxybenzene in benzene in the presence of aluminium chloride at 50° (60%). The same result was obtained in ethyl ether at r.t. [1160].
- Also obtained (poor yield) by reaction of 2,3,4,5-tetra-methoxybenzoyl chloride with hydroquinone dimethyl ether in benzene in the presence of aluminium chloride (11%) [1160].

m.p. 74–74°5 [1160]; Spectra (NA).

(2,5-Dimethoxyphenyl)(2-hydroxy-3,4,6-trimethoxyphenyl)methanone

[23251-65-2]

 $C_{18}H_{20}O_7$ mol.wt. 348.35

Syntheses

- Obtained by reaction of 2,5-dimethoxybenzoyl chloride with 1,2,3,5-tetramethoxybenzene in the presence of aluminium chloride in ethyl ether at r.t. for 18 h [416], (75%) [1160].
- Also obtained by selective demethylation of 2,2',3,4,5',6-hexamethoxybenzophenone with aluminium chloride in ethyl ether (30%) [1185].

m.p. 128–130° [1160,1185]; 1H NMR [416,1185], UV [1185], MS [416].**(2,5-Dimethoxyphenyl)(6-hydroxy-2,3,4-trimethoxyphenyl)methanone**

[22804-57-5]

 $C_{18}H_{20}O_7$ mol.wt. 348.35

Synthesis

- Preparation by reaction of 2,5-dimethoxybenzoic acid with 1-acetoxy-3,4,5-trimethoxybenzene in the presence of trifluoroacetic anhydride for two weeks at r.t., followed by hydrolysis of the reaction mixture (52%) [1186], (45%) [1160].

yellow oil [1186]; m.p. 65–66° [1160]; 1H NMR [1186], UV [1186].

(2,6-Dimethoxyphenyl)(2-hydroxy-3,4,6-trimethoxyphenyl)methanone

[22804-60-0]

 $C_{18}H_{20}O_7$ mol.wt. 348.35

Synthesis

– Preparation by selective demethylation of 2,2',3,4,6,6'-hexamethoxybenzophenone (SM) with aluminium chloride in refluxing ethyl ether (60%). SM was obtained by

condensation of 2,6-dimethoxybenzoyl chloride with 1,2,3,5-tetramethoxybenzene in nitrobenzene with aluminium chloride for two days at r.t. (27%, m.p. 136–136°5) [1186].

m.p. 167–168° [1186]; 1H NMR [1186], UV [1186].

(2-Hydroxy-3,4-dimethoxyphenyl)(2,4,5-trimethoxyphenyl)methanone $C_{18}H_{20}O_7$ mol.wt. 348.35

Synthesis

– Refer to: [1011] (compound **42**).

m.p. and Spectra (NA).

(2-Hydroxy-3,4-dimethoxyphenyl)(2,4,6-trimethoxyphenyl)methanone

[42833-67-0]

 $C_{18}H_{20}O_7$ mol.wt. 348.35

Synthesis

– Obtained by reaction of 2,3,4-trimethoxybenzoyl chloride with 1,3,5-trimethoxybenzene in the presence of aluminium chloride in ethyl ether for 15 h [416].

m.p. (NA); 1H NMR [416].

(2-Hydroxy-3,4-dimethoxyphenyl)(3,4,5-trimethoxyphenyl)methanone $C_{18}H_{20}O_7$ mol.wt. 348.35

Synthesis

– Preparation by Friedel–Crafts acylation of pyrogallol trimethyl ether with 3,4,5-trimethoxybenzoyl chloride in carbon disulfide in the presence of aluminium chloride in a water bath [1169,1170].

m.p. 133–134° [1169,1170]; Spectra (NA).

(2-Hydroxy-4,5-dimethoxyphenyl)(2,3,4-trimethoxyphenyl)methanoneC₁₈H₂₀O₇ mol.wt. 348.35

Synthesis

– Refer to: [1011] (compound **43**).

m.p. and Spectra (NA).

(2-Hydroxy-4,5-dimethoxyphenyl)(2,4,6-trimethoxyphenyl)methanone

[42833-68-1]

C₁₈H₂₀O₇ mol.wt. 348.35

Syntheses

– Obtained (by-product) by partial demethylation of 2,2',4,4',5',6-hexamethoxybenzophenone with boron trichloride in methylene chloride at 18° for 20 min (26%) [1187].

– Also obtained by Friedel–Crafts acylation of 1,3,5-trimethoxybenzene with 2,4,5-trimethoxybenzoyl chloride in the presence of aluminium chloride in ethyl ether for 21 h [416] or in boiling ethyl ether for 48 h (12%) [1187].

m.p. 171–173° [1188], 165–166° [1187]; ¹H NMR [416,1187], IR [1187], MS [1187].**(2-Hydroxy-4,6-dimethoxyphenyl)(2,4,5-trimethoxyphenyl)methanone**

[76013-33-7]

C₁₈H₂₀O₇ mol.wt. 348.35

Synthesis

– Preparation by partial demethylation of 2,2',4,4',5',6-hexamethoxybenzophenone with boron trichloride in methylene chloride at 18° for 20 min (57%) [1187].

m.p. 129–130° [1187]; ¹H NMR [1187], IR [1187], MS [1187].**(2-Hydroxy-3-methoxyphenyl)(2,3,4,6-tetramethoxyphenyl)methanone**C₁₈H₂₀O₇ mol.wt. 348.35

Synthesis

– Obtained by reaction of 2,3-dimethoxybenzoic acid with 1,2,3,5-tetramethoxybenzene in trifluoroacetic acid for 23 days at r.t. [1185].

m.p. and Spectra (NA); TLC [1185].

[4-(4-Bromophenoxy)-2-hydroxyphenyl](3,4-dichlorophenyl)methanone

[35698-03-4]

 $C_{19}H_{11}BrCl_2O_3$ mol.wt. 438.10

Synthesis

– Refer to: [839] (compound **33**).

m.p. (NA); UV [839].

(4-Chlorophenyl)(2-hydroxy-4-phenoxyphenyl)methanone

[35698-40-9]

 $C_{19}H_{13}ClO_3$ mol.wt. 324.76

Synthesis

– Preparation by reaction of p-chlorobenzoyl chloride with 3-methoxydiphenyl ether in chloro-benzene in the presence of aluminium chloride: first at r.t., then for 4 h at 90–95° [839].

m.p. 125–127° [839]; UV [839].

[3-(Cyclohexyloxy)-4-hydroxy-5-nitrophenyl](2-nitrophenyl)methanone

[190585-64-9]

 $C_{19}H_{18}N_2O_7$ mol.wt. 386.36

Synthesis

– Preparation by reaction of cyclohexene with 3,4-di-hydroxy-2',5'-dinitrobenzophenone in the presence of boron trifluoride ethyl ether complex for 12 h at reflux (24%). -Refer to: Chem. Abstr., **127**, 17465u (1997).

m.p. and Spectra (NA).

[4-(Acetyloxy)-2-methoxy-6-methylphenyl]**(3-chloro-2-hydroxy-4,6-dimethoxyphenyl)-methanone**

[95276-66-7]

 $C_{19}H_{19}ClO_7$ mol.wt. 394.81

Synthesis

– Obtained by reaction of 4-acetoxy-2-methoxy-6-methylbenzoic acid with 2-chloro-3,5-dimethoxyphenol in the presence of trifluoroacetic anhydride at 20° for 18 h (17%) [1189] or at 25° (50%) [1190,1191].

– Also refer to: [1192].

m.p. 199–203° [1189]; Spectra (NA).

[4-(Acetyloxy)-2-methoxy-6-methylphenyl](3-fluoro-2-hydroxy-4,6-dimethoxyphenyl)-methanoneC₁₉H₁₉FO₇ mol.wt. 378.35

Synthesis

– Preparation by addition of 4-acetoxy-2-methoxy-6-methylbenzoic acid to 2-fluoro-3,5-dimethoxyphenol in the presence of trifluoroacetic anhydride (60%) [1190], first at 0°, then at 20–25° for 20 h (40%) [1191].

m.p. 195–200° [1190,1191]; IR [1191], UV [1190,1191].

(5-Chloro-3-hexyl-2-hydroxyphenyl)(4-chlorophenyl)methanone

[92739-91-8]

C₁₉H₂₀Cl₂O₂ mol.wt. 351.27

Synthesis

– Preparation by Fries rearrangement of 4-chloro-2-hexyl-phenyl p-chlorobenzoate with aluminium chloride at 160° for 15 min [1107].

oil [1107]; b.p._{0.133} 204° [1107]; Spectra (NA).**(4-Butoxy-2-hydroxyphenyl)(4-ethenylphenyl)methanone**

[80167-01-7]

C₁₉H₂₀O₃ mol.wt. 296.37

Synthesis

– Obtained by reaction of aqueous potassium hydroxide with 2-hydroxy-4-butoxy-4'-(2-bromoethyl)benzophenone in the presence of hydroquinone in refluxing methanol for 1.5 h with nitrogen bubbling (24%) [1147].

m.p. 78–80° [1147]; ¹H NMR [1147], ¹³C NMR [1147], IR [1147], UV [1147], MS [1147].

m.p. 78–80° [1147]; ¹H NMR [1147], ¹³C NMR [1147], IR [1147], UV [1147], MS [1147].

[3-(Acetyloxy)-6-hydroxy-2,4-dimethoxyphenyl](2,5-dimethoxyphenyl)methanone

[129168-54-3]

C₁₉H₂₀O₈ mol.wt. 376.36

Synthesis

– Obtained (poor yield) by reaction of 2,5-dimethoxybenzoic acid with 2,6-dimethoxy-1,4-hydroquinone diacetate in the presence of trifluoroacetic anhydride for two weeks at r.t. (<5%) [1160].

m.p. 135–135°5 [1160]; Spectra (NA).

(4-Fluorophenyl)[4-(hexyloxy)-2-hydroxyphenyl]methanone

$C_{19}H_{21}FO_3$ mol.wt. 316.37

Synthesis

- Preparation by partial alkylation of 4'-fluoro-2,4-di-hydroxybenzophenone with an hexyl halide in the presence of an alkali [1109].

m.p. and Spectra (NA).

[3-(1,1-Dimethylethyl)-2-hydroxy-5-methylphenyl](4-methylphenyl)methanone

[93575-42-9]

$C_{19}H_{22}O_2$ mol.wt. 282.38

Synthesis

- Preparation by photo-Fries rearrangement of 2-tert-butyl-4-methylphenyl p-toluate in benzene under nitrogen for 32 h [1107].

m.p. 110–111° [1107]; Spectra (NA).

[3-(1,1-Dimethylethyl)-4-hydroxyphenyl](2,4-dimethylphenyl)methanone

[203786-32-7]

$C_{19}H_{22}O_2$ mol.wt. 282.38

Synthesis

- Refer to: Chem. Abstr., **128**, 210826m (1998) (Japanese patent).

m.p. and Spectra (NA).

(3-Ethyl-2-hydroxy-5-methylphenyl)(4-propylphenyl)methanone

[93575-38-3]

$C_{19}H_{22}O_2$ mol.wt. 282.38

Synthesis

- Preparation by Fries rearrangement of 2-ethyl-4-methylphenyl 4-n-propylbenzoate with aluminium chloride at 160° for 15 min [1107].

oil [1107]; b.p. (NA); $n_D^{21} = 1.5861$ [1107]; Spectra (NA).

(2-Hydroxy-4-propoxyphenyl)(4-propoxyphenyl)methanone

[6131-39-1]

 $C_{19}H_{22}O_4$ mol.wt. 314.38

Synthesis

– Preparation by reaction of propyl bromide with 2,4,4'-trihydroxybenzophenone in the presence of potassium carbonate (50%) [380].

m.p. 60–60°5 [380]; IR [394], UV [380,394].

(3,6-Diethoxy-2-hydroxyphenyl)(2,5-dimethoxyphenyl)methanone

[110047-51-3]

 $C_{19}H_{22}O_6$ mol.wt. 346.38

Synthesis

– Obtained (poor yield) by reaction of 3,6-diethoxy-2-methoxybenzoyl chloride with hydroquinone dimethyl ether in ethyl ether in the presence of aluminium chloride at r.t. for 2 days (4%) [1172].

m.p. 102–103° [1172]; Spectra (NA).

(2,5-Diethoxyphenyl)(2-hydroxy-3,6-dimethoxyphenyl)methanone

[110049-41-7]

 $C_{19}H_{22}O_6$ mol.wt. 346.38

Synthesis

– Obtained (poor yield) by reaction of 2,3,6-trimethoxybenzoyl chloride with hydroquinone diethyl ether in ethyl ether in the presence of aluminium chloride at r.t. for 2 days (7%) [1172].

m.p. 100–101° [1172]; Spectra (NA).

(3,4-Dimethoxy-2,6-dimethylphenyl)(2-hydroxy-4,5-dimethoxyphenyl)methanone $C_{19}H_{22}O_6$ mol.wt. 346.38

Synthesis

– Preparation by reaction of 2,4,5-trimethoxybenzoyl chloride with 3,5-dimethylveratrole in the presence of aluminium chloride in refluxing carbon disulfide for 8 h, then at r.t. for 12 h [1175].

m.p. 138–139° [1175]; UV [1175].

(5-Ethoxy-2-hydroxy-3,4-dimethoxyphenyl)(4-ethoxyphenyl)methanone

[69471-33-6]

 $C_{19}H_{22}O_6$ mol.wt. 346.38

Synthesis

- Preparation by reaction of ethyl iodide with 4'-ethoxy-2,5-dihydroxy-3,4-dimethoxybenzo-phenone in the presence of potassium carbonate in refluxing acetone during 16 h (79%) [1168].

m.p. 60–61° [1168]; 1H NMR [1168], IR [1168].**(4-Ethoxy-2-hydroxy-5-methoxyphenyl)(3-ethoxy-4-methoxyphenyl)methanone**

[18008-38-3]

 $C_{19}H_{22}O_6$ mol.wt. 346.38

Synthesis

- Preparation by reaction of 3-ethoxy-4-methoxy-benzoyl chloride with 2,5-dimethoxyphenetole in the presence of aluminium chloride in ethyl ether at r.t. for 48 h (23%) [1174].

m.p. 132–133° [1174]; 1H NMR [1174], IR [1174], UV[1174].**(5-Ethoxy-2-hydroxy-4-methoxyphenyl)(3-ethoxy-4-methoxyphenyl)methanone**

[17892-44-3]

 $C_{19}H_{22}O_6$ mol.wt. 346.38

Syntheses

- Obtained by action of diethyl sulfate with 2,3',5'-tri-hydroxy-4,4'-dimethoxybenzophenone in the presence of potassium carbonate in refluxing acetone for 6 h (46%) [428].
- Preparation by reaction of 3-ethoxy-4-methoxy-benzoyl chloride with 2,4-dimethoxyphenetole in the presence of aluminium chloride in ethyl ether at r.t. for 48 h (26%) [1174].

m.p. 121–122° [1174], 121° [428]; 1H NMR [1174], IR [1174], UV [1174].**(2-Ethyl-4,5-dimethoxyphenyl)(2-hydroxy-4,5-dimethoxyphenyl)methanone** $C_{19}H_{22}O_6$ mol.wt. 346.38

Synthesis

- Preparation by reaction of 2,4,5-trimethoxybenzoyl chloride with 4-ethylveratrole in the presence of aluminium chloride in refluxing carbon disulfide for 8 h, then at r.t. for 12 h [1175].

m.p. 113–114° [1175]; UV [1175].

(2,3-Dimethoxyphenyl)(2-hydroxy-3,4,5,6-tetramethoxyphenyl)methanone

[22804-56-4]

 $C_{19}H_{22}O_8$ mol.wt. 378.38

Synthesis

– Obtained by condensation of 2,3-dimethoxybenzoyl chloride with pentamethoxybenzene in the presence of aluminium chloride in refluxing ethyl ether for 1 h, then overnight at r.t. (19%) [1186].

m.p. 116°5–117°5 [1186]; 1H NMR [1186], UV [1186].**(2,5-Dimethoxyphenyl)(2-hydroxy-3,4,5,6-tetramethoxyphenyl)methanone**

[22961-80-4]

 $C_{19}H_{22}O_8$ mol.wt. 378.38

Syntheses

– Preparation by reaction of 2,5-dimethoxybenzoyl chloride with pentamethoxybenzene in nitrobenzene in the presence of aluminium chloride for 6 h at r.t. (38%) [1160], (13%) [1186].

– Preparation by selective demethylation of 2,2',3,4,5,5',6-heptamethoxybenzophenone with aluminium chloride in ethyl ether for 1.5 h at r.t. (42%) [1186].
yellow oil [1186]; m.p. 59° [1160]; 1H NMR [1186], UV [1186].

(2,6-Dimethoxyphenyl)(2-hydroxy-3,4,5,6-tetramethoxyphenyl)methanone

[22804-62-2]

 $C_{19}H_{22}O_8$ mol.wt. 378.38

Synthesis

– Obtained (trace) by condensation of 2,6-dimethoxybenzoyl chloride with pentamethoxybenzene in nitrobenzene with aluminium chloride for 4 h at r.t. (<1%) [1186].

oil [1186]; b.p. (NA); 1H NMR [1186], UV [1186].**(2-Hydroxy-3,4,5-trimethoxyphenyl)(2,3,4-trimethoxyphenyl)methanone**

[197355-26-3]

 $C_{19}H_{22}O_8$ mol.wt. 378.38

Synthesis

– Refer to: Chem. Abstr., **127**, 303322p (1997).

m.p. and Spectra (NA).

(2-Hydroxy-3,4,5-trimethoxyphenyl)(2,4,6-trimethoxyphenyl)methanone

[42833-85-2]

 $C_{19}H_{22}O_8$ mol.wt. 378.38

Synthesis

- Obtained by reaction of 2,4,6-trimethoxybenzoyl chloride with 1,2,3,4-tetramethoxybenzene in the presence of aluminium chloride in ethyl ether for 18 h [416].

m.p. (NA); 1H NMR [416].**[3-(Aminomethyl)-5-(1,1-dimethylethyl)-2-hydroxyphenyl][4-(methylthio)phenyl]-methanone**

[75061-01-7]

 $C_{19}H_{23}NO_2S$ mol.wt. 329.46

Synthesis

- Refer to: [817]; see the hydrochloride below.

m.p. and Spectra (NA).

[3-(Aminomethyl)-5-(1,1-dimethylethyl)-2-hydroxyphenyl][4-(methylthio)phenyl]-methanone (Hydrochloride)

[75060-69-4]

 $C_{19}H_{23}NO_2S, HCl$ mol.wt. 365.92

Synthesis

- Preparation by reaction of concentrated hydrochloric acid with 4-tert-butyl-6-(N-chloroacetylaminomethyl)-2-(4-methylthio benzoyl)phenol in refluxing ethanol for 20 h (86%) [817].

m.p. 205–208° [817]; Spectra (NA).

[3-[(2,6-Dichlorophenyl)methoxy]-4-hydroxy-5-nitrophenyl](2-nitrophenyl)methanone

[190585-65-0]

 $C_{20}H_{12}Cl_2N_2O_7$ mol.wt. 463.03

Synthesis

- Obtained by adding 2,6-dichlorobenzyl bromide to a solution of 3,4-dihydroxy-2',5'-dinitrobenzo-phenone in N,N-dimethylformamide, first treated with sodium hydride, then stirring for 2 h at 35° (66%). -Refer to: Chem. Abstr., **127**, 17465u (1997).

m.p. and Spectra (NA).

[2,3-Dichloro-4-hydroxy-5-(phenylmethoxy)phenyl](2-fluorophenyl) methanone

[103843-59-0]

 $C_{20}H_{13}Cl_2FO_3$

mol.wt. 391.23

Synthesis

– Preparation by reaction of benzyl bromide with 2,3-dichloro-4,5-dihydroxy-2'-fluorobenzophenone in the presence of sodium hydride in N,N-dimethyl-formamide at r.t. for 15 min (71%) [841,842].

m.p. 156–157° [841,842]; 1H NMR [841,842], IR [841,842]; X-ray analysis [841].

[2,3-Dichloro-5-hydroxy-4-(phenylmethoxy)phenyl](2-fluorophenyl) methanone

[103843-64-7]

 $C_{20}H_{13}Cl_2FO_3$

mol.wt. 391.23

Synthesis

– Preparation by reaction of benzyl bromide with 2,3-dichloro-3,4-dihydroxy-2'-fluorobenzophenone in the presence of sodium hydride in N,N-dimethyl-formamide at 100° for 2 h (52%) [841].

m.p. 109–110° [841]; 1H NMR [841], IR [841].

[4-Hydroxy-3-nitro-5-(phenylmethoxy)phenyl](2-nitrophenyl) methanone

[190585-63-8]

 $C_{20}H_{14}N_2O_7$

mol.wt. 294.34

Synthesis

– Obtained by adding benzyl bromide to a solution of 3,4-dihydroxy-2',5-dinitrobenzophenone in N,N-dimethylformamide, first treated with sodium hydride,

- then stirring for 2 h at 35° (66%);
- or then refluxing for 1 h and stirring for 12 h at 25° (75%). -Refer to: Chem. Abstr., **127**, 17465u (1997)^T.

m.p. (NA); 1H NMR^T.

(4-Chlorophenyl)[2-hydroxy-4-(4-methylphenoxy)phenyl]methanone

[35698-48-7]

 $C_{20}H_{15}ClO_3$ mol.wt. 338.79

Synthesis

– Preparation by Fries rearrangement of 3-(p-chlorobenzoyloxy)-4'-methylidiphenyl ether in 1,2,4-trichlorobenzene in the presence of aluminium chloride at first for 30 min at 140°, then for 2 h at 200° [839].

m.p. 166–169° [839]; UV [839].

(2-Hydroxy-4-methoxyphenyl)(4-phenoxyphenyl)methanone

[127724-93-0]

 $C_{20}H_{16}O_4$ mol.wt. 320.34

Synthesis

– Refer to: [668].

m.p. and Spectra (NA).

(5-Chloro-3-hexyl-2-hydroxyphenyl)(4-methylphenyl)methanone

[93739-92-9]

 $C_{20}H_{23}ClO_2$ mol.wt. 330.86

Synthesis

– Preparation by Fries rearrangement of 4-chloro-2-hexylphenyl p-toluate with aluminium chloride at 160° for 15 min [1107].

oil [1107]; b.p._{0,133} 192° [1107]; Spectra (NA).**(2,4-Dimethylphenyl)[2-hydroxy-4-(pentyloxy)phenyl]methanone**

[36130-60-6]

 $C_{20}H_{24}O_3$ mol.wt. 312.41

Synthesis

– Preparation by reaction of n-amyloxy chloride (1-chloropentane) with 2,4-dihydroxy-2',4'-di-methylbenzophenone in the presence of potassium hydroxide and antimony triiodide in diethylene glycol at 140° for 1.5 h (85%) [801].

b.p._{0,4} 218–222° [801]; Spectra (NA).

(2-Hydroxy-3,4-dimethoxy-6-methyl)(2,3,5,6-tetramethylphenyl)methanone

[183725-95-3]

 $C_{20}H_{24}O_4$ mol.wt. 328.41

Syntheses

- Preparation by Friedel–Crafts acylation of 3,4,5-trimethoxy-toluene with 2,3,5,6-tetramethylbenzoyl chloride [1072].
- Also obtained by partial demethylation of 2,3,5,6,6'-penta-methyl-2',3',4'-trimethoxybenzophenone [1072].

m.p. 137° [1072]; Spectra (NA).

(4,5-Dimethoxy-2-propylphenyl)(2-hydroxy-4,5-dimethoxyphenyl)methanone $C_{20}H_{24}O_6$ mol.wt. 360.41

Synthesis

- Preparation by reaction of 2,4,5-trimethoxybenzoyl chloride with 4-propylveratrole in the presence of aluminium chloride in refluxing carbon disulfide for 8 h, then at r.t. for 12 h [1175].

m.p. 108–109° [1175]; UV [1175].

(2,4-Dichlorophenyl)[2-hydroxy-5-(1,1,3,3-tetramethylbutyl)phenyl]methanone

[93885-04-2]

 $C_{21}H_{24}Cl_2O_2$ mol.wt. 379.36

Synthesis

- Preparation by demethylation of 2-(2,4-di-chlorobenzoyl)-4-(1,1,3,3-tetramethyl-butyl) anisole (SM) with aluminium chloride in methylene chloride for 1 h at 10–12° (55%). SM

was obtained by Friedel–Crafts acylation of 4-(1,1,3,3-tetramethylbutyl)-anisole with 2,4-dichlorobenzoyl chloride in methylene chloride in the presence of aluminium chloride for 30 min at 10° (74%) [1164].

m.p. 89–90° [1164]; Spectra (NA); GC [1164].

(3,4-Dichlorophenyl)[2-hydroxy-4-(octyloxy)phenyl]methanone

[36414-88-7]

 $C_{21}H_{24}Cl_2O_3$ mol.wt. 395.32

Synthesis

- Refer to: [235].

m.p. 51° [235]; UV [235].

[2-Hydroxy-4,5-dimethoxy-3-(2-propenyl)phenyl](2,4,6-trimethoxyphenyl) methanone

[42833-95-5]

C₂₁H₂₄O₇ mol.wt. 388.42

Synthesis

– Obtained by Claisen rearrangement of 2-(allyloxy)-2',4,4',5,6'-pentamethoxy-benzophenone in refluxing N,N-dimethyl-aniline for 4 h (62%) [416].

pale yellow oil [416]; b.p. (NA); ¹H NMR [416].

[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl](2-bromophenyl) methanone

[84700-54-9]

C₂₁H₂₅BrO₂ mol.wt. 389.33

Synthesis

– Preparation by acylation of 2,6-di-tert-butylphenol with o-bromobenzoyl chloride in the presence of aluminium chloride (31% [860], according to [857].

m.p. 74–75° [860]; IR [860].

[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl](4-chlorophenyl) methanone

[84700-53-8]

C₂₁H₂₅ClO₂ mol.wt. 344.88

Synthesis

– Preparation by acylation of 2,6-di-tert-butylphenol with p-chlorobenzoyl chloride in the presence of aluminium chloride (41% [860], according to [857].

m.p. 162–163° [860]; IR [860].

(4-Chlorophenyl)[2-hydroxy-4-(octyloxy)phenyl] methanone

[18190-30-2]

C₂₁H₂₅ClO₃ mol.wt. 360.88

Synthesis

– Refer to: [235].

m.p. 60° [235]; UV [235].

[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl](4-fluorophenyl)methanone

[69451-08-7]

 $C_{21}H_{25}FO_2$ mol.wt. 328.43

Synthesis

– Preparation by acylation of 2,6-di-tert-butylphenol with p-fluorobenzoyl chloride in the presence of aluminium chloride (35%) [860], according to [857].

m.p. 133–134° [860]; IR [860].

(4-Fluorophenyl)[2-hydroxy-4-(octyloxy)phenyl]methanone

[84794-99-0]

 $C_{21}H_{25}FO_3$ mol.wt. 344.43

Synthesis

– Preparation by reaction of 1-bromo-octane with 4'-fluoro-2,4-dihydroxybenzophenone in the presence of sodium bicarbonate in cyclohexanone for 5 h at 150° (72%) [1109].

m.p. 48–49° [1109]; Spectra (NA).

[5-(1,1-Dimethylethyl)-2-hydroxyphenyl][4-(1,1-dimethylethyl)phenyl]methanone $C_{21}H_{26}O_2$ mol.wt. 310.44

Synthesis

– Obtained by UV light irradiation of p-tert-butyl-phenyl p-tert-butylbenzoate in benzene (48%) [154].

yellow oil [154]; b.p._{0.02} 150° [154]; Spectra (NA).**(4-Butoxy-2-hydroxyphenyl)(4-butoxyphenyl)methanone** $C_{21}H_{26}O_4$ mol.wt. 342.44

Synthesis

– Preparation by reaction of butyl bromide with 2,4,4'-trihydroxybenzophenone in the presence of potassium carbonate (50%) [380].

m.p. 95–96° [380]; UV [380].

[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl](3-methylphenyl)methanone

[84700-50-5]

 $C_{22}H_{28}O_2$ mol.wt. 324.46

Synthesis

– Preparation by acylation of 2,6-di-tert-butylphenol with m-methylbenzoyl chloride in the presence of aluminium chloride (38%) [860], according to [857].

m.p. 99–100° [860]; IR [860].

[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl](4-methylphenyl)methanone

[84700-49-2]

 $C_{22}H_{28}O_2$ mol.wt. 324.46

Synthesis

– Preparation by acylation of 2,6-di-tert-butylphenol with p-methylbenzoyl chloride in the presence of aluminium chloride (40%) [860], according to [857].

m.p. 131–132° [860]; IR [860].

[3,5-Bis(1,1-dimethylethyl)-2-hydroxyphenyl](4-methoxyphenyl)methanone

[80078-54-2]

 $C_{22}H_{28}O_3$ mol.wt. 340.46

Syntheses

– Preparation by oxidation of 2,4-di-tert-butyl-6-(p-methoxybenzyl)phenol with silver oxide in boiling acetone for 40 min (24%) [1193].

– Preparation by treatment of 2-hydroxy-4'-methoxy-benzophenone at 120° with a mixture of isobutylene/nitrogen (1:1) in the presence of a macroreticular acid ion exchanger (Wofatit OK 80) as catalyst for 10 h (85%) [819].

b.p._{0.15} 200–205° [819]; m.p. 116–117° [1193]; ¹H NMR [1193], IR [1193], UV [1193], MS [1193].

[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl](2-methoxyphenyl)methanone

[28441-13-6]

 $C_{22}H_{28}O_3$ mol.wt. 340.46

Synthesis

– Preparation by acylation of 2,6-di-tert-butylphenol with o-methoxybenzoyl chloride in the presence of aluminium chloride (36%) [860], according to [857].

m.p. 87–88° [860]; IR [860].

[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl](4-methoxyphenyl)methanone

[28440-99-5]

 $C_{22}H_{28}O_3$ mol.wt. 340.46

Synthesis

– Preparation by acylation of 2,6-di-tert-butylphenol with p-methoxybenzoyl chloride in the presence of aluminium chloride (61%) [860], according to [857].

m.p. 143–144° [860]; IR [860].

[2-Hydroxy-4-(octyloxy)phenyl](4-methoxyphenyl)methanone

[36469-90-6]

 $C_{22}H_{28}O_4$ mol.wt. 356.46

Synthesis

– Refer to: [235].

m.p. 55° [235]; UV [235].

(3,4-Dichlorophenyl)[4-[4-(1,1-dimethylethyl)phenoxy]-2-hydroxyphenyl]methanone

[35698-02-3]

 $C_{23}H_{20}Cl_2O_3$ mol.wt. 415.32

Synthesis

– Refer to: [839] (compound **32**).

m.p. (NA); UV [839].

[4-(1,1-Dimethylethyl)phenyl](2-hydroxy-4-phenoxyphenyl)methanone

[35698-42-1]

 $C_{23}H_{22}O_3$ mol.wt. 346.94

Synthesis

– Preparation by reaction of p-tert-butyl-benzoyl chloride with 3-methoxydiphenyl ether in chlorobenzene in the presence of aluminium chloride first at r.t., then for 4 h at 90–95° [839].

m.p. 88–90° [839]; UV [839].

(3-Butoxyphenyl)(2-hydroxy-4-phenoxyphenyl)methanone

[35698-55-6]

 $C_{23}H_{22}O_4$ mol.wt. 362.43

Synthesis

– Refer to: [839] (compound **13**).

m.p. (NA); UV [839].

(4-Butoxyphenyl)(2-hydroxy-4-phenoxyphenyl)methanone

[35698-52-3]

 $C_{23}H_{22}O_4$ mol.wt. 362.43

Synthesis

– Refer to: [839] (compound **10**).

m.p. (NA); UV [839].

[2-Hydroxy-4-[(3-methyl-2-butenyl)oxy]phenyl][4-[(3-methyl-2-butenyl)oxy]phenyl]-methanone

[63565-01-5]

 $C_{23}H_{26}O_4$ mol.wt. 366.46

Synthesis

– Obtained (poor yield) by reaction of prenyl bromide with 2,4,4'-tri-hydroxy-benzophenone,

- in the presence of potassium carbonate in refluxing acetone for 3 h (6%) [831];
- in the presence of boron trifluoride-etherate in dioxane at 50–60° for 3 h (<1%) [832].

m.p. 74° [831], 73–74° [832]; ¹H NMR [831], IR [831], UV [831].**(4-Ethenylphenyl)[2-hydroxy-4-(octyloxy)phenyl]methanone**

[80167-02-3]

 $C_{23}H_{28}O_3$ mol.wt. 352.47

Synthesis

– Preparation by reaction of aqueous potassium hydroxide with 2-hydroxy-4-(octyloxy)-4'-(2-bromoethyl)-benzophenone in the presence of hydroquinone in refluxing methanol for 1.5 h with nitrogen bubbling (41%) [1147].

m.p. 57–59° [1147]; ¹H NMR [1147], IR [1147], UV [1147], MS [1147].**[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl](3-ethylphenyl)methanone**

[84700-52-7]

 $C_{23}H_{30}O_2$ mol.wt. 338.49

Synthesis

– Preparation by Friedel–Crafts acylation of 2,6-di-tert-butylphenol with 3-ethylbenzoyl chloride in the presence of aluminium chloride at –10° (50%) [860], according to [857].

m.p. 69–70° [860]; Spectra (NA).

[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl](4-ethylphenyl)methanone

[84700-51-6]

 $C_{23}H_{30}O_2$ mol.wt. 338.49

Synthesis

– Preparation by Friedel–Crafts acylation of 2,6-di-tert-butylphenol with p-ethylbenzoyl chloride in the presence of aluminium chloride at -10° (35%) [860] according to [857].

m.p. 136–137° [860]; Spectra (NA).

[3-Chloro-4,6-dimethoxy-2-(phenylmethoxy)phenyl](4-hydroxy-2-methoxy-6-methyl-phenyl)methanone $C_{24}H_{23}ClO_6$ mol.wt. 442.90

Synthesis

– Preparation by reaction of 2-(benzyloxy)-3-chloro-4,6-dimethoxybenzoyl chloride with mono(trimethylsilyl)derivative

of 3-methoxy-5-methylphenol in the presence of stannic chloride (or titanium tetrachloride or aluminium chloride) in refluxing methylene chloride for 2 h [921].

m.p. and Spectra (NA).

[4-(4-Butylphenoxy)-2-hydroxyphenyl](3-methylphenyl)methanone

[35698-58-9]

 $C_{24}H_{24}O_3$ mol.wt. 360.45

Synthesis

– Refer to: [839] (compound **16**).

m.p. (NA); UV [839].

[4-(4-Butoxyphenoxy)-2-hydroxyphenyl](3-methylphenyl)methanone

[35697-96-2]

 $C_{24}H_{24}O_4$ mol.wt. 376.45

Synthesis

– Refer to: [839] (compound **25**).

m.p. (NA); UV [839].

(4-Butoxyphenyl)[2-hydroxy-4-(3-methylphenoxy)phenyl]methanone

[35698-62-5]

 $C_{24}H_{24}O_4$ mol.wt. 376.45

Synthesis

– Refer to: [839] (compound **20**).

m.p. (NA); UV [839].

[4-Butoxyphenyl][2-hydroxy-4-(4-methylphenoxy)phenyl]methanone

[35698-59-0]

 $C_{24}H_{24}O_4$

mol.wt. 376.45

Synthesis

– Refer to: [839] (compound **17**).

m.p. (NA); UV [839].

[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl](3,4,5-trimethoxyphenyl) methanone

[54808-42-3]

 $C_{24}H_{32}O_5$

mol.wt. 400.52

Synthesis

– Preparation by Friedel–Crafts acylation of 2,6-di-tert-butylphenol with 3,4,5-trimethoxybenzoyl chloride in the presence of stannic chloride in refluxing methylene chloride for 19 h (58%) [334].

m.p. 138–138°5 [334]; 1H NMR [334], IR [334].**[3-Hydroxy-5-(phenoxy-*d*5)phenyl][4-(phenoxy-3,5-*d*2)phenyl]methanone**

[176738-22-0]

 $C_{25}H_{11}D_7O_4$ mol.wt.
389.46

Synthesis

– Preparation by adding 3, 5-dihydroxy-4'-(phenoxy-*d*2)benzophenone, potassium carbonate and copper powder to a

solution of N-methyl-pyrrolidone/toluene. The obtained mixture was refluxed for 1 h, with removal of water.

– Then, adding bromobenzene-*d*5 and heating at reflux again for 2 h (22%) (compound **22**) [906].m.p. (NA); 1H NMR [906], ^{13}C NMR [906].**[4-(1,1-Dimethylethyl)phenyl][4-(3,4-dimethylphenoxy)-2-hydroxyphenyl] methanone**

[35697-99-5]

 $C_{25}H_{26}O_3$

mol.wt. 374.48

Synthesis

– Refer to: [839] (compound **28**).

m.p. (NA); UV [839].

(4-Dodecylphenyl)(2-hydroxy-3-nitrophenyl)methanone

[35698-24-9]

 $C_{25}H_{33}NO_4$

mol.wt. 411.54

Synthesis

– Obtained by reaction of fuming nitric acid with 2-hydroxy-4'-dodecylbenzophenone in an acetic acid/acetic anhydride mixture (4:3) at 5–7° for 1 h (27%) [889,891].
m.p. and Spectra (NA).

(4-Dodecylphenyl)(2-hydroxy-5-nitrophenyl)methanone

[35698-23-8]

 $C_{25}H_{33}NO_4$

mol.wt. 411.54

Synthesis

– Obtained by reaction of fuming nitric acid with 2-hydroxy-4'-dodecylbenzophenone in an acetic acid/acetic anhydride mixture (4:3) at 5–7° for 1 h (54%) [889,891].

m.p. and Spectra (NA).

C₁₃H₇F₃O₃ mol. wt. 268.19

Synthesis

– Preparation by demethylation of 2,4-dimethoxy-3,5,6-trifluorobenzophenone (SM1) or of 2-hydroxy-4-methoxy-3,5,6-trifluorobenzophenone (SM2) with aluminium chloride in methylene chloride at 20° for 6 h (97% and 60%

yields, respectively) [570]. SM1 was obtained in two steps: first, preparation of 4-methoxy-2,3,5,6-tetrafluorobenzophenone by treatment of 2,3,4,5,6-pentafluorobenzophenone with sodium methoxide in methanol at 20° for 3 days (91%). Then, this new ketone, by reaction with sodium methoxide in boiling methanol for 15 h gave SM1 (82%) [570]. The preparation of SM2 was also described in this book (94%) [570].

m.p. 173–176° [570]; IR [570], UV [570].

(3-Bromo-4-chloro-2,5-dihydroxyphenyl)phenylmethanone

[154700-58-0]

C₁₃H₈BrClO₃ mol. wt. 327.56

Synthesis

– Obtained by 10% Pd/C-catalyzed hydrogenolysis of *gem*-diphenylcyclopropane fused with 4-bromo-3,6-dichloro-benzoquinone in 1,4-dioxane in the presence of water (1%) for 6 h under atmospheric pressure at r.t. (27%) [1194].m.p. (NA); ¹H NMR [1194].

(3-Bromo-2,4-dihydroxy-5-nitrophenyl)phenylmethanone
 $C_{13}H_8BrNO_5$ mol.wt. 338.11
Syntheses

- Preparation by reaction of bromine with 2,4-dihydroxy-5-nitrobenzophenone in acetic acid at r.t. for 2 h [1195] or in hot acetic acid for 1 h [1196].
 - Also obtained by reaction of nitric acid ($d = 1.4$) with 3,3'-dibenzoyl-5,5'-dibromo-2,2',6,6'-tetrahydroxy-diphenyl thioether in acetic acid at r.t. for 1 h. The same result was obtained from 3,3'-dibenzoyl-5,5'-dibromo-4,4',6,6'-tetrahydroxydiphenyl thioether [1195].
 - Also obtained by action of nitric acid ($d = 1.4$) with 5-bromo-2,4-dihydroxybenzophenone in acetic acid, first at low temperature, then at r.t. According to the authors, there is a migration of the bromine atom during nitration [1196].
- m.p. 208–209° [1195,1196]; Spectra (NA).

(5-Bromo-2,4-dihydroxy-3-nitrophenyl)phenylmethanone
 $C_{13}H_8BrNO_5$ mol.wt. 338.11
Synthesis

- Obtained by reaction of bromine with 2,4-dihydroxy-3-nitrobenzophenone in hot acetic acid solution then at r.t. for overnight [1196].

m.p. 110–111° [1196]; Spectra (NA).

(2,4-Dibromo-3,6-dihydroxyphenyl)phenylmethanone

[27065-46-9]

 $C_{13}H_8Br_2O_3$ mol.wt. 372.01
**Syntheses**

- Preparation by demethylation of 4,6-dibromo-2-hydroxy-5-methoxybenzophenone with aluminium chloride in boiling benzene for 10 min (72%) [571].
 - Also obtained by saponification of 5-acetoxy-2-benzoyloxy-4,6-dibromobenzo-phenone (SM) with potassium hydroxide in boiling ethanol for 1 h (72%) [1197]. SM was prepared in three steps: first, bromination of 5-hydroxy-2,3-diphenylbenzofuran (bromine/carbon tetrachloride), followed by acetylation of the 4,6-dibromo-5-hydroxy-2,3-diphenylbenzofuran so obtained (acetic anhydride/sodium acetate) and oxidation of the resulting 5-acetoxy-4,6-dibromo-2,3-diphenylbenzofuran (chromium trioxide/acetic acid).
- m.p. 170–171° [1197], 170° [571]; Spectra (NA).

(3,4-Dibromo-2,5-dihydroxyphenyl)phenylmethanone

[154700-61-5]

 $C_{13}H_8Br_2O_3$ mol.wt. 372.01

Synthesis

– Obtained by 10% Pd/C-catalyzed hydrogenolysis of *gem*-diphenylcyclopropane fused with 3,4,6-tribromo-benzoquinone in 1,4-dioxane in the presence of water (1%) for 6 h under atmospheric pressure at r.t. (33%) [1194].

m.p. (NA); 1H NMR [1194].**(3,5-Dibromo-2,4-dihydroxyphenyl)phenylmethanone**

[3286-96-2]

 $C_{13}H_8Br_2O_3$ mol.wt. 372.01

Syntheses

- Preparation by reaction of bromine with resbenzophenone in acetic acid [1195,1196], (44%) [1198].
- Also obtained by reaction of bromine with 3,3'-dibenzoyl-2,2',6,6'-tetrahydroxydiphenyl thioether in acetic acid in a boiling water bath for 4 h. The same result was obtained from 3,3'-dibenzoyl-4,4',6,6'-tetrahydroxydiphenyl thioether [1195].
- Also obtained by saponification of 4-acetoxy-2-benzoyloxy-3,5-dibromobenzophenone (SM) with potassium hydroxide in boiling ethanol for 1 h (73%). SM was prepared in three steps: first, bromination of 6-hydroxy-2,3-diphenylbenzofuran (bromine/carbon tetrachloride), followed by acetylation of the 5,7-dibromo-6-hydroxybenzofuran so obtained (acetic anhydride/sodium acetate) and oxidation of the resulting 6-acetoxy-5,7-dibromo-2,3-diphenylbenzofuran (chromium trioxide/acetic acid) [1197].

m.p. 151–152° [1198], 150–151° [1195,1196], 148–149° [1197];

Spectra (NA).

(4,6-Dibromo-2,3-dihydroxyphenyl)phenylmethanone

[65202-42-8]

 $C_{13}H_8Br_2O_3$ mol.wt. 372.01

Synthesis

– Preparation by saponification of 3-acetoxy-2-(benzoyloxy)-4,6-dibromobenzophenone (SM) with potassium hydroxide in boiling ethanol (72%). SM was obtained by oxidation of 7-acetoxy-4,6-dibromo-2,3-diphenylbenzofuran with chromium trioxide in boiling acetic acid (70%) [579].

m.p. 205° [579]; Spectra (NA).

(2,3-Dichloro-4,5-dihydroxyphenyl)phenylmethanone

[103843-56-7]

 $C_{13}H_8Cl_2O_3$ mol.wt. 283.11

Synthesis

– Preparation by Friedel–Crafts acylation of 1,2-dichloro-3,4-dihydroxybenzene with benzoyl chloride in the presence of aluminium chloride in refluxing ethylene dichloride for 24 h (83%) [841,842].

m.p. 178–180° [841,842]; 1H NMR [841], IR [841].

(3,4-Dichloro-2,5-dihydroxyphenyl)phenylmethanone

[21250-79-3]

 $C_{13}H_8Cl_2O_3$ mol.wt. 283.11

Syntheses

- Obtained by reaction of 2,3-dichloro-1,4-benzoquinone with benzaldehyde, either in the presence of benzoyl peroxide at 80° or in the absence of this one at 155° [840].
- Also obtained by 10% Pd/C-catalyzed hydrogenolysis of *gem*-diphenylcyclopropane fused with 3,4,6-trichloro-benzoquinone or with 6-bromo-3,4-dichlorobenzoquinone in 1,4-dioxane in the presence of water (2%) for 2 h under atmospheric pressure at r.t. (59% and 75% yields, respectively) [1194].

m.p. (NA); 1H NMR [1194].

(2,4-Dihydroxy-3,5-diiodophenyl)phenylmethanone

[33427-67-7]

 $C_{13}H_8I_2O_3$ mol.wt. 466.01

Syntheses

- Preparation by iodination of resbenzophenone,
 - with iodine and iodic acid in dilute ethanol for 1 h (62%) [460];
 - with iodine and potassium iodide in aqueous ammonia for 15 min [460];
 - with iodine monochloride in acetic acid for 2 h at r.t. [460].
- Also obtained from 2,4-dihydroxy-3,5-dinitrobenzophenone by methylation, reduction to 3,5-di-amino-2,4-dimethoxybenzophenone, subsequent diazotization and heating of the diazonium salt with potassium iodide, then demethylation of the 3,5-diiodo-2,4-dimethoxybenzophenone so formed [460].

m.p. 184–185° [460]; Spectra (NA).

(2,3-Dihydroxy-4,6-dinitrophenyl)phenylmethanone

[65202-37-1]

 $C_{13}H_8N_2O_7$

mol.wt. 304.22

Synthesis

– Preparation by saponification of 3-acetoxy-2-(benzoyloxy)-4,6-dinitrobenzophenone (SM) with potassium hydroxide in refluxing ethanol (68%). SM was obtained by oxidation of 7-acetoxy-4,6-dinitro-2,3-diphenylbenzofuran with chromium trioxide in boiling acetic acid (81%) [579].

m.p. 264–265° [579]; Spectra (NA).

(2,4-Dihydroxy-3,5-dinitrophenyl)phenylmethanone

[27065-50-5]

 $C_{13}H_8N_2O_7$

mol.wt. 304.22

Syntheses

- Obtained by saponification of 4-acetoxy-2-benzoyloxy-3,5-dinitrobenzophenone (SM) with potassium hydroxide in boiling ethanol for 1 h (76%). SM was prepared in three steps: first, nitration of 6-hydroxy-2,3-diphenylbenzofuran (concentrated nitric acid/acetic acid), followed by acetylation of the 6-hydroxy-5,7-dinitro-2,3-diphenylbenzofuran so obtained (acetic anhydride/sodium acetate) and oxidation of the resulting 6-acetoxy-5,7-dinitro-2,3-diphenylbenzofuran (chromium trioxide/acetic acid) [1197].
- Preparation by nitration of resbenzophenone with 4 N nitric acid in the presence of sodium nitrite at r.t. for 8 days [460,1197], (60%) [227].

m.p. 187–188° [227], 185° [1197]; 1H NMR [1197].**(2-Bromo-4,5-dihydroxyphenyl)phenylmethanone**

[91197-10-3]

 $C_{13}H_9BrO_3$

mol.wt. 293.12

Synthesis

- Preparation by demethylation of 2-bromo-4,5-dimethoxy-benzophenone (SM) (m.p. 71–72°) with pyridinium chloride for 2 h at 180–200°. SM was obtained by reaction of benzoic acid with 1-bromo-3,4-dimethoxybenzene in the presence of phosphorous pentoxide in methanesulfonic acid for 30 min at 70° [1199].
- Also refer to: [1200].
- brown oil [1199]; b.p. (NA); Spectra (NA).

(3-Bromo-2,5-dihydroxyphenyl)phenylmethanone[112932-43-1] $C_{13}H_9BrO_3$ mol.wt. 293.12

Synthesis

– Refer to: [1201,1202].

m.p. and Spectra (NA).

(3-Bromo-2,6-dihydroxyphenyl)phenylmethanone $C_{13}H_9BrO_3$ mol.wt. 293.12

Syntheses

- Preparation by decarboxylation of 3-benzoyl-5-bromo-2,4-dihydroxybenzoic acid [1203], in the presence of concentrated hydrochloric acid in refluxing dilute acetic acid for 24 h (34%) [1204].
- Preparation by hydrolysis of 8-benzoyl-6-bromo-7-hydroxy-4-methylcoumarin [1204], in refluxing 10% sodium hydroxide for 2.5 h (49%) [1203].

m.p. 122–123° [1204], 122° [1203]; Spectra (NA).

(5-Bromo-2,4-dihydroxyphenyl)phenylmethanone[3286-97-3] $C_{13}H_9BrO_3$ mol.wt. 293.12

Syntheses

- Obtained by demethylation of 5-bromo-2-hydroxy-4-methoxybenzophenone with aluminium chloride in boiling benzene for 10 min (72%) [571].
 - Preparation by reaction of bromine with 2,4-dihydroxybenzophenone in acetic acid at r.t. overnight [1195,1196].
- Also refer to: [1198].

m.p. 148–149° [1195,1196], 148° [571]; Spectra (NA).

(2-Chloro-4,5-dihydroxyphenyl)phenylmethanone[85525-22-0] $C_{13}H_9ClO_3$ mol.wt. 248.67

Syntheses

- Preparation by reaction of benzoyl chloride with 4-chloro-1,2-benzenediol in the presence of aluminium chloride at 140° for 4.5 h [1205].
- Preparation by total demethylation of 2-chloro-4,5-di-methoxybenzophenone (SM) with 48% hydrobromic acid in refluxing acetic acid for 17 h [1205]. SM was obtained by benzylation of 4-chloro-1,2-dimethoxybenzene,

- with benzoyl chloride in the presence of iodine;
 - with 2-pyridinyl benzoate in the presence of trifluoroacetic acid at 150° for 2 h in a sealed tube.
- Also refer to: [1199,1200].
m.p. 130–135° [1205]; Spectra (NA).

(3-Chloro-2,6-dihydroxyphenyl)phenylmethanoneC₁₃H₉ClO₃ mol.wt. 248.67

Syntheses

- Preparation by decarboxylation of 3-benzoyl-5-chloro-2,4-dihydroxybenzoic acid with concentrated hydrochloric acid in refluxing dilute acetic acid for 24 h [1203], (30%) [1204].
 - Preparation by hydrolysis of 8-benzoyl-6-chloro-7-hydroxy-4-methylcoumarin with refluxing 10% aqueous sodium hydroxide or potassium hydroxide solution for 2.5 h [1204], (40%) [1203].
- m.p. 119–120° [1203,1204]; Spectra (NA).

(5-Chloro-2,4-dihydroxyphenyl)phenylmethanone

[3286-95-1]

C₁₃H₉ClO₃ mol.wt. 248.67

Syntheses

- Preparation by reaction of benzotrichloride with 4-chloro-resorcinol in 40% aqueous isopropanol solution at 70–80° (89%) [211].
- Preparation in two steps: first, chlorination of resorcinol dimethyl ether with sulfuryl chloride in chloroform, then Friedel–Crafts acylation of the 2,4-dimethoxychlorobenzene so obtained with benzoyl chloride in ethylene dichloride in the presence of aluminium chloride at r.t. for 3 h (81%) [478].

m.p. 142–143° [478], 142–143° [211]; ¹H NMR [478], IR [478], MS [478].

(2-Fluoro-4,5-dihydroxyphenyl)phenylmethanone

[85525-20-8]

C₁₃H₉FO₃ mol.wt. 232.21

Synthesis

- Preparation by total demethylation of 2-fluoro-4,5-di-methoxybenzophenone (SM) with 48% hydrobromic acid in refluxing acetic acid for 17 h. SM was obtained on heating a mixture of 4-fluoro-1,2-dimethoxybenzene^T, 2-pyridinyl benzoate and trifluoroacetic acid at 100° for 4.5 h in a sealed tube [1205]. The starting dimethyl ether^T was prepared from 3,4-dimethoxyaniline by a Balz-Schiemann reaction [1206].
 - Also refer to: [1200].
- m.p. 169°5–171° [1205]; Spectra (NA).

(2,4-Dihydroxy-3-iodophenyl)phenylmethanone

[33427-62-2]

 $C_{13}H_9IO_3$ mol.wt. 340.12

Synthesis

– Obtained by iodination of resbenzophenone with iodine and iodic acid in dilute ethanol for 30 min at r.t. (78%) [460].

m.p. 150–151° [460]; Spectra (NA).

(2,4-Dihydroxy-5-iodophenyl)phenylmethanone

[33427-72-4]

 $C_{13}H_9IO_3$ mol.wt. 340.12

Synthesis

– Obtained from 2,4-dihydroxy-3,5-diiodobenzophenone in refluxing acetic acid for 8 h. There is an elimination of one iodine atom [460].

m.p. 151° [460]; Spectra (NA).

(2,4-Dihydroxy-3-nitrophenyl)phenylmethanone

[59746-91-7]

 $C_{13}H_9NO_5$ mol.wt. 259.22

Syntheses

- Preparation by reaction of benzotrichloride with 2-nitro-resorcinol in hydrofluoric acid in the presence of water at -10° for 4 h, then at r.t. overnight (98%) [213].
- Preparation by Fries rearrangement of 2-nitroresorcinol dibenzoate with aluminium chloride [1207],
 - in nitrobenzene at 100–110° for 3 h or at 25–28° for 70 h (42%);
 - without solvent, at 140° for 2 h (23%).
- Also obtained (poor yield) by reaction of concentrated nitric acid with resbenzophenone in acetic acid at r.t. for 1–2 h (6%) [1082].
- Also obtained (by-product) by reaction of benzoyl chloride with 2-nitroresorcinol in the presence of aluminium chloride in nitrobenzene in a boiling water bath for 1 h [1196].

m.p. 145° [1207], 144–145° [1196], 142° [213]; 1H NMR [1082], IR [1082], MS [1082]; TLC [1082].

(2,4-Dihydroxy-5-nitrophenyl)phenylmethanone

[40990-79-2]

 $C_{13}H_9NO_5$ mol.wt. 259.22

Syntheses

– Obtained by nitration of resbenzophenone,

- with concentrated nitric acid in acetic acid at r.t. for 1–2 h (38%) [1082] or first at r.t., then at 60° [1195];

- with 4 N nitric acid in the presence of sodium nitrite (trace) at r.t. for 8 days [1197];

- also obtained by adding nitric acid (d = 1.4) to an ice cooled solution of resbenzophenone in acetic acid. Then, the ice bath was removed and the reaction stopped when the temperature reached 45° [1196].

– Preparation by refluxing hydrobromic acid with 2-hydroxy-4-methoxy-5-nitrobenzophenone for 3 h (61%) [571].

– Also obtained by reaction of nitric acid (d = 1.4) with 3,3'-dibenzoyl-4,4',6,6'-tetrahydroxydiphenyl thioether in acetic acid at r.t. for 1 h [1195].

m.p. 144–145° [1195,1196], 143° [571]; ¹H NMR [1082], IR [1082], MS [1082]; TLC [1082].**(2,5-Dihydroxy-4-nitrophenyl)phenylmethanone**

[40990-70-3]

 $C_{13}H_9NO_5$ mol.wt. 259.22

Syntheses

– Preparation by saponification of 5-(acetyloxy)-4-nitro-2-(p-nitrobenzoyloxy)benzophenone (SM) with potassium hydroxide in ethanol for 1 h (81%). SM was obtained by oxidation of

5-(acetyloxy)-6-nitro-2-(p-nitrophenyl)-3-phenylbenzofuran with chromium trioxide in refluxing acetic acid for 30 min [571].

– Preparation by demethylation of 2-hydroxy-5-methoxy-4-nitrobenzophenone with aluminium chloride in boiling benzene (62%) [571].

m.p. 167° [571]; Spectra (NA).

(2,6-Dihydroxy-3-nitrophenyl)phenylmethanone $C_{13}H_9NO_5$ mol.wt. 259.22

Syntheses

– Preparation by reaction of benzoic anhydride with 4-nitro-resorcinol in the presence of aluminium chloride in nitro-benzene on a steam bath for 3 h [1208].

- Preparation by nitration of 2,6-dihydroxybenzophenone with nitric acid ($d = 1.42$) at 0° for 10 min [1208].
 - Preparation by Fries rearrangement,
 - of 4-nitroresorcinol 1-monobenzoate with aluminium chloride without solvent at $130\text{--}140^\circ$ for 2 h (16%) or in nitrobenzene at 100° for 2 h (43%) [1209];
 - of 4-nitroresorcinol 3-monobenzoate that, under the above conditions, afforded the same mono-ketone [1209];
 - of 4-nitroresorcinol dibenzoate with aluminium chloride without solvent at 140° for 3 h or in nitrobenzene at 100° or 140° for 2 h [1209].
- m.p. $159\text{--}160^\circ$ [1209], 158° [1208]; Spectra (NA).

(3,4-Dihydroxy-5-nitrophenyl)phenylmethanone

[125628-96-8]

 $C_{13}H_9NO_5$ mol.wt. 259.22

Synthesis

- Preparation by total demethylation of 3,4-dimethoxy-5-nitro-benzophenone with 48% hydrobromic acid in acetic acid at 110° for 30 h [1019].
- Also refer to: [1084,1210,1211].

m.p. 132° [1019]; Spectra (NA); pK_a [1084].

(3,5-Dihydroxy-4-nitrophenyl)phenylmethanone

[51787-06-5]

 $C_{13}H_9NO_5$ mol.wt. 259.22

Synthesis

- Preparation from 3,5-dihydroxybenzophenone (and not from resorcinol 3-benzoate, as indicated in the paper) by nitration with aluminium nitrate in acetic acid for 4 h at r.t. (83%) [1212].

N.B.: This ketone was called 2-nitro-5-benzoyl resorcinol in the paper (table 1, compound 4) [1212].

m.p. 121° [1212]; Spectra (NA).

(3-Amino-2,4-dihydroxyphenyl)phenylmethanone

[87119-03-7]

 $C_{13}H_{11}NO_3$ mol.wt. 229.24

Synthesis

- Obtained from the corresponding hydrochloride described below [1082].

m.p. and Spectra (NA).

(3-Amino-2,4-dihydroxyphenyl)phenylmethanone (Hydrochloride)

[87119-04-8]

 $C_{13}H_{11}NO_3 \cdot HCl$ mol.wt. 265.70

Synthesis

– Preparation by hydrogenation of 2,4-dihydroxy-3-nitro-benzophenone in chloroform/ethanol solution in the presence of 10% Pd/C, followed by treatment of the amino compound formed with concentrated hydrochloric acid in ethanol (61%) [1082].

m.p. 175–185° (d) [1082]; 1H NMR [1082], IR [1082], MS [1082]; TLC [1082].

(5-Amino-2,4-dihydroxyphenyl)phenylmethanone

[87119-01-5]

 $C_{13}H_{11}NO_3$ mol.wt. 229.24

Synthesis

– Obtained from the corresponding hydrochloride described below [1082].

m.p. and Spectra (NA).

(5-Amino-2,4-dihydroxyphenyl)phenylmethanone (Hydrochloride)

[87119-02-6]

 $C_{13}H_{11}NO_3 \cdot HCl$ mol.wt. 265.70

Synthesis

– Preparation by hydrogenation of 2,4-dihydroxy-5-nitro-benzophenone in chloroform/ethanol solution in the presence of 10% Pd/C, followed by treatment of the amino compound formed with concentrated hydrochloric acid in ethanol (85%) [1082].

m.p. 155–160° (d) [1082]; 1H NMR [1082], IR [1082], MS [1082]; TLC [1082].

(3,5-Dibromo-2,6-dihydroxy-4-methoxyphenyl)phenylmethanone $C_{14}H_{10}Br_2O_4$ mol.wt. 402.04

Synthesis

– Obtained by action of bromine with Cotoin in cooled chloroform [807].

N.B.: The formula proposed is the more likely.

m.p. 116° [807]; Spectra (NA).

[3-Chloro-2,4 (or 2,5)-dihydroxy-5 (or 4)-methoxyphenyl]phenylmethanone

[140708-51-6]

 $C_{14}H_{11}ClO_4$ mol.wt. 278.69**Synthesis**

- Obtained by reaction of benzoyl chloride with 3-chloro-1,2,4-trimethoxybenzene in the presence of aluminium chloride in ethylene dichloride between 0° and 5°, then at r.t. for 8 h and at reflux for 1.5 h (58%) [704].

m.p. 181–182° [704]; ¹H NMR [704], IR [704], MS [704].**(2,6-Dihydroxy-4-methoxy-3-nitrosophenyl)phenylmethanone** $C_{14}H_{11}NO_5$ mol.wt. 273.25**Synthesis**

- Preparation by adding an aqueous solution of potassium nitrite to a solution of 2,6-dihydroxy-4-methoxy-benzophenone (so called Cotoin) in an acetic acid/ethanol mixture [808].

m.p. 153–154° [808]; Spectra (NA).

(2,4-Dihydroxy-3-methylphenyl)phenylmethanone

[52117-23-4]

 $C_{14}H_{12}O_3$ mol.wt. 228.25**Syntheses**

- Preparation by reaction of benzonitrile with 2,6-dihydroxy-toluene in the presence of zinc chloride and hydrochloric acid, followed by hydrolysis of the ketimine hydrochloride so formed with boiling water for 1 h (68%) (Hoesch reaction) [749].
- Preparation by Friedel–Crafts acylation of 3-methoxy-2-methylphenol with benzoyl chloride in the presence of aluminium chloride in boiling carbon disulfide for 1 h [749].
- Preparation by demethylation of 2-hydroxy-4-methoxy-3-methylbenzophenone with hydriodic acid in refluxing acetic anhydride (125–135°) for 2 h (63%) [750].
- Also obtained by methylation of resbenzophenone with methyl iodide in the presence of potassium hydroxide in refluxing methanol for 6 h [649] according to [751]. In this case, there is introduction of one methyl group on the benzene nucleus [649].
- Preparation by reaction of benzoic acid with 2-methylresorcinol in tetrachloroethane in the presence of boron trifluoride at 80° for 4 h (70%) [224].

– Also refer to: [221,597,805,867,1213–1217].

m.p. 177° [749,750], 176° [649], 173–174° [224]; ¹H NMR [224], UV [224].

(2,4-Dihydroxy-5-methylphenyl)phenylmethanone

[52220-71-0]

C₁₄H₁₂O₃ mol.wt. 228.25

Syntheses

- Preparation by demethylation of 2-hydroxy-4-methoxy-5-methylbenzophenone with aluminium chloride in boiling benzene (62%) [752].
- Preparation by reaction of benzonitrile with 2,4-dihydroxy-toluene in the presence of zinc chloride and hydrochloric acid in ethyl ether, followed by hydrolysis of the ketimine hydrochloride so formed (65%) (Hoesch reaction) [805].
- Preparation by reaction of benzoyl chloride with 4-methylresorcinol in the presence of aluminium chloride [887].

N.B.: In the paper [234], the formula of the 2,4-dihydroxy-6-methylbenzophenone reported in the discussion (page 392, formula II) is correct since this product is prepared starting from orcinol. It must be pointed out that in the same communication, this compound has been erroneously named as the 2,4-dihydroxy-5-methylbenzophenone in the experimental part (page 394). The obtained compound is actually the 2,4-dihydroxy-6-methylbenzophenone already prepared by an other procedure [371].

m.p. 137°5–138° [805], 137° [752]; Spectra (NA).

(2,4-Dihydroxy-6-methylphenyl)phenylmethanone

[43221-40-5]

C₁₄H₁₂O₃ mol.wt. 228.25

Syntheses

- Preparation by Hoesch condensation of orcinol with benzonitrile (90%) [753], (50%) [371].
 - Preparation by reaction of benzoyl chloride with orcinol in the presence of aluminium chloride in nitrobenzene at r.t. overnight, then heated in a water bath (temperature not quoted) for 1 h [234].
- N.B.:** In the paper [234], the formula of the 2,4-dihydroxy-6-methylbenzophenone reported in the discussion (page 392, formula II) is correct since this product is prepared starting from orcinol. It must be pointed out that in the same communication, this compound has been erroneously named as the 2,4-di-hydroxy-5-methylbenzophenone in the experimental part (page 394). The obtained compound is actually the 2,4-dihydroxy-6-methylbenzophenone already prepared by an other procedure [371].
- Preparation from 3-methyl-3'-phenyl-5,5'-diisoxazolylmethane by performing hydrogenolysis and subsequent hydrolysis with hydrochloric acid (48%) [693].

- Orcinol by condensation with benzanilide imidochloride in the presence of aluminium chloride in ethyl ether gave a keto anil. This one was hydrolyzed by refluxing with ethanolic hydrochloric acid yielded the expected ketone (26%) [156].
- Also refer to: [1218].
m.p. 145–146° [753], 141° [156,371], 140° [693], 138° [234]; ¹H NMR [693,753], MS [693].

(2,5-Dihydroxy-4-methylphenyl)phenylmethanone

[59954-93-7]

C₁₄H₁₂O₃ mol.wt. 228.25

Syntheses

- Preparation by demethylation of,
 - 2,5-dimethoxy-4-methylbenzophenone on heating with pyridinium chloride for 20 min (95%) [726];
 - 2-hydroxy-5-methoxy-4-methylbenzophenone with aluminium chloride in boiling benzene for 10 min (65%) [752].

m.p. 152°5 [726], 152° [752]; Spectra (NA).

(2,6-Dihydroxy-4-methylphenyl)phenylmethanone

[68436-77-1]

C₁₄H₁₂O₃ mol.wt. 228.25

Syntheses

- Obtained by Fries rearrangement of orcinol dibenzoate with aluminium chloride at 160–170° for 90 min [253].
- Preparation by heating a mixture of benzoic acid, orcinol, zinc chloride and phosphorous oxychloride at 65° for 3 h [193].
- Also obtained by partial decarbonylation of 3-benzoyl-2,6-dihydroxy-4-methylbenzophenone by treatment with 85% sulfuric acid at r.t. for 4 h (quantitative yield) [253].
- Also obtained (poor yield) by Hoesch condensation of orcinol with benzonitrile (10%) [753].

m.p. 153–154° [753], 127° [253]; ¹H NMR [753].

(3,4-Dihydroxy-5-methylphenyl)phenylmethanone

[108055-13-6]

C₁₄H₁₂O₃ mol.wt. 228.25

Synthesis

- Refer to: [1219].

m.p. and Spectra (NA).

(2,3-Dihydroxy-4-methoxyphenyl)phenylmethanone*(Alizarine Yellow A, monomethyl ether)*

[35836-41-0]

 $C_{14}H_{12}O_4$

mol.wt. 244.25

Syntheses

- Obtained by partial methylation of 2,3,4-trihydroxy-benzophenone,
 - with methyl iodide in the presence of potassium hydroxide in methanol at 100° for several hours [344] or in the presence of lithium carbonate in N,N-dimethylformamide at 30° for 15 h under nitrogen (30%) [369];
 - with dimethyl sulfate in the presence of alkali [379].
- Also obtained by reaction of methyl iodide with monosodium salt of 2,3,4-trihydroxy-benzophenone at 120° for several hours [344].
- Also obtained by adding a 5% sodium hydrogen carbonate solution to a 2,3-diacetoxy-4-methoxy-benzophenone solution in methanol and stirring at 30° for 2 h under nitrogen (25%) [369].
- Also refer to: [1220].

m.p. 172–174° [369], 165° [344], 164–165° [379]; ¹H NMR [369], ¹³C NMR [369], UV [369], MS [369].

(2,4-Dihydroxy-5-methoxyphenyl)phenylmethanone $C_{14}H_{12}O_4$

mol.wt. 244.25

Synthesis

- Obtained by partial demethylation of 2,4,5-trimethoxy-benzophenone or 2-hydroxy-4,5-dimethoxybenzophenone with hydrobromic acid (d = 1.47) in acetic acid [761,762].

m.p. 183–185° [761,762]; Spectra (NA).

(2,4-Dihydroxy-6-methoxyphenyl)phenylmethanone (*Isocotoin*)

[81525-12-4]

 $C_{14}H_{12}O_4$

mol.wt. 244.25

Syntheses

- Preparation by reaction of benzonitrile with phloroglucinol monomethyl ether in the presence of zinc chloride and hydrochloric acid in ethyl ether, followed by hydrolysis of the ketimine hydrochloride so formed with boiling water for 15 min (good yield) (Hoesch reaction) [376,766].
- Preparation in one step involving the reaction of phlorobenzophenone with two mol of p-toluene-sulfonyl chloride in acetone in the presence of potassium carbonate followed by methylation with dimethyl sulfate and subsequent detosylation with ethanolic potassium hydroxide [373,685].
- Also refer to: [375].

Isolation from natural sources

- From *Helichrysum triplinerve* (Asteraceae) [377].
- From genus *Leontonyx* [378].

m.p. 162° [376]; Spectra (NA).

(2,5-Dihydroxy-4-methoxyphenyl)phenylmethanone (*Cearoin*)

[52811-37-7]

C₁₄H₁₂O₄

mol.wt. 244.25

Syntheses

- Obtained (poor yield) by reaction of benzoic acid with 2-methoxyhydroquinone in the presence of boron trifluoride-etherate, on heating at 100° for 30–45 min (5%) [650].
- Also obtained (poor yield) by oxidation of 2-hydroxy-4-methoxybenzophenone (Elbs reaction),
 - with lead tetraacetate in acetic acid at 100° for 5 h (3%) [650];
 - with potassium persulfate in aqueous potassium hydroxide (22%) [656].
- Preparation by oxidation of 2-hydroxy-4,5-dimethoxybenzophenone with nitric acid (d = 1.2) for 30 min at 15–20°, followed by reduction of the 2-benzoyl-5-methoxy-1,4-benzoquinone formed (93%) with sulfur dioxide in warm ethanol containing a drop of acetic acid for 1 h (79%) [763].
- Also refer to: [1221].

Isolation from natural sources

- From *Dalbergia cearensis* (Leguminosae) [760,1222–1224] and *Dalbergia miscobium* [1222–1224].
- From *Dalbergia melanoxylon* Guill. et Perr. heartwood (Leguminosae-Lotoideae) [428].
- From the stem/bark of *Dalbergia volubilis* (Leguminosae) [1225].
- From the heartwood of *Dalbergia latifolia* Roxb. [1173].
- From the heartwood of *Dalbergia parviflora* Roxb. (Leguminosae) [1226].
- From *Dalbergia violacea* (Leguminosae) [1222].

m.p. 188–189° [763], 188° [656,1227], 187–188° [760], 187° [1225], 184°5–185°5 [1226], 183–185° [1228], 182–184° [428,1173], 182–183° [650];

¹H NMR [650,760,1225,1226], ¹³C NMR [1226],

IR [650,760,1225,1226], UV [726 650], MS [760,1225,1226].

(2,6-Dihydroxy-4-methoxyphenyl)phenylmethanone (*Cotoin*)

[479-21-0]

C₁₄H₁₂O₄

mol.wt. 244.25

Syntheses

- Obtained by reaction of benzonitrile with phloroglucinol monomethyl ether (Hoesch reaction) [376,685].

Also obtained by saponification of 2,6-diacetoxy-4-methoxybenzophenone with boiling aqueous potassium hydroxide solution for 15 min [807].

– Also refer to: [220,375,442,686,766,1229].

Isolation from natural sources

– From *Coto* bark (Lauraceae) [190,376,771,772,774,807,808,1230,1231];

– From the wood of *Aniba dukei* Kostermans (Lauraceae) [1232].

N.B.: In 1890 a careful quantitative analysis was kindly undertaken by Julius B. Cohen [771].

m.p. 131–132° [1232], 131° [376], 130–131° [774,807], 130° [771];

¹H NMR [675], IR [774,1232], UV [190].

(3,4-Dihydroxy-2-methoxyphenyl)phenylmethanone

[177703-29-6]

C₁₄H₁₂O₄ mol.wt. 244.25

Synthesis

– Preparation by adding a 5% sodium bicarbonate solution to a 3,4-diacetoxy-2-methoxybenzophenone solution in methanol and stirring at 30° for 2 h under nitrogen (50%) [369].

m.p. 130–132° [369]; ¹H NMR [369], ¹³C NMR [369], UV [369], MS [369]; pK_a [369].

(3,4-Dihydroxy-5-methoxyphenyl)phenylmethanone

C₁₄H₁₂O₄ mol.wt. 244.25

Synthesis

– Obtained by reaction of benzoyl chloride with 2,6-di-methoxyphenol in the presence of aluminium chloride in nitrobenzene, first at 2–3°, then at r.t. for 24 h (6–12% yield) [1233].

m.p. 168–169° [1233]; Spectra (NA).

(3,6-Dihydroxy-2-methoxyphenyl)phenylmethanone

[55137-06-9]

C₁₄H₁₂O₄ mol.wt. 244.25

Synthesis

– Obtained from 2-benzoyl-1,4-benzoquinone [1234],

- in refluxing methanol for 48 h without catalyst (26%);
- in refluxing methanol for 12 h in the presence of zinc chloride (23%).

m.p. 141–143° [1234]; ¹H NMR [1234], IR [1234], UV [1234].

[2,4-Dihydroxy-3,5-bis[(trifluoromethyl)thio]phenyl]phenylmethanone

[66625-08-9]

 $C_{15}H_8F_6O_3S_2$ mol.wt. 414.35

Synthesis

– Preparation by reaction of trifluoromethanesulfonyl chloride with 2,4-dihydroxybenzophenone in chloroform in the presence of a slight excess of pyridine, first at -40° , then 60° for 3 h (80%) [1235].

m.p. $91-95^\circ$ [1235]; 1H NMR [1235], IR [1235].

(2-Ethyl-4,5-dihydroxyphenyl)phenylmethanone

[91197-12-5]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Preparation by demethylation of 2-ethyl-4,5-dimethoxybenzophenone (SM) with pyridinium chloride for 2 h at $180-200^\circ$. SM was obtained by reaction of benzoic acid with

1-ethyl-3,4-dimethoxybenzene in the presence of phosphorous pentoxide in methanesulfonic acid for 30 min at 70° [1199].

m.p. and Spectra (NA).

(3-Ethyl-2,6-dihydroxyphenyl)phenylmethanone $C_{15}H_{14}O_3$ mol.wt. 242.27

Syntheses

– Preparation from 8-benzoyl-6-ethyl-7-hydroxy-4-methyl-coumarin by action of,

- a 20% aqueous sodium hydroxide solution at reflux for 2–2.5 h (51%) [1236];
 - a 10% aqueous sodium hydroxide solution at reflux for 4 h (40%) [1237].
- Also obtained by decarboxylation of 3-benzoyl-2,4-dihydroxy-5-ethylbenzoic acid with dilute hydrochloric acid (1:1) in a sealed tube at $160-170^\circ$ [1238].

m.p. 128° [1237], $125-126^\circ$ [1236], 125° [1238]; Spectra (NA).

(4-Ethyl-2,5-dihydroxyphenyl)phenylmethanone

[59623-16-4]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Preparation by demethylation of 4-ethyl-2-hydroxy-5-methoxybenzophenone with aluminium chloride in boiling benzene for 10 min (55%) [370].

m.p. 86° [370]; Spectra (NA).

(5-Ethyl-2,4-dihydroxyphenyl)phenylmethanone

[50537-80-9]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Syntheses

- Preparation by reaction of benzotrichloride with 4-ethyl-resorcinol in a 40% aqueous acetic acid solution at 70–80° (82%) [211].
 - Preparation by Fries rearrangement of 4-ethylresorcinol dibenzoate with aluminium chloride in nitrobenzene at 50–60° for 3–4 h [1239].
 - Preparation by reaction of benzoic acid with 4-ethylresorcinol,
 - in hydrofluoric acid at 100° in a stainless steel bomb (48%) [113];
 - in the presence of boron trifluoride in tetrachloroethane on a steam bath for 4 h [113].
 - Preparation by demethylation of 5-ethyl-2-hydroxy-4-methoxybenzophenone with aluminium chloride in boiling benzene for 10 min (70%) [370].
- m.p. 109° [370], 104° [113], 99°5–100°5 [211], 63–64° [1239]. One of the reported melting points is obviously wrong.
b.p.₁ 240–250° [113]; Spectra (NA).

(2,6-Dihydroxy-4-methoxy-3-methylphenyl)phenylmethanone $C_{15}H_{14}O_4$ mol.wt. 258.27

Synthesis

- Preparation by reaction of benzonitrile with 5-methoxy-4-methylresorcinol according to Hoesch method (50%) [805].
- m.p. 143–144° [805]; Spectra (NA).

(2,3-Dihydroxy-4,5-dimethoxyphenyl)phenylmethanone $C_{15}H_{14}O_5$ mol.wt. 274.27

Synthesis

- Refer to: [1221].

Isolation from natural source

- From *Machaerium scleroxylon* [1240].
 - Also refer to: [416].
- m.p. (NA) ¹H NMR [1240], IR [1240], UV [1240].

(2,4-Dihydroxy-3,5-dimethoxyphenyl)phenylmethanone

[42833-89-6]

 $C_{15}H_{14}O_5$ mol.wt. 274.27

Synthesis

– Obtained by selective demethylation of 2-hydroxy-3,4,5-tri-methoxybenzophenone with refluxing aqueous piperidine for 45–65 h [416].

m.p. 182–184° [416]; UV [416], MS [416].

(2,5-Dihydroxy-3,4-dimethoxyphenyl)phenylmethanone (*Scleroin*)

[4646-78-0]

 $C_{15}H_{14}O_5$ mol.wt. 274.27

Synthesis

– Obtained (poor yield) by action of potassium persulfate with 2-hydroxy-3,4-dimethoxybenzophenone in the presence of ferrous sulfate in aqueous potassium hydroxide at r.t. for 3–4 h (10%) (Elbs reaction) [757].

Isolation from natural source

- From *Machaerium scleroxylon* (Leguminosae) [675,1222,1224,1240].
- Also refer to: [416,1221,1241].

m.p. 143°5–144°5 [675], 140–142° [757]; 1H NMR [675], IR [675], UV [675].

[2,4-Dihydroxy-5-(2-propenyl)phenyl]phenylmethanone $C_{16}H_{14}O_3$ mol.wt. 254.29

Synthesis

– Preparation by reaction of benzotrichloride with 4-allylresorcinol [211].

m.p. and Spectra (NA).

[2,6-Dihydroxy-3-(2-propenyl)phenyl]phenylmethanone $C_{16}H_{14}O_3$ mol.wt. 254.29

Synthesis

– Preparation from 6-allyl-8-benzoyl-4-methyl-umbelliferone (6-allyl-8-benzoyl-7-hydroxy-4-methyl-coumarin), by cleavage with boiling aqueous sodium hydroxide in the presence of sodium hydrosulfite under nitrogen for 3 h (90%) [269].

m.p. 80–81° [269]; Spectra (NA); TLC [269].

(2,4-Dihydroxy-3-propylphenyl)phenylmethanone

[79557-81-6]

 $C_{16}H_{16}O_3$ mol.wt. 256.30

Synthesis

– Preparation by reaction of benzoic acid with 2-propyl-resorcinol in the presence of zinc chloride at 150° for 2.5 h (62%) [1242] (Nencki reaction).

– Also refer to: [168,597,1243].

m.p. 152–153° [1242]; Spectra (NA).

(2,4-Dihydroxy-5-propylphenyl)phenylmethanone $C_{16}H_{16}O_3$ mol.wt. 256.30

Synthesis

– Obtained by Fries rearrangement of 4-propylresorcinol dibenzoate with aluminium chloride in nitrobenzene at 50° for 4 h [1239].

m.p. 138–140° [1239]; b.p.₉ 240–245° [1239]; Spectra (NA).

[3-(2-Butenyl)-2,4-dihydroxyphenyl]phenylmethanone

[96836-08-7]

 $C_{17}H_{16}O_3$ mol.wt. 268.31

Synthesis

– Preparation by condensation of 2,4-dihydroxy-benzophenone with 1,3-butadiene in the presence of orthophosphoric acid in petroleum ether at 30–35° for 24 h (40%) [769].

m.p. 144–146° [769]; ¹H NMR [769].

[5-(2-Butenyl)-2,4-dihydroxyphenyl]phenylmethanone

[96859-90-4]

 $C_{17}H_{16}O_3$ mol.wt. 268.31

Synthesis

– Preparation by condensation of 2,4-dihydroxy-benzophenone with 1,3-butadiene in the presence of orthophosphoric acid in petroleum ether at 30–35° for 24 h (35%) [769].

m.p. 119–121° [769]; ¹H NMR [769].

[2,4-Dihydroxy-3-(1-methyl-2-propenyl)phenyl]phenylmethanone

[96836-07-6]

C₁₇H₁₆O₃ mol.wt. 268.31
Synthesis

– Obtained (poor yield) by condensation of 2,4-di-hydroxybenzophenone with 1,3-butadiene in the presence of orthophosphoric acid in petroleum ether at 30–35° for 24 h (15%) [769].

m.p. 153–155° [769]; ¹H NMR [769].**[2,5-Dihydroxy-6-methyl-3-(1-methylethyl)phenyl]phenylmethanone**

[101594-97-2]

C₁₇H₁₈O₃ mol.wt. 270.33
Synthesis

– Obtained by demethylation of 2-hydroxy-5-methoxy-6-methyl-3-isopropylbenzophenone or 3-hydroxy-6-methoxy-2-methyl-5-isopropylbenzophenone in refluxing pyridinium chloride for 20 min [726].

m.p. 147–147°5 [726]; Spectra (NA).

[5-(1,1-Dimethylethyl)-2,4-dihydroxyphenyl]phenylmethanone

[4211-67-0]

C₁₇H₁₈O₃ mol.wt. 270.33
Synthesis

– Preparation by alkylation of resbenzophenone with isobutylene in benzene in the presence of p-toluenesulfonic acid [835].
– Also refer to: [1244–1246].

m.p. 141° [835,836];
Spectra (NA); gel chromatography [247].**[2,4-Dihydroxy-3-(3-methyl-2-butenyl)phenyl]phenylmethanone**

[63565-04-8]

C₁₈H₁₈O₃ mol.wt. 282.34
Synthesis

– Obtained (poor yield) by reaction of prenyl bromide with resbenzophenone,

- in the presence of sodium methoxide in refluxing methanol for 4 h (10%) [831];
- in the presence of boron trifluoride-etherate in dioxane at 60–70° for 2 h (<3%) [832].

m.p. 121° [831], 120° [832]; ¹H NMR [831], IR [831], UV [831].

[3-(2-Butenyl)-2,4-dihydroxy-6-methoxyphenyl]phenylmethanone

[96836-12-3]

C₁₈H₁₈O₄ mol.wt. 298.34

Synthesis

– Obtained by condensation of 2, 4-dihydroxy-6-methoxybenzophenone with 1,3-butadiene in the presence of orthophosphoric acid in petroleum ether at 30–35° for 24 h (35%) [769].

m.p. 165–167° [769]; ¹H NMR [769].**[3-(2-Butenyl)-4,6-dihydroxy-2-methoxyphenyl]phenylmethanone**

[96836-13-4]

C₁₈H₁₈O₄ mol.wt. 298.34

Synthesis

– Obtained by condensation of 2, 4-dihydroxy-6-methoxybenzophenone with 1,3-butadiene in the presence of orthophosphoric acid in petroleum ether at 30–35° for 24 h (35%) [769].

m.p. 116–118° [769]; ¹H NMR [769].**[2,4-Dihydroxy-6-methoxy-3-(1-methyl-2-propenyl)phenyl]phenylmethanone**

[96836-11-2]

C₁₈H₁₈O₄ mol.wt. 298.34

Synthesis

– Obtained (poor yield) by condensation of 2,4-di-hydroxy-6-methoxybenzophenone with 1,3-butadiene in the presence of orthophosphoric acid in petroleum ether at 30–35° for 24 h (15%) [769].

m.p. 117–119° [769]; ¹H NMR [769].**[2,6-Dihydroxy-4-[(3-methyl-2-butenyl)oxy]phenyl]phenylmethanone**

[70219-83-9]

C₁₈H₁₈O₄ mol.wt. 298.34

Syntheses

- Obtained (trace) by reaction of 2-methyl-3-buten-2-ol with 2,4,6-trihydroxybenzophenone in the presence of boron trifluoride-etherate in dioxane at 25–30° (<1%) [373].
- Also obtained (trace) by reaction of prenyl bromide with 2,4,6-trihydroxybenzophenone in the presence of sodium methoxide in refluxing methanol for 3 h (<1%) [374].

Isolation from natural source

- From *Leontonyx squarrosus* DC (Compositae) [378].

colourless oil [378]. This product is impure or in a metastable state.

m.p. 121° [373], 120–121° [374]; ¹H NMR [373,374,378], IR [373,374,378], UV [373,374], MS [378].

[2,4-Dihydroxy-5-(1,1-dimethylpropyl)phenyl]phenylmethanone

$C_{18}H_{20}O_3$ mol.wt. 284.36

Synthesis

- Preparation by alkylation of resbenzophenone with 2-methylbutene in benzene in the presence of p-toluene-sulfonic acid [835].

m.p. 116° [835,836]; Spectra (NA).

[3,6-Dihydroxy-2-(phenylsulfonyl)phenyl]phenylmethanone

[145746-55-0]

$C_{19}H_{14}O_5S$ mol.wt. 354.38

Synthesis

- Preparation by shaking an aqueous solution of sodium benzenesulfinate with a solution of benzoyl-1,4-benzo-quinone and trifluoroacetic acid in methylene chloride for 4 h at r.t. (85%) [1247].

m.p. 207–210° [1247]; ¹H NMR [1247], IR [1247], MS [1247].

(5-Cyclohexyl-2,4-dihydroxyphenyl)phenylmethanone

$C_{19}H_{20}O_3$ mol.wt. 296.37

Synthesis

- Preparation by reaction of benzoic acid with 4-cyclohexyl-resorcinol in hydrofluoric acid at 100° in a stainless steel bomb [113].

m.p. 164° [113]; Spectra (NA).

[2,4-Dihydroxy-6-methoxy-3-(3-methyl-2-butenyl)phenyl]phenylmethanone

[81490-45-1]

$C_{19}H_{20}O_4$ mol.wt. 312.37

Synthesis

- Obtained by prenylation of 2,4-dihydroxy-6-methoxybenzophenone (Isocotoin) with 2-methyl-3-buten-2-ol in the presence of boron trifluoride-etherate [685].

m.p. 160–161° [685]; ¹H NMR [685].

[4,6-Dihydroxy-2-methoxy-3-(3-methyl-2-butenyl)phenyl]phenylmethanone

[81490-46-2]

 $C_{19}H_{20}O_4$ mol.wt. 312.37

Synthesis

- Obtained by prenylation of 2,4-dihydroxy-6-methoxybenzophenone (Isocotoin) with 2-methyl-3-buten-2-ol in the presence of boron trifluoride-etherate [685].

m.p. 104–105° [685]; 1H NMR [685].**(5-Hexyl-2,4-dihydroxyphenyl)phenylmethanone**

[59746-92-8]

 $C_{19}H_{22}O_3$ mol.wt. 298.38

Syntheses

- Preparation by reaction of benzotrichloride with 4-hexyl-resorcinol in hydrofluoric acid in the presence of water at -10° for 4 h, then at r.t. overnight (80%) [213].
- Preparation by reaction of benzoic acid with 4-hexyl-resorcinol in the presence of boron trifluoride in tetrachloroethane on a steam bath for 4 h [113].
- Also refer to: [78].

m.p. 81–82° [113]; Spectra (NA).

[4-(Benzoyloxy)-2,6-dihydroxyphenyl]phenylmethanone $C_{20}H_{14}O_5$ mol.wt. 334.33

Synthesis

- Obtained by action of benzoyl chloride with phloro-benzophenone (2,4,6-trihydroxybenzophenone) in the presence of 1% potassium hydroxide aqueous solution at 0° (14%) [775].

m.p. 186° [775]; Spectra (NA).

[2,4-Dihydroxy-3-(phenylmethyl)phenyl]phenylmethanone $C_{20}H_{16}O_3$ mol.wt. 304.35

Syntheses

- Obtained (poor yield) by reaction of benzonitrile with 2-benzylresorcinol (8%) (Hoesch reaction) [846].
- Also obtained (poor yield) by hydrolysis of 3-benzyl-4-(benzyloxy)-2-hydroxybenzophenone (SM) with concentrated hydrochloric acid in boiling acetic acid for

2 h (2%). SM was obtained by reaction of benzyl chloride with resbenzophenone in the presence of potassium hydroxide in refluxing methanol for 5 h [846].

- Preparation by Friedel–Crafts acylation of 2-benzylresorcinol with benzoyl chloride in methylene chloride in the presence of aluminium chloride [168].

m.p. 159–160° [846]; Spectra (NA).

[2,4-Dihydroxy-5-(phenylmethyl)phenyl]phenylmethanone

$C_{20}H_{16}O_3$ mol.wt. 304.35

Synthesis

- Preparation by reaction of benzotrichloride with 4-benzyl-resorcinol [211].

m.p. and Spectra (NA).

[2,4-Dihydroxy-3-(1-phenylethyl)phenyl]phenylmethanone

[65221-07-0]

$C_{21}H_{18}O_3$ mol.wt. 318.37

Synthesis

- Refer to: [233].

m.p. (NA); UV [233].

[2,4-Dihydroxy-5-(1-phenylethyl)phenyl]phenylmethanone

[43221-41-6]

$C_{21}H_{18}O_3$ mol.wt. 318.37

Synthesis

- Refer to: [233].

m.p. and Spectra (NA).

[4,6-Dihydroxy-3-methyl-2-(phenylmethoxy)phenyl]phenylmethanone

[74627-92-2]

$C_{21}H_{18}O_4$ mol.wt. 334.37

Synthesis

- Preparation from 2-(benzyloxy)-4,6-dimethoxy-3-methyl-benzophenone by treatment with 10% hydrochloric acid in refluxing methanol for 40 min (89%) [838].

m.p. 155° [838]; 1H NMR [838], MS [838].

[5-(2-Ethylhexyl)-2,4-dihydroxyphenyl]phenylmethanoneC₂₁H₂₆O₃ mol.wt. 326.44

Synthesis

- Preparation by reaction of benzo-trichloride with 4-(2-ethylhexyl)-resorcinol [211].

m.p. and Spectra (NA).

[2,4-Dihydroxy-3,5-bis(3-methyl-2-butenyl)phenyl]phenylmethanone

[69443-76-1]

C₂₃H₂₆O₃ mol.wt. 350.46

Synthesis

- Obtained (poor yield) by reaction of 2-methyl-3-buten-2-ol with resbenzophenone in the presence of boron trifluoride-etherate in dioxane at 60–70° for 2 h (3%) [832].

m.p. 74–75° [832]; ¹H NMR [832], IR [832], UV [832].**[2,6-Dihydroxy-3-(3-methyl-2-butenyl)-4-[(3-methyl-2-butenyl)oxy]phenyl]phenylmethanone**

[83611-01-2]

C₂₃H₂₆O₄ mol.wt. 366.46

Synthesis

- Obtained (trace) by reaction of 2-methyl-3-buten-2-ol with 2,4,6-trihydroxy-benzophenone in the presence of boron trifluoride-etherate in dioxane at 25–30° (<1%) [373].

brown oil [373]; b.p. (NA); ¹H NMR [373], IR [373], UV [373].**[4-[(3,7-Dimethyl-2,6-octadienyl)oxy]-2,6-dihydroxyphenyl]phenylmethanone (E)**

[70219-85-1]

C₂₃H₂₆O₄ mol.wt. 366.46

Synthesis

- Not yet described.

Isolation from natural source

- From *Leontonyx spathulatus* Less. (Compositae) [377,378].
colourless oil [378]; b.p. (NA); ^1H NMR [378], IR [378].

[2,4-Dihydroxy-6-methoxy-3,5-bis(3-methyl-2-butenyl)phenyl]phenylmethanone
(*Vismiaphephone A*)

[76444-61-6]

 $\text{C}_{24}\text{H}_{28}\text{O}_4$ mol.wt. 380.48

Syntheses

- Obtained by prenylation of 2,4-dihydroxy-6-methoxybenzophenone (Isocotoin) with 2-methyl-3-buten-2-ol in the presence of boron trifluoride-etherate [373,685].
- Also obtained first by methylation of 6-hydroxy-3,5-diprenyl-2,4-ditosyloxybenzophenone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 12 h. Then, the resulting compound was treated with 10% ethanolic potassium hydroxide for 2 h at 50–55° (17%) [373].

Isolation from natural source

- From the berries of *Vismia decipiens* Schlecht-Cham. (Guttiferae) [1248].
oil [373,685,1248]; b.p. (NA); ^1H NMR [373,685,1248], IR [373,685,1248], UV [373,685,1248], MS [1248].

[2,4-Dihydroxy-5-(dodecyloxy)phenyl]phenylmethanone

 $\text{C}_{25}\text{H}_{34}\text{O}_4$ mol.wt. 398.54

Synthesis

- Refer to: [78].

m.p. and Spectra (NA).

(2,4-Dihydroxy-5-octadecylphenyl)phenylmethanone

 $\text{C}_{31}\text{H}_{46}\text{O}_3$ mol.wt. 466.70

Synthesis

- Preparation by reaction of benzotrichloride with 4-stearyl-resorcinol [211].

m.p. and Spectra (NA).

2.2.1.2 Substituents Located on the Other Ring**(2,4-Dihydroxyphenyl)(2,4,6-trinitrophenyl)methanone**

[188347-38-8]

C₁₃H₇N₃O₉ mol.wt. 349.21

Synthesis

– Refer to: [1249] (compound **51**) NSC 338104 (no comments).

m.p. and Spectra (NA).

(4-Bromo-3-chlorophenyl)(2,5-dihydroxyphenyl)methanone

[161463-54-3]

C₁₃H₈BrClO₃ mol.wt. 327.56

Synthesis

– Preparation by demethylation of 4-bromo-3-chloro-2',5'-di-methoxybenzophenone (SM) with boron tribromide in methylene chloride at 0° for 15–17 h (70–95%). SM was prepared by reaction of 4-bromo-3-chlorobenzoic acid with 1,4-dimethoxybenzene in the presence of polyphosphoric acid at 60–70° for 6–7 h (40–83%) [1250].

m.p. (NA); ¹H NMR [1250], IR [1250].**(2-Chloro-4-nitrophenyl)(2,5-dihydroxyphenyl)methanone**

[37884-01-8]

C₁₃H₈ClNO₅ mol.wt. 293.66

Synthesis

– Preparation by demethylation of 2-chloro-2',5'-di-methoxy-4-nitrobenzophenone with an excess of boiling pyridinium chloride for 6 h (40%) [1073].

m.p. 265° [1073]; Spectra (NA).

(2,4-Dichlorophenyl)(2,4-dihydroxyphenyl)methanoneC₁₃H₈Cl₂O₃ mol.wt. 283.11

Synthesis

– Preparation by reaction of 2,4-dichlorobenzotrichloride with resorcinol [211], in hydrofluoric acid in the presence of water at –10°, then at 15° overnight and at 80° for 30 min [213].

m.p. and Spectra (NA).

(2,4-Dichlorophenyl)(2,5-dihydroxyphenyl)methanone

[37884-00-7]

 $C_{13}H_8Cl_2O_3$ mol.wt. 283.11**Syntheses**

- Preparation by reaction of 2,4-dichlorobenzotrichloride with hydroquinone in hydrofluoric acid in the presence of water at -10° , then at 15° overnight and at 80° for 30 min [213].
 - Also obtained by condensation reaction of hydroquinone dimethyl ether with excess of 2,4-dichlorobenzoic acid in the presence of polyphosphoric acid [1251].
 - Preparation by demethylation of 2,4-dichloro-2',5'-dimethoxybenzophenone,
 - with boiling excess pyridinium chloride for 1 h (95%) [1073];
 - with boron tribromide in methylene chloride at 0° (77%) [1251].
- m.p. 145° [1073], 126° [1251]; 1H NMR [1251], IR [1251].

(3,4-Dichlorophenyl)(2,4-dihydroxyphenyl)methanone

[36419-34-8]

 $C_{13}H_8Cl_2O_3$ mol.wt. 283.11**Synthesis**

- Preparation by reaction of 3,4-dichlorobenzoic acid with resorcinol in the presence of boron trifluoride in tetrachloroethane on a steam bath for 4 h [113].
 - Refer to: [235,1252].
- m.p. 188° [113], 186° [235]; UV [113,235,1252].

(2-Bromophenyl)(2,4-dihydroxyphenyl)methanone $C_{13}H_9BrO_3$ mol.wt. 293.12**Synthesis**

- Preparation by reaction of o-bromobenzotrichloride with resorcinol [211].

m.p. and Spectra (NA).

(4-Bromophenyl)(2,4-dihydroxyphenyl)methanone

[3286-88-2]

 $C_{13}H_9BrO_3$ mol.wt. 293.12**Synthesis**

- Preparation by reaction of p-bromobenzonitrile with resorcinol in the presence of zinc chloride and hydrochloric acid in ethyl ether in an ice bath for 1 or 2 days, followed by hydrolysis of the ketimine hydrochloride so formed with boiling water (64%) [1253], (50%) [439].
 - Also refer to: Chem. Abstr., **127**, 108921f (1997).
- m.p. 169° [1253], 164° [439]; Spectra (NA).

(4-Bromophenyl)(2,5-dihydroxyphenyl)methanoneC₁₃H₉BrO₃ mol.wt. 293.12

Synthesis

- Preparation by condensation of p-bromobenzoic acid with hydroquinone in the presence of aluminium chloride and sodium chloride at 180–200° for 2 min (32%) [129].

m.p. 153° [129]; Spectra (NA).

(2-Chlorophenyl)(2,4-dihydroxyphenyl)methanone

[50685-40-0]

C₁₃H₉ClO₃ mol.wt. 248.67

Syntheses

- Preparation by reaction of o-chlorobenzoyl chloride with O,O-bis(trimethylsilyl)resorcinol in the presence of stannic chloride in refluxing methylene chloride for 2 h (80%) [921].
- Preparation by Fries rearrangement of m-methoxyphenyl o-chlorobenzoate with aluminium chloride without solvent at 180° (40%) [155].
- Preparation by reaction of o-chlorobenzotrichloride with resorcinol in dilute isopropanol at 70–80° (85%) [211].
- Preparation by condensation of resorcinol and o-chlorobenzoic acid with boron trifluoride-etherate in carbon tetrachloride [1254], according to [360].

m.p. 138° [155], 135.5–136.5° [211], 131–132° [921]; Spectra (NA).

(2-Chlorophenyl)(2,5-dihydroxyphenyl)methanone

[37883-99-1]

C₁₃H₉ClO₃ mol.wt. 248.67

Syntheses

- Preparation by reaction of o-chlorobenzoyl chloride with O,O-bis(trimethylsilyl)hydroquinone in the presence of stannic chloride in refluxing methylene chloride for 2 h (84%) [921].
- Preparation by demethylation of 2'-chloro-2,5-dimethoxy-benzophenone with an excess of boiling pyridinium chloride for 1 h (63%) [1073].
- Also obtained by photochemical addition of o-chlorobenzaldehyde to 1,4-benzoquinone in benzene in the presence of benzophenone for 5 days (78%) [1255].

m.p. 160° [1073]; Spectra (NA).

(2-Chlorophenyl)(2,6-dihydroxyphenyl)methanone[100334-93-8] $C_{13}H_9ClO_3$ mol.wt. 248.67

Synthesis

– Preparation by hydrolysis of 8-(o-chlorobenzoyl)-7-hydroxy-4-methylcoumarin (SM) with sodium hydroxide in refluxing dilute ethanol for 3 h (72%). SM was obtained by Fries rearrangement of 7-(o-chlorobenzoyloxy)-4-methylcoumarin with aluminium chloride, first at 180°, then at 185–190° for 1.5 h (65%, m.p. 165°). –Refer to: Chem. – then at 190–195° for 1 h (64%, m.p. 245°).

– Refer to: Chem. Abstr., **114**, 42490n (1991)^T.

m.p. 150^T; IR^T.

(4-Chlorophenyl)(2,4-dihydroxyphenyl)methanone

[18239-10-6]

 $C_{13}H_9ClO_3$ mol.wt. 248.67

Syntheses

- Obtained by reaction of p-chlorobenzonitrile with resorcinol in the presence of zinc chloride and hydrochloric acid in ethyl ether (Hoesch reaction) in ice during 24 h and hydrolysis of 4'-chloro-2,4-dihydroxybenzophenone imide hydrochloride so formed (72%) with boiling water for 30 min (46%) [1253], (39%) [1256].
 - Also obtained by reaction of p-chlorobenzoic acid with resorcinol,
 - in hydrofluoric acid at 100° in a stainless steel bomb [113];
 - in the presence of Zeolite-H-beta in refluxing p-chlorotoluene (162°) for 7 h, with stirring and azeotropic removal of water (4%) [53].
 - Preparation by reaction of 4-chlorobenzotrichloride with resorcinol in 40% aqueous isopropanol solution at 70–80° (95%) [211].
 - Also refer to: [235,778,1252,1257].
- m.p. 155° [1253], 152° [235], 151–152° [1256], 151° [113], 150° [215]; 149°5–150°5 [211]; UV [113,215,235].

(4-Chlorophenyl)(2,5-dihydroxyphenyl)methanone

[91290-75-4]

 $C_{13}H_9ClO_3$ mol.wt. 248.67

Syntheses

- Preparation by demethylation of 4'-chloro-2,5-dimethoxy-benzophenone (SM) with boron tribromide in methylene chloride,
 - at 0° (95%) [1251];
 - first at –30° for 30 min, then at 22° for 5 h. SM was obtained by Friedel–Crafts acylation of hydroquinone dimethyl ether with p-chlorobenzoyl chloride in methylene chloride in the presence of aluminium chloride at 0° for 8 h (85%) [1258].
 - Also obtained by photochemical addition of p-chlorobenzaldehyde to 1,4-benzoquinone in benzene in the presence of benzophenone for 5 days (73%) [1255].
- m.p. 132° [1251]; ¹H NMR [1251], IR [1251].

(4-Chlorophenyl)(2,6-dihydroxyphenyl)methanone

[29627-01-8]

 $C_{13}H_9ClO_3$ mol.wt. 248.67

Synthesis

- Preparation by hydrolysis of 8-(p-chlorobenzoyl)-7-hydroxy-4-methylcoumarin (SM) with sodium hydroxide in refluxing dilute ethanol for 3 h (71%). SM was obtained by Fries rearrangement

of 7-(p-chlorobenzoyloxy)-4-methylcoumarin with aluminium chloride, first at 180°, then at 185–190° for 1.5 h (60%, m.p. 214°). -Refer to: Chem. Abstr., **114**, 42490n (1991)^T.

m.p. 130^{oT}; IR^T.

(4-Chlorophenyl)(3,4-dihydroxyphenyl)methanone

[134612-84-3]

C₁₃H₉ClO₃ mol.wt. 248.67

Syntheses

- Preparation by demethylation of 4'-chloro-4-hydroxy-3-methoxybenzophenone with hydrobromic acid in refluxing aqueous acetic acid [1019].
- Preparation by Friedel-Crafts reaction of p-chlorobenzoyl chloride with veratrole [900].

m.p. 190° [900], 174–176° [1019]; Spectra (NA).

(2,4-Dihydroxyphenyl)(2-fluorophenyl)methanone

[19390-38-6]

C₁₃H₉FO₃ mol.wt. 232.21

Synthesis

- Preparation by reaction of 2-fluorobenzoyl chloride with resorcinol dimethyl ether in the presence of aluminium chloride in ethylene dichloride at 60° for 90 min [476], (59%) [1031].

m.p. 112–114° [1031], 109–111° [476]; Spectra (NA).

(2,4-Dihydroxyphenyl)(4-fluorophenyl)methanone

[84794-97-8]

C₁₃H₉FO₃ mol.wt. 232.21

Synthesis

- Preparation by Friedel-Crafts acylation of resorcinol with p-fluorobenzoyl chloride in the presence of aluminium chloride in ethylene dichloride at 50° for 1.5 h (90%) [1109].
- Also refer to: [1259].

m.p. 171–172° [1109]; Spectra (NA).

(2,5-Dihydroxyphenyl)(2-fluorophenyl)methanone

[176547-98-1]

C₁₃H₉FO₃ mol.wt. 232.21

Synthesis

- Preparation by total demethylation of 2'-fluoro-2,5-di-methoxybenzophenone (SM) with boron tribromide in methylene chloride, first at -70°, then at 25° for 24 h (86%). SM was obtained by Friedel-Crafts

acylation of hydroquinone dimethyl ether with *o*-fluorobenzoyl chloride in methylene chloride in the presence of aluminium chloride at 0° for 4 h (79%) [258].

m.p. 118–119° [258]; ¹H NMR [258].

(2,5-Dihydroxyphenyl)(3-fluorophenyl)methanone

[161463-61-2]

C₁₃H₉FO₃ mol.wt. 232.21

Synthesis

– Preparation by demethylation of 3'-fluoro-2,5-dimethoxy-benzophenone (SM) with boron tribromide in methylene chloride at 0° for 15–17 h (70–95%) [1250] or at 22° [258]. SM was prepared from hydroquinone dimethyl ether,

- by reaction with *m*-fluorobenzoic acid in the presence of polyphosphoric acid at 60–70° for 6–7 h (40–83%) [1250];
- by reaction with *m*-fluorobenzoyl chloride in methylene chloride in the presence of aluminium chloride at 0° (78%) [258].

m.p. (NA); ¹H NMR [1250], IR [1250].

(2,5-Dihydroxyphenyl)(4-fluorophenyl)methanone

[83235-21-6]

C₁₃H₉FO₃ mol.wt. 232.21

Syntheses

- Preparation by total demethylation of 4'-fluoro-2,5-di-methoxybenzophenone (SM) with boron tribromide in methylene chloride, first at –30° for 30 min, then at 22° for 5 h (80%). SM was obtained by Friedel–Crafts acylation of hydroquinone dimethyl ether with *p*-fluorobenzoyl chloride in methylene chloride in the presence of aluminium chloride at 0° for 8 h (90%) [258,1258].
- Also obtained by photochemical addition of *p*-fluorobenzaldehyde to 1,4-benzoquinone in benzene in the presence of benzophenone for 5 days (61%) [1255].
- Also obtained by UV light irradiation of α -hydroxy(*p*-fluorobenzyl)-1,4-benzoquinone in benzene for 72 h (45%) [1260].
- Also refer to: [261].

m.p. 140–141° [1258,1260]; ¹H NMR [1258,1260], IR [1260].

(3,5-Dihydroxyphenyl)(4-fluorophenyl)methanone

[148253-51-4]

C₁₃H₉FO₃ mol.wt. 232.21

Synthesis

– Preparation by total demethylation of 3,5-dimethoxy-4'-fluorobenzophenone (SM) with 48% hydrobromic acid in refluxing acetic acid under nitrogen for 20 h (91%) [905,906].

SM was obtained by oxidation of 3,5-dimethoxy-4'-fluorobenzhydrol with pyridinium chlorochromate in the presence of sodium acetate in methylene chloride at r.t. under nitrogen for 30 min (84%) [905].

m.p. 142–143° [905,906]; ¹H NMR [905,906], ¹³C NMR [905,906], IR [905,906], MS [905,906].

(2,4-Dihydroxyphenyl)(3-nitrophenyl)methanone

$C_{13}H_9NO_5$ mol.wt. 259.22

Syntheses

- Obtained by reaction of m-nitrobenzotrionitrile with resorcinol in the presence of zinc chloride and hydrochloric acid in ethyl ether, followed by hydrolysis of the resulting ketimine hydrochloride in boiling water (73%) [215], for 30 min [1261], (11%) [1262] (Hoesch reaction).
 - Preparation by reaction of m-nitrobenzotrionitrile with resorcinol [211].
- m.p. 228° [215,1261,1262]; Spectra (NA).

(2,4-Dihydroxyphenyl)(4-nitrophenyl)methanone

Synthesis

– Preparation by reaction of o-(trifluoromethyl)benzoyl chloride with resorcinol in the presence of aluminium chloride in refluxing carbon disulfide for 20 h [239].

m.p. 168–168°5 [239]; Spectra (NA).

(2,4-Dihydroxyphenyl)[3-(trifluoromethyl)phenyl]methanoneC₁₄H₉F₃O₃ mol.wt. 282.22

Synthesis

– Preparation by reaction of m-(trifluoromethyl)benzoyl chloride with resorcinol in the presence of aluminium chloride in refluxing carbon disulfide for 20 h [239].

m.p. 175°5–176° [239]; Spectra (NA).

(2,5-Dihydroxyphenyl)[2-(trifluoromethyl)phenyl]methanone

[161463-62-3]

C₁₄H₉F₃O₃ mol.wt. 282.22

Synthesis

– Preparation by demethylation of 2,5-dimethoxy-2'-(tri-fluoromethyl)benzophenone (SM) with boron tribromide at 0° for 15–17 h (70–95%). SM was prepared by reaction of 2-(trifluoromethyl)benzoic acid with 1,4-dimethoxybenzene in the presence of polyphosphoric acid at 60–70° for 6–7 h (40–83%) [1250].

m.p. (NA); ¹H NMR [1250], IR [1250].

(3-Chloro-4-methylphenyl)(2,5-dihydroxyphenyl)methanoneC₁₄H₁₁ClO₃ mol.wt. 262.69

Synthesis

– Preparation by demethylation of 3'-chloro-2,5-dimethoxy-4'-methylbenzophenone (SM) with boron tribromide in methylene chloride at 0° for 15–17 h (70–95%). SM was prepared by reaction of 3-chloro-4-methylbenzoic acid with 1,4-dimethoxybenzene in the presence of polyphosphoric acid at 60–70° for 6–7 h (40–83%) [1250].

m.p. (NA); ¹H NMR [1250], IR [1250].

(2,5-Dihydroxyphenyl)(3-fluoro-4-methylphenyl)methanone

[161463-63-4]

C₁₄H₁₁FO₃ mol.wt. 246.24

Synthesis

– Preparation by demethylation of 2,5-dimethoxy-3'-fluoro-4'-methylbenzophenone (SM) with boron tribromide in methylene chloride at 0° for 15–17 h (70–95%). SM was prepared by

reaction of 3-fluoro-4-methylbenzoic acid with 1,4-dimethoxybenzene in the presence of polyphosphoric acid at 60–70° for 6–7 h (40–83%) [1250].

m.p. (NA); ¹H NMR [1250], IR [1250].

(2,5-Dihydroxyphenyl)(2-methyl-3-nitrophenyl)methanone

[161463-58-7]

C₁₄H₁₁NO₅ mol.wt. 273.25

Synthesis

– Preparation by demethylation of 2,5-dimethoxy-2'-methyl-3'-nitrobenzophenone (SM) with boron tribromide in methylene chloride at 0° for 15–17 h

(70–95%). SM was prepared by reaction of 2-methyl-3-nitrobenzoic acid with 1,4-dimethoxybenzene in the presence of polyphosphoric acid at 60–70° for 6–7 h (40–83%) [1250].

m.p. (NA); ¹H NMR [1250], IR [1250].

(2,5-Dihydroxyphenyl)(3-methyl-4-nitrophenyl)methanone

[153907-08-5]

C₁₄H₁₁NO₅ mol.wt. 273.25

Synthesis

– Preparation by demethylation of 2,5-dimethoxy-3'-methyl-4'-nitrobenzophenone with boron tribromide in methylene chloride at 0° (81%) [1251].

m.p. 150° [1251]; ¹H NMR [1251], IR [1251].

(2,4-Dihydroxyphenyl)(2-methylphenyl)methanone

[14446-07-2]

C₁₄H₁₂O₃ mol.wt. 228.25

Synthesis

– Preparation by reaction of o-toluic acid (2-methylbenzoic acid) with resorcinol,

- in the presence of zinc chloride for 20 min at 160° (42%), (Nencki reaction) [1263];
- in the presence of Amberlyst-15 in refluxing 4-chlorotoluene (162°) for 2 h (91%) [53];
- in the presence of Zeolite-H-beta (previously activated at 400°) in refluxing mesitylene or 4-chlorotoluene for 3 h (with removal of water) (76%) [53,196].

– Also refer to: [1264].

m.p. 126–127° [1263], 121–123° [53,196]; ¹H NMR [53,196].

(2,4-Dihydroxyphenyl)(3-methylphenyl)methanone

- in the presence of zinc chloride and phosphorous oxychloride at 65° for 3 h [193];
- in the presence of zinc chloride at 140° for 20 min (22%) [1088] (Nencki reaction).

m.p. 168° [1088]; Spectra (NA).

(2,4-Dihydroxyphenyl)(4-methylphenyl)methanone

- in the presence of zinc chloride for 20 min at 165° (25%) (Nencki reaction) [1265];
- in the presence of Zeolite-H-beta in refluxing 4-chlorotoluene (162°) for 16–18 h (70%) [53];
- in the presence of boron trifluoride in tetrachloroethane on a steam bath for 4 h [113].

– Also refer to: [298,391,435,778,779,1266–1269].

m.p. 139° [113], 138° [1265]; UV [113].

(2,5-Dihydroxyphenyl)(2-methylphenyl)methanone

– Also refer to: [261].

m.p. 106–108° [1260]; ¹H NMR [1260], IR [1260].

(2,5-Dihydroxyphenyl)(3-methylphenyl)methanone

[83235-19-2]

C₁₄H₁₂O₃ mol.wt. 228.25

Synthesis

- Obtained by UV light irradiation of α -hydroxy(m-methyl-benzyl)-1,4-benzoquinone in benzene for 72 h (37%) [1260].
- Also refer to: [261].

m.p. 114–116° [1260]; ¹H NMR [1260], IR [1260].**(2,5-Dihydroxyphenyl)(4-methylphenyl)methanone**

[83235-20-5]

C₁₄H₁₂O₃ mol.wt. 228.25

Syntheses

- Obtained by photochemical addition of p-tolualdehyde to 1,4-benzoquinone in benzene in the presence of benzophenone (79%) [1255].
- Obtained by UV light irradiation of α -hydroxy(p-methyl-benzyl)-1,4-benzoquinone in benzene for 72 h (43%) [1260].

m.p. 137–139° [1260]; ¹H NMR [1260], IR [1260].**(2,6-Dihydroxyphenyl)(2-methylphenyl)methanone**C₁₄H₁₂O₃ mol.wt. 228.25

Synthesis

- Obtained from 8-(o-toluoyl)-4-methylumbelliferone by refluxing with N aqueous sodium hydroxide for 30 min (54%) [1263].

m.p. 140° [1263]; Spectra (NA).

(2,6-Dihydroxyphenyl)(3-methylphenyl)methanoneC₁₄H₁₂O₃ mol.wt. 228.25

Synthesis

- Obtained from 8-(m-toluoyl)-4-methylumbelliferone by refluxing with N aqueous sodium hydroxide for 30 min (41%) [1088].

m.p. 145° [1088]; Spectra (NA).

(2,6-Dihydroxyphenyl)(4-methylphenyl)methanoneC₁₄H₁₂O₃ mol.wt. 228.25

Synthesis

- Obtained from 8-(p-toluoyl)-4-methylumbelliferone by refluxing with N aqueous sodium hydroxide for 30 min (45%) [1265].

m.p. 125° [1265]; Spectra (NA).

(2,4-Dihydroxyphenyl)(2-methoxyphenyl)methanone

[79215-32-0]

 $C_{14}H_{12}O_4$ mol.wt. 244.25

Syntheses

- Preparation by oxidation of 6-acetoxy-2,3-bis(2-methoxy-phenyl)benzofuran with chromium trioxide in refluxing acetic acid for 30 min, followed by saponification of the resulting keto ester (65%) with potassium hydroxide in refluxing ethanol for 1 h (66%) [1117].
 - Preparation by condensation of resorcinol and o-anisic acid with boron trifluoride-etherate in carbon tetrachloride [1254], according to [360].
 - Also obtained by hydrolysis of various substituted keto anils^T with potassium hydroxide in refluxing ethanol for 8 h [415],
 - ^T4-(N-phenyl-o-anisimidoyl)resorcinol;
 - ^T4-(N-o-tolyl-o-anisimidoyl)resorcinol;
 - ^T4-[N-(p-methoxyphenyl)-o-anisimidoyl]resorcinol;
 - ^T4-[N-(p-ethoxyphenyl)-o-anisimidoyl]resorcinol.
 - Also refer to: [1259].
- m.p. 247–248° [415], 175° [1117]. One of the reported melting points is obviously wrong. IR [1117].

(2,4-Dihydroxyphenyl)(3-methoxyphenyl)methanone $C_{14}H_{12}O_4$ mol.wt. 244.25

Syntheses

- Preparation by reaction of m-anisoyl chloride with resorcinol in the presence of aluminium chloride in nitrobenzene at r.t. for 48 h (86%) [1137].
 - Obtained (poor yield) by condensation of m-anisic acid with resorcinol in the presence of zinc chloride at 160° for 10 min (Nencki reaction) (4%) [1137].
- m.p. 176° [1137]; Spectra (NA).

(2,4-Dihydroxyphenyl)(4-methoxyphenyl)methanone

[5298-27-1]

 $C_{14}H_{12}O_4$ mol.wt. 244.25

Syntheses

- Preparation by reaction of p-methoxybenzoic acid (p-anisic acid) with resorcinol,
 - in the presence of Zeolite-H-beta in refluxing p-chlorotoluene (162°) for 3 h, with stirring and azeotropic removal of water (55%) [53];
 - in the presence of zinc chloride at 160° (Nencki reaction) [188];
 - in the presence of zinc chloride and phosphorous oxychloride during 3 h at 65° [193];

- in the presence of zinc chloride and a mixture of polyphosphoric acid/85% phosphoric acid (60:40) at 40°. Then, during 1.5 h, phosphorous trichloride was added and the mixture heated at 60° for 16 h (98%) [194];
 - in the presence of boron trifluoride without solvent at 160° for 2 h in a sealed tube (67%) [185] or in tetrachloroethane on a steam bath for 4 h (81%) [113];
 - in hydrofluoric acid at 100° in a stainless steel bomb [113].
- Preparation by condensation of p-anisoyl chloride with resorcinol in the presence of aluminium chloride in nitrobenzene during 48 h at r.t. (73%) [1137].
- Also obtained by hydrolysis of various substituted keto anils^T with potassium hydroxide in refluxing ethanol for 8 h [415],
- ^T4-(N-phenyl-p-anisimidoyl)resorcinol;
- ^T4-(N-o-tolyl-p-anisimidoyl)resorcinol;
- ^T4-[N-(p-methoxyphenyl)-p-anisimidoyl]resorcinol;
- ^T4-[N-(p-ethoxyphenyl)-p-anisimidoyl]resorcinol.
- Also refer to: [235,626].
- m.p. 165° [113,188], 164° [185], 163°4–164°8 [194], 163° [235], 160° [1137], 158–159° [415]; UV [113,235]; paper chromatography [383].

(2,5-Dihydroxyphenyl)(2-methoxyphenyl)methanone

[140660-43-1]

C₁₄H₁₂O₄ mol.wt. 244.25

Syntheses

- Obtained by photochemical addition of o-anisaldehyde to 1,4-benzoquinone in benzene in the presence of benzophenone for 5 days (72%) [1255].
- Preparation by irradiation of a solution of 1,4-benzo-quinone and salicylaldehyde in benzene under nitrogen for 5 days (62%) [259].

– Also refer to: [1270].

m.p. 145–148° [259]; ¹H NMR [259], IR [259], MS [259]; TLC [259].

(2,5-Dihydroxyphenyl)(4-methoxyphenyl)methanone

[160720-40-1]

C₁₄H₁₂O₄ mol.wt. 244.25

Synthesis

- Obtained by photochemical addition of p-anisaldehyde to 1,4-benzoquinone in benzene in the presence of benzophenone for 5 days (77%) [1255].

m.p. and Spectra (NA).

(2,4-Dihydroxyphenyl)[4-(methylsulfonyl)phenyl]methanone

[36419-33-7]

C₁₄H₁₂O₅S mol.wt. 292.31

Synthesis

– Refer to: [235].

m.p. 202° [235]; UV [235].

(2,4-Dihydroxyphenyl)(4-ethenylphenyl)methanone

[66787-22-2]

C₁₅H₁₂O₃ mol.wt. 240.26

Syntheses

– Preparation by reaction of aqueous potassium hydroxide with 2,4-dihydroxy-4'-(2-bromo-ethyl)benzophenone in the presence of hydroquinone in refluxing methanol for 1.5 h with nitrogen bubbling (40%) [1147].

– Preparation, first by dehydrobromination of 2,4-diacetoxy-4'-(1-bromoethyl)benzophenone with tri-n-butylamine in the presence of picric acid as polymerization inhibitor in refluxing N,N-di-methylacetamide (140°) for 80 min, under nitrogen, then hydrolysis of the resulting new keto ester (2,4-diacetoxy-4'-vinylbenzophenone) (42%) with sodium bicarbonate in refluxing aqueous methanol for 1 h (33%) [1271].

m.p. 96° [1271,1272], 91–93° [1147]; ¹H NMR [1147,1271], IR [1147,1271], UV [1147,1271], MS [1147].

[4-(2-Bromoethyl)phenyl](2,4-dihydroxyphenyl)methanone

[80167-04-0]

C₁₅H₁₃BrO₃ mol.wt. 321.17

Synthesis

– Preparation by reaction of p-(2-bromoethyl)-benzocyanide with resorcinol (Hoesch reaction) (53%) [1147].

m.p. 113–115° [1147]; Spectra (NA).

(3-Chloro-4,5-dimethylphenyl)(2,5-dihydroxyphenyl)methanone

[161463-57-6]

C₁₅H₁₃ClO₃ mol.wt. 276.72

Synthesis

N.B.: This compound is mentioned in [Chem. Abstr., **122**, 187188v (1995)]. Nevertheless, the benzophenone in question is not described in the original paper [1250]. Actually, in this one, all substituted benzophenones without exception have the two *ortho* positions to the carbonyl group occupied.

m.p. and Spectra (NA).

(2,4-Dihydroxyphenyl)(2,4-dimethylphenyl)methanone

[36130-59-3]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Refer to: [801].

m.p. and Spectra (NA).

(2,4-Dihydroxyphenyl)(2,6-dimethylphenyl)methanone

[147809-19-6]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Obtained by Friedel–Crafts acylation of resorcinol with 2,6-dimethylbenzoic acid in refluxing p-chlorotoluene (162°), with stirring and azeotropic removal of water,

- in the presence of Amberlyst-15 for 2 h (98%) [53];
- in the presence of Zeolite-H-beta for 5 h (32%) [53].

– Also refer to: [1264].

m.p. and Spectra (NA).

(2,4-Dihydroxyphenyl)(3,5-dimethylphenyl)methanone

[36419-35-9]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Refer to: [1252] (Japanese patent) and [235].

m.p. 158° [235]; UV [235].

(2,4-Dihydroxyphenyl)(4-ethylphenyl)methanone

[66802-91-3]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Preparation by reaction of resorcinol with p-ethyl-benzoic acid in tetrachloroethane in the presence of boron trifluoride at 80° for 4 h (59%) [1271].

– Also refer to: [1273,1274].

m.p. 111–113° [1271]; b.p._{0.1} 195–200° [1271]; ¹H NMR [1271], IR [1271], UV [1271].

(2,4-Dihydroxyphenyl)(3,4-dimethoxyphenyl)methanone

[128996-02-1]

 $C_{15}H_{14}O_5$ mol.wt. 274.27

Syntheses

- Preparation by reaction of veratric acid with resorcinol in the presence of zinc chloride at 160° for 7 min (24%) (Nencki reaction) [1137].
- Preparation by reaction of veratroyl chloride with resorcinol in the presence of aluminium chloride in nitrobenzene during 3 days (60–64%) [1137].
- Also obtained from β -(3-hydroxy-4-veratroylphenoxy)propionic acid with aqueous sodium hydroxide solution [218].

m.p. 177° [1137], 149° [218]. One of the reported melting points is obviously wrong. Spectra (NA).

(2,5-Dihydroxyphenyl)(2,4-dimethoxy-6-methylphenyl)methanone

[78044-94-7]

 $C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

- Obtained by photo-Fries rearrangement of 4-hydroxy-phenyl 2,4-dimethoxy-6-methylbenzoate in benzene under nitrogen for 4 h (33%) [1167].

m.p. 228–229° [1167]; 1H NMR [1167], IR [1167], UV [1167], MS [1167].

(3,4-Dihydroxyphenyl)(2,4,6-trimethoxyphenyl)methanone (Cotogenin) $C_{16}H_{16}O_6$ mol.wt. 304.30

Synthesis

- Obtained by reaction of 3,4-(diacetoxy) benzonitrile with phloroglucinol trimethyl ether in the presence of zinc chloride and hydrochloric acid, followed by hydrolysis of the resulting ketimine hydrochloride (16%) (Hoesch reaction) [1275].
- Also refer to: [450,772].

m.p. 219–220° [1275], 217° [450], 210° [447]; Spectra (NA).

(2,4-Dihydroxyphenyl)[4-(1,1-dimethylethyl)phenyl]methanone

[21332-56-9]

 $C_{17}H_{18}O_3$ mol.wt. 270.33

Synthesis

- Refer to: [235,1276].

m.p. 162° [235]; UV [235].

(2,5-Dihydroxyphenyl)[4-(1,1-dimethylethyl)phenyl]methanone

[169696-58-6]

 $C_{17}H_{18}O_3$ mol.wt. 270.33

Synthesis

– Preparation by total demethylation of 4'-tert-butyl-2,5-dimethoxybenzophenone (SM) with boron tribromide in methylene chloride, first at -30° for

30 min, then at 22° for 5 h (86%). SM was obtained by Friedel–Crafts acylation of hydroquinone dimethyl ether with p-tert-butylbenzoyl chloride in methylene chloride in the presence of aluminium chloride at 0° for 8 h (84%) [1258].

m.p. $115-116^\circ$ [1258]; 1H NMR [1258].

(2,4-Dihydroxyphenyl)[4-(1-methylbutyl)phenyl]methanone $C_{18}H_{20}O_3$ mol.wt. 284.36

Synthesis

– Preparation by reaction of p-sec-amyl-benzoic acid with resorcinol in the presence of boron trifluoride in tetra-chloroethane on a steam bath for 4 h [113].

b.p._{0.75} $235-240^\circ$ [113]; Spectra (NA).

(3,5-Dihydroxyphenyl)(4-phenoxy-3,5-*d*₂-phenyl)methanone

[176738-21-9]

 $C_{19}H_{12}D_2O_4$ mol.wt. 308.33

Synthesis

– Preparation by demethylation of 3,5-dimethoxy-4'-(phenoxy-*d*₃)benzophenone with 48% hydrobromic acid in refluxing acetic acid for 16 h (92%) (compound **21**). The acidic treatment exchanges exclusively the deuterium atoms in the 2'', 4'' and 6'' positions, because of the mesomeric inductive effect of the exocyclic oxygen [906].

m.p. (NA), white solid [906]; 1H NMR [906], ^{13}C NMR [906].

2.2.1.3 Substituents Located on Both Rings**(2,3,4,5,6-Pentafluorophenyl)(2,3,5-trifluoro-4,6-dihydroxyphenyl)methanone**

[32541-20-1]

 $C_{13}H_2F_8O_3$ mol.wt. 358.14

Synthesis

– Preparation by total demethylation of 2,4-dimethoxy-2',3,3',4',5,5',6,6'-octafluorobenzophenone in methylene chloride with aluminium chloride (2 mol) at 20° (73%) [570].

m.p. $118-120^\circ$ [570]; IR [570].

(2,3-Dichloro-4,5-dihydroxyphenyl)(2-fluorophenyl)methanone

[103843-57-8]

 $C_{13}H_7Cl_2FO_3$ mol.wt. 301.10

Synthesis

– Preparation by reaction of 2-fluorobenzoyl chloride with 3,4-dichloro-1,2-dihydroxybenzene in the presence of aluminium chloride in refluxing ethylene dichloride during 24 h (75%) [841,842].

m.p. 164–165° [841,842]; 1H NMR [841,842], IR [841,842].

(5-Chloro-2,4-dihydroxy-3-nitrophenyl)(4-chlorophenyl)methanone $C_{13}H_7Cl_2NO_5$ mol.wt. 328.11

Synthesis

– Obtained by reaction of concentrated nitric acid with 4',5-dichloro-2,4-dihydroxybenzophenone (50%) [1082].

m.p. 120° [1082]; TLC [1082]; 1H NMR [1082], IR [1082], MS [1082].

(5-Chloro-2,4-dihydroxyphenyl)(2,4-dichlorophenyl)methanone $C_{13}H_7Cl_3O_3$ mol.wt. 317.55

Synthesis

– Preparation by reaction of 2,4-dichlorobenzotrichloride with 4-chlororesorcinol [211].

m.p. and Spectra (NA).

(2,6-Difluorophenyl)(3,4-dihydroxy-5-nitrophenyl)methanone

[134612-45-6]

 $C_{13}H_7F_2NO_5$ mol.wt. 295.20

Synthesis

– Preparation by demethylation of 2',6'-difluoro-4-hydroxy-3-methoxy-5-nitrobenzophenone with hydrobromic acid in refluxing aqueous acetic acid [1019].

m.p. 194–196° [1019]; Spectra (NA).

(2,4-Dihydroxy-3,5-dinitrophenyl)(3-nitrophenyl)methanone $C_{13}H_7N_3O_9$ mol.wt. 349.21

Synthesis

– Preparation by slowly adding (2 h) nitric acid (d = 1.42) to a solution of resbenzophenone in concentrated sulfuric acid (d = 1.84) at 5–10°. The mixture was allowed to stand overnight, then

heated at 50° for 30 min (quantitative yield) [227].

N.B.: The first crop from 95% ethanol contained 12–14% of the 2,4-dihydroxy-3,5-dinitrobenzophenone.

m.p. 178–180° [227]; Spectra (NA).

(3-Bromo-2,5-dihydroxyphenyl)(2-chlorophenyl)methanone

[153907-03-0] $C_{13}H_8BrClO_3$ mol.wt. 327.56

Synthesis

– Preparation by reaction of boron tribromide with 3-bromo-2'-chloro-2,5-dimethoxybenzophenone in methylene chloride at 0° (95%) [1251].

m.p. 150° [1251]; 1H NMR [1251], IR [1251].

(3-Bromo-2,5-dihydroxyphenyl)(4-chlorophenyl)methanone

[153907-04-1] $C_{13}H_8BrClO_3$ mol.wt. 327.56

Synthesis

– Preparation by demethylation of 3-bromo-4'-chloro-2,5-di-methoxybenzophenone with boron tribromide in methylene chloride at 0° (86%) [1251].

m.p. 90° [1251]; 1H NMR [1251], IR [1251].

(4-Bromophenyl)(4-chloro-2,5-dihydroxyphenyl)methanone

[161463-53-2] $C_{13}H_8BrClO_3$ mol.wt. 327.56

Synthesis

– Preparation by demethylation of 4'-bromo-4-chloro-2,5-di-methoxybenzophenone (SM) with boron tribromide in methylene chloride at 0° for 15–17 h (70–95%). SM was prepared by reaction of 4-bromobenzoic acid with 2-chloro-1,4-dimethoxybenzene in the presence of polyphosphoric acid at 60–70° for 6–7 h (40–83%) [1250].

m.p. (NA); 1H NMR [1250], IR [1250].

(4-Chlorophenyl)(5-fluoro-2,3-dihydroxyphenyl)methanone

[92735-05-2] $C_{13}H_8ClFO_3$ mol.wt. 266.65

Synthesis

– Obtained by action of dilute hydrogen peroxide with 4'-chloro-5-fluoro-3-formyl-2-hydroxybenzophenone in refluxing aqueous sodium hydroxide under argon for 30 min [1077].

m.p. 124–126° [1077]; 1H NMR [1077], IR [1077].

(2-Chlorophenyl)(3,4-dihydroxy-5-nitrophenyl)methanone

[134612-46-7]

 $C_{13}H_8ClNO_5$ mol.wt. 293.66

Synthesis

– Preparation by demethylation of 2'-chloro-4-hydroxy-3-methoxy-5-nitrobenzophenone with hydrobromic acid in refluxing aqueous acetic acid [1019].

m.p. 129–131° [1019]; Spectra (NA).

(3-Chlorophenyl)(3,4-dihydroxy-5-nitrophenyl)methanone

[134612-47-8]

 $C_{13}H_8ClNO_5$ mol.wt. 293.66

Synthesis

– Preparation by demethylation of 3'-chloro-4-hydroxy-3-methoxy-5-nitrobenzophenone with hydrobromic acid in refluxing aqueous acetic acid [1019].

m.p. 143–145° [1019]; Spectra (NA).

(2-Chloro-4,5-dihydroxyphenyl)(3-chlorophenyl)methanone

[91197-11-4]

 $C_{13}H_8Cl_2O_3$ mol.wt. 283.11

Synthesis

– Preparation by demethylation of 2,3'-dichloro-4,5-di-methoxybenzophenone (SM) with pyridinium chloride for 2 h at 180–200°. SM was obtained by reaction of m-chlorobenzoic acid with 1-chloro-3,4-dimethoxybenzene in the presence of phosphorous pentoxide in methanesulfonic acid for 30 min at 70° [1199].

m.p. and Spectra (NA).

(4-Chloro-2,5-dihydroxyphenyl)(3-chlorophenyl)methanone

[161463-60-1]

 $C_{13}H_8Cl_2O_3$ mol.wt. 283.11

Synthesis

– Preparation by demethylation of 3',4-dichloro-2,5-di-methoxybenzophenone (SM) with boron tribromide in methylene chloride at 0° for 15–17 h (70–95%). SM was prepared by reaction of m-chlorobenzoic acid with 2-chloro-1,4-dimethoxybenzene in the presence of polyphosphoric acid at 60–70° for 6–7 h (40–83%) [1250].

m.p. (NA); 1H NMR [1250], IR [1250].

(5-Chloro-2,3-dihydroxyphenyl)(4-chlorophenyl)methanone[92735-01-8] $C_{13}H_8Cl_2O_3$ mol.wt. 283.11

Synthesis

– Obtained by action of dilute hydrogen peroxide with 4',5-di-chloro-3-formyl-2-hydroxybenzophenone in refluxing aqueous sodium hydroxide under argon for 30 min [1077].

m.p. 133–135° [1077]; 1H NMR [1077], IR [1077].**(5-Chloro-2,4-dihydroxyphenyl)(2-chlorophenyl)methanone**[50685-42-2] $C_{13}H_8Cl_2O_3$ mol.wt. 283.11

Synthesis

– Preparation by reaction of 2-chlorobenzotrichloride with 4-chlororesorcinol in isopropanol at 70–80° (81%) [211].

m.p. 187–188° [211]; Spectra (NA).

(5-Chloro-2,4-dihydroxyphenyl)(4-chlorophenyl)methanone[50685-41-1] $C_{13}H_8Cl_2O_3$ mol.wt. 283.11

Syntheses

- Preparation by demethylation of 4',5-dichloro-2-hydroxy-4-methoxybenzophenone with a 47% aqueous solution of hydrobromic acid in refluxing acetic acid for 18 h under nitrogen (22%) [1082].
- Preparation by reaction of 4-chlorobenzotrichloride with 4-chlororesorcinol in 40% aqueous isopropanol solution at 70–80° (85%) [211].

m.p. 188°5–189°5 [211], 170–190° [1082]. A typing error probably occurred in the published data. 1H NMR [1082], IR [1082], MS [1082]; TLC [1082].

(3,4-Dihydroxy-5-nitrophenyl)(2-fluorophenyl)methanone[125628-97-9] $C_{13}H_8FNO_5$ mol.wt. 277.21

Synthesis

- Preparation by demethylation of 2'-fluoro-4-hydroxy-3-methoxy-5-nitrobenzophenone with 48% hydrobromic acid in refluxing acetic acid for 4 h (86%) [1019,1084].
- Also refer to: [1277–1281].

m.p. 169–171° [1019,1084]; 1H NMR [1084], MS [1084]; LD₅₀ [1282].

(3,4-Dihydroxy-5-nitrophenyl)[2-(fluoro-¹⁸F)]phenylmethanone

[172546-74-6]

C₁₃H₈FNO₅

mol.wt. 276.21

**Synthesis**

– Preparation by demethylation of 2'-[¹⁸F] fluoro-3,4-di-methoxy-5-nitrobenzophenone (SM) in dimethyl sulfoxide with aqueous hydrobromic acid first at r.t. and at 140° for 30 min. SM was obtained by action of [¹⁸F] cesium fluoride with 3,4-dimethoxy-2',5-dinitrobenzophenone in dimethyl sulfoxide for 10 min at 150° in a silicone-coated tube (Vacutainer).

– Refer to: Chem. Abstr., **127**, 17465u (1997).

m.p. and Spectra (NA).

(3,4-Dihydroxy-5-nitrophenyl)(3-fluorophenyl)methanone

[134612-43-4]

C₁₃H₈FNO₅

mol.wt. 277.21

**Synthesis**

– Preparation by demethylation of 3'-fluoro-4-hydroxy-3-methoxy-5-nitrobenzophenone with hydrobromic acid in refluxing aqueous acetic acid [1019].

m.p. 124–126° [1019]; Spectra (NA).

(3,4-Dihydroxy-5-nitrophenyl)(4-fluorophenyl)methanone

[134612-44-5]

C₁₃H₈FNO₅

mol.wt. 277.21

**Synthesis**

– Preparation by demethylation of 4'-fluoro-4-hydroxy-3-methoxy-5-nitrobenzophenone with hydrobromic acid in refluxing aqueous acetic acid [1019].

m.p. 171–173° [1019]; Spectra (NA).

(3,4-Dihydroxy-5-nitrophenyl)(2-nitrophenyl)methanone

[190523-00-3]

C₁₃H₈N₂O₇

mol.wt. 304.22

**Synthesis**

– Preparation by demethylation of 4-hydroxy-3-methoxy-2',5-dinitrobenzophenone with 48% hydrobromic acid in refluxing acetic acid for 6 h (70%). -Refer to: Chem. Abstr., **127**, 17465u (1997)^T.

m.p. (NA); ¹H NMR^T, MS^T.

(3-Amino-5-chloro-2,4-dihydroxyphenyl)(4-chlorophenyl)methanone

[87119-05-9]

 $C_{13}H_9Cl_2NO_3$

mol.wt. 298.12

Synthesis

– Obtained from the corresponding hydrochloride described below [1082].

m.p. and Spectra (NA).

(3-Amino-5-chloro-2,4-dihydroxyphenyl)(4-chlorophenyl)methanone*(Hydrochloride)*

[87119-06-0]

 $C_{13}H_9Cl_2NO_3 \cdot HCl$

mol.wt. 334.59

Synthesis

– Preparation by hydrogenation of 4',5-dichloro-2,4-di-hydroxy-3-nitrobenzophenone in chloroform/ethanol solution in the presence of 10% Pd/C, followed by treatment of the resulting amino compound with concentrated hydrochloric acid in ethanol (51%) [1082].

m.p. 180° [1082]; 1H NMR [1082], IR [1082], MS [1082]; TLC [1082].**(3,4-Dihydroxy-5-nitrophenyl)[2-(trifluoromethyl)phenyl]methanone**

[134612-50-3]

 $C_{14}H_8F_3NO_5$

mol.wt. 327.22

Synthesis

– Preparation by demethylation of 4-hydroxy-3-methoxy-5-nitro-2'-(trifluoromethyl)benzophenone with hydrobromic acid in refluxing aqueous acetic acid [1019].

m.p. 146–148° [1019]; Spectra (NA).

(3,4-Dihydroxy-5-nitrophenyl)[4-(trifluoromethyl)phenyl]methanone

[134611-76-0]

 $C_{14}H_8F_3NO_5$

mol.wt. 327.22

Synthesis

– Preparation by demethylation of 4-hydroxy-3-methoxy-5-nitro-4'-(trifluoromethyl)benzophenone first with 33% hydrobromic acid in acetic acid at 90° for 18 h, then with 48% hydrobromic acid in aqueous acetic acid at 110° for 18 h [1019].

m.p. 116–118° [1019]; Spectra (NA).

(2,4-Dihydroxy-3,5,6-trinitrophenyl)(4-methoxy-3-nitrophenyl)methanone

[67246-07-5]

 $C_{14}H_8N_4O_{12}$

mol.wt. 424.24

Synthesis

– Obtained by partial methylation of 2,4,4'-trihydroxy-3,5,3',6-tetranitrobenzophenone with dimethyl sulfate in the presence of potassium carbonate in acetone [592].

m.p. 75° [592]; 1H NMR [592].**[3-Chloro-2,4 (or 2,5)-dihydroxy-5 (or 4)-methoxyphenyl](2-fluorophenyl)methanone**

[140708-53-8]

 $C_{14}H_{10}ClFO_4$

mol.wt. 296.68

Synthesis

– Obtained by reaction of o-fluorobenzoyl chloride with 3-chloro-1,2,4-trimethoxybenzene in the presence of aluminium chloride in ethylene dichloride between 0° and 5°, then at r.t. for 8 h and at reflux for 1.5 h (71%) [704].

m.p. 136–137° [704]; Spectra (NA).

(4-Chloro-2,5-dihydroxyphenyl)(3-chloro-4-methylphenyl)methanone

[161463-56-5]

 $C_{14}H_{10}Cl_2O_3$

mol.wt. 297.14

Synthesis

– Preparation by demethylation of 3',4'-dichloro-2,5-di-methoxy-4'-methylbenzophenone (SM) with boron tribromide in methylene chloride at 0° for 15–17 h (70–95%). SM was prepared by reaction of 3-chloro-4-methylbenzoic acid with 2-chloro-1,4-dimethoxybenzene in the presence of polyphosphoric acid at 60–70° for 6–7 h (40–83%) [1250].

m.p. (NA); 1H NMR [1250], IR [1250].**(2,4-Dichlorophenyl)(2,5-dihydroxy-3-methylphenyl)methanone**

[153907-06-3]

 $C_{14}H_{10}Cl_2O_3$

mol.wt. 297.14

Synthesis

– Preparation by demethylation of 2',4'-dichloro-2,5-di-methoxy-3-methylbenzophenone with boron tribromide in methylene chloride at 0° (77%) [1251].

m.p. 150° [1251]; 1H NMR [1251], IR [1251].

(2,6-Dichlorophenyl)(4,5-dihydroxy-2-methylphenyl)methanone

[91197-05-6]

 $C_{14}H_{10}Cl_2O_3$

mol.wt. 297.14

Syntheses

- Preparation by total demethylation of 2',6'-dichloro-4,5-di-methoxy-2-methylbenzophenone (SM) [1072], with pyridinium chloride for 2 h at 180–200° [1199]. SM was obtained by reaction of 2,6-dichlorobenzoic acid with 1,2-dimethoxy-4-methylbenzene in the presence of phosphorous pentoxide in methanesulfonic acid for 30 min at 70° [1199].
- Preparation by Friedel–Crafts acylation of 4-methylpyrocatechol with 2,6-dichlorobenzoyl chloride [1072].
- Also refer to: [1200].

m.p. 206–207° [1199], 201–203° [1072]; Spectra (NA).

(2,4-Dihydroxy-3,5-dinitrophenyl)(2-methoxyphenyl)methanone

[79204-68-5]

 $C_{14}H_{10}N_2O_8$

mol.wt. 334.24

Synthesis

- Preparation by oxidation of 6-acetoxy-2,3-bis(o-methoxy-phenyl)-5,7-dinitrobenzofuran with chromium trioxide in acetic acid, followed by saponification of the keto ester so formed with potassium hydroxide in ethanol (55%) [1117].

m.p. 280° [1117]; IR [1117].

(2-Bromophenyl)(4,5-dihydroxy-2-methylphenyl)methanone

[91197-04-5]

 $C_{14}H_{11}BrO_3$

mol.wt. 307.14

Synthesis

- Preparation by demethylation of 2'-bromo-4,5-dimethoxy-2-methylbenzophenone (SM) with pyridinium chloride for 2 h at 180–200°. SM was obtained by reaction of o-bromo-benzoic acid with 1,2-dimethoxy-4-methylbenzene in the presence of phosphorous pentoxide in methanesulfonic acid for 30 min at 70° [1199].

m.p. 177–178° [1199]; Spectra (NA).

(4-Chloro-2,5-dihydroxyphenyl)(4-methylphenyl)methanone

[161463-55-4]

 $C_{14}H_{11}ClO_3$

mol.wt. 262.69

Synthesis

- Preparation by demethylation of 4-chloro-2,5-dimethoxy-4'-methylbenzophenone (SM) with boron tribromide in methylene chloride at 0° for 15–17 h (70–95%).

SM was prepared by reaction of p-toluic acid with 2-chloro-1,4-di-methoxybenzene in the presence of polyphosphoric acid at 60–70° for 6–7 h (40–83%) [1250].

m.p. (NA); ¹H NMR [1250], IR [1250].

(2-Chlorophenyl)(2,5-dihydroxy-3-methylphenyl)methanone

[153907-05-2] $C_{14}H_{11}ClO_3$ mol.wt. 262.69

Synthesis

– Preparation by demethylation of 2'-chloro-2,5-dimethoxy-3-methylbenzophenone with boron tri-bromide in methylene chloride at 0° (76%) [1251].

m.p. 140° [1251]; ¹H NMR [1251], IR [1251].

(4-Chlorophenyl)(2,5-dihydroxy-3-methylphenyl)methanone

[153907-07-4] $C_{14}H_{11}ClO_3$ mol.wt. 262.69

Synthesis

– Preparation by demethylation of 4'-chloro-2,5-dimethoxy-3-methylbenzophenone with boron tribromide in methylene chloride at 0° (70%) [1251].

m.p. 190° [1251]; ¹H NMR [1251], IR [1251].

(3,4-Dihydroxy-5-nitrophenyl)(2-methylphenyl)methanone

[134612-48-9] $C_{14}H_{11}NO_5$ mol.wt. 273.25

Synthesis

– Preparation by demethylation of 4-hydroxy-3-methoxy-2'-methyl-5-nitrobenzophenone with hydrobromic acid in refluxing aqueous acetic acid [1019].

m.p. 164–166° [1019]; Spectra (NA).

(3,4-Dihydroxy-5-nitrophenyl)(4-methylphenyl)methanone

[134308-13-7] $C_{14}H_{11}NO_5$ mol.wt. 273.25

Synthesis

– Preparation by demethylation of 4-hydroxy-3-methoxy-4'-methyl-5-nitrobenzophenone with hydrobromic acid in refluxing aqueous acetic acid [1019].

– Also refer to: [1283–1285].

m.p. 146–148° [1019]; Spectra (NA).

(2,6-Dichlorophenyl)(2,3-dihydroxy-4-methoxy-6-methylphenyl)methanone

[183725-80-6]

 $C_{15}H_{12}Cl_2O_4$ mol.wt. 327.16

Synthesis

– Preparation by partial demethylation of 2',6'-dichloro-2,3,4-trimethoxy-6-methylbenzophenone in acetic acid in the presence of 30% hydrobromic acid for 2 h at 75° (39%) [1072].

m.p. 182° [1072]; Spectra (NA).

(2,4-Dihydroxy-3-methylphenyl)(2-methylphenyl)methanone

[147809-15-2]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Preparation by treating o-toluic acid with 2-methylresorcinol in the presence of Zeolite-H-beta (previously activated at 400°), in refluxing p-chlorotoluene or n-decane for 2–3 h (with water removal) (74%) [53,196].

– Also refer to: [1264].

m.p. 187–188°5 [53,196]; 1H NMR [53,196].

(4,5-Dihydroxy-2-methylphenyl)(2-methylphenyl)methanone

[91197-07-8]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Preparation by demethylation of 4,5-dimethoxy-2,2'-di-methylbenzophenone (SM) with pyridinium chloride for 2 h at 180–200°. SM was obtained by reaction of o-toluic acid with 1,2-dimethoxy-4-methylbenzene in the presence of phosphorous pentoxide in methanesulfonic acid for 20 min at 70° [1199].

– Also refer to: [1200].

m.p. 149–150° [1199]; Spectra (NA).

(2,4-Dihydroxy-3-methylphenyl)(2-methoxyphenyl)methanone

[85636-84-6]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Synthesis

– Refer to: [193].

m.p. and Spectra (NA).

(2,4-Dihydroxy-3-methylphenyl)(4-methoxyphenyl)methanone

[79861-83-9]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Synthesis

– Preparation by reaction of p-anisic acid with 2-methyl-resorcinol in tetrachloroethane in the presence of boron trifluoride at 80° for 4 h (66%) [224].

m.p. 194–195° [224]; 1H NMR [224].**(2,5-Dihydroxy-4-methoxyphenyl)(2-methoxyphenyl)methanone**

[42833-90-9]

 $C_{15}H_{14}O_5$ mol.wt. 274.27

Synthesis

– Preparation by reaction of 2-hydroxy-2',4,5-trimethoxy-benzophenone with DDQ (2,3-Dichloro-5,6-dicyano-1,4-benzoquinone) in refluxing benzene for 1.5 h, followed by complete evaporation of the solvent, then treatment of the resulting brown oil in boiling methanol (58%) [416].

m.p. 195–196° [416]; UV [416], MS [416].

(2,5-Dihydroxy-4-methoxyphenyl)(4-methoxyphenyl)methanone

[42045-63-6]

 $C_{15}H_{14}O_5$ mol.wt. 274.27

Syntheses

– Preparation by reaction of p-anisic acid with 2-methoxyhydroquinone in the presence of boron trifluoride-etherate, heating at 100° for 30–45 min (26%) [650].

– Also obtained (poor yield) by reaction of 2-hydroxy-4,4'-dimethoxybenzophenone with lead tetraacetate in acetic acid at 100° for 5 h (1%) [650].

m.p. 164–165° [650]; 1H NMR [650], IR [650], UV [650].**(2,6-Dihydroxy-4-methoxyphenyl)(4-methoxyphenyl)methanone**

[55051-89-3]

 $C_{15}H_{14}O_5$ mol.wt. 274.27

Synthesis

– Obtained by partial methylation of 2,4',6-trihydroxy-4-methoxybenzophenone with diazomethane in ethyl ether [1286].

m.p. (NA); 1H NMR [1286].

(2-Chlorophenyl)(2,4-dihydroxy-3-propylphenyl)methanone

[115296-10-1]

 $C_{16}H_{15}ClO_3$ mol.wt. 290.75

Synthesis

– Obtained (poor yield) by reaction of o-chlorobenzoyl chloride with 1,3-dimethoxy-2-propylbenzene in methylene chloride in the presence of aluminium chloride, first at 0° for 2 h and at r.t. for 1 h (10%) [1029].

oil [1029]; b.p. and Spectra (NA).

(4,5-Dihydroxy-2-methylphenyl)(2,6-dimethylphenyl)methanone

[91197-06-7]

 $C_{16}H_{16}O_3$ mol.wt. 256.30

Synthesis

– Preparation by demethylation of 4,5-dimethoxy-2,2',6'-tri-methylbenzophenone (SM) with pyridinium chloride for 2 h at 180–200°. SM was obtained by reaction of 2,6-di-methylbenzoic acid with 1,2-dimethoxy-4-methylbenzene in methanesulfonic acid in the presence of phosphorous pentoxide for 30 min at 70° [1199].

– Also refer to: [1200].

m.p. 193–195° [1199]; Spectra (NA).

(2,5-Dihydroxy-4-methoxyphenyl)(3,4-dimethoxyphenyl)methanone

[62495-45-8]

 $C_{16}H_{16}O_6$ mol.wt. 304.30

Synthesis

– Obtained (poor yield) by oxidation of 2-hydroxy-3',4,4',5-tetramethoxybenzophenone with manganese (III) acetate dihydrate in refluxing acetic acid for 2 h (9%) [1136].

m.p. 208–209° [1136]; 1H NMR [1136], IR [1136], UV [1136].**(3-Chloro-4,6-dihydroxy-2-methylphenyl)(2,4,6-trimethoxyphenyl)methanone**

[68048-19-1]

 $C_{17}H_{17}ClO_6$ mol.wt. 352.77

Synthesis

– Preparation by hydrogenolysis of 4,6-bis(benzyloxy)-3-chloro-2',4',6'-trimethoxy-2-methylbenzophenone (SM) with hydrogen in ethyl acetate/

tetrahydrofuran in the presence of 10% Pd/C at 25°. SM was obtained by condensation of 4,6-bis(benzyloxy)-3-chloro-2-methylbenzoic acid with phloroglucinol trimethyl ether in the presence of trifluoroacetic anhydride in methylene chloride under nitrogen for 3 min (87%) [1179].

m.p. 132–133° [1179]; ¹H NMR [1179], IR [1179], MS [1179].

(2,5-Dihydroxy-3,4-dimethoxyphenyl)(4-ethoxyphenyl)methanone

[69471-32-5]

C₁₇H₁₈O₆ mol.wt. 318.33

Synthesis

– Preparation by oxidation of 4'-ethoxy-2-hydroxy-3,4-dimethoxybenzophenone with potassium persulfate (24%) (Elbs reaction) [1168].

m.p. 140–142° [1168]; ¹H NMR [1168], IR [1168].

(2,4-Dihydroxy-6-methylphenyl)(2,4,6-trimethoxyphenyl)methanone

[76631-09-9]

C₁₇H₁₈O₆ mol.wt. 318.33

Synthesis

– Preparation by reaction of triethylamine with 1-(2,4,6-trimethoxyphenyl)-1,3,5,7-octanetetraone (SM) in refluxing tetrahydrofuran in a nitrogen atmosphere for 38 h (quantitative yield) [1287]. SM can be obtained according to two methods:

- acylation of the trilithium salt of 2,4,6-heptanetrione (prepared with LDA in tetrahydrofuran at 0°) with methyl 2,4,6-trimethoxybenzoate in tetrahydrofuran for 17 h at r.t. (55%);
- acylation of the dilithium salt of 2,4-pentanedione with methyl 3-(2,4,6-trimethoxyphenyl)-3-oxopropanoate (sodium salt) (42%).

m.p. 169–173° [1287]; ¹H NMR [1287], IR [1287], MS [1287]; TLC [1287].

(2,4-Dihydroxy-3,5-dimethoxyphenyl)(2,5-dimethoxyphenyl)methanone

C₁₇H₁₈O₇ mol.wt. 334.33

Synthesis

– Obtained (poor yield) by reaction of 2,3,4,5-tetramethoxy-benzoyl chloride with hydroquinone dimethyl ether in benzene in the presence of aluminium chloride (16%) [1160].

m.p. and Spectra (NA).

(3,6-Dihydroxy-2,4-dimethoxyphenyl)(2,5-dimethoxyphenyl)methanone

$C_{17}H_{18}O_7$ mol.wt. 334.33

Synthesis

– Preparation by reaction of 2,5-dimethoxybenzoic acid with 2,6-dimethoxyhydroquinone in trifluoroacetic anhydride [1185].

m.p. and Spectra (NA).

(2-Chlorophenyl)(5-hexyl-2,4-dihydroxyphenyl)methanone

[50685-43-3]

$C_{19}H_{21}ClO_3$ mol.wt. 332.83

Synthesis

– Preparation by reaction of 2-chlorobenzotrichloride with 4-hexylresorcinol in dilute isobutanol at 70–80° (77%) [211].

m.p. and Spectra (NA).

(5-Hexyl-2,4-dihydroxyphenyl)(3-nitrophenyl)methanone

$C_{19}H_{21}NO_5$ mol.wt. 343.38

Synthesis

– Refer to: [113].

m.p. 85° [113]; Spectra (NA).

2.2.2 Hydroxy Groups Located on Both Rings**2.2.2.1 Substituents Located on One Ring****(2,3-Dichloro-4-hydroxyphenyl)(2-hydroxyphenyl)methanone**

[72482-30-5]

$C_{13}H_8Cl_2O_3$ mol.wt. 283.11

Synthesis

– Preparation by total demethylation of 2,3-dichloro-2',4'-dimethoxybenzophenone (SM) with pyridinium chloride at 200° for 1 h. SM was obtained by reaction of o-anisoyl chloride with 2,3-dichloroanisole in ethylene dichloride in the presence of aluminium chloride first at –10° for 2.5 h, then at +5° [476].

– Also refer to: [967].

m.p. 197–201° [476]; Spectra (NA).

(2,3-Dichloro-4-hydroxyphenyl)(4-hydroxyphenyl)methanone

 $C_{13}H_8Cl_2O_3$ mol.wt. 283.11

Synthesis

– Obtained by Friedel–Crafts acylation of 2,3-dichloro-anisole with p-methoxybenzoyl chloride in the presence of aluminium chloride at r.t. [979] or in benzene at 75–80° for 1 h (53%) [1288].

m.p. 208–210° [1288]; Spectra (NA).

(2,5-Dichloro-4-hydroxyphenyl)(4-hydroxyphenyl)methanone

[98155-78-3]

 $C_{13}H_8Cl_2O_3$ mol.wt. 283.11

Synthesis

– Refer to: [901] (compound **20**).

m.p. and Spectra (NA).

(3,5-Dichloro-4-hydroxyphenyl)(3-hydroxyphenyl)methanone

[92005-28-2]

 $C_{13}H_8Cl_2O_3$ mol.wt. 283.11

Synthesis

– Refer to: [1289].

m.p. and Spectra (NA).

(3,5-Dichloro-4-hydroxyphenyl)(4-hydroxyphenyl)methanone

[92005-19-1]

 $C_{13}H_8Cl_2O_3$ mol.wt. 283.11

Synthesis

– Preparation by acylation of 2,6-dichlorophenol with p-(trichloromethyl)phenyl p-(trichloromethyl)benzoate in methylene chloride in the presence of aluminium chloride at 0–5° over 1 h, then at r.t. for 1 h, followed by alkaline hydrolysis of the resulting keto ester [325] (Japanese patent).

m.p. and Spectra (NA).

(2-Chloro-4-hydroxyphenyl)(2-hydroxyphenyl)methanone

[126165-47-7]

 $C_{13}H_9ClO_3$ mol.wt. 248.67

Synthesis

– Preparation by Fries rearrangement of m-chloro-phenyl salicylate with aluminium chloride without solvent at 180–182° for 3 h (40%) [506].

m.p. 130° [506]; Spectra (NA).

(2-Chloro-4-hydroxyphenyl)(3-hydroxyphenyl)methanone

[126165-56-8]

 $C_{13}H_9ClO_3$ mol.wt. 248.67

Synthesis

– Obtained (by-product) by Fries rearrangement of m-chloro-phenyl m-methoxybenzoate with aluminium chloride at 182–184° for 3 h (15%) [506].

m.p. 200° [506]; Spectra (NA).

(2-Chloro-4-hydroxyphenyl)(4-hydroxyphenyl)methanone

[98155-77-2]

 $C_{13}H_9ClO_3$ mol.wt. 248.67

Synthesis

– Preparation by reaction of bis(4-trichloromethylphenoxy)-ketone with m-chloro-phenol in methylene chloride in the presence of aluminium chloride, first at 0° for 1.5 h, then at 20° for 3 h, then hydrolysis of the intermediate product so obtained with 20% sodium hydroxide aqueous solution at 20° for 7 h (64%) [901].

m.p. 176–178° (anhydrous) and 100–108° (hemihydrate) [901]; Spectra (NA).

(3-Chloro-2-hydroxyphenyl)(3-hydroxyphenyl)methanone

[126165-53-5]

 $C_{13}H_9ClO_3$ mol.wt. 248.67

Synthesis

– Obtained (by-product) by Fries rearrangement of o-chloro-phenyl m-methoxybenzoate with aluminium chloride at 182–184° for 3 h (13%) [506].

m.p. 121° [506]; Spectra (NA).

(3-Chloro-2-hydroxyphenyl)(4-hydroxyphenyl)methanone

[126165-62-6]

 $C_{13}H_9ClO_3$ mol.wt. 248.67

Synthesis

– Obtained (by-product) by Fries rearrangement of o-chloro-phenyl p-methoxybenzoate with aluminium chloride at 180° for 3 h (10%) [506].

m.p. 152° [506]; Spectra (NA).

(3-Chloro-4-hydroxyphenyl)(2-hydroxyphenyl)methanone

[123861-94-9]

 $C_{13}H_9ClO_3$ mol.wt. 248.67

Syntheses

- Preparation by Fries rearrangement of o-chlorophenyl salicylate with aluminium chloride at 180–183° for 3 h (35%) [506].
 - Preparation by hydrolysis of 2-chloro-4-salicyloylphenyl salicylate [346], a secondary product obtained by Fries rearrangement of o-chlorophenyl salicylate at 180–183° for 3 h (20%) [506].
 - Also obtained (by-product) by Fries rearrangement of o-chlorophenyl 2-(nicotinoyloxy)benzoate with aluminium chloride at 150–152° for 2 h (4%) [346].
- m.p. 113° [346,506]; Spectra (NA).

(3-Chloro-4-hydroxyphenyl)(3-hydroxyphenyl)methanone

[92005-08-8]

 $C_{13}H_9ClO_3$ mol.wt. 248.67

Synthesis

– Preparation by Fries rearrangement of o-chlorophenyl m-methoxybenzoate with aluminium chloride at 182–184° for 3 h (62%) [506].

m.p. 183° [506]; Spectra (NA).

(3-Chloro-4-hydroxyphenyl)(4-hydroxyphenyl)methanone

[92005-17-9]

 $C_{13}H_9ClO_3$ mol.wt. 248.67

Synthesis

– Preparation by Fries rearrangement of o-chlorophenyl p-methoxybenzoate with aluminium chloride at 180° for 3 h (57%) [506].

m.p. 204° [506]; Spectra (NA).

(4-Chloro-2-hydroxyphenyl)(3-hydroxyphenyl)methanone

[126165-57-9]

 $C_{13}H_9ClO_3$ mol.wt. 248.67

Synthesis

– Preparation by Fries rearrangement of m-chlorophenyl m-methoxybenzoate with aluminium chloride at 182–184° for 3 h (55%) [506].

m.p. 132° [506]; Spectra (NA).

(4-Chloro-2-hydroxyphenyl)(4-hydroxyphenyl)methanone

[126165-44-4]

 $C_{13}H_9ClO_3$ mol.wt. 248.67

Synthesis

– Preparation by Fries rearrangement of m-chlorophenyl p-methoxybenzoate with aluminium chloride without solvent at 182–185° for 3 h (47%) [506].

m.p. 170° [506]; Spectra (NA).

(5-Chloro-2-hydroxyphenyl)(2-hydroxyphenyl)methanone

[76237-02-0]

 $C_{13}H_9ClO_3$ mol.wt. 248.67

Syntheses

– Obtained by Fries rearrangement of p-chlorophenyl salicylate with aluminium chloride at 208–210° for 2.5 h (20%) [506].
 – Also obtained by UV light irradiation of p-chlorophenyl salicylate in methanol for 8 h [1290].

m.p. 68–69° [1290], 59–60° [506]; 1H NMR [1290], ^{13}C NMR [1290], IR [1290], UV [1290], MS [1290].**(5-Chloro-2-hydroxyphenyl)(3-hydroxyphenyl)methanone**

[126165-59-1]

 $C_{13}H_9ClO_3$ mol.wt. 248.67

Synthesis

– Preparation by Fries rearrangement of p-chlorophenyl m-methoxybenzoate with aluminium chloride at 182–185° for 3 h (60%) [506].

m.p. 148° [506]; Spectra (NA).

(5-Chloro-2-hydroxyphenyl)(4-hydroxyphenyl)methanone

[126165-40-0]

 $C_{13}H_9ClO_3$ mol.wt. 248.67

Synthesis

– Preparation by Fries rearrangement of p-chlorophenyl p-methoxybenzoate with aluminium chloride without solvent at 182–185° for 3 h (67%) [506].

m.p. 160° [506]; Spectra (NA).

(2-Fluoro-4-hydroxyphenyl)(4-hydroxyphenyl)methanone

[98155-81-8]

 $C_{13}H_9FO_3$ mol.wt. 232.21

Synthesis

– Refer to: [901] (compound **30**).

m.p. and Spectra (NA).

(5-Fluoro-2-hydroxyphenyl)(4-hydroxyphenyl)methanone

[159300-38-6]

 $C_{13}H_9FO_3$ mol.wt. 232.21

Synthesis

– Obtained by demethylation of 5-fluoro-2-hydroxy-4'-methoxybenzophenone with an excess of boron tribromide under nitrogen first at –70° for 2 min, then at 0° for 1 h (47%) [1106].

m.p. 104–105° [1106]; 1H NMR [1106,1108], MS [1106,1108]; HPLC [1106,1108].

(4-Hydroxy-3-nitrophenyl)(4-hydroxyphenyl)methanone

[94737-85-6]

 $C_{13}H_9NO_5$ mol.wt. 259.22

Synthesis

– Refer to: [325] (Japanese patent).

m.p. and Spectra (NA).

(4-Amino-3-hydroxyphenyl)(4-hydroxyphenyl)methanone

[136134-35-5]

 $C_{13}H_{11}NO_3$ mol.wt. 229.24

Synthesis

– Preparation by hydrolysis of 6-(4-hydroxybenzoyl)-benzoxazolinone in aqueous sodium hydroxide [564], according to [565].

m.p. (NA); MS [564].

(2-Hydroxy-3-methylphenyl)(3-hydroxyphenyl)methanone

- Obtained by Fries rearrangement of o-cresyl m-anisate with aluminium chloride without solvent at 120° or 160° for 2 h [340].

m.p. 144° [340]; Spectra (NA).

(2-Hydroxy-4-methylphenyl)(2-hydroxyphenyl)methanone

- Refer to: [294].

m.p. and Spectra (NA).

(2-Hydroxy-4-methylphenyl)(3-hydroxyphenyl)methanone

- Obtained by Fries rearrangement of m-cresyl m-anisate with aluminium chloride without solvent at 120° or 160° for 2 h [340].

m.p. 105° [340]; Spectra (NA).

(2-Hydroxy-4-methylphenyl)(4-hydroxyphenyl)methanone

- Preparation by reaction of p-hydroxybenzoic acid with m-cresol in the presence of boron trifluoride at 150° for 3 h (68%) [150].

m.p. 148–149° [150]; Spectra (NA).

(2-Hydroxy-5-methylphenyl)(2-hydroxyphenyl)methanone

- Preparation by Fries rearrangement of p-tolyl salicylate with aluminium chloride at 140° for 3 h (70%) [345].

- Also obtained by reaction of o-methoxybenzoyl chloride with p-cresol in the presence of aluminium chloride at 100° for 24 h [683].

- Also refer to: [1135].

m.p. 143–144° [345]; Spectra (NA).

(2-Hydroxy-5-methylphenyl)(3-hydroxyphenyl)methanone

[57855-38-6]

 $C_{14}H_{12}O_3$ mol.wt. 228.25

Syntheses

- Preparation by demethylation of 2-hydroxy-3'-methoxy-5-methylbenzophenone with hydrobromic acid in acetic acid [1132,1291].
- Also obtained by Fries rearrangement of p-tolyl m-anisate with aluminium chloride without solvent at 120° or 160° for 2 h (20–30%) [340].

- Also refer to: [1292].

m.p. 136° [340]; Spectra (NA).

(2-Hydroxy-5-methylphenyl)(4-hydroxyphenyl)methanone

[25148-21-4]

 $C_{14}H_{12}O_3$ mol.wt. 228.25

Syntheses

- Preparation by demethylation of 4'-hydroxy-2-methoxy-5-methylbenzophenone (m.p. 160°) with aluminium chloride at 150° [683].
- Preparation by diazotization of 4'-amino-2-hydroxy-5-methylbenzophenone (m.p. 137°), followed by hydrolysis of the resulting diazonium salt [683].

m.p. 150–151° [683]; Spectra (NA).

(3-Hydroxy-4-methylphenyl)(4-hydroxyphenyl)methanone

[75731-48-5]

 $C_{14}H_{12}O_3$ mol.wt. 228.25

Synthesis

- Refer to: [352,355].

m.p. and Spectra (NA).

(4-Hydroxy-2-methylphenyl)(2-hydroxyphenyl)methanone $C_{14}H_{12}O_3$ mol.wt. 228.25

Syntheses

- Obtained by Fries rearrangement,
 - of m-cresyl salicylate (1 mol) with aluminium chloride (4 mol) at 140° for 3 h (80%) [345];
 - of m-cresyl o-methoxybenzoate (1 mol) with aluminium chloride (2.6 mol) at 120° or 160° for 2 h (low yields) [340].

m.p. 146° [340,345]; Spectra (NA).

(4-Hydroxy-2-methylphenyl)(3-hydroxyphenyl)methanone

– Obtained by Fries rearrangement of m-cresyl m-anisate with aluminium chloride without solvent at 120° or 160° for 2 h [340].

m.p. 173° [340]; Spectra (NA).

(4-Hydroxy-2-methylphenyl)(4-hydroxyphenyl)methanone

– Preparation by adding m-cresol to a mixture of bis(4-tri-chloromethylphenoxy)ketone and aluminium chloride in methylene chloride at 0° for 1.5 h, then at 20° for 3 h. Then, hydrolysis of the intermediate product so obtained with 20% sodium hydroxide aqueous solution at 20° for 7 h (40%) [901].

m.p. 82–85° [901]; Spectra (NA).

(4-Hydroxy-3-methylphenyl)(2-hydroxyphenyl)methanone

– Preparation by Fries rearrangement of o-cresyl salicylate with aluminium chloride without solvent at 140° for 3 h (80%) [345].

m.p. 112° [345]; Spectra (NA).

(4-Hydroxy-3-methylphenyl)(3-hydroxyphenyl)methanone

- Obtained by Fries rearrangement of o-cresyl m-methoxy-benzoate with aluminium chloride between 120° and 160° for 2 h (20–30%) [340].
- Preparation by demethylation of 3,4'-dimethoxy-3'-methylbenzophenone with 48% hydrobromic acid in an acetic anhydride/acetic acid mixture (1:1) for 15 h at reflux (78%) [352].

m.p. 174–175° [352], 172° [340]; Spectra (NA).

(4-Hydroxy-3-methylphenyl)(4-hydroxyphenyl)methanone

[92005-11-3]

C₁₄H₁₂O₃ mol.wt. 228.25

Synthesis

– Preparation by acylation of o-cresol with p-(trichloro-methyl)phenyl p-(trichloro-methyl)benzoate in methylene chloride in the presence of aluminium chloride at 0–5° over 1 h, then at r.t. for 1 h, followed by alkaline hydrolysis of the resulting keto ester [325] (Japanese patent).

m.p. and Spectra (NA).

(2-Hydroxy-3-methoxyphenyl)(2-hydroxyphenyl)methanone

[117574-12-6]

C₁₄H₁₂O₄ mol.wt. 244.25

Synthesis

– Refer to: [1293].

m.p. and Spectra (NA).

(2-Hydroxy-4-methoxyphenyl)(2-hydroxyphenyl)methanone*(Dioxybenzone, Cyasorb UV 24)*

[131-53-3]

C₁₄H₁₂O₄ mol.wt. 244.25

Syntheses

- Preparation by condensation of salicylic acid and m-methoxyphenol [1135].
- Preparation by reaction of o-anisoyl chloride with 1,3-di-methoxybenzene in the presence of aluminium chloride in chlorobenzene, first at 0°, then at 88° (21%) [684,1294].
- Preparation by partial demethylation of 2-hydroxy-2',4'-dimethoxybenzophenone or 2,2',4'-tri-methoxybenzophenone with aluminium chloride or aluminium bromide in chlorobenzene at 90–95° (good yield) [655].
- Preparation by partial methylation of 2,2',4-trihydroxybenzophenone with dimethyl sulfate in alkaline solution (50%) [380].
- Also refer to: [225,235,666,1293,1295].

b.p.₁ 170–175° [684,1294];m.p. 71–72° [1135], 70° [93], 69–70° [380], 69° [236]; ¹H NMR [303], IR [1135], UV [93,235,236,241,242,303,380,830], MS [1135];pK_a [93,115]; TLC [116,244];

gel permeation chromatography [246,247]; vapour pressure [236];

paper chromatography [383].

(2-Hydroxy-4-methoxyphenyl)(3-hydroxyphenyl)methanone

[84394-12-7]

C₁₄H₁₂O₄ mol.wt. 244.25

Synthesis

- Preparation by condensation of m-methoxyphenol with m-hydroxybenzoic acid in the presence of stannic chloride at reflux for 8 h (26%) [1296].

m.p. 113–114° [1296]; IR [1296].

(2-Hydroxy-4-methoxyphenyl)(4-hydroxyphenyl)methanone

[33257-86-2]

C₁₄H₁₂O₄ mol.wt. 244.25

Syntheses

- Obtained by condensation of 2-hydroxy-4-methoxybenzoic acid with phenol,
 - in the presence of stannic chloride at 115–120° for 3–4 h [190];
 - in the presence of zinc chloride at 115–120° for 3–4 h [237].
- Preparation by reaction of p-hydroxybenzoic acid with m-methoxyphenol in the presence of phosphorous oxychloride at 60–70° for 1.5 h (36%) [626,1297], 1213].
- Also refer to: [592,627,1016,1017,1298,1299].

m.p. 200° [626], 136–138° [190,237]. One of the reported melting points is obviously wrong.

IR [626], UV [190,237].

(2-Hydroxy-5-methoxyphenyl)(2-hydroxyphenyl)methanone

[83570-57-4]

C₁₄H₁₂O₄ mol.wt. 244.25

Syntheses

- Preparation by saponification of 2'-(acetylamino)-2-hydroxy-5-methoxybenzophenone (SM) with 10% sodium hydroxide (37%). SM was obtained by photo-Fries rearrangement of p-methoxyphenyl 2-(acetylamino)-benzoate in benzene for 2.5 h (40%) [1115].
- Also obtained by photo-Fries rearrangement of p-methoxyphenyl salicylate in hexane for 4 h (8%) or in methanol for 11 h (23%) [1025].
- Also obtained by photo-Fries rearrangement of p-methoxyphenyl o-acetoxybenzoate in benzene, followed by saponification of the keto ester so formed [1148].
- Preparation by partial demethylation of 2,2',5-trimethoxybenzophenone with aluminium chloride in benzene at 50° under nitrogen atmosphere for 12 h (40%) [395].

m.p. 93° [1025], 88–90° [395];

¹H NMR [98,395,1025], IR [395,1025], UV [395], MS [395]; TLC [395].

(2-Hydroxy-5-methoxyphenyl)(4-hydroxyphenyl)methanone

[80427-40-3]

 $C_{14}H_{12}O_4$ mol.wt. 244.25

Synthesis

- Obtained by partial demethylation of 2,4',5-trimethoxy-benzophenone (SM) with aluminium chloride in nitro-methane at 20° for 24 h. SM was obtained by Friedel–Crafts acylation of 1,4-dimethoxybenzene with p-anisoyl chloride in the presence of stannic chloride in nitromethane at 20° for 1 h [679].
- Also refer to: [325] (Japanese patent).

m.p. 154° [679]; IR [679], UV [679].

(4-Hydroxy-3-methoxyphenyl)(4-hydroxyphenyl)methanone

[147904-63-0]

 $C_{14}H_{12}O_4$ mol.wt. 244.25

Synthesis

- Refer to: [1300].
- Isolation from natural source
- Identified from lignin dimers [1300].

m.p. (NA); GC-MS [1300].

[3-Hydroxy-4-(methylamino)phenyl](4-hydroxyphenyl)methanone

[136134-36-6]

 $C_{14}H_{13}NO_3$ mol.wt. 243.26

Synthesis

- Preparation from 6-(4-hydroxybenzoyl)-3-methyl-benzoxazolinone by alkaline hydrolysis with boiling 10% aqueous sodium hydroxide solution [564].

m.p. and Spectra (NA).

(4-Hydroxy-2,3-dimethylphenyl)(4-hydroxyphenyl)methanone

[98155-73-8]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

- Refer to: [901] (compound 2).

m.p. and Spectra (NA).

(4-Hydroxy-2,5-dimethylphenyl)(4-hydroxyphenyl)methanone

[98155-75-0]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Refer to: [901] (compound 5).

m.p. and Spectra (NA).

(4-Hydroxy-2,6-dimethylphenyl)(4-hydroxyphenyl)methanone

[93899-05-9]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Preparation by reaction of p-hydroxybenzoic acid with 3,5-xenolol in the presence of zinc chloride and a mixture of polyphosphoric acid/85% phosphoric acid (60:40)

at 40°. Then, during 1.5 h, phosphorous trichloride was added and the mixture heated at 70° for 16 h (90%) [194].

– Also refer to: [901] (compound 3).

m.p. and Spectra (NA).

(4-Hydroxy-3,5-dimethylphenyl)(2-hydroxyphenyl)methanone $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Obtained by photo-Fries rearrangement of 2,6-dimethyl-phenyl salicylate (by-product) [219].

m.p. (NA); UV [219].

(4-Hydroxy-3,5-dimethylphenyl)(3-hydroxyphenyl)methanone

[92005-26-0]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Preparation by acylation of 2,6-dimethylphenol with m-(tri-chloromethyl)phenyl m-(trichloromethyl)benzoate in methylene chloride in the presence of aluminium chloride at 0–5° over 1 h, then at r.t. for 1 h, followed by alkaline hydrolysis of the resulting keto ester [325] (Japanese patent).

m.p. and Spectra (NA).

(4-Hydroxy-3,5-dimethylphenyl)(4-hydroxyphenyl)methanone

[92005-13-5]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Preparation by acylation of 2,6-dimethylphenol with p-(trichloromethyl)phenyl p-(trichloromethyl)benzoate in methylene chloride in the presence of aluminium chloride at 0–5° over 1 h, then at r.t. for 1 h, followed by alkaline hydrolysis of the resulting keto ester [325] (Japanese patent).

m.p. and Spectra (NA).

(4-Ethoxy-2-hydroxyphenyl)(2-hydroxyphenyl)methanone $C_{15}H_{14}O_4$ mol.wt. 258.27

Synthesis

– Preparation by partial deethylation of 2,4-diethoxy-2'-hydroxybenzophenone with aluminium chloride in chlorobenzene at 80–100° [655].

m.p. and Spectra (NA).

(2-Hydroxy-3,4-dimethoxyphenyl)(2-hydroxyphenyl)methanone $C_{15}H_{14}O_5$ mol.wt. 274.27

Synthesis

– Preparation by action of o-anisoyl chloride with pyrogallol trimethyl ether in the presence of aluminium chloride.
– Refer to: Chem. Abstr., **9**, 609⁵⁻⁶ (1915)^T.

m.p. 127°^T; Spectra (NA).**(2-Hydroxy-4,6-dimethoxyphenyl)(3-hydroxyphenyl)methanone**

[34425-65-5]

 $C_{15}H_{14}O_5$ mol.wt. 274.27

Synthesis

– Not yet described.

Isolation from natural source

– From the heartwood of *Allanblackia floribunda* Oliver (Guttiferae) [171].

m.p. 105–107° [171]; ¹H NMR [171], IR [171], UV [171], MS [171].

[5-(1,1-Dimethylethyl)-2-hydroxyphenyl](2-hydroxyphenyl)methanone

[125182-25-4]

 $C_{17}H_{18}O_3$ mol.wt. 270.33

Synthesis

- Obtained by treatment of 2,2'-dihydroxybenzophenone at 120° with a mixture of isobutylene/nitrogen (1:1) in the presence of a macroreticular acid ion exchanger (Wofatit OK 80) as catalyst for 1 h (40%) [819].

Synthesis

- Preparation by demethylation of 2',4-dimethoxy-2-methyl-5-isopropylbenzophenone with refluxing pyridinium chloride at 205–215° for 2 h (61%) [824].

b.p._{0.6} 195–200° [824]; m.p. 117–118° [824]; Spectra (NA).**[4-Hydroxy-2-methyl-5-(1-methylethyl)phenyl](4-hydroxyphenyl)methanone** $C_{17}H_{18}O_3$ mol.wt. 270.33

Synthesis

- Obtained by demethylation of 4,4'-dimethoxy-2-methyl-5-isopropylbenzophenone in refluxing pyridinium chloride (205–215°) for 2 h (20%) [824].

b.p._{0.6} 200–210° [824]; Spectra (NA).**(4-Butoxy-2-hydroxyphenyl)(2-hydroxyphenyl)methanone** $C_{17}H_{18}O_4$ mol.wt. 286.33

Synthesis

- Refer to: [383].

m.p. and Spectra (NA); paper chromatography [383].

(2-Hydroxy-4-methoxy-3-propylphenyl)(2-hydroxyphenyl)methanone

[115296-05-4]

 $C_{17}H_{18}O_4$ mol.wt. 286.33

Syntheses

- Preparation by partial methylation of 2,2',4-trihydroxy-3-propylbenzophenone with dimethyl sulfate in the presence of potassium carbonate in refluxing 2-butanone for overnight (93%) [1029].
 - Also obtained (trace) by reaction of o-anisoyl chloride with 1,3-dimethoxy-2-propylbenzene in methylene chloride in the presence of aluminium chloride, first at 0° for 2 h and at r.t. for 1 h [1029].
- oil [1029]; b.p. and Spectra (NA).

[5-(1,1-Dimethylethyl)-2-hydroxy-4-methoxyphenyl](2-hydroxyphenyl)methanone $C_{18}H_{20}O_4$ mol.wt. 300.35

Synthesis

- Preparation by selective methylation of 5-tert-butyl-2,2',4-trihydroxybenzophenone with dimethyl sulfate in refluxing methyl ethyl ketone in the presence of potassium carbonate [835].
- m.p. 116°5 [835,836]; Spectra (NA).

(2-Hydroxyphenyl)[2-hydroxy-4-(2-propenyloxy)-3-propylphenyl]methanone

[115308-88-8]

 $C_{19}H_{20}O_4$ mol.wt. 312.37

Synthesis

- Obtained by reaction of allyl bromide with 2,2',4-trihydroxy-3-propylbenzophenone in the presence of potassium carbonate and potassium iodide in refluxing methyl ethyl ketone for 3 h (30%) [1029].
- oil [1029]; b.p. and Spectra (NA).

[4-(Hexyloxy)-2-hydroxyphenyl](2-hydroxyphenyl)methanone

[65221-06-9]

 $C_{19}H_{22}O_4$ mol.wt. 314.38

Synthesis

- Refer to: [233].
- m.p. (NA); UV [233].

[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl](2-hydroxyphenyl)methanone

$C_{21}H_{26}O_3$ mol.wt. 326.44

Synthesis

– Obtained by UV light irradiation of phenyl 3,5-di-tert-butyl-4-hydroxybenzoate in isooc-tane [1301].

m.p. 119° [1301]; Spectra (NA).

[4-(2-Ethylhexyl)-2-hydroxyphenyl](2-hydroxyphenyl)methanone

[84875-84-3]

$C_{21}H_{26}O_3$ mol.wt. 326.44

Synthesis

– Refer to: [1302].

m.p. and Spectra (NA).

(2-Hydroxy-3-octylphenyl)(2-hydroxyphenyl)methanone

$C_{21}H_{26}O_3$ mol.wt. 326.44

Synthesis

– Obtained by photo-Fries rearrangement of o-octylphenyl salicylate (major product) [219].

m.p. (NA); UV [219].

(2-Hydroxy-5-octylphenyl)(2-hydroxyphenyl)methanone

$C_{21}H_{26}O_3$ mol.wt. 326.44

Synthesis

– Obtained by photo-Fries rearrangement of p-octylphenyl salicylate (major product) [219].

m.p. (NA); UV [219].

(4-Hydroxy-3-octylphenyl)(2-hydroxyphenyl)methanone

$C_{21}H_{26}O_3$ mol.wt. 326.44

Synthesis

– Obtained by photo-Fries rearrangement of o-octylphenyl salicylate (by-product) [219].

m.p. (NA); UV [219].

[2-Hydroxy-4-(octyloxy)phenyl](2-hydroxyphenyl)methanone

[85-24-5]

 $C_{21}H_{26}O_4$ mol.wt. 342.44

Synthesis

- Preparation by reaction of octyl bromide with 2,2',4-tri-hydroxybenzophenone,
- in the presence of potassium carbonate (50%) [380];
 - in the presence of sodium carbonate in refluxing dilute ethanol [1303].
- Also refer to: [888,892,1104,1215,1295,1304–1313].
m.p. 90°5–91° [380]; UV [380]; paper chromatography [383].

[2-Hydroxy-4-(octyloxy)phenyl](4-hydroxyphenyl)methanone $C_{21}H_{26}O_4$ mol.wt. 342.44

Synthesis

- Refer to: [1310] (Japanese patent).
- m.p. and Spectra (NA).

**[2-Hydroxy-3-(3-methyl-2-butenyl)-4-[(3-methyl-2-butenyl)oxy]phenyl]-
(4-hydroxyphenyl)methanone**

[63565-06-0]

 $C_{23}H_{26}O_4$ mol.wt. 366.46

Synthesis

- Obtained (poor yield) by reaction of prenyl bromide with 2,4,4'-trihydroxybenzophenone in the presence of potassium carbonate in refluxing acetone for 3 h (7%) [831].
- m.p. 80° [831]; 1H NMR [831], IR [831], UV [831].

(3-Dodecyl-2-hydroxy-5-methylphenyl)(2-hydroxyphenyl)methanone $C_{26}H_{36}O_3$ mol.wt. 396.57

Synthesis

- Obtained by photo-Fries rearrangement of 2-dodecyl-4-methylphenyl salicylate (major product) [219].
- m.p. (NA); UV [219].

[5-(1,1-Dimethylethyl)-4-(dodecyloxy)-2-hydroxyphenyl](2-hydroxyphenyl) methanone

$C_{29}H_{42}O_4$ mol.wt. 454.65

Synthesis

– Preparation by selective alkylation of 5-tert-butyl-2,2',4-trihydroxybenzophenone with lauryl bromide in refluxing methyl ethyl ketone in the presence of potassium carbonate [835].

m.p. 81° [835,836]; Spectra (NA).

2.2.2.2 Substituents Located on Both Rings*Symmetrical ketones***Bis(2,3,5,6-tetrachloro-4-hydroxyphenyl)methanone**

$C_{13}H_2Cl_8O_3$ mol.wt. 489.78

Synthesis

– Refer to: [901] (compound **12**).

m.p. and Spectra (NA).

Bis(3-bromo-4-hydroxy-5-nitrophenyl)methanone

$C_{13}H_6Br_2N_2O_7$ mol.wt. 462.01

Synthesis

– Preparation by adding sodium nitrite to an hot solution of 3,3',5,5'-tetrabromo-4,4'-dihydroxybenzophenone in acetic acid [326].

m.p. 246° [326]; Spectra (NA).

Bis(3,5-dibromo-2-hydroxyphenyl)methanone

$C_{13}H_6Br_4O_3$ mol.wt. 529.80

Synthesis

– Obtained by treatment of 2,2'-dihydroxybenzophenone in hot acetic acid with bromine (60%) [1314].
– Also refer to: [297].

m.p. $178^\circ\text{--}180^\circ\text{5}$ [1314]; Spectra (NA).

Bis(3,5-dibromo-4-hydroxyphenyl)methanone

[28818-29-3]

 $C_{13}H_6Br_4O_3$ mol.wt. 529.80

Syntheses

- Obtained by action of bromine with 4,4'-dihydroxy-benzophenone [327,329], (86%) [1314].
- Also obtained by oxidation of α,α -bis(3,5-dibromo-4-hydroxyphenyl)dichloroethylene by heating with chromium trioxide (81%) [1315].

m.p. 230–232° [1314], 225–226° [326,1315], 213–214° [327,329];

Spectra (NA).

Bis(3,5-dichloro-4-hydroxyphenyl)methanone $C_{13}H_6Cl_4O_3$ mol.wt. 352.00

Synthesis

- Preparation by reaction of chlorine with 4,4'-dihydroxy-benzophenone in acetic acid [326].
- Also refer to: [1316,1317] (Japanese papers).

m.p. 231–232° [326]; Spectra (NA).

Bis(2-hydroxy-3,5-diiodophenyl)methanone

[33417-57-1]

 $C_{13}H_6I_4O_3$ mol.wt. 717.80

Synthesis

- Preparation by iodination of 2,2'-dihydroxybenzophenone,
 - with iodine and iodic acid in dilute ethanol for 20 min (77%) [460];
 - with iodine and potassium iodide in aqueous ammonia [460].

m.p. 225° [460]; Spectra (NA).

Bis(4-hydroxy-3,5-diiodophenyl)methanone

[15198-16-0]

 $C_{13}H_6I_4O_3$ mol.wt. 717.80

Syntheses

- Preparation by iodination of 4,4'-dihydroxybenzophenone,
 - with iodine and potassium iodide in ammonia for 1 h (65%) [460];

- with iodine and iodic acid in dilute ethanol for 15 min [460];
 - with iodine monochloride (Wijs' chloride) at r.t. [460].
- Also obtained (by-product) by reaction of 4-hydroxy-3,5-diiodophenylpyruvic acid with 4-hydroxy-3,5-diiodobenzoic acid (6%) [333], according to the methods [1318,1319].

m.p. 255° (d) [333], 254° (d) [460]; IR [333], UV [333].

Bis(2-bromo-4-hydroxyphenyl)methanone

[98155-80-7]

$C_{13}H_8Br_2O_3$

mol.wt. 372.01

Synthesis

– Refer to: [901] (compound **29**).

m.p. and Spectra (NA).

Bis(3-bromo-4-hydroxyphenyl)methanone

[5423-21-2]

$C_{13}H_8Br_2O_3$

mol.wt. 372.01

Synthesis

– Preparation by demethylation of 3,3'-dibromo-4,4'-di-methoxybenzophenone (SM) with pyridinium chloride at 210° for 20 min (85%) [313]. SM was obtained by action of bromine with 4,4'-dimethoxybenzophenone in acetic acid for 1 h in daylight (77%).

m.p. 214–215° [313]; 1H NMR [313], IR [313].

Bis(5-bromo-2-hydroxyphenyl)methanone

$C_{13}H_8Br_2O_3$

mol.wt. 372.01

Synthesis

– Refer to: [297].

m.p. and Spectra (NA).

Bis(2-chloro-4-hydroxyphenyl)methanone

[94323-04-3]

$C_{13}H_8Cl_2O_3$

mol.wt. 283.11

Synthesis

– Refer to: [901] (compound **13**).

m.p. and Spectra (NA); hemihydrate [901].

Bis(3-chloro-4-hydroxyphenyl)methanone

[79616-16-3]

 $C_{13}H_8Cl_2O_3$

mol.wt. 283.11

Synthesis

– Preparation by demethylation of 3,3'-dichloro-4,4'-di-methoxybenzophenone (SM) with pyridinium chloride at 210° for 20 min (84%) [313]. SM was obtained by chlorination of 4,4'-dimethoxybenzophenone with sulfuryl chloride in methylene chloride at 45° for 5 h (74%).

m.p. 206–207° [313]; ¹H NMR [313], IR [313].

Bis(5-chloro-2-hydroxyphenyl)methanone

[6178-89-8]

 $C_{13}H_8Cl_2O_3$

mol.wt. 283.11

Synthesis

– Preparation by oxidation of 2,2'-methylenebis(4-chloro-anisole) with chromium trioxide in refluxing acetic acid, followed by demethylation of the 5,5'-dichloro-2,2'-di-methoxybenzophenone so obtained with aluminium chloride in chlorobenzene at 60° for 5.5 h [295], (92%) [1320].

– Also refer to: [297,1321–1323].

m.p. 151–152° [1320]; Spectra (NA).

Bis(2-fluoro-4-hydroxyphenyl)methanone

[98155-79-4]

 $C_{13}H_8F_2O_3$

mol.wt. 250.20

Synthesis

– Refer to: [901] (compound **28**).

m.p. and Spectra (NA).

Bis(2-hydroxy-5-iodophenyl)methanone

[33417-58-2]

 $C_{13}H_8I_2O_3$

mol.wt. 466.01

Synthesis

– Obtained by iodination of 2,2'-dihydroxybenzophenone with iodine monochloride in acetic acid for 24 h at r.t. (23%) [460].

m.p. 194–195° [460]; Spectra (NA).

Bis(2-hydroxy-5-nitrophenyl)methanone
 $C_{13}H_8N_2O_7$ mol.wt. 304.22

Synthesis

N.B.: The 2,7-dinitroxanthone was obtained on heating 2,2'-dimethoxy-5,5'-dinitrobenzophenone (m.p. 188°) with 75% sulfuric acid at 150° for 1 h via 2,2'-dihydroxy-5,5'-dinitrobenzophenone [288].

- Also refer to: [187,1324].
m.p. and Spectra (NA).

Bis(4-hydroxy-3-nitrophenyl)methanone

[37567-35-4]

 $C_{13}H_8N_2O_7$ mol.wt. 304.22

Synthesis

– Preparation by hydrolysis of 4,4'-dichloro-3,3'-dinitro-benzophenone with 5–15% sodium hydroxide at 155–160° for 1–1.5 h (97–98%) [1071].

m.p. 195°2–195°5 [1071]; Spectra (NA).

Bis(3-amino-4-hydroxyphenyl)methanone

[22445-98-3]

 $C_{13}H_{12}N_2O_3$ mol.wt. 244.25

Synthesis

– Preparation by hydrogenation of 4,4'-dihydroxy-3,3'-di-nitrobenzophenone in the presence of Raney nickel in water at 85–90° for 1 h under 100 atmospheres (69%) [1071].

m.p. >220° (d) [1071]; Spectra (NA).

Bis(4-amino-2-hydroxyphenyl)methanone

[107516-91-6]

 $C_{13}H_{12}N_2O_3$ mol.wt. 244.25

Synthesis

– Preparation from 4-amino-2'-hydroxy-2-methoxy-4'-nitrobenzophenone by refluxing with freshly distilled constant-boiling hydriodic acid at 140° for 7 h (81%) [286].

m.p. 247–248° [286]; Spectra (NA).

Bis(4-amino-2-hydroxyphenyl)methanone (Dihydrochloride) $C_{13}H_{12}N_2O_3 \cdot 2HCl$ mol.wt. 317.17

Synthesis

– Preparation from 4,4'-diamino-2,2'-di-hydroxybenzophenone with hydrochloric acid in refluxing dilute ethanol (74%) [286].

m.p. 208° (d) [286]; Spectra (NA).

Bis(2-chloro-4-hydroxy-6-methylphenyl)methanone $C_{15}H_{12}Cl_2O_3$ mol.wt. 311.16

Synthesis

– Refer to: [901] (compound 35).

m.p. and Spectra (NA).

Bis(2-hydroxy-4-methylphenyl)methanone

[24018-76-6]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Synthesis

– Refer to: [668] and also [1325–1327] (Japanese papers).

m.p. and Spectra (NA).

Bis(2-hydroxy-5-methylphenyl)methanone

[27404-62-2]

 $C_{15}H_{14}O_3$ mol.wt. 242.27

Syntheses

- Preparation by Friedel–Crafts acylation of p-methoxytoluene with 2-methoxy-5-methylbenzoyl chloride in carbon disulfide in the presence of aluminium chloride, first at 0° for 5 h, then at r.t. overnight and at reflux for 2 h (74%) [1153].
- Also obtained by total demethylation of 2,2'-dimethoxy-5,5'-dimethylbenzophenone (m.p. 84°) with hydriodic acid in refluxing acetic acid for 7 h (83%) [1153].
- Also obtained (poor yield) by Fries rearrangement of p-cresyl 2-methoxy-5-methylbenzoate in nitrobenzene with aluminium chloride for 20 min at 130° (9%) [1153].

- Also obtained (poor yield) by alkaline melting of p-cresolphthalein at 200° with potassium hydroxide [1153,1328].
 - Also obtained by fusion of 2,7-dimethylfluoran with potassium hydroxide at 220–240° [617].
 - Also refer to: [1154,1329,1330].
- m.p. 107° [1154], 106–107° [1153,1329], 104–106° [617], 104–105° [1328];
IR [1154], UV [1154], MS [1329].

Bis(4-hydroxy-2-methylphenyl)methanone

[98155-74-9]

C₁₅H₁₄O₃

mol.wt. 242.27

Synthesis

- Refer to: [901] (compound 4).

m.p. and Spectra (NA).

Bis(4-hydroxy-3-methylphenyl)methanone

[94323-02-1]

C₁₅H₁₄O₃

mol.wt. 242.27

Syntheses

- Obtained by condensation of o-cresol with carbon tetrachloride in the presence of metallic halides (zinc chloride, aluminium chloride or stannic chloride) at 100–130° in an autoclave [642].
 - Obtained by oxidation of o-cresaurin in 5% sodium hydroxide solution by passing a very slow stream of air during several days (41%) [642].
- m.p. 240° [642]; Spectra (NA).

Bis[4-hydroxy-3-(hydroxymethyl)phenyl]methanone

[74697-55-5]

C₁₅H₁₄O₅

mol.wt. 274.27

Synthesis

- Refer to: [309].

m.p. and Spectra (NA).

Bis(2-hydroxy-4-methoxyphenyl)methanone

(UV 12, Uvinul D-49, Uvinul 490, Uvinul 3049)

[131-54-4]

C₁₅H₁₄O₅

mol.wt. 274.27

Syntheses

- Preparation by reaction of 2-hydroxy-4-methoxy-benzoic acid with resorcinol monomethyl ether in the presence of zinc chloride and phosphorous oxychloride at 70–75° for 2 h (27%) [402].

- Preparation by reaction of 2,4-dimethoxybenzoyl chloride with 1,3-dimethoxybenzene in the presence of aluminium chloride,
 - in a chlorobenzene/*N,N*-dimethylformamide mixture (22:1) at 115° (72%) [235,657];
 - in chlorobenzene at 90° [222].
 - Preparation by partial demethylation of 2-hydroxy-2',4,4'-trimethoxybenzophenone or 2,2',4,4'-tetramethoxybenzophenone with aluminium chloride or aluminium bromide in chlorobenzene at 90–95° (good yield). The same result is obtained using ethylene dichloride or nitrobenzene as the solvent [655].
 - Preparation by reaction of phosgene with resorcinol dimethyl ether in the presence of aluminium chloride [215].
 - Also refer to: [78,84,222,225,227,228,241,298,666,668,684].
- m.p. 139–140° [402], 137° [215], 136–137° [650], 135° [236], 133–136° [93], 133–135° [222];
 EPR [98], IR [650], UV [93,215,235,236,240,241,650,684,830];
 TLC [116]; vapour pressure [236]; pK_a [93];
 gel permeation chromatography [247].

Bis(4-hydroxy-3-methoxyphenyl)methanone

[5623-44-9]

 $C_{15}H_{14}O_5$

mol.wt. 274.27

Syntheses

- Obtained from 4-hydroxy-3,3',4'-trimethoxy-1,2-di-phenyl-1,2-ethanediol (*Z* configuration) after 3 h radiolysis of aqueous sodium hydroxide solution [1331].
- Also obtained by heating a mixture of the 4,4'-dihydroxy-3,3'-dimethoxydiphenylmethane, 2 N sodium hydroxide and nitrobenzene for 2 h at 170° (21%) [1332,1333].
- Also obtained by mild oxidation of various materials^T with cupric hydroxide in aqueous sodium hydroxide at 170° for 5 h in a stainless steel bomb,
 - ^Tthree polymers prepared from isoeugenol by oxidative coupling with cuprous chloride in pyridine at 100° under oxygen [1334];
 - ^Tdehydrodiisoeugenol [1334];
 - ^Tmilled wood lignin [1334];
 - ^Tlignin and related products [1335].
- Also refer to: [1336–1338].

N. B.: Na salt [215].

m.p. (NA); IR [215];

TLC [1334]; GLC [1334,1335]; GC and GC-MS [1332,1333].

Bis(4-hydroxy-3,5-dimethylphenyl)methanone

$C_{17}H_{18}O_3$ mol.wt. 270.33

Synthesis

– Refer to: Chem. Abstr., **127**, 109367s (1997).

m.p. and Spectra (NA).

Bis(4-ethoxy-2-hydroxyphenyl)methanone

[15889-67-5]

$C_{17}H_{18}O_5$ mol.wt. 302.33

Synthesis

– Preparation by partial dealkylation of 2-hydroxy-2'-methoxy-4,4'-diethoxybenzophenone, 2-hydroxy-2',4,4'-triethoxybenzophenone or 2,2',4,4'-tetraethoxybenzophenone with aluminium chloride in chlorobenzene at 80–100° [655].

m.p. and Spectra (NA).

Bis(2-hydroxy-3-methoxy-5-methylphenyl)methanone

[17772-33-7]

$C_{17}H_{18}O_5$ mol.wt. 302.33

Synthesis

– Obtained by heating a mixture of the 2,2'-dihydroxy-3,3'-dimethoxy-5,5'-dimethyldiphenylmethane, 2 N sodium hydroxide and nitrobenzene for 2 h at 170° (24%) [1332,1333].

m.p. and Spectra (NA); GC and GC-MS [1332,1333].

Bis(2-hydroxy-4-methoxy-6-methylphenyl)methanone

[78135-60-1]

$C_{17}H_{18}O_5$ mol.wt. 302.33

Synthesis

– Preparation by reduction of 4',6'-dimethoxy-4,6'-di-methylspiro[78135-60-1]-2',3 (2H) dione with zinc dust in acetic acid at r.t. for 1 h (94%) [1339].

m.p. 159–160° [1339]; 1H NMR [1339], MS [1339].

Bis(4-hydroxy-3,5-dimethoxyphenyl)methanone

[34007-64-2]

 $C_{17}H_{18}O_7$

mol.wt. 334.33

Synthesis

– Obtained by heating a mixture of the 4,4'-dihydroxy-3,3',5,5'-tetramethoxydiphenylmethane (disyringyl-methane), 2 N sodium hydroxide and nitrobenzene for 2 h at 170° (18%) [1332,1333].

m.p. and Spectra (NA); GC and GC-MS [1332,1333].

Bis[2-hydroxy-4-(2-hydroxyethoxy)phenyl]methanone

[15577-13-6]

 $C_{17}H_{18}O_7$

mol.wt. 334.33

Synthesis

– Preparation by bubbling ethylene oxide into a hot mixture of 2,2',4,4'-tetrahydroxybenzophenone and aqueous sodium hydroxide during 1 h at 55° (98%) [1340].

– Also refer to: [93,116].

m.p. 152° [93]; UV [93]; pK_a [93]; TLC [116].

Bis[5-(1,1-dimethylethyl)-2-hydroxyphenyl]methanone

[25446-98-4]

 $C_{21}H_{26}O_3$

mol.wt. 326.44

Syntheses

– Obtained by photo-Fries rearrangement of p-tert-butylphenyl carbonate,

- in ethanol for 24 h (26%) [68];
 - in benzene for 24 h (36%) [68];
 - in ethylene dichloride [1341], where the rearrangement proceeds via the formation of an intermediate ester, the p-tert-butylphenyl 5-tert-butylsalicylate [1341].
- Also obtained by treatment of 2,2'-dihydroxybenzophenone at 120° with a mixture of isobutylene/nitrogen (1:1) in the presence of a macroreticular acid ion exchanger (Wofatit OK 80) as catalyst for 1 h (30%) [819].

b.p._{0.15} 200–205° [819]; m.p. 104–106° [68]; IR [68].

Bis[4-hydroxy-2-methyl-5-(1-methylethyl)phenyl]methanone

$C_{21}H_{26}O_3$ mol.wt. 326.44

Synthesis

- Obtained by total demethylation of 5,5'-di-isopropyl-4,4'-dimethoxy-2,2'-dimethyl-benzophenone with refluxing pyridinium chloride (205–215°) for 3 h (26%) [824].

b.p._{0,9} 215–225° [824]; Spectra (NA).

Bis[3,5-bis(1,1-dimethylethyl)-2-hydroxyphenyl]methanone

[30381-72-7]

$C_{29}H_{42}O_3$ mol.wt. 438.65

Syntheses

- Preparation by oxidation of bis (2-hydroxy-3,5-di-tert-butylphenyl) methane (SM) with chromium trioxide in acetic anhydride. SM was obtained by condensation of 2,4-di-tert-butylphenol with formaldehyde under acidic condition [1342].
- Preparation by treatment of 2,2'-dihydroxybenzophenone at 120° with a mixture of isobutylene/nitrogen (1:1) in the presence of a macroreticular acid ion exchanger (Wofatit OK 80) as catalyst for 10 h (75%) [819].

b.p._{0,19} 230–240° [819]; m.p. 202–204° [1342]; MS [1342].

Bis[3,5-bis(1,1-dimethylethyl)-4-hydroxyphenyl]methanone

[29372-72-3]

$C_{29}H_{42}O_3$ mol.wt. 438.65

Synthesis

- Preparation by demethylation of 3,3',5,5'-tetra-tert-butyl-4,4'-dimethoxybenzophenone (SM) by means of sodium thioethoxide, under nitrogen, in refluxing N,N-dimethylformamide for 15 h (95%). SM was obtained by a two-step synthesis: at first, total methylation of 3,3',5,5'-tetra-tert-butyl-4,4'-dihydroxydiphenylmethane with methyl iodide in the presence of sodium hydride, under nitrogen, in refluxing tetrahydrofuran for 2 h. Then, by adding a solution of chromium trioxide in dilute sulfuric acid to an acetic solution of the dimethyl ether previously formed (82%) and stirring at r.t. for 70 h, one obtains the expected ketone SM (86%) [334].

m.p. 226°5–227° [334]; ¹H NMR [334], IR [334].

Bis(2-hydroxy-5-octylphenyl)methanone
 $C_{29}H_{42}O_3$ mol.wt. 438.65

Synthesis

- Obtained by photo-Fries rearrangement of p-octylphenyl 5-octylsalicylate (major product) [219].

m.p. (NA); UV [219].

*Asymmetric ketones***(3,5-Dibromo-2-hydroxyphenyl)(3,5-dibromo-4-hydroxyphenyl)methanone**
 $C_{13}H_6Br_4O_3$ mol.wt. 529.80

Synthesis

- Preparation by reaction of bromine with 2,4'-dihydroxy-benzophenone in acetic acid (84%) [1314].

m.p. 193–195°5 [1314]; Spectra (NA).

(2-Chloro-4-hydroxyphenyl)(2-fluoro-4-hydroxyphenyl)methanone
 $C_{13}H_8ClFO_3$ mol.wt. 266.65

Synthesis

- Refer to: [901] (compound 32).

m.p. and Spectra (NA).

(2-Chloro-3-hydroxyphenyl)(4-chloro-3-hydroxyphenyl)methanone
 $C_{13}H_8Cl_2O_3$ mol.wt. 283.11

Synthesis

- Preparation by demethylation of 2,4'-dichloro-3,3'-di-methoxybenzophenone with aluminium chloride in chlorobenzene at 60° for 5.5 h (88%) [1320].

m.p. 157–158°5 [1320]; Spectra (NA).

(2-Chloro-5-hydroxyphenyl)(4-chloro-3-hydroxyphenyl)methanoneC₁₃H₈Cl₂O₃ mol.wt. 283.11**Synthesis**

- Preparation by diazotization of 3',5-diamino-2,4'-dichloro-benzophenone, followed by treatment of the diazonium salt obtained with boiling 70% sulfuric acid (160°) for 10 min (32%) [1320].

m.p. 161° [1320]; Spectra (NA).

(4-Amino-2-hydroxyphenyl)(2-hydroxy-4-nitrophenyl)methanoneC₁₃H₁₀N₂O₅ mol.wt. 274.23**Syntheses**

- Preparation by hydrolysis of 4-acetamido-2,2'-di-hydroxy-4'-nitrobenzophenone with refluxing 20% hydrochloric acid for 3 h [286].
- Preparation by demethylation of 4-amino-2'-hydroxy-2-methoxy-4'-nitrobenzophenone with 50% hydrobromic acid in refluxing acetic acid for 6 h (78%) [286].

m.p. 224–226° [286]; Spectra (NA).

(2-Amino-4-hydroxyphenyl)(4-amino-2-hydroxyphenyl)methanone

[107518-30-9]

C₁₃H₁₂N₂O₃ mol.wt. 244.25**Synthesis**

- Preparation from 2-amino-2'-hydroxy-4-methoxy-4'-nitrobenzophenone by refluxing with freshly distilled constant-boiling hydriodic acid at 140° for 7 h (63%) [286].

m.p. 190–191° [286]; Spectra (NA).

(2-Amino-4-hydroxyphenyl)(4-amino-2-hydroxyphenyl)methanone*(Dihydrochloride)*C₁₃H₁₂N₂O₃·2HCl mol.wt. 317.17**Synthesis**

- Preparation from 2,4'-diamino-2',4-dihydroxy-benzophenone with hydrochloric acid in refluxing dilute ethanol (72%) [286].

m.p. 218° (d) [286]; Spectra (NA).

(3-Bromo-2-hydroxy-5-methylphenyl)(3,5-dibromo-2-hydroxyphenyl) methanone
 $C_{14}H_9Br_3O_3$ mol.wt. 464.94
Synthesis

– Obtained by reaction of excess bromine with 2,2'-di-hydroxy-5-methylbenzophenone in acetic acid [683].

m.p. 190° [683]; Spectra (NA).

(3-Bromo-2-hydroxy-5-methylphenyl)(3,5-dibromo-4-hydroxyphenyl) methanone
 $C_{14}H_9Br_3O_3$ mol.wt. 464.94
Synthesis

– Obtained by reaction of bromine with 2,4'-dihydroxy-5-methylbenzophenone in acetic acid [683].

m.p. 211°5–212°5 [683]; Spectra (NA).

(2-Hydroxy-4-methoxy-5-nitrophenyl)(4-hydroxy-3-nitrophenyl) methanone

[67246-05-3]

 $C_{14}H_{10}N_2O_8$ mol.wt. 334.24
Synthesis

– Obtained by reaction of nitric acid (d = 1.42) with 2,4'-dihydroxy-4-methoxybenzophenone in acetic acid at 32° [592].

m.p. 185° [592]; ¹H NMR [592].

(2-Chloro-4-hydroxyphenyl)(4-hydroxy-2-methylphenyl) methanone

[98155-83-0]

 $C_{14}H_{11}ClO_3$ mol.wt. 262.69
Synthesis

– Refer to: [901] (compound **34**).

m.p. and Spectra (NA).

(2-Chloro-4-hydroxyphenyl)(4-hydroxy-2-methoxyphenyl) methanone
 $C_{14}H_{11}ClO_4$ mol.wt. 278.69
Synthesis

– Refer to: [901] (compound **36**).

m.p. and Spectra (NA).

(4-Chloro-2-hydroxyphenyl)(2-hydroxy-4-methoxyphenyl)methanone
 $C_{14}H_{11}ClO_4$ mol.wt. 278.69

Synthesis

– Preparation by reaction of 2,4-dimethoxybenzoyl chloride with m-chloroanisole in chlorobenzene in the presence of aluminium chloride at 90° [222].

m.p. and Spectra (NA).

(2-Hydroxy-5-methylphenyl)(2-hydroxy-5-nitrophenyl)methanone

[145804-70-2]

 $C_{14}H_{11}NO_5$ mol.wt. 273.25

Synthesis

– Obtained by cleavage of 2-methyl-7-nitroanthone with 10% potassium hydroxide in refluxing methanol for 12 h [719].

m.p. 146–148° [719]; Spectra (NA).

(3-Chloro-2-hydroxy-5-methylphenyl)(2-hydroxy-5-methylphenyl)methanone

[27404-63-3]

 $C_{15}H_{13}ClO_3$ mol.wt. 276.72

Synthesis

– Refer to: [1329] (compound IV).

m.p. 146–147° [1329]; MS [1329].

(2-Hydroxy-4-methoxyphenyl)(2-hydroxy-4-methylphenyl)methanone

[105515-30-8]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Synthesis

– Refer to: [1343] (Japanese patent).

m.p. and Spectra (NA).

(2-Ethyl-4-hydroxyphenyl)(4-hydroxy-2-methylphenyl)methanone
 $C_{16}H_{16}O_3$ mol.wt. 256.30

Synthesis

– Refer to: [901] (compound 6).

m.p. and Spectra (NA).

(4-Hydroxy-2,5-dimethylphenyl)(4-hydroxy-3-methylphenyl)methanone

m.p. and Spectra (NA).

(4-Ethoxy-2-hydroxyphenyl)(2-hydroxy-4-methoxyphenyl)methanone

- in a chlorobenzene/N,N-dimethylformamide mixture (22:1) at 115° [657];
 - in chlorobenzene at 90° [222].
 - Preparation by partial demethylation of 4-ethoxy-2-hydroxy-2',4'-dimethoxybenzophenone or 4-ethoxy-2,2',4'-trimethoxybenzophenone with aluminium chloride or aluminium bromide in chlorobenzene at 90–95° (good yield) [655].
 - Also refer to: [235].
- m.p. (NA); UV [235].

(2-Hydroxy-4,6-dimethoxyphenyl)(4-hydroxy-2-methylphenyl)methanone

m.p. (NA); MS [114].

(2-Hydroxy-3-methoxy-5-methylphenyl)(4-hydroxy-3-methoxyphenyl)methanone

m.p. and Spectra (NA); GC and GC-MS [1332,1333].

(2-Hydroxy-4,5-dimethoxyphenyl)(2-hydroxy-4-methoxyphenyl)methanoneC₁₆H₁₆O₆ mol.wt. 304.30

Synthesis

- Preparation by reaction of 2-hydroxy-4-methoxy-benzoic acid with 3,4-dimethoxyphenol in the presence of zinc chloride and phosphorous oxychloride on heating at 65–70° for 1 h [650].
- Also refer to: [649].

m.p. 147–148° [650]; IR [650], UV [650].

(4-Hydroxy-3,5-dimethoxyphenyl)(2-hydroxy-4-methoxyphenyl)methanone

[62495-38-9]

C₁₆H₁₆O₆ mol.wt. 304.30

Synthesis

- Preparation by reaction of 3,4,5-trimethoxybenzoic acid with 3-methoxyphenol in the presence of phosphorous oxychloride and zinc chloride at 65–70° for 2 h (32%) [1136].

m.p. 142–143° [1136]; ¹H NMR [1136], IR [1136], UV [1136].**(3-Chloro-6-hydroxy-4-methoxy-2-methylphenyl)(3,5-dichloro-2-hydroxy-4-methoxy-6-methylphenyl)methanone**

[69709-92-8]

C₁₇H₁₅Cl₃O₅ mol.wt. 405.66

Synthesis

- Preparation by hydrogenolysis of 2, 2'-bis (benzyloxy)-3,5,5'-trichloro-4, 4'-dimethoxy-6,6'-dimethylbenzophenone (SM) with hydrogen in the presence of 10% Pd/C in ethyl acetate

containing concentrated hydrochloric acid (5 drops) (>90%) [1339]. SM was obtained by Friedel–Crafts acylation of 5-(benzyloxy)-2-chloro-3-methoxytoluene with 2-(benzyloxy)-3,5-dichloro-4-methoxy-6-methylbenzoic acid in the presence of trifluoroacetic anhydride in refluxing ethylene dichloride for 5 h (28%).

- Also refer to: [1344].

m.p. 137–138° [1339]; ¹H NMR [1339], MS [1339].

(3-Chloro-2-hydroxy-6-methoxy-4-methylphenyl)(4-hydroxy-2-methoxy-6-methyl-phenyl)methanone

$C_{17}H_{17}ClO_5$ mol.wt. 336.77

Synthesis

– Not yet described.

Isolation from natural source

– From cultures of *Penicillium patulum* [1345].

m.p. 181–182° [1345]; IR [1345], UV [1345], MS [1345].

(3-Chloro-2-hydroxy-4,6-dimethoxyphenyl)(4-hydroxy-2-methoxy-6-methylphenyl)-methanone

(*Griseophenone A*)

[2151-17-9]

$C_{17}H_{17}ClO_6$ mol.wt. 352.77

Syntheses

– Obtained by acylation of 2-chloro-3,5-dimethoxy-phenol,

- with 4-acetoxy-2-methoxy-6-methylbenzoyl chloride in the

presence of aluminium chloride in nitrobenzene at r.t. for 20 h (35%) [1189] (Friedel–Crafts reaction);

- with 4-acetoxy-2-methoxy-6-methylbenzoic acid in the presence of trifluoroacetic anhydride at 20° for 18 h (50%) [1189];
 - with 2-methoxy-4-methoxycarbonyl-6-methylbenzoyl chloride in the presence of aluminium chloride in nitrobenzene at r.t. [1346].
- Also obtained by hydrogenation of dehydrogriseofulvin,
- with hydrogen in the presence of Pd/C in ethanol [1347];
 - over Rh/C containing 3% of selenium in ethanol (70%) [1346].
- Also obtained by saponification of two intermediate esters^T (formed in the above reactions) with 2.5% sodium hydroxide in dilute methanol at 25° (quantitative yields) [1189],
- ^Tof 4'-acetoxy-3-chloro-2-hydroxy-2',4,6-trimethoxy-6'-methylbenzophenone;
^Tof 4'-acetoxy-3-chloro-2-(trifluoroacetoxy)-2',4,6-trimethoxybenzophenone.
- Also obtained from dehydrogriseofulvin by reductive scission with chromous chloride or with zinc in acetic acid [1192].
- Also obtained from 2-chloro-3,5-dimethoxyphenyl 4-hydroxy-2-methoxy-6-methylbenzoate,
- by Fries rearrangement in the presence of titanium tetrachloride in nitrobenzene at 20° for 18 h (65%) [1189];
 - by light-catalyzed Fries rearrangement in ethanol (10–15%) [1192], at 40° for 66 h (8%) [1189].

– Also refer to: [1348,1349].

Isolation from natural source

– From cultures of *Penicillium patulum* [1182,1345,1346,1350].

m.p. 213–214° [1182,1350], 212°5–215° [1189], 212–214° [1345], 210–212° [1192]; IR [1182,1345,1346], UV [1192,1345,1346], MS [1345]; paper chromatography [1182].

(3-Fluoro-2-hydroxy-4,6-dimethoxyphenyl)(4-hydroxy-2-methoxy-6-methylphenyl)-methanone

$C_{17}H_{17}FO_6$ mol.wt. 336.32

Syntheses

– Obtained by addition of 4-acetoxy-2-methoxy-6-methylbenzoic acid to 2-fluoro-3,5-dimethoxy-phenol in the presence of trifluoroacetic anhydride, first at 0°, then at 20–25° for 20 h (21%) [1191].

– Preparation by saponification of the corresponding acetate [1190], with 5% aqueous sodium hydroxide at 20° under nitrogen for 2 h (quantitative yield) [1191].

m.p. 200–203° [1190], double melting point: 186–190°, then 200–203° [1191]; IR [1191], UV [1190,1191].

(2-Hydroxy-4-methoxy-6-methylphenyl)(4-hydroxy-2-methoxy-6-methylphenyl)-methanone

[81574-67-6]

$C_{17}H_{18}O_5$ mol.wt. 302.33

Synthesis

– Preparation by reduction of the 2', 6'-dimethoxy-4,6'-dimethylspiro[81574-67-6]-3(2H),4'-dione (SM) with zinc dust in acetic acid for 1 h (83%). SM

was obtained from methyl 4-methoxy-2-(2,4-dimethoxy-6-methyl-phenoxy)-6-methylbenzoate by treatment with titanium tetrachloride and hydrogen chloride for 40 h (65%, m.p. 190–192°) [1184].

m.p. 176–177° [1184]; 1H NMR [1184], MS [1184].

(4-Hydroxy-2,6-dimethoxyphenyl)(2-hydroxy-4-methoxy-6-methylphenyl) methanone

[74628-36-7]

$C_{17}H_{18}O_6$ mol.wt. 318.33

Synthesis

– Preparation by reduction of the 2', 6'-trimethoxy-4-methylspiro[74628-36-7]-3(2H),4'-dione (SM) with zinc dust in acetic acid [1183], for 1 h (82%).

SM was obtained from methyl 4-methoxy-2-(2,4,6-trimethoxy-phenoxy)-6-methylbenzoate by treatment with titanium tetrachloride and hydrogen chloride for 12 h (90%, m.p. 273–274°) [1184].

m.p. 192–193° [1184]; ¹H NMR [1184], MS [1184].

(4-Hydroxy-3,5-dimethoxyphenyl)(2-hydroxy-3-methoxy-5-methylphenyl) methanone

[25138-53-8]

C₁₇H₁₈O₆ mol.wt. 318.33

Synthesis

– Obtained (poor yield) by heating a mixture of 2,4'-di-hydroxy-3,3',5'-trimethoxy-5-methyldiphenylmethane, 2 N sodium hydroxide and nitrobenzene for 2 h at 170° (5%) [1332,1333].

m.p. and Spectra (NA); GC and GC-MS [1332,1333].

(4-Hydroxy-3,5-dimethoxyphenyl)(5-hydroxy-4-methoxy-2-methylphenyl) methanone

[199735-38-1]

C₁₇H₁₈O₆ mol.wt. 318.33

Synthesis

– Obtained (poor yield) by heating a mixture of 4,5'-dihydroxy-3,4',5-trimethoxy-2-methyldiphenyl-methane, 2 N sodium hydroxide and nitrobenzene for 2 h at 170° (4%) [1332,1333].

m.p. and Spectra (NA); GC and GC-MS [1332,1333].

[4-Hydroxy-2-methyl-5-(1-methylethyl)phenyl](2-hydroxy-5-methylphenyl) methanone

C₁₈H₂₀O₃ mol.wt. 284.36

Synthesis

– Obtained by demethylation of 2',4-dimethoxy-2,5'-di-methyl-5-isopropylbenzophenone with pyridinium chloride at reflux (205–215°) for 1.5 h (30%) [824].

b.p._{0.7} 200–210° [824]; Spectra (NA).

(4-Butoxy-2-hydroxyphenyl)(2-hydroxy-4-methoxyphenyl)methanoneC₁₈H₂₀O₅ mol.wt. 316.35

Syntheses

- Preparation by partial demethylation of 4-butoxy-2-hydroxy-2',4'-dimethoxybenzophenone with aluminium chloride or aluminium bromide in chlorobenzene at 90–95° (good yield) [655].
 - Preparation by reaction of 2,4-dimethoxybenzoyl chloride with 1,3-dibutoxybenzene in the presence of aluminium chloride,
 - in a chlorobenzene/N,N-dimethylformamide mixture (22:1) at 115° [657];
 - in chlorobenzene at 90° [222].
 - Also refer to: [235].
- m.p. (NA); UV [235].

(6-Hydroxy-2,4-dimethoxy-3-methylphenyl)(4-hydroxy-2,6-dimethoxyphenyl)methanone

[81574-66-5]

C₁₈H₂₀O₇ mol.wt. 348.35

Synthesis

- Preparation by reduction of 2',4,6,6'-tetramethoxy-5-methyl-spiro [81574-66-5]-3(2*H*),4'-dione (SM) with zinc dust in acetic acid for 1 h (85%). SM was prepared from methyl 2,4-dimethoxy-6-(2,4,6-trimethoxyphenoxy)-3-methylbenzoate by treatment with titanium tetrachloride and hydrogen chloride for 65 h (78%, m.p. 265–267°) [1184].

m.p. 239–241° [1184]; ¹H NMR [1184], MS [1184].

[5-(1,1-Dimethylethyl)-2-hydroxyphenyl](4-hydroxy-3,5-dimethylphenyl)methanoneC₁₉H₂₂O₃ mol.wt. 298.38

Synthesis

- Obtained by photo-Fries rearrangement of 2,6-di-methylphenyl 5-tert-butylsali-cylate (by-product) [219].

m.p. and Spectra (NA).

[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl](4-chloro-2-hydroxyphenyl) methanone

[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl](2-hydroxy-4-methoxyphenyl) methanone

$C_{22}H_{28}O_4$ mol.wt. 356.46

Synthesis

– Obtained by UV light irradiation of m-methoxy-phenyl 3,5-di-tert-butyl-4-hydroxybenzoate in isooctane [1301].

m.p. 137–138° [1301]; Spectra (NA).

[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl](2-hydroxy-5-methoxyphenyl) methanone

$C_{22}H_{28}O_4$ mol.wt. 356.46

Synthesis

– Obtained by UV light irradiation of p-methoxyphenyl 3,5-di-tert-butyl-4-hydroxybenzoate in isooctane (60%) [1301].

m.p. 142–143° [1301]; Spectra (NA).

[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl](4-hydroxy-3,5-dimethoxyphenyl)-methanone

[54808-43-4]

$C_{23}H_{30}O_5$ mol.wt. 386.49

Synthesis

– Preparation by selective demethylation of 3,5-di-tert-butyl-4-hydroxy-3',4',5'-trimethoxybenzophenone (SM),

- with 45% anhydrous hydrobromic acid in acetic acid at r.t. for 48 h (49%) [334];
- by adding a freshly prepared ethereal magnesium iodide solution to a solution of SM in toluene, elimination of ethyl ether by distillation, toluene being added to maintain the original volume. Then, heating at reflux for 10 h (68%) [334].

m.p. 181°5–182°5 [334]; 1H NMR [334], IR [334].

[3,5-Bis(1,1-dimethylethyl)-2-hydroxyphenyl][5-(1,1-dimethylethyl)-2-hydroxy-phenyl]methanone

[125182-26-5]

$C_{25}H_{34}O_3$ mol.wt. 382.54

Synthesis

– Obtained by treatment of 2,2'-dihydroxy-benzophenone at 120° with a mixture of isobutylene/nitrogen (1:1) in the presence of a macroreticular acid ion exchanger (Wofatit OK 80) as catalyst for 5 h (40%) [819].

 $C_{23}H_{26}O_4$ mol.wt. 366.46

Syntheses

- Obtained (poor yield) by reaction of 2-methyl-3-buten-2-ol with 2,4,6-trihydroxybenzophenone in the presence of boron trifluoride-etherate in dioxane at 25–30° (6%) [373].
- Also obtained (poor yield) by reaction of prenyl bromide with 2,4,6 trihydroxybenzophenone in the presence of sodium methoxide in refluxing methanol for 3 h [373], (<1%) [374].

Isolation from natural sources

- From *Leontonyx spathulatus* Less and from *Leontonyx squarrosus* DC (Compositae) [378];
- From *Helichrysum crispum* Less (Compositae) [1359].

Colourless oil [378]. This product is impure or in a metastable state.

m.p. 94–95° [373,374]; 1H NMR [373,374,378], IR [373,374,378], UV [373,374], MS [378].**2.3.1.2 Substituents Located on the Other Ring****(2,4-Dichlorophenyl)(2,4,6-trihydroxyphenyl)methanone**

[61101-87-9]

 $C_{13}H_8Cl_2O_4$ mol.wt. 299.11

Synthesis

- Preparation by reaction of 2,4-dichlorobenzoyl chloride with O,O,O-tris(trimethylsilyl)phloroglucinol in the presence of stannic chloride in refluxing methylene chloride for 2 h (76%) [921].
- oily product, not distillable [921]; b.p. and Spectra (NA).

(2-Chlorophenyl)(2,4,6-trihydroxyphenyl)methanone

[61101-84-6]

 $C_{13}H_9ClO_4$ mol.wt. 264.66

Synthesis

- Preparation by adding O,O,O-tris(trimethylsilyl)phloro-glucinol to a solution of o-chlorobenzoyl chloride and stannic chloride in methylene chloride and the resulting solution stirred overnight at r.t. (80%) [921].
- m.p. 141–143° [921]; Spectra (NA).

(3-Chlorophenyl)(2,4,6-trihydroxyphenyl)methanone
 $C_{13}H_9ClO_4$ mol.wt. 264.66

Synthesis

– Preparation by reaction of m-chlorobenzonitrile with phloroglucinol (67%) (Hoesch reaction) [1256].

m.p. 169°5–170° [1256]; Spectra (NA).

(4-Chlorophenyl)(2,3,4-trihydroxyphenyl)methanone
 $C_{13}H_9ClO_4$ mol.wt. 264.66

Synthesis

– Preparation by reaction of p-chlorobenzonitrile with pyrogallol in the presence of zinc chloride and hydrochloric acid in ethyl ether, followed by hydrolysis of the resulting ketimine hydrochloride with boiling water for 10 min under carbon dioxide (25%) [439].

m.p. 157–158° [439]; Spectra (NA).

(4-Chlorophenyl)(2,4,5-trihydroxyphenyl)methanone
 $C_{13}H_9ClO_4$ mol.wt. 264.66

Synthesis

– Preparation by reaction of p-chlorobenzonitrile with hydroxyhydroquinone in the presence of zinc chloride and hydrochloric acid in ethyl ether, followed by hydrolysis of the resulting ketimine hydrochloride with boiling water for 30 min under carbon dioxide (Hoesch reaction) (55%) [439].

m.p. 260° [439]; Spectra (NA).

(4-Chlorophenyl)(2,4,6-trihydroxyphenyl)methanone
 $C_{13}H_9ClO_4$ mol.wt. 264.66

Synthesis

– Preparation by reaction of p-chlorobenzonitrile with phloroglucinol (43%) (Hoesch reaction) [1256].

m.p. 169–169°5 [1256]; Spectra (NA).

(4-Fluorophenyl)(2,3,4-trihydroxyphenyl)methanone

[84795-00-6]

 $C_{13}H_9FO_4$ mol.wt. 248.21

Synthesis

– Preparation by reaction of p-fluorobenzotrichloride with pyrogallol in ethanol at 65° for 30 min (80%) [1109].

m.p. 149–150° [1109]; Spectra (NA).

(2-Nitrophenyl)(2,4,6-trihydroxyphenyl)methanone

[61736-69-4]

 $C_{13}H_9NO_6$ mol.wt. 275.22

Synthesis

– Obtained by reaction of o-nitrobenzoyl chloride with phloroglucinol in the presence of aluminum chloride in ethyl ether at 0° for 3 h (20%) [1122].

– Also refer to: [974].

m.p. 182–184° [1122]; ¹H NMR [1122], IR [1122], UV [1122], MS [1122].**(3-Nitrophenyl)(2,4,6-trihydroxyphenyl)methanone** $C_{13}H_9NO_6$ mol.wt. 275.22

Synthesis

– Preparation by reaction of m-nitrobenzotrile with phloroglucinol in the presence of zinc chloride and hydrochloric acid in ethyl ether, followed by hydrolysis of the resulting ketimine hydrochloride with boiling water for 30 min (Hoesch reaction) [1261,1262].

m.p. 194° [1261,1262]; Spectra (NA).

(4-Nitrophenyl)(2,4,6-trihydroxyphenyl)methanone $C_{13}H_9NO_6$ mol.wt. 275.22

Synthesis

– Preparation by reaction of p-nitrobenzotrile with phloroglucinol in the presence of zinc chloride and hydrochloric acid, followed by hydrolysis of the resulting ketimine hydrochloride with boiling water for 10–30 min [1261,1262], (46%) [439] (Hoesch reaction).

m.p. 246–247° [1261,1262], 244–245° [439]; monohydrate [439,1262]; Spectra (NA).

(2-Aminophenyl)(2,3,4-trihydroxyphenyl)methanone

$C_{13}H_{11}NO_4$ mol.wt. 245.23

Synthesis

– Refer to: [974].

m.p. and Spectra (NA).

(2-Aminophenyl)(2,4,6-trihydroxyphenyl)methanone

$C_{13}H_{11}NO_4$ mol.wt. 245.23

Synthesis

– Presumably obtained by treatment of 2-nitro-2',4',6'-tri-hydroxybenzophenone in the presence of tin and hydrochloric acid at r.t., before cyclodehydration and quantitative conversion into 1,3-dihydroxyacridan-9-one [974].

– Also refer to: [975,1122].

m.p. and Spectra (NA).

(2-Methylphenyl)(2,3,4-trihydroxyphenyl)methanone

[120506-54-9]

$C_{14}H_{12}O_4$ mol.wt. 244.25

Synthesis

– Preparation by acylation of pyrogallol with o-toluic acid in the presence of Amberlyst-15 in refluxing toluene with azeotropic water removal [419].
– Also refer to: [1361–1363] (Japanese patents).

m.p. and Spectra (NA).

(4-Methylphenyl)(2,3,4-trihydroxyphenyl)methanone

[120506-55-0]

$C_{14}H_{12}O_4$ mol.wt. 244.25

Synthesis

– Preparation by acylation of pyrogallol with p-toluic acid in the presence of Amberlyst-15 in refluxing toluene with azeotropic water removal [419].

m.p. and Spectra (NA).

(2-Methoxyphenyl)(2,3,4-trihydroxyphenyl)methanone

[156333-16-3]

 $C_{14}H_{12}O_5$ mol.wt. 260.25

Synthesis

– Preparation by condensation of pyrogallol and o-anisic acid with boron trifluoride-etherate in carbon tetrachloride [1254], according to [360].

m.p. and Spectra (NA).

(3-Methoxyphenyl)(2,4,6-trihydroxyphenyl)methanone

[21554-79-0]

 $C_{14}H_{12}O_5$ mol.wt. 260.25

Synthesis

– Obtained (poor yield) by reaction of m-anisoyl chloride with phloroglucinol in the presence of aluminium chloride in ethyl ether at r.t. for 60 h [343], (11%) [341,422].

m.p. 168–171° [341]; 1H NMR [341], IR [341], UV [341].**(4-Methoxyphenyl)(2,3,4-trihydroxyphenyl)methanone**

[105443-50-3]

 $C_{14}H_{12}O_5$ mol.wt. 260.25

Synthesis

– Preparation by reaction of p-anisic acid with pyrogallol,

- in tetrachloroethane bubbling boron trifluoride at 110° for 1 h (84%) [420];
- in the presence of Amberlyst-15 in refluxing toluene with azeotropical water removal [419].

– Also refer to: [1364].

m.p. and Spectra (NA).

(4-Ethoxyphenyl)(2,3,4-trihydroxyphenyl)methanone

[69471-29-0]

 $C_{15}H_{14}O_5$ mol.wt. 274.27

Synthesis

– Preparation by reaction of p-ethoxybenzoic acid with pyrogallol in the presence of boron trifluoride-ethyl ether complex at 100° for 2 h (73%) [1168].

m.p. 104–105° [1168]; 1H NMR [1168], IR [1168], MS [1168].

(2,6-Dimethoxyphenyl)(2,4,6-trihydroxyphenyl)methanone

[61101-86-8]

 $C_{15}H_{14}O_6$ mol.wt. 290.27

Syntheses

- Preparation by reaction of 2,6-dimethoxybenzoyl chloride with O,O,O-tris(trimethylsilyl)phloroglucinol in the presence of stannic chloride in refluxing methylene chloride for 2 h (64%) [921].
- Also obtained (poor yield) by reaction of 2,6-dimethoxy-benzonitrile with phloroglucinol in the presence of zinc chloride and hydrochloric acid in ethyl ether at 0° for 5 days, followed by hydrolysis of the resulting ketimine with boiling water for 2 h (7%) (Hoesch reaction) [439].

m.p. 216–218° [439], 195–202° (d) [921]; Spectra (NA).

(2,4-Dimethoxy-6-methylphenyl)(2,4,6-trihydroxyphenyl)methanone

[38071-50-0]

 $C_{16}H_{16}O_6$ mol.wt. 304.30

Synthesis

- Obtained by treatment of methyl 7-(4-orcynyl)-3,5,7-trioxoheptanoate dimethyl ether with aqueous potassium hydroxide (25%) [1365].
- m.p. and Spectra (NA).

2.3.2 Hydroxy Groups Located on Both Rings**2.3.2.1 Substituents Located on One Ring****(2-Chloro-3-hydroxyphenyl)(2,6-dihydroxyphenyl)methanone** $C_{13}H_9ClO_4$ mol.wt. 264.66

Synthesis

- Preparation by reaction of 2-chloro-3-hydroxybenzoyl chloride with bis(trimethylsilyl) derivative of resorcinol in the presence of stannic chloride (or titanium tetrachloride or aluminium chloride) in refluxing methylene chloride for 2 h [921].
- m.p. and Spectra (NA).

(4-Chloro-2-hydroxyphenyl)(2,4-dihydroxyphenyl)methanone

[95481-60-0]

 $C_{13}H_9ClO_4$ mol.wt. 264.66

Synthesis

- Preparation by reaction of 4-chlorosalicylic acid with resorcinol in the presence of zinc chloride and a mixture of polyphosphoric acid/85% phosphoric acid (60:40) at 27°. Then, during 2 h, phosphorous trichloride was added between 27° and 37° and the mixture heated at 60° for 16 h [194].
- Also refer to: [1366].

pale yellow crystals [194]; m.p. and Spectra (NA).

(2,4-Dihydroxy-3-nitrophenyl)(2-hydroxyphenyl)methanone

[69169-87-5]

 $C_{13}H_9NO_6$ mol.wt. 275.22

Synthesis

- Obtained (poor yield) by action of salicylic acid with 2-nitroresorcinol in the presence of zinc chloride and phosphorous oxychloride at 60–65° for 3 h (10%) [406].

m.p. 118–120° [406]; Spectra (NA).

(3,4-Dihydroxy-5-nitrophenyl)(4-hydroxyphenyl)methanone

[134612-51-4]

 $C_{13}H_9NO_6$ mol.wt. 275.22

Synthesis

- Preparation by demethylation of 3,4'-dimethoxy-4-hydroxy-5-nitrobenzophenone with hydrobromic acid in refluxing acetic acid [1019].

m.p. 212–214° [1019]; Spectra (NA).

(2,6-Dihydroxyphenyl)(3-hydroxy-2-nitrophenyl)methanone $C_{13}H_9NO_6$ mol.wt. 275.22

Synthesis

- Preparation by reaction of 3-hydroxy-2-nitrobenzoyl chloride with bis(trimethylsilyl) derivative of resorcinol in the presence of stannic chloride (or titanium tetrachloride or aluminium chloride) in refluxing methylene chloride for 2 h [921].

m.p. and Spectra (NA).

(2,4-Dihydroxy-3-methylphenyl)(2-hydroxyphenyl)methanone

[57654-18-9]

 $C_{14}H_{12}O_4$ mol.wt. 244.25

Synthesis

– Preparation by reaction of salicylic acid with 2-methyl-resorcinol in the presence of zinc chloride and phosphorous oxychloride for 4 h at 60–65° (55%) [303].

m.p. 145°–147° [303]; 1H NMR [303], IR [303], UV [303], MS [303].

(2,4-Dihydroxy-3-methylphenyl)(3-hydroxyphenyl)methanone

[61227-13-2]

 $C_{14}H_{12}O_4$ mol.wt. 244.25

Syntheses

– Preparation by condensation of m-acetoxybenzonitrile with 2-methylresorcinol in the presence of zinc chloride in ethyl ether (Hoesch reaction) (42%) [413].

– Also obtained by [414] according to the method [415].

m.p. 181° [413]; Spectra (NA).

(2,4-Dihydroxy-3-methylphenyl)(4-hydroxyphenyl)methanone

[79861-84-0]

 $C_{14}H_{12}O_4$ mol.wt. 244.25

Synthesis

– Preparation by reaction of p-hydroxybenzoic acid with 2-methylresorcinol in tetrachloroethane in the presence of boron trifluoride at 80° for 4 h (79%) [224].

m.p. 227–228° [224]; 1H NMR [224].

 $C_{22}H_{28}O_4$ mol.wt. 356.46
Synthesis

- Preparation by reaction of β -resorcylic acid with p-nonyl-phenol in the presence of a mixture of polyphosphoric acid/85% phosphoric acid (60:40) at 40–45°. Then, during 2 h, phosphorous trichloride was added and the mixture heated at 60° for 16 h (73%) [194].

m.p. and Spectra (NA).

2.3.2.2 Substituents Located on Both Rings

(2,4-Dihydroxy-3,5,6-trinitrophenyl)(4-hydroxy-3-nitrophenyl)methanone

[67246-03-1]

 $C_{13}H_6N_4O_{12}$ mol.wt. 410.21

Synthesis

– Obtained by reaction of nitric acid ($d = 1.42$) with 4-hydroxy-2',4'-dimethoxybenzophenone in acetic acid at 32° [592].

m.p. 110° [592]; 1H NMR [592].**(2,4-Dihydroxy-3-methylphenyl)(5-hydroxy-2-methoxyphenyl)methanone**

[61227-17-6]

 $C_{15}H_{14}O_5$ mol.wt. 274.27

Synthesis

– Preparation by hydrolysis of N-[5-acetoxy- α -(2,4-di-hydroxyphenyl)-2-methoxy-3-methylbenzylidene]aniline with refluxing 20% sulfuric acid under nitrogen during 2 h (90%) [413].

m.p. 210° [413]; Spectra (NA).**(2,4-Dihydroxy-5-methylphenyl)(5-hydroxy-2-methoxyphenyl)methanone** $C_{15}H_{14}O_5$ mol.wt. 274.27

Syntheses

– Preparation by hydrolysis of N-[5-acetoxy- α -(2,4-di-hydroxyphenyl)-2-methoxy-5-methylbenzylidene]-aniline with refluxing 20% sulfuric acid during 5 h under nitrogen (90%) [413].

– Also obtained by [414] according to the method [415].

m.p. 199° [413]; Spectra (NA).**(2,4-Dihydroxy-6-methylphenyl)(5-hydroxy-2-methoxyphenyl)methanone**

[61227-16-5]

 $C_{15}H_{14}O_5$ mol.wt. 274.27

Synthesis

N.B.: This compound, mentioned in [Chem. Abstr., **86**, 16504d (1977)], is not described in the original paper [413], where the sole corresponding ketone indicated is the 2,4,5'-trihydroxy-2'-methoxy-5-methylbenzophenone or (2,4-dihydroxy-5-methylphenyl)(5-hydroxy-2-methoxy-phenyl)methanone.

m.p. and Spectra (NA).

(2,5-Dihydroxy-4-methoxyphenyl)(3-hydroxy-4-methoxyphenyl)methanone
(*Melanoxoin*)

[58115-05-2]

 $C_{15}H_{14}O_6$ mol.wt. 290.27

Synthesis

– Not yet described.

Isolation from natural source

– From *Dalbergia melanoxylon* Guill. et Perr. heartwood (Leguminosae-Lotoideae) [428].

m.p. 232–234° [428]; IR [428], UV [428].

(2,6-Dihydroxy-4-methoxyphenyl)(2-hydroxy-3-methoxyphenyl)methanone $C_{15}H_{14}O_6$ mol.wt. 290.27

Synthesis

– Obtained by condensation of 2,3-dimethoxybenzoic acid and 1,3,5-trimethoxybenzene in the presence of aluminium chloride, zinc chloride and phosphorous oxychloride, prior to cyclisation into 1-hydroxy-3,5-di-methoxyxanthone [1241].

m.p. and Spectra (NA).

(3-Chloro-4,6-dihydroxy-2-methylphenyl)(3,5-dichloro-2-hydroxy-4-methoxy-6-methylphenyl)methanone

[69709-89-3]

 $C_{16}H_{13}Cl_3O_5$ mol.wt. 391.63

Synthesis

– Preparation by hydrogenolysis of 2,2',4'-tris-(benzyloxy)-3,5,5'-trichloro-4-methoxy-6,6'-di-methylbenzophenone (SM) in the presence of 10% Pd/C in ethyl acetate containing concentrated hydrochloric acid (5 drops) (>90%) [1339]. SM was obtained by Friedel–Crafts acylation of 3,5-bis(benzyloxy)-2-chlorotoluene with 2-(benzyloxy)-3,5-dichloro-4-methoxy-6-methylbenzoic acid in the presence of trifluoroacetic anhydride in refluxing ethylene dichloride for 5 h (42%).

– Also refer to: [1344].

m.p. 168°5–169°5 [1339]; 1H NMR [1339], MS [1339].

(3-Chloro-6-hydroxy-4-methoxy-2-methylphenyl)(3,5-dichloro-2,4-dihydroxy-6-methylphenyl)methanoneC₁₆H₁₃Cl₃O₅ mol.wt. 391.63**Synthesis**

– Preparation by hydrogenolysis of 2,2',4'-tris-(benzyloxy)-3,5,5'-trichloro-4'-methoxy-6,6'-di-methylbenzophenone (SM) in the presence of 10%

Pd/C in ethyl acetate containing concentrated hydrochloric acid (5 drops) (>90%) [1339]. SM was obtained by Friedel–Crafts acylation of 5-(benzyloxy)-2-chloro-3-methoxytoluene with 2,4-bis-(benzyloxy)-3,5-dichloro-6-methylbenzoic acid in the presence of trifluoroacetic anhydride in refluxing ethylene dichloride for 5 h (42%).

m.p. 174–175°5 [1339]; ¹H NMR [1339], MS [1339].

(3,5-Dibromo-2-hydroxy-4-methoxy-6-methylphenyl)(2,4-dihydroxy-6-methylphenyl)methanoneC₁₆H₁₄Br₂O₅ mol.wt. 446.09**Synthesis**

– Preparation by hydrogenolysis of 2,2',4'-tris-(benzyloxy)-3,5-dibromo-4-methoxy-6,6'-dimethyl-benzophenone (SM) in the presence of 10%

Pd/C in ethanol/ethyl acetate mixture at r.t. and atmospheric pressure. SM was obtained by condensation of orcinol dibenzyl ether with 3,5-dibromoevernic acid benzyl ether in the presence of a trifluoroacetic anhydride/trifluoroacetic acid mixture under nitrogen in refluxing chloroform for 5 h [1376].

m.p. and Spectra (NA).

(3,5-Dibromo-2-hydroxy-6-methoxy-4-methylphenyl)(2,4-dihydroxy-6-methylphenyl)methanone

[39803-81-1]

C₁₆H₁₄Br₂O₅ mol.wt. 446.09**Synthesis**

– Preparation by hydrogenolysis of 2,2',4'-tris-(benzyloxy)-3,5-dibromo-6-methoxy-4,6'-dimethyl-benzophenone (SM) in ethanol/trifluoroacetic acid

mixture in the presence of 10% Pd/C at atmospheric pressure (quantitative yield). SM was obtained by condensation of O-benzyl-O-methyl-3,5-dibromo-γ-orsellinic acid—2-(benzyloxy)-3,5-dibromo-6-methoxy-4-methylbenzoic acid—with orcinol dibenzyl ether in the presence of trifluoroacetic anhydride/trifluoroacetic acid mixture under nitrogen in refluxing chloroform for 6.25 h [1376].

m.p. and Spectra (NA).

(3-Chloro-4,6-dihydroxy-2-methylphenyl)(3-chloro-6-hydroxy-4-methoxy-2-methylphenyl)methanone

[78135-54-3]

C₁₆H₁₄Cl₂O₅ mol.wt. 357.19**Synthesis**

– Preparation by hydrogenolysis (4 bars) of 4,6,6'-tris(benzyloxy)-3,3'-dichloro-4'-methoxy-2,2'-dimethylbenzophenone (m.p. 168–169°) in ethyl acetate in the presence of 10% Pd/C and 5 drops of concentrated hydrochloric acid (75%) [1377].

m.p. 180–182° [1377]; ¹H NMR [1377], IR [1377].**(3,5-Dichloro-2,6-dihydroxy-4-methylphenyl)(2-hydroxy-4-methoxy-6-methylphenyl)-methanone**

[23565-77-7]

C₁₆H₁₄Cl₂O₅ mol.wt. 357.19**Synthesis**

– Obtained (poor yield) by photo-Fries rearrangement of 2,4-dichloro-5-hydroxy-3-methylphenyl 2-hydroxy-4-methoxy-6-methylbenzoate in ethanol at 20° for 75 h (3%) [754].

m.p. 142–144° [754]; ¹H NMR [754], IR [754], UV [754].**(3,5-Dichloro-2-hydroxy-4-methoxy-6-methylphenyl)(2,4-dihydroxy-6-methylphenyl)-methanone**

[39803-63-9]

C₁₆H₁₄Cl₂O₅ mol.wt. 357.19**Synthesis**

– Preparation by hydrogenolysis of 2,2',4'-tris(benzyloxy)-3,5-dichloro-4-methoxy-6,6'-dimethyl-benzophenone (SM) in the presence of 10%

Pd/C in ethanol containing a few drops of trifluoroacetic acid for 3–4 h. SM was obtained by condensation of orcinol dibenzyl ether with 3,5-dichloroeverminic acid benzyl ether in the presence of a trifluoroacetic anhydride/trifluoroacetic acid mixture in refluxing chloroform for 6 h [1376].

m.p. and Spectra (NA).

[68048-17-9]

 $C_{16}H_{15}ClO_6$ mol.wt. 338.74

Synthesis

– Preparation by hydrogenolysis of 2',4',6'-tris-(benzyloxy)-3-chloro-2,4-dimethoxy-6'-methyl-benzophenone (SM) in ethyl acetate/tetrahydrofuran in the presence of 10% Pd/C at 25°. SM was obtained by condensation of 2,4-bis(benzyloxy)-6-methylbenzoic acid with 4-chloro-3,5-dimethoxyphenol benzyl ether in the presence of trifluoroacetic anhydride in methylene chloride under nitrogen for 15 min (61%) [1179].

m.p. 181–182° [1179]; 1H NMR [1179], IR [1179], MS [1179].

(3,6-Dihydroxy-2,4-dimethylphenyl)(2-hydroxy-6-methoxyphenyl)methanone

[42594-59-2]

C₁₆H₁₆O₅ mol.wt. 288.30

Synthesis

– Preparation by partial demethylation of 3-hydroxy-2',6,6'-trimethoxy-2,4-dimethylbenzophenone with boron tribromide in methylene chloride (quantitative yield) [1181].

m.p. 188–191° [1181]; ¹H NMR [1181], IR [1181], UV [1181], MS [1181].

(2,4-Dihydroxy-6-methylphenyl)(2-hydroxy-4-methoxy-6-methylphenyl)methanone

[21147-34-2]

C₁₆H₁₆O₅ mol.wt. 288.30

Syntheses

- Preparation by hydrogenolysis of 2,2',4'-tris-(benzyloxy)-4-methoxy-6,6'-dimethylbenzophenone (SM) in the presence of 10% Pd/C in ethyl acetate containing concentrated hydrochloric acid (5 drops) [1339]. SM was obtained by Friedel–Crafts acylation of 3,5-bis(benzyloxy)toluene with 2-(benzyloxy)-4-methoxy-6-methylbenzoic acid in the presence of trifluoroacetic anhydride in refluxing ethylene dichloride for 5 h (95%).
- Also obtained by photo-Fries rearrangement of 5-hydroxy-3-methylphenyl 2-hydroxy-4-methoxy-6-methylbenzoate in ethanol at r.t. for 80 h (21%) [754].
- m.p. 158–160° [1339], 158–159° [754];
¹H NMR [754,1339], IR [754], UV [754], MS [114,1339].

(2,4-Dihydroxy-6-methylphenyl)(4-hydroxy-2-methoxy-6-methylphenyl)methanone

[23573-47-9]

C₁₆H₁₆O₅ mol.wt. 288.30

Synthesis

– Obtained by reaction of orcinol with 2-methoxy-4-O-methoxycarbonyl-6-methylbenzoic acid in trifluoroacetic anhydride, first at 0° for 30 min, then at 20° for 15 h (30%) [754].

m.p. 118–120° [754]; ¹H NMR [754], IR [754], UV [754].

(2,6-Dihydroxy-4-methylphenyl)(2-hydroxy-4-methoxy-6-methylphenyl) methanone

[21147-33-1]

C₁₆H₁₆O₅ mol.wt. 288.30

Syntheses

- Obtained (poor yields) by photo-Fries rearrangement of two esters in ethanol at r.t.,
 - from 3-hydroxy-5-methylphenyl 2-hydroxy-4-methoxy-6-methylbenzoate during 80 h (5%) [754];
 - from 3-methoxy-5-methylphenyl 2,6-dihydroxy-4-methylbenzoate during 60 h (<2%) [754].
- Preparation by hydrogenolysis of 3',5'-dichloro-2,2',6'-trihydroxy-4-methoxy-4',6-dimethyl-benzophenone in the presence of Pd/C in 1 N sodium hydroxide [754].
- m.p. 56–58° [754]; ¹H NMR [754], IR [754], UV [754], MS [114].

(2,6-Dihydroxy-4-methylphenyl)(4-hydroxy-2-methoxy-6-methylphenyl) methanone

[23565-89-1]

C₁₆H₁₆O₅ mol.wt. 288.30

Synthesis

- Obtained (by-product) by reaction of orcinol with 2-methoxy-4-O-methoxy-carbonyl-6-methylbenzoic acid in trifluoroacetic anhydride, first at 0° for 30 min, then at 20° for 15 h (11%) [754].
- m.p. 139–140° [754]; ¹H NMR [754], IR [754], UV [754].

(2,4-Dihydroxy-3-methylphenyl)(2,5-dihydroxyphenyl)methanone

[61234-46-6]

C₁₄H₁₂O₅ mol.wt. 260.25

Synthesis

- Preparation by demethylation of 2,4,5'-trihydroxy-2'-methoxy-3-methylbenzophenone with hydrobromic acid in refluxing acetic acid during 2 h (79%) [413].

m.p. 238–240° [413]; Spectra (NA).

(2,4-Dihydroxy-5-methylphenyl)(2,5-dihydroxyphenyl)methanone

[61234-45-5]

C₁₄H₁₂O₅ mol.wt. 260.25

Synthesis

- Preparation by demethylation of 2,4,5'-trihydroxy-2'-methoxy-5-methylbenzophenone with hydrobromic acid in refluxing acetic acid during 2 h (77%) [413].

m.p. 244° [413]; Spectra (NA).

(2,4-Dihydroxy-5-methylphenyl)(3,5-dihydroxyphenyl)methanone

[61234-68-2]

 $C_{14}H_{12}O_5$ mol.wt. 260.25

Synthesis

– Preparation by condensation of 3,5-diacetoxybenzonitrile with 4-methylresorcinol (80%) (Hoesch reaction) [413].

m.p. 263–265° [413]; Spectra (NA).

(2-Hydroxy-3-methylphenyl)(2,3,4-trihydroxyphenyl)methanone

[107412-94-2]

 $C_{14}H_{12}O_5$ mol.wt. 260.25

Synthesis

– Preparation by heating o-cresotic acid and pyrogallol with zinc chloride and phosphorous oxychloride (40%) [1367].

m.p. 137–138° [1367]; Spectra (NA).

(2-Hydroxy-4-methylphenyl)(2,3,4-trihydroxyphenyl)methanone

[109067-41-6]

 $C_{14}H_{12}O_5$ mol.wt. 260.25

Synthesis

– Preparation by heating m-cresotic acid and pyrogallol with zinc chloride and phosphorous oxychloride (40%) [1367].

m.p. 122–123° [1367]; Spectra (NA).

(2-Hydroxy-5-methylphenyl)(2,3,4-trihydroxyphenyl)methanone

[105443-51-4]

 $C_{14}H_{12}O_5$ mol.wt. 260.25

Synthesis

– Preparation by treatment of pyrogallol with 5-methylsalicylic acid,

- in tetrachloroethane bubbling boron trifluoride at 110° for 1 h [420];

- in the presence of Amberlyst-15 in refluxing toluene under azeotropic water removal for 21 h [419].

– Also refer to: [421].

m.p. and Spectra (NA).

(4-Hydroxy-3-methoxyphenyl)(2,4,6-trihydroxyphenyl)methanone

$C_{14}H_{12}O_6$ mol.wt. 276.25

Synthesis

– Preparation by reaction of vanillonitrile with phloro-glucinol in the presence of zinc chloride and hydrochloric acid in ethyl ether, first at r.t. for 1 h, then at 50° for 4 h, followed by hydrolysis of the ketimine hydrochloride so obtained with boiling water for 1–2 h (38%) [440].

monohydrate [440]; m.p. >200° (d) [440]; Spectra (NA).

(5-Hydroxy-2-methoxyphenyl)(2,4,6-trihydroxyphenyl)methanone

$C_{14}H_{12}O_6$ mol.wt. 276.25

Synthesis

– Preparation by reaction of 5-hydroxy-2-methoxybenzoyl chloride with tris(trimethylsilyl) derivative of phloroglucinol in the presence of stannic chloride (or titanium tetrachloride or aluminium chloride) in refluxing methylene chloride for 2 h [921].

m.p. and Spectra (NA).

[42470-91-7]

$C_{15}H_{14}O_5$ mol.wt. 274.27

Synthesis

– Preparation by condensation of 3,6-dihydroxy-2,4-di-methylbenzoic acid with resorcinol in the presence of zinc chloride and phosphorous oxychloride at 40° for 1 h (69%) [1369].

m.p. 226° [1369]; 1H NMR [1369], IR [1369], UV [1369], MS [1369].

(3,6-Dihydroxy-2,4-dimethylphenyl)(2,6-dihydroxyphenyl)methanone

[42594-60-5]

$C_{15}H_{14}O_5$ mol.wt. 274.27

Synthesis

– Obtained by demethylation of 2',3,6-trihydroxy-6'-methoxy-2,4-dimethylbenzophenone with boron tribromide in refluxing methylene chloride for 90 h (58%) [1181].

m.p. 171–174° [1181]; 1H NMR [1181], IR [1181], UV [1181], MS [1181].

(2-Hydroxy-4-methoxy-6-methylphenyl)(2,4,6-trihydroxyphenyl)methanoneC₁₅H₁₄O₆ mol.wt. 290.27

Synthesis

– Preparation by hydrogenolysis of 2,2',4,6-tetrakis-(benzyloxy)-4'-methoxy-6'-methylbenzophenone (SM) in ethyl acetate/tetrahydrofuran mixture in the

presence of 10% Pd/C at 25°. SM was obtained by condensation of 2-(benzyloxy)-4-methoxy-6-methyl-benzoic acid with phloroglucinol tribenzyl ether in the presence of trifluoroacetic anhydride in methylene chloride under nitrogen for 15 min (81%) [1179].

m.p. (NA); ¹H NMR [1179].

(4-Hydroxy-2-methoxy-6-methylphenyl)(2,4,6-trihydroxyphenyl)methanone

[60556-49-2]

C₁₅H₁₄O₆ mol.wt. 290.27

Synthesis

– Preparation by catalytic hydrogenolysis of 2,4,4',6-tetra-kis(benzyloxy)-2'-methoxy-6'-methylbenzophenone (SM) in the presence of 10% Pd/C in ethanol (72%). SM

was obtained by condensation of 4-(benzyloxy)-6-methoxy-o-toluic acid with phloroglucinol tribenzyl ether in the presence of trifluoroacetic anhydride in methylene chloride (88%) [1349].

– Also refer to: [1348].

m.p. 177–178° [1349]; ¹H NMR [1349], IR [1349], UV [1349], MS [1349].

(3-Hydroxy-2,6-dimethoxyphenyl)(2,4,6-trihydroxyphenyl)methanoneC₁₅H₁₄O₇ mol.wt. 306.27

Synthesis

– Preparation by reaction of 3-hydroxy-2,6-dimethoxy-benzoyl chloride with tris(trimethylsilyl) derivative of phloroglucinol in the presence of stannic chloride (or titanium tetrachloride or aluminium chloride) in refluxing methylene chloride for 2 h [921].

m.p. and Spectra (NA).

2.4.2.2 Substituents Located on Both Rings

Symmetrical ketones

Bis(2,4-Dihydroxy-6-methylphenyl)methanone

[39803-53-7]

 $C_{15}H_{14}O_5$

mol.wt. 274.27

Synthesis

– Preparation by hydrogenolysis of 2,2',4,4'-tetrakis-(benzyloxy)-6,6'-dimethylbenzophenone (SM) in the presence of 10% Pd/C in ethyl acetate (90%) [1376].

SM was obtained by condensation of orcinol dibenzyl ether with orsellinic acid dibenzyl ether in methylene chloride in the presence of trifluoroacetic anhydride for 5 min (75%).

– Also refer to: [1388].

m.p. 195–198° [1376]; 1H NMR [1376], IR [1376], UV [1376].

Bis(2,6-Dihydroxy-4-methoxyphenyl)methanone

 $C_{15}H_{14}O_7$

mol.wt. 306.27

Synthesis

– Refer to: [1389].

m.p. and Spectra (NA).

Asymmetric ketones

(3-Chloro-4,6-dihydroxy-2-methylphenyl)(3,5-dichloro-2,4-dihydroxy-6-methylphenyl)-methanone

[69709-91-7]

 $C_{15}H_{11}Cl_3O_5$

mol.wt. 377.61

Synthesis

– Preparation by hydrogenolysis of 2,2',4,4'-tetrakis-(benzyloxy)-3,5,5'-trichloro-6,6'-dimethylbenzophenone (SM) in the presence of 10% Pd/C in ethyl acetate

containing concentrated hydrochloric acid (5 drops) (>90%) [1339]. SM was obtained by Friedel–Crafts acylation of 3,5-bis(benzyloxy)-2-chlorotoluene with 2,4-bis(benzyloxy)-3,5-dichloro-6-methylbenzoic acid in the presence of trifluoroacetic anhydride in refluxing ethylene dichloride for 5 h (33%).

– Also refer to: [1344].

m.p. 201–203° [1339]; 1H NMR [1339], MS [1339].

(3,5-Dichloro-2,4-dihydroxy-6-methylphenyl)(2,4-dihydroxy-6-methylphenyl) methanone

[39803-58-2]

 $C_{15}H_{12}Cl_2O_5$

mol.wt. 343.16

Synthesis

– Preparation by hydrogenolysis of 2,2',4,4'-tetrakis-(benzyloxy)-3,5-dichloro-6,6'-dimethylbenzophenone (SM) in ethanol in the presence of 10% Pd/C for 3 h (51%).

SM was obtained by condensation of 3,5-di-chloroorcellinic acid dibenzyl ether with orcinol dibenzyl ether in refluxing chloroform in the presence of trifluoroacetic anhydride/trifluoroacetic acid for 3 h [1376].

m.p. 213–216° [1376]; 1H NMR [1376], UV [1376].

(2,6-Dihydroxy-4-methoxyphenyl)(2,4-dihydroxy-6-methylphenyl) methanone

[60556-46-9]

 $C_{15}H_{14}O_6$

mol.wt. 290.27

Synthesis

– Preparation by catalytic hydrogenolysis of 2,2',4',6'-tetrakis(benzyloxy)-4-methoxy-6'-methyl-benzophenone (SM) in the presence of 10% Pd/C in ethyl acetate

at r.t. (71%). SM was obtained by condensation of 2,6-bis(benzyloxy)-4-methoxybenzoic acid with 3,5-bis(benzyloxy)toluene in the presence of trifluoroacetic anhydride in methylene chloride for 5 min at r.t. (69%) [1349].

– Also refer to: [1378,1379].

m.p. 250–251° (first melting point at 115°) [1349];

1H NMR [1349], IR [1349], UV [1349], MS [1349].

(2,3-Dihydroxy-4-methoxyphenyl)(3,5-dihydroxy-4-methoxyphenyl) methanone $C_{15}H_{14}O_7$

mol.wt. 306.27

Synthesis

– Obtained by reaction of methyl iodide with exifone (2,3,3',4,4',5'-hexahydroxybenzophenone) in the presence of lithium carbonate in N,N-dimethylformamide at 30° for 15 h under nitrogen (30%) [369].

m.p. 216–218° [369]; 1H NMR [369], ^{13}C NMR [369], MS [369]; pK_a [369].

[4-(Benzoylmethoxy)-3,5-dihydroxyphenyl](2,3-dihydroxy-4-methoxyphenyl) methanone

2-[4-(2,3-Dihydroxy-4-methoxybenzoyl)-2,6-dihydroxyphenoxy]-1-phenylethanone

$C_{22}H_{18}O_8$ mol.wt. 410.38

Synthesis

– Obtained by action of methyl iodide with 4'-phenacyl ether of exifone (2,3,3',4,4',5'-hexahydroxybenzophenone) in the presence of lithium carbonate in N,N-dimethylformamide at 30° for 15 h (30%) [369].

m.p. (NA); 1H NMR [369], ^{13}C NMR [369].

2.5 Pentahydroxybenzophenones

2.5.1 Hydroxy Groups Located on One Ring

Not described till December 1999

2.5.2 Hydroxy Groups Located on Both Rings

2.5.2.1 Substituents Located on One Ring

(3-Chloro-4,6-dihydroxy-2-methylphenyl)(2,4,6-trihydroxyphenyl)methanone

[68048-30-6]

$C_{14}H_{11}ClO_6$ mol.wt. 310.69

Synthesis

– Preparation by hydrogenolysis of 2',4,4',6,6'-pentakis-(benzyloxy)-3-chloro-2-methylbenzophenone (SM) in ethyl acetate/tetrahydrofuran in the presence of 10%

Pd/C at 25°. SM was obtained by condensation of 4,6-bis-(benzyloxy)-3-chloro-2-methylbenzoic acid with phloroglucinol tribenzyl ether in the presence of trifluoroacetic anhydride in methylene chloride under nitrogen for 2 min (95%) [1179].

m.p. (NA); 1H NMR [1179].

(2,4-Dihydroxy-6-methylphenyl)(2,4,6-trihydroxyphenyl)methanone

[55018-96-7]

C₁₄H₁₂O₆

mol.wt. 276.25

Syntheses

– Preparation by hydrogenolysis of 2,2',4,4',6-pentakis-(benzyloxy)-6'-methylbenzophenone (SM), in the presence of 10% Pd/C in ethyl acetate or in a ethanol/ethyl acetate mixture at atmospheric pressure and r.t. (>95%) [1179,1349,1390]. SM was obtained,

- by condensation of 4,6-bis(benzyloxy)-o-toluic acid with phloroglucinol tribenzyl ether in the presence of trifluoroacetic anhydride (TFAA) in a chloroform/methylene chloride mixture at r.t. for 5 min (61%, colourless oil) [1349];
 - by condensation of 2,4,6-tris(benzyloxy)benzoic acid with orcinol dibenzyl ether in the presence of trifluoroacetic anhydride (TFAA) in methylene chloride for 10 min [1179], (83%, m.p. 33°) [1390].
- Also obtained (poor yield) by demethylation of 2,2',4,4',6-pentamethoxy-6'-methylbenzophenone (m.p. 126°5–127°) in methylene chloride in the presence of boron tribromide at r.t. for overnight (15%) [1390].
- Also obtained by Friedel–Crafts acylation of phloroglucinol with o-orsellinic acid [1391].
- Also obtained by Fries rearrangement of phloroglucinyl o-orsellinate (m.p. 185–188°) [1391].
- Also refer to: [1345,1378,1379,1389,1392].

N.B.: Discussion on hypothetical formation from various polyketones [1287]. This ketone is the biosynthetic precursor of the antibiotic griseofulvin and the various fungal and lichen xanthenes [1287]. It was very unstable and underwent facile cyclization to norlichexanthone (1,3,6-tri-hydroxy-8-methylxanthen-9-one) [1179].

viscous, pale yellow oil [1349]; b.p. (NA);

pale yellow powder [1390]; m.p. (NA);

light yellow compound [1179];

N.B.: The description of the physical state of this ketone was imprecise.

¹H NMR [1349,1390], IR [1349,1390], UV [1349,1390],

MS [1349]; TLC [1390].

(2,3-Dihydroxy-4-methoxyphenyl)(3,4,5-trihydroxyphenyl)methanone

[177703-30-9]

 $C_{14}H_{12}O_7$ mol.wt. 292.25

Synthesis

– Preparation from exifone (2,3,3',4,4',5'-hexahydroxy-benzophenone) in three steps: at first, phenacylation of exifone at the 4'-position, according to [365].

After, methylation of the 4'-phenacyl ether of exifone at the 4-position. Then, removal of the phenacyl protecting group of 4-methoxy-4'-phenacyl exifone derivative obtained in the presence of zinc dust in an acetic acid/methanol mixture at r.t. for 2 min (50%) [369].

m.p. 260–262° [369]; 1H NMR [369], ^{13}C NMR [369], MS [369]; pK_a [369].

(3,5-Dihydroxy-4-methoxyphenyl)(2,3,4-trihydroxyphenyl)methanone

[170630-11-2]

 $C_{14}H_{12}O_7$ mol.wt. 292.25

Synthesis

– Obtained by reaction of methyl iodide with exifone (2,3,3',4,4',5'-hexahydroxy-benzophenone) in the presence of lithium carbonate in N,N-dimethyl-formamide at 30° for 15 h under nitrogen (15%) [369].

– Also refer to: [1393].

m.p. 202–204° [369]; 1H NMR [369], ^{13}C NMR [369], MS [369]; pK_a [369].

[4-(Benzoylmethoxy)-3,5-dihydroxyphenyl](2,3,4-trihydroxyphenyl)methanone**2-[2,6-Dihydroxy-4-(2,3,4-trihydroxybenzoyl)phenoxy]-1-phenylethanone** $C_{21}H_{16}O_8$ mol.wt. 396.35

Synthesis

– Obtained by reaction of α -bromoacetophenone with exifone (2,3,3',4,4',5'-hexahydroxy-benzophenone) in the presence of lithium carbonate in N,N-dimethylformamide at r.t. for 15 h under nitrogen (40%) [365].

m.p. decomposes above 180° [365]; 1H NMR [365], ^{13}C NMR [365], MS [365].

2.5.2.2 Substituents Located on Both Rings

(3-Bromo-4,5-dihydroxyphenyl)(3,5-dibromo-2,4,6-trihydroxyphenyl) methanoneC₁₃H₇Br₃O₆ mol.wt. 498.91

Synthesis

– Obtained by reaction of maclurin with bromine in boiling water [451].

N.B.: The formula proposed is the more likely.
monohydrate [451]; m.p. and Spectra (NA).

(3-Chloro-4,6-dihydroxy-2-methylphenyl)(3-chloro-2,4,6-trihydroxyphenyl) methanone

[68048-32-8]

C₁₄H₁₀Cl₂O₆ mol.wt. 345.14

Synthesis

– Preparation by hydrogenolysis of 2,4,4',6,6'-pentakis-(benzyloxy)-3,3'-dichloro-2'-methylbenzophenone (SM) in ethyl acetate/tetrahydrofuran mixture in the presence of 10% Pd/C at 25°.

SM was obtained by condensation of 2,4,6-tris(benzyloxy)-3-chlorobenzoic acid with 3,5-bis(benzyloxy)-2-chlorotoluene in the presence of trifluoroacetic anhydride in methylene chloride under nitrogen for 20 min (18%) [1179].

m.p. (NA); ¹H NMR [1179].

(3-Chloro-2,4,6-trihydroxyphenyl)(2,4-dihydroxy-6-methylphenyl) methanone

[68048-31-7]

C₁₄H₁₁ClO₆ mol.wt. 310.69

Synthesis

– Preparation by hydrogenolysis of 2,2',4,4',6-pentakis-(benzyloxy)-3-chloro-6'-methylbenzophenone (SM) in ethyl acetate/tetrahydrofuran mixture in the presence of

10% Pd/C at 25°. SM was obtained by condensation of 3-chloro-2,4,6-tris(benzyloxy)benzoic acid with orcinol dibenzyl ether in the presence of trifluoroacetic anhydride in methylene chloride under nitrogen for 15 min [1179].

m.p. (NA); ¹H NMR [1179].

2.6 Hexahydroxybenzophenone

(2,3,4-Trihydroxy-5-methylphenyl)(3,4,5-trihydroxyphenyl)methanone

[112232-18-5]

 $C_{14}H_{12}O_7$

mol.wt. 292.25

Synthesis

Chapter 3

Polyphenyl Phenyl Methanones

(Class of METHANONES)

3.1 Biphenyl Phenyl Methanones

3.1.1 Monohydroxylated Ketones

(6-Bromo-5-hydroxy[1,1'-biphenyl]-2-yl)phenylmethanone

[133721-72-9]

$C_{19}H_{13}BrO_2$ mol.wt. 353.22

Synthesis

– Preparation by adding trimethylsilyl trifluoromethane-sulfonate to a solution of 5-bromo-2,3-dihydro-2,2-di-methyl-6-phenyl-4*H*-pyran-4-one, di-(tert-butyl)pyridine and 1-benzoylacetylene in chloroform at -30° . Then, the mixture was stirred at 20° for 24 h (59%) [833].

m.p. $155-156^\circ$ [833]; 1H NMR [833], IR [833], MS [833].

(4-Chlorophenyl)(4'-hydroxy[1,1'-biphenyl]-4-yl)methanone

[38304-24-4]

$C_{19}H_{13}ClO_2$ mol.wt. 308.76

Syntheses

- Preparation by reaction of p-chlorobenzoic acid with 4-hydroxybiphenyl in the presence of trifluoromethane-sulfonic acid, first at 50° for 23 h, then at 70° for 4 h (97%) [151].
- Preparation by Friedel–Crafts acylation of p-acetoxybiphenyl with p-chlorobenzoyl chloride, followed by hydrolysis of the keto ester so obtained (74%) [1394].

m.p. $196-197^\circ$ [151,1394]; 1H NMR [151,1394], IR [151,1394].

(4-Fluorophenyl)(4'-hydroxy[1,1'-biphenyl]-4-yl)methanone

[112782-46-4]

C₁₉H₁₃FO₂ mol.wt. 292.31**Synthesis**

- Preparation by Fries rearrangement of 4-(4-fluorobenzoyloxy)biphenyl with aluminium chloride in o-dichlorobenzene at 120° for 8 h (good yield) [1395].

m.p. and Spectra (NA).

[1,1'-Biphenyl]-4-yl(4-hydroxyphenyl)methanone

[3558-83-6]

C₁₉H₁₄O₂ mol.wt. 274.32**Syntheses**

- Preparation by demethylation of p-anisoylbiphenyl,
 - with pyridinium chloride at reflux a few min [1396];
 - with aluminium chloride in benzene [1141].
 - Also obtained by reaction of EKONOL^(RM), an aromatic polyester as Friedel-Crafts reagent, with biphenyl in triflic acid at 25° for 18 h (95%) [922]. Similar results can be obtained using hydrofluoric acid/boron trifluoride or aluminium chloride in place of triflic acid [922].
 - Also refer to: Chem. Abstr., **127**, 34137f (1997).
- m.p. 186° [1396], 185–187° [1141]; ¹³C NMR [922], MS [922]; HPLC [922].

(2-Hydroxy[1,1'-biphenyl]-3-yl)phenylmethanoneC₁₉H₁₄O₂ mol.wt. 274.32**Synthesis**

- Obtained by irradiation of 2-biphenyl benzoate with 254 nm light in benzene (23%) [1397].

m.p. and Spectra (NA).

(4-Hydroxy[1,1'-biphenyl]-3-yl)phenylmethanoneC₁₉H₁₄O₂ mol.wt. 274.32**Synthesis**

- Obtained by irradiation of 4-biphenyl benzoate with 254 nm light in benzene (54%) [1397].

m.p. and Spectra (NA).

(4'-Hydroxy[1,1'-biphenyl]-4-yl)phenylmethanone

[5623-46-1]

C₁₉H₁₄O₂ mol.wt. 274.32

Syntheses

– Obtained by Fries rearrangement of 4-benzoyloxy-biphenyl in the presence of aluminium chloride without solvent for 30 min at 160° (22%) [1398] or in tetrachloroethane for 1 h at 140° [130]. There is an heteronuclear migration of the benzoyl group, since the Fries reaction catalysed by Lewis acids is not a true rearrangement, but more probably an intermolecular acylation [1399,1400].

– Preparation by Friedel–Crafts acylation of p-acetoxybiphenyl with benzoyl chloride, followed by hydrolysis of the resulting keto ester (94%) [1394].

m.p. 194–195° [1394], 193–195° [130,1398]; ¹H NMR [1394], IR [1394].

(5-Hydroxy[1,1'-biphenyl]-2-yl)phenylmethanone

[133721-67-2]

C₁₉H₁₄O₂ mol.wt. 274.32

Syntheses

– Obtained by heating a solution of 5-[(triisopropylsilyl)oxy]-biphenyl-2-yl phenyl ketone in methanol with 2 N aqueous hydrochloric acid for 3 h at 80° in a sealed tube (93%) [833].

– Preparation by adding trimethylsilyl trifluoromethane-sulfonate to a solution of 2,3-dihydro-2,2-dimethyl-6-phenyl-4H-pyran-4-one, di-(tert-butyl)pyridine and 1-benzoylacetylene in chloroform at –30°. Then, the mixture was stirred at 0° for 30 min and at 20° for 24 h (84%) [833].

m.p. 179–180° [833]; ¹H NMR [833], IR [833], MS [833].

(6-Hydroxy[1,1'-biphenyl]-3-yl)phenylmethanone

[84627-07-6]

C₁₉H₁₄O₂ mol.wt. 274.32

Syntheses

– Preparation by decarboxylation of 2-[(2'-hydroxy-5'-bi-phenyl)carbonyl]benzoic acid in the presence of cupric acetate in refluxing quinoline for 30 min (96%) [1401].

– Also obtained by irradiation of 2-biphenyl benzoate with 254 nm light in benzene (27%) [1397].

m.p. 195°2–197° [1401];

¹H NMR [1401], IR [1401], UV [1401]; TLC [1401].

[1,1'-Biphenyl]-4-yl(2-Hydroxy-5-methylphenyl)methanoneC₂₀H₁₆O₂ mol.wt. 288.35**Syntheses**

- Preparation by reaction of 4-biphenylcarbonyl chloride with p-cresol in the presence of aluminium chloride in trichlorobenzene at 190–200° for 2 h (64%) [1402].
 - Preparation by Fries rearrangement of p-cresyl 4-bi-phenylcarboxylate with aluminium chloride in trichlorobenzene, first at 140° for 30 min, then between 140° and 200° for 30 min and at 200° for 3 h (82%) [1402].
 - Also refer to: [235].
- m.p. 79–80° [1402]; UV [1402].

(2'-Hydroxy-5'-methyl[1,1'-biphenyl]-3-yl)phenylmethanone

[132555-32-9]

C₂₀H₁₆O₂ mol.wt. 288.35**Synthesis**

- Obtained by irradiation of a (Z)-(3-benzoylphenyl)azo tert-butyl sulfide and p-cresol mixture in the presence of potassium tert-butoxide in dimethyl sulfoxide for 3.5 h (53%) [1403].
- glassy oil [1403]; b.p. (NA); ¹H NMR [1403].

(2'-Hydroxy-5'-methyl[1,1'-biphenyl]-4-yl)phenylmethanone

[132555-33-0]

C₂₀H₁₆O₂ mol.wt. 288.35**Synthesis**

- Obtained by irradiation of a (Z)-(4-benzoylphenyl)azo tert-butyl sulfide and p-cresol mixture in the presence of potassium tert-butoxide in dimethyl sulfoxide for 2.5 h (54%) [1403].
- m.p. 144°5–145°9 [1403]; ¹H NMR [1403], IR [1403].

(5-Hydroxy-3-methyl[1,1'-biphenyl]-2-yl)phenylmethanone

[133721-68-3]

C₂₀H₁₆O₂ mol.wt. 288.35**Synthesis**

- Preparation by heating 3-methyl-5-[(triisopropylsilyl)oxy]-biphenyl-2-yl phenyl ketone in ethanol with 2 N aqueous hydrochloric acid for 4.5 h at 80° in a sealed tube (93%) [833].
- m.p. 148–148°5 [833]; ¹H NMR [833], IR [833], MS [833].

[1,1'-Biphenyl]-4-yl(2-hydroxy-4-methoxyphenyl)methanone

[90986-69-9]

 $C_{20}H_{16}O_3$ mol.wt. 304.35

Synthesis

– Preparation by reaction of 4-biphenylcarbonyl chloride with resorcinol dimethyl ether in the presence of aluminium chloride [408],

- in nitrobenzene, first between 25° and 30° for 2 h, then at 80° for 4 h (56%) [1402];
- in refluxing carbon disulfide for 4 h (20–30%) [1141].

– Also refer to: [235].

m.p. 105–106° [1402], 104–105° [1141];

¹H NMR [1141], IR [1141], UV [1402], MS [1141].**(5-Hydroxy-2'-methoxy[1,1'-biphenyl]-2-yl)phenylmethanone**

[133721-75-2]

 $C_{20}H_{16}O_3$ mol.wt. 304.35

Synthesis

– Obtained by heating a solution of 5-[[dimethyl (1,1,2-tri-methylpropyl)silyl]oxy]-2'-methoxy-biphenyl-2-yl phenyl ketone in ethanol with 2 N aqueous hydrochloric acid for 2.5 h at 80° in a sealed tube (93%) [833].

m.p. 177°5–178°5 [833]; ¹H NMR [833], IR [833], MS [833].**[4-(Acetyloxy)-2-hydroxyphenyl][1,1'-biphenyl]-4-ylmethanone**

[36415-12-0]

 $C_{21}H_{16}O_4$ mol.wt. 332.36

Synthesis

– Refer to: [235].

m.p. 108° [235]; UV [235].

[1,1'-Biphenyl]-4-yl(4-ethoxy-2-hydroxyphenyl)methanone $C_{21}H_{18}O_3$ mol.wt. 318.37

Synthesis

– Preparation by reaction of 4-biphenylcarbonyl chloride with resorcinoldiethyl ether in the presence of aluminium chloride in nitrobenzene, first between 25° and 30° for 2 h, then at 80° for 4 h [1402].

– Also refer to: [235].

m.p. 114–115° [1402]; UV [1402].

(2-Hydroxy-4-methoxyphenyl)(5-methyl[1,1'-biphenyl]-2-yl)methanone

[80988-17-6]

[1,1'-Biphenyl]-4-yl[4-(1,1-dimethylethoxy)-2-hydroxyphenyl]methanone

[36488-90-1]

 $C_{23}H_{22}O_3$ mol.wt. 346.94

Synthesis

– Refer to: [235].

m.p. 80° [235]; UV [235].

[1,1'-Biphenyl]-4-yl[2-hydroxy-4-(4-nitrophenoxy)phenyl]methanone

[36469-48-4]

 $C_{25}H_{17}NO_5$ mol.wt. 411.41

Synthesis

– Refer to: [235].

m.p. 234° [235]; UV [235].

[1,1'-Biphenyl]-4-yl[4-hydroxy[1,1'-biphenyl]-3-yl]methanone*4',5-Diphenyl-2-hydroxybenzophenone*

[95818-93-2]

 $C_{25}H_{18}O_2$ mol.wt. 350.42

Syntheses

– Preparation by reaction of 4-biphenylcarbonyl chloride with 4-phenylphenol in the presence of aluminium chloride in trichlorobenzene at 190–200° for 2 h [1402].

- Also obtained by Fries rearrangement of 4-biphenylyl biphenyl-4-carboxylate, (4-biphenylyl 4-phenyl-benzoate), with aluminium bromide in chlorobenzene at 110° for 6 h [1406].

m.p. 135–136° [1402], 135° [1406]; IR [1406], UV [1402,1406]; GLC [1406].

[4-(4-Aminophenoxy)-2-hydroxyphenyl][1,1'-biphenyl]-4-ylmethanone

[36414-91-2] $C_{25}H_{19}NO_3$ mol.wt. 381.43

m.p. 163° [235]; UV [235].

[1,1'-Biphenyl]-4-yl[4-(cyclohexyloxy)-2-hydroxyphenyl]methanone

[36414-95-6] $C_{25}H_{24}O_3$ mol.wt. 372.46

m.p. 123° [235]; UV [235].

[1,1'-Biphenyl]-4-yl[4-(hexyloxy)-2-hydroxyphenyl]methanone

[36419-22-4] $C_{25}H_{26}O_3$ mol.wt. 374.48

m.p. 89° [235]; UV [235].

[1,1'-Biphenyl]-4-yl[2-hydroxy-4-(1-propylbutoxy)phenyl]methanone

[36414-89-8] $C_{26}H_{28}O_3$ mol.wt. 388.51

oil [235]; b.p. (NA); UV [235].

[1,1'-Biphenyl]-4-yl[2-hydroxy-4-(octyloxy)phenyl]methanone

[36130-58-2] $C_{27}H_{30}O_3$ mol.wt. 402.53

– Also refer to: [235].

m.p. 69–70° [801], 67° [235]; UV [235].

[1,1'-Biphenyl]-4-yl[4-(decyloxy)-2-hydroxyphenyl]methanone

[36419-24-6]

$C_{29}H_{34}O_3$ mol.wt. 430.59

Synthesis

– Refer to: [235].

m.p. 82° [235]; UV [235].

[1,1'-Biphenyl]-4-yl[4-(hexadecyloxy)-2-hydroxyphenyl]methanone

[36419-25-7]

$C_{35}H_{46}O_3$ mol.wt. 514.75

Synthesis

– Refer to: [235].

m.p. 88° [235]; UV [235].

3.1.2 Dihydroxylated Ketones

(2,4-Dihydroxyphenyl)(4'-nitro[1,1'-biphenyl]-4-yl)methanone

[36414-94-5]

$C_{19}H_{13}NO_5$ mol.wt. 335.32

Synthesis

– Refer to: [235].

m.p. 299° [235]; UV [235].

[1,1'-Biphenyl]-4-yl(2,4-dihydroxyphenyl)methanone

[36130-57-1]

$C_{19}H_{14}O_3$ mol.wt. 290.32

Syntheses

– Preparation by reaction of 4-biphenyl-carboxylic acid with resorcinol in the presence of boron trifluoride in tetrachloroethane at 45° for 5 h (67%) [1402].

– Preparation by reaction of 4-biphenylcarbonyl chloride with resorcinol in the presence of aluminium chloride in nitrobenzene, first between 25° and 30° for 1 h, then at 55–60° for 4 h (91%) [1402].

– Also refer to: [235,801].

m.p. 188° [235], 183–184° [1402]; UV [235,1402].

(3,5-Dihydroxy[1,1'-biphenyl]-2-yl)phenylmethanone

[54439-82-6]

 $C_{19}H_{14}O_3$ mol.wt. 290.32

Synthesis

– Preparation from 3,3'-diphenyl-5,5'-diisoxazoly-methane by performing hydrogenolysis and subsequent hydrolysis with hydrochloric acid (55%) [693].

m.p. 148° [693]; 1H NMR [693], MS [693].

(4,4'-Dihydroxy[1,1'-biphenyl]-3-yl)phenylmethanone

[52189-86-3]

 $C_{19}H_{14}O_3$ mol.wt. 290.32

Syntheses

– Obtained by irradiation of [bi(cyclohexa-2,5-dienylidene)-4,4'-dione], so called 4,4'-diphenylidene, in benzaldehyde for 2 days (21%) [1407].

– Also obtained by Fries rearrangement of 4,4'-biphenyldiyl dibenzoate with aluminium chloride in o-dichlorobenzene during 3 h at 180° (19%) [1408].

m.p. 142–144° [1408], 130° [1407];

1H NMR [1407,1408], IR [1407,1408], UV [1408], MS [1407].

(2-Hydroxy[1,1'-biphenyl]-3-yl)(2-hydroxyphenyl)methanone $C_{19}H_{14}O_3$ mol.wt. 290.32

Synthesis

– Obtained by photo-Fries rearrangement of phenyl m-phenyl-salicylate (major product) [219].

m.p. and Spectra (NA).

(4'-Hydroxy[1,1'-biphenyl]-4-yl)(3-hydroxyphenyl)methanone

[75731-50-9]

 $C_{19}H_{14}O_3$ mol.wt. 290.32

Synthesis

– Preparation by acylation of 4-hydroxybiphenyl with 3-hydroxybenzoic acid in hydrofluoric acid in the presence of boron trifluoride (pressure: 207 KPa) in an autoclave for 6 h at 0° (94%) [352].

m.p. 213–219° [352]; Spectra (NA).

(4'-Hydroxy[1,1'-biphenyl]-4-yl)(4-hydroxyphenyl)methanone

[86432-13-5]

C₁₉H₁₄O₃ mol.wt. 290.32

Syntheses

- Preparation by reaction of 4-hydroxybenzoic acid with 4-hydroxybiphenyl in the presence of trifluoromethanesulfonic acid at r.t. for overnight, then at 50° for 3.5 h and at 65° for 1.5 h (95%) [151].
- Preparation by Friedel-Crafts acylation of p-acetoxybiphenyl with p-hydroxybenzoyl chloride, followed by hydrolysis of the keto ester so obtained (65%) [1394].
- Preparation by heating a mixture of 4-hydroxybiphenyl-4'-carboxylic acid and phenol in nitrobenzene in the presence of boron trifluoride at 80° for 30 min (84%) [186].

m.p. 230–232° [1394], 190–198° [151]. There is discrepancy between the two melting points.

¹H NMR [151,1394], IR [1394].

[1,1'-Biphenyl]-4-yl[2-hydroxy-4-(2-hydroxyethoxy)phenyl]methanoneC₂₁H₁₈O₄ mol.wt. 334.37

Synthesis

- Preparation by reaction of ethylene carbonate with 2,4-dihydroxy-4'-phenylbenzophenone in the presence of sodium methoxide in diisobutyl ketone for 2 h at 130° (84%) [700].

m.p. 157–158° [700]; Spectra (NA).

[1,1'-Biphenyl]-4-yl[2-hydroxy-4-(3-hydroxypropoxy)phenyl]methanone

[36469-47-3]

C₂₂H₂₀O₄ mol.wt. 348.40

Synthesis

- Refer to: [235].

m.p. 145° [235]; UV [235].

3.2 Terphenyl Phenyl Methanones

(2,4-Dihydroxyphenyl)[1,1';4',1'']terphenyl-4''-ylmethanone

$C_{25}H_{18}O_3$ mol.wt. 366.42

Synthesis

– Preparation by Friedel–Crafts acylation of p-terphenyl with 2,4-dihydroxybenzoic acid or its derivatives [1409].

m.p. and Spectra (NA).

(2-Hydroxy-4-methoxyphenyl)[1,1',4',1'']terphenyl-4''-ylmethanone]

$C_{26}H_{20}O_3$ mol.wt. 380.44

Synthesis

– Preparation by Friedel–Crafts acylation of p-terphenyl with 2-hydroxy-4-methoxybenzoic acid or its derivatives [1409].

m.p. (NA); UV [1409].

Chapter 4

Cyclohexyl Phenyl Methanones

(Class of METHANONES)

4.1 Monohydroxylated Ketones

(3-Bromo-2-hydroxyphenyl)cyclohexylmethanone

[81066-14-0] $C_{13}H_{15}BrO_2$ mol.wt. 283.16

Syntheses

- Preparation by reaction of cyclohexanecarbonyl chloride with o-bromophenol in the presence of aluminium chloride without solvent at 140° for 1 h (48%) [1410].
 - Preparation by Fries rearrangement of o-bromophenyl cyclohexanecarboxylate with aluminium chloride without solvent at 100° for 1 h (36%) [1411].
- b.p.₁ 140–145° [1410]; m.p. 51–52° [1410]; Spectra (NA).

(3-Bromo-4-hydroxyphenyl)cyclohexylmethanone

[81066-15-1] $C_{13}H_{15}BrO_2$ mol.wt. 283.16

Syntheses

- Obtained by reaction of cyclohexanecarbonyl chloride with o-bromophenol in the presence of aluminium chloride without solvent at 120° for 2 h (16%) [1410].
 - Also obtained by Fries rearrangement of o-bromophenyl cyclohexanecarboxylate with aluminium chloride without solvent at 120° for 1 h (19%) [1411].
- b.p.₁ 160–170° [1410]; m.p. 138–139° [1410]; Spectra (NA).

(4-Bromo-2-hydroxyphenyl)cyclohexylmethanone

[81066-16-2] $C_{13}H_{15}BrO_2$ mol.wt. 283.16

Syntheses

- Preparation by reaction of cyclohexanecarbonyl chloride with m-bromophenol in the presence of aluminium chloride without solvent at 120° for 1–2 h (57–64%) [1410,1411].

- Preparation by Fries rearrangement of m-bromophenyl cyclohexanecarboxylate with aluminium chloride without solvent at 100° for 1 h (71%) [1411].
b.p.₁ 165–175° [1410]; m.p. 56°5–57°5 [1410]; Spectra (NA).

(5-Bromo-2-hydroxyphenyl)cyclohexylmethanone

[81066-17-3] $C_{13}H_{15}BrO_2$ mol.wt. 283.16

Syntheses

- Preparation by Fries rearrangement of p-bromophenyl cyclohexanecarboxylate with aluminium chloride without solvent at 120° for 1 h (55%) [1411].
- Also obtained by reaction of cyclohexanecarbonyl chloride with p-bromophenol in the presence of aluminium chloride without solvent at 120° for 2 h (32%) [1410] or between 100° and 140° for 1 h (12–22% yields) [1411].
b.p.₁ 150–170° [1410]; m.p. 98°5–99°5 [1410]; Spectra (NA).

Cyclohexyl(5-fluoro-2-hydroxyphenyl)methanone

[183280-18-4] $C_{13}H_{15}FO_2$ mol.wt. 222.26

Synthesis

- Preparation by Fries rearrangement of p-fluorophenyl cyclohexanecarboxylate with aluminium chloride at 150–180° for 20 min (47%) [492].
m.p. 61°5 [492]; ¹H NMR [492], MS [492].

Cyclohexyl(2-hydroxyphenyl)methanone

[18066-52-9] $C_{13}H_{16}O_2$ mol.wt. 204.27

Syntheses

- Preparation by Fries rearrangement of phenyl cyclohexanecarboxylate with aluminium chloride,
 - without solvent at 120° or at 160° for 2 h (45% and 27% yields, respectively) [1412] or at 150° for 3 h (70%) [1413];
 - in nitrobenzene at 70° for 2 h [1414].
- Preparation by oxidative cleavage of 3-cyclohexylbenzofuran in methylene chloride with ozone at
 - 78° for 15 min, then at r.t. for 1 h and saponification of the cyclohexyl 2-(formyloxy)phenyl ketone so obtained in methanol with 1 N sodium hydroxide at r.t. for 12 h [1415].
m.p. 104–105° [1412];
b.p.₂ 189–190° [1412], b.p.₄ 127–129° [1414]. There is discrepancy between the two boiling points.
¹H NMR [1415], IR [1415], MS [1415].

Cyclohexyl(3-hydroxyphenyl)methanone[148493-08-7] $C_{13}H_{16}O_2$ mol.wt. 204.27

Synthesis

– Preparation by treatment of m-bromophenol in tetrahydrofuran with tert-butyllithium in pentane for 15 min at -78° under argon, after which a solution of cyclohexyl-N,O-dimethylhydroxamide in tetrahydrofuran was slowly added (60%). -Refer to: Chem. Abstr., **119**, 49010t (1993).

m.p. $70-72^\circ$; Spectra (NA).**Cyclohexyl(4-hydroxyphenyl)methanone**[38459-58-4] $C_{13}H_{16}O_2$ mol.wt. 204.27

Syntheses

– Obtained (by-product) by Fries rearrangement of phenyl cyclohexanecarboxylate with aluminium chloride at 120° for 2 h (1%) [1412].

– Preparation by demethylation of 4-methoxyphenyl cyclohexyl ketone (SM) by treatment with boron tribromide in methylene chloride (76%). SM was obtained by Friede-Crafts acylation of anisole with cyclohexanecarboxylic acid chloride [1416].

m.p. and Spectra (NA).

Cyclohexyl(4-hydroxy-3-methoxy-5-nitrophenyl)methanone[125629-27-8] $C_{14}H_{17}NO_5$ mol.wt. 279.29

Synthesis

– Preparation by reaction of 65% nitric acid with cyclohexyl 4-hydroxy-3-methoxyphenyl ketone in acetic acid at r.t. (75%) [1084].

m.p. $135-141^\circ$ [1084]; 1H NMR [1084], MS [1084].**Cyclohexyl(2-hydroxy-3-methylphenyl)methanone** $C_{14}H_{18}O_2$ mol.wt. 218.30

Synthesis

– Preparation by Fries rearrangement of o-cresyl cyclohexane-carboxylate with aluminium chloride at 120° for 2 h (56%) or at 160° for 2 h [1412].

m.p. 130° [1412]; Spectra (NA).

Cyclohexyl(2-hydroxy-4-methylphenyl)methanoneC₁₄H₁₈O₂ mol.wt. 218.30**Syntheses**

– Obtained by Fries rearrangement of m-cresyl cyclohexane-carboxylate,

- with alumina in methanesulfonic acid for 25 min at 160° (86%). -Refer to: Chem. Abstr., **130**, 81248q (1999);
 - with aluminium chloride without solvent at 120° or 160° for 2 h (poor yield) [1412].
- Preparation by Friede–Crafts acylation of m-cresol with cyclohexanecarboxylic acid in the presence of alumina in methanesulfonic acid for 5 min at 120° (87%).
- Refer to: Chem. Abstr., **130**, 81248q (1999).
b.p.₂ 115° [1412]; Spectra (NA).

Cyclohexyl(2-hydroxy-5-methylphenyl)methanoneC₁₄H₁₈O₂ mol.wt. 218.30**Syntheses**

– Preparation by reaction of cyclohexanecarboxylic acid with p-cresol in the presence of aluminium chloride and phosphorous trichloride at 160° for 2 h (77%) [1417].

- Also obtained (poor yield) by Fries rearrangement of p-cresyl cyclohexanecarboxylate with aluminium chloride without solvent at 120° for 2 h (9%) or at 160° [1412].
- m.p. 75–76° [1417];
b.p.₂ 120° [1412], b.p.₅ 160–170° [1417]. There is discrepancy between the two boiling points. Spectra (NA).

Cyclohexyl(4-hydroxy-3-methylphenyl)methanoneC₁₄H₁₈O₂ mol.wt. 218.30**Synthesis**

– Obtained (trace) by Fries rearrangement of o-cresyl cyclohexanecarboxylate with aluminium chloride at 120° or at 160° for 2 h (<1%) [1412].

m.p. 118–119° [1412]; Spectra (NA).

Cyclohexyl(2-hydroxy-4-methoxyphenyl)methanone

[69210-88-4]

 $C_{14}H_{18}O_3$ mol.wt. 234.30

Syntheses

- Preparation by Fries rearrangement of m-methoxyphenyl cyclohexanecarboxylate in a nitromethane/toluene mixture in the presence of hafnium triflate/lithium perchlorate for 6 h at 50°.
- Preparation by Friede–Crafts acylation of m-methoxyphenol with cyclohexanecarbonyl chloride, cyclohexanecarboxylic acid or its anhydride in the same conditions.
- Refer to: Chem. Abstr., **127**, 278063v (1997).
m.p. and Spectra (NA).

Cyclohexyl(4-hydroxy-3-methoxyphenyl)methanone

[125629-26-7]

 $C_{14}H_{18}O_3$ mol.wt. 234.30

Synthesis

- Preparation by adding a solution of 30% hydrobromic acid in acetic acid to a solution of 4-(benzyloxy)-3-methoxy-phenyl cyclohexyl ketone in methylene chloride with stirring 2 h at r.t. (77%) [1084].
m.p. 113–115° [1084]; 1H NMR [1084], MS [1084].

Cyclohexyl(2-hydroxy-3,4-dimethoxyphenyl)methanone

[121638-96-8]

 $C_{15}H_{20}O_4$ mol.wt. 264.32

Synthesis

- Obtained (poor yield) by Friede–Crafts acylation of pyrogallol trimethyl ether with cyclohexanecarbonyl chloride in the presence of aluminium chloride in refluxing methylene chloride for 2 h (7%) [756].

m.p. 85° [756]; Spectra (NA).

Cyclohexyl[3-(1,1-dimethylethyl)-4-hydroxyphenyl]methanone

[124979-10-8]

 $C_{17}H_{24}O_2$ mol.wt. 260.38

Synthesis

- Preparation by Friede–Crafts acylation of o-tert-butyl-phenol with cyclohexanecarbonyl chloride in ethylene dichloride in the presence of titanium tetrachloride, first at 0°, then at r.t. [816].

m.p. 142–143° [816]; Spectra (NA).

Cyclohexyl[5-(1,1-dimethylethyl)-2-hydroxyphenyl]methanone

[18738-74-4]

 $C_{17}H_{24}O_2$ mol.wt. 260.38

Syntheses

- Preparation by demethylation of 2-(cyclohexylcarbonyl)-4-tert-butylanisole with a mixture of 47% hydrobromic acid and 57% hydriodic acid in refluxing acetic acid for 2 h (95%) [817].
- Also obtained (poor yields) by Fries rearrangement of p-tert-butylphenyl cyclohexanecarboxylate with aluminium chloride at 120° for 2 h (5%) or at 160° for 2 h (8%) [1412].

b.p.₆ 219–220° [1412]; Spectra (NA).**Cyclohexyl[2-hydroxy-5-(1,1-dimethylpropyl)phenyl]methanone** $C_{18}H_{26}O_2$ mol.wt. 274.40

Synthesis

- Obtained (poor yields) by Fries rearrangement of p-tert-pentylphenyl cyclohexanecarboxylate with aluminium chloride at 120° for 2 h (16%) or at 160° for 2 h (7%) [1412].
- oil [1412]; b.p.₅ 219–220° [1412]; Spectra (NA).

[3-(Aminomethyl)-5-(1,1-dimethylethyl)-2-hydroxyphenyl]cyclohexylmethanone

[75060-98-9]

 $C_{18}H_{27}NO_2$ mol.wt. 289.42

Synthesis

- Refer to: [817]; see the hydrochloride below.

m.p. and Spectra (NA).

[3-(Aminomethyl)-5-(1,1-dimethylethyl)-2-hydroxyphenyl]cyclohexylmethanone (Hydrochloride)

[75060-63-8]

 $C_{18}H_{27}NO_2 \cdot HCl$ mol.wt. 325.89

Synthesis

- Preparation by reaction of concentrated hydrochloric acid with 2-(cyclohexylcarbonyl)-4-tert-butyl-6-(N-chloroacetylaminomethyl)phenol in refluxing ethanol for 30 h (67%) [817].

m.p. 205–209° [817]; Spectra (NA).

[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl]cyclohexylmethanone

[28440-98-4]

 $C_{21}H_{32}O_2$ mol.wt. 316.48

Synthesis

– Preparation by action of cyclohexanecarbonyl chloride with 2,6-di-tert-butylphenol in ethylene dichloride in the presence of titanium tetrachloride for 15–30 min at r.t.

– Refer to: Chem. Abstr., **90**, 121219v (1979)^T.

m.p. 125–127^{oT}; Spectra (NA).

4.2 Dihydroxylated Ketones**Cyclohexyl(3,4-dihydroxy-5-nitrophenyl)methanone**

[125628-95-7]

 $C_{13}H_{15}NO_5$ mol.wt. 265.27

Synthesis

– Preparation by demethylation of cyclohexyl (4-hydroxy-3-methoxy-5-nitrophenyl) ketone with 48% hydrobromic acid in refluxing acetic acid for 20 h (55%) [1084].

m.p. 145–147^o [1084]; ¹H NMR [1084], MS [1084].

Cyclohexyl(2,4-dihydroxyphenyl)methanone

[97231-21-5]

 $C_{13}H_{16}O_3$ mol.wt. 220.27

Synthesis

– Preparation by reaction of cyclohexanecarboxylic acid with resorcinol in the presence of zinc chloride at 125–135^o (54%) (Nencki reaction) [1418].

– Also refer to: [298].

m.p. 115^o–116^o [1418]; b.p.₄ 200–202^o [1418]; Spectra (NA).

(1-Hydroxycyclohexyl)(4-hydroxyphenyl)methanone

[200420-24-2]

 $C_{13}H_{16}O_3$ mol.wt. 220.27

Synthesis

– Refer to: Chem. Abstr., **128**, 68498k (1998).

m.p. and Spectra (NA).

(2-Hydroxycyclohexyl)(2-hydroxyphenyl)methanone

[148077-95-6]

 $C_{13}H_{16}O_3$ mol.wt. 220.27

Synthesis

– Refer to: Chem. Abstr., **119**, 8806p (1993).

m.p. and Spectra (NA).

4.3 Trihydroxylated Ketones**Cyclohexyl(2,4,6-trihydroxyphenyl)methanone**

[85602-45-5]

 $C_{13}H_{16}O_4$ mol.wt. 236.27

Synthesis

– Preparation by action of cyclohexanecarbonyl chloride with phloroglucinol in the presence of aluminium chloride in refluxing carbon disulfide/nitrobenzene mixture for 3 h.

– Refer to: Chem. Abstr., **99**, 5339w (1983)^T.– Also refer to: Chem. Abstr., **101**, 151650s (1984).m.p. 110–113^{oT}; Spectra (NA).**Cyclohexyl[2,4,6-trihydroxy-3-(3-methyl-2-butenyl)phenyl]methanone**

[85602-18-2]

 $C_{18}H_{24}O_4$ mol.wt. 304.39

Synthesis

– Preparation by reaction of prenyl chloride with cyclohexyl 2,4,6-trihydroxyphenyl ketone in ethyl ether in

the presence of a saturated aqueous sodium carbonate solution and a catalytic amount of cuprous chloride for 3 h at r.t. (48%).

– Refer to: Chem. Abstr., **101**, 151650s (1984)^T.– Also refer to: Chem. Abstr., **101**, 221168s (1984)^{TT}.m.p. 144–147^{oT}; ¹³C NMR^T, ^{TT}, IR^T, MS^T.

Part II
Diaroylphenols and Polyaroylphenols

Chapter 5

Phenols with One Benzoyl Group and One or Several Acetyl Groups

(Class of *ETHANONES*)

5.1 Monohydroxylated Ketones

1-[3-(4-Chlorobenzoyl)-4-hydroxyphenyl]ethanone

[108294-81-1]

$C_{15}H_{11}ClO_3$ mol.wt. 274.70

Synthesis

– Obtained (poor yield) by reaction of 5-acetyl-2-hydroxy-benzoyl chloride with chlorobenzene in the presence of aluminium chloride at 100° for 24 h (7%) [92].

m.p. 127–130° [92]; Spectra (NA).

1-(3-Benzoyl-2-hydroxyphenyl)ethanone

[85558-60-7]

$C_{15}H_{12}O_3$ mol.wt. 240.26

Synthesis

– Obtained by hydrolysis of 2-acetoxy-3-benzoyl-acetophenone [1419].

m.p. 108–109° [1419]; 1H NMR [1419], IR [1419], MS [1419].

1-(3-Benzoyl-4-hydroxyphenyl)ethanone

[13043-37-3]

$C_{15}H_{12}O_3$ mol.wt. 240.26

Synthesis

– Preparation by Fries rearrangement of p-acetylphenyl benzoate with aluminium chloride at 153° for 8 h (24%) [96].

m.p. 95° [96]; 1H NMR [99], UV [99,109–111];
 pK_a [96,115]; polarographic study [117]; TLC [116].

1-(5-Benzoyl-2-hydroxyphenyl)ethanone[2589-80-2] $C_{15}H_{12}O_3$ mol.wt. 240.26

Synthesis

– Refer to: Chem. Abstr., **113**, 97396w (1990).

m.p. and Spectra (NA).

1-[2-(2-Hydroxybenzoyl)phenyl]ethanone[17526-21-5] $C_{15}H_{12}O_3$ mol.wt. 240.26

Syntheses

- Obtained by rearrangement of 10-methylanthronyl hydroperoxide (SM) with a mixture of acetic acid/4 N sulfuric acid (4:3). SM was obtained either by self-oxidation of 10-methylanthrone or by action of methylmagnesium iodide on 10-methylanthryl acetate [1420].
- Also obtained (poor yield) from meso-photoxide of 9-methylanthracene in refluxing o-dichloro-benzene for 3 h under nitrogen (3%) [1421].

m.p. 108° [1420], 107–108° [1421];
IR [1420], UV [1420], MS [1420].

(3-Benzoyl-2-hydroxy-5-methylphenyl)ethanone[79877-07-9] $C_{16}H_{14}O_3$ mol.wt. 254.29

Syntheses

- Preparation by Fries rearrangement of 2-(benzoyloxy)-5-methylacetophenone with aluminium chloride at 130–140° for 2 h (60–65%) [616].
- Preparation by Fries rearrangement of 2-(acetyloxy)-5-methylbenzophenone with aluminium chloride at 140° for 1 h [573].
- Preparation by reaction of benzoyl chloride with 2-hydroxy-5-methylacetophenone in the presence of aluminium chloride in nitrobenzene at 80° for 8 h (40%) [1422].
- Also refer to: [1423].

m.p. 102–103° [573], 101–102° [1422];
 1H NMR [1422], IR [1422], UV [1422];
structural data [1424,1425].

1-(3-Benzoyl-2-hydroxy-4-methoxyphenyl)ethanone[64857-84-7] $C_{16}H_{14}O_4$ mol.wt. 270.28

Syntheses

- Obtained by Friedel–Crafts acylation of paeonol with benzoyl chloride in the presence of aluminium chloride in nitrobenzene at r.t. or at 100° [270].

- Also obtained by Friedel–Crafts acylation of 2-hydroxy-6-methoxybenzophenone with acetic anhydride in the presence of aluminium chloride in nitrobenzene in a boiling water bath for 2 h [270].

m.p. 169° [270]; Spectra (NA).

5.2 Dihydroxylated Ketones

5.2.1 Symmetrical Ketones

Bis(5-Acetyl-2-hydroxyphenyl)methanone

[33427-60-0]

$C_{17}H_{14}O_5$ mol.wt. 298.30

Syntheses

- Obtained (poor yield) by Fries rearrangement of 2,2'-diacetoxybenzophenone with aluminium chloride without solvent at 160–180° for 20 min (10%) [1322].

- Also obtained by reaction of sodium hydroxide with 2,7-diacetyl-xanthone (94%) [1426].

– Also refer to: [1427].

m.p. >300° [1322], 175–177° [1426]. There is discrepancy between the two melting points.

1H NMR [1322,1426], IR [1322], MS [1322,1426].

Bis(3-Acetyl-2-hydroxy-5-methylphenyl)methanone

$C_{19}H_{18}O_5$ mol.wt. 326.35

Synthesis

- Preparation by Fries rearrangement of 2,2'-diacetoxy-5,5'-dimethylbenzophenone with aluminium chloride without solvent, first at 120°, then at 170° for 20 min (80%) [1153].

m.p. 207–208° [1153]; Spectra (NA).

5.2.2 Asymmetric Ketones

1-(3-Benzoyl-2,4-dihydroxyphenyl)ethanone

$C_{15}H_{12}O_4$ mol.wt. 256.26

Syntheses

- Resacetophenone, by condensation with benzanilide imidochloride in the presence of aluminium chloride in nitrobenzene gave a keto anil.

This one was hydrolyzed with hydrochloric acid in refluxing ethanol and yielded the expected ketone (18%) [156].

- Also obtained by Fries rearrangement of 4-(benzoyloxy)-2-hydroxyacetophenone in the presence of aluminium chloride without solvent at 140° for 1.5 h (15%) [234].
 - Also obtained (poor yield) by condensation of benzoyl chloride with resacetophenone in the presence of aluminium chloride in nitrobenzene in a water bath for 2 h (2%) [234].
 - Also obtained by decarboxylation of 5-acetyl-3-benzoyl-2,4-dihydroxybenzoic acid on heating in a test-tube at 220–225° for 1 h [234].
- m.p. 167–168° [156], 165° [234]; Spectra (NA).

1-(3-Benzoyl-2,6-dihydroxyphenyl)ethanone

$C_{15}H_{12}O_4$ mol.wt. 256.26

Syntheses

- Obtained by Friedel–Crafts acylation of resbenzophenone,
 - with acetic anhydride in the presence of aluminium chloride in nitrobenzene in a water bath for 6 h (30%) [234];
 - with acetyl chloride in the presence of aluminium chloride in o-dichlorobenzene [1428].
 - Also obtained by Friedel–Crafts acylation of 2,6-dihydroxyacetophenone with benzoyl chloride in the presence of aluminium chloride in nitrobenzene, first at r.t., then in a water bath for 1 h [234].
- m.p. 108° [234], 99°5–100° [1428]; Spectra (NA).

1-(5-Benzoyl-2,4-dihydroxyphenyl)ethanone

[64857-83-6]

$C_{15}H_{12}O_4$ mol.wt. 256.26

Synthesis

- Obtained by Friedel–Crafts acylation of paeonol with benzoyl chloride in the presence of aluminium chloride in nitrobenzene at r.t. or at 100° [270].
- m.p. 138° [270]; Spectra (NA).

1-[2-(2,4-Dihydroxybenzoyl)phenyl]ethanone

[36414-93-4]

$C_{15}H_{12}O_4$ mol.wt. 256.26

Synthesis

- Refer to: [235].
- m.p. 184° [235]; UV [235].

1-[2-Hydroxy-5-(2-hydroxybenzoyl)phenyl]ethanone

[124208-69-1]

 $C_{15}H_{12}O_4$ mol.wt. 256.26

Syntheses

- Obtained by Fries rearrangement,
 - of 2,4'-diacetoxybenzophenone with aluminium chloride at 158–160° for 2 h (15%) [155];
 - of 4'-acetoxy-2-methoxybenzophenone with aluminium chloride at 153–155° for 2 h (60%) [155].

m.p. 130–131° [155]; Spectra (NA).

1-[4-Hydroxy-3-(4-hydroxybenzoyl)phenyl]ethanone

[124208-64-6]

 $C_{15}H_{12}O_4$ mol.wt. 256.26

Syntheses

- Obtained by Fries rearrangement,
 - of phenyl 2-acetoxybenzoate with aluminium chloride at 180° for 3 h (38%) [155];
 - of phenyl 5-acetyl-2-hydroxybenzoate with aluminium chloride at 180° for 3 h (38%) [155].

m.p. 188° [155]; Spectra (NA).

1-(3-Acetyl-5-benzoyl-2,4-dihydroxyphenyl)ethanone*3,5-Diacetyl-2,4-dihydroxybenzophenone*

[16832-72-7]

 $C_{17}H_{14}O_5$ mol.wt. 298.30

Syntheses

- Obtained by acetylation of 2,4-dihydroxybenzophenone,
 - with acetyl chloride in the presence of aluminium chloride in o-dichlorobenzene [1428];
 - with acetic anhydride in the presence of aluminium chloride in nitrobenzene in a water bath for 6 h (5%) [234].
- Also obtained by condensation of 2-acetyl-4-benzoylresorcinol with acetic anhydride according to Friedel–Crafts [234].

m.p. 151–151°5 [1428], 151° [234]; Spectra (NA).

5.3 Trihydroxylated Ketone

1-(3-Benzoyl-2,4,6-trihydroxyphenyl)ethanone

[31188-65-5]

 $C_{15}H_{12}O_5$

mol.wt. 272.26

Synthesis

- Preparation by two successive Friedel-Crafts acylations of phloroglucinol, first with acetic acid, then with benzoic acid, always in the presence of boron trifluoride-etherate (compound 17).

- Refer to: Chem. Abstr., **114**, 94606j (1991).
m.p. and Spectra (NA).

5.4 Tetrahydroxalated Ketone

1-[3-(3,6-Dihydroxy-2-methylbenzoyl)-2,4-dihydroxyphenyl]ethanone

[115834-34-9]

 $C_{16}H_{14}O_6$

mol.wt. 302.28

Synthesis

- Not yet described.

Isolation from natural source

- This ketone, named baishouwubenzophenone, is one of constituents of Baishouwu. The botanical source of this one is chiefly the tuber of *Cynanchum auriculatum* Royle ex Wight (Asclepiadaceae).
- Refer to: Chem. Abstr., **109**, 79560h (1988)^T.
m.p. (NA); ¹H NMR^T, ¹³C NMR^T, IR^T, UV^T, MS^T.

Chapter 6

Phenols with Two or Several Benzoyl Groups (Class of METHANONES)

6.1 Monohydroxylated Ketones

6.1.1 Symmetrical Ketones

(5-Hydroxy-1,3-phenylene)bis[phenylmethanone]

$C_{20}H_{14}O_3$ mol.wt. 302.33

Synthesis

- Preparation by diazotization of 3,5-dibenzoylaniline, followed by hydrolysis of the resulting diazonium salt [1429].

m.p. 135° [1429]; Spectra (NA).

(2-Hydroxy-5-methyl-1,3-phenylene)bis[phenylmethanone]

[77347-19-4]

$C_{21}H_{16}O_3$ mol.wt. 316.36

Syntheses

- Preparation by Fries rearrangement of 2-(benzoyl-oxy)-5-methylbenzophenone with aluminium chloride at 130–140° for 2 h (60–65%) [616].
 - Preparation by reaction of benzoyl chloride with p-cresol in the presence of aluminium chloride in nitrobenzene at 80° for 8 h (30%) [1422].
 - Preparation by reaction of benzotrichloride,
 - with 2-hydroxy-5-methylbenzophenone in the presence of aluminium chloride in nitrobenzene at 70° for 2 h [1430], (59%) [1423], (54%) [1431];
 - with p-cresol in the presence of aluminium chloride in carbon disulfide at 0° for 2 h (4%) [1423].
 - Also refer to: [125,1432–1434].
- m.p. 166–166°5 [1423], 164°2–165°6 [1431], 163–164° [1430], 160° [1422];
¹H NMR [1422], IR [1422], UV[1422].

(2-Hydroxy-4,6-dimethyl-5-nitro-1,3-phenylene)bis[phenylmethanone]

[85450-69-7]

 $C_{22}H_{17}NO_5$ mol.wt. 375.38

Synthesis

- Preparation by reaction of nitromethane with 1,3-dibenzoyl-4,6-dimethylpyrone in the presence of potassium tert-butoxide in tert-butanol at 60° for 4 h (77%) [1435].

m.p. 208–210° [1435]; Spectra (NA).

(5-Ethyl-2-hydroxy-1,3-phenylene)bis[phenylmethanone] $C_{22}H_{18}O_3$ mol.wt. 330.38

Synthesis

- Preparation by reaction of benzotrichloride with 5-ethyl-2-hydroxybenzophenone in the presence of aluminium chloride in nitrobenzene at 70° for 2 h [1431].
- Also refer to: [1432].

m.p. and Spectra (NA).

(2-Hydroxy-4,6-dimethoxy-1,3-phenylene)bis[phenylmethanone]

[197169-08-7]

 $C_{22}H_{18}O_5$ mol.wt. 362.38

Synthesis

- Preparation from 1,3,5-trimethoxybenzene and benzoyl chloride by Friedel–Crafts acylation reaction.
- Refer to: Chem. Abstr., **127**, 292966y (1997).

m.p. and Spectra (NA).

(2-Hydroxy-4,6-dimethoxy-1,3-phenylene)bis[phenylmethanone]

or

(6-Hydroxy-2,4-dimethoxy-1,3-phenylene)bis[phenylmethanone] $C_{22}H_{18}O_5$ mol.wt. 362.38

Synthesis

- Preparation by saponification of 2,4- or 2,6-di-benzoyl-3,5-dimethoxyphenyl benzoate (SM) with potassium hydroxide in ethanol for 3 h at 100° in a sealed tube (90%) [220]. SM was obtained by Friedel–Crafts acylation of 3,5-dimethoxyphenyl benzoate with benzoyl chloride in the presence of zinc chloride in refluxing benzene for 45 min (70%, m.p. 194°). SM can

also be obtained by Friedel–Crafts acylation of hydrocotoin (2-hydroxy-4,6-dimethoxy-benzophenone) with benzoyl chloride in the presence of zinc chloride in refluxing benzene for 90 min (72%, m.p. 194°).

N.B.: K salt: [220].

m.p. 170° [220]; Spectra (NA).

(5-Amino-2-hydroxy-4,6-dimethyl-1,3-phenylene)bis[phenylmethanone]

[85450-78-8]

$C_{22}H_{19}NO_3$

mol.wt. 345.40

Synthesis

– Obtained (poor yield) by catalytic hydrogenation of 3-benzoyl-2-hydroxy-4,6-dimethyl-5-nitro-benzophenone in the presence of 10% Pd/C at 40° for 3 days (10%) [1435].

m.p. 208–211° [1435]; Spectra (NA).

(5-Butyl-2-hydroxy-1,3-phenylene)bis[phenylmethanone]

$C_{23}H_{20}O_3$

mol.wt. 344.41

Synthesis

– Preparation by reaction of benzotrichloride with 5-butyl-2-hydroxybenzophenone in the presence of aluminium chloride in nitrobenzene at 70° for 2 h [1431].

m.p. and Spectra (NA).

(2,4-Diethoxy-6-hydroxy-1,3-phenylene)bis[phenylmethanone]

or

(4,6-Diethoxy-2-hydroxy-1,3-phenylene)bis[phenylmethanone]

$C_{24}H_{22}O_5$

mol.wt. 390.44

Synthesis

– Preparation by saponification of 2,4- or 2,6-di-benzoyl-3,5-diethoxyphenyl benzoate (SM) with potassium hydroxide in ethanol for 3 h at 100° in a sealed tube (90%). SM was obtained by Friedel–Crafts acylation of 3,5-diethoxyphenyl benzoate (m.p. 84°) with benzoyl chloride in the presence of zinc chloride in refluxing benzene for 45 min (72–81%, m.p. 163–164°) [220].

m.p. 156° [220]; Spectra (NA).

**[5-(Acetyloxy)-2-hydroxy-4,6-dimethoxy-1,3-phenylene]bis
[(2,5-dimethoxyphenyl)methanone]**

[129168-55-4]

C₂₈H₂₈O₁₁ mol.wt. 492.53

Synthesis

- Obtained (poor yield) by reaction of 2,5-dimethoxybenzoic acid with 2,6-dimethoxy-1,4-hydroquinone diacetate in the presence of trifluoroacetic anhydride for 2 weeks at r.t. (3%) [1160].

m.p. 114–115° [1160]; MS [1160].

6.1.2 Asymmetric Ketones

(2-Benzoylphenyl)(2-hydroxyphenyl)methanone

[14596-74-8]

C₂₀H₁₄O₃ mol.wt. 302.33

Syntheses

- From photoxide of 9-phenylanthracene (SM1):
 - SM1 in dilute acetic acid under nitrogen during 3 h isomerises into 1-(2-hydroxyphenyl)-3-phenylisobenzofuran (SM2). In this mixture, SM2, by self-oxidation in the presence of air and sunlight during 3 days gave the 2-(2-hydroxybenzoyl)benzophenone (22%) [1436].
 - Also obtained (poor yield) by action of sulfuric acid with SM1 in acetic acid/acetic anhydride at r.t. for 5 min (8%) [1436].
 - Also obtained (poor yield) from SM1 in refluxing toluene (at 110°) or in o-dichlorobenzene (at 180°) for 3 h under nitrogen (2–5%, yields respectively). The reaction carried out in the presence of N-maleimide in refluxing toluene in the same conditions gave a 3% yield [1421].
- From 1-(2-hydroxyphenyl)-3-phenylisobenzofuran (SM2):
 - Obtained by self-oxidation of SM2 in chloroformic solution in the presence of air and sunlight during 3 days (quantitative yield) [1436].
 - Also obtained by action of sulfuric acid with SM2 in acetic acid/acetic anhydride for 5 min (51%) [1436].
 - Also obtained by action of N-methylmaleimide with SM2 in methylene chloride at 0° (20%) [1436].
- From photoxide of 9-methoxy-10-phenylanthracene (SM3): Obtained by action of concentrated sulfuric acid (d = 1.83) with SM3 in acetone for 24 h at r.t. (25%) [1437].
- From 3,3-diphenyl-1,2-indanedione (SM4): Obtained by irradiation of SM4 in the presence of air in benzene during 70 h at r.t. (10%) [86,1438].

- From 10-phenylanthrone (SM5): Obtained by irradiation of SM5 in the presence of air in benzene for 2.5 h at r.t. (20%) [1438], (30%) [86].
 - From 10-phenylanthronyl hydroperoxide (SM6): Obtained by photochemical degradation of SM6 in benzene for 5.5 h (29%) [1438]. Also obtained by chemical degradation of SM6 with sulfuric acid in acetone for 1 to 1.5 h (21%) [1438].
 - From photoxide of 1,3-diphenylisobenzofuran (SM7): Obtained by isomerization of SM7 in acetic acid solution [1439].
- m.p. 139–140° [86,1421,1436,1438], 138–139° [1437];
¹H NMR [1437], IR [86,1437,1438], UV [1438].

(2-Benzoylphenyl)(3-hydroxyphenyl)methanone

[57436-75-6]

C₂₀H₁₄O₃

mol.wt. 302.33

Synthesis

- Obtained by isomerization of photoxide of 1,3-diphenylisobenzofuran, via an arene oxide formation, in acetic acid solution [1439].

m.p. 135–137° [1439]; Spectra (NA).

(4-Hydroxy-1,3-phenylene)bis[phenylmethanone]

[2589-81-3]

C₂₀H₁₄O₃

mol.wt. 302.33

Syntheses

- Preparation by Friedel–Crafts acylation,
 - of phenol with benzoyl chloride in the presence of aluminium chloride at 200° for 15 min (69%) [24];
 - of 4-hydroxybenzophenone with benzoyl chloride in the presence of aluminium chloride from 100° up to 150° [145].
- Also obtained by Fries rearrangement of 4-benzoyloxybenzophenone with aluminium chloride at 160–165° for 1 h [1440].

m.p. 105–106° [1440], 105° [145], 101° [24], 98° [96];

¹H NMR (Sadtler: standard n° 20032 M) [99],

IR (Sadtler: standard n° 47041) [24], UV [24,99,109];

pK_a [96]; TLC [116].

(4-Hydroxy-6-methyl-1,3-phenylene)bis[(2-chlorophenyl)methanone]

[147167-72-4]

C₂₁H₁₄Cl₂O₃

mol.wt. 385.25

Syntheses

- Preparation by reaction of o-chlorobenzoic acid with 2'-chloro-2-hydroxy-4-methylbenzophenone in the presence of phosphoric acid and phosphorous pentoxide at 70° for 20 h (76%) [1089].

- Also obtained by reaction of *o*-chlorobenzoic acid with *m*-cresol in the presence of phosphoric acid and phosphorous pentoxide at 130° for 2 h (15%) [1089].
 - Also obtained by Fries rearrangement of *m*-cresyl *o*-chlorobenzoate with phosphoric acid and phosphorous pentoxide at 130° for 1 h (16%) [1089].
 - Also obtained by isomerization of 2'-chloro-4-hydroxy-2-methylbenzophenone in the presence of phosphoric acid and phosphorous pentoxide at 130° for 4 h (15%) [1089].
- m.p. 105–107° [1089]; ¹H NMR [1089], IR [1089].

6.2 Di- and Polyhydroxylated Ketones

6.2.1 Symmetrical Ketones

(4,6-Dihydroxy-1,3-phenylene)bis[(2,4-dichlorophenyl)methanone

[13340-61-9]

C₂₀H₁₀Cl₄O₄

mol.wt. 456.11

Synthesis

- Preparation by Friedel–Crafts acylation of resorcinol with 2,4-dichlorobenzoyl chloride in the presence of trifluoromethanesulfonic acid and methanesulfonic acid, via a Fries rearrangement,
 - without solvent, at 180° for 3 h (92%) [1441];
 - in *o*-dichlorobenzene at 100° for 12 h (76%) [1441].
 - Also refer to: [1442].
- m.p. 209° [1441]; ¹³C NMR [1441].

(5-Fluoro-2-hydroxy-1,3-phenylene)bis[(5-fluoro-2-hydroxyphenyl)methanone

[78563-16-3]

C₂₀H₁₁F₃O₅

mol.wt. 388.30

Synthesis

- Preparation by treatment of the corresponding triacetate (SM) with 15% aqueous sodium hydroxide solution (90%). SM was obtained by oxidation of the methylene groups in 1-acetoxy-2,6-bis(2'-acetoxy-5'-fluoro- α -tolyl)-4-fluorobenzene to carbonyl groups by means of chromium trioxide in acetic anhydride (97%) [1443].
- m.p. 154–155° [1443]; IR [1443], MS [1443].

(4,6-Dihydroxy-1,3-phenylene)bis[(2-chlorophenyl)methanone]

[152383-56-7]

 $C_{20}H_{12}Cl_2O_4$ mol.wt. 387.22

Synthesis

- Preparation by reaction of o-chlorobenzoic acid with resorcinol diacetate in the presence of hexafluoro-isopropylsulfonic acid in methanesulfonic acid first at 160° for 1 h, then at 180° for 12 h [1441].

- Also refer to: [1442].

m.p. (NA); ^{13}C NMR [1441].**(4,6-Dihydroxy-5-nitro-1,3-phenylene)bis[phenylmethanone]**

[102160-16-7]

 $C_{20}H_{13}NO_6$ mol.wt. 363.33

Syntheses

- Obtained by condensation of benzoyl chloride with 2-nitroresorcinol in the presence of aluminium chloride in nitrobenzene at 100° [1196,1207].

- Preparation by Fries rearrangement of 2-nitro-resorcinol dibenzoate with aluminium chloride in nitrobenzene at 100–110° for 3 h (40%) [1207].

- Preparation by nitration of 4,6-dibenzoylresorcinol with nitric acid in a sulfuric acid and acetic acid solution at 0° for 1 h [1207].

- Also refer to: [203].

m.p. 215–216° [1196], 215° [1207]; Spectra (NA).

(2,3-Dihydroxy-1,4-phenylene)bis[phenylmethanone]

[31709-42-9]

 $C_{20}H_{14}O_4$ mol.wt. 318.33

Syntheses

- Obtained by hydrogenolysis of 3,6-diphenyl-benzo[1,2-d:4,3-d']diisoxazole (SM) (m.p. 206–207°) in the presence of Raney

nickel at r.t., and treating the intermediate with 20% sulfuric acid (21%) [1444]. SM was prepared through a four-steps synthesis: first, reaction of benzonitrile oxide with 1,3-cyclohexadiene in boiling ethyl ether. Second, bromination of the 5,10-diphenyl-3,12-dioxo-4,11-diazatricyclo[7,3,0,0^{2,6}]dodeca-4,10-diene (m.p. 186–187°) obtained with N-bromosuccinimide in carbon tetrachloride. After which, dehydrohalogenation of the intermediate compound in boiling triethylamine and aromatization with N-bromosuccinimide in carbon tetrachloride.

- Preparation by hydrolysis of 2,3-dibenzoyloxy-1,4-dibenzoylbenzene (SM) in concentrated sulfuric acid at r.t. for 15 min (75%) [1445]. SM (m.p. 144°) was obtained by oxidation of 2,3,6,7-tetraphenylbenzo[2,1-b:3,4-b']difuran (o-benzo-tetraphenyldifurfuran) with chromium trioxide in boiling acetic acid for 75 min.

m.p. 159°5 [1445], 156–158° [1444]; IR [1444].

(4,6-Dihydroxy-1,3-phenylene)bis[phenylmethanone

[3088-15-1]

 $C_{20}H_{14}O_4$ mol.wt. 318.33

Syntheses

- Preparation by saponification of 4,6-di-(benzoyloxy)-1,3-dibenzoylbenzene (SM) with potassium hydroxide in refluxing ethanol [203,210]. The keto ester SM was obtained by acylation of resorcinol dibenzoate with benzoyl chloride in the presence of zinc chloride at 100–120° during several days [210].
 - Preparation by Fries rearrangement of resorcinol dibenzoate,
 - with aluminium chloride [1207];
 - with zinc chloride (25%) [1446].
 - Also obtained by photo-Fries rearrangement of resorcinol dibenzoate in benzene for 8 h under nitrogen (15%) [843].
 - Also refer to: [226,230,1447].
- oily liquid [843]; b.p. (NA). This product is impure or in a metastable state.
 m.p. 149–150° [203], 149° [210], 145° [113];
¹H NMR [843], UV [113].

1,2-Phenylenebis[(2-hydroxyphenyl)methanone

[119838-11-8]

 $C_{20}H_{14}O_4$ mol.wt. 318.33

Synthesis

- Preparation by demethylation of bis(2-methoxybenzoyl)-benzene with 47% hydrobromic acid at reflux for 5 h (95%) [1448].
- m.p. 160–161° [1448];
¹H NMR [1448], IR [1448], MS [1448].

1,3-Phenylenebis[(4-hydroxyphenyl)methanone

[5436-05-5]

 $C_{20}H_{14}O_4$ mol.wt. 318.33

Syntheses

- Preparation by demethylation of 1,3-di-(p-methoxybenzoyl)-benzene (SM) with hydrobromic acid (d = 1.49) in refluxing acetic acid for 6 h (68%) [1449] or for 10 h [1450]. SM was obtained by Friedel–Crafts acylation of anisole with isophthaloyl chloride [1450].
- Preparation by Friedel–Crafts acylation of anisole with isophthaloyl chloride in the presence of aluminium chloride in boiling carbon disulfide (major product) [1449], (<75%) [1451].

- Preparation by Fries rearrangement of diphenyl isophthalate with aluminium chloride at 185–195° for 25 min [1451].
- Obtained by action of isophthalic acid with phenol in the presence of trifluoromethanesulfonic acid, first at 50° for 23 h, then at 70° for 4 h (50%) [151].
- Also refer to: [956,1452–1455].

m.p. 215° [1449], 207–209° [1451], 194° [151]. There is discrepancy between the melting points.

¹H NMR [151], IR [151].

1,4-Phenylenebis[(2-hydroxyphenyl)methanone

[66832-95-9]

C₂₀H₁₄O₄ mol.wt. 318.33

Synthesis

- Preparation by total demethylation of 1,4-bis (2-anisoyl)-benzene. This one was obtained by condensation of 2-anisoyl magnesium bromide with terephthalonitrile [1456].
- Also refer to: [1457].

m.p. and Spectra (NA).

1,4-Phenylenebis[(4-hydroxyphenyl)methanone

[15517-46-1]

C₂₀H₁₄O₄ mol.wt. 318.33

Syntheses

- Obtained by Fries rearrangement of phenyl terephthalate (diester) with aluminium chloride at 185–195° for 25 min [1451].
- Preparation by Friedel–Crafts acylation of anisole (2 mol) with terephthaloyl chloride (1 mol) in the presence of aluminium chloride in refluxing carbon disulfide for 1 h [1451].
- Preparation by reaction of terephthalic acid with phenol in the presence of trifluoromethanesulfonic acid at 50° for 23 h, then at 70° for 4 h (34%) [151].
- Also refer to: Chem. Abstr., **101**, 15450z (1984).

m.p. 298–299° [1451], 292° [151];

¹H NMR [151], IR [151].

(2,5-Dihydroxy-1,3-phenylene)bis[(2,5-dihydroxyphenyl)methanone

[78563-18-5]

C₂₀H₁₄O₈ mol.wt. 382.33

Synthesis

- Preparation by saponification of the corresponding hexaacetate (SM) with 6 N sodium hydroxide in methanol or with 1%

sodium hydroxide in aqueous solution (15% yield). SM was obtained by oxidation of the methylene groups of 1,4-diacetoxy-2,6-bis (2',5'-diacetoxy- α -tolyl)benzene to carbonyl groups by means of chromium trioxide in acetic anhydride (80% yield) [1443].

m.p. $>300^{\circ}$ [1443]; Spectra (NA).

(4,6-Dihydroxy-2-methyl-1,3-phenylene)bis[(2,6-dichlorophenyl)methanone

[152383-58-9]

$C_{21}H_{12}Cl_4O_4$ mol.wt. 470.13

Synthesis

– Refer to: [1442] (compound 6).

m.p. and Spectra (NA).

(4,6-Dihydroxy-5-methyl-1,3-phenylene)bis[(2,4-dichlorophenyl)methanone

[153167-54-5]

$C_{21}H_{12}Cl_4O_4$ mol.wt. 470.13

Synthesis

– Preparation by Fries rearrangement of 2-methylresorcinol 2,4-dichlorobenzoate (diester) with fluoroalcanesulfonic acid and alcanesulfonic acid mixture [1441].

m.p. (NA); ^{13}C NMR [1441].

(4,6-Dihydroxy-5-methyl-1,3-phenylene)bis[(2,6-dichlorophenyl)methanone

[153167-55-6]

$C_{21}H_{12}Cl_4O_4$ mol.wt. 470.13

Synthesis

– Preparation by Fries rearrangement of 2-methyl-resorcinol 2,6-dichlorobenzoate (diester) with trifluoromethanesulfonic acid or hexafluoro-isopropanesulfonic acid in methanesulfonic acid [1441].

m.p. (NA); ^{13}C NMR [1441].

(4,6-Dihydroxy-5-methyl-1,3-phenylene)bis[(2-fluorophenyl)methanone

$C_{21}H_{14}F_2O_4$ mol.wt. 368.34

Synthesis

– Refer to: [1442] (compound 3).

m.p. and Spectra (NA).

1,4-Phenylenebis[(2-hydroxy-5-methylphenyl)methanone]

[4084-62-2]

 $C_{22}H_{18}O_4$ mol.wt. 346.38

Syntheses

- Preparation by Fries rearrangement of p-tolyl terephthalate (diester) in the presence of aluminium chloride,
 - *without solvent* at 210° (90%) [1458] or at 220–230° for 15 min, then a short time at 250° (27%) [1459],
 - *with solvent* in chlorobenzene at 132° for 5 h (31%) [1460] or at reflux for 4 h (68%) [1457] or for 38 h (25%) [1461]. The diester was obtained by heating p-cresol and terephthaloyl chloride at 200° for 90 min [1457]. in nitrobenzene at 100° for 3 h [1462].
 - Also obtained by photo-Fries rearrangement of p-tolyl terephthalate (diester) in benzene for 20 h under nitrogen (10%) [1459].
 - Preparation by reaction of 1,4-bis(trichloromethyl)benzene with p-cresol in the presence of 20% or 30% sodium hydroxide, first at 50°, then 95° for 1 h (69% and 77% yields, respectively) [1457].
- m.p. 190–190°5 [1461], 187–189° [1459], 165–168° [1457]. There is discrepancy between the melting points. IR [1457,1461], UV [1457].

1,4-Phenylenebis[(2-hydroxy-4-methoxyphenyl)methanone] $C_{22}H_{18}O_6$ mol.wt. 378.38

Synthesis

- Preparation by reaction of 1,4-bis(trichloromethyl)benzene with resorcinol monomethyl ether in the presence of 30% sodium hydroxide, first at 70°, then at 95° for 1 h (71%) [1457].
glassy brown compound [1457];
- m.p. (NA); IR [1457], UV [1457].

(2-Hydroxy-5-methyl-1,3-phenylene)bis[(2-hydroxy-5-methylphenyl)methanone]

[27404-61-1]

 $C_{23}H_{20}O_5$ mol.wt. 376.41

Synthesis

- Preparation by Friedel–Crafts acylation of 4-methoxytoluene with 2-methoxy-5-methyl-benzene-1,3-dicarbonyl dichloride in carbon disulfide in the presence

of aluminium chloride, first at r.t. for overnight, then at reflux for 4 h (40%). The same reaction, carried out in nitrobenzene at 120° for 2 h, gave a 37% yield [1153].

– Also refer to: [431] (compound VII).

m.p. 149° [1153], 122–123° [1329]. There is discrepancy between the two melting points.

MS [1329].

Bis[5-chloro-3-(5-chloro-2-hydroxybenzoyl)-2-hydroxyphenyl]methanone

[78563-33-4] $C_{27}H_{14}Cl_4O_7$ mol.wt. 592.21

Synthesis

– Preparation by saponification of the corresponding tetraacetate with 15% aqueous sodium hydroxide solution at 40° for 1 h (90%) [1443].

m.p. 224° [1443]; MS [1443].

Bis[5-fluoro-3-(5-fluoro-2-hydroxybenzoyl)-2-hydroxyphenyl]methanone

[78563-35-6] $C_{27}H_{14}F_4O_7$ mol.wt. 526.40

Synthesis

– Preparation by saponification of the corresponding tetraacetate with 15% aqueous sodium hydroxide solution at 40° for 1 h (95%) [1443].

m.p. 165–167° [1443]; IR [1443], UV [1443], MS [1443].

(2,4-Dihydroxy-1,3,5-benzenetriyl)tris[phenylmethanone]

[82-67-7] $C_{27}H_{18}O_5$ mol.wt. 422.44

Synthesis

– Obtained by action of benzoyl chloride with resorcinol dibenzoate in the presence of aluminium chloride at 100° for 8 h, then at 150° [145].

m.p. 185° [113,145]; UV [113].

(2,4,6-Trihydroxy-1,3,5-benzenetriyl)tris[phenylmethanone]

[1818-24-2]

 $C_{27}H_{18}O_6$ mol.wt. 438.44

Syntheses

- Obtained by Fries rearrangement of phloroglucinol tribenzoate with aluminium chloride at 130–140° for 30 min (30%) [271].
- Also obtained by action of benzoyl chloride

with phloro-glucinol in the presence of boron trifluoride at 50° (72–78%) [1463].

m.p. 185° [271], 134–136° [1463]. There is discrepancy between the two melting points.

Spectra (NA).

Bis[3-(2-bromobenzoyl)-2-hydroxy-5-methylphenyl]methanone $C_{29}H_{20}Br_2O_5$ mol.wt. 608.28

Synthesis

- Preparation by Fries rearrangement of 2,2'-di-(o-bromobenzoyloxy)-5,5'-dimethylbenzophenone with

aluminium chloride without solvent for 30 min at 160° (50%) [1153].

m.p. 170° [1153]; Spectra (NA).

Bis(3-benzoyl-2-hydroxy-5-methylphenyl)methanone $C_{29}H_{22}O_5$ mol.wt. 450.49

Synthesis

- Preparation by Fries rearrangement of 2,2'-di-(benzoyloxy)-5,5'-dimethylbenzophenone with aluminium chloride without solvent at 160° for 30 min (50%) [1153].

m.p. 204° [1153]; Spectra (NA).

Bis[3-(4-methylbenzoyl)-2-hydroxy-5-methylphenyl]methanone $C_{31}H_{26}O_5$ mol.wt. 478.54

Synthesis

- Preparation by Fries rearrangement of

2,2'-di-(p-toluoyloxy)-5,5'-dimethylbenzophenone with aluminium chloride without solvent for 30 min at 160° (81%) [1153].

m.p. 184–185° [1153]; Spectra (NA).

1,4-Phenylenebis[2-hydroxy-5-(1,1,3,3-tetramethylbutyl)phenyl]methanone $C_{36}H_{46}O_4$ mol.wt. 542.76**Syntheses**

- Preparation by reaction of 1,4-bis-(trichloromethyl)benzene with p-(1,1,3,3-tetramethylbutyl)phenol in the presence of 30% sodium hydroxide, first at 70°, then at 95° for 1 h (71%) [1457].
- Preparation by reaction of terephthaloyl chloride with p-(1,1,3,3-tetramethylbutyl)phenol in ethylene dichloride in the presence of aluminium chloride, first at 0°, then between 5° and 10° for 7 h (58%) [1457].

glassy brown compound [1457]; m.p. (NA);
IR [1457], UV [1457].

1,4-Phenylenebis[2-hydroxy-4-(octyloxy)phenyl]methanone $C_{36}H_{46}O_6$ mol.wt. 574.76**Synthesis**

- Preparation by reaction of 1,4-bis(trichloromethyl)benzene with resorcinol mono-octyl ether in the presence of 30% sodium hydroxide, first at 70°, then at 95° for 1 h (74%) [1457].

glassy light brown compound [1457]; m.p. (NA);
IR [1457], UV [1457].

1,4-Phenylenebis[(2-hydroxy-5-dodecyl)phenyl]methanone $C_{44}H_{62}O_4$ mol.wt. 654.97**Synthesis**

- Preparation by reaction of 1,4-bis-(trichloromethyl)benzene with 4-dodecylphenol in the presence of 30% sodium hydroxide, first at 70°, then at 95° for 1 h (68%) [1457].

glassy light brown compound [1457]; m.p. (NA);
IR [1457], UV [1457].

1,4-Phenylenebis[2-hydroxy-4-(dodecyloxy)phenyl]methanone $C_{44}H_{62}O_6$ mol.wt. 686.97**Synthesis**

- Preparation by reaction of 1,4-bis(trichloromethyl)benzene with resorcinol monododecyl ether in the presence of 30% sodium hydroxide, first at 70°, then at 95° for 1 h (69%) [1457].

glassy dark brown compound [1457];

m.p. (NA);

IR [1457], UV [1457].

6.2.2 Asymmetric Ketones**(2,4-Dihydroxy-1,3-phenylene)bis[(2,4-dichlorophenyl)methanone**

[153167-57-8]

 $C_{20}H_{10}Cl_4O_4$ mol.wt. 456.11**Synthesis**

- Preparation by reaction of 2,4-dichloro-benzoyl chloride with resorcinol in the presence of trifluoromethanesulfonic acid in

methanesulfonic acid, at 180° for 3 h (by-product) or in o-dichlorobenzene at 100° for 12 h (24%) [1441].

- Also refer to: [1442] (compound 4).

m.p. (NA); ^{13}C NMR [1441].

(3-Benzoyl-4-hydroxyphenyl)(2-hydroxyphenyl)methanone $C_{20}H_{14}O_4$ mol.wt. 318.33**Synthesis**

- Obtained (by-product) by heating a mixture of o-anisoyl chloride, benzene and aluminium chloride between 79° and 90° for 2.25 h (14%) [12].

m.p. 127°9–130°1 [12]; Spectra (NA).

(5-Benzoyl-2-hydroxyphenyl)(4-hydroxyphenyl)methanone

[124208-66-8]

 $C_{20}H_{14}O_4$ mol.wt. 318.33

Syntheses

- Obtained by Fries rearrangement of phenyl 5-benzoyl-2-hydroxybenzoate with aluminium chloride at 180° for 3 h (20%); the same reaction, in the presence of phenol, gave a 36% yield [155].
 - Also obtained by Fries rearrangement of phenyl 2-benzoyloxybenzoate with aluminium chloride at 180° for 3 h (10%). The same reaction, in the presence of phenol, gave a 21% yield [155].
- m.p. 162° [155]; Spectra (NA).

(2,4-Dihydroxy-1,3-phenylene)bis[phenylmethanone]

[82-64-4]

 $C_{20}H_{14}O_4$ mol.wt. 318.33

Syntheses

- Obtained by reaction of chromium trioxide with angular meta benzotetraphenyldifurfuran in boiling acetic acid for 1 h, followed by saponification of the non-isolated keto ester formed with 10% sodium hydroxide in refluxing ethanol for 1.5 h [203].
 - Also obtained on decarboxylation of 2,4-dihydroxy-3,5-dibenzoylbenzoic acid [208].
 - Also obtained by photo-Fries rearrangement of resorcinol dibenzoate in benzene for 8 h under nitrogen (10%) [843].
 - Also refer to: [1464,1465] (Japanese patents).
- oil [843]. This product is impure or in a metastable state.
m.p. 105° [113], 103–104° [203], 102° [208];
¹H NMR [98,843], UV [113,241,242].

(2,5-Dihydroxy-1,4-phenylene)bis[phenylmethanone]

[97971-75-0]

 $C_{20}H_{14}O_4$ mol.wt. 318.33

Syntheses

- Preparation from lin-parabenzotetraphenyldifurfuran by oxidation with chromium trioxide in refluxing acetic anhydride for >1 h, followed by saponification of the 2,5-dibenzoylhydroquinone dibenzoate so formed with potassium hydroxide in ethanol in a water bath for 30 min (43%) [254].
- Also obtained by reaction of benzoyl chloride with hydroquinone in the presence of aluminium chloride at 190–200° [146,169,1466] or at 200–205° [256]

for 2 days, followed by saponification of the keto ester so formed (2,5-dibenzo-ylhydroquinone dibenzoate) with potassium hydroxide in ethanol (2%) [1466], (12–15%) [256].

- Also obtained by photo-Fries rearrangement of hydroquinone dibenzoate in benzene for 8 h under nitrogen (10%) [843].

m.p. 210°5–211°1 [256], 207° [146,1466], 203° [254], 172–173° [843]. There is discrepancy between the melting points.

¹H NMR [843].

(3,4-Dihydroxy-1,2-phenylene)bis[phenylmethanone]

[97971-73-8]

$C_{20}H_{14}O_4$ mol.wt. 318.33

Synthesis

- Obtained by photo-Fries rearrangement of 1,2-di-(benzoyloxy)benzene in benzene for 8 h under nitrogen (28%) [843].

m.p. 134–136° [843]; ¹H NMR [843].

(2,4-Dihydroxy-5-hexyl-1,3-phenylene)bis[phenylmethanone]

$C_{26}H_{26}O_4$ mol.wt. 402.49

Synthesis

- Preparation by reaction of benzoyl chloride with 4-hexylresorcinol in the presence of aluminium chloride in nitrobenzene at 80–90° for 3 h (52%) [113].

m.p. 68–69° [113]; Spectra (NA).

Synthesis

– Refer to: [1356].

m.p. and Spectra (NA).

Phenyl[2,3,4-trihydroxy-5-[(4-hydroxy-2-methylphenyl)methyl]phenyl]methanone

$C_{21}H_{18}O_5$ mol.wt. 350.37

Synthesis

– Refer to: [1356].

m.p. and Spectra (NA).

[Methylenebis(2,4-dihydroxy-5-methyl-3,1-phenylene)]bis[phenylmethanone]

$C_{29}H_{24}O_6$ mol.wt. 468.51

Synthesis

– Preparation by reaction of 40% aqueous formaldehyde solution with 2,4-dihydroxy-5-methylbenzophenone in ethanol in the presence of concentrated sulfuric acid for 24 h at r.t. (73%) [805].

m.p. 240° [805]; Spectra (NA).

[Methylenebis(4,6-dihydroxy-5-methyl-3,1-phenylene)]bis[phenylmethanone]

$C_{29}H_{24}O_6$ mol.wt. 468.51

Synthesis

– Preparation by reaction of 40% aqueous formaldehyde solution with 2,4-dihydroxy-3-methylbenzophenone in ethanol in the presence of concentrated sulfuric acid for 3 days at r.t. (68%) [805].

m.p. 207–208° [805]; Spectra (NA).

[Methylenebis(2,4,6-trihydroxy-5,1,3-benzenetriyl)]tetrakis[phenylmethanone]

[98149-22-5]

$C_{41}H_{28}O_{10}$ mol.wt. 680.67

Synthesis

– Preparation by condensation of 2,4-di-benzoylphloroglucinol with 40% aqueous formaldehyde solution (58–64%) [1463].

m.p. 215–217° [1463]; Spectra (NA).

7.3 Diphenylethane Derivative**[1,2-Ethanediy]bis(6-hydroxy-3,1-phenylene)]bis[phenylmethanone]**

[76346-16-2]

$C_{28}H_{22}O_4$ mol.wt. 422.48

Synthesis

– Obtained (poor yield) by reaction of benzoyl peroxide with 2-hydroxy-5-methylbenzophenone in refluxing chloroform for 6 h (<4%) [278].

m.p. 172–173° [278]; 1H NMR [278], IR [278], UV [278].

7.4 Diphenylpropane Derivatives

3-Benzoyldiphenylolpropane 4'-monobenzoate

$C_{29}H_{24}O_4$ mol.wt. 436.51

Synthesis

- Obtained by photo-Fries rearrangement of diphenylolpropane dibenzoate (Bisphenol A, dibenzoate) in benzene during 96 h under nitrogen (22%) [1470].

b.p. _{0.15} 220° [1470]; IR [1470], UV [1470].

2,2-Bis(3-benzoyl-4-hydroxyphenyl)propane

$C_{29}H_{24}O_4$ mol.wt. 436.51

Synthesis

- Obtained by reaction of benzoyl chloride with diphenylolpropane dimethyl ether in the presence of aluminium chloride in ethylene dichloride, first at 0° for 45 min, then at r.t. overnight and at 45° for 90 min (14%) [1470].

m.p. 159°5–160°5 [1470]; IR [1470], UV [1470].

7.5 Diphenyl Oxide Derivatives

(4-Chlorophenyl)[4-(4-hydroxyphenoxy)phenyl]methanone

[86405-16-5]

$C_{19}H_{13}ClO_3$ mol.wt. 324.76

Synthesis

- Refer to: Chem. Abstr., **127**, 278690x (1997).

m.p. and Spectra (NA).

[4-(4-Hydroxyphenoxy)phenyl]phenylmethanone

$C_{19}H_{14}O_3$ mol.wt. 290.22

Synthesis

- Preparation by demethylation of 4-(4-methoxyphenoxy)benzo-

phenone (m.p. 104–105°) with aluminium chloride in boiling benzene during some hours [1471].

m.p. 109° [1471]; Spectra (NA).

2-(4-Benzoyl-3-hydroxyphenoxy)cyclohexanone

[125426-75-7]

 $C_{19}H_{18}O_4$ mol.wt. 310.35

Synthesis

– Preparation by reaction of α -bromocyclohexanone with resbenzophenone in the presence of potassium carbonate in refluxing acetone for 6 h (70%) [221].

m.p. 132–133° [221]; 1H NMR [221].

2-(4-Benzoyl-3-hydroxy-2-methylphenoxy)cyclohexanone

[125426-85-9]

 $C_{20}H_{20}O_4$ mol.wt. 324.38

Synthesis

– Preparation by reaction of α -bromocyclohexanone with 2,4-dihydroxy-3-methylbenzophenone in the presence of potassium carbonate in refluxing acetone for 6 h [221].

m.p. 121–122° [221]; 1H NMR [221].

Bis[4-(4-hydroxyphenoxy)phenyl]methanone $C_{25}H_{18}O_5$

mol.wt. 398.41

Synthesis

– Preparation by demethylation of 4,4'-(4-methoxyphenoxy)benzophenone (m.p. 198–199°) with excess aluminium chloride in boiling benzene (30%) [1471].

m.p. 214° [1471]; Spectra (NA).

(Oxydi-4,1-phenylene)bis(4-hydroxyphenyl)methanone

[86432-12-4]

 $C_{26}H_{18}O_5$

mol.wt. 258.23

Syntheses

– Obtained by reaction of 4,4'-Oxybis(benzoic acid) with phenol in the presence of trifluoromethanesulfonic acid at r.t. for 6 days [151].

– Preparation by Fries rearrangement of 4,4'-bis(phenoxy carbonyl)diphenyl ether,

- with methanesulfonic acid at 120° for 2 h (70%) [1472];
- with trifluoromethanesulfonic acid (high yield) [922];
- with hydrofluoric acid at –10° to 0° for 20 h (96%) [1473].

– Also obtained by reaction of EKONOL^(TM), an aromatic polyester as Friedel–Crafts reagent, with diphenyl ether in triflic acid solution at 25° for 18 h (98%) [922].

Similar results can be obtained using hydrofluoric acid/boron trifluoride or aluminium chloride in place of triflic acid [922].

m.p. (NA); ^1H NMR [151], ^{13}C NMR [922], MS [922]; HPLC [922].

7.6 Diphenyl Sulfoxide Derivatives

[Sulfinylbis(6-hydroxy-4-methoxy-3,1-phenylene)]bis[phenylmethanone]

[35839-46-4]

$\text{C}_{28}\text{H}_{22}\text{O}_7\text{S}$ mol.wt. 502.54

Synthesis

– Obtained by action of thionyl chloride with 2-hydroxy-4-methoxybenzophenone in the presence of aluminium chloride in nitrobenzene at r.t. for 24 h [1474].

m.p. 202–203° [1474]; Spectra (NA).

[Sulfinylbis[4-(cyclohexyloxy)-6-hydroxy-3,1-phenylene]]bis[phenylmethanone]

$\text{C}_{38}\text{H}_{38}\text{O}_7\text{S}$ mol.wt. 638.79

Synthesis

– Obtained by action of thionyl chloride with 2-hydroxy-4-(cyclohexyloxy)benzophenone in the presence of aluminium chloride in nitrobenzene at r.t. for 24 h [1474].

m.p. and Spectra (NA).

[Sulfinylbis[4-(benzyloxy)-6-hydroxy-3,1-phenylene]]bis[phenylmethanone]

$\text{C}_{40}\text{H}_{30}\text{O}_7\text{S}$ mol.wt. 654.74

Synthesis

– Obtained by action of thionyl chloride with 2-hydroxy-4-(benzyloxy)benzophenone in the presence of aluminium chloride in nitrobenzene at r.t. for 24 h [1474].

m.p. and Spectra (NA).

[Sulfinylbis[6-hydroxy-4-(octyloxy)-3,1-phenylene]]bis[phenylmethanone]

[35839-47-5]

 $C_{42}H_{50}O_7S$ mol.wt. 698.92**Synthesis**

- Obtained by action of thionyl chloride with 2-hydroxy-4-(octyloxy)benzophenone in the presence of aluminium chloride in nitrobenzene at r.t. for 24 h [1474].

m.p. 131°5–132° [1474]; Spectra (NA).

7.7 Diphenyl Sulfone Derivatives**[Sulfonylbis(6-hydroxy-3,1-phenylene)]bis[(2,4-dichlorophenyl)methanone]**

[153167-56-7]

 $C_{26}H_{14}Cl_4O_6S$ mol.wt. 596.27**Synthesis**

- Preparation by Fries rearrangement of bis(4-hydroxy-phenyl)sulfonedi-(2,4-dichlorobenzoate) with a mixture of fluoroalkanesulfonic acid and alkanesulfonic acid [1441].

m.p. (NA); ^{13}C NMR [1441].**[Sulfonylbis(4,6-dihydroxy-3,1-phenylene)]bis[phenylmethanone]**

[35839-48-6]

 $C_{26}H_{18}O_8S$ mol.wt. 490.49**Synthesis**

- Obtained by reaction of a 30% aqueous solution of hydrogen peroxide with 5,5'-thiobis(2,4-dihydroxy-benzophenone) in acetic acid. The mixture was then heated on a steam bath for 6 h [1474].

m.p. 217–219° [1474]; Spectra (NA).

[Sulfonylbis(6-hydroxy-4-methoxy-3,1-phenylene)]bis[phenylmethanone]

[35698-04-5]

 $C_{28}H_{22}O_8S$ mol.wt. 518.54**Synthesis**

- Obtained by reaction of a 30% aqueous solution of hydrogen peroxide with 5,5'-thiobis(2-hydroxy-4-methoxybenzophenone) in acetic acid. The mixture was then heated on a steam bath for 4 h [1474].

m.p. 264–267° [1474]; Spectra (NA).

[Sulfonylbis(6-hydroxy-4-methoxy-3,1-phenylene)]bis[(2-methylphenyl)methanone]

[35698-06-7]

 $C_{30}H_{26}O_8S$ mol.wt. 546.60**Synthesis**

- Obtained by reaction of a 30% aqueous solution of hydrogen peroxide with 5,5'-thiobis(2-hydroxy-4-methoxy-2'-methylbenzophenone) in acetic acid. The mixture was then heated on a steam bath for 6 h [1474].

m.p. 268–269° [1474]; Spectra (NA).

[Sulfonylbis[4-(cyclopentyloxy)-6-hydroxy-3,1-phenylene]]bis[phenylmethanone] $C_{36}H_{34}O_8S$ mol.wt. 626.73**Synthesis**

- Obtained by reaction of a 30% aqueous solution of hydrogen peroxide with 5,5'-thiobis[2-hydroxy-4-(cyclopentyloxy)benzophenone] in acetic acid. The mixture was then heated on a steam bath for 6 h [1474].

m.p. and Spectra (NA).

[Sulfonylbis[4-(benzyloxy)-6-hydroxy-3,1-phenylene]]bis[phenylmethanone]
 $C_{40}H_{30}O_8S$ mol.wt. 670.74
Synthesis

– Obtained by reaction of a 30% solution of hydrogen peroxide with 5,5'-sulfinylbis(2-hydroxy-4-benzyloxybenzophenone) in acetic acid. The mixture was then heated on a water bath for 6 h [1474].

m.p. and Spectra (NA).

[Sulfonylbis[6-hydroxy-4-(octyloxy)-3,1-phenylene]]bis[phenylmethanone]

[35698-05-6]

 $C_{42}H_{50}O_8S$ mol.wt. 714.92
Synthesis

– Obtained by reaction of a 30% solution of hydrogen peroxide with 5,5'-sulfinylbis(2-hydroxy-4-octyloxybenzophenone) in acetic acid. The mixture was then heated on a steam bath for 6 h [1474].

m.p. and Spectra (NA).

7.8 Other Acylated Compounds**2-Chloro-4-(2-hydroxybenzoyl)phenyl 2-hydroxybenzoate**

2-Hydroxybenzoic acid, 2-chloro-4-(2-hydroxybenzoyl)phenyl ester

[123861-93-8]

 $C_{20}H_{13}ClO_5$ mol.wt. 368.77
Syntheses

– Obtained by Fries rearrangement,

- of o-chlorophenyl 2-(nicotinoyloxy)benzoate in the presence of aluminium chloride without solvent at 150–152° for 2 h (26%) [346];
- of o-chlorophenyl salicylate in the presence of aluminium chloride without solvent at 180–183° for 3 h (20%) [506] according to [1475].

m.p. 151–152° [346,506]; Spectra (NA).

4-(2-Hydroxybenzoyl)phenyl 2-hydroxybenzoate*2-Hydroxybenzoic acid 4-(2-hydroxybenzoyl)phenyl ester*

[124011-55-8]

 $C_{20}H_{14}O_5$ mol.wt. 334.33**Syntheses**

- Preparation by total demethylation of 4-(2-methoxybenzoyl)phenyl 2-methoxybenzoate with aluminium chloride in refluxing benzene for 1 h (50%) [346].
 - Also obtained by Fries rearrangement of phenyl salicylate (salol) with aluminium chloride [1475], without solvent at 180–182° for 3 h (10%) [155].
 - Also obtained (by-product) by Fries rearrangement of phenyl 2-(nicotinoyloxy) benzoate with aluminium chloride without solvent at 140–145° for 2 h (16%) [346].
- m.p. 110° [155], 109–110° [346]; Spectra (NA).

Part IV
Addendum to Volume 1

Chapter 8

Addendum 2000–2008

Part I Monoaroylphenols

Chapter 1. Unsubstituted Hydroxybenzophenones (Class of METHANONES)

1.1 Monohydroxybenzophenones [1476] p. 3

(2-Hydroxyphenyl)phenylmethanone

[117-99-7]

$C_{13}H_{10}O_2$ mol.wt. 198.22

Described [1476] p. 3

Methyl ether

[2553-04-0]

$C_{14}H_{12}O_2$

mol.wt. 212.25

- Obtained by action of ethereal diazomethane on 2-hydroxybenzophenone in the presence of methanol [1477].
- Also obtained by reaction of bromoethane with 2-hydroxybenzophenone in the presence of sodium ethoxide in ethanol [1478].
- Also obtained by reaction of 2-methoxybenzoyl chloride with benzene in the presence of aluminium chloride [1479].
- Also obtained by reaction of benzonitrile with anisole (Hoesch reaction) (36%) [1480].
- Also obtained by heating its oxime with pyridinium chloride containing 10% of water (72%) [1481].
- Also obtained by reaction of 2-methoxyphenylmagnesium bromide,
 - with benzonitrile (50%) [1482];
 - with benzaldehyde [1483].
- Also refer to: [1484–1488].

b.p._{0,9} 126–128° [1486], b.p._{0,8} 136° [1489], b.p.₁₀ 190° [1481], b.p.₂₇ 210° [1478];

m.p. 39° [1478,1481], 36–37° [1483], 35.5–36.5° [1482];

¹H NMR [1486,1487,1489,1490], ¹³C NMR [1487–1489],

IR [1485,1487,1489,1490],

UV [1479,1487,1490,1491], MS [1486,1488].

(3-Hydroxyphenyl)phenylmethanone

[13020-57-0]

C₁₃H₁₀O₂ mol.wt. 198.22

Described [1476] **p. 6**

Syntheses

– Also refer to: [1492–1494].

Methyl ether

[6136-67-0]

C₁₄H₁₂O₂ mol.wt. 212.25

– Obtained by photolysis of 2-bromo-3'-methoxybenzophenone in acetonitrile under nitrogen at 350 nm for 36 min (18%) [1495].

(4-Hydroxyphenyl)phenylmethanone

[1137-42-4]

C₁₃H₁₀O₂ mol.wt. 198.22

Described [1476] **p. 7**

Methyl ether

[611-94-9]

C₁₄H₁₂O₂ mol.wt. 212.25

– Obtained by reaction of 4-methoxybenzoyl chloride with benzene in the presence of aluminium chloride [1496].

– Also obtained by reaction of benzoyl chloride with anisole [1497].

– Also obtained by photocatalytic oxidation of 4-methoxybenzhydrol using silica-encapsulated H₃PW₁₂O₄₀ as photocatalyst in acetonitrile for 1.25 h at r.t. under oxygen gas as the sole reoxidant of the catalyst, (90%) [1498].

– Also obtained by photolysis of 2-bromo-4'-methoxybenzophenone in acetonitrile under nitrogen at 350 nm for 14 min (39%) [1495].

– Also obtained by reaction of benzonitrile with anisole (Hoesch reaction) (34%) [1480].

– Also refer to: [1482,1499,1500], (94%) [1501].

m.p. 58–60° [1501];

¹H NMR [1498], IR [1498], UV [1501], MS [1498]; TLC [1498].

Ethyl ether

[27982-06-5]

C₁₅H₁₄O₂ mol.wt. 226.27 (m.p. 42–44°)

[1502]

– Refer to: [1502].

1.2 Dihydroxybenzophenones [1476] p. 11

1.2.1 Hydroxy Groups Located on One Ring [1476] p. 11

(2,4-Dihydroxyphenyl)phenylmethanone

[131-56-6] $C_{13}H_{10}O_3$ mol.wt. 214.22

Described [1476] p. 11

Dimethyl ether [3555-84-8] $C_{15}H_{14}O_3$ mol.wt. 242.27

- Obtained by reaction of benzoic acid with 1,3-dimethoxybenzene in the presence of PPA at 90° for 8 h (90%) [1503].
- Also refer to: [1485,1504].

white solid [1503]; m.p. 87° [1503], 86–88° [1504];
 $^1\text{H NMR}$ [1503], IR [1485,1503].

(2,5-Dihydroxyphenyl)phenylmethanone

[2050-37-5] $C_{13}H_{10}O_3$ mol.wt. 214.22

Described [1476] p. 14

Dimethyl ether [4038-13-5] $C_{15}H_{14}O_3$ mol.wt. 242.27

- Obtained by reaction of benzoyl chloride with 1,4-dimethoxybenzene in methylene chloride in the presence of stannic chloride at 0° (82%) [1503].
- Also refer to: [1504].

m.p. 51° [1503], 49–50° [1504];
 $^1\text{H NMR}$ [1503], IR [1485,1503].

(3,4-Dihydroxyphenyl)phenylmethanone

[10425-11-3] $C_{13}H_{10}O_3$ mol.wt. 214.22

Described [1476] p. 15

Syntheses

- Also obtained by Friedel–Crafts reaction between-benzoyl chloride and pyrocatechol dimethyl ether, followed by demethylation of the product so obtained [1505].
 - Also refer to: [1506–1508].
- m.p. 132° [1505].

Dimethyl ether [4038-14-6] $C_{15}H_{14}O_3$ mol.wt. 242.27
(4-Benzoylveratrole)

- Obtained by reaction of benzoyl chloride with veratrole,
 - in the presence of aluminium chloride in carbon disulfide (68%) [1509];
 - in the presence of zinc chloride [1510].
 - Also obtained by reaction of benzoic acid with veratrole in the presence of PPA at 90° for 8 h (90%) [1503].
 - Also obtained by reaction of phenylcarbonyl benzoate with veratrole in the presence of $TiCl(OTf)_3$ and TfOH in acetonitrile at r.t. for 12 h (94%) [1511].
 - Also obtained by photolysis of 2-bromo-3',4'-dimethoxybenzophenone in acetonitrile under nitrogen at 350 nm for 72 min (2%) [1495].
 - Also obtained by oxidation of (3,4-dimethoxyphenyl)phenylmethanol with chromic acid [1512].
 - Also refer to: [1479,1504,1513–1518].
- m.p. 103–104° [1512], 102° [1503], 101–102° [1510], 99–100° [1504], 99° [1513], 98–100° [1509];
 1H NMR [1503,1515], IR [1503,1504,1518],
 UV [1479,1503,1515–1517], MS [1514].

(3,5-Dihydroxyphenyl)phenylmethanone

[38009-30-2] $C_{13}H_{10}O_3$ mol.wt. 214.22

Described [1476] p. 16

Dimethyl ether [628263-26-3] $C_{15}H_{14}O_3$ mol.wt. 242.27

- Obtained by irradiation of 2-bromo-3',5'-dimethoxybenzophenone at 350 nm in acetonitrile under nitrogen atmosphere for 72 h at r.t. (3%) [1495].

1.2.2 Hydroxy Groups Located on Both Rings [1476] p. 17

Symmetrical ketones [1476] p. 17

Bis(2-hydroxyphenyl)methanone

[835-11-0] $C_{13}H_{10}O_3$ mol.wt. 214.22

Described [1476] p. 17

Syntheses

- Also refer to: [1519–1521].

N.B.: Thermal and dielectric studies [1521].

Dimethyl ether [13102-33-5] $C_{15}H_{14}O_3$ mol.wt. 242.27

- Obtained by reaction of anisole with N,N-dimethylamide chlorocarbonic acid (77%) [1522].
 - Refer to: [1485].
- 1H NMR [1522], ^{13}C NMR [1522], IR [1485,1522].

Bis(3-hydroxyphenyl)methanone

[611-80-3] $C_{13}H_{10}O_3$ mol.wt. 214.22

Described [1476] p. 17

Synthesis

- Also refer to: [1523].

Bis(4-hydroxyphenyl)methanone

[611-99-4] $C_{13}H_{10}O_3$ mol.wt. 214.22

Described [1476] p. 18

Synthesis

- Also obtained by Friedel–Crafts reaction between p-anisoyl chloride and anisole, followed by demethylation of the obtained product [1505].
- m.p. 210° [1505].

Dimethyl ether [90-96-0] $C_{15}H_{14}O_3$ mol.wt. 242.27

- Obtained by photocatalytic oxidation of 4,4'-dimethoxybenzhydrol (m.p. 69–71°) catalyzed by $H_3PW_{12}O_{40}/SiO_2$ in acetonitrile under oxygen atmosphere at r.t. for 1 h (90%) [1498].
- Also obtained by microwave irradiation of 4-iodoanisole in the presence of $Co_2(CO)_8$ in acetonitrile under air in sealed vessel for 10 s (57%) [1524].
- Also obtained by reaction of 4-methoxyphenylglyoxylonitrile with 4-methoxyphenylmagnesium bromide in the presence of $Fe(acac)_3$ (5 mol%) in THF at -10° for 30 min under argon (98%) [1525].
- Also obtained by reaction of p-anisoyl chloride with anisole [1526] in the presence of MoO_2Cl_2 (20 mol%) at reflux for 20 h (81%) [1527].
- Obtained by photolysis of 2-bromo-4',4'-dimethoxybenzophenone in acetonitrile under nitrogen at 350 nm for 24 min (34%) [1495].
- Also refer to: [1501] (93%).

m.p. 146–147.5° [1501], 143° [1526];

1H NMR [1498], IR [1498], UV [1501], MS [1498];

TLC [1498]; GC-MS [1524].

Diethyl ether $C_{17}H_{18}O_3$ mol.wt. 270.33

- Preparation by reaction of 4-ethoxybenzoyl chloride with phenetole in the presence of aluminium chloride in carbon disulfide at 55° (80%) [1497].

b.p.₁₅ 258° [1497]; m.p. 132° [1497].

1.3 Trihydroxybenzophenones [1476] p. 22**1.3.1 Hydroxy Groups Located on One Ring [1476] p. 22****Phenyl(2,3,4-trihydroxyphenyl)methanone**

[1143-72-2]

 $C_{13}H_{10}O_4$ mol.wt. 230.22**Described** [1476] p. 22

Syntheses

– Also obtained by Friedel–Crafts reaction between benzoyl chloride and pyrogallol trimethyl ether, followed by demethylation of the obtained product [1505].

– Also refer to: [1529,1530] (Japanese patent) [1531–1534] (Chinese patent).

m.p. 118° [1505].

Phenyl(2,4,6-trihydroxyphenyl)methanone (*Phlorbenzophenone*)

[3555-86-0]

 $C_{13}H_{10}O_4$ mol.wt. 230.22**Described** [1476] p. 23

Syntheses

- Also obtained by treatment of 2,4,6-trimethoxybenzophenone,
 - with boron tribromide (5 equiv) in methylene chloride, first at -78° , then at r.t. (92%) [1535] for 66 h (80%) [1536];
 - with aluminium chloride in methylene chloride at 20° for 12 h (96%) [1535].
- Also refer to: [1537,1538].

m.p. $167-169^\circ$ [1535], $164-165^\circ$ [1537]; 1H NMR [1535,1539-1541], ^{13}C NMR [1541],

IR [1535,1540], MS [1541].

BIOLOGICAL ACTIVITY: Antimicrobial activity against *Bacillus subtilis* [1542]; activity against *Escherichia coli* [1542].

USE: Stabilization PVC [1543].

Trimethyl ether [3770-80-7] $C_{16}H_{16}O_4$ mol.wt. 272.30 (58%) [1536]
(*Methylhydrocotoin*)

- Obtained by reaction of benzoyl chloride with 1,3,5-trimethoxybenzene in the presence of aluminium chloride in ethyl ether, first between 0° and 5° for 1 h, then at r.t. for 15 h (46%) [1544].
- Also obtained by reaction of benzoyl chloride with 2,4,6-trimethoxyphenyllithium in ethyl ether at 0° for 1 h under nitrogen (50%) [1545].
- Also obtained by reaction of benzonitrile with phloroglucinol trimethyl ether (Hoesch reaction) (66%) [1480].

m.p. $113-115^\circ$ [1535,1545], 113° [1544]; 1H NMR [1535,1544,1545], ^{13}C NMR [1535],

IR [1545], UV [1545].

Tribenzoate $C_{34}H_{22}O_7$ mol.wt. 542.54 (m.p. $125-126^\circ$) [1537].

1.3.2 Hydroxy Groups Located on Both Rings [1476] p. 24**(2,4-Dihydroxyphenyl)(2-hydroxyphenyl)methanone**

[13087-18-8]

 $C_{13}H_{10}O_4$ mol.wt. 230.22**Described** [1476] p. 25

Synthesis

- Also obtained by action of salicylic acid with resorcinol in the presence of zinc chloride for 45 min at $125-140^\circ$ [1505].
- m.p. 138° [1505].

Trimethyl ether [33077-87-1] $C_{16}H_{16}O_4$ mol.wt. 272.30

– Obtained by reaction of 2-methoxybenzoic acid with 1,3-dimethoxybenzene in the presence of PPA at 90° for 8 h (85%) [1503].

– Also refer to: [1515,1546,1547].

m.p. 61–62° [1515,1546,1547], 59–60° [1503];

1H NMR [1503], IR [1503].

(2,4-Dihydroxyphenyl)(3-hydroxyphenyl)methanone

[837-60-5] $C_{13}H_{10}O_4$ mol.wt. 230.22

Described [1476] p. 25

Trimethyl ether [844-38-2] $C_{16}H_{16}O_4$ mol.wt. 272.30

– Obtained by reaction of 3-methoxybenzoic acid with 1,3-dimethoxybenzene in the presence of PPA at 90° for 8 h (85%) [1503].

– Also refer to: [1548].

m.p. 79–80° [1503]; 1H NMR [1503], IR [1503].

(2,4-Dihydroxyphenyl)(4-hydroxyphenyl)methanone

[1470-79-7] $C_{13}H_{10}O_4$ mol.wt. 230.22

Described [1476] p. 25

Syntheses

– Obtained by treatment of its trimethyl ether with aluminium chloride in toluene at 120° [1505].

– Also obtained by Friedel–Crafts reaction between p-anisoyl chloride and resorcinol dimethyl ether, followed by demethylation of the obtained product [1505].

– Also refer to: [1531,1532].

m.p. 198° [1505].

Trimethyl ether [4038-15-7] $C_{16}H_{16}O_4$ mol.wt. 272.30

– Obtained by heating of its oxime with pyridinium chloride containing 10% of water [1481].

– Also obtained by reaction of p-anisoyl chloride with resorcinol dimethyl ether in the presence of aluminium chloride [1549].

– Also obtained by reaction of 2,4-dimethoxybenzoyl chloride with anisole in the presence of aluminium chloride [1550].

– Also obtained by reaction of 4-methoxybenzoic acid with 1,3-dimethoxybenzene in the presence of PPA at 90° for 8 h (85%) [1503].

– Also refer to: [1551–1556].

m.p. 145° [1503], 73–74° [1481,1550], 70–71° [1549], 67° [1557];

One of the reported melting points is obviously wrong.

¹H NMR [1503,1556], IR [1503,1557], UV [1551].

(2,5-Dihydroxyphenyl)(2-hydroxyphenyl)methanone

[183106-13-0]

C₁₃H₁₀O₄ mol.wt. 230.22

Described [1476] p. 26

Synthesis

- Also obtained by action of salicylic acid with hydroquinone in the presence of zinc chloride for 45 min at 125–140° [1505].

m.p. 98° [1505].

Trimethyl ether [32938-33-3] C₁₆H₁₆O₄ mol.wt. 272.30

- Obtained by reaction of 2-methoxybenzoyl chloride with 1,4-dimethoxybenzene in methylene chloride in the presence of stannic chloride (82%) [1503].

- Also refer to: [1558].

m.p. 48° [1503]; ¹H NMR [1503], IR [1503].

(2,5-Dihydroxyphenyl)(4-hydroxyphenyl)methanone

[120506-56-1]

C₁₃H₁₀O₄ mol.wt. 230.22

Described [1476] p. 26

Synthesis

- Also obtained by Friedel–Crafts reaction between p-anisoyl chloride and hydroquinone dimethyl ether, followed by demethylation of the obtained product [1505].

m.p. 162° [1505].

Trimethyl ether [80427-23-2] C₁₆H₁₆O₄ mol.wt. 272.30

- Obtained by reaction of 4-methoxybenzoyl chloride with 1,4-dimethoxybenzene in methylene chloride in the presence of stannic chloride (80%) [1503].

- Also refer to: [1559].

white solid; m.p. 70° [1503]; ¹H NMR [1503], IR [1503].

(3,4-Dihydroxyphenyl)(4-hydroxyphenyl)methanone

[74697-54-4]

C₁₃H₁₀O₄ mol.wt. 230.22

Described [1476] p. 27

Syntheses

- Also obtained by Friedel–Crafts reaction between p-anisoyl chloride and pyrocatechol dimethyl ether, followed by demethylation of the obtained product [1505].

- Also obtained by reaction of 3,4-dimethoxybenzoyl chloride with anisole in the presence of aluminium chloride in carbon disulfide. The obtained trimethoxybenzophenone was converted to the trihydroxybenzophenone by heating with an equal weight of aluminium chloride in toluene for 1 h at 120° [1505].

m.p. 205° [1505].

Trimethyl ether [2898-54-6] $C_{16}H_{16}O_4$ mol.wt. 272.30.

- Obtained by reaction of 4-methoxybenzoic acid with veratrole in the presence of PPA at 90° for 8 h (80%) [1503].
- Also refer to: [1560].

white solid; m.p. 96–97° [1503]; 1H NMR [1503], IR [1503], UV [1503].

1.4 Tetrahydroxybenzophenones [1476] p. 28

1.4.1 Hydroxy Groups Located on One Ring [1476] p. 28

1.4.2 Hydroxy Groups Located on Both Rings [1476] p. 28

Symmetrical ketones [1476] p. 28

Bis(2,4-dihydroxyphenyl)methanone

[131-55-5]

$C_{13}H_{10}O_5$ mol.wt. 246.22

Described [1476] p. 29

Syntheses

- Also prepared from 2,4-dihydroxybenzoic acid and resorcinol in sulfolane using anhydrous zinc chloride and phosphorous oxychloride as catalysts for 2.2 h at 70° (87%) [1561].
- Also obtained by action of β -resorcylic acid with resorcinol in the presence of zinc chloride for 45 min at 125–140° [1505].
- Also refer to: [1562] (**THBP**), [1534] (Chinese patent).

m.p. 180° [1505].

Tetramethyl ether [3555-85-9] $C_{17}H_{18}O_5$ mol.wt. 302.33.

- Refer to: [1562] (**TMBP**).

Bis(3,5-dihydroxyphenyl)methanone[873220-56-5] $C_{13}H_{10}O_5$ mol.wt. 246.22**New compound**

Synthesis

– Preparation by treatment of its tetramethyl ether with boron tribromide in methylene chloride at 0° [1563].

Tetramethyl ether [184090-09-3] $C_{17}H_{18}O_5$ mol.wt. 302.33.

– Obtained by oxidation of 3,3',5,5'-tetramethoxybenzhydrol with manganese dioxide in methylene chloride at r.t. [1563].

Asymmetric ketones [1476] p. 30**(2-Hydroxyphenyl)(2,3,4-trihydroxyphenyl)methanone**[42204-63-7] $C_{13}H_{10}O_5$ mol.wt. 246.22**Described** [1476] p. 32

Synthesis

– Also refer to: [1534] (Chinese patent).

(4-Hydroxyphenyl)(2,3,4-trihydroxyphenyl)methanone[31127-54-5] $C_{13}H_{10}O_5$ mol.wt. 246.22**Described** [1476] p. 34

Syntheses

– Also obtained by Friedel–Crafts reaction between p-anisoyl chloride and pyrogallol trimethyl ether, followed by demethylation of the product obtained [1505].

– Also refer to: [1564,1565] (Japanese patent), [1534,1566,1567] (Chinese patents).

m.p. 219° [1505].

(4-Hydroxyphenyl)(2,4,6-trihydroxyphenyl)methanone (*Triflophenone*)[52591-10-3] $C_{13}H_{10}O_5$ mol.wt. 246.22**Described** [1476] p. 34**Monohydrate** [880877-63-4] $C_{13}H_{10}O_5, H_2O$ mol.wt. 264.24

Isolation from natural sources

– From the rhizomes of *Iris germanica* Linn. [1568].

m.p. 209–210° [1568]; X-ray Data [1568].

1.5 Pentahydroxybenzophenones [1476] p. 35

1.5.1 Hydroxy Groups Located on One Ring [1476] p. 35

1.5.2 Hydroxy Groups Located on Both Rings [1476] p. 35

(2,4-Dihydroxyphenyl)(2,3,4-trihydroxyphenyl)methanone

[92379-42-5]

C₁₃H₁₀O₆ mol.wt. 262.22**Described [1476] p. 35**

Synthesis

- Also obtained by action of β-resorcylic acid with pyrogallol in the presence of zinc chloride for 45 min at 125–140° [1505].

m.p. 200° [1505].

(2,4-Dihydroxyphenyl)(3,4,5-trihydroxyphenyl)methanone

[10425-09-9]

C₁₃H₁₀O₆ mol.wt. 262.22**Described [1476] p. 36**

Synthesis

- Also obtained by action of β-resorcylic acid with pyrogallol in the presence of zinc chloride for 45 min at 125–140° [1505].

m.p. 253° [1505].

(3,4-Dihydroxyphenyl)(2,4,6-trihydroxyphenyl)methanone

[519-34-6]

C₁₃H₁₀O₆ mol.wt. 262.22**Described [1476] p. 37**

Syntheses

- Also obtained by Friedel–Crafts reaction between veratryl chloride and phloglucinol dimethyl ether, followed by demethylation of the obtained product [1505].
- Also refer to: [1569].

m.p. 220° [1505].

(4-Hydroxyphenyl)(2,3,4,5-tetrahydroxyphenyl)methanone

[112232-17-4]

C₁₃H₁₀O₆ mol.wt. 262.22**Described [1476] p. 39**

Synthesis

- Also refer to: [1534] (Chinese patent).

1.6 Hexahydroxybenzophenones [1476] p. 39

Symmetrical ketones [1476] p. 39

Bis(2,3,4-trihydroxyphenyl)methanone (*Exifone, Adlone*)

[75440-84-5]

$C_{13}H_{10}O_7$ mol.wt. 278.22

Described [1476] p. 39

Synthesis

– Also obtained by action of 2,3,4-trihydroxybenzoic-acid with pyrogallol in the presence of zinc chloride for 45 min at 125–140° [1505].

m.p. 240° [1505].

Asymmetric ketones [1476] p. 40

(2,3,4-Trihydroxyphenyl)(3,4,5-trihydroxyphenyl)methanone (*Exifone, Adlone*)

[52479-85-3]

$C_{13}H_{10}O_7$ mol.wt. 278.22

Described [1476] p. 40

Syntheses

– Also obtained by action of gallic acid with pyrogallol in the presence of zinc chloride for 45 min at 125–140° [1505].

– Also refer to: [1529,1533,1570].

m.p. 276° [1505].

BIOLOGICAL ACTIVITY: Synergistic antimalarial activity of exifone and rufi-gallol. [1571]; synergistic antimalarial activity of exifone and vitamin C [1571]; pharmacology [1572]; animal studies in memory improvement [1573]; in antagonism of benzodiazepine-induced amnesia [1574]; clinical evaluation in senile dementia [1575]; in Parkinson's disease [1576].

(4-Hydroxyphenyl)(2,3,4,5,6-pentahydroxyphenyl)methanone

[960294-81-9]

$C_{13}H_{10}O_7$ mol.wt. 278.22

New compound

Synthesis

– Refer to: [1534] (Chinese patent).

Chapter 2. Substituted Hydroxybenzophenones (Class of METHANONES)

2.1 Monohydroxybenzophenones [1476] p. 43

2.1.1 Substituents Located on the Hydroxylated Ring [1476] p. 43

(3,5-Dibromo-4-hydroxyphenyl)phenylmethanone

[26733-16-4]

C₁₃H₈Br₂O₂ mol.wt. 356.01**Described** [1476] p. 44

Syntheses

- Also obtained by adding HMTAB (hexamethylene tetramine-bromine complex) to 4-hydroxybenzophenone in methylene chloride at r.t. for 5 min (40%) [1577].
- Also obtained by reaction of bromine with 4-hydroxybenzophenone in dilute acetic acid [1497].

m.p. 153.5° [1497], 148–150° [1577].

Ethyl ether C₁₅H₁₂Br₂O₂ mol.wt. 384.07

- Obtained by reaction of ethyl iodide with 2-hydroxy-3,5-dibromobenzophenone in the presence of potassium hydroxide in boiling ethanol [1497].

b.p.₁₁ 244° [1497]; m.p. 83.5° [1497].

(3-Chloro-2-hydroxy-5-iodophenyl)phenylmethanone

[883566-15-2]

C₁₃H₈ClIO₂ mol.wt. 358.56**New compound**

Synthesis

- Obtained by reaction of iodine and iodic acid with 3-chloro-2-hydroxybenzophenone at 35–40° in 95% ethyl alcohol (82%) [1578].
- m.p. 172° [1578]; ¹H NMR [1578], IR [1578], MS [1578].

(5-Chloro-2-hydroxy-3-iodophenyl)phenylmethanone

[58878-51-6]

C₁₃H₈ClIO₂ mol.wt. 358.56**New compound**

Syntheses

- Obtained by reaction of iodine and iodic acid with 5-chloro-2-hydroxybenzophenone at 35–40° in 95% ethyl alcohol (80%) [1578].
- Also refer to: [1579,1580].

m.p. 118° [1578], 110–111° [1579,1580];

¹H NMR [1578], IR [1578], MS [1578].

(3-Bromo-4-hydroxyphenyl)phenylmethanone

[89899-44-5]

C₁₃H₉BrO₂ mol.wt. 277.11

Described [1476] p. 50

Syntheses

- Also obtained by adding HMTAB (hexamethylene tetramine-bromine complex) to 4-hydroxybenzophenone in methylene chloride at –5° for 145 min (97%) [1577].
- Also obtained by reaction of bromine with 4-hydroxybenzophenone in anhydrous acetic acid [1497].

m.p. 183° [1497], 181–183° [1577].

Methyl ether C₁₄H₁₁BrO₂ mol.wt. 294.14

- Refer to: [1514]; MS [1514].

Ethyl ether C₁₅H₁₃BrO₂ mol.wt. 305.17

- Obtained by reaction of ethyl iodide with 3-bromo-4-hydroxybenzophenone in the presence of potassium hydroxide in boiling ethanol for 3 h [1497].
- Also obtained by reaction of bromine with 4-ethoxybenzophenone in dilute acetic acid at r.t. for 1 h [1497].

m.p. 102° [1497].

(4-Bromo-2-hydroxyphenyl)phenylmethanone

[6723-04-2]

C₁₃H₉BrO₂ mol.wt. 277.11

Described [1476] p. 50

Syntheses

- Obtained by treatment of 6-bromo-2,3-diphenylbenzofuran with chromium trioxide [1581].
- Also refer to: [1582–1584].

m.p. 83° [1582]; UV [1582].

Oxime (1*E*) [335195-33-0] C₁₃H₁₀BrNO₂ mol.wt. 292.13 (75%) [1581]

m.p. 115° [1581]; ¹H NMR [1581], IR [1581], MS [1581].

(2-Chloro-4-hydroxyphenyl)phenylmethanone

[81375-00-0]

C₁₃H₉ClO₂ mol.wt. 232.67

Described [1476] p. 51

Methyl ether [67601-27-8] $C_{14}H_{11}ClO_2$ mol.wt. 246.69

- Obtained by heating for 4 h a mixture of 3-chloroanisole and benzoyl chloride,
 - in the presence of ferric chloride (75%) [1585];
 - in the presence of aluminium chloride (80%) [1585].

b.p.₁₂ 183° [1585].

(3-Chloro-2-hydroxyphenyl)phenylmethanone

[35582-86-6] $C_{13}H_9ClO_2$ mol.wt. 232.67

Described [1476] p. 52

Synthesis

- Also refer to: [1578].

(3-Chloro-4-hydroxyphenyl)phenylmethanone

[55191-20-3] $C_{13}H_9ClO_2$ mol.wt. 232.67

Described [1476] p. 52

Synthesis

- Also refer to: [1514]; MS [1514].

Methyl ether [10547-61-2] $C_{14}H_{11}ClO_2$ mol.wt. 246.69

- Obtained by heating for 4 h a mixture of 2-chloroanisole and benzoyl chloride,
 - in the presence of ferric chloride (70%) [1585];
 - in the presence of aluminium chloride (81%) [1585].

- Also refer to: [1514].

b.p.₁₂ 181° [1585]; m.p. 99° [1585]; MS [1514].

(4-Chloro-2-hydroxyphenyl)phenylmethanone

[2985-80-0] $C_{13}H_9ClO_2$ mol.wt. 232.67

Described [1476] p. 53

Synthesis

- Obtained by heating 4-chloro-2-hydroxybenzoyl chloride with benzene in the presence of aluminium chloride (81%) [1586].

m.p. 70–71° [1586]; ¹H NMR [1586].

Methyl ether [78589-12-5] $C_{14}H_{11}ClO_2$ mol.wt. 246.69

- Obtained by treatment of 4-chloro-2-hydroxybenzophenone with methyl iodide in DMSO in the presence of potassium hydroxide at 40° (25%) [1586].

m.p. 91–93° [1586]; ¹H NMR [1586], ¹³C NMR [1586], IR [1586].

(5-Chloro-2-hydroxyphenyl)phenylmethanone[85-19-8] $C_{13}H_9ClO_2$ mol.wt. 232.67**Described** [1476] p. 53

Synthesis

– Also refer to: [1584].

Methyl ether [4072-28-0] $C_{14}H_{11}ClO_2$ mol.wt. 246.69

- Obtained by heating for 4 h a mixture of 4-chloroanisole and benzoyl chloride,
 - in the presence of ferric chloride (70%) [1585];
 - in the presence of aluminium chloride (81%) [1585].
- Obtained by reaction of dimethyl sulfate with 5-chloro-2-hydroxybenzophenone potassium salt in toluene [1587].
- Preparation from 1-(5-chloro-2-methoxyphenyl)-1-phenylethylene [1588].
- Preparation from 5-chloro-2-methoxyphenylboronic acid [1588].
- Also refer to: [1557,1589,1590].

b.p.₁₂ 180° [1585]; m.p. 103–104° [1590], 101° [1585], 100.5–101° [1587], 100° [1557];¹H NMR [1588], ¹³C NMR [1588], IR [1557,1588].**(2-Hydroxy-4-iodophenyl)phenylmethanone**[335195-30-7] $C_{13}H_9IO_2$ mol.wt. 324.12**New compound**

Synthesis

– Obtained by treatment of 6-iodo-2,3-diphenylbenzofuran with chromium trioxide [1581].

Oxime (1E) [335195-36-3] $C_{13}H_{10}INO_2$ mol.wt. 339.13 (82%) [1581]
m.p. 143–144° [1581]; ¹H NMR [1581], IR [1581], MS [1581].**(3-Amino-4-hydroxyphenyl)phenylmethanone**[42404-41-1] $C_{13}H_{11}NO_2$ mol.wt. 213.24**Described** [1476] p. 61

Syntheses

- Also obtained by treatment of 4-hydroxy-3-nitrobenzophenone with hydrazine hydrate in the presence of Raney nickel in methanol at 60–60° for 1.5 h [1591].
- Also refer to: [1533,1592–1595].

UV [1595].

Hydrochloride $C_{13}H_{11}NO_2 \cdot HCl$ mol.wt. 249.70.

– Refer to: [1596] (91%); (m.p. 185–196°) [1596].

(2-Hydroxy-3,5-diiodo-4-methylphenyl)phenylmethanone

[883566-14-1]

 $C_{14}H_{10}I_2O_2$ mol.wt. 464.04**New compound****Synthesis**

- Obtained by reaction of iodine and iodic acid with 2-hydroxy-4-methylbenzophenone at 35–40° in 95% ethyl alcohol (84%) [1578].

m.p. 121° [1578]; 1H NMR [1578], IR [1578], MS [1578].**(4-Bromo-2-hydroxy-3-methylphenyl)phenylmethanone**

[6758-89-0]

 $C_{14}H_{11}BrO_2$ mol.wt. 291.14**Described [1476] p. 65****Synthesis**

- Obtained by treatment of 6-bromo-7-methyl-2,3-diphenyl-benzofuran with chromium trioxide [1581].

Oxime (1E)

[335195-35-2]

 $C_{14}H_{12}BrNO_2$

mol.wt. 306.16 (69%) [1581]

m.p. 140–142° [1581]; 1H NMR [1581], IR [1581], MS [1581].**(4-Bromo-2-hydroxy-5-methylphenyl)phenylmethanone**

[6723-07-5]

 $C_{14}H_{11}BrO_2$ mol.wt. 291.14**Described [1476] p. 65****Synthesis**

- Obtained by treatment of 6-bromo-5-methyl-2,3-diphenyl-benzofuran with chromium trioxide [1581].

Oxime (1E)

[335195-34-1]

 $C_{14}H_{12}BrNO_2$

mol.wt. 306.16 (78%) [1581],

m.p. 135–137° [1581]; 1H NMR [1581], IR [1581], MS [1581].**(2-Hydroxy-3-iodo-5-methylphenyl)phenylmethanone**

[883566-13-0]

 $C_{14}H_{11}IO_2$ mol.wt. 338.14**New compound****Synthesis**

- Obtained by reaction of iodine and iodic acid with 2-hydroxy-5-methylbenzophenone at 35–40° in 95% ethyl alcohol (82%) [1578].

m.p. 80° [1578];

 1H NMR [1578], ^{13}C NMR [1578], IR [1578], MS [1578].

(2-Hydroxy-4-iodo-3-methylphenyl)phenylmethanone[194784-86-6] $C_{14}H_{11}IO_2$ mol.wt. 338.14**New compound**

Synthesis

– Obtained by treatment of 6-iodo-7-methyl-2,3-diphenylbenzofuran with chromium trioxide [1581].

Oxime (1E) [335195-38-5] $C_{14}H_{12}INO_2$ mol.wt. 353.16 (83%) [1581].m.p. 161° [1581]; 1H NMR [1581], IR [1581], MS [1581].**(2-Hydroxy-4-iodo-5-methylphenyl)phenylmethanone**[335195-31-8] $C_{14}H_{11}IO_2$ mol.wt. 338.14**New compound**

Synthesis

– Obtained by treatment of 6-iodo-5-methyl-2,3-diphenylbenzofuran with chromium trioxide [1581].

Oxime (1E) [335195-37-4] $C_{14}H_{12}INO_2$ mol.wt. 353.16 (85%) [1581].m.p. 152–155° [1581]; 1H NMR [1581], IR [1581], MS [1581].**(4-Hydroxy-3-methoxy-2-nitrophenyl)phenylmethanone**[383382-98-7] $C_{14}H_{11}NO_5$ mol.wt. 273.25**New compound**

Synthesis

– Obtained by hydrolysis of 4-acetoxy-3-methoxy-2-nitrobenzophenone with 3 N sodium hydroxide in dilute methanol at r.t. for 15 min (93%) [1597].

m.p. 168.9–170° [1597]; 1H NMR [1597], ^{13}C NMR [1597].**Acetate** [383382-96-5] $C_{16}H_{13}NO_6$ mol.wt. 315.22

– Obtained by adding copper (II) nitrate trihydrate in one portion to a solution of 4-(acetyloxy)-3-methoxybenzophenone (m.p. 103–104°) in acetic anhydride at r.t. (52%) [1597].

m.p. 84.5–86° [1597]; 1H NMR [1597], ^{13}C NMR [1597].**(4-Hydroxy-3-methylphenyl)phenylmethanone**[5326-42-1] $C_{14}H_{12}O_2$ mol.wt. 212.25**Described [1476] p. 78**

Syntheses

- Also obtained by Friedel–Crafts acylation of o-cresol with benzoic acid in a mixture of graphite and methanesulfonic acid at 120° for 3 h (90%) [1598].
- Also refer to: [1514,1599].

¹H NMR [1598], ¹³C NMR [1598], MS [1514].

Methyl ether [30090-97-2] C₁₅H₁₄O₂ mol.wt. 226.27

- Refer to: [1514]; MS [1514].

(4-Hydroxy-3-methoxyphenyl)phenylmethanone

[51439-89-5] C₁₄H₁₂O₃ mol.wt. 228.25

Described [1476] p. 83

Acetate [383382-97-6] C₁₆H₁₄O₄ mol.wt. 270.28

- Preparation by reaction of acetic anhydride with 4-hydroxy-3-methoxybenzophenone in the presence of pyridine in methylene chloride at r.t. for 15 min (94%) [1597].

m.p. 103–104° [1597]; ¹H NMR [1597], ¹³C NMR [1597].

(3-Amino-4-hydroxy-2-methylphenyl)phenylmethanone

[909255-30-7] C₁₄H₁₃NO₂ mol.wt. 227.26

New compound

Synthesis

- Obtained by treatment of (3-amino-4-methoxy-2-methyl-phenyl)phenylmethanone with aluminium chloride in toluene at 100° for 20 min (86%) [1595].

m.p. 145–147° [1595]; ¹H NMR [1595], ¹³C NMR [1595].

Methyl ether C₁₅H₁₅NO₂ mol.wt. 241.29

- Obtained by reaction of benzoic acid with 2-methoxy-6-methylaniline in the presence of PPA at 100° for 3 h (40%) [1595].

(3-Amino-2-hydroxy-4-methoxyphenyl)phenylmethanone

[253681-30-0] C₁₄H₁₃NO₃ mol.wt. 243.26

New compound

Synthesis

- Obtained by treatment of 3-amino-2,4-dimethoxy-benzophenone with aluminium chloride in refluxing methylene chloride for 1 h (70–90%) [1529].

(2-Hydroxy-3,5-diiodo-4,6-dimethylphenyl)phenylmethanone

[883566-16-3]

 $C_{15}H_{12}I_2O_2$ mol.wt. 478.07**New compound****Synthesis**

– Obtained by reaction of iodine and iodic acid with 2-hydroxy-4,6-dimethylbenzophenone at 35–40° in 95% ethyl alcohol (75%) [1578].

m.p. 133° [1578]; 1H NMR [1578], IR [1578], MS [1578].

(3-Chloro-6-hydroxy-2,4-dimethylphenyl)phenylmethanone

[34174-02-2]

 $C_{15}H_{13}ClO_2$ mol.wt. 260.72**Described [1476] p. 88****Synthesis**

– Obtained by [3 + 3] cyclisation of 3-chloro-4-(tri-methylsilyloxy)-3-penten-2-one (**3a**) with 2,4-bis (trimethylsilyloxy)-2-phenyl-2-butene (**4c**) in the presence of titanium tetrachloride in methylene chloride, first at –78°, then to 20° for 20 h (44%) [1600].

m.p. 199° [1600]; 1H NMR [1600], ^{13}C NMR [1600], IR [1600], MS [1600].

(2-Hydroxy-4,6-dimethylphenyl)phenylmethanone

[2929-45-5]

 $C_{15}H_{14}O_2$ mol.wt. 226.27**Described [1476] p. 93****Synthesis**

– Also obtained by Fries rearrangement of 3,5-dimethylphenyl benzoate in the presence of 1-butyl-3-methylimidazolium chloroaluminum [BMIm] $^+Al_2Cl_7^-$ melt at 120° for 2 h (94%) [1601].

(4-Hydroxy-2,3-dimethoxyphenyl)phenylmethanone

[872881-75-9]

 $C_{15}H_{14}O_4$ mol.wt. 258.27**New compound****Isolation from natural sources**

– From the roots of *Securidaca inappendiculata* Hassk (Polygalaceae) [1602].

Colourless powder; m.p. 62.5° [1602]; $(\alpha)_D^{20} = 0$ (0.50 $CHCl_3$) [1602]; 1H NMR [1602], ^{13}C NMR [1602], MS [1602], IR [1602], UV [1602], MS [1602].

BIOLOGICAL ACTIVITY: Used as antiinflammatory, antibacterial and anti-rheumatism agent in China [1602].

[5-(1,1-Dimethylethyl)-2-hydroxyphenyl]phenylmethanone

[10425-05-5]

 $C_{17}H_{18}O_2$ mol.wt. 254.33**Described** [1476] p. 115

Synthesis

- Obtained by palladium diacetate catalyzed reaction of benzonitrile with p-tert-butylphenol in the presence of TFA in DMSO at 90° (71%) [1480].

(4-Butoxy-2-hydroxyphenyl)phenylmethanone

[15131-43-8]

 $C_{17}H_{18}O_3$ mol.wt. 270.33**Described** [1476] p. 119

Synthesis

- Also refer to: [1603].

[4-(1,1-Dimethylethoxy)-2-hydroxyphenyl]phenylmethanone $C_{17}H_{18}O_3$ mol.wt. 270.33**New compound**

- Polymer with 1,2-ethanediol [1020077-60-4].
- Refer to: [1603].

[2-Hydroxy-4-(pentyloxy)phenyl]phenylmethanone

[83937-21-7]

 $C_{18}H_{20}O_3$ mol.wt. 284.36**Described** [1476] p. 124

Synthesis

- Also refer to: [1604].

[3-(3,7-Dimethyl-2,6-octadienyl)-2-hydroxy-4,6-dimethoxyphenyl]phenylmethanone (E) (Marupone monomethyl ether)

[53948-16-6]

 $C_{25}H_{30}O_4$ mol.wt. 394.51**New compound**

Synthesis

- Obtained by treatment of marupone with diazomethane in ethyl ether at r.t. for 24 h [1605].

oil [1605]; 1H NMR [1605], IR [1605], UV [1605].

Acetate (*E*) [53948-17-7] $C_{27}H_{32}O_5$ mol.wt. 436.55

– Obtained by treatment of marupone monomethyl ether with acetic anhydride in the presence of pyridine at r.t. for 24 h [1605].

oil [1605]; 1H NMR [1605], IR [1605].

2.1.2 Substituents Located on the Other Ring [1476] p. 143

(2,6-Dichlorophenyl)(4-hydroxyphenyl)methanone

[61002-53-7]

$C_{13}H_8Cl_2O_2$ mol.wt. 267.11

Described [1476] p. 146

Syntheses

- Obtained by reaction of 2,6-dichlorobenzoyl chloride with anisole in the presence of aluminium chloride [1606].
- Also refer to: [1607].

m.p. 208° [1606].

(2,4-Difluorophenyl)(2-hydroxyphenyl)methanone

[46795-44-2]

$C_{13}H_8F_2O_2$ mol.wt. 234.20

New compound

Synthesis

- Obtained by an intramolecular acyl radical *ipso* substitution (68%) [1608].

(3,5-Difluorophenyl)(4-hydroxyphenyl)methanone (*Homopolymer*)

[148253-50-3]

$C_{13}H_8F_2O_2$ mol.wt. 234.20

New compound

Synthesis

- Refer to: [1609] (Japanese patent).

(3,5-Dinitrophenyl)(4-hydroxyphenyl)methanone

[51339-44-7]

$C_{13}H_8N_2O_6$ mol.wt. 288.22

Described [1476] p. 147

Synthesis

- Also refer to: [1610] (Japanese patent).

(2-Bromophenyl)(4-hydroxyphenyl)methanone

$C_{13}H_9BrO_2$ mol.wt. 277.11

Described [1476] **p. 148**

Syntheses

- Also obtained by dealkylation of 2-bromo-4'-ethoxy-benzophenone by treatment with hydrobromic acid ($d = 1.49$) in acetic acid [1611].
- Also obtained by Fries rearrangement of phenyl 2-bromobenzoate with aluminium chloride [1612].

b.p.₁₀ 260° [1611]; m.p. 114° [1611], 100–103° [1612].

Methyl ether [59142-63-1] $C_{14}H_{11}BrO_2$ mol.wt. 291.14

- Obtained by reaction of p-anisoyl chloride with o-bromophenylzinc iodide in the presence of $Pd(PPh_3)_4$ in THF at 20° for 1 h [1613].
- Also obtained by reaction of o-bromobenzoyl chloride with anisole in the presence of aluminium chloride in chloroform at 20° for 12 h (89%) [1614].
- Also obtained by treatment of 2-bromo- α -(4-methoxyphenyl)benzyl alcohol with PCC in methylene chloride at 20° for 2 h (90%) [1615].
- Preparation [1616] according to [1617].
- Also refer to: [1495,1618,1619].

m.p. 90–92° [1495];

1H NMR [1495,1614,1615], ^{13}C NMR [1495,1614,1615], IR [1495].

(3-Bromophenyl)(3-hydroxyphenyl)methanone

[62810-50-8]

$C_{13}H_9BrO_2$ mol.wt. 277.11

Described [1476] **p. 148**

Methyl ether [750633-66-0] $C_{14}H_{11}BrO_2$ mol.wt. 291.14

- Obtained by reaction of 3-bromobenzoyl chloride with 3-methoxyphenylmagnesium bromide [1620], (98%) [1621].
- Also refer to: [1622].

colourless oil [1621]; 1H NMR [1621], ^{13}C NMR [1621].

(3-Bromophenyl)(4-hydroxyphenyl)methanone

$C_{13}H_9BrO_2$ mol.wt. 277.11

Described [1476] **p. 149**

Synthesis

- Also obtained by dealkylation of its ethyl ether by treatment with hydrobromic acid ($d = 1.49$) in boiling acetic acid for 2 days [1497].

m.p. 171° [1497].

Methyl ether [54118-76-2] $C_{14}H_{11}BrO_2$ mol.wt. 291.14

– Refer to: [1501] (78%).

m.p. 80–81° [1501]; UV [1501].

Ethyl ether $C_{15}H_{13}BrO_2$ mol.wt. 277.11

– Preparation by reaction of 3-bromobenzoyl chloride with phenetole in the presence of aluminium chloride in carbon disulfide at 55° (80%) [1497].

b.p.₁₁ 232° [1497]; m.p. 79.5° [1497].

(4-Bromophenyl)(3-hydroxyphenyl)methanone

[62810-46-2] $C_{13}H_9BrO_2$ mol.wt. 277.11

Described [1476] p. 149

Methyl ether [151239-47-3] $C_{14}H_{11}BrO_2$ mol.wt. 291.14

– Obtained by reaction of 4-bromophenylmagnesium iodide with 3-methoxybenzoyl chloride in the presence of bis[2-(N,N-dimethylamino)ethyl] ether in THF at –5° to 0° (80%) [1623].

(4-Bromophenyl)(4-hydroxyphenyl)methanone

[4369-50-0] $C_{13}H_9BrO_2$ mol.wt. 277.11

Described [1476] p. 150

Syntheses

– Also refer to: [1624–1626].

m.p. 191° [1626]; ¹H NMR [1624,1625].

Methyl ether [54118-75-1] $C_{14}H_{11}BrO_2$ mol.wt. 291.14

– Refer to: (79%) [1627], (62%) [1501].

m.p. 155–157° [1501], 147–149° [1627];

¹H NMR [1627], ¹³C NMR [1627], IR [1627], UV [1501], MS [1627].

– Complex preparation: Tandem catalysis access to ketones from aldehydes and arylboronic acids via rhodium-catalyzed addition/oxidation, (52%) [1628].

(2-Chlorophenyl)(4-hydroxyphenyl)methanone

[55270-71-8] $C_{13}H_9ClO_2$ mol.wt. 232.67

Described [1476] p. 151

Methyl ether [54118-74-0] $C_{14}H_{11}ClO_2$ mol.wt. 246.69

– Obtained by reaction of 4-methoxybenzoyl chloride with chlorobenzene in the presence of aluminium chloride in carbon disulfide at r.t. for 3 h (90%) [1501].

– Also refer to: [1629].

m.p. 79–80.5° [1501]; UV [1501].

(3-Chlorophenyl)(4-hydroxyphenyl)methanone

[61002-52-6]

$C_{13}H_9ClO_2$ mol.wt. 232.67

Described [1476] p. 152

Methyl ether

[13389-51-0]

$C_{14}H_{11}ClO_2$

mol.wt. 246.69

– Refer to: (96%) [1501].

m.p. 71.5–72° [1501]; UV [1501].

(4-Chlorophenyl)(2-hydroxyphenyl)methanone

[2985-79-7]

$C_{13}H_9ClO_2$ mol.wt. 232.67

Described [1476] p. 152

Methyl ether

[78589-10-3]

$C_{14}H_{11}ClO_2$

mol.wt. 246.69

– Obtained by reaction of 4-chlorobenzoyl chloride with anisole [1630] in the presence of MoO_2Cl_2 (20 mol%) at reflux for 20 h (5%) [1527].

– Also obtained by reaction of 4-chlorobenzoic acid with anisole,

- in the presence of difluorophosphoric anhydride in methylene chloride at 20° for 4 h (46%) [1631];
- in the presence of boron trifluoride etherate at 80° [1632].

– Also refer to: [1557,1633].

m.p. 78° [1557]; IR [1557].

(4-Chlorophenyl)(4-hydroxyphenyl)methanone

[42019-78-3]

$C_{13}H_9ClO_2$ mol.wt. 232.67

Described [1476] p. 153

Synthesis

– Also refer to: [1634].

Methyl ether

[10547-60-1]

$C_{14}H_{11}ClO_2$

mol.wt. 246.69

– Obtained by reaction of 4-chlorobenzoyl chloride with anisole in the presence of MoO_2Cl_2 (20 mol%) at reflux for 20 h (75%) [1527].

– Also obtained by reaction of 4-chlorophenylglyoxylonitrile with 4-methoxyphenylmagnesium bromide in the presence of $Fe(acac)_3$ (5 mol%) in THF at –10° for 30 min under argon (89%) [1525].

– Also refer to: [1571], (90%) [1627], (70%) [1501].

m.p. 126–127.5° [1501], 116–118° [1627];

¹H NMR [1627], ¹³C NMR [1627], IR [1627], UV [1501], MS [1627].

(2-Fluorophenyl)(2-hydroxyphenyl)methanone

[329235-41-8]

C₁₃H₉FO₂ mol.wt. 216.21

New compound

Synthesis

– Obtained by an intramolecular acyl radical *ipso* substitution (57%) [1608].

(2-Fluorophenyl)(4-hydroxyphenyl)methanone

C₁₃H₉FO₂ mol.wt. 216.21

Described [1476] p. 155

Methyl ether [66938-29-2] C₁₄H₁₁FO₂ mol.wt. 230.24

– Refer to: [1635].

(4-Fluorophenyl)(2-hydroxyphenyl)methanone

[62666-37-9]

C₁₃H₉FO₂ mol.wt. 216.21

Described [1476] p. 155

Syntheses

– Also obtained by demethylation of 4-fluoro-2'-methoxy-benzophenone with boron tribromide in methylene chloride at 0° [1484].

– Also obtained by an intramolecular acyl radical *ipso* substitution (53%) [1608].

¹H NMR [1484], ¹³C NMR [1484], IR [1484], MS [1484].

Methyl ether [750633-46-6] C₁₄H₁₁FO₂ mol.wt. 230.24

– Obtained by reaction of 2-methoxyphenylmagnesium bromide with 4-fluorobenzaldehyde in THF at 0° for 3 h [1484].

¹H NMR [1484], ¹³C NMR [1484], IR [1484], MS [1484].

(4-Fluorophenyl)(4-hydroxyphenyl)methanone

[25913-05-7]

C₁₃H₉FO₂ mol.wt. 216.21

Described [1476] p. 156

Synthesis

– Also refer to: [1636].

Methyl ether [345-89-1] $C_{14}H_{11}FO_2$ mol.wt. 230.24

- Obtained by reaction of p-fluorobenzoyl chloride with anisole in the presence of aluminium chloride in carbon disulfide at r.t. for 1 h (75%) [1637].
- Also refer to: (85%) [1627]; (61%) [1501].

m.p. 96° [1637], 95–96° [1501], 89–91° [1627];
 1H NMR [1627,1637], ^{13}C NMR [1627], ^{19}F NMR [1637],
 IR [1627,1637], UV [1501,1637], MS [1627].

(4-Hydroxyphenyl)(4-iodophenyl)methanone

[113275-52-8] $C_{13}H_9IO_2$ mol.wt. 324.12

Described [1476] **p. 157**

Methyl ether [54118-73-9] $C_{14}H_{11}IO_2$ mol.wt. 338.14

- Obtained by reaction of 4-methoxybenzoyl chloride with iodoanisole in the presence of aluminium chloride in carbon disulfide at r.t. for 3 h (57%) [1501].
- m.p. 187–189° [1501]; UV [1501].

(2-Hydroxyphenyl)(2-nitrophenyl)methanone

[22293-32-9] $C_{13}H_9NO_4$ mol.wt. 243.22

Described [1476] **p. 157**

Synthesis

- Also obtained by an intramolecular acyl radical *ipso* substitution (40%) [1608].

(2-Hydroxyphenyl)(4-nitrophenyl)methanone

[68223-20-1] $C_{13}H_9NO_4$ mol.wt. 243.22

Described [1476] **p. 158**

Syntheses

- Also obtained by demethylation of 2-methoxy-4'-nitro-benzophenone with boron tribromide in methylene chloride at 0° [1484].
- Also obtained by an intramolecular acyl radical *ipso* substitution (52%) [1608].
- 1H NMR [1484], ^{13}C NMR [1484], IR [1484], MS [1484].

Methyl ether [42495-50-1] $C_{14}H_{11}NO_4$ mol.wt. 257.24

- Obtained by reaction of p-nitrobenzoyl chloride with anisole,
 - in the presence of MoO_2Cl_2 (20 mol%) at reflux for 20 h (3%) [1527];
 - in the presence of perfluorobutane sulfonic acid [1630].
- Also obtained by reaction of 2-methoxyphenylmagnesium bromide with 4-nitrobenzaldehyde in THF at 0° for 3 h [1484].

- Also obtained by a Pd-catalyzed coupling-type reaction of 4-nitrobenzaldehyde and 2-methoxy-phenylboronic acid in the presence of P(1-nap)₃, using Cs₂CO₃ in toluene with air (65%) [1638].
 - Also obtained by reaction of p-nitrobenzoic acid with anisole in the presence of TFAA at 80° [1632].
 - Also refer to: [1639,1640].
- m.p. 117–119° [1639,1640];
¹H NMR [1484,1638,1640], ¹³C NMR [1484,1638,1640], IR [1484], MS [1484].

(3-Hydroxyphenyl)(4-nitrophenyl)methanone[147029-77-4] C₁₃H₉NO₄ mol.wt. 243.22**Described [1476] p. 158****Methyl ether** [62507-47-5] C₁₄H₁₁NO₄ mol.wt. 257.24

- Also obtained by adding under an argon atmosphere, 60% sodium hydride in oil to a mixture of 4-nitrofluorobenzene, 3-methoxybenzaldehyde and 1,3,4,5-tetramethylimidazolium iodide in DMF. The mixture was stirred at –15° for 15 min; then at –5° for 2 h (70%) [1641].

(4-Hydroxyphenyl)(4-nitrophenyl)methanone[18920-70-2] C₁₃H₉NO₄ mol.wt. 243.22**Described [1476] p. 159****Methyl ether** [1151-94-6] C₁₄H₁₁NO₄ mol.wt. 257.24

- Obtained by reaction of p-nitrobenzoyl chloride with anisole,
 - in the presence of aluminium chloride in carbon disulfide for 1 h at r.t. (72%) [1637];
 - in the presence of MoO₂Cl₂ (20 mol%) at reflux for 20 h (31%) [1527].
 - Also obtained by adding under an argon atmosphere, 60% sodium hydride in oil to a mixture of 4-nitrofluorobenzene, 4-methoxybenzaldehyde and 1,3,4,5-tetramethylimidazolium iodide in DMF. The mixture was stirred at –15° for 15 min; then at –5° for 2 h (85%) [1641].
 - Also obtained by reaction of dimethyl sulfate with 4-hydroxy-4'-nitrobenzophenone in the presence of aqueous sodium hydroxide [1642].
 - Also refer to: [1643–1650], (73%) [1501].
- b.p._{0,9} 192–194° [1646];
 m.p. 126–128° [1646], 124° [1501], 123° [1637], 121–122° [1642];
¹H NMR [1637,1643,1645], ¹³C NMR [1647,1650],
 IR [1637,1642], UV [1501,1637,1642], MS [1648].

(4-Aminophenyl)(4-hydroxyphenyl)methanone

[14963-34-9]

C₁₃H₁₁NO₂ mol.wt. 213.24**Described** [1476] p. 162**Methyl ether**

[4834-72-4]

C₁₄H₁₃NO₂ mol.wt. 227.26

- Obtained by reduction of 4-nitro-4'-methoxybenzophenone with sodium hydro-sulfite in refluxing ethanol overnight (62%) [1637].
- Also obtained by treatment of its hydrochloride with 20% ammonia [1651].
- Also refer to: [1501] (92%).

m.p. 110° [1637], 108–109.5° [1501], 108° [1651];

¹H NMR [1637], IR [1637], UV [1501,1637].**Hydrochloride**C₁₄H₁₃NO₂, HCl mol.wt. 263.72

- Obtained by heating 4-hydroxy-4'-nitrobenzophenone with stannous chloride in the presence of concentrated hydrochloric acid for 15 min [1651].

m.p. 193° [1651].

(2-Hydroxyphenyl)[4-(trifluoromethyl)phenyl]methanone

[34450-48-1]

C₁₄H₉F₃O₂ mol.wt. 266.22**New compound**

Synthesis

- Obtained by demethylation of 2-methoxy-4-(trifluoro-methyl)benzophenone with boron tribromide in methylene chloride at 0° for 4 h [1484].

¹H NMR [1484], ¹³C NMR [1484], IR [1484], MS [1484].**Methyl ether**

[256475-07-7]

C₁₅H₁₁F₃O₂ mol.wt. 280.25

- Obtained by reaction of 2-methoxyphenylmagnesium bromide with 4-(trifluoromethyl)-benzaldehyde in THF at 0° for 3 h [1484].
- Also refer to: [1485].

¹H NMR [1484], ¹³C NMR [1484], IR [1484,1485], MS [1484].**2-(2-Hydroxybenzoyl)benzonitrile**

[131118-03-1]

C₁₄H₉NO₂ mol.wt. 223.23**New compound**

Synthesis

- Obtained by an intramolecular acyl radi-cal *ipso* substitution (30%) [1608].

4-(2-Hydroxybenzoyl)benzonitrile

[131117-91-4]

C₁₄H₉NO₂ mol.wt. 223.23**New compound****Synthesis**

- Obtained by demethylation of 4-(2-methoxybenzoyl)-benzonitrile with boron tribromide in methylene chloride at 0° [1484].

¹H NMR [1484], ¹³C NMR [1484], IR [1484], MS [1484].**Methyl ether** [131117-90-3] C₁₅H₁₁NO₂ mol.wt. 237.26

- Obtained by reaction of 2-methoxyphenylmagnesium bromide with 4-cyanobenzaldehyde in THF at 0° for 3 h [1484].

¹H NMR [1484], ¹³C NMR [1484], IR [1484], MS [1484].**4-(4-Hydroxybenzoyl)benzonitrile**

[27645-61-0]

C₁₄H₉NO₂ mol.wt. 223.23**New compound****Syntheses**

- Obtained by demethylation of 4-cyano-4'-methoxybenzophenone with aluminium chloride in boiling methylene chloride for 20 h [1652].
- Also obtained from 4-(4-methoxymethoxybenzoyl)benzonitrile by heating with aqueous hydrochloric acid in THF for 3 h [1625].

¹H NMR [1625].**Methyl ether** [27645-60-9] C₁₅H₁₁NO₂ mol.wt. 237.26

- Obtained by reaction of 4-methoxybenzoyl chloride with acetonitrile in the presence of aluminium chloride in carbon disulfide at r.t. for 3 h (35%) [1501].
- Also obtained by reaction of 4-methoxyphenylglyoxylonitrile with 4-cyanophenylmagnesium bromide in the presence of Fe(acac)₃ (5 mol%) in THF at -10° for 30 min under argon (84%) [1525].
- Also obtained by reaction of p-cyanobenzoyl chloride with anisole in the presence of aluminium chloride in benzene [1653].
- Also obtained by treatment of (4-bromophenyl)(4-methoxyphenyl)methanone with copper (I) cyanide [1654].

m.p. 131–132° [1654], 130–132° [1525], 125–128° [1501], 106–109° [1653], 92–93° [1652];

¹H NMR [1525], ¹³C NMR [1525], IR [1525], UV [1501], MS [1525].

(2-Hydroxyphenyl)(3-methyl-4-nitrophenyl)methanone

[1018668-99-9]

 $C_{14}H_{11}NO_4$ mol.wt. 257.25**New compound****Synthesis**

– Obtained by demethylation of 2'-methoxy-3-methyl-4-nitrobenzophenone with boron tribromide in methylene chloride at 0° for 4 h [1484].

1H NMR [1484], ^{13}C NMR [1484], IR [1484], MS [1484].

Methyl ether $C_{15}H_{13}NO_4$ mol.wt. 271.27

– Obtained by reaction of 2-methoxyphenylmagnesium bromide with 3-methyl-4-nitrobenzaldehyde in THF at 0° for 3 h [1484].

1H NMR [1484], ^{13}C NMR [1484], IR [1484], MS [1484].

(2-Hydroxyphenyl)(2-methylphenyl)methanone

[51974-19-7]

 $C_{14}H_{12}O_2$ mol.wt. 212.25**Described [1476] p. 166**

Methyl ether [142256-62-0] $C_{15}H_{14}O_2$ mol.wt. 226.27

– Obtained by reaction of pyridinium chlorochromate (PCC) with (2-methoxyphenyl)(2-methyl-phenyl)methanol in the presence of Celite in methylene chloride at r.t. (70%) [1655].

– Also obtained by reaction of (2-methoxyphenyl)lithium with N-methoxy-2,N-dimethylbenzamide [1485].

– Also refer to: [1485].

m.p. 71–72° [1655];

1H NMR [1655], IR [1485,1655], MS [1655].

(2-Hydroxyphenyl)(3-methylphenyl)methanone

[33785-66-9]

 $C_{14}H_{12}O_2$ mol.wt. 212.25**Described [1476] p. 167****Synthesis**

– Also obtained by an intramolecular acyl radical *ipso* substitution (76%) [1608].

(2-Hydroxyphenyl)(4-methylphenyl)methanone

[19434-30-1]

 $C_{14}H_{12}O_2$ mol.wt. 212.25**Described** [1476] **p. 167**

Syntheses

- Also obtained by demethylation of 4-methyl-2'-methoxy-benzophenone with boron tribromide in methylene chloride at 0° [1484].
- Also obtained by an intramolecular acyl radical *ipso* substitution (80%) [1608].

 1H NMR [1484], ^{13}C NMR [1484], IR [1484], MS [1484].**Methyl ether**

[28137-36-2]

 $C_{15}H_{14}O_2$

mol.wt. 226.27

- Obtained by reaction of p-toluoyl chloride with anisole in the presence of MoO_2Cl_2 (20 mol%),
 - in refluxing acetonitrile for 20 h (3%) [1527];
 - in refluxing methylene chloride for 20 h (1%) [1527].
 - Also obtained by reaction of 2-methoxybenzoyl chloride with toluene, in the presence of MoO_2Cl_2 (20 mol%) at reflux for 20 h (3%) [1527].
 - Also obtained by reaction of O-methylsalicylic acid with toluene in the presence of CF_3SO_3H in various solvents at 25° [1656].
 - Also obtained by reaction of 2-methoxyphenylmagnesium bromide with 4-methylbenzaldehyde in THF at 0° for 3 h [1484].
 - Also obtained by methylation of 2-hydroxy-4'-methylbenzophenone [1557].
 - Also refer to: [1632,1640,1657].
- m.p. 64–65° [1657], 61° [1557];
 1H NMR [1484,1640,1657], ^{13}C NMR [1484,1640,1657,1658],
 IR [1484,1557,1657], MS [1484].

(3-Hydroxyphenyl)(4-methylphenyl)methanone

[62810-49-5]

 $C_{14}H_{12}O_2$

mol.wt. 212.25

**Described** [1476] **p. 168****Methyl ether**

[82520-37-4]

 $C_{15}H_{14}O_2$

mol.wt. 226.27

- Complex preparation: Tandem catalysis access to ketones from aldehydes and arylboronic acids via rhodium-catalyzed addition/oxidation, (64%) [1628].

(4-Hydroxyphenyl)(2-methylphenyl)methanone

[52981-01-8]

 $C_{14}H_{12}O_2$

mol.wt. 212.25

**Described** [1476] **p. 168**

Methyl ether [41204-59-5] $C_{15}H_{14}O_2$ mol.wt. 226.27

- Refer to: [1501] (94%).
b.p._{1.5} 147–148° [1501]; UV [1501].

(4-Hydroxyphenyl)(3-methylphenyl)methanone

[71372-37-7] $C_{14}H_{12}O_2$ mol.wt. 212.25

Described [1476] p. 169

Methyl ether [53039-63-7] $C_{15}H_{14}O_2$ mol.wt. 226.27

- Refer to: [1501] (91%).
m.p. 55–56° [1501]; UV [1501].

(4-Hydroxyphenyl)(4-methylphenyl)methanone

[134-92-9] $C_{14}H_{12}O_2$ mol.wt. 212.25

Described [1476] p. 169

Methyl ether [23886-71-7] $C_{15}H_{14}O_2$ mol.wt. 226.27

- Also obtained by reaction of p-toluoyl chloride with anisole in the presence of MoO_2Cl_2 (20 mol%),

- in refluxing bromobenzene for 20 h (82%) [1527];
- in refluxing acetonitrile for 20 h (59%) [1527];
- in refluxing methylene chloride for 20 h (49%) [1527].

- Also obtained by reaction of 4-methoxybenzoyl chloride with toluene in the presence of MoO_2Cl_2 (20 mol%) at reflux for 20 h (6%) [1527].

- Complex preparation: Tandem catalysis access to ketones from aldehydes and arylboronic acids via rhodium-catalyzed addition/oxidation, (74%) [1628].

- Also refer to: [1632,1640,1659–1664], (93%) [1665], (82%) [1501], (81%) [1627], (73%) [1666,1667], (60%) [1657].

m.p. 105–107° [1663], 91–91.2° [1661], 90–92° [1668], 88.5–89° [1665], 88–89° [1657], 87.5–88.5° [1501];

(2-Hydroxyphenyl)[2-(methylthio)phenyl]methanone

[1004540-28-6] $C_{14}H_{12}O_2S$ mol.wt. 244.31

New compound

Synthesis

- Refer to: [1669].

Methyl ether [746652-03-9] $C_{15}H_{14}O_2S$ mol.wt. 258.34

– Refer to: [1669].

(4-Hydroxyphenyl)[4-(methylthio)phenyl]methanone

(4-Hydroxyphenyl)(4-methylsulfanylphenyl)methanone

[83888-61-3] $C_{14}H_{12}O_2S$ mol.wt. 244.31

Described [1476] p. 169

Syntheses

- Obtained from its methyl ether [1670].
- Also obtained by reaction of p-methylthiobenzoyl chloride with phenol in 1,2-dichloroethane [1670].
- Also refer to: [1671,1672].
- m.p. 133–134° [1671].

Methyl ether [54118-72-8] $C_{15}H_{14}O_2S$ mol.wt. 258.34

- Obtained by reaction of 4-methoxybenzoyl chloride with thioanisole in the presence of aluminium chloride in carbon disulfide at r.t. for 3 h (37%) [1501].
- Also obtained by reaction of 4-methylthiobenzoyl chloride with anisole in the presence of aluminium chloride in 1,2-dichloroethane [1670].
- Also obtained by reaction of 4-methylthiobenzoic acid with anisole in the presence of boron trifluoride etherate at 80° [1632].
- Obtained by reaction of 4-methoxybenzoyl chloride with thioanisole in the presence of MoO_2Cl_2 (20 mol%) at reflux for 20 h (56%) [1527].
- m.p. 126–127° [1501]; UV [1501].

(2-Hydroxyphenyl)(4-methoxyphenyl)methanone

[18733-07-8] $C_{14}H_{12}O_3$ mol.wt. 228.25

Described [1476] p. 171

Synthesis

- Also obtained by an intramolecular acyl radical *ipso* substitution (56%) [1608].

(4-Hydroxyphenyl)(4-methoxyphenyl)methanone

[61002-54-8] $C_{14}H_{12}O_3$ mol.wt. 228.25

Described [1476] p. 172

Synthesis

- Complex preparation: Tandem catalysis access to ketones from aldehydes and arylboronic acids via rhodium-catalyzed addition/oxidation, (82%) [1628].

Ethyl ether [52886-92-7] $C_{16}H_{16}O_3$ mol.wt. 256.30

- Obtained by reaction of p-anisoyl chloride with phenetole in the presence of aluminium chloride in carbon disulfide [1673].
- Also obtained by reaction of ethyl iodide with 4-hydroxy-4'-methoxy-benzophenone in the presence of sodium ethoxide [1674].
- Also refer to: (17%) [1526,1675,1676], (85%) [1501].

m.p. 112–113° [1501], 112° [1674], 111° [1676], 106–107° [1526,1673], 105° [1675];

1H NMR [1675], IR [1675], UV [1501,1675], MS [1675].

BIOLOGICAL DATA: Radioprotective activity, intraperitoneally [1677]

(4-Methoxyphenyl)(4-methylphenyl)methanone ^{13}C

[112379-67-6]

$C_{14}^{13}CH_{14}O_2$ mol.wt. 227.26

New compound

Synthesis

- Obtained from (E)-2-anisyl-1,2-ditolyl (2- ^{13}C)vinyl bromide and 1,1,1-trifluoroethanol [1678].

[3-(Acetyloxy)phenyl](4-hydroxyphenyl)methanone

[263395-60-4]

$C_{15}H_{12}O_4$ mol.wt. 256.07

New compound

Synthesis

- Obtained by adding acetic anhydride to a solution of the sodium salt of 3,4'-dihydroxybenzophenone in DMF at -10° (59%) [1528].

white solid [1528]; m.p. 118–120° [1528];

1H NMR [1528], ^{13}C NMR [1528], IR [1528], MS [1528].

(3-Ethoxyphenyl)(4-hydroxyphenyl)methanone

[263395-63-7]

$C_{15}H_{14}O_3$ Mol.wt. 242.27

New compound

Synthesis

- Obtained in two steps: first, treatment of 3,4'-dihydroxy-benzophenone with sodium hydride (2.2 equiv) in DMF, then reaction of ethyl iodide (1.1 equiv) with the sodium salt previously obtained, at -10° (50%) [1528].

white solid; m.p. 98–100° [1528];

1H NMR [1528], ^{13}C NMR [1528], IR [1528], MS [1528].

Ethyl ether $C_{17}H_{18}O_3$ mol.wt. 270.33

- Also obtained in the above reaction (25–30%) [1528].

(3,4-Dimethoxyphenyl)(2-hydroxyphenyl)methanone

[183106-12-9]

C₁₅H₁₄O₄ mol.wt. 258.27**Described** [1476] p. 179

Synthesis

– Also obtained by an intramolecular acyl radical *ipso* substitution (49%) [1608].**(3-Hydroxyphenyl)[4-(methoxymethoxy)phenyl]methanone**

[263395-55-7]

C₁₅H₁₄O₄ mol.wt. 258.27**New compound**

Synthesis

– MOMCl was added to a solution of 3,4'-dihydroxybenzophenone and DIPEA in THF. After removing the cooling bath, the solution was stirred for 4 h (51%) [1528].

white solid; m.p. 94–95° [1528];

¹H NMR [1528], ¹³C NMR [1528], IR [1528], MS [1528].**Methoxymethyl ether**C₁₇H₁₈O₅

mol.wt. 302.33

– The diprotected compound was isolated in this reaction (31%) [1528].
yellow oil [1528];¹H NMR [1528], ¹³C NMR [1528], IR [1528], MS [1528].**(4-Hydroxyphenyl)[3-(2-propenyloxy)phenyl]methanone**

[263395-62-6]

C₁₆H₁₄O₃ mol.wt. 254.29**New compound**

Synthesis

– Obtained by adding allyl bromide to a solution of the sodium salt of 3,4'-dihydroxybenzophenone in DMF at –10° (52%) [1528].

white solid [1528]; m.p. 63–65° [1528];

¹H NMR [1528], ¹³C NMR [1528], IR [1528], MS [1528].**4-(2-propenyl)ether**C₁₉H₁₈O₃

mol.wt. 294.35

– Also obtained in the above reaction (25–30%) [1528].

(2-Hydroxyphenyl)(2,4,6-trimethylphenyl)methanone

[46863-20-1]

C₁₆H₁₆O₂ mol.wt. 240.30**Described** [1476] p. 182

Synthesis

– Also obtained by an intramolecular acyl radical *ipso* substitution (38%) [1608].

[4-[2-(Dimethylamino)ethoxy]phenyl](3-hydroxyphenyl)methanone

[263395-65-9]

 $C_{17}H_{19}NO_3$ mol.wt. 285.33**New compound**

Synthesis

- Obtained by treatment of its pivalic ester below with 2 N KOH in ethanol at r.t. for 5 h (86%) [1528].

white solid; m.p. 96–98° [1528];

 1H NMR [1528], ^{13}C NMR [1528], IR [1528], MS [1528].**Pivalic ester** $C_{22}H_{27}NO_4$ mol.wt. 369.19

- Obtained by treatment of 4'-hydroxy-3-(trimethylacetoxy)benzophenone with 2-(dimethylamino)-ethyl chloride in the presence of potassium carbonate in refluxing acetone-water (19:1) for 5 h in the dark (61%) [1528].

yellow solid; m.p. 60–62° [1528];

 1H NMR [1528], ^{13}C NMR [1528], IR [1528], MS [1528].**(3-Hydroxyphenyl)[4-(trimethylacetoxy)phenyl]methanone** $C_{18}H_{18}O_4$ mol.wt. 298.34**New compound**

Synthesis

- Obtained by adding pivaloyl chloride to a solution of the sodium salt of 3, 4'-dihydroxybenzophenone in DMF at 0°. Then, the solution was stirred at r.t. for 2 h (47%) [1528].

white solid; m.p. 104–105° [1528];

 1H NMR [1528], ^{13}C NMR [1528], IR [1528], MS [1528].**(4-Hydroxyphenyl)[3-(trimethylacetoxy)phenyl]methanone** $C_{18}H_{18}O_4$ mol.wt. 298.34**New compound**

Syntheses

- Obtained by heating a solution of 4'-methoxy-methoxy-3-(trimethylacetoxy)benzophenone in 15% acetic acid at 80° for 20 h (76%) [1528].
- Also obtained by adding pivaloyl chloride to a solution of 3,4'-dihydroxybenzophenone sodium salt in DMF at –10° (85%) [1528].

white solid; m.p. 117–119° [1528];

 1H NMR [1528], ^{13}C NMR [1528], IR [1528], MS [1528].

Methoxymethyl ether $C_{20}H_{22}O_5$ mol.wt. 342.39

- Obtained by treatment of 3-hydroxy-4'-(methoxymethoxy)benzophenone in THF at 0° with triethylamine and pivaloyl chloride, then stirring the solution obtained at r.t. for 3 h (quantitative yield) [1528].

yellow oil [1528];

1H NMR [1528], ^{13}C NMR [1528], IR [1528], MS [1528].

[(3-tert-Butoxycarbonyloxy)phenyl](4-hydroxyphenyl)methanone

$C_{18}H_{18}O_5$ mol.wt. 314.34

$(CH_3)_3COCOO$

New compound

Synthesis

- Obtained by adding $(BOC)_2O$ to a solution of 3,4'-dihydroxybenzophenone sodium salt in DMF at -10° (62%) [1528].

white solid; m.p. 142–144° [1528];

1H NMR [1528], ^{13}C NMR [1528], IR [1528], MS [1528].

[2-(3,7-Dimethyloctyl)phenyl](4-hydroxyphenyl)methanone

[908368-59-2]

$C_{23}H_{30}O_2$ mol.wt. 338.49

New compound

Synthesis

- According to a procedure of [1679], a mixture of 2-(3,7-dimethyloctyl)-4'-methoxybenzophenone, 57% HI solution and acetic acid was heated at reflux for 5 h (84%) [1621].

colourless oil; $(\alpha)_D^{28} = -4.29^\circ$ ($CHCl_3$) [1621];

1H NMR [1621], ^{13}C NMR [1621].

Methyl ether [908368-68-3] $C_{24}H_{32}O_2$ mol.wt. 352.52

- Refer to: [1621].

[2-[(3R)-3,7-Dimethyloctyl]phenyl](4-hydroxyphenyl)methanone

[908368-61-6]

$C_{23}H_{30}O_2$ mol.wt. 338.49

New compound

Synthesis

- According to a procedure of [1679], a mixture of 2-(3,7-dimethyloctyl)-4'-methoxybenzophenone, 57% HI solution and acetic acid was heated at reflux for 3.5 h (50%) [1621].

clear oil [1621]; 1H NMR [1621], ^{13}C NMR [1621].

Methyl ether [908368-60-5] $C_{24}H_{32}O_2$ mol.wt. 352.52

- According to the procedure of [1680], to a solution of (*R*)-3,7-dimethyloctene (6.4 mmol) in THF was added dropwise 0.5 M 9-BBN (7.25 mmol) in THF. The resulting mixture was stirred at r.t. for 4 h, then transferred via a syringe to a mixture of Pd(dppf)Cl₂ (1.60 mmol), Cs₂CO₃ (24.1 mmol), AsPh₃ (1.61 mmol) and 2-iodo-4'-methoxybenzophenone in a mixture of THF, DMF and H₂O. The resulting mixture was heated at reflux under N₂ overnight (65%) [1621].

colourless oil; $(\alpha)_D^{28} = -5.03^\circ$ (CHCl₃) [1621];

¹H NMR [1621], ¹³C NMR [1621].

[3-[(3*R*)-3,7-Dimethyloctyl]phenyl](3-hydroxyphenyl)methanone

[908368-64-9] $C_{23}H_{30}O_2$ mol.wt. 338.49

New compound

Synthesis

- Refer to: [1621] (multi-step reaction).

Methyl ether [908368-75-2] $C_{24}H_{32}O_2$ mol.wt. 352.52

- Refer to: [1621].

[3-[(3*R*)-3,7-Dimethyloctyl]phenyl](4-hydroxyphenyl)methanone

$C_{23}H_{30}O_2$ mol.wt. 338.49

New compound

Synthesis

- Obtained from its methyl ether (74%) [1621].

Colourless oil [1621]; ¹H NMR [1621], ¹³C NMR [1621].

Methyl ether $C_{24}H_{32}O_2$ mol.wt. 352.52

- Refer to: [1621] (69%).

Colourless oil [1621]; ¹H NMR [1621], ¹³C NMR [1621].

[3-[(4*R*)-4,8-Dimethylnonyl]phenyl](4-hydroxyphenyl)methanone

[908368-62-7] $C_{24}H_{32}O_2$ mol.wt. 352.52

New compound

Synthesis

- Obtained by refluxing a mixture of 3-(4,8-dimethylnonyl)-4'-methoxybenzophenone, 57% HI solution and acetic acid for 3.5 h (81%) [1621].
colourless oil [1621]; $^1\text{H NMR}$ [1621], $^{13}\text{C NMR}$ [1621].

Methyl ether [908368-70-7] $\text{C}_{25}\text{H}_{34}\text{O}_2$ mol.wt. 366.54

- Obtained by reaction of (*R*)-4,8-dimethylnonene and 3-iodo-4'-methoxybenzophenone (Multi-step reaction) (72%) [1621].
colourless oil [1621]; $^1\text{H NMR}$ [1621], $^{13}\text{C NMR}$ [1621].

[4-[(4*R*)-4,8-Dimethylnonyl]phenyl](3-hydroxyphenyl)methanone

[908368-63-8] $\text{C}_{24}\text{H}_{32}\text{O}_2$ mol.wt. 352.52

New compound

Synthesis

- Obtained by refluxing a mixture of (*R*)-4-(4,8-dimethylnonyl)-3'-methoxybenzophenone, 57% HI solution and acetic acid for 5 h (81%) [1621].
colourless oil [1621]; $^1\text{H NMR}$ [1621], $^{13}\text{C NMR}$ [1621].

Methyl ether [908368-73-0] $\text{C}_{25}\text{H}_{34}\text{O}_2$ mol.wt. 366.54

- According to the method [1681], it was obtained by Friedel–Crafts reaction of *m*-anisoyl chloride with (4,8-dimethylnonyl)phenyl in the presence of aluminium chloride in refluxing carbon disulfide for 5 h (94%) [1621].
golden oil [1621]; $^1\text{H NMR}$ [1621], $^{13}\text{C NMR}$ [1621].

2.1.3 Substituents Located on Both Rings [1476] p. 190

(3-Bromo-5-chlorophenyl)(5-chloro-2-hydroxyphenyl)methanone

[329944-61-8] $\text{C}_{13}\text{H}_7\text{BrCl}_2\text{O}_2$ mol.wt. 346.01

New compound

Synthesis

- Obtained by treatment of its methyl ether with boron tribromide in methylene chloride (quantitative yield) [1682].

yellow crystals [1682]; $^1\text{H NMR}$ [1682], $^{13}\text{C NMR}$ [1682].

Methyl ether [329944-59-4] $\text{C}_{14}\text{H}_9\text{BrCl}_2\text{O}_2$ mol.wt. 360.03

- A solution of 1,3-dibromo-5-chlorobenzene (1 mmol) in ethyl ether was cooled to -78° and *n*-butyllithium in hexane (1.1 mmol) was added over 2 min.

The reaction mixture was stirred at -78° for an additional 10 min, and then 5-chloro-N,2-dimethoxy-N-methylbenzamide (1 mmol) was added in small portions over 4 min. The reaction mixture was stirred at -78° for 1.25 h and then allowed to warm to r.t. and stirred for 14 h (97%) [1682].

^1H NMR [1682], ^{13}C NMR [1682], MS [1682].

(5-Chloro-2-hydroxyphenyl)(3,5-difluorophenyl)methanone

[329941-82-4] $\text{C}_{13}\text{H}_7\text{ClF}_2\text{O}_2$ mol.wt. 268.65

New compound

Synthesis

– Obtained by treatment of its methyl ether with boron tribromide in methylene chloride (98%) [1682].

^1H NMR [1682], MS [1682].

Methyl ether [874889-35-7] $\text{C}_{14}\text{H}_9\text{ClF}_2\text{O}_2$ mol.wt. 282.67

– A solution of n-butyllithium in hexanes (18.2 mmol) was added over 4 min to a solution of 2-bromo-4-chloroanisole (15.8 mmol) in ethyl ether cooled to -78° . The resulting mixture was stirred at -78° for 20 min, and then a solution of 3,5-difluoro-N-methoxy-N-methylbenzamide (17.3 mmol) in ethyl ether was added over 5 min. The reaction mixture was stirred at -78° for 1 h and then allowed to warm at r.t. over 3.25 h (42%) [1682].

white solid [1682]; ^1H NMR [1682], ^{13}C NMR [1682].

(5-Chloro-2-hydroxyphenyl)(2,3-dichlorophenyl)methanone

[842169-21-5] $\text{C}_{13}\text{H}_7\text{Cl}_3\text{O}_2$ mol.wt. 301.56

New compound

Synthesis

– Preparation by Fries rearrangement of 4-chlorophenyl 2,3-dichlorobenzoate in the presence of aluminium chloride in nitrobenzene at $80-90^{\circ}$ for 45 min (85%) [1683].

m.p. $78-80^{\circ}$ [1683]; ^1H NMR [1683], IR [1683], MS [1683].

(5-Bromo-2-hydroxyphenyl)(4-chlorophenyl)methanone

[939382-98-6] $\text{C}_{13}\text{H}_8\text{BrClO}_2$ mol.wt. 311.56

New compound

Synthesis

– Preparation by Fries rearrangement of 4-bromophenyl-p-chlorobenzoate in the presence of aluminium chloride in nitrobenzene at $80-90^{\circ}$ for 45 min (81%) [1683].

m.p. $82-84^{\circ}$ [1683]; ^1H NMR [1683], IR [1683], MS [1683].

(2-Bromophenyl)(5-chloro-2-hydroxyphenyl)methanone

[92739-90-7]

 $C_{13}H_8BrClO_2$ mol.wt. 311.56**Described [1476] p. 201****Synthesis**

- Preparation by reaction of 2-bromobenzoyl chloride with 4-chloroanisole in the presence of aluminium chloride in refluxing methylene chloride overnight (96%) [1682].

tan solid [1682]; 1H NMR [1682].**(3-Chloro-4-hydroxyphenyl)(4-nitrophenyl)methanone**

[99768-27-1]

 $C_{13}H_8ClNO_4$ mol.wt. 277.66**Described [1476] p. 205****Synthesis**

- Also refer to: [1684].

Methyl ether

[76442-91-6]

 $C_{14}H_{10}ClNO_4$

mol.wt. 291.69

- Obtained by reaction of p-nitrobenzoyl chloride with 2-chloroanisole in the presence of aluminium chloride in carbon disulfide [1684].
- Also obtained by reaction of dimethyl sulfate with 3-chloro-4-hydroxy-4'-nitrobenzophenone [1684].
- Also obtained by heating for 4 h a mixture of 2-chloroanisole and 4-nitrobenzoyl chloride,

- in the presence of ferric chloride (89%) [1585];
- in the presence of aluminium chloride (85%) [1585].

b.p.₁₂ 263° [1585]; m.p. 166° [1585,1684].**2,4-Dinitrophenylhydrazone (of the methyl ether)** $C_{20}H_{14}ClN_5O_7$ mol.wt. 471.81

(5-Chloro-2-hydroxyphenyl)(4-nitrophenyl)methanone

[84443-36-7]

 $C_{13}H_8ClNO_4$ mol.wt. 277.66**Described [1476] p. 206****Methyl ether**

[76442-97-2]

 $C_{14}H_{10}ClNO_4$

mol.wt. 291.69

- Obtained by heating for 4 h a mixture of 4-chloroanisole and 4-nitrobenzoyl chloride,

- in the presence of ferric chloride (89%) [1585];
 - in the presence of aluminium chloride (85%) [1585] and in carbon disulfide [1684].
- Also obtained by reaction of dimethyl sulfate with 5-chloro-2-hydroxy-4'-nitrobenzophenone in the presence of aqueous sodium hydroxide [1684].
- b.p.₁₂ 265° [1585]; m.p. 114° [1684, 1585].

(2-Chloro-4-hydroxyphenyl)(4-chlorophenyl)methanone

[949492-38-0]

$C_{13}H_8Cl_2O_2$ mol.wt. 267.11

New compound

Synthesis

- Obtained by treatment of its methyl ether with aqueous hydrobromic acid in acetic acid [1685].

Methyl ether

[76442-93-8]

$C_{14}H_{10}Cl_2O_2$ mol.wt. 281.14

- Obtained by heating for 4 h a mixture of 3-chloroanisole and 4-chlorobenzoyl chloride,
- in the presence of ferric chloride (91%) [1585];
 - in the presence of aluminium chloride (89%) [1585].
- Also obtained by reaction of 2-chloro-4-methoxyphenylmagnesium iodide with 4-chloro-benzaldehyde in refluxing ethyl ether for 50 min [1686].
- Also obtained by reaction of 2-chloro-4-methoxybenzoyl chloride with chlorobenzene in the presence of aluminium chloride in carbon disulfide [1589].
- Also refer to: [1687].
- b.p.₁₂ 251° [1585]; m.p. 74° [1585], 73–74.5° [1686], 68–70° [1589].

[1005488-92-5]

 $C_{15}H_{12}Br_2O_3$ mol.wt. 400.07**New compound**

Synthesis

– Refer to: [1693].

(2-Bromo-6-hydroxy-4-methylphenyl)(4-methoxyphenyl)methanone

[1005488-89-0]

 $C_{15}H_{13}BrO_3$ mol.wt. 321.17**New compound**

Synthesis

– Refer to: [1693].

[2-Bromo-6-hydroxy-4-(hydroxymethyl)phenyl](4-methoxyphenyl)methanone

[1005488-91-4]

 $C_{15}H_{13}BrO_4$ mol.wt. 337.17**New compound**

Synthesis

– Refer to: [1693].

(2-Chlorophenyl)(2-hydroxy-4,6-dimethylphenyl)methanone[1019637-56-9] $C_{15}H_{13}ClO_2$ mol.wt. 260.72**New compound****Synthesis**

– Obtained by Friedel–Crafts acylation of 3,5-dimethylphenol with 2-chlorobenzoyl chloride in the presence of aluminium chloride in chlorobenzene [1700].

Methyl ether [1019637-58-1] $C_{16}H_{15}ClO_2$ mol.wt. 274.75

– Obtained by reaction of dimethyl sulfate with 2'-chloro-2-hydroxy-4,6-dimethylbenzophenone in the presence of potassium hydroxide in acetonitrile [1700].

(2-Chloro-6-hydroxy-4-methylphenyl)(4-methoxyphenyl)methanone[1005486-64-5] $C_{15}H_{13}ClO_3$ mol.wt. 276.72**New compound****Synthesis**

– Refer to: [1693].

[2-Chloro-6-hydroxy-4-(hydroxymethyl)phenyl](4-methoxyphenyl)methanone[1005486-69-0] $C_{15}H_{13}ClO_4$ mol.wt. 292.72**New compound****Synthesis**

– Refer to: [1693].

(5-Chloro-2-hydroxyphenyl)(3,5-dimethoxyphenyl)methanone[329944-55-0] $C_{15}H_{13}ClO_4$ mol.wt. 292.72**New compound****Synthesis**

– A solution of 2-bromo-4-chlorophenol (4 mmol) in THF was cooled to -78° . A solution of *n*-butyllithium in hexanes (8.8 mmol) was added over 5 min, and the resulting mixture was stirred at -78° for 1 h. A solution of *N*-methyl-*N*-3,5-trimethoxybenzamide (4 mmol) in THF was added over 4 min and the resulting mixture was stirred at -78° for 1.25 h and then at r.t. for 14 h (20%) [1682].

yellow crystals [1682]; 1H NMR [1682], ^{13}C NMR [1682].

(2-Fluorophenyl)(2-hydroxy-4,6-dimethylphenyl)methanone[1019637-57-0] $C_{15}H_{13}FO_2$ mol.wt. 244.27**New compound**

Synthesis

– Obtained by Friedel–Crafts acylation of 3,5-dimethylphenol with 2-fluorobenzoyl chloride in the presence of aluminium chloride in chlorobenzene [1700].

Methyl ether [1019637-59-2] $C_{16}H_{15}FO_2$ mol.wt. 258.29

– Obtained by reaction of dimethyl sulfate with 2'-fluoro-2-hydroxy-4,6-dimethylbenzophenone in the presence of potassium hydroxide in acetonitrile [1700].

(2-Fluoro-6-hydroxy-4-methylphenyl)(4-methoxyphenyl)methanone[1005488-56-1] $C_{15}H_{13}FO_3$ mol.wt. 260.26**New compound**

Synthesis

– Refer to: [1693].

[2-Fluoro-6-hydroxy-4-(hydroxymethyl)phenyl](4-methoxyphenyl)methanone[1005488-58-3] $C_{15}H_{13}FO_4$ mol.wt. 276.26**New compound**

Synthesis

– Refer to: [1693].

(4-Hydroxy-3-methoxy-5-nitrophenyl)(4-methylphenyl)methanone*(Tolcapone, 3-O-methyltolcapone) (Ro 40-7591)*[134612-80-9] $C_{15}H_{13}NO_5$ mol.wt. 287.27**Described** [1476] p. 277

Syntheses

– Also obtained by reaction of 70% nitric acid with (4-hydroxy-3-methoxyphenyl)(4-methylphenyl)-methanone in acetic acid at 0° for 30 min (88%) [1701].

– A plasma metabolite of tolcapone in human [1702].

N.B.: Conjugaison (O-methylation by COMT).

– Also refer to: [1703,1704].

white solid [1701];

m.p. 137–139° [1703,1704], 135–137° [1701];

(2-Hydroxy-3-methylphenyl)(4-methylphenyl)methanone

[887344-78-7]

C₁₅H₁₄O₂ mol.wt. 226.27

New compound

Synthese

- Obtained by reaction of 2-(1*H*-benzotriazol-1-ylcarbonyl)-6-methylphenol with 4-methylphenylmagnesium bromide at 25° for 4 h (74%) [1689].

- Also refer to: [1705].

white crystals [1689]; m.p. 62–63° [1689,1705];

¹H NMR [1689], ¹³C NMR [1689].

(2-Hydroxy-4-methylphenyl)(2-methylphenyl)methanone

[1023758-42-0]

C₁₅H₁₄O₂ mol.wt. 226.27

New compound

Syntheses

- Obtained by Fries rearrangement of *m*-cresyl *o*-toluate in the presence of PPA [1690].
- Also obtained by Friedel–Crafts acylation of *m*-cresol with *o*-toluic acid in the presence of PPA [1690].
- Also refer to: [1695].

(2-Hydroxy-4-methylphenyl)(3-methylphenyl)methanone

[92548-90-8]

C₁₅H₁₄O₂ mol.wt. 226.27

Described [1476] p. 279

Syntheses

- Also obtained by Friedel–Crafts acylation of *m*-cresol with *m*-toluic acid in a mixture of graphite and methanesulfonic acid at 120° for 2 h (86%) [1598].
 - Also refer to: [1692,1695].
- ¹H NMR [1598], ¹³C NMR [1598], IR [1598].

(2-Hydroxy-4-methylphenyl)(4-methylphenyl)methanone

[81652-53-1]

C₁₅H₁₄O₂ mol.wt. 226.27

Described [1476] p. 279

Syntheses

- Also obtained by Friedel–Crafts acylation of *m*-cresol with *p*-toluic acid in a mixture of graphite and methanesulfonic acid at 120° for 2 h (50%) [1598].

– Also refer to: [1584,1692,1695].

white crystals; m.p. 72° [1598]; ¹H NMR [1598], ¹³C NMR [1598].

(2-Hydroxy-5-methylphenyl)(2-methylphenyl)methanone

[147029-79-6]

C₁₅H₁₄O₂ mol.wt. 226.27

Described [1476] p. 280

Synthesis

– Preparation by Fries rearrangement of 5-methylphenyl 2-methylbenzoate in the presence of aluminium chloride in nitrobenzene at 80–90° for 45 min (90%) [1683].

m.p. 71–73° [1683]; ¹H NMR [1683], IR [1683], MS [1683].

(2-Hydroxy-5-methylphenyl)(4-methylphenyl)methanone

[26880-95-5]

C₁₅H₁₄O₂ mol.wt. 226.27

Described [1476] p. 280

Syntheses

– Preparation by Fries rearrangement of p-tolyl p-toluate in the presence of aluminium chloride in nitrobenzene at 80–90° for 45 min (92%) [1683].

m.p. 75–77° [1683]; ¹H NMR [1683], IR [1683], MS [1683].

(4-Hydroxy-2-methylphenyl)(2-methylphenyl)methanone

[1023758-40-8]

C₁₅H₁₄O₂ mol.wt. 226.27

New compound

Syntheses

– Obtained by Fries rearrangement of m-cresyl o-toluate in the presence of PPA [1690].

– Also obtained by Friedel–Crafts acylation of m-cresol with o-toluic acid in the presence of PPA [1690].

(4-Hydroxy-2-methylphenyl)(4-methylphenyl)methanone

C₁₅H₁₄O₂ mol.wt. 226.27

Described [1476] p. 281

Methyl ether [41295-26-5] C₁₆H₁₆O₂ mol.wt. 240.30

– Refer to: [1706] (Japanese patent).

[1641-17-4]

C₁₅H₁₄O₃ mol.wt. 242.27**Described** [1476] p. 282

Synthesis

– Also obtained by an intramolecular acyl radical *ipso* substitution (33%) [1608].**(2-Hydroxy-5-methoxyphenyl)(4-methylphenyl)methanone**

[4998-50-9]

C₁₅H₁₄O₃ mol.wt. 242.27**New compound**

Synthesis

– Also obtained by an intramolecular acyl radical *ipso* substitution (28%) [1608].**(2-Hydroxy-6-methoxyphenyl)(4-methylphenyl)methanone**

[329235-51-0]

C₁₅H₁₄O₃ mol.wt. 242.27**New compound**

Synthesis

– Also obtained by an intramolecular acyl radical *ipso* substitution (37%) [1608].**(3-Hydroxy-4-methoxyphenyl)(4-methylphenyl)methanone**

[210704-43-1]

C₁₅H₁₄O₃ mol.wt. 242.27**New compound**

Synthesis

– Obtained by reaction of p-methylbenzoyl chloride with veratrole in the presence of aluminium chloride in methylene chloride at 32–35° [1709].

Li salt [210704-41-9] $C_{15}H_{13}O_3Li$ mol.wt. 248.21

Na salt [210704-39-5] $C_{15}H_{13}O_3Na$ mol.wt. 264.26

(4-Hydroxy-3-methoxyphenyl)(4-methylphenyl)methanone

[134612-39-8] $C_{15}H_{14}O_3$ mol.wt. 242.27

Described [1476] p. 283

Syntheses

- Also obtained by refluxing a mixture of its benzyl ether, 10% Pd/C and ammonium formate in methanol under nitrogen for 30 min (92%) [1701].
- Also obtained by reaction of p-methylbenzoyl chloride with veratrole in the presence of aluminium chloride in methylene chloride at 32–35° [1709].
- Also refer to: [1703,1704].

white solid [1701];

m.p. 103–105° [1703,1704], 98–100° [1701];

(2,4-Dihydroxy-3-nitrophenyl)phenylmethanone

[59746-91-7]

$C_{13}H_9NO_5$ mol.wt. 259.22

Described [1476] p. 371

Synthesis

– Also refer to: [1543].

m.p. 228° [1543].

USE: Stabilization PVC [1543].

(3,4-Dihydroxy-2-nitrophenyl)phenylmethanone

[383382-84-1]

$C_{13}H_9NO_5$ mol.wt. 259.22

New compound

Synthesis

– Obtained from 4-hydroxy-3-methoxy-2-nitrobenzophenone by ether cleavage with aluminium chloride in a pyridine/1,2-dichloroethane mixture at 100° for 30 min (81%) [1597].

orange crystals [1597]; 1H NMR [1597], ^{13}C NMR [1597], IR [1597].

(3,4-Dihydroxy-5-nitrophenyl)phenylmethanone

[125628-96-8]

$C_{13}H_9NO_5$ mol.wt. 259.22

Described [1476] p. 373

Synthesis

– Also refer to: [1712] (compound **7a**, n = 0).

m.p. 134–136° [1712]; 1H NMR [1712], ^{13}C NMR [1712], IR [1712].

(3-Amino-2,4-dihydroxyphenyl)phenylmethanone

[87119-03-7]

C₁₃H₁₁NO₃ mol.wt. 229.24**Described** [1476] p. 373

Syntheses

– Obtained by treatment of its dimethyl ether,

- with aluminium chloride in refluxing toluene for 2 h (45–60%) [1529];
 - with boron tribromide at r.t. for 3 h (60%) [1529].
- Also obtained by reaction of iso-amylamine with 2,3,4-trihydroxybenzophenone in the presence of lithium perchlorate in methanol (30%) or by electrochemical oxidation in acetic acid buffer (pH ca. 4.5) at r.t. [1713].
 - Also obtained by reaction of 1-isopropyl-2-methylpropylamine with 2,3,4-trihydroxybenzophenone in the presence of lithium perchlorate in methanol (55%) or by electrochemical oxidation in acetic acid buffer (pH ca. 4.5) at r.t. [1713].
 - Also obtained by reaction of diisopropylamine with 2,3,4-trihydroxybenzophenone in the presence of lithium perchlorate in methanol or by electrochemical oxidation in acetic acid buffer (pH ca. 4.5) at r.t. [1713].
 - Also obtained by reaction of 1,2-dimethylpropylamine with 2,3,4-trihydroxybenzophenone in the presence of lithium perchlorate in methanol (40%) or by electrochemical oxidation in acetic acid buffer (pH ca. 4.5) at r.t. [1713].
 - Also obtained by reaction of α -phenylbenzylamine with 2,3,4-trihydroxybenzophenone in the presence of lithium perchlorate in methanol at 25° (72%) or by electrolysis [1714].
 - Also obtained by reaction of phenylmethylamine with 2,3,4-trihydroxybenzophenone in the presence of lithium perchlorate in methanol at 20° (62%) or by electrolysis [1715].
 - Also refer to: [1533,1595,1716–1718].

m.p. 195–197° [1714], 186–188° [1715];

¹H NMR [1713], ¹³C NMR [1713].

BIOLOGICAL ACTIVITY: Toxicity [1529]; potent neuroprotective agent in vitro [1529].

Dimethyl ether

[253681-20-8]

C₁₅H₁₅NO₃

mol.wt. 257.29

- Obtained by Friedel–Crafts acylation of 2,6-dimethoxyaniline with benzoic acid in the presence of PPA at 80° for 8 h (45–55%) [1529].

Cyclohexyl(2,4-dihydroxy-3-nitrophenyl)methanone

[909255-41-0]

C₁₃H₁₅NO₅ mol.wt. 265.27**New compound**

Synthesis

- Obtained by reaction of cyclohexanecarboxylic acid with 2-nitroresorcinol in the presence of PPA at 70–80° for 5 h (60%) [1595].

(3-Amino-2,4-dihydroxyphenyl)cyclohexylmethanone

[909255-14-7]

C₁₃H₁₇NO₃ mol.wt. 235.28**New compound**

Synthesis

– Obtained by treatment of cyclohexyl(2,4-dihydroxy-3-nitrophenyl)methanone with zinc in acetic acid at 20° (76%) [1595].

m.p. 124–126° [1595]; ¹H NMR [1595], ¹³C NMR [1595].

(3,4-Dihydroxy-2-methoxyphenyl)phenylmethanone

[177703-29-6]

C₁₄H₁₂O₄ mol.wt. 244.25**Described [1476] p. 380**

Synthesis

– Also refer to: [1719].

[2,6-Dihydroxy-4-[(3-methyl-2-butenyl)oxy]phenyl]phenylmethanone

[70219-83-9]

C₁₈H₁₈O₄ mol.wt. 298.34**Described [1476] p. 386**

Synthesis

– Also obtained by treatment of 2,4,6-trihydroxy-benzophenone with prenyl di-*n*-cyclohexyl-sulfonium tetrafluoroborate salt (1 equiv) in the presence of Hünig's base (1.1 equiv) in methylene chloride at r.t. for 7 h (10%) [1536].

Isolation from natural sources

– From the aerial parts of *Helichrysum asperum* (Thunb.) Hilliard et Burt. var. *albidulum* Hilliard (DC) [1720].

[3-(3,7-Dimethyl-2,6-octadienyl)-2,4-dihydroxy-6-methoxyphenyl]phenylmethanone (E) (Marupone)

[53948-11-1]

C₂₄H₂₈O₄ mol.wt. 380.48**New compound**

Isolation from natural sources

– From *Moronobea pulchra* Ducke (Guttiferae) [1536,1605].

Yellow crystals; m.p. 125–127° [1605]; ¹H NMR [1605], IR [1605], UV [1605], MS [1605].

Diacetate [53948-15-5] $C_{28}H_{32}O_6$ mol.wt. 464.56

– Obtained by treatment of marupone with acetic anhydride in the presence of pyridine at r.t. for 24 h [1605].

oil [1605]; 1H NMR [1605], IR [1605].

Dimethyl ether (E) [53948-14-4] $C_{26}H_{32}O_4$ mol.wt. 408.54

– Obtained by treatment of marupone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 6 h [1605].

– Also obtained by reaction of 2,4,6-trimethoxybenzophenone with geranyl di-n-butyl-sulfonium tetrafluoroborate salt (2.5 equiv) in the presence of Hunig's base (5 equiv) in toluene at 80° for 16 h (15%) [1536].

oil [1605]; 1H NMR [1605], IR [1605], UV [1605].

[3-(3,7-dimethyloctyl)-2,4-Dihydroxy-6-methoxyphenyl]phenylmethanone

[53948-13-3]

$C_{24}H_{32}O_4$
mol.wt. 384.52

New compound

Synthesis

– Obtained by catalytic hydrogenation of marupone with hydrogen

in the presence of Pd/C in ethanol at r.t. and pressure [1605].

m.p. 140–143° [1605]; 1H NMR [1605], IR [1605], UV [1605], MS [1605].

**2.2.1.3 Substituents Located on Both Rings [1476] p. 409****(3,4-Dihydroxy-5-nitrophenyl)(2-fluorophenyl)methanone**

[125628-97-9]

 $C_{13}H_8FNO_5$ mol.wt. 277.21**Described** [1476] p. 413

Synthesis

- Also refer to: [1723].
- **BIOLOGICAL ACTIVITY:** Inhibition of dopamine uptake [1724]; cytotoxicity [1724].
- Also refer to: [1725,1726].

**Dimethyl ether** $C_{15}H_{12}FNO_5$ mol.wt. 305.26

- Obtained by reaction of dimethyl sulfate with 2'-fluoro-3,4-dihydroxy-5-nitrobenzophenone in the presence of dilute sodium hydroxide and tetrabutylammonium bromide in methylene chloride at r.t. for 17 h (91%) [1725].
- Also obtained by adding sodium hydride and dimethyl sulfate to a solution of 4-hydroxy-3-methoxy-5-nitro-2'-fluorobenzophenone in DMF, and refluxing 30 min (73%) [1727].

 1H NMR [1727].

(3-Amino-2,4-dihydroxyphenyl)(4-fluorophenyl)methanone

[909255-18-1]

 $C_{13}H_{10}FNO_3$ mol.wt. 247.23**New compound**

Syntheses

- Obtained by total demethylation of (3-amino-2,4-dimethoxyphenyl)(4-fluorophenyl)methanone in the presence of aluminium chloride (70%) [1595].
- Also obtained from (p-fluorophenyl)benzoic acid [1595].
- Also obtained from 2,6-dimethoxyaniline [1595].
- Also refer to: [1728].

light-yellow crystals [1595], yellow crystals [1728];

m.p. 179–181° [1595];

 1H NMR [1595], ^{13}C NMR [1595]; X-ray Data [1595,1728].**4-(3,4-Dihydroxy-5-nitrobenzoyl)benzoic acid** (*Tolcapone, carboxylic acid*)
(Ro 47-1669)

[212902-63-1]

 $C_{14}H_9NO_7$ mol.wt. 303.23**New compound**

Isolation from natural sources

- A plasma metabolite of tolcapone in human [1702].

(3,4-Dihydroxy-5-nitrophenyl)(4-methylphenyl)methanone (*Tolcapone*)
(Ro-40-7592)

[134308-13-7]

 $C_{14}H_{11}NO_5$ mol.wt. 273.25**Described** [1476] **p. 418**

Syntheses

- Also obtained by adding aluminium chloride to a stirred suspension of (4-hydroxy-3-methoxy-5-nitrophenyl) (4-methylphenyl)methanone in ethyl acetate at r.t. under nitrogen, followed by pyridine. The red solution obtained was refluxed for 2 h (91%) [1701].
- Also refer to: [1702–1704,1712,1729–1735].

yellow solid [1701];

m.p. 146–148° [1703,1704], 141–143° [1701]; 1H NMR [1701], ^{13}C NMR [1701], MS [1701].**BIOLOGICAL ACTIVITY:** Hepatotoxicity [1712,1729,1731]; a novel inhibitor of catechol-O-methyltransferase [1702].

(3,4-Dihydroxy-5-nitrophenyl)[4-(hydroxymethyl)phenyl]methanone*(Tolcapone, primary alcohol metabolite) (Ro 47-1868)*

[254912-15-7]

C₁₄H₁₁NO₆ mol.wt. 289.25**New compound**

Isolation from natural sources

- A plasma metabolite of tolcapone in human [1702].

N.B.: Oxidation CYP3A4.**(3-Amino-4,5-dihydroxyphenyl)(4-methylphenyl)methanone***(Tolcapone, amine derivative) (Ro 61-3662)*

[254912-17-9]

C₁₄H₁₃NO₃ mol.wt. 243.26**New compound**

Synthesis

- From Tolcapone via reductive metabolism in human [1702].

(3-Amino-2,4-dihydroxyphenyl)(2-methoxyphenyl)methanone

[909255-19-2]

C₁₄H₁₃NO₄ mol.wt. 259.26**New compound**

Synthesis

- Obtained by treatment of (2,4-dihydroxy-3-nitrophenyl)-(2-methoxyphenyl)methanone with zinc in acetic acid at 20° (76%) [1595].

m.p. 153–155° [1595]; ¹H NMR [1595], ¹³C NMR [1595].**(3-Amino-2,4-dihydroxyphenyl)[(4-methylsulfonyl)phenyl]methanone**

[909255-17-0]

C₁₄H₁₃NO₅S mol.wt. 307.33**New compound**

Synthesis

- Preparation by treatment of (3-amino-2,4-dimethoxyphenyl)(4-methylsulfonyl)methanone with aluminium chloride in toluene at 100° for 20 min (72%) [1595].

m.p. 233–235° [1595]; ¹H NMR [1595], ¹³C NMR [1595].**Dimethyl ether** C₁₆H₁₇NO₅S mol.wt. 335.38

- Obtained by reaction of p-(methylsulfonyl)benzoic acid with 2,6-dimethoxyaniline in the presence of PPA at 100° for 7 h (42%) [1595].

[3-Amino-4-hydroxy-5-(sulfooxy)phenyl](4-methylphenyl)methanone*(Tolcapone, amine sulphate)*

[254902-29-9]

C₁₄H₁₃NO₆S mol.wt. 323.32**New compound**

Synthesis

C₁₆H₁₆O₂ mol.wt. 240.30

New compound

Syntheses

- Obtained by reaction of p-anisoyl chloride with p-xylene,
 - in the presence of aluminium chloride in methylene chloride between 10° and 20° (83%) [1770];
 - in the presence of MoO₂Cl₂ (20 mol%) at reflux for 20 h (31%) [1527].
 - Also obtained by reaction of p-anisic anhydride with p-xylene [1631].
 - Also obtained by reaction of 2,5-dimethylbenzoyl chloride with anisole in the presence of aluminium chloride in methylene chloride at 20° for 1 h [1771].
- m.p. 88° [1631]; ¹H NMR [1770,1771], ¹³C NMR [1771], IR [1770,1771].

(2,5-Dimethoxyphenyl)(3-methoxyphenyl)methanone

[183106-11-8]

C₁₆H₁₆O₄ mol.wt. 272.30

New compound

Synthesis

- Obtained by reaction of 3-methoxybenzoyl chloride with 1,4-dimethoxybenzene in methylene chloride in the presence of stannic chloride (80%) [1503].
- white needles; m.p. 71–72° [1503];
¹H NMR [1503], IR [1503], UV [1503], MS [1503]; TLC [1503].

(3,4-Dimethoxyphenyl)(2-methoxyphenyl)methanone

[131252-46-5]

C₁₆H₁₆O₄ mol.wt. 272.30

New compound

Syntheses

- Obtained by reaction of 2-methoxybenzoic acid with veratrole in the presence of PPA at 90° for 8 h (82%) [1503].
- Also refer to: [1772].
- m.p. 80–82° [1560], 78° [1503]; ¹H NMR [1503], IR [1503], UV [1503].

(2-Amino-4,5-dimethoxyphenyl)(2-methoxyphenyl)methanone

[882531-40-0]

 $C_{16}H_{17}NO_4$ mol.wt. 287.32**New compound**

Synthesis

– Refer to: [1773].

(2-Bromo-3,5-dimethylphenyl)(3,5-dimethoxyphenyl)methanone

[1000990-11-3]

 $C_{17}H_{17}BrO_3$ mol.wt. 349.22**New compound**

Synthesis

– Refer to: [1495].

(2-Bromo-3,5-dimethoxyphenyl)(3,5-dimethoxyphenyl)methanone

[1000990-09-9]

 $C_{17}H_{17}BrO_5$ mol.wt. 381.22**New compound**

Synthesis

– Refer to: [1495].

(2-Bromo-4,5-dimethoxyphenyl)(3,5-dimethoxyphenyl)methanone

[1000990-07-7]

 $C_{17}H_{17}BrO_5$ mol.wt. 381.22**New compound**

Synthesis

– Refer to: [1495].

(2-Methoxy-4,6-dimethylphenyl)(2-methoxyphenyl)methanone

[1019637-60-5]

 $C_{17}H_{18}O_3$ mol.wt. 270.33**New compound**

Synthesis

– Refer to: [1700].

(4-Methoxyphenyl)(3,4,5-trimethoxyphenyl)methanone

[109091-08-9]

 $C_{17}H_{18}O_5$ mol.wt. 302.33**New compound**

Synthesis

– Refer to: [1774].

Phenyl[2,4,6-trimethoxy-3-[5-methyl-2-(1-methylethylidene)-4-hexen-1-yl]phenyl]-methanone

[950201-80-6]

 $C_{26}H_{32}O_4$ mol.wt. 408.54**New compound**

Synthesis

– Obtained by reaction of 2,4,6-trimethoxy-benzophenone

with 2-(1-methyl-ethylidene)-4-hexenyl di-n-butyl-sulfonium tetrafluoroborate salt (2.5 equiv) in the presence of Hunig's base (5 equiv) in toluene at 80° for 16 h (30%) [1536].

(5-Bromo-1,3-phenylene)bis[(3,5-dihydroxyphenyl)methanone

[873220-62-3]

C₂₀H₁₃BrO₆ mol.wt. 429.22

New compound

Synthesis

- Obtained by total demethylation of its tetramethyl ether with boron tribromide in methylene chloride at 0° [1563].

Tetramethyl ether [873220-61-2] C₂₄H₂₁BrO₆ mol.wt. 485.33

- Obtained by oxidation of 5-bromo- α,α' -bis(3,5-dimethoxyphenyl)benzenedi-methanol [873220-60-1] with manganese dioxide in methylene chloride at r.t., followed by demethylation of the obtained product with boron tribromide in methylene chloride at 0° [1563].

(2,4,6-Trihydroxy-1,3,5-benzenetriyl)tris[phenylmethanone

[1818-24-2]

 $C_{27}H_{18}O_6$ mol.wt. 438.44**Described [1476] p. 541**

Synthesis

– Obtained by Fries rearrangement of phloroglucinol tribenzoate [1777].

*Asymmetric ketones* [1476] p. 543

Compounds Derived from Acetic Acid

1-(2,3,4,5-Tetrafluoro-6-hydroxyphenyl)ethanone

[182951-74-2] $C_8H_4F_4O_2$ mol.wt. 208.11

Synthesis

– Obtained by hydrolytic cleavage of 2-amino-3-(2-hydroxy-3,4,5,6-tetrafluorobenzoyl)acrylic acid (**I**) or of 3-(2-hydroxy-3,4,5,6-tetrafluorobenzoylmethylene)-piperazin-2-one (**II**) in boiling aqueous sodium hydroxide for 20 min (53% and 44% yields, respectively) [1778].

m.p. 36° [1778]; 1H NMR [1778], ^{19}F NMR [1778], IR [1778].

1-(2,3,5,6-Tetrafluoro-4-hydroxyphenyl)ethanone

[145797-51-9] $C_8H_4F_4O_2$ mol.wt. 208.11

Synthesis

– Preparation by reaction of acetyl chloride on 2,3,5,6-tetrafluorophenol with aluminium chloride in carbon disulfide at 5° (10%) [1779].

m.p. $109-111^\circ$ [1779].

1-(3,5-Dibromo-2-hydroxy-4-nitrophenyl)ethanone

$C_8H_5Br_2NO_4$ mol.wt. 338.94

Synthesis

– Preparation by reaction of bromine on 2-hydroxy-4-nitro-acetophenone in refluxing acetic acid–sodium acetate mixture (68%) [1780].

m.p. 157° [1780].

1-(2,4,6-Tribromo-3-hydroxyphenyl)ethanone[49605-14-3] $C_8H_5Br_3O_2$ mol.wt. 372.84

Synthesis

- Preparation by bromination of 3-hydroxyacetophenone in water at 50° (94%) [1781,1782].

m.p. 127°5 [1781,1782].

1-(3,4,5-Tribromo-2-hydroxyphenyl)ethanone[145666-19-9] $C_8H_5Br_3O_2$ mol.wt. 372.84

Synthesis not yet described.

- Refer to: [1783] (compound **1h**).

1-(4-Chloro-2-hydroxy-3,5-dinitrophenyl)ethanone $C_8H_5ClN_2O_6$ mol.wt. 260.59

Syntheses

- Preparation by nitration of 4-chloro-2-hydroxyacetophenone (77%) [1784].
- Also obtained (by-product) by nitration of 2-acetyl-5-chlorophenyl acetate in sulfuric acid solution at -10° (24%) [1784].

m.p. 49–150° [1784].

1-(4,6-Dichloro-2-hydroxy-3-nitrophenyl)ethanone[81515-01-7] $C_8H_5Cl_2NO_4$ mol.wt. 250.04

Synthesis

- Preparation by nitration of 2,4-dichloro-6-hydroxyacetophenone with potassium nitrate in concentrated sulfuric acid, first between -10° and 0°, then at r.t. [1785].

m.p. 62–64° [1785].

1-(3,4,6-Trichloro-2-hydroxyphenyl)ethanone[126712-08-1] $C_8H_5Cl_3O_2$ mol.wt. 239.48

Synthesis

- Preparation by Fries rearrangement of 2,3,5-trichlorophenyl acetate with aluminium chloride without solvent at 130–140° (49%) [1786].

m.p. 103–104° [1786]; 1H NMR [1786], MS [1786].

1-(Trichloro-4-hydroxyphenyl)ethanone

[94650-96-1]

 $C_8H_5Cl_3O_2$ mol.wt. 239.48

Synthesis not yet described.

- Identified in wheat and rye straw pulp bleaching and combined mill effluents [1787].
- Identified during control of effluent from the manufacturing of bleached pulp and paper from sugarcane bagasse [1788].

1-(2,3,6-Trichloro-4,5-dihydroxyphenyl)ethanone

[154638-87-6]

 $C_8H_5Cl_3O_3$ mol.wt. 255.48

Synthesis

- Obtained (by-product) by chlorination of 4-hydroxy-3-methoxyacetophenone in dioxane–water mixture at 40° (4%) [1789].

MS [1789].

1-(2,4,5-Trichloro-3,6-dihydroxyphenyl)ethanone

[7714-14-9]

 $C_8H_5Cl_3O_3$ mol.wt. 255.48

Syntheses

- Preparation by reaction of chlorine on 2,5-dihydroxyacetophenone in chloroform solution containing a drop of triethylamine, under UV light, at 0° (50%) [1790].
 - Preparation by reaction of excess of chlorine on acetyl-1,4-benzoquinone in chloroform, followed by treatment of the adduct obtained with hydrochloric acid in ethyl ether (60%) [1791].
- m.p. 127°5–129° [1791], 79–81° [1790]. One of the reported melting points is obviously wrong. 1H NMR [1791], IR [1791], MS [1791].

1-(2,3,5-Trifluoro-4,6-dihydroxyphenyl)ethanone

[182951-75-3]

 $C_8H_5F_3O_3$ mol.wt. 206.12

Syntheses

- Obtained by treatment of 2-amino-3-(2-hydroxy-3,4,5,6-tetrafluorobenzoyl)acrylic acid with boiling aqueous sodium hydroxide for 2 h (40%) [1778].
 - Also obtained by treatment of 3-(2-hydroxy-3,4,5,6-tetra-fluorobenzoyl-methylene)piperazin-2-one with boiling aqueous sodium hydroxide for 2 h (30%) [1778].
- m.p. 146–147° [1778]; 1H NMR [1778], ^{19}F NMR [1778], IR [1778].

1-(3-Bromo-5-chloro-2-hydroxyphenyl)ethanone[59443-15-1] $C_8H_6BrClO_2$ mol.wt. 249.49

Syntheses

- Preparation by bromination of 5-chloro-2-hydroxyacetophenone in acetic acid (65%) [1792].
- Preparation by Fries rearrangement of 2-bromo-4-chlorophenyl acetate with aluminium chloride without solvent at 140° [1793].
- Also refer to: [1794,1795] (compound **1b**), [1783] (compound **1e**) and [1796] (compound **1c**).
- m.p. 104–105° [1792].

1-(3-Bromo-5-chloro-4-hydroxyphenyl)ethanone $C_8H_6BrClO_2$ mol.wt. 249.49

Synthesis

- Preparation by bromination of 3-chloro-4-hydroxyacetophenone [1797,1798].
- m.p. 170° [1797,1798].

1-(3-Bromo-5-fluoro-2-hydroxyphenyl)ethanone[393-62-4] $C_8H_6BrFO_2$ mol.wt. 233.04

Syntheses

- Preparation by bromination of 5-fluoro-2-hydroxyacetophenone in acetic acid [1799].
- Preparation by Fries rearrangement of 2-bromo-4-fluorophenyl acetate with aluminium chloride without solvent at 130° [1800].
- m.p. 97° [1799,1800].

1-(3-Bromo-5-fluoro-4-hydroxyphenyl)ethanone[402-84-6] $C_8H_6BrFO_2$ mol.wt. 233.04

Synthesis

- Preparation by bromination of 3-fluoro-4-hydroxyacetophenone in acetic acid [1801].
- m.p. 173° [1801].

1-(5-Bromo-2-hydroxy-3-iodophenyl)ethanone[28467-11-0] $C_8H_6BrIO_2$ mol.wt. 340.94

Synthesis

– Preparation by reaction of iodine–iodic acid mixture on 5-bromo-2-hydroxyacetophenone in ethanol (75–85%) [1802], (68%) [1803].

m.p. 116° [1803], 105° [1802]; 1H NMR [1802], IR [1802].**1-(3-Bromo-2-hydroxy-5-nitrophenyl)ethanone**[90004-97-0] $C_8H_6BrNO_4$ mol.wt. 260.04

Syntheses

– Preparation by reaction of bromine on 2-hydroxy-5-nitroacetophenone in refluxing acetic acid–sodium acetate mixture (83%) [1780].
 – Also obtained by treatment of 2-hydroxy-5-nitroacetophenone with NBS in acetonitrile (56%) (compound **31**) [1804].

m.p. 132° [1780]; 1H NMR [1804], MS [1804].**1-(3-Bromo-4-hydroxy-5-nitrophenyl)ethanone**[90004-98-1] $C_8H_6BrNO_4$ mol.wt. 260.04

Synthesis

– Preparation by reaction of bromine on 4-hydroxy-3-nitroacetophenone in refluxing acetic acid–sodium acetate mixture (83%) [1780].

m.p. 136° [1780].

1-(5-Bromo-2-hydroxy-3-nitrophenyl)ethanone[70978-54-0] $C_8H_6BrNO_4$ mol.wt. 260.04

Syntheses

– Preparation by nitration of 5-bromo-2-hydroxyacetophenone in refluxing carbon tetrachloride (88%) [1805].
 – Preparation by reaction of nitric acid on 5-bromo-2-hydroxyacetophenone in concentrated sulfuric acid between -2° and 0° (75%) [1806].

m.p. 99°5 [1806]; IR [1807].

1-(3-Bromo-2,4-dihydroxy-5-nitrophenyl)ethanone[116465-22-6] $C_8H_6BrNO_5$ mol.wt. 276.04

Syntheses

- Preparation by bromination of 5-nitroresacetophenone in acetic acid at 90° [1808].
 - Obtained by saponification of 8-bromo-7-hydroxy-2-methyl-6-nitrochromone with 10% aqueous sodium hydroxide [1809].
 - Also obtained by reaction of nitric acid on 3,3'-diacetyl-5,5'-dibromo-4,4',6,6'-tetrahydroxy-diphenyl thioether in acetic acid at r.t. [1810].
- m.p. 182–183° [1808,1810], 181–182° [1809].

1-(3-Bromo-2,6-dihydroxy-5-nitrophenyl)ethanone $C_8H_6BrNO_5$ mol.wt. 276.04

Syntheses

- Preparation by bromination of 2,6-dihydroxy-3-nitroacetophenone in acetic acid [1809].
 - Preparation by reaction of nitric acid on 3,5-dibromo-2,6-dihydroxyacetophenone in acetic acid at 0° [1809].
 - Obtained by saponification of 6-bromo-5-hydroxy-2-methyl-8-nitrochromone or of 8-bromo-5-hydroxy-2-methyl-6-nitrochromone with 10% aqueous sodium hydroxide at reflux [1809].
- m.p. 127–128° [1809].

1-(2,4-Dibromo-6-hydroxyphenyl)ethanone $C_8H_6Br_2O_2$ mol.wt. 293.94

Synthesis

- Preparation by reaction of acetyl chloride on 3,5-dibromo-anisole with aluminium chloride in refluxing carbon disulfide (33%) [1811].
- m.p. 96–97° [1811].

1-(2,6-Dibromo-4-hydroxyphenyl)ethanone $C_8H_6Br_2O_2$ mol.wt. 293.94

Synthesis

- Obtained by reaction of acetyl chloride on 3,5-dibromo-anisole with aluminium chloride in refluxing carbon disulfide (10%) [1811].
- m.p. 141–142° [1811].

1-(3,4-Dibromo-2-hydroxyphenyl)ethanone[145666-18-8] $C_8H_6Br_2O_2$ mol.wt. 293.94

Synthesis

– Refer to: [1783] (compound **1f**).**1-(3,5-Dibromo-2-hydroxyphenyl)ethanone**[22362-66-9] $C_8H_6Br_2O_2$ mol.wt. 293.94

Syntheses

- Preparation by Fries rearrangement of 2,4-dibromophenyl acetate with aluminium chloride without solvent between 150° and 165° [1812–1814], (46%) [1813], (51%) [1812].
 - Preparation by reaction of acetic anhydride on 2,4-dibromo-phenol with aluminium chloride in nitrobenzene at 120° (41%) [1813,1814].
 - Preparation by bromination of 2-hydroxyacetophenone [1815,1816], (61%) [1815] or 5-bromo-2-hydroxyacetophenone in acetic acid (78%) [1792].
 - Preparation by reaction of bromine on 2-hydroxyacetophenone in acetic acid–potassium acetate mixture (55%) [1816].
 - Also obtained (by-product) by Fries rearrangement of 2-bromophenyl acetate with aluminium chloride without solvent at 180° (2%) [1817].
 - Also obtained by reaction of sodium iodide on 3,5-dibromo-2-hydroxy- α,α,α -tribromo-acetophenone in acetic acid–dioxane–hydrochloric acid mixture (50%) [1818].
 - Also obtained by action of hydriodic acid with 3,5-dibromo-2-hydroxy- α,α,α -tribromo-acetophenone [1818].
- m.p. 111° [1815], 110° [1813], 109–110° [1792,1812,1818], 108–109° [1816,1817], 108° [1819];
 1H NMR [1817,1820], ^{13}C NMR [1821], UV [1820,1822], fluorescence spectra [1820].

1-(3,5-Dibromo-4-hydroxyphenyl)ethanone[2887-72-1] $C_8H_6Br_2O_2$ mol.wt. 293.94

Syntheses

- Preparation by bromination of 4-hydroxyacetophenone in dilute acetic acid [1797,1798,1823], (94%) [1824], (80%) [1816], (75%) [1825], (62%) [1801].
- Preparation by reaction of bromine on 4-hydroxy-acetophenone in acetic acid–potassium acetate mixture (91%) [1825], (80%) [1816].

- Preparation by bromination of 4-hydroxyacetophenone [1826].
 - Preparation by Fries rearrangement of 2,6-dibromophenyl acetate with aluminium chloride without solvent at 120° (60%) [1826].
 - Also refer to: [1827] (compound **9**) and [1828].
- m.p. 187° [1797,1798], 184° [1826], 181° [1801,1816,1824], 180–184° [1825]; UV [1829].

1-(4,5-Dibromo-2-hydroxyphenyl)ethanone

[30186-15-3] $C_8H_6Br_2O_2$ mol.wt. 293.94

Syntheses

- Obtained (by-product) by Fries rearrangement of 2-bromophenyl acetate with aluminium chloride without solvent at 180° (1%) [1817].
- Also obtained (by-product) by Fries rearrangement of 3-bromophenyl acetate with aluminium chloride without solvent at 175–180° [1830].

m.p. 136° [1830], 130–131° [1817]; 1H NMR [1817,1830].

1-(2,5-Dibromo-3,6-dihydroxyphenyl)ethanone

$C_8H_6Br_2O_3$ mol.wt. 309.94

Synthesis not yet described

- Obtained by alkaline hydrolysis of 5,8-dibromo-6-hydroxy-2-methylchromone [1831].
- Also obtained by bromination of quinacetophenone [1831].

N.B.: The results of reference [1831] were erroneous [1832].

m.p. 86° [1831].

1-(3,5-Dibromo-2,4-dihydroxyphenyl)ethanone

[36772-98-2] $C_8H_6Br_2O_3$ mol.wt. 309.94

Syntheses

- Preparation by bromination of resacetophenone in acetic acid [1833–1838].
- Preparation by saponification of 6,8-dibromo-7-hydroxy-2-methylchromone with 5% aqueous sodium hydroxide [1809,1839].
- Obtained by reaction of bromine on 3,3'-diacetyl-4,4',6,6'-tetrahydroxydiphenyl thioether in acetic acid at 50° [1810].
- Preparation by saponification of 6,8-dibromo-7-hydroxyflavone with refluxing 10% aqueous sodium hydroxide [1840].
- Preparation by saponification of 3-benzoyl-6,8-dibromo-7-hydroxyflavone with 10% ethanolic potassium hydroxide in a water bath [1840].

– Also obtained (by-product) by reaction of bromine with resacetophenone in ethanol at -78° [1841].

m.p. 174° [1839], $173-174^{\circ}$ [1810,1833,1834,1838], 173° [1835], $172-173^{\circ}$ [1809,1840].

1-(3,5-Dibromo-2,6-dihydroxyphenyl)ethanone

[63411-84-7] $C_8H_6Br_2O_3$ mol.wt. 309.94

Syntheses

– Preparation by bromination of 2-acetylresorcinol in acetic acid [1809].

– Obtained by saponification of 6,8-dibromo-5-hydroxy-2-methylchromone with 10% aqueous sodium hydroxide at reflux [1809].

– Also refer to: [1840] (compound **IVc**).

m.p. 173° [1809].

1-(2,3-Dibromo-4,5,6-trihydroxyphenyl)ethanone

[65883-24-1] $C_8H_6Br_2O_4$ mol.wt. 325.94

Synthesis

– Preparation by reaction of bromine on gallacetophenone in chloroform at 10° [1842,1843].

Pale yellow crystals [1842,1843].

1-(3,5-Dibromo-2,4,6-trihydroxyphenyl)ethanone

[63990-67-0] $C_8H_6Br_2O_4$ mol.wt. 325.94

Syntheses

– Preparation by reaction of acetyl chloride or acetic anhydride on 2,4-dibromophloroglucinol with boron trifluoride (72–78%) [1844].

– Preparation by bromination of phloracetophenone with cupric bromide in refluxing chloroform–ethyl acetate mixture [1845].

m.p. $202-204^{\circ}$ [1844], $200-202^{\circ}$ [1845]; 1H NMR [1845], MS [1845].

1-(3-Chloro-4-fluoro-2-hydroxyphenyl)ethanone

[703-97-9] $C_8H_6ClFO_2$ mol.wt. 188.59

Synthesis not yet described

– There is a single reference, erroneous, concerning the 3-chloro-5-fluoro-2-hydroxyacetophenone [1800].

1-(3-Chloro-5-fluoro-2-hydroxyphenyl)ethanone[445-38-5] $C_8H_6ClFO_2$ mol.wt. 188.59

Syntheses

- Preparation by Fries rearrangement of 2-chloro-4-fluoro-phenyl acetate with aluminium chloride without solvent at 130° [1800].
- Preparation by reaction of chlorine on 5-fluoro-2-hydroxyacetophenone in acetic acid solution [1799].

m.p. 84° [1799,1800].

1-(4-Chloro-2-fluoro-5-hydroxyphenyl)ethanone[148254-30-2] $C_8H_6ClFO_2$ mol.wt. 188.59

Synthesis

- Refer to: [1846] (Japanese patent).

1-(4-Chloro-5-fluoro-2-hydroxyphenyl)ethanone[105533-69-5] $C_8H_6ClFO_2$ mol.wt. 188.59

Synthesis

- Preparation by reaction of acetyl chloride on 3-chloro-4-fluorophenol with aluminium chloride at 95–100° (86%) [1847].

m.p. 72° [1847].

1-(3-Chloro-2-hydroxy-5-iodophenyl)ethanone[292144-84-4] $C_8H_6ClIO_2$ mol.wt. 296.49

Synthesis

- Preparation by iodination of 3-chloro-2-hydroxyacetophenone with iodine (1 mol) and iodic acid (1 mol) in ethanol at 35–40° for 1.5 h (75–85%) [1802].

m.p. 112° [1802].

1-(5-Chloro-2-hydroxy-3-iodophenyl)ethanone[175655-11-5] $C_8H_6ClIO_2$ mol.wt. 296.49

Synthesis

– Preparation by iodination of 5-chloro-2-hydroxy-acetophenone with iodine (1 mol) and iodic acid (1 mol) in ethanol at 35–40° for 1.5 h (75–85%) [1802].

m.p. 89° [1802].

1-(5-Chloro-2,4-dihydroxy-3-iodophenyl)ethanone[102297-89-2] $C_8H_6ClIO_3$ mol.wt. 312.49

Synthesis

– Preparation by reaction of a iodine–iodic acid mixture on 5-chloro-2,4-dihydroxyacetophenone in water (73%) [1848].

m.p. 173–176° [1848]; 1H NMR [1848].**1-(3-Chloro-4-hydroxy-5-nitrophenyl)ethanone**[52129-62-1] $C_8H_6ClNO_4$ mol.wt. 215.59

Synthesis

– Preparation by reaction of potassium nitrate on 3-chloro-4-hydroxyacetophenone in concentrated sulfuric acid between 5° and 10° [1849,1850].

1-(4-Chloro-2-hydroxy-3-nitrophenyl)ethanone $C_8H_6ClNO_4$ mol.wt. 215.59

Synthesis

– Obtained (by-product) by nitration of 2-acetyl-5-chlorophenyl acetate in sulfuric acid at –20° [1784].

m.p. 105–106° [1784]; IR [1784].

1-(4-Chloro-2-hydroxy-5-nitrophenyl)ethanone $C_8H_6ClNO_4$ mol.wt. 215.59

Syntheses

– Obtained by Fries rearrangement of 3-chloro-4-nitrophenyl acetate with aluminium chloride in nitrobenzene at 120° (18%) [1784].

- Preparation by nitration of 2-acetyl-5-chlorophenyl acetate in sulfuric acid solution at -10° (50%) [1784].
 - Preparation by hydrolysis of 2-acetyl-5-chloro-4-nitrophenyl 4-methyl-3-nitrobenzenesulfonate with 2 N sodium hydroxide (86%) [1784].
- m.p. $104-105^{\circ}$ [1784]; IR [1784].

1-(5-Chloro-2-hydroxy-3-nitrophenyl)ethanone

[84942-40-5] $C_8H_6ClNO_4$ mol.wt. 215.59

Syntheses

- Preparation by reaction of nitric acid on 5-chloro-2-hydroxyacetophenone in acetic acid at r.t. [1851–1853], (98%) [1852], (63%) [1853].
 - Preparation by reaction of nitric acid on 5-chloro-2-hydroxyacetophenone in concentrated sulfuric acid between -2° and 0° (80%) [1806].
 - Preparation by reaction of copper nitrate on 5-chloro-2-hydroxyacetophenone in acetic anhydride [1851].
 - Also refer to: [1854].
- m.p. $135-136^{\circ}$ [1852], 132° [1806], $131-132^{\circ}$ [1853]; IR [1853].

1-(2,3-Dichloro-4-hydroxyphenyl)ethanone

[2977-53-9] $C_8H_6Cl_2O_2$ mol.wt. 205.04

Syntheses

- Preparation by reaction of aluminium chloride on 2,3-dichloro-4-methoxyacetophenone in methylene chloride at 5° [1855].
 - Preparation by reaction of aluminium chloride on 2,3-dichloro-4-methoxyacetophenone (or 2,3-dichloro-4-ethoxyacetophenone) in heptane [1856–1858].
- m.p. $153-155^{\circ}$ [1858].

1-(2,4-Dichloro-3-hydroxyphenyl)ethanone

[92119-05-6] $C_8H_6Cl_2O_2$ mol.wt. 205.04

Syntheses

- Preparation from 3-hydroxyacetophenone by chlorination of its ethylene ketal using two equivalents of tert-butyl hypochlorite. Hydrolysis of the obtained dichloroketal with dilute hydrochloric acid in tetrahydrofuran gave essentially 2,4-dichloro-3-hydroxyacetophenone [1859].
 - Also obtained (by-product) by reaction of tert-butyl hypochlorite on 3-hydroxyacetophenone in chloroform at 15° , in subdued light (9%) [1859].
- Oil [1859].

1-(2,4-Dichloro-6-hydroxyphenyl)ethanone[57051-50-0] $C_8H_6Cl_2O_2$ mol.wt. 205.04

Syntheses

- Preparation by reaction of acetyl chloride on 3,5-dichloroanisole with aluminium chloride in boiling carbon disulfide [1811,1814], (35–40%) [1811].
 - Preparation by Fries rearrangement of 3,5-dichlorophenyl acetate with aluminium chloride without solvent at 120° [1785,1811].
- m.p. 49–50° [1811], 48–49° [1785].

1-(2,5-Dichloro-4-hydroxyphenyl)ethanone[73239-04-0] $C_8H_6Cl_2O_2$ mol.wt. 205.04

Syntheses

- Preparation by reaction of acetyl chloride on 2,5-dichloroanisole with aluminium chloride at 110° (36%) [1860].
 - Preparation by Fries rearrangement of 2,5-dichlorophenyl acetate with aluminium chloride without solvent at 155–165° (36%) [1861].
- m.p. 151–152° [1860], 148–149° [1861]; ¹H NMR [1860], IR [1860], UV [1860].

1-(2,6-Dichloro-4-hydroxyphenyl)ethanone $C_8H_6Cl_2O_2$ mol.wt. 205.04

Synthesis

- Obtained by reaction of acetyl chloride on 3,5-dichloroanisole with aluminium chloride in refluxing carbon disulfide (30%) [1811].
- m.p. 117–119° [1811]; b.p.₁₄ 197° [1811].

1-(3,4-Dichloro-2-hydroxyphenyl)ethanone[55736-71-5] $C_8H_6Cl_2O_2$ mol.wt. 205.04

Syntheses

- Preparation by Fries rearrangement of 2,3-dichlorophenyl acetate with aluminium chloride without solvent at 130–140° [1786,1814,1862,1863], (75%) [1786].
 - Also obtained by reaction of 40% peracetic acid on 2-(benzyloxy)-3,4-dichloroacetophenone in acetic acid at 50° (40%) [1864].
 - Preparation by reaction of aqueous sodium hydroxide solution on 7,8-dichlorochromone-2-carboxylic acid at 95° (38%) [1865].
- m.p. 113–114° [1864], 109–111° [1865], 109–110° [1786];
¹H NMR [1786], IR [1786], MS [1786].

1-(3,5-Dichloro-2-hydroxyphenyl)ethanone[3321-92-4] $C_8H_6Cl_2O_2$ mol.wt. 205.04

Syntheses

- Preparation by Fries rearrangement of 2,4-dichlorophenyl acetate with aluminium chloride in tetrachloroethane at 150–160° [1866] and without solvent between 115° and 170° (43–75%) [1867–1872].
 - Preparation by reaction of chlorine on 2-hydroxy-acetophenone with ferric chloride in dilute acetic acid [1849,1850].
 - Preparation by reaction of hydrated sodium sulfide (containing 7–9 mol of water) with 2-piperidino-4-[1873,5-dichloro-2-hydroxyphenyl]-1,3-dithiolane perchlorate in ethanol (63%) [1874].
- m.p. 100–101° [1874], 97° [1870], 95–96° [1849,1850,1868,1869], 95° [1866], 94–96° [1872]; b.p.₁₈ 132–134° [1867,1871];
¹H NMR [1820,1869,1874], UV [1820], IR [1874], MS [1869], fluorescence spectra [1820].

1-(3,5-Dichloro-4-hydroxyphenyl)ethanone[17044-70-1] $C_8H_6Cl_2O_2$ mol.wt. 205.04

Syntheses

- Preparation by Fries rearrangement of 2,6-dichlorophenyl acetate with aluminium chloride without solvent at 140–150° [1875,1876], (69%) [1876].
- Preparation by chlorination of 4-hydroxyacetophenone in acetic acid [1849,1850,1877].

m.p. 164–165° [1876], 164–165° [1849], 160–160° [1877];
 pK_a [1877].

1-(3,6-Dichloro-2-hydroxyphenyl)ethanone[55736-72-6] $C_8H_6Cl_2O_2$ mol.wt. 205.04

Syntheses

- Preparation by Fries rearrangement of 2,5-dichlorophenyl acetate with aluminium chloride,
 - without solvent, at 155–165° (57%) [1861];
 - in nitrobenzene, at 130° (42%) [1878].
- Preparation by reaction of methyl 3,6-dichloro-2-methoxybenzoate with carbanion reagent (78% yield), followed by ether cleavage (95%) [1879].
- Preparation by reaction of aqueous sodium hydroxide solution on 5,8-dichlorochromone-2-carboxylic acid on a steam bath (92%) [1865].

- Preparation by hydrolysis of 5,8-dichlorochromone with 10% sodium hydroxide at 100° (80%) [1880].
- Also refer to: [1865,1881,1882], and [1883] (compound **III**); [1884] (compound **VIIIk**); [1885] (compound **11**).
m.p. 55–56° [1865].

1-(4,5-Dichloro-2-hydroxyphenyl)ethanone

[22526-30-3] $C_8H_6Cl_2O_2$ mol.wt. 205.04

Syntheses

- Preparation by Fries rearrangement of 3,4-dichlorophenyl acetate with aluminium chloride without solvent between 120° and 140° [1786,1814,1862,1886,1887], (72–73%) [1786,1887], (52%) [1886] or at 200° [1888].
- Also obtained by cleavage of 5,6-dichloro-2,3-dimethyl-benzofuran with chromium trioxide in acetic acid at 50°, the keto ester formed was saponified with potassium hydroxide (70%) [1887].

m.p. 104–105° [1786], 102° [1887], 99–105° [1886];

b.p.₁₅ 151° [1887]; ¹H NMR [1786], IR [1786], MS [1786].

1-(3,4-Dichloro-2,5-dihydroxyphenyl)ethanone

[79755-07-8] $C_8H_6Cl_2O_3$ mol.wt. 221.04

Syntheses

- The preparation from acetylhydroquinone required conversion into its ethylene acetal, oxidation to the quinone with silver oxide, addition of chlorine in acetic acid and enolisation and cleavage of the acetal with, at first hydrogen chloride in ethyl ether, then sulfuric acid in aqueous ethanol (overall yield of 51%) [1791].
- Also obtained by Fries rearrangement of 2,3-dichlorohydroquinone diacetate with aluminium chloride without solvent at 165° (poor yield) [1791].
m.p. 219–220° [1791]; ¹H NMR [1791], IR [1791], MS [1791].

1-(3,5-Dichloro-2,4-dihydroxyphenyl)ethanone

$C_8H_6Cl_2O_3$ mol.wt. 221.04

Syntheses

- Preparation by reaction of chlorine on resacetophenone in acetic acid solution [1889,1890].
- Also obtained by reaction of sulfuryl chloride on the 3,3'-di-acetyl-4,4',6,6'-tetrahydroxydiphenyl thioether with a crystal of bismuth chloride as a catalyst [1810].
m.p. 195–196° [1810,1889,1890].

1-(3,5-Dichloro-2,6-dihydroxyphenyl)ethanone[87953-95-5] $C_8H_6Cl_2O_3$ mol.wt. 221.04

Syntheses

- Preparation by reaction of chlorine on 2,6-dihydroxyacetophenone in ethanol at 0° (84%) [1891].
- Also refer to: [1892] (compound **1d**).

m.p. 174°5–175° [1891]; IR [1891].

1-(4-Fluoro-2-hydroxy-5-nitrophenyl)ethanone[119994-02-4] $C_8H_6FNO_4$ mol.wt. 199.14

Syntheses

- Preparation by reaction of fuming nitric acid with 4-fluoro-2-hydroxyacetophenone, first between –5° and 0°, then at 0° for 30 min [1893].
- Also refer to: [1894–1896] (Japanese patents).

m.p. 96° [1893].

1-(5-Fluoro-2-hydroxy-3-nitrophenyl)ethanone[70978-39-1] $C_8H_6FNO_4$ mol.wt. 199.14

Synthesis

- Preparation by nitration of 5-fluoro-2-hydroxyacetophenone with nitric acid (d = 1.42) in concentrated sulfuric acid between –15° and –5° (46%) [1897,1898].

m.p. 87–90° [1898], 87–89° [1897].

1-(3,5-Difluoro-2-hydroxyphenyl)ethanone[140675-42-9] $C_8H_6F_2O_2$ mol.wt. 172.13

Syntheses

- This compound can be easily obtained by Fries rearrangement of 2,4-difluorophenyl acetate with aluminum chloride without solvent at 150°, and purified by recrystallization from ethanol (80–90%) [1899]; the 2,4-difluorophenyl acetate is prepared by reaction of acetic anhydride on 2,4-difluorophenol [1900,1901].
- Also refer to: [1902].

N.B.: This compound was purchased from Fluorochem Ltd., (Old Glossop, UK) – Catalogue 1993–1994 page 48-reference F-02826 [1821].

m.p. 108–110° [1821]; ^{13}C NMR [1821].

1-(3,5-Difluoro-4-hydroxyphenyl)ethanone[133186-55-7] $C_8H_6F_2O_2$ mol.wt. 172.13

Syntheses

- Preparation by Fries rearrangement of 2,6-difluorophenyl acetate (b.p., 62–63°) with aluminium chloride at 140–150° for 5 h under nitrogen atmosphere (56%) [1903].
- Also refer to: [1904].

N.B.: Refer to: [1905] (Japanese patent) and [1906]; there is one erroneous reference. It concerns the 2,6-difluorophenyl acetate (compound **11**) [1906]. This ester, by Fries rearrangement with aluminium chloride, can easily give the aforesaid ketone.

Black solid [1903]; 1H NMR [1903], IR [1903].

1-(4,5-Difluoro-2-hydroxyphenyl)ethanone[199586-38-4] $C_8H_6F_2O_2$ mol.wt. 172.13

Synthesis

- Refer to: [1907].

1-(4-Hydroxy-3-iodo-5-nitrophenyl)ethanone[76748-71-5] $C_8H_6INO_4$ mol.wt. 307.04

Synthesis

- Refer to: [1908,1909] (compound NIP).

1-(2,4-Dihydroxy-3-iodo-5-nitrophenyl)ethanone $C_8H_6INO_5$ mol.wt. 323.04

Syntheses

- Preparation by nitration of 2,4-dihydroxy-3-iodoacetophenone [1910].
- Preparation by iodination of 2,4-dihydroxy-5-nitroacetophenone [1910].

m.p. 189° [1910].

1-(2-Hydroxy-3,5-diiodophenyl)ethanone[7191-46-0] $C_8H_6I_2O_2$ mol.wt. 387.94

Syntheses

– Preparation by iodination of 2-hydroxyacetophenone,

- with iodine in aqueous sodium carbonate at r.t. [1911–1915], (25%) [1914], (42%) [1915];
- with iodine and iodic acid in ethanol at 35–40° for 1.5 h (75–85%) [1802] or at 60° [1837,1916], (75%) [1916].

m.p. 128° [1802], 127° [1916], 126° [1912], 125°5–126° [1913,1914]; UV [1914].

1-(4-Hydroxy-3,5-diiodophenyl)ethanone[7191-55-1] $C_8H_6I_2O_2$ mol.wt. 387.94

Syntheses

– Preparation by reaction of iodine on 4-hydroxy-acetophenone in aqueous sodium carbonate solution at r.t. [1913,1915,1917–1919], (75%) [1915,1918].

– Preparation by iodination of 4-hydroxyacetophenone with iodine–iodic acid mixture in ethanol at 35–40° for 1.5 h (75–85%) [1802] or in 50% aqueous ethanol (61–69%) [1837,1916,1920].

– Preparation by iodination of 4-hydroxyacetophenone by treatment with iodine monochloride (good yield) [1921,1922].

– Also obtained by Fries rearrangement of 2-iodophenyl acetate with aluminium chloride [1920].

m.p. 174–175° [1918], 172–173° [1921,1922], 171–172° [1920], 162° [1802], 158° [1916]; UV [1918].

1-(2,4-Dihydroxy-3,5-diiodophenyl)ethanone[62069-34-5] $C_8H_6I_2O_3$ mol.wt. 403.94

Syntheses

– Preparation by addition of an aqueous iodine and potassium iodide solution on resacetophenone in 30% ammonium hydroxide solution at r.t. (93%) [1923].

– Preparation by addition of an aqueous iodine and iodic acid solution on resacetophenone in ethanol at ambient temperature (86%) [1837,1924].

m.p. 189–190° [1923], 180° [1924]; 1H NMR [1923].

1-(2-Hydroxy-3,5-dinitrophenyl)ethanone[69027-37-8] $C_8H_6N_2O_6$ mol.wt. 226.15

Syntheses

- Preparation by nitration of 2-hydroxyacetophenone,
- in acetic acid (27–36%) [1925,1926];
 - without solvent (34%) [1927].

m.p. 123°5–124°5 [1926], 123–124° [1925]; IR [1928].

1-(2-Hydroxy-4,6-dinitrophenyl)ethanone[13684-24-7] $C_8H_6N_2O_6$ mol.wt. 226.15

Synthesis not yet described

- Claimed to be prepared by reaction of boiling 50% nitric acid with 2-hydroxyacetophenone (34%) [1927].

N.B.: No physical data is indicated in the patent for this compound. According to the rules dealing with aromatic substitution (Holleman rules) [1929] and electronic induction using the Hammett substituent constants [1930], the obtained product most likely is the 2-hydroxy-3,5-dinitroacetophenone.

1-(3-Hydroxy-2,6-dinitrophenyl)ethanone[172669-49-7] $C_8H_6N_2O_6$ mol.wt. 226.15

Syntheses

- Obtained by action of concentrated nitric acid ($d = 1.42$) with 3-hydroxyacetophenone in concentrated sulfuric acid at -20° for 15 min (25%) [1931].
- Also refer to: [1932].

m.p. 182–183° [1931]; 1H NMR [1931]; Crystal data [1931].**1-(4-Hydroxy-3,5-dinitrophenyl)ethanone**[52129-61-0] $C_8H_6N_2O_6$ mol.wt. 226.15

Syntheses

- Preparation by nitration of 4-hydroxyacetophenone with potassium nitrate in concentrated sulfuric acid at $5-10^\circ$ [1849,1850].
- Preparation by nitration of 4-hydroxy-3-nitroacetophenone with potassium nitrate in sulfuric acid at $5-10^\circ$ (64–70%) [1933,1934].

m.p. 123°2–123°5 [1933], 119–121° [1849], 119–120°5 [1934].

1-(5-Hydroxy-2,4-dinitrophenyl)ethanone

[22633-36-9]

 $C_8H_6N_2O_6$ mol.wt. 226.15

Synthesis not yet described

- There is a single reference, erroneous. It concerns the 2-hydroxy-3,5-dinitroacetophenone or 6'-hydroxy-2',4'-di-nitroacetophenone [1928].

1-(2,4-Dihydroxy-3,5-dinitrophenyl)ethanone

[54917-82-7]

 $C_8H_6N_2O_7$ mol.wt. 242.14

Syntheses

- Preparation by reaction of nitric acid on resacetophenone [1818,1935] or 4-acetoxy-2-hydroxyacetophenone in acetic acid [1818].
 - Also obtained by reaction of nitric acid on 3-benzoyl-2,4-dihydroxyacetophenone 4- β -glucopyranoside (35–36%) [1936].
 - Also obtained by reaction of nitric acid on 3,3'-diacetyl-4,4',6,6'-tetrahydroxydiphenyl thioether in a water bath [1810].
 - Resacetophenone by treatment with cerium (IV) ammonium nitrate in hot acetic acid yields 2,4-di-hydroxy-3,5-dinitroacetophenone (22%) [1937].
 - Preparation by reaction of an ammonia liquor on 7-hydroxy-4-methyl-3,6,8-trinitrocoumarin in a boiling water bath [1938].
 - Also obtained by hydrolysis of 7-hydroxy-2-methyl-6,8-dinitrochromone by heating its solution in sodium hydroxide (4%) on a steam bath [1935].
 - Also obtained by reaction of concentrated nitric acid ($d = 1.42$) or fuming nitric acid on the 7-hydroxy-2-methylchromone in acetic acid, heated on a steam bath [1935].
 - Also obtained by hydrolysis of 7-hydroxy-8-nitroflavone by refluxing with 10% sodium hydroxide solution [1935].
- m.p. 168–169° [1938], 168° [1937], 167° [1935,1939], 166–167° [1810,1818], 165–167° [1936].

1-(2,5-Dihydroxy-3,6-dinitrophenyl)ethanone $C_8H_6N_2O_7$ mol.wt. 242.14

Syntheses

- Obtained by alkaline hydrolysis of 6-hydroxy-2-methyl-5,8-dinitrochromone [1831].
- Also obtained by nitration of quinacetophenone [1831].

N.B.: The results of reference [1831] were erroneous [1832].

m.p. 69–70° [1831].

1-(2,6-Dihydroxy-3,5-dinitrophenyl)ethanone $C_8H_6N_2O_7$ mol.wt. 242.14

Synthesis

– Preparation by nitration of 2,6-dihydroxyacetophenone (31%) [1940].

m.p. 104° [1940].

1-(3,6-Dihydroxy-2,4-dinitrophenyl)ethanone $C_8H_6N_2O_7$ mol.wt. 242.14

Synthesis

– Preparation by Fries rearrangement of 3,5-dinitro-4-hydroxyphenyl acetate with aluminium chloride in nitrobenzene (61%) [1941].

m.p. 133–134° [1941].

1-(2-Bromo-4-hydroxyphenyl)ethanone[61791-99-9] $C_8H_7BrO_2$ mol.wt. 215.05

Syntheses

– Obtained (by-product) by Fries rearrangement of 3-bromophenyl acetate with aluminium chloride without solvent at 45° (10%) [1942].

– Also refer to: [1943,1944] and [1945] (Japanese patent).

m.p. 85–89° [1942].

1-(2-Bromo-6-hydroxyphenyl)ethanone[55736-69-1] $C_8H_7BrO_2$ mol.wt. 215.05

Synthesis

– Preparation by diazotization of 2-amino-6-bromoacetophenone, followed by hydrolysis of the obtained diazonium salt (50%) [1865].

m.p. 106–108° [1865].

1-(3-Bromo-2-hydroxyphenyl)ethanone[1836-05-1] $C_8H_7BrO_2$ mol.wt. 215.05

Syntheses

– Preparation by diazotization of 5-amino-3-bromo-2-hydroxyacetophenone, followed by hydrolysis of the obtained diazonium salt (49%) [1817].

- Also obtained (by-product) by Fries rearrangement of 2-bromophenyl acetate with aluminium chloride without solvent at 120–140° (11–13%) [1817,1946,1947].
 - Also obtained by reaction of bromine on 2-hydroxyacetophenone with tert-butylamine in methylene chloride at –70° (12%) [1948] or in aqueous acetic acid [1821].
- m.p. 33° [1817], 30°5–32°5 [1949,1950]; b.p.₆ 140–145° [1946];
¹H NMR [1817], ¹³C NMR [1821], UV [1946,1947].

1-(3-Bromo-4-hydroxyphenyl)ethanone

[1836-06-2] C₈H₇BrO₂ mol.wt. 215.05

Syntheses

- Preparation by reaction of acetyl chloride on 2-bromo-phenol with aluminium chloride in refluxing carbon disulfide (86%) [1951].
 - Preparation by bromination of 4-hydroxyacetophenone (70%) [1952].
 - Preparation by diazotization of 3-amino-4-hydroxyacetophenone and replacement of the diazonium group by bromine (Sandmeyer reaction) (51%) [1953].
 - Preparation by Fries rearrangement of 2-bromophenyl acetate with aluminium chloride without solvent at 100–120° [1817,1946,1947,1954], (68%) [1817].
 - Also obtained by reaction of ammonium tribromide on 4-hydroxyacetophenone in methylene chloride–methanol mixture [1955].
 - Also refer to: [1828].
- m.p. 129° [1817], 125–128° [1951], 119–121° (anhydrous) [1952], 112° [1953], 97–99° (hydrate) [1952], 95° [1946], 93–94° [1955], 92–95° [1954];
¹H NMR [1817], UV [1946,1947].

1-(4-Bromo-2-hydroxyphenyl)ethanone

[30186-18-6] C₈H₇BrO₂ mol.wt. 215.05

Syntheses

- Preparation by Fries rearrangement of 3-bromophenyl acetate with aluminium chloride [1942,1956–1959],
 - without solvent, at 170–180° (85–88%) [1942,1956,1957];
 - in chlorobenzene, heating in a water bath [1959].
 - Also obtained (by-product) by Fries rearrangement of 2-bromophenyl acetate with aluminium chloride without solvent at 180° (6%) [1817] (intermolecular bromine migration).
 - Also refer to: [1960–1962].
- m.p. 43° [1959], 42–43° [1942,1956,1957]; ¹H NMR [1817], IR [1963].

1-(4-Bromo-3-hydroxyphenyl)ethanone[73898-22-3] $C_8H_7BrO_2$ mol.wt. 215.05

Synthesis

– Preparation by diazotization of 4-amino-3-hydroxyacetophenone and replacement of the diazonium group by bromine (Sandmeyer reaction) (36%) [1951].

m.p. 122–123° [1951].

1-(5-Bromo-2-hydroxyphenyl)ethanone[1450-75-5] $C_8H_7BrO_2$ mol.wt. 215.05

Syntheses

- Preparation by Fries rearrangement of 4-bromophenyl acetate with aluminium chloride without solvent between 110° and 160° [1805,1837,1946,1947,1964–1968], (84–91%) [1805,1946,1964,1968].
- Preparation by reaction of acetic acid on 4-bromophenol with boron trifluoride in a sealed tube at 120° (44%) [1969].
- Preparation by bromination of 2-hydroxyacetophenone in acetic acid [1792,1815,1821,1970], (63%) [1815].
- Also obtained by reaction of bromine on 2-hydroxyacetophenone with tert-butylamine in methylene chloride at –70° (17%) [1948].
- Also obtained by reaction of sodium ethoxide on 6-bromo-4-phenacylidene-flavene in refluxing ethanol [1971,1972].
- Also obtained (by-product) by Fries rearrangement of 2-bromophenyl acetate with aluminium chloride without solvent at 180° (6%) [1817].
- Also refer to: [1973,1974].

m.p. 62–63° [1946], 62° [1815], 61–62° [1792,1971,1972], 59–60° [1965,1975], 59° [1967], 57°4–59°2 [1970], 57°3 [1966], 56° [1969], 55–56° [1964], 43–44° [1968];

b.p.₇ 110–115° [1968], b.p.₂₀ 143° [1964], b.p.₂₀ 145–148° [1815];

¹H NMR [1817,1976], ¹³C NMR [1821,1976], IR [1963,1964], UV [1946,1947,1964];

pK_a [1977].

1-(2-Bromo-3,6-dihydroxyphenyl)ethanone[30095-76-2] $C_8H_7BrO_3$ mol.wt. 231.05

Synthesis

– Obtained from 5-bromo-6-hydroxy-2-methylchromone by alkaline degradation with 10% aqueous sodium hydroxide solution at reflux (22%) [1832].

m.p. 143–144° [1832];

¹H NMR [1832], IR [1832], UV [1832].

1-(3-Bromo-2,4-dihydroxyphenyl)ethanone[60990-39-8] $C_8H_7BrO_3$ mol.wt. 231.05

Syntheses

- Obtained by reaction of cupric bromide on resacetophenone in refluxing chloroform-ethyl acetate mixture (6%) [1978].
- Also obtained by reaction of acetic acid on 2-bromo-resorcinol with zinc chloride (Nencki reaction) (26%) [1840].
- Also obtained by saponification of 8-bromo-7-hydroxyflavone with 10% aqueous sodium hydroxide on a steam bath (14%) [1840].
- Preparation by bromination of resacetophenone in acetic acid with bromine in the presence of quinoline sulfate while cooling (90%) [1979] according to the method [1980] or in ethanol at -78° (43%) [1841].

m.p. 139° [1979], $134-135^\circ$ [1978], 133° [1840], $118-121^\circ$ [1841];
 1H NMR [1841,1978], IR [1841], MS [1841].

1-(3-Bromo-2,5-dihydroxyphenyl)ethanone[33857-20-4] $C_8H_7BrO_3$ mol.wt. 231.05

Syntheses

- Preparation from 3-bromo-2-hydroxyacetophenone by persulfate oxidation (Elbs reaction) [1949].
- Also obtained by hydrolysis of 8-bromo-6-hydroxy-2-methylchromone with a 10% aqueous solution of sodium hydroxide, heated on a sand bath [1831].
- Also obtained by reaction of bromine on quinacetophenone in acetic acid at r.t. [1831].
- Also refer to: [1854,1981].

N.B.: All the results of reference [1831] were erroneous [1832].

m.p. $142-144^\circ$ [1949], 132° [1831].

1-(3-Bromo-2,6-dihydroxyphenyl)ethanone[82320-47-6] $C_8H_7BrO_3$ mol.wt. 231.05

Syntheses

- Obtained by saponification of 8-acetyl-6-bromo-7-hydroxy-4-methylcoumarin with 10% aqueous sodium hydroxide solution at reflux (64%) [1982,1983].
- Also obtained by decarboxylation of 3-acetyl-5-bromo-2,4-dihydroxybenzoic acid with dilute acetic acid containing few drops of concentrated hydrochloric acid, at reflux (40%) [1982,1983].
- Preparation by reaction of 2-carboxyethyltriphenylphosphonium perbromide on 2,6-dihydroxy-acetophenone in tetrahydrofuran at r.t. [1984].

m.p. 143° [1982,1983], $140-142^\circ$ [1984]; 1H NMR [1984].

1-(4-Bromo-2,5-dihydroxyphenyl)ethanone

[52376-19-9]

 $C_8H_7BrO_3$ mol.wt. 231.05

Syntheses

- Preparation by reaction of boron tribromide on 4-bromo-2,5-dimethoxyacetophenone in methylene chloride at -70° (90%) [1985].
- Preparation by Fries rearrangement of 2-bromo-hydroquinone diacetate with aluminium chloride without solvent between 160° and 180° (66%) [1986], (25%) [1987].

m.p. 152° [1985], $148-149^\circ$ [1986], 132° [1987].**1-(5-Bromo-2,4-dihydroxyphenyl)ethanone**

[60965-25-5]

 $C_8H_7BrO_3$ mol.wt. 231.05

Syntheses

- Preparation by reaction of acetic acid on 4-bromoresorcinol with zinc chloride (Nencki reaction) [1890,1988].
- Preparation by bromination of resacetophenone in acetic acid at r.t. [1834].
- Preparation by bromination of resacetophenone with cupric bromide in refluxing chloroform-ethyl acetate mixture (26%) [1978].
- Preparation by saponification of 4-acetoxy-5-bromo-2-hydroxyacetophenone with sodium hydroxide in dilute methanol at r.t. (76-83%) [1836,1989].
- Also obtained by saponification of 3-benzoyl-6-bromo-7-hydroxyflavone with 10% ethanolic potassium hydroxide in a water bath [1840].
- Preparation by Fries rearrangement of 4-bromoresorcinol diacetate with aluminium chloride in boiling nitrobenzene [1836].

m.p. 171° [1836], $170-171^\circ$ [1978], 167° [1834,1840,1988], $165-170^\circ$ [1989]; 1H NMR [1978,1989].**1-(3-Bromo-2,4,6-trihydroxyphenyl)ethanone**

[155818-27-2]

 $C_8H_7BrO_4$ mol.wt. 247.05

Synthesis

- Preparation by reaction of cupric bromide on phloracetophenone in refluxing chloroform-ethyl acetate mixture [1845].

 1H NMR [1845].

1-(5-Bromo-2,3,4-trihydroxyphenyl)ethanoneC₈H₇BrO₄ mol.wt. 247.05

Syntheses

- Preparation by bromination of gallacetophenone in acetic acid with bromine in the presence of quinoline sulfate while cooling [1990], (95%) [1979] according to the method [1980].
 - Also obtained by reaction of acetyl chloride with 4-bromo-pyrogallol [1990].
- m.p. 186° [1979], 183° [1990].

1-(2-Chloro-3-hydroxyphenyl)ethanone[69240-96-6] C₈H₇ClO₂ mol.wt. 170.60

Syntheses

- Preparation by reaction of tert-butyl hypochlorite on 3-hydroxyacetophenone in chloroform at 15°, in subdued light (49%) [1859].
 - Also refer to: [1991] (compound **XVIIa**) and to [1992].
- m.p. 61–63° [1859]; ¹H NMR [1859], IR [1859].

1-(2-Chloro-4-hydroxyphenyl)ethanone[68301-59-7] C₈H₇ClO₂ mol.wt. 170.60

Syntheses

- Obtained (by-product) by Fries rearrangement of 3-chlorophenyl acetate with aluminium chloride [1958,1993,1994].
 - Preparation by reaction of acetyl chloride on 3-chloro-phenol with aluminium chloride (Friedel–Crafts reaction) [1958].
 - Also refer to: [1991] (compound **XVIIb**) and to [1992].
- m.p. 110° [1994].

1-(2-Chloro-5-hydroxyphenyl)ethanone[58020-38-5] C₈H₇ClO₂ mol.wt. 170.60

Syntheses

- Obtained by reaction of tert-butyl hypochlorite on 3-hydroxyacetophenone in chloroform at 15°, in subdued light (24%) [1859].
- Also refer to: [1995] (Japanese patent), [1991] (compound **XVIIc**) and to [1992].

1-(2-Chloro-6-hydroxyphenyl)ethanone[55736-04-4] $C_8H_7ClO_2$ mol.wt. 170.60

Synthesis

- Preparation by diazotization of 2-amino-6-chloro-acetophenone, followed by hydrolysis of the obtained diazonium salt (55%) [1865].
- The reference [1996] is erroneous. The compound above mentioned is, in reality, the 5-chloro-2-hydroxyacetophenone.
- Oil [1865], b.p._{0.5} 78–80° [1865].

1-(3-Chloro-2-hydroxyphenyl)ethanone[3226-34-4] $C_8H_7ClO_2$ mol.wt. 170.60

Syntheses

- Preparation by Fries rearrangement of 2-chlorophenyl acetate with aluminium chloride,
 - without solvent, between 110° and 180° (40–21%) [1817,1837,1947,1994,1997];
 - in tetrachloroethane at 70–80° [1866].
- Preparation in two steps: At first, by reaction of acetyl chloride on 2-chlorophenol with aluminium chloride in refluxing petroleum ether, one obtains the 2-acetoxy-3-chloroacetophenone (83%); the saponification of this keto ester leads to the 3-chloro-2-hydroxyacetophenone (93%) [1867,1871].
- Obtained by reaction of acetyl chloride on 2-chlorophenol with ferric chloride at r.t. (22%) [1998].
- m.p. 84° [1997], 55° [1994], 49–50° [1817], 48°⁵ [1866]. One of the reported melting points is obviously wrong.
- b.p.₆ 66–67° [1998], b.p.₁ 87–89° [1867,1871], b.p.₂₀ 148–153° [1866]; UV [1947,1998].

1-(3-Chloro-4-hydroxyphenyl)ethanone[2892-29-7] $C_8H_7ClO_2$ mol.wt. 170.60

Syntheses

- Preparation by reaction of acetyl chloride on 2-chlorophenol with aluminium chloride in refluxing carbon disulfide (98%) [1951].
- Preparation by diazotization of 3-amino-4-hydroxyacetophenone and replacement of diazonium group by chlorine (Sandmeyer reaction) [1953,1999], (84%) [1953].

- Preparation by Fries rearrangement of 2-chlorophenyl acetate with aluminium chloride without solvent [1797,1817,1947,1954,1994,1998], (60–66%) [1817,1998].
 - Preparation by Fries rearrangement of 2-chlorophenyl acetate with aluminium chloride in nitrobenzene at 100° (30%) [1994].
 - Preparation by Fries rearrangement of 2-chlorophenyl acetate with aluminium chloride in tetrachloroethane at 70–80° [1866].
 - Also obtained by reaction of acetyl chloride on 2-chlorophenol with ferric chloride [1823,1998,2000].
 - Also obtained (by-product) by reaction of acetyl chloride on 2-chloroanisole or 2-chlorophenetole with aluminium chloride [2001].
- m.p. 107–108° [1866], 107° [2001], 100–100.5 [1817], 96° [1823,1994,1999], 95° [1953], 94–95° [1998], 93° [1797], 92–95° [1951,1954];
¹H NMR [1817], IR [1866], UV [1947,1998]; pK_a [1977].

1-(3-Chloro-5-hydroxyphenyl)ethanone

[23164-97-8]

C₈H₇ClO₂ mol.wt. 170.60

Synthesis not yet described

- The reference [1947] is erroneous. In this one, the compound **4** is, in reality, the 5-chloro-2-hydroxyacetophenone.
- Also refer to: [2002].

1-(4-Chloro-2-hydroxyphenyl)ethanone

[6921-66-0]

C₈H₇ClO₂ mol.wt. 170.60

Syntheses

- Preparation by Fries rearrangement of 3-chlorophenyl acetate with aluminium chloride,
 - without solvent at 130–135° (74–75%) [2003,2004], between 135° and 200° [1784,1956,1993,1994,2003–2005], and 175–200° (85–89%) [1784,1956];
 - with solvent, at r.t., in nitrobenzene (88%) [2004], in tetrachloroethane (50%) [1994] or in chlorobenzene [1959].
- Also obtained by treatment of 4-chloroacetophenone with sodium trifluoroacetate in nitromethane–trifluoroacetic acid–trifluoroacetic anhydride mixture in the presence of a platinum electrode followed by treatment of the intermediate trifluoroacetate ester with 10% potassium hydrogen carbonate solution (51%) [2006] (hydroxylation of aromatic compounds).
- Preparation by reaction of methyl magnesium iodide on 4-chloro-2-hydroxybenzoyl chloride in ethyl ether, at –70°, followed by hydrolysis of the complex so obtained [2007].

m.p. 50–51° [1993], 26° [2005]. One of the reported melting points is obviously wrong.

b.p.₂ 96° [2004], b.p.₁₄ 119–122° [1784], b.p.₁₀ 120–122° [2003], b.p.₁₅ 121–124° [1956], b.p.₁₆ 126° [2005], b.p. 247° [1959]; IR [1784,1963], (Sadtler: standard n° 8980); pK_a [1977].

1-(4-Chloro-3-hydroxyphenyl)ethanone

[61124-56-9] C₈H₇ClO₂ mol.wt. 170.60

Syntheses

- Preparation by diazotization of 3-amino-4-chloroacetophenone (quantitative yield) [2007], (16–18%) [1951].
- Obtained by treatment of 4-chloroacetophenone with sodium trifluoroacetate in nitromethane–trifluoroacetic acid–trifluoroacetic anhydride mixture in the presence of a platinum electrode, followed by treatment of the intermediate trifluoroacetate ester with 10% potassium hydrogen carbonate solution (33%) [2006] (hydroxylation of aromatic compound).
- Preparation by reaction of pyridinium chloride on 4-chloro-3-methoxyacetophenone between 170° and 200° (40%) [1951].
- Preparation from 3-hydroxyacetophenone by chlorination of its 2,3-butylene ketal or its ethylene ketal using tert-butyl hypochlorite. The hydrolysis of these chloroketals with concentrated hydrochloric acid in tetrahydrofuran–water mixture gave 3-hydroxy-4-chloroacetophenone (94% and 48% yields, respectively) [1859].
- Also obtained by reaction of acetyl chloride on 2-chlorophenol with ferric chloride [1823].
- Also obtained (by-product) by reaction of tert-butyl hypochlorite on 3-hydroxyacetophenone in chloroform at 15° (6%) [1859].

m.p. 106–107° [1859], 103–104° [1951], 96° [1823]; ¹H NMR [1859], IR [1859].

1-(5-Chloro-2-hydroxyphenyl)ethanone

[1450-74-4] C₈H₇ClO₂ mol.wt. 170.60

Syntheses

- Preparation by Fries rearrangement of 4-chlorophenyl acetate with aluminium chloride without solvent between 110° and 200° [1837,1851,1867,1871,1947,1965,1967,1970,1994,1998,2008–2014], (90–100% yield) [1970,1994,1998,2008–2010,2012–2014].

- Preparation by Fries rearrangement of 4-chlorophenyl acetate with aluminium chloride,
 - in tetrachloroethane at 150–160° [1866];
 - in chlorobenzene, in a sealed tube and subjected to high power microwave irradiation for 2 min only (85%) [2013].
- Preparation by Fries rearrangement of 4-chlorophenyl acetate with boron trifluoride in acetic acid at 125°, in a sealed tube (91%) [1969].
- Preparation by photo-Fries rearrangement of 4-chlorophenyl acetate with potassium carbonate in hexane at r.t. (88%) [2015].
- Preparation by reaction of acetyl chloride on 4-chlorophenol with ferric chloride [1823,2000,2008].
- Preparation by reaction of acetyl chloride on 4-chlorophenol with aluminium chloride in refluxing petroleum ether, and saponification of the obtained keto ester, the 2-acetoxy-5-chloroacetophenone (90%) [1871].
- Preparation by reaction of acetic acid on 4-chlorophenol with boron trifluoride at 150°, in a sealed tube (94%) [1969].
- Preparation by diazotization of 5-amino-2-hydroxyacetophenone and replacement of the diazonium group by chlorine (Sandmeyer reaction) [2016].
- Also obtained (by-product) by heating 4-chlorophenyl 3,3-dimethylacrylate at 255–260°, in a sealed tube (4%) [2017].
- Also refer to: [1794] (compound **1b**); [1795] (compound **1a**); and to [1783] (compound **1d**).
 m.p. 72° [2010], 57° [2016], 56–57° [1994], 55° [1823,1998], 54° [1969,2011], 53°5–54°5 [2014], 53–54° [1965,2012], 53° [1866,2017], 52°5–53° [1975], 52°2–53°6 [1970], 52°5 [1967], 52–53° [2009], 52° [1851], 50–52° [2015];
 b.p.₂ 97–99° [2011], b.p.₁₂ 107–109° [1867,1871], b.p.₁₄ 125–126° [1969], b.p.₂₈ 126–128° [1871], b.p._{26–27} 134–136° [2009];
¹H NMR [1820,1976], ¹³C NMR [1976], IR [1963,2010],
 UV [1820,1947,1970,1998], fluorescence spectra [1820]; pK_a [1977].

1-(2-Chloro-3,4-dihydroxyphenyl)ethanone

[56961-48-9]

C₈H₇ClO₃

mol.wt. 186.59

N.B.: The titled compound seems, to our knowledge, to have never been prepared so far [2018]. However, in the various considered publications which mentioned the usage of this compound, for example [2019], it is always another substance that is used as starting material, namely [99-40-1].

As far as the titled compound is concerned, the same confusion occurs when consulting the *Chemical Abstracts Service, Registry Handbook*, Number Section, (1975 supplement, p. 2202RD) and the *Beilstein Institut zur Foerderung der Chemischen Wissenschaften* (Copyright 1988–2001), Beilstein Registry Number 4921697.

Both above mentioned documents use the same Registry Number [56961-48-9], though both compounds are different even if have the same raw formula C₈H₇ClO₃.

1-(2-Chloro-3,6-dihydroxyphenyl)ethanone

[52095-12-2] C₈H₇ClO₃ mol.wt. 186.59

Syntheses

- Preparation by reaction of aluminium chloride on 2-acetylquinone in acetone (87%) [2020].
- Preparation by reaction of hydrochloric acid on 2-acetylquinone in benzene (89%) [2020].

m.p. 94–96° [2020]; ¹H NMR [2020], IR [2020].

1-(2-Chloro-4,5-dihydroxyphenyl)ethanone

[69240-97-7] C₈H₇ClO₃ mol.wt. 186.59

Synthesis

- Refer to: [1991] (compound **XVIIId**).

1-(3-Chloro-2,6-dihydroxyphenyl)ethanone

[87953-93-3] C₈H₇ClO₃ mol.wt. 186.59

Syntheses

- Preparation by reaction of sulfonyl chloride on 2,6-dihydroxyacetophenone in refluxing ethyl ether (90%) [2021].
 - Preparation by hydrolysis of 8-acetyl-6-chloro-7-hydroxy-4-methylcoumarin with 10% aqueous sodium hydroxide solution at reflux [1982,1983].
- Obtained by decarboxylation of 3-acetyl-5-chloro-2,4-dihydroxybenzoic acid [1982,1983].

- Preparation by reaction of thionyl chloride on 2,6-dihydroxyacetophenone in refluxing acetic acid (77%) [2022,2023].
m.p. 135° [2021], 134–135° [1982,1983].

1-(3-Chloro-4,5-dihydroxyphenyl)ethanone

[154638-86-5] $C_8H_7ClO_3$ mol.wt. 186.59

MS [1789].

Synthesis

- Obtained (by-product) by chlorination of 4-hydroxy-3-methoxyacetophenone (acetoguaiacone) in dioxane–water mixture at 40° (8%) [1789].

1-(4-Chloro-2,5-dihydroxyphenyl)ethanone

[90110-31-9] $C_8H_7ClO_3$ mol.wt. 186.59

m.p. 145° [1987,2024].

Syntheses

- Preparation by Fries rearrangement of 2-chloro-1,4-dihydroxyphenyl diacetate with aluminium chloride without solvent [1987,2024], at 160° (35%) [1987].
- Also refer to: [2025].

1-(5-Chloro-2,4-dihydroxyphenyl)ethanone

[90110-32-0] $C_8H_7ClO_3$ mol.wt. 186.59

- Preparation by reaction of acetic acid on 4-chlororesorcinol with zinc chloride at 145° (Nencki reaction) (31%) [1988].
- Preparation by reaction of acetic anhydride on 4-chlororesorcinol with polyphosphoric acid in the presence of one drop of concentrated sulfuric acid at reflux (12%) [2026].

– Also obtained by reaction of cuprous cyanide on 5-chloro-2,4-dihydroxy-3-iodoacetophenone in HMPT at 90° (conditions of the Rosenmund-von Braun reaction) (80%) [1848].

m.p. 176–177° [2026], 174° [1848], 171° [1988].

1-(3-Chloro-2,4,6-trihydroxyphenyl)ethanone

[130435-29-9] $C_8H_7ClO_4$ mol.wt. 202.59

m.p. 215–218° [2027]; 1H NMR [2027], MS [2027].

Synthesis

- Preparation by reaction of sulfuryl chloride on phloroacetophenone in ethyl ether at r.t. (86%) [2027].

1-(2-Fluoro-4-hydroxyphenyl)ethanone[98619-07-9] $C_8H_7FO_2$ mol.wt. 154.14

Synthesis

- Preparation by reaction of acetyl chloride on 3-fluorophenol with aluminium chloride in refluxing ethylene dichloride [2028].

 1H NMR [2028], IR [2028], MS [2028].**1-(2-Fluoro-5-hydroxyphenyl)ethanone**[145300-04-5] $C_8H_7FO_2$ mol.wt. 154.14

Synthesis

- Preparation by aromatization of 5-acetyl-4-fluoro-3-cyclohexenone promoted by cupric bromide–lithium bromide mixture in refluxing acetonitrile (70%) [2029,2030].

m.p. 97° [2029,2030]; 1H NMR [2030], IR [2030].**1-(2-Fluoro-6-hydroxyphenyl)ethanone**[93339-98-1] $C_8H_7FO_2$ mol.wt. 154.14

Syntheses

- Preparation by reaction of boron tribromide on 2-fluoro-6-methoxyacetophenone (**I**) in methylene chloride at -65° to -80° [2031,2032], (56%) [2032]. The precursor (**I**) was obtained by reaction of methyl magnesium iodide on 2-fluoro-6-methoxybenzonitrile in refluxing toluene (quantitative yield) [2031].
- Preparation from 2-fluoro-6-methoxybenzonitrile [2033] according to the procedure [2034].

oil [2031,2032]; b.p._{0.2} 170–172° [2031]; 1H NMR [2032,2033], ^{13}C NMR [2033], ^{19}F NMR [2033], MS [2033].**1-(3-Fluoro-2-hydroxyphenyl)ethanone**[699-92-3] $C_8H_7FO_2$ mol.wt. 154.14

Syntheses

- Obtained by Fries rearrangement of 2-fluorophenyl acetate with aluminium chloride without solvent at 115° [1869], 150° [2031] or at 180 – 190° (16%) [2035,2036].
- Also obtained by Fries rearrangement of 2-fluorophenyl acetate with aluminium chloride in chlorobenzene at 100° for 24 h (38%) [2037].

m.p. 75–77° [2031], 75–76° [1869], 72–73° [2035,2036];

 1H NMR [1869,2037], MS [1869].

1-(3-Fluoro-4-hydroxyphenyl)ethanone[403-14-5] $C_8H_7FO_2$ mol.wt. 154.14

Syntheses

- Preparation by reaction of pyridinium chloride on 3-fluoro-4-methoxyacetophenone at reflux (78%) [2038].
 - Preparation by reaction of acetyl chloride on 2-fluorophenol with aluminium chloride in refluxing carbon disulfide (74%) [1951].
 - Preparation by Fries rearrangement of 2-fluorophenyl acetate with aluminium chloride without solvent at 115° [1869] or 140° (51–52%) [2039–2042].
- m.p. 128–128°5 [1869], 127–129° [1951], 126–127° [2040], 125–126°6 [2042], 125° [2038];
 b.p.₂ 125–135° [2042];
¹H NMR [1869], IR [2040], MS [1869,2040].

1-(4-Fluoro-2-hydroxyphenyl)ethanone[1481-27-2] $C_8H_7FO_2$ mol.wt. 154.14

Syntheses

- Preparation by Fries rearrangement of 3-fluorophenyl acetate with aluminium chloride without solvent at 160–180° [2043–2045], (75%) [2045], (88–90%) [2043,2044].
 - Preparation by Fries rearrangement of 3-fluorophenyl acetate with alumina in methanesulfonic acid for 3 h at 160° (60%) [2046].
 - Preparation by Friedel–Crafts acylation of 3-fluorophenol with acetic acid in the presence of alumina in methanesulfonic acid for 2 h at 120° (63%) [2046].
 - Also refer to: [1893,2047,2048].
- m.p. 24° [2043,2044].

1-(5-Fluoro-2-hydroxyphenyl)ethanone[394-32-1] $C_8H_7FO_2$ mol.wt. 154.14

Syntheses

- Preparation by Fries rearrangement of 4-fluorophenyl acetate with aluminium chloride without solvent between 115° and 150° [1800,1869,1965,2044,2049–2051], (88–89%) [1965,2044,2049], (62–63%) [2050,2051].
- Preparation by reaction of acetic acid on 4-fluorophenol with boron trifluoride at 150°, in a sealed tube (89%) [1969].
- Preparation by reaction of pyridinium chloride on 5-fluoro-2-methoxyacetophenone at reflux (74%) [1799], (59%) [1970].

- Preparation by reaction of acetyl chloride on 4-fluoroanisole with aluminium chloride in carbon tetrachloride (44%) [2052,2053].
 - Also obtained (by-product) by reaction of acetyl chloride on 4-fluoroanisole with aluminium chloride in carbon disulfide [1799].
 - Also refer to: [2025].
- m.p. 57–58° [1965,1975], 57° [1799,1969], 56°4–57°6 [1970], 56°5–57° [2049], 56–57° [2052,2053], 56–56°5 [2051], 56° [2044], 55° [1869];
 b.p.₈ 65–66° [2050], b.p.₁₂ 94–99° [2051], b.p.₁₃ 103–104° [1799], b.p.₁₆ 105° [1969];
¹H NMR [1869,2052], ¹³C NMR [1821], UV [1970], MS [1869,2052];
 pK_a [1977].

1-(3-Fluoro-2,6-dihydroxyphenyl)ethanone

[117902-14-4] C₈H₇FO₃ mol.wt. 170.14

Synthesis

- Obtained (by-product) by reaction of boron tribromide on 2,6-dimethoxy-3-fluoroacetophenone in methylene chloride–methanol mixture (14%) [2054].

m.p. 134–135° [2054]; ¹H NMR [2054].

1-(4-Fluoro-2,5-dihydroxyphenyl)ethanone

[88772-48-9] C₈H₇FO₃ mol.wt. 170.14

Synthesis

- Preparation by Fries rearrangement of 2-fluoro-hydroquinone diacetate with aluminium chloride in nitrobenzene at 140° (66%) [1884].

m.p. 210° [1884]; ¹H NMR [1884], IR [1884].

1-(2-Hydroxy-3-iodophenyl)ethanone

C₈H₇IO₂ mol.wt. 262.05

Synthesis

- Preparation by diazotization of 3-amino-2-hydroxyacetophenone with sodium nitrite in dilute sulfuric acid at 0°, and replacement of the diazonium group by iodine with potassium iodide at 65° (Sandmeyer reaction) [1920,1965,2036], (50%) [1965].

m.p. 59°5–60°5 [1920], 58–59° [1965,2036].

1-(2-Hydroxy-4-iodophenyl)ethanone[39730-66-0] $C_8H_7IO_2$ mol.wt. 262.05

Syntheses

- Preparation by Fries rearrangement of 3-iodophenyl acetate with aluminium chloride [1942,1956–1959,2055],
- in chlorobenzene, at 125–135° (64%) [1956,1959];
 - in nitrobenzene, at 110–140° (40–45%) [1956,1957,2055].
- Preparation by diazotization of 4-amino-2-hydroxyacetophenone and replacement of the diazonium group by iodine (Sandmeyer reaction) (46%) [1956].
- Preparation by reaction of acetyl chloride on 3-iodoanisole with aluminium chloride in refluxing carbon disulfide (14%) [2055].
- Also refer to: [1848] (compound **6**).
- m.p. 54° [1959], 53–54° [1942,1956,1957], 52–54° [2055].

1-(2-Hydroxy-5-iodophenyl)ethanone[7191-41-5] $C_8H_7IO_2$ mol.wt. 262.05

Syntheses

- Preparation by saponification of ethyl 4-hydroxy-6-iodocoumarin-3-carboxylate with boiling 10% aqueous potassium hydroxide solution (92%) [1914,2056].
- Preparation by diazotization of 2-hydroxy-5-nitroacetophenone and replacement of the diazonium group by iodine (Sandmeyer reaction) [1920,1965,1975,2057], (75–80%) [1965,1975].
- Preparation by diazotization of 4-acetamido-2-methoxyacetophenone and replacement of the diazonium group by iodine (73%) [1975].
- Also obtained by reaction of iodine on 2-hydroxyacetophenone in aqueous sodium carbonate solution (37%) [1915], (14%) [1913,1914].
- Also obtained by Fries rearrangement of 4-iodophenyl acetate with aluminium chloride in nitrobenzene at 25° (13%) [2058].
- Also refer to: [1961].
- m.p. 91–92° [1965], 90–92° [1920,1975], 90° [2057], 88–89° [1914,2056], 67–69° [2058]. One of the reported melting points is obviously wrong. UV [1914].

1-(3-Hydroxy-2-iodophenyl)ethanone[348616-32-0] $C_8H_7IO_2$ mol.wt. 262.05

Synthesis

- Obtained by debenylation of 3-(benzyloxy)-2-iodoacetophenone (m.p. 53–55°) with boron tribromide in methylene chloride at –70° for 50 min (93%) [2059].
- m.p. 93–97° [2059]; 1H NMR [2059], ^{13}C NMR [2059], IR [2059], MS [2059].

1-(3-Hydroxy-4-iodophenyl)ethanone[73898-23-4] $C_8H_7IO_2$ mol.wt. 262.05

Synthesis

- Obtained by reaction of iodine–potassium iodide mixture in aqueous solution with 3-hydroxyacetophenone in concentrated aqueous ammonia at r.t. (15%) [1951].

m.p. 134–135° [1951].

1-(4-Hydroxy-2-iodophenyl)ethanone $C_8H_7IO_2$ mol.wt. 262.05

Syntheses

- Preparation by reaction of 48% hydrobromic acid on 2-iodo-4-methoxyacetophenone in acetic acid at 100°, in a sealed tube (45%) [2055].
- Also obtained (by-product) by reaction of acetyl chloride on 3-iodoanisole with aluminium chloride in refluxing carbon disulfide (9%) [2055].
- Also obtained in very small quantities by Fries rearrangement of 3-iodophenyl acetate with aluminium chloride in nitrobenzene at 90–95° [1942].

m.p. 131–132° [2055], 128–136° [1942].

1-(4-Hydroxy-3-iodophenyl)ethanone[62615-24-1] $C_8H_7IO_2$ mol.wt. 262.05

Syntheses

- Preparation by reaction of iodine and potassium iodide on 4-hydroxyacetophenone in aqueous ammonium hydroxide at r.t. [1951,1989,2060], (54–57%) [1951,1989].
- Preparation by adding an aqueous solution of potassium iodide to a solution of 4-hydroxyacetophenone in concentrated ammonium hydroxide at 35° (49%) [2061].
- Preparation by adding a 5% aqueous solution of sodium hypochlorite to a solution of 4-hydroxyacetophenone and sodium iodide in methanol at 15° (60%) [2062].
- Also refer to: [2063].

m.p. 155–156° [2062], 154–156° [1989], 153–155° [2061], 153–154° [1951]; 1H NMR [1989,2061,2062], IR [2061].

1-(2,4-Dihydroxy-3-iodophenyl)ethanone[71243-12-4] $C_8H_7IO_3$ mol.wt. 278.05

Syntheses

– Preparation by iodination of resacetophenone,

- with iodine and iodic acid in dilute ethanol at r.t. [1837,1910,1924,2064–2066], (82–84%) [1924,2065];
- with iodine in the presence of diisopropylamine in methanol at r.t. (14%) [2065];
- with potassium iodate and potassium iodide in dilute acetic acid [1890].

m.p. 164° [1924], 158–162° [2065], 158–159° [1890]; 1H NMR [2065].**1-(2,4-Dihydroxy-5-iodophenyl)ethanone**[62069-33-4] $C_8H_7IO_3$ mol.wt. 278.05

Syntheses

– Preparation by selective deiodination of 2,4-dihydroxy-3,5-diiodoacetophenone with stannous chloride in refluxing acetic acid (40%) [1923].

– Also obtained by reaction of aqueous iodine–potassium iodide solution on resacetophenone in 22% aqueous ammonia at r.t. (15%) [1924].

- Preparation by iodination of resacetophenone using iodine and iodic acid in dilute ethanol at r.t. [1837].
- Preparation by reaction of boron tribromide with 2,4-bis(benzyloxy)-5-iodoacetophenone (SM) in methylene chloride with stirring for 5 min at -70° (97%). SM was obtained from 2,4-bis(benzyloxy)acetophenone with iodine in the presence of silver trifluoroacetate in chloroform (89%) [2062].

m.p. 185–186° [1923], 184° [1924], 180–181° [2062]; 1H NMR [1923,2062].**1-(2-Hydroxy-5-nitrosophenyl)ethanone**[15516-61-7] $C_8H_7NO_3$ mol.wt. 165.15

Synthesis

– Refer to: [2067] (compound **XVII**).

UV [2067].

1-(4-Hydroxy-3-nitrosophenyl)ethanone[97871-70-0] $C_8H_7NO_3$ mol.wt. 165.15

Synthesis

– Preparation by direct nitrosation [2068] of 4-hydroxy-acetophenone with aqueous sodium nitrite solution in dilute hydrochloric acid between 0° and 5° [2069].

UV [2069]; pK_a [2069].**1-(2-Hydroxy-3-nitrophenyl)ethanone**[28177-69-7] $C_8H_7NO_4$ mol.wt. 181.15

Syntheses

- Preparation by reaction of boiling 5% aqueous potassium hydroxide on 8-nitrochromone (78%) [2070].
 - Also obtained by reaction of nitric acid on 2-hydroxy-acetophenone in acetic acid [2071], (30%) [2022,2023], (9–10%) [1926,2072], (2%) [1925,1965,2073].
 - Preparation by diazotization of 5-amino-2-hydroxy-3-nitroacetophenone, followed by decomposition of the obtained diazonium salt (90%) [2074], (56%) [2075].
 - Also obtained by reaction of boiling 20% aqueous hydrochloric acid on 2-hydroxy-3-nitro-acetophenone oxime [2076].
 - Also obtained by nitration and hydroxylation of acetophenone with pernitrous acid (2%) [2077].
 - Also refer to: [2078–2081].
- m.p. 103–104° [2070], 99–101° [1949], 98°5–99°5 [2072], 97–98° [2071], 90° [2077], 89–90° [2076], 84–85° [1965], 82–83° [1925,1926,2073–2075]; 1H NMR [2074,2078], IR [2074]; pK_a [2078].

1-(2-Hydroxy-4-nitrophenyl)ethanone[1834-91-9] $C_8H_7NO_4$ mol.wt. 181.15

Syntheses

- Obtained by Fries rearrangement of 3-nitrophenyl acetate with aluminium chloride without solvent at 125° [2082–2084], (20%) [2084], (32%) [2082].
- Also obtained by reaction of acetyl chloride on 3-nitro-phenol with aluminium chloride at 125° (16–18%) [2084].
- Claimed to be prepared by reaction of boiling 50% nitric acid on 2-hydroxy acetophenone (59%) [1927].

N.B.: No physical data is indicated in the patent for this compound. According to the rules dealing with aromatic substitution (Holleman rules) [1929] and electronic induction using the Hammett substituent constants [1930], the obtained product most likely is the 2-hydroxy-5-nitro-acetophenone.

m.p. 67–68° [2082,2085,2086], 67° [2084]; ¹H NMR [1963], IR [1963].

1-(2-Hydroxy-5-nitrophenyl)ethanone

[1450-76-6] C₈H₇NO₄ mol.wt. 181.15

Syntheses

- Obtained by nitration of 2-hydroxyacetophenone oxime, followed by treatment of this oxime with boiling 20% hydrochloric acid (73%) [2016,2076].
 - Preparation by reaction of acetyl chloride on 4-nitrophenol with aluminium chloride in nitrobenzene at 130° (44%) [1925].
 - Preparation by Fries rearrangement of 4-nitrophenyl acetate with aluminium chloride,
 - without solvent, at 140–150° (28%) [2087];
 - with solvent, in nitrobenzene, at 120–130° (20–35%) [1925,2083,2085,2088,2089].
 - Preparation by nitration of 2-hydroxyacetophenone,
 - in acetic acid (20–30%) [1925,1926,1965,2072,2073];
 - without solvent (59%) [1927].
 - Also obtained by reaction of acetic anhydride on 4-nitrophenol with aluminium chloride [2088].
 - Also obtained from mixture of 2-chloro-5-nitroacetophenone, sodium acetate and acetamide heated at 180–200° (49%) [1806].
 - Also refer to: [2090].
- m.p. 111–112° [2076], 102–103° [1926,2083,2085,2088], 101–102° [1965,2087], 99°5 [1806,1925], 98°5–99°5 [2072], 98–99° [2073]; ¹H NMR [1963,1976], ¹³C NMR [1976], IR [1963].

1-(3-Hydroxy-2-nitrophenyl)ethanone

[53967-72-9] C₈H₇NO₄ mol.wt. 181.15

Syntheses

- Preparation by nitration of 3-hydroxyacetophenone,
 - with concentrated nitric acid in concentrated sulfuric acid at –20° (35–45%) [1932];
 - with nitric acid (d = 1.4) in acetic acid at 70° (16%) [2091];
 - with cupric nitrate in acetic acid–acetic anhydride mixture between 12° and 15° (18%) [1932,2092].

- Preparation by demethylation of 3-methoxy-2-nitroacetophenone with pyridinium chloride at 200° [2093].

m.p. 138° [1932], 136° [2093], 135° [2091]; IR [2091], UV [1932,2091]; pK_a [2091].

1-(3-Hydroxy-4-nitrophenyl)ethanone

[89942-63-2] C₈H₇NO₄ mol.wt. 181.15

Syntheses

- Obtained (poor yield) by nitration of 3-hydroxyacetophenone,
 - with nitric acid (d = 1.4) in acetic acid, at 70° (10%) [2091];
 - with cupric nitrate in acetic acid–acetic anhydride mixture, between 12° and 15° (<1%) [1932].

m.p. 131–132° [2085], 71°5–72°5 [1932], 69–70° [2091]; IR [2091], UV [1932,2091]; pK_a [2091].

N.B.: The melting point 131–132° [2085] was erroneous. This melting point is the one of an isomer, the 3-nitro-4-hydroxyacetophenone (130–131°2) [2094].

1-(3-Hydroxy-5-nitrophenyl)ethanone

[70284-07-0] C₈H₇NO₄ mol.wt. 181.15

Syntheses

- Obtained in two steps: First, a mixture of 3-hydroxyacetophenone and dysprosium nitrate in ethyl acetate were refluxed (85–105°) for 75 min. Then, the isolated intermediate (C₈H₆NO₄)₃Dy (59%) was dissolved in 6 N hydrochloric acid (50%) [2095].
- Also refer to: [2096] (compound NP), [2097].

N.B.: Dy (III) salt [193693-92-4] [2095].

m.p. 122–124° [2095]; MS [2095].

1-(4-Hydroxy-3-nitrophenyl)ethanone

[6322-56-1] C₈H₇NO₄ mol.wt. 181.15

Syntheses

- Preparation by nitration of 4-hydroxyacetophenone [1933,1934,1953,1999,2091,2098–2100], (85%) [1953,1999], (70–75%) [1933,2099,2100], (56%) [2091].
- Also obtained by nitration of 4-hydroxyacetophenone,
 - using properties of dinitrogen tetroxide complexes of iron – Fe(NO₃)₃·1.5 N₂O₄ – and copper nitrates – Cu(NO₃)₂·N₂O₄ – in acetone for 5–10 min at r.t. (97–100%) [2101];

- by reaction of ferric nitrate nonahydrate – $\text{Fe}(\text{NO}_3)_3 \cdot 9 \text{H}_2\text{O}$ – in ethanol for 24 h at 65° (91%) [2102].
- Also obtained by reaction of peroxyxynitrite (ONOO^-) with 4-hydroxyacetophenone in aqueous phosphate buffer and acetonitrile solution [2103].
- Also obtained from aromatic nucleophilic substitution of 3,4-dichloroacetophenone with sodium nitrite in DMSO (40%) [2104].
- Preparation by reaction of acetyl chloride on 2-nitrophenol with aluminium chloride in nitrobenzene (46–47%) [1925,2094,2105,2106].
- Also obtained by reaction of acetyl chloride on 2-nitroanisole with aluminium chloride (11%) [2107].
- Preparation by Fries rearrangement of 2-nitrophenyl acetate with aluminium chloride in nitrobenzene (40–45%) [1925,2082], (30%) [2086,2094].
- Also obtained by Fries rearrangement of 2-nitrophenyl acetate [2108], which occurs under mild conditions on K 10 montmorillonite using microwave radiations [2109].
- Also obtained on heating 4-bromo-3-nitroacetophenone with acetamide–sodium acetate mixture between 175° and 200° (low yield) [2110].
- Also obtained by mononitration of 4-hydroxyacetophenone with a combination,
 - trichloroisocyanuric acid, sodium nitrite and wet silicone dioxide (50% w/w) in methylene chloride at r.t. for 20 min (97%) [2111];
 - magnesium bisulfate or sodium bisulfate monohydrate, sodium nitrite and wet silicone dioxide (50% w/w) in methylene chloride at r.t. for 3 h (80–82%) [2112].
- Also refer to: [2078,2113–2119].

N.B.: Na salt [42247-95-0] [2120].

1-(5-Hydroxy-2-nitrophenyl)ethanone

[30879-49-3] $\text{C}_8\text{H}_7\text{NO}_4$ mol.wt. 181.15

Syntheses

- Preparation by nitration of 3-hydroxyacetophenone,
 - with nitric acid ($d = 1.4$) in acetic acid, at 70° (31%) [2091], (15%) [2099];

- with cupric nitrate in acetic acid–acetic anhydride mixture, between 12° and 15° (20%) [1932,2092].

m.p. 148–149° [1932,2091,2099]; IR [2091], UV [1932,2091,2122]; pK_a [2091].

1-(2,4-Dihydroxy-3-nitrophenyl)ethanone

[89684-58-2] C₈H₇NO₅ mol.wt. 197.15

Syntheses

- Resacetophenone by treatment with cerium (IV) ammonium nitrate in acetic acid at 50–60° yields 2,4-dihydroxy-3-nitro-acetophenone (good yield) [2123], (23%) [1937].
- Preparation by reaction of acetic anhydride on 2-nitro-resorcinol with aluminium chloride in nitrobenzene at 100° [2124,2125], (53%) [2124].
- Also obtained by reaction of aqueous hydrochloric acid–acetic acid mixture on 5-acetyl-2,4-di-hydroxy-3-nitrobenzoic acid in a sealed tube at 140–145° [1938].
- Also refer to: [2126].

m.p. 103° [2125], 102° [2124], 93° [1938,1939,2127], 90–91° [1937,2123]; ¹H NMR [2123], IR [2123].

1-(2,4-Dihydroxy-5-nitrophenyl)ethanone

[3328-77-6] C₈H₇NO₅ mol.wt. 197.15

Syntheses

- Preparation by nitration of resacetophenone [2128,2129], (71%) [2130], (54–50%) [1836,2131], (44%) [2074].
- Also obtained by reaction of nitric acid on 3,3'-diacetyl-4,4',6,6'-tetrahydroxydiphenyl thioether in acetic acid at r.t. [1810].
- Also obtained (by-product) by reaction of acetic anhydride on 4-nitroresorcinol with aluminium chloride in nitrobenzene (6%) [1940].
- Also obtained by reaction of sodium hydroxide on 3-benzoyl-2,4-dihydroxy-5-nitroacetophenone in boiling aqueous ethanol [1936].
- Resacetophenone by treatment with cerium (IV) ammonium nitrate in hot acetic acid yields 2,4-di-hydroxy-5-nitroacetophenone (31%) [1937].

m.p. 145–147° [2074], 145° [1836], 143° [1937], 142° [1810,1936,1939,1940,2125,2128–2131].

¹H NMR [2074], IR [2074].

1-(2,5-Dihydroxy-3-nitrophenyl)ethanone

[30095-74-0]

 $C_8H_7NO_5$

mol.wt. 197.15

Syntheses

- Preparation by nitration of 3-acetyl-4-hydroxyphenyl acetate, followed by hydrolysis of the obtained keto ester with hydrochloric acid in refluxing methanol (61%) [1832].
- Also obtained by hydrolysis of 6-hydroxy-2-methyl-8-nitro-chromone with 10% aqueous sodium hydroxide [1831].
- Also obtained by nitration of quinacetophenone in acetic acid [1831].
- Also obtained by demethylation of 2-hydroxy-5-methoxy-3-nitroacetophenone with 48% hydrobromic acid in the presence of red phosphorous at 85–90° for 16 h under argon atmosphere (90%) [2074].

N.B.: All the results of reference [1831] were erroneous [1832].

m.p. 141–142° [1832], 136–138° [2074], 58° [1831]. One of the reported melting points is obviously wrong.

¹H NMR [1832,2074], IR [1832], UV [1832].

1-(2,6-Dihydroxy-3-nitrophenyl)ethanone

[25205-34-9]

 $C_8H_7NO_5$

mol.wt. 197.15

Syntheses

- Preparation by reaction of acetic anhydride on 4-nitro-resorcinol with aluminium chloride in nitrobenzene [1940,2125], (37%) [1940].
- Preparation by Fries rearrangement of 4-nitroresorcinol diacetate with aluminium chloride in nitrobenzene at 95–100° (38%) [2132].
- Also obtained by nitration of 2,6-dihydroxyacetophenone (77%) [2074], (27%) [1940].
- Also obtained by demethylation of 2,6-dimethoxy-3-nitroacetophenone with aluminium chloride or with boiling 10% aqueous sodium hydroxide (quantitative yield) [1940].
- Also obtained by reaction of 4-methoxy-2-methyl-8-nitrochromone or its 3-acetyl derivative with boiling 10% aqueous sodium carbonate (50% and 58% yields, respectively) [2133].
- Also refer to: [2134].

m.p. 119° [1940,2125], 116–117° [2132], 114–115° [2074]; ¹H NMR [2074], IR [2074].

1-(3,4-Dihydroxy-5-nitrophenyl)ethanone[116313-84-9] $C_8H_7NO_5$ mol.wt. 197.15

Syntheses

- Preparation from 4-hydroxy-3-methoxyacetophenone by nitration and subsequent demethylation of 4-hydroxy-3-methoxy-5-nitroacetophenone obtained,
 - with boiling concentrated hydrobromic acid [2135];
 - with concentrated hydrobromic acid in acetic acid (35%) [2136].
 - Preparation by demethylation of 3,4-dimethoxy-5-nitroacetophenone with concentrated hydrobromic acid at 140° [2135].
- m.p. 161–169° [2136], 159–160° [2135]; pK_a [2137].

1-(2,4,6-Trihydroxy-3-nitrophenyl)ethanone[81325-88-4] $C_8H_7NO_6$ mol.wt. 213.15

Syntheses

- Preparation by addition of a mixture of concentrated sulfuric acid and fuming nitric acid into a solution of phloroaceto-phenone in concentrated sulfuric acid and hexane mixture under cooling with an ice bath (70–80%) [2138].
 - Also obtained by adding acetic anhydride to a mixture of 1,3,5-trihydroxy-2-nitrobenzene and aluminium chloride in nitrobenzene and heating on a steam bath for 7 h (20%) [2139].
- m.p. 133–135° [2138], 131–132° [2139]; 1H NMR [2138,2139], IR [2138], MS [2138].

1-(3-Amino-5-bromo-2-hydroxyphenyl)ethanone[70977-85-4] $C_8H_8BrNO_2$ mol.wt. 230.06

Synthesis

- Preparation by reaction of 20% aqueous titanium trichloride solution on 5-bromo-2-hydroxy-3-nitroacetophenone in toluene, at r.t., in a sealed tube [1897,1898], (31%) [1897].
- m.p. 99–102° [1897,1898].

1-(5-Amino-3-bromo-2-hydroxyphenyl)ethanone (Hydrochloride)[30186-22-2] $C_8H_8BrNO_2, HCl$ mol.wt. 266.52

Synthesis

- Preparation by reduction of 3-bromo-2-hydroxy-5-nitro-acetophenone with an excess of tin in concentrated hydrochloric acid at 100° (82%) [1817].
- m.p. 200°(d) [1817].

1-(3-Amino-5-chloro-2-hydroxyphenyl)ethanone

[21312-85-6]

 $C_8H_8ClNO_2$ mol.wt. 185.61

Syntheses

- Preparation by reaction of acetic anhydride on 2-amino-4-chlorophenol with aluminium chloride in 1,2,4-trichloro-benzene at 120° [2140].
- Preparation by reaction of 75% hydrochloric acid solution on 3-acetamido-5-chloro-2-hydroxyacetophenone; the mixture was heated on a steam bath (98%) [2141].

m.p. 110–112° [2141]; UV [2141].

1-(3-Amino-5-chloro-2-hydroxyphenyl)ethanone (Hydrochloride)

[153404-65-0]

 $C_8H_8ClNO_2, HCl$ mol.wt. 222.07

Synthesis

- Preparation by reaction of acetic anhydride on 2-amino-4-chlorophenol hydrochloride with aluminium chloride in 1,2,4-trichlorobenzene at 120° (79%) [2140].

1-(5-Amino-4-chloro-2-hydroxyphenyl)ethanone $C_8H_8ClNO_2$ mol.wt. 185.61

Synthesis

- Preparation by reduction of 4-chloro-2-hydroxy-5-nitro-acetophenone with iron powder in dilute acetic acid at 95° (93%) [1784] (Béchamp reduction).

m.p. 117–118° [1784]; IR [1784].

1-[5-(Aminosulfonyl)-4-chloro-2-hydroxyphenyl]ethanone $C_8H_8ClNO_4S$ mol.wt. 249.67

Synthesis

- Preparation by reaction of ammonia gas on 4-chloro-5-chlorosulfonyl-2-hydroxyacetophenone in tetrahydrofuran at r.t. (57%) [1784].

m.p. 181–182° [1784].

1-(3-Amino-5-fluoro-2-hydroxyphenyl)ethanone[70977-84-3] $C_8H_8FNO_2$ mol.wt. 169.16

Synthesis

– Preparation by catalytic hydrogenation of 5-fluoro-2-hydroxy-3-nitroacetophenone in the presence of 5% Pd/C in ethanol at 25° [1897,1898], (99%) [1897].

m.p. 113–114° [1897].

1-(5-Amino-4-fluoro-2-hydroxyphenyl)ethanone $C_8H_8FNO_2$ mol.wt. 169.16

Synthesis

– Refer to: [1893] (Japanese patent).

1-(3-Amino-2-hydroxy-5-nitrophenyl)ethanone[70977-79-6] $C_8H_8N_2O_4$ mol.wt. 196.16

Synthesis

– Preparation by reaction of sodium sulfide on 2-hydroxy-3,5-dinitroacetophenone with ammonium chloride in refluxing methanol [1897,1898], (55%) [1898], (72%) [1897].

m.p. 172–175° [1898], 172–174° [1897].

1-(5-Amino-2-hydroxy-3-nitrophenyl)ethanone[108129-55-1] $C_8H_8N_2O_4$ mol.wt. 196.16

Synthesis

– Preparation by hydrolysis of 5-acetamido-2-hydroxy-3-nitroacetophenone (96%) [2074], (82%) [2075].

m.p. 141–142° [2075], 129–130° [2074]; 1H NMR [2074], IR [2074].

1-(2-Hydroxyphenyl)ethanone[118-93-4] $C_8H_8O_2$ mol.wt. 136.15**Syntheses**

– Preparation by Fries rearrangement of phenyl acetate,
with Lewis acids

- aluminium chloride,

with solvent:

- in petroleum ether at 25° (80%) [2142] (result not reproducible);
- in nitrobenzene [2143–2146] at 60° (26%) [2145];
- in nitroethane at 60° (12%) [2147];
- in chlorobenzene at 60–65° (23%) [2148] or in a sealed tube and subjected to high power microwave irradiation for 2 min only (30%) [2013].

without solvent:

- between 130° and 165° (63–82%) [1967,2013,2149–2153];
- between 120° and 180° (35–46%) [2143,2154–2159];
- between 90° and 200° (25–31%) [1797,1888,1914,2150,2160–2165];
- at 60° (7%) [2166];
- boron trifluoride etherate, in boiling benzene (70%) [2167];
- aluminium chloride–sodium chloride mixture at 240–250° (47%) [2168];
- boron trifluoride at 90° (43%) [2164];
- titanium tetrachloride at 110° (22%) [2169];
- scandium tris(trifluoromethanesulfonate), in nitromethane, at 50° (17%) [2170];
- zinc chloride between 125° and 160° (4–7%) [2164,2171];

with Protic acids

- p-Toluenesulfonic acid at 160° (25%) [2164];
- methanesulfonic acid at 160° (22%) [2164];
- polyphosphoric acid at 100° (20%) [2172];
- monohydrated sulfuric acid at 190° (20%) [2164];
- methanetrissulfonic acid at 160° (11%) [2164];
- phosphoric acid at 190° (8%) [2164];

with a cation exchange resin

- sulfonated polystyrene resin;
 - (Dowex 50 X 8) at 150° (8%) [2164];
 - (Dowex 50 WX 8) at 115° (6%) [2164];
- Nafion-XR 500 at 100° [2173];

with Zeolites molecular sieves

- Ga ZSM-5 at 250° (46%) [2174];

- ZSM-5 (Si/Al = 20) in sulfolane, at 180° (34%) [2175];
 - H-Nu-2 (unknown structure) at 170° (6%) [2176];
 - H-ZSM-5 (MFI structure) at 210° (4%) [2176].
 - HY (Si/Al = 3) at 400° (3%) [2177];
 - fluorided alumina (Al₂O₃-F; 3 % wt. F) at 400° (3%) [2177];
 - H-ZSM-5 (Si/Al = 45) at 400° (1%) [2177].
- Also obtained by Fries rearrangement of 4-trimethylsilylphenyl acetate with aluminium chloride without solvent at 140° (60%) [2178].
- Also obtained by reaction of triethylamine hydrochloride on phenyl acetate at 260°, in a sealed tube [2179].
- Also obtained (by-product) by Fries rearrangement of 2-bromophenyl acetate with aluminium chloride without solvent, at 180° (15%) [1817].
- Also obtained by reaction of acetic acid on phenol,
- with polyphosphoric acid at 100° (20%) [2172];
 - with zinc chloride (Nencki reaction) at reflux (2–5%) [2165,2171,2180].
- Also obtained by reaction of acetyl chloride on phenol, in nitrobenzene, between 45° and 60°,
- with aluminium chloride (14–15%) [2144,2181];
 - with titanium tetrachloride (11%) [2181].
- Also obtained by reaction of acetyl chloride on phenyl borate with aluminium chloride in refluxing carbon disulfide (54%) [2182].
- Also obtained by reaction of acetic anhydride on phenol, using a steam bath,
- with 70% HClO₄ (51%) [2183];
 - with aluminium chloride (38%) [2183];
 - with zinc chloride at 145–150° (36%) [2184].
- Also obtained by reaction of acetylacetone on phenyl benzoate with aluminium chloride in nitrobenzene, at 45° (3%) [2144].
- Preparation by diazotization of 2-aminoacetophenone and hydrolysis of the obtained diazonium salt [1819,2185,2186].
- Also obtained by demethylation of 2-methoxyacetophenone with hydrochloric acid, in a sealed tube (low yield) [2185] or at 130° [2187].
- Also obtained by hydroxylation of acetophenone,
- this reaction was accomplished by oxidation of acetophenone at platinum in methylene chloride–trifluoroacetic acid mixture containing tetraethylammonium fluoborate, at r.t. (85% yield) [2188];
 - this reaction was realized by treatment of acetophenone with sodium trifluoroacetate in nitromethane–trifluoroacetic acid–trifluoroacetic anhydride mixture in the presence of a platinum electrode, followed by treatment of the intermediate trifluoroester with 10% potassium hydrogen carbonate solution (50% yield) [2006];
 - the 2-hydroxyacetophenone was obtained by nitration and hydroxylation of acetophenone with pernitrous acid (2% yield) [2077].

- Also obtained by reaction of boiling dilute potassium hydroxide solution on flavone [2189].
- Also obtained by reaction of sodium ethoxide on chromone in refluxing ethanol [2190].
- Also obtained by reaction of aqueous potassium hydroxide on 4-hydroxycoumarin (benzotetronic acid) at 180° (80%) [2180].
- Also obtained by reaction of sodium ethoxide on 4-phenacylidene-flaven in refluxing ethanol [1971].
- Also obtained by reaction of aqueous potassium hydroxide solution on methyl or ethyl 4-hydroxycoumarin-3-carboxylate at 180° (80%) [2191].
- Also obtained by reaction of potassium hydroxide on the 2-hydroxyseneciophenone (2'-hydroxy-3,3-dimethylacrylophenone) in boiling ethanol (60%) [2017].
- Also obtained by UV light irradiation of phenyl acetate (photo-Fries rearrangement),
 - in hexane, at 25° (13%) [2015];
 - in the presence of potassium carbonate (78%) [2015];
 - in benzene (59%) [2192];
 - in cyclohexane, at 25° (43%) [2193];
 - in methanol (28%) [2192];
 - in water, at 25–30° (25–28%) [2194,2195];
 - in the presence of β -cyclodextrin (89%) [2192], (35%) [2195], (11%) [2194];
 - in the presence of methyl α -D-glucopyranoside (32%) [2194];
 - in ethyl ether, at 25° (24%) [2193];
 - in ethanol [2196,2197], at 30° (19%) [2196];
 - in isopropanol, at 25° (9%) [2193].
- Also obtained by UV light irradiation of 2-methoxyphenyl acetate in benzene (14%) [2198], in ethyl ether (4%) [2193].
- Also obtained (by-product) on UV light irradiation of 2-hydroxy- α -chloroacetophenone in ethanol (3%) [2199].

Isolation from natural sources

1-(3-Hydroxyphenyl)ethanone

[121-71-1] C₈H₈O₂ mol.wt. 136.15

Syntheses

- Preparation by diazotization of 3-aminoacetophenone, followed by hydrolysis of the obtained diazonium salt [1782,1932,2145,2186,2218–2223], (78–82%) [1782,1932].
- Synthesis of 3-hydroxyacetophenone by means of organocadmium derivatives (77%) [2224].
- Preparation by reductive deamination of 2-amino-5-hydroxyacetophenone [2225].
- Preparation by aromatization of 5-acetyl-2-cyclohexenone [2030] promoted by,
 - cupric bromide and lithium bromide in refluxing acetonitrile (75%);
 - Pd/C in refluxing xylene (40%).
- Also obtained by treatment of acetophenone with sodium trifluoroacetate in nitromethane–trifluoroacetic acid–trifluoroacetic anhydride mixture in the presence of a platinum electrode, followed by treatment of the intermediate trifluoroester with 10% potassium hydrogen carbonate solution (14%) [2006], (hydroxylation of aromatic compounds).
- Also obtained (trace) by UV irradiation of phenyl acetate in ethanol at r.t. [2196].
- Also obtained from 3-(allyloxy)acetophenone by cleavage of allyl group with bis(benzonitrile)-palladium (II) chloride in refluxing benzene (90%) [2226].
- Also refer to: [2227].

Isolation from natural sources

- From *Propolis* and *Populus nigra* bud exudate (compound **36**) [2228].
- From commercial wood vinegar liquor (*Cryptomeria japonica*) [2229].

N.B.: Toxic action of 3-hydroxyacetophenone to the ciliate *Tetrahymena pyriformis* [2230,2231].

1-(4-Hydroxyphenyl)ethanone[99-93-4] $C_8H_8O_2$ mol.wt. 136.15

Syntheses

– Preparation by Fries rearrangement of phenyl acetate

with Lewis acids

- aluminium chloride,

with solvent:

- in nitrobenzene at 20–25° [1914,2146,2151,2153] or at 50–60° [2013,2143,2145,2146,2151], (75–76%) [2013,2143,2151], (60–64%) [2145,2146];
- in chlorobenzene between 45° and 65° [2144,2148], (69%) [2148] or in a sealed tube and subjected to high power microwave irradiation for 2 min only (36%) [2013];
- in nitroethane at 60° (44%) [2147];
- in carbon disulfide at 45° (40%) [1953];
- in petroleum ether at 50° (20%) [2142];

without solvent:

- [1797,2143,2150,2152,2154,2157,2159,2162–2164,2166,2233,2234], but between 130° and 175° (40–60%) [2143,2150,2154,2159,2164,2233];
- aluminium chloride–sodium chloride mixture at 240–250° (10%) [2168];
- boron trifluoride at 90° (56%) [2164];
- scandium tris(trifluoromethanesulfonate), in nitromethane, at 50° (39%) [2170];
- titanium tetrachloride at 90–100° (34%) [2162];
- ferric chloride at 65° (25%) [2235];
- zinc chloride at 125° (8%) [2171];

with Protic acids

- hydrofluoric acid [2236–2238], between 20° and 100° (94%) [2237], (81%) [2236];
- polyphosphoric acid, between 20° and 100° (69%) [2239], (50–53%) [2172,2240], (44%) [2241];

with a cation exchange resin

- Nafion-XR 500, sulfonic acid type at 100° [2173];

with Zeolites molecular sieves

- ZSM-5, in sulfolane, at 180° (28%) [2175];
- H-ZSM-5 at 400° [2177] or at 210° (6%) [2176];
- H-Nu-2 at 170° (15%) [2176];
- HY (Si/Al = 3) or fluorided alumina (Al_2O_3 -F; 3 % wt. F), at 400° [2177].

- Also obtained by Fries rearrangement of 4-trimethylsilylphenyl acetate with aluminium chloride in refluxing carbon disulfide (55%) [2178].
- Also obtained (by-product) by Fries rearrangement of 2-bromophenyl acetate with aluminium chloride without solvent at 180° (8%) [1817].
- Preparation by reaction of acetic acid on phenol,
 - with boron trifluoride, between 30° and 80° (95%) [2242], (85%) [2243], (77%) [2244];
 - with polyphosphoric acid [2239–2241], between 70° and 100° (65–67%) [2239,2240];
 - with hydrofluoric acid, at 100° (61%) [2236];
 - with zinc chloride (Nencki reaction) [2171,2180,2186,2245], (11%) [2180];
 - with Nafion-XR 500, sulfonic acid type, at 100° [2173].
- Preparation by reaction of acetyl chloride on phenol,
 - with aluminium chloride, in nitrobenzene, between 45° and 60° (70–74%) [2181,2233], (50–55%) [2144,2246];
 - with titanium tetrachloride, in nitrobenzene, at 60° (70%) [2181];
 - with butanesulfonic acid, at 85–90° (23%) [2247];
 - with ferric chloride, in carbon disulfide [1823,2221], (21%) [1823];
 - with zinc chloride [2220].
- Also obtained by reaction of acetyl chloride on phenyl borate with aluminium chloride in refluxing carbon disulfide (35%) [2145].
- Preparation by reaction of acetic anhydride on phenol,
 - with 70% perchloric acid (20%) [2183];
 - with aluminium chloride (48%) [2248], (19%) [2183];
 - with zinc chloride at 145–150° (40%) [2184].
- Also obtained by reaction of phenyl 2-acetoxybenzoate on phenol with aluminium chloride at 180° (18%) [2249].
- Preparation by reaction of acetonitrile on phenol with triflic acid (trifluoromethanesulfonic acid) at r.t. (74%) [2250].
- Preparation by dealkylation of 4-ethoxyacetophenone [2251,2252], (70%) [2252] or 4-methoxyacetophenone (70%) [2252] with aluminium chloride between 140° and 180°.
- Also obtained by UV light irradiation of phenyl acetate (photo-Fries rearrangement),
 - in water, at 25–30° (24–25%) [2194,2195],
 - in the presence of β -cyclodextrin [2192,2194], (69%) [2194];
 - in the presence of methyl α -D-glucopyranoside (32%) [2194];
 - in benzene or methanol, at r.t. (38–39%) [2192],
 - in cyclohexane, ethyl ether, ethanol or isopropanol, at 25–30° (10–15%) [2193,2196,2197],
 - in hexane, at 25° (4%) [2015],
 - in the presence of potassium carbonate (10%) [2015].

- Also obtained by UV light irradiation of 4-methoxyphenyl acetate in ethyl ether, at 25° (7%) [2193].
- Also obtained by UV light irradiation of 4-hydroxy- α -chloroacetophenone in ethanol (26%) [2199].
- Also obtained by reaction of acetylacetone on phenyl benzoate with aluminium chloride in nitrobenzene at 45° (12%) [2144].
- Preparation by diazotization of 4-aminoacetophenone, followed by hydrolysis of the obtained diazonium salt [2253,2254].
- Also obtained by treatment of acetophenone with sodium trifluoroacetate in nitromethane–trifluoroacetic acid–trifluoroacetic anhydride mixture in the presence of a platinum electrode, followed by treatment of the intermediate trifluoroester with 10% potassium hydrogen carbonate solution (16%) [2006], (hydroxylation of aromatic compounds).
- Also obtained by reaction of stannous chloride on 4-hydroxyacetophenone 2,4-dinitro-phenylhydrazone in refluxing aqueous acetic acid–hydrochloric acid mixture (66%) [2255].

Isolation from natural sources:

- From the roots of *Paeonia broteroi* (Paeoniaceae) [2256].
- The Picein or 4-hydroxyacetophenone-D-glucoside has been isolated from leaves of *Picea Glehnii Masters* (Coniferae). This compound, by hydrolysis with dilute mineral acids or with emulsin leads to 4-hydroxyacetophenone [2257,2258].
- Hinokiflavone has been isolated from *Chamaecyparis obtusa* (Coniferae) [2259]. When treated with potassium hydroxide, Hinokiflavone produces 4-hydroxyacetophenone [2260].
- From spruce needles (*Picea abies* L. Karst) [2261].
- Also obtained by saponification of Apiin or Apigenin with boiling 25% aqueous sodium hydroxide (87%) [2262]. Apiin or 4',5,7-trihydroxyflavone-7-apiosylglucoside was isolated from parsley or from celery [2263,2264].

1-(2-Hydroxy-4-mercaptophenyl)ethanone[35204-52-5] $C_8H_8O_2S$ mol.wt. 168.22

Syntheses

- Preparation by reaction of stannous chloride with 2-acetyl-5-chlorosulfonylphenol in acetic acid previously saturated with gaseous hydrochloric acid (63%) [2270].
- Also refer to: [2271].

m.p. 60–62° [2270].

1-(2-Hydroxy-5-mercaptophenyl)ethanone[35204-45-6] $C_8H_8O_2S$ mol.wt. 168.22

Synthesis

- Refer to: [2272].

1-(2-Hydroxy-6-mercaptophenyl)ethanone[83080-88-0] $C_8H_8O_2S$ mol.wt. 168.22

Synthesis

- Preparation by reaction of 2 N aqueous sodium hydroxide on 2-dimethylcarbamylthio-6-hydroxyacetophenone in refluxing methanol (65%) [2273].

1-(4-Hydroxy-3-mercaptophenyl)ethanone[66264-55-9] $C_8H_8O_2S$ mol.wt. 168.22

Synthesis

- Preparation by reaction of stannous chloride dihydrate on 3-(chlorosulfonyl)-4-hydroxyacetophenone with gaseous hydrochloric acid in acetic acid at 25–30° (31%) [2274,2275].

m.p. 117–120° [2274,2275].

1-(2,3-Dihydroxyphenyl)ethanone[13494-10-5] $C_8H_8O_3$ mol.wt. 152.15

Syntheses

- Preparation by reaction of acetic anhydride on pyrocatechol with 70% perchloric acid on a steam bath (58%) [2183], at 100° (4%) [2276].

- Preparation by demethylation of 2,3-dimethoxy-acetophenone [2277–2281], (73%) [2278], (50%) [2280], itself obtained by oxidation of 2,3-dimethoxyphenyl methyl carbinol [2277,2279–2281]. This “carbinol” was prepared either from 2,3-dimethoxybenzaldehyde by an organomagnesium synthesis [2277,2279,2280] or from 2,3-dimethoxycinnamic acid by Posner’s method [2280,2281].
 - Also obtained by acid hydrolysis of 8-hydroxyflavone [2280].
 - Also obtained by UV light irradiation of pyrocatechol monoacetate in ethanol at 30° (19–22%) [2196,2197,2282].
 - Also obtained (low yield) by degradation of an aqueous solution (pH 4.5) of D-xylose at 96° (0.5%) [2283].
 - Also obtained (low yields) by degradation of aqueous solutions (pH 3.5 and 4.5) of D-glucuronic acid at 96° (0.3% and 0.2% yields, respectively) [2283].
 - Also obtained from 3-acetyl-1-oxocyclohexane-2,3,6-triol, either on sublimation at 0.5 mm Hg (70% yield) or when heated in an aqueous solution (pH 4.5) and 96° (50% yield). The above triol was obtained in crystalline form (m.p. 149–150°) by reaction of D-glucuronic acid in aqueous solutions (pH 3.5 and 4.5) at 96° [2283].
 - Also obtained (by product) by UV light irradiation of 3-methyl-1,2-benzisoxazole in 96% sulfuric acid (10%) [2284,2285].
 - Also obtained by hydrolytic rearrangement of 2-acetoacetyl-2,5-dimethoxytetrahydrofuran in refluxing 0.1 N hydrochloric acid (88%) [2286], (52%) [2287].
 - Also obtained by hydrolysis of (2,2-dimethyl-1,3-benzodioxol-4-yl)acetone (m.p. 72–73°) with concentrated hydrochloric acid in refluxing ethanol under argon atmosphere (84%) [2288].
- m.p. 98–98°5 [2286], 98° [2196,2197,2278], 97–98° [2280,2282], 97° [2183], 96°5–97°5 [2284], 96–98° [2276,2283], 96–97° [2288], 95–96° [2287];
- ¹H NMR [2282,2284,2287,2288], ¹³C NMR [2288], IR [2284], UV [2284], MS [2284,2288].

1-(2,4-Dihydroxyphenyl)ethanone (*Resacetophenone*)

[89-84-9] C₈H₈O₃ mol.wt. 152.15

Syntheses

- Preparation by reaction of acetic acid on resorcinol,
 - with zinc chloride (Nencki reaction) [1833,1835,1838,2129, 2289–2296], (94%) [2294], (57–65%) [2129,2291,2292];
 - with boron trifluoride [2242,2297,2298], (85–94%) [2242, 2298];
 - with Amberlite IR-120 (a cation exchange resin, sulfonic acid type) (87%) [2026];
 - with polyphosphoric acid [2241,2299], (63%) [2299];
 - with 70% perchloric acid (33%) [2297].
- Preparation by reaction of acetonitrile on resorcinol,
 - with triflic acid (trifluoromethanesulfonic acid) (87%) [2250];
 - with zinc chloride (Hoesch reaction) [2300–2304], (77%) [2303], (70%) [2301].

- Preparation by reaction of acetic anhydride on resorcinol,
 - with boron trifluoride (91%) [2305];
 - with 70% perchloric acid (90%) [2183], (70%) [2306];
 - with Amberlite IR-120 (83%) [2026];
 - with zinc chloride at 145–150° (2%) [2184];
 - with a trace of concentrated sulfuric acid at 130° (75%) [2307].
- Preparation by reaction of acetyl chloride on resorcinol,
 - with aluminium chloride in nitrobenzene at r.t. (65%) [2308], (50%) [2309];
 - with Amberlite IR-120 (52%) [2026];
 - with zinc chloride [2310,2311].
- Preparation by Fries rearrangement of resorcinol monoacetate with 70% perchloric acid in acetic anhydride at r.t. (83%) [2183].
- Preparation by Fries rearrangement of resorcinol diacetate,
 - with Amberlite IR-120 (64%) [2026];
 - with aluminium chloride [2024,2312,2313], (63%) [2313], (60%) [2024];
 - with boron trifluoride etherate in benzene at reflux (60%) [2167];
 - with zinc chloride [2129,2314], (52%) [2314].
- Preparation by Fries rearrangement of 3-methoxyphenyl acetate with aluminium chloride without solvent at 180–185° (60%) [2024].
- Also obtained by UV light irradiation of resorcinol diacetate in methanol at 25° [2315].
- Also obtained by demethylation of 2-hydroxy-4-methoxyacetophenone,
 - with potassium hydroxide [2316];
 - with hydriodic acid [2316].
- Also obtained by reaction of concentrated sulfuric acid on resacetophenone diacetate [2312].
- Also obtained by reaction of potassium hydroxide on 4-methylumbelliferone [2317] or on 4-methylene-2-phenyl-4*H*-chromen-7-ol [2318].
- Also obtained by decarboxylation of 2-acetyl-3,5-dihydroxybenzoic acid with copper powder in quinoline at 220–230° [2319].
- Also obtained by decarboxylation of 3-acetyl-2,6-dihydroxybenzoic acid with dilute hydrochloric acid at reflux [2320,2321].
- Also obtained by decarboxylation of 5-acetyl-2,4-dihydroxybenzoic acid with dilute hydrochloric acid at 160–170°, in a sealed tube [2322].

Isolation from natural sources

- From Chinese Moutan Cortex, the root of *Paeonia suffruticosa* Andrews (Paeoniaceae) [2323].
- Also obtained by thermal decomposition of the resin from *Ferula pyramidata* (Kar. et Kir.) eug. kor. [2293].

m.p. 147° [1833,2242,2298], 146° [2306–2308], 145–146° [2293], 145° [2026,2300], 144–145° [2301,2305], 144° [2184], 143° [2297,2322], 142–144° [2291], 142–143° [2320,2324], 142° [2266,2278,2289,2290,2313,2314,2316,2325] [2129,2186,2204,2241,2299,2309], 141–142° [2317,2319], 141° [1835], 140–141° [2292], 138–140° [2250], 133–140° [2294];

b.p. 303–305° (d) [2129];

$d^{141^\circ} = 1.18$ [2220]; $n_D^{141^\circ} = 1.56467$ [2220];

$^1\text{H NMR}$ [2205,2250,2326,2327], $^{13}\text{C NMR}$ [1821,2219,2328,2329],

1-(2,4-Dihydroxyphenyl)ethanone- $^{13}\text{C}_2$

[74291-78-4]

$\text{C}_8\text{H}_8\text{O}_3$

mol.wt. 154.13

Synthesis

– Preparation by reaction of [1,2- $^{13}\text{C}_2$]acetyl chloride with resorcinol in nitrobenzene in the presence of aluminium chloride for 24 h at r.t. (65%) [2332].

1-(2,5-Dihydroxyphenyl)ethanone (*Quinacetophenone*)

[490-78-8]

$\text{C}_8\text{H}_8\text{O}_3$

mol.wt. 152.15

Syntheses

- Preparation by Fries rearrangement of hydroquinone diacetate,
- with aluminium chloride [1970,2024,2072,2333–2341], (91%) [2337], (76%) [2072,2341], (63–77%) [2333,2334,2340], (55–60%) [1970,2024,2336,2338];
 - with zinc chloride in refluxing acetic acid (quantitative yield) [2342];
 - with boron trifluoride etherate in benzene at reflux (65%) [2167].
- Preparation by Fries rearrangement of hydroquinone diacetate with aluminium chloride in the presence of hydroquinone (54%) [2339].
- Also obtained by UV light irradiation of hydroquinone diacetate in methanol (35%) [2343].
- Preparation by Fries rearrangement of 4-methoxyphenyl acetate with aluminium chloride without solvent at 130° (40%) [2344].
- Preparation by Fries rearrangement of 4-(benzoyloxy)phenyl acetate with aluminium chloride without solvent at 125–130° (22%) [2344].
- Preparation by reaction of acetic acid on hydroquinone,
- with zinc chloride (Nencki reaction) [2000,2186,2289,2336,2342,2345–2347], (25–28%) [2345,2347];
 - with boron trifluoride [2242,2298,2348–2350], (95%) [2350], (66–70%) [2242,2298];
 - with Amberlite IR-120 or Zeokarb 225 (22%) [2026].

- Preparation by reaction of acetyl chloride on hydroquinone with aluminium chloride [2289,2336,2339], (35–40%) [2336,2339].
- Also obtained by reaction of acetic anhydride on hydroquinone,
 - with zinc chloride at 145–150° (76%) [2184];
 - with Amberlite IR-120 (27%) [2026].
- Also obtained (by-product) by reaction of acetic acid on 1,4-dimethoxybenzene with boron trifluoride at 70° [2298].
- Preparation by dealkylation of,
 - 2,5-dimethoxyacetophenone with aluminium bromide in refluxing carbon disulfide (81%) [2351];
 - 2-hydroxy-5-methoxyacetophenone with hydriodic acid [2352];
 - 2,5-diethoxyacetophenone or 5-ethoxy-2-hydroxyacetophenone with aluminium chloride [2289].
- Preparation by diazotization of 5-amino-2-hydroxyacetophenone, connected with hydrolysis of the obtained diazonium salt [2076,2353].
- Preparation by hydrolysis of keto esters further on,
 - 5-(benzoyloxy)-2-hydroxyacetophenone with concentrated sulfuric acid at r.t. [2344];
 - 5-acetoxy-2-hydroxyacetophenone,
 - with 5% aqueous sodium hydroxide (96%) [2338];
 - with a 5% solution of hydrogen chloride in methanol (75%) [2354];
 - with aluminium chloride in refluxing carbon disulfide (55%) [2338].
- Also obtained by reduction of 2-acetyl-1,4-benzoquinone,
 - with aqueous sodium hydrosulfite, in ethyl ether [2351];
 - with allyltrimethylstannane, in benzene (36%) [2355].
- Also obtained by reaction of acetaldehyde on 1,4-benzoquinone with sunlight, in a sealed tube (good yield) [2356].
- Also obtained (by-product) from 5-bromo-6-hydroxy-2-methylchromone by alkaline degradation with 10% aqueous sodium hydroxide solution at reflux (50%) [1832].
- Also obtained (poor yield) by alkaline degradation of a solution of D-xylose or D-glucose in 0.63 M sodium hydroxide at 96° under nitrogen [2276].
- Also obtained by UV light irradiation of 3-methyl-1,2-benzisoxazole in 96–98% sulfuric acid (52–57%) [2284,2285].
- Also obtained by heating 5'-cinnamyloxy-2'-hydroxyacetophenone at 220° (64%) [2357].
- Also obtained from 5-(allyloxy)-2-hydroxyacetophenone by cleavage of allyl group with bis(benzonitrile)palladium (II) chloride in refluxing benzene (89%) [2226].

- m.p. 206° [2336], 205–206° [2276,2354], 204°6–205°4 [1970], 204° [2350], 202°6–203°6 [2284], 202–204° [2026], 202–203° [2334,2338,2340], 202° [2076,2242,2278,2289,2298,2337,2339,2346,2352,2356] [2341,2343], 201–203° [2355], 201–202° [2266,2333,2342,2344,2345,2351], 201° [2186,2204], 200–201° [2347], 200° [2184], 198–200° [2358], 197°5–198°5 [2072], 196–198° [2226,2357];
 b.p._{0.01} 86° [2226]; pK_a [1977];
¹H NMR [2338,2348], (Sadtlter: standard n° 4286); ¹³C NMR [1821,2328],
 IR [2284,2338,2355], (Sadtlter: standard n° 10815);

1-(2,6-Dihydroxyphenyl)ethanone (*γ*-Resacetophenone)

[699-83-2] C₈H₈O₃ mol.wt. 152.15

Syntheses

- Preparation by hydrolysis of 8-acetyl-4-methyl-umbelliferone (8-acetyl-7-hydroxy-4-methylcoumarin) with aqueous sodium hydroxide solution at reflux (56–73%) [2213,2359–2361], (77–89%) [2362–2367], (89–100%) [2363,2368–2370].
- Preparation by hydrolysis of 8-acetyl-4-phenylumbelliferone with aqueous sodium hydroxide solution at reflux (33%) [2371].
- Preparation by demethylation of 2,6-dimethoxyacetophenone with aluminium chloride in toluene at 120° (24%) [2366,2367], (59%) [2372]. The 2,6-dimethoxyacetophenone was obtained from 2,6-dimethoxybenzotrile and methylmagnesium iodide.

From Microorganisms

- Isolation from *Daldinia concentrica* [2373].
- m.p. 157–158° [2372], 157° [2278,2369,2371], 156–157° [2359,2361,2366,2367], 155–156° [2213], 154–157° [2374], 154–156° [2370], 154–155° [2363–2365], 154° [2360], 152–154° [2368];

1-(3,4-Dihydroxyphenyl)ethanone

[1197-09-7] C₈H₈O₃ mol.wt. 152.15

Syntheses

- Preparation by Fries rearrangement of pyrocatechol diacetate with aluminium chloride in nitrobenzene between 75° and 95° [2282,2339,2376], (80%) [2339], (64%) [2282], (43%) [2376] or in chlorobenzene at 80° (83%) [2377].
- Also obtained by Fries rearrangement of guaiacol acetate with aluminium chloride in nitrobenzene at r.t. (30%) [2339] or without solvent between 20° and 50° (6%) [2378].

- Preparation by reaction of acetic acid on pyrocatechol,
 - with boron trifluoride in a sealed tube at 150° (43%) [2298];
 - with zinc chloride (Nencki reaction) [2171,2379], (20%) [2171];
 - with polyphosphoric acid (10%) [2299].
- Also obtained by reaction of acetic anhydride on pyrocatechol,
 - with perchloric acid at 100° (6%) [2276];
 - with zinc chloride at 145–150° (51%) [2184].
- Preparation by reaction of acetyl chloride with pyrocatechol with aluminium chloride at 140° [2380].
- Also obtained by UV light irradiation of pyrocatechol monoacetate in ethanol at 30° (18%) [2196,2197].
- Also obtained by reaction of 5% aqueous potassium hydroxide on Luteolin, at reflux [2381].
- Preparation by demethylation of acetovanillone,
 - with dilute hydrochloric acid in a sealed tube at 140–150° [2379];
 - using aluminium chloride and pyridine [2331,2382].
- Also obtained by reaction of zinc powder [2266,2383–2386] or stannous chloride [2384] and hydrochloric acid on 3,4-dihydroxy- α -chloroacetophenone (quantitative yield) [2266,2384], (45–49%) [2385].
- Also obtained by reaction of aluminium bromide on (3,4-methylenedioxy)acetophenone (acetopiperone) in nitrobenzene at r.t. (48%) [2387].
- Also obtained from 3,4-diacetoxyacetophenone [2383],
 - by heating with a concentrated solution of sodium carbonate;
 - by refluxing with 5% sulfuric acid;
 - by treatment with porcine pancreatic lipase in diisopropyl ether and n-butanol at 42–45° (80%) [2388,2389].
- Also obtained (by-product) by chlorination of acetoguaiacone in dioxane–water mixture at 40° (3%) [1789].
- Also obtained (poor yield) by alkaline degradation of a solution of D-xylose or D-glucose in 0.63 M sodium hydroxide at 96° under nitrogen (<1%) [2276].
- Also obtained from neutral glucose and fructose solutions heated at 120° [2390].

Isolation from natural sources

- From the needles of *Picea obovata* Ledeb. and *Picea koraiensis* Nakai (Pinaceae) [2391].
- This ketone was shown to occur in natural humic acids* and fulvic acids by hydrolysis with 2 N sodium hydroxide at 170° [2392]. Allomelanins* found in soils, coals and peat, resulting from the decomposition of organic matter, particularly dead plants [2393].
- By hydrolysis of its 3-O- β -D-glucopyranoside (*poungenoside*) (m.p. 200–202°) [2391].

N.B.: it was found to be an antimicrobial substance in coffee residue [2394].

m.p. 122° [2196,2197], 120° [2298], 119–121° [2385], 119°2–119°7 [2380], 118–120° [2276], 117–118° [2387], 117° [2331], 116–117° [2391], 116° [2171,2184,2299,2339,2376,2382,2384], 115–116° [2266,2282], 114–116° [2381], 114–115° [2383], 114° [2386], 110–112° [2377], 96–98° [2379];

1-(3,5-Dihydroxyphenyl)ethanone

[51863-60-6]

C₈H₈O₃ mol.wt. 152.15

Syntheses

- Preparation from 3,5-dimethoxyacetophenone (SM) by demethylation with aluminium chloride in refluxing chlorobenzene (71%) [2395]. The starting material (SM) was prepared by a three-step procedure from 3,5-dimethoxybenzoic acid.
- Preparation from 3,5-diacetoxyacetophenone by hydrolysis with 10% sulfuric acid at reflux (41%) [2396]. The starting ketone was prepared by reaction of methyl bromide on 3,5-diacetoxybenzoyl chloride in the presence of dimethyl cadmium.

m.p. 148° [2396], 147–148° [2395].

1-(2,3,4-Trihydroxyphenyl)ethanone (*Gallacetophenone*)

[528-21-2]

C₈H₈O₄ mol.wt. 168.15

Syntheses

- Preparation by Fries rearrangement of pyrogallol triacetate with aluminium chloride without solvent [2312,2335], (very good yield) [2335].
- Preparation by reaction of acetic anhydride on pyrogallol,
 - with Amberlite IR-120 or Zeokarb 225, at 160° (84%) [2026];
 - with few drops sulfuric acid at 130° (65%) [2307];
 - with zinc chloride at 145–150° (53%) [2184] or in the presence of acetic acid (58–63%) [2397,2398];
 - with sulfuric acid and benzene-1,3-disulfonic acid mixture at 135° (54%) [2399];
 - with 70% perchloric acid on a steam bath (44%) [2183].
- Preparation by reaction of acetyl chloride on pyrogallol with aluminium chloride [2309,2400–2402].
- Preparation by reaction of acetic acid on pyrogallol,

- with boron trifluoride at 28–30° (90%) [2242,2403] alone or in ethyl ether at 0° (90%) [2268];
 - with Amberlite IR-120 or Zeokarb 225 at 160° (75%) [2026];
 - with zinc chloride at 140–150° (Nencki reaction) (good yield) [2129,2186,2290,2404], (58%) [2405];
 - with 70% perchloric acid, at reflux (30%) [2297].
- Also obtained by dealkylation of 2,3-dihydroxy-4-methoxyacetophenone with aluminium chloride in refluxing chlorobenzene [2406].
- Also obtained by hydrolysis of 3,4-diacetoxy-2-hydroxyacetophenone [2343].
- By other method (90%), also refer to: [2407].
- Preparation by reaction of hydrogen peroxide on 3-formylresacetophenone in 1 N aqueous sodium hydroxide (79%) [2360].
- Also obtained by cleavage of 4-methylene-2-phenyl-4*H*-chromene-7,8-diol with boiling 10% potassium hydroxide [2318].
- m.p. 186° [2312], 173° [2183,2242,2297,2401,2403,2404], 172° [2186,2204], 171–173° [2184], 171–172° [2397,2398], 171° [2268,2400], 170° [2405], 169–171° [2026], 169–170° [2307,2343], 168° [2129,2266,2290,2360,2402,2406], 167° [2309];
- IR [2403], UV [2186,2268].

1-(2,3,6-Trihydroxyphenyl)ethanone

[85918-30-5]

C₈H₈O₄

mol.wt. 168.15

Syntheses

- Photolysis of 1,2,4-triacetoxybenzene gave a complex mixture from which 2-acetyl-3,6-diacetoxyphenol could be isolated. The triacetate of this one, by deacetylation afforded 3-acetyl-1,2,4-trihydroxybenzene [2343].
- Preparation by reaction of potassium persulfate on 2,6-dihydroxyacetophenone in aqueous sodium hydroxide solution at 15–20° (29%) [2408].
- Preparation by reaction of hydrogen peroxide on 3-formyl-2,6-dihydroxyacetophenone in 1 N aqueous sodium hydroxide (71–74%) [2360,2409].

m.p. 160° [2343], 157° [2360], 230° (d) [2408], 96° [2409]. These reported melting points are obviously wrong.

(The triacetate melted to 155° [2408]).

1-(2,4,5-Trihydroxyphenyl)ethanone

[1818-27-5]

C₈H₈O₄

mol.wt. 168.15

Syntheses

- Preparation by Fries rearrangement of 1,2,4-triacetoxybenzene,
- with aluminium chloride in nitrobenzene [2312,2410–2413], (30–43%) [2411–2413];

- with zinc chloride at 135–140° [2399,2414–2416], (49–53%) [2399,2414];
 - with p-toluenesulfonic acid in refluxing tetrachloroethane or benzene or without solvent at 135–140° (60%) [2399].
- Also obtained by reaction of potassium persulfate on resacetophenone (Elbs reaction),
- in aqueous solution of potassium hydroxide at r.t. (24–30%) [2417,2418];
 - with ferrous sulfate in aqueous sodium hydroxide at r.t. (18%) [2415].
- Preparation by reaction of acetonitrile on hydroxyquinol with zinc chloride (Hoesch reaction) [2411–2413,2419], (25%) [2411].
- Also obtained by reaction of acetic acid–acetic anhydride mixture on hydroxyquinol with zinc chloride at 140–150° (32%) [2411].
- Also obtained by reaction of acetic anhydride on hydroxyquinol with concentrated sulfuric acid at 135° (61–81%) [2399].
- Preparation by reaction of acetic anhydride on p-quinone with concentrated sulfuric acid alone or with benzenesulfonic acid, p-toluenesulfonic acid, dl-camphorsulfonic acid or benzene-m-disulfonic acid at 135° (53 to 70%) [2399].
- Also refer to: [2420].
- m.p. 208° [2416], 206–207° [2312,2411–2413], 206° [2419], 202–204° [2417], 200–202° [2414,2415];
¹³C NMR [2421], MS [2331].

1-(2,4,6-Trihydroxyphenyl)ethanone (*Phloroacetophenone*)

[480-66-0]

C₈H₈O₄ mol.wt. 168.15

Syntheses

- Preparation by reaction of acetic anhydride on phloroglucinol,
- with concentrated sulfuric acid at 130° (70%) [2307];
 - with boron trifluoride at 10° (62.5–68%) [1844];
 - with zinc chloride at 145–150° (50%) [2184];
 - with Amberlite IR-120 or Zeokarb 225 (cation exchange resins, sulfonic acid type) at 160° (39%) [2026].
- Preparation by reaction of acetonitrile on phloroglucinol,
- with zinc chloride (Hoesch reaction) [2268,2301,2422–2427], (93%) [2425], (74–87%) [2301,2422,2424,2426];
 - with triflic acid, at r.t. (40%) [2250].
- Preparation by reaction of acetyl chloride on phloroglucinol,
- with boron trifluoride, at 10° (62.5–68%) [1844];
 - with aluminium chloride, in nitrobenzene [2309,2312,2428], (25–30%) [2312,2428];
 - with ferric chloride, in a boiling water bath [2000].

- Preparation by reaction of acetic acid on phloroglucinol with zinc chloride (Nencki reaction), and then saponification of 5,7-dihydroxy-4-methylene-2-(2,4,6-trihydroxyphenyl)-4*H*-benzopyran first formed (76%) [2429].
 - Preparation by reaction of phenyl acetate on phloroglucinol with boron trifluoride etherate in refluxing benzene (30%) [2167].
 - Also obtained by Fries rearrangement of phloroglucinol triacetate with aluminium chloride in nitro-benzene at 27° (10%) [2312].
 - Also obtained by deacetylation of 4,6-diacetoxy-2-hydroxyacetophenone [2343].
 - Also obtained (high yields) by hydrolysis of undermentioned compounds with water at 160–170° [2430],
 - ethyl 5,7-dihydroxy-2,4-dioxo-chroman-8-carboxylate;
 - ethyl 3-ethoxycarbonylacetyl-2,4,6-trihydroxybenzoate;
 - diethyl 5-ethoxycarbonylacetyl-2,4,6-trihydroxy-isophthalate.
 - Also obtained by cleavage of 4-methylene-2-phenyl-4*H*-chromen-5,7-diol with boiling 10% potassium hydroxide (low yield) [2318,2431].
- m.p. 284–285° [2429], 280° [2318], 221–223° [1844], 220–222° [2026], 219° [2423], 218°5 [2425], 218–219° [2424,2426], 218° [2301,2309,2312,2430], 217–218° [2422], 216–218° [2250], 214–216° [2184], 214–215° [2432], 213–214° [2307,2428], 209–210° [2431];
- TLC [2433]; tautomerism [2434];
¹H NMR [2206,2250,2435], ¹³C NMR [2206,2219,2328,2436],
 IR [2435],
 UV [2268,2437], MS [2331].

1-(3,4,5-Trihydroxyphenyl)ethanone

[33709-29-4] C₈H₈O₄ mol.wt. 168.15

Syntheses

- Preparation by reaction of aluminium chloride on gallicetophenone trimethyl ether in refluxing chlorobenzene (71%) [2438].
 - Preparation from diethyl 3,4,5-triacetoxybenzoylmalonate by hydrolysis and decarboxylation with 10% sulfuric acid in acetic acid at 80° (92%) [2439].
- Also refer to: [2440,2441].

Isolation from natural sources

- This ketone was shown to occur in natural humic acids* and fulvic acids by hydrolysis with 2 N sodium hydroxide at 170° [2392]. Allomelanins* found in soils, coals and peat, resulting from the decomposition of organic matter, particularly dead plants [2393].
- m.p. 187–188° [2438]; 178–180° [2439]; IR [2392], MS [2392,2439].

1-(2,3,4,6-Tetrahydroxyphenyl)ethanone[63635-39-2] $C_8H_8O_5$ mol.wt. 184.15

Syntheses

- Preparation by reaction of acetic acid on 1,2,3,5-tetrahydroxybenzene by heating with zinc chloride (Nencki reaction) [2442,2443], (84–85%) [2443].
- Preparation by reaction of acetonitrile on 1,2,3,5-tetrahydroxybenzene (Hoesch reaction) [2444,2445], (65%) [2445].
- Also obtained by demethylation of 3,6-dihydroxy-2,4-dimethoxyacetophenone with aluminium chloride in boiling chlorobenzene (42%) [2446].
- Also refer to: [2442] (compound **I**); [2447] (compound **9**); [2448] (compound **2**); [2449] (compound **12**).

m.p. 243–244° [2446], 236–238° [2444,2445], 204–205° [2443];
¹H NMR [2445], IR [2445], MS [2445].

1-(2,3,5,6-Tetrahydroxyphenyl)ethanone $C_8H_8O_5$ mol.wt. 184.15

Syntheses

- Preparation by reaction of aluminium bromide on 2,3,5,6-tetramethoxyacetophenone in refluxing benzene (84%) [2450].
- Preparation by reaction of concentrated hydrochloric acid on 2,3,5,6-tetraacetoxyacetophenone in refluxing methanol (77%) [2450].

m.p. 134° [2450].

1-(2-Amino-3-hydroxyphenyl)ethanone[4502-10-7] $C_8H_9NO_2$ mol.wt. 151.17

Syntheses

- Preparation from 3-hydroxy-2-nitroacetophenone,
 - by catalytic hydrogenation in the presence of Raney nickel in ethanol (good yield) [2451] or in the presence of 5% Pt/C catalyst in THF under normal pressure at r.t. for 5 h [2452], (96%) [2453];
 - by reduction with iron filings in aqueous hydrochloric acid [2093] (Béchamp reduction).
- Preparation by reaction of hydriodic acid with 3-methoxy-2-nitroacetophenone in the presence of phosphorous. Simultaneous demethylation and reduction of the nitro group occur [2093].
- Also obtained as a side product by photolysis of 3-methylantranil in 98% sulfuric acid (6%) [2285,2454,2455].

- Also obtained from 2-azidoacetophenone, by thermal decomposition in 98% sulfuric acid (9%) [2454,2455] or by photolysis in dioxane/water/sulfuric acid mixture (3%) [2454,2455].
- Also refer to: [2456] (compound **8b**) and [2457,2458].

Isolation from natural sources

By alkaline degradation,

- of 3-hydroxykynurenine [2459–2461], (13%) [2462], itself obtained by gentle alkaline degradation of *Xanthommatin* [2461];
- of *Ommin* (SM) by heating with 2 N sodium hydroxide in a water bath for 4 h under oxygen atmosphere (53%) [2460]. SM was isolated from the eyes of silkworms (*Bombyx Mori*) and prawns (*Crangon vulgaris*);
- of *Ommatin D* [2459] according to the method [2462];
- of *Ommochromes* (*Xanthommatin*, *Rhodommatin*, *Ommatin D* and *Bombyx Ommin*) with 2 N sodium hydroxide by heating in a water bath for 2 h [2459].

Also refer to: [2463].

m.p. 185–187° [2453], 185° [2093], 184–185° [2455], 183° [2462];

paper chromatography [2459,2460];

¹H NMR [2453,2455], ¹³C NMR [2453], IR [2455,2462], UV [2122,2455,2459,2460],

MS [2455].

1-(2-Amino-3-hydroxyphenyl)ethanone (*Hydrochloride*)

C₈H₉NO₂ · HCl mol.wt. 187.63

Syntheses

– Obtained by reaction of gaseous hydrochloric acid on 2-amino-3-hydroxyacetophenone in ethanol–ethyl ether mixture (93%) [2451].

- Also refer to: [2458].

m.p. 215° (d) [2451].

1-(2-Amino-4-hydroxyphenyl)ethanone

[90033-64-0] C₈H₉NO₂ mol.wt. 151.17

Syntheses

– Preparation by reaction of aluminium chloride with 2-amino-4-methoxyacetophenone in methylene chloride (63%) [2464].

– Preparation from 3-hydroxyaniline using acetonitrile with boron trichloride as a catalyst [2465] or by classical Friedel–Crafts techniques [2466].

¹H NMR [2464].

1-(2-Amino-5-hydroxyphenyl)ethanone[30954-71-3] $C_8H_9NO_2$ mol.wt. 151.17

Syntheses

- Preparation by catalytic hydrogenation of 5-hydroxy-2-nitroacetophenone in the presence of platinum oxide in methanol (quantitative yield) [2091].
- Also obtained by UV light irradiation of,
 - 3-methyl-2,1-benzisoxazole (3-methylanthranil), in 98% sulfuric acid (83%) [2455], (87%) [2285,2454] or in 66% sulfuric acid at 80–90° (88–95%) [2225];
 - 3-methyl-1*H*-indazole, at 11–15°, in dilute sulfuric acid (26–28%) [2285,2467] or in methanol, water and sulfuric acid mixture (19%) [2285].
- Also obtained from 2-azidoacetophenone,
 - by thermal decomposition in 98% sulfuric acid (67%) [2454,2455];
 - by UV light irradiation in dioxane, water and sulfuric acid mixture (21%) [2454,2455].

m.p. 178–179° [2455,2467], 176–177° [2091,2225];

 1H NMR [2455,2467], IR [2455,2467], UV [2455,2467], MS [2455,2467].**1-(3-Amino-2-hydroxyphenyl)ethanone**[70977-72-9] $C_8H_9NO_2$ mol.wt. 151.17

Syntheses

- Preparation by catalytic hydrogenation of 2-hydroxy-3-nitroacetophenone in the presence of Pt/C in ethanol at 25° (90%) [1898].
 - Preparation by reaction of stannous chloride on 2-hydroxy-3-nitroacetophenone with hydrochloric acid [1965].
 - Preparation by hydrogenolysis of 3-amino-5-chloro-2-hydroxyacetophenone [2140].
 - Preparation by reduction of 2-hydroxy-3-nitroacetophenone (65%) [2075].
- m.p. 95–97° [1898], 95–96° [2075], 93–94° [1965,2036].

1-(3-Amino-2-hydroxyphenyl)ethanone (Hydrobromide)[136450-03-8] $C_8H_9NO_2, HBr$ mol.wt. 232.08

Synthesis

- Preparation by catalytic hydrogenation of 5-bromo-2-hydroxy-3-nitroacetophenone in presence of Pd/C in solution of methanol and methylene chloride mixture at r.t. (99%) [1805].

1-(3-Amino-2-hydroxyphenyl)ethanone (Hydrochloride)[90005-55-3] $C_8H_9NO_2, HCl$ mol.wt. 187.63

Synthesis

– Preparation by catalytic hydrogenolysis of 3-amino-5-chloro-2-hydroxyacetophenone hydrochloride at 25° in the presence of Pd/C in isopropanol (94%) [2140].

1-(3-Amino-4-hydroxyphenyl)ethanone[54255-50-4] $C_8H_9NO_2$ mol.wt. 151.17

Syntheses

– Preparation by hydrolysis of 3-acetamido-4-hydroxy-acetophenone with boiling aqueous hydrochloric acid at 50% HCl [2468] or 10 N HCl (78%) [2469].

– Preparation from 4-hydroxy-3-nitroacetophenone,

- by catalytic hydrogenation in acetone [1999,2098], (67%) [2098] or in the presence of 10% Pd/C in methanol at r.t. (95%) [2105];
- by reaction of tin in boiling concentrated hydrochloric acid [1953].

m.p. 127–128° [2469], 98–99° [2105], 98° [1999,2098,2468]. One of the reported melting points is obviously wrong.
oil [1953]; 1H NMR [2469], IR [2469].

1-(3-Amino-4-hydroxyphenyl)ethanone (Hydrobromide) $C_8H_9NO_2, HBr$ mol.wt. 232.08

Synthesis

– Refer to: [2105].

m.p. 250° (d) [2105].

1-(3-Amino-4-hydroxyphenyl)ethanone (Hydrochloride)[14347-14-9] $C_8H_9NO_2, HCl$ mol.wt. 187.63

Synthesis

– Obtained on saturating with dry hydrogen chloride gas an acetone-ethyl ether solution of the amine [2098].

m.p. > 250° (d) (anhydrous) [2098],
232° (monohydrate) [2105].

1-(4-Amino-2-hydroxyphenyl)ethanone[2476-29-1] $C_8H_9NO_2$ mol.wt. 151.17

Synthesis

– Preparation by hydrolysis of 4-acetamido-2-hydroxy-acetophenone with boiling aqueous hydrochloric acid at 50% HCl [2468] or at 15% HCl [1956,2470], (86%) [1956].

m.p. 130° [2468], 129–130° [1956], 122–123° [2470].

1-(4-Amino-2-hydroxyphenyl)ethanone (Hydrochloride)[51410-07-2] $C_8H_9NO_2, HCl$ mol.wt. 187.63

Synthesis

– Refer to: [1961].

1-(4-Amino-3-hydroxyphenyl)ethanone[54903-54-7] $C_8H_9NO_2$ mol.wt. 151.17

Syntheses

– Preparation from 6-acetyl-2-(3*H*)-benzoxazolinone by alkaline hydrolysis with boiling 10% aqueous sodium hydroxide solution (90–100%) [2469,2471].

– Also refer to: [2472] (compound **VI**) and [2456], (compound **8d**).

m.p. 170° [2469,2471]; 1H NMR [2469], IR [2469], UV [2122].**1-(5-Amino-2-hydroxyphenyl)ethanone**[50-80-6] $C_8H_9NO_2$ mol.wt. 151.17

Syntheses

- Preparation by hydrolysis of 5-acetamido-2-methoxy-acetophenone (80%) [1975].
- Preparation by hydrolysis of 5-acetamido-2-hydroxy-acetophenone with boiling aqueous hydrochloric acid solution [1965,2016,2057,2468,2470,2473,2474], (50%) [2016,2473], (84%) [1965].
- Preparation by reduction of 2-hydroxy-5-nitroacetophenone,
 - with stannous chloride [1965,2016,2076], (53%) [2076];
 - by electrolytic way in concentrated sulfuric acid [2475].
- The 5-amino-2-hydroxyacetophenone hydrochloride, by treatment with ammonia gave the keto-base [2353].

– Also obtained by electrolytic reduction of 3-nitroacetophenone in concentrated sulfuric acid [2107].

m.p. 121–122° [2076], 118° [2057,2353], 112–113°5 [1975], 112–113° [1965], 110° [2016,2107,2468,2475], 105° [2473,2474].

1-(5-Amino-2-hydroxyphenyl)ethanone (*Hydrochloride*)

[57471-32-6] $C_8H_9NO_2$, HCl mol.wt. 187.63

Synthesis

– Obtained by reaction of gaseous hydrochloric acid on 5-amino-2-hydroxyacetophenone in ethanol [1965,2057] or in ethyl ether [2473,2474].

m.p. 230–240° (d) [1965], 231° [2353], 155° (d) [2473,2474].

1-(5-Amino-2-hydroxyphenyl)ethanone (*Sulfate*)

2 $C_8H_9NO_2$, H_2SO_4 mol.wt. 400.41

H_2SO_4

Synthesis

– Easily obtained by reaction of sulfuric acid on 5-amino-2-hydroxyacetophenone in ethyl ether [2474].

m.p. 150° [2474].

1-(5-Amino-2,4-dihydroxyphenyl)ethanone

[5528-13-2] $C_8H_9NO_3$ mol.wt. 167.16

Synthesis

– Preparation from 2,4-dihydroxy-5-nitroacetophenone by reduction in acetone solution using Raney catalyst [2130].

m.p. 137–142° (d) [2130].

1-(5-Amino-2,4-dihydroxyphenyl)ethanone (*Hydrochloride*)

$C_8H_9NO_3$, HCl mol.wt. 203.61

Synthesis

– Prepared by passing dry hydrochloric acid in 2,4-dihydroxy-5-aminoacetophenone in acetone solution, and adding ethyl ether when needed for precipitation [2130].

m.p. >300° [2130].

1-(2,3,6-Trichloro-4-hydroxy-5-methoxyphenyl)ethanone[94649-69-1] $C_9H_7Cl_3O_3$ mol.wt. 269.51

Synthesis not yet described

- Identified in wheat and rye straw pulp bleaching and combined mill effluents [1787].
- Identified on control of effluent from the manufacturing of bleached pulp and paper from sugarcane bagasse [1788].

1-[2-Hydroxy-5-(trifluoromethyl)phenyl]ethanone[67589-15-5] $C_9H_7F_3O_2$ mol.wt. 204.15

Synthesis

- Preparation by reaction of acetyl chloride with p-(trifluoromethyl)phenol in hydrofluoric acid for 6 h to 100° under 3 atm (88%) [2476].

 1H NMR [2476], IR [2476].**1-[4-Hydroxy-3-(trifluoromethyl)phenyl]ethanone**[149105-11-3] $C_9H_7F_3O_2$ mol.wt. 204.15

Synthesis

- Obtained by heating to 180° under nitrogen a mixture of 4-methoxy-3-(trifluoromethyl)acetophenone and pyridinium chloride (39%) [2477].

m.p. 168–170° [2477].

1-[2-Hydroxy-5-(trifluoromethoxy)phenyl]ethanone[146575-64-6] $C_9H_7F_3O_3$ mol.wt. 220.15

Synthesis

- Preparation by reaction of pyridinium dichromate with 4-trifluoromethoxy-2-(α -hydroxyethyl)phenol in the presence of Celite in methylene chloride at r.t. (85%) [2478,2479].

1-[2,4,6-Trihydroxy-3-(trifluoromethyl)thio]phenyl]ethanone[66625-03-4] $C_9H_7F_3O_4S$ mol.wt. 268.21

Synthesis

- Preparation by reaction of trifluoromethanesulfonyl chloride with phloracetophenone in chloroform in the presence of a slight excess of pyridine, first at –40°, then at 60° for 3 h (33%) [2480].

m.p. 139–140° [2480]; 1H NMR [2480], IR [2480].

1-(3-Hydroxy-5-methyl-2,4,6-trinitrophenyl)ethanoneC₉H₇N₃O₈ mol.wt. 285.17

Synthesis

– Obtained by reaction of nitric acid on 3-hydroxy-5-methylacetophenone in acetic anhydride at 10° (23%) [2122].

m.p. 195–196° [2122].

1-[3-Bromo-5-(chloromethyl)-4-hydroxyphenyl]ethanone[107724-60-7] C₉H₈BrClO₂ mol.wt. 263.52

Synthesis

– Preparation by adding a methylene chloride solution of bromine to a methanol/methylene chloride solution of 3-(chloromethyl)-4-hydroxyacetophenone at 0° (85%) [2481].

m.p. 120–121° [2481]; ¹H NMR [2481], IR [2481], MS [2481].**1-[3-(Bromomethyl)-5-chloro-2-hydroxyphenyl]ethanone**[50317-56-1] C₉H₈BrClO₂ mol.wt. 263.52

Syntheses

– Preparation by heating 3,3'-diacetyl-5,5'-dichloro-2,2'-di-hydroxydibenzyl ether with an 48% aqueous hydrobromic acid solution during 8 h (61%) [2482].

– Preparation by [Quelet (bromomethylation) reaction] of 5-chloro-2-hydroxyacetophenone [2482] according to [2483].

m.p. 74–76° [2482].

1-(3-Bromo-2-hydroxy-4-methoxy-5-nitrophenyl)ethanone[134700-74-6] C₉H₈BrNO₅ mol.wt. 290.07

Synthesis

– Refer to: [2484] (compound **1d**).

1-(3-Bromo-6-hydroxy-2-methoxy-5-nitrophenyl)ethanone[7253-20-5] $C_9H_8BrNO_5$ mol.wt. 290.07

Syntheses

- Preparation by bromination of 2-hydroxy-6-methoxy-3-nitroacetophenone [1807,2485,2486], (44%) [1807].
- Obtained by reaction of nitric acid ($d = 1.4$) on 2,2'-di-hydroxy-3,3'-diacetyl-4,4'-dimethoxy-5,5'-dibromophenyl thioether, at 0° [2485].

m.p. 160–162° [1807], 156–157° [2485,2486]; IR [1807].

1-(5-Bromo-2-hydroxy-4-methoxy-3-nitrophenyl)ethanone $C_9H_8BrNO_5$ mol.wt. 290.07

Synthesis

- Preparation by reaction of nitric acid on 5-bromo-2-hydroxy-4-methoxyacetophenone in acetic acid at r.t. [1818].

m.p. 112–114° [1818].

1-(2,4-Dibromo-6-hydroxy-3-methylphenyl)ethanone[212494-38-7] $C_9H_8Br_2O_2$ mol.wt. 307.97

Synthesis

- Refer to: [2487].

1-(3,5-Dibromo-2-hydroxy-4-methylphenyl)ethanone[145666-17-7] $C_9H_8Br_2O_2$ mol.wt. 307.97

Syntheses

- Preparation by reaction of bromine with 2-hydroxy-4-methylacetophenone in aqueous acetic acid (68%) [2488].
- Also refer to: [1783] (compound **1b**).

m.p. 107–108° [2488]; 1H NMR [2488], IR [2488].

1-(3,5-Dibromo-2-hydroxy-6-methoxyphenyl)ethanone[16290-04-3] $C_9H_8Br_2O_3$ mol.wt. 323.97

Synthesis

– Preparation by reaction of bromine with 2-hydroxy-6-methoxyacetophenone in acetic acid at 35° (62%) [2489].

m.p. 90–90°5 [2489]; 1H NMR [2489].**1-(5-Chloro-2-hydroxy-3-iodo-4-methylphenyl)ethanone**[292144-86-6] $C_9H_8ClIO_2$ mol.wt. 310.52

Synthesis

– Preparation by iodination of 5-chloro-2-hydroxy-4-methyl-acetophenone with iodine (1 mol) and iodic acid (1 mol) in ethanol at 35–40° for 1.5 h (75–85%) [1802].

m.p. 76° [1802].

1-[3-Chloro-5-(chloromethyl)-2-hydroxyphenyl]ethanone[66883-87-2] $C_9H_8Cl_2O_2$ mol.wt. 219.07

Syntheses

– Preparation from 3-chloro-2-hydroxyacetophenone in acetic acid solution by introduction of the chloromethyl group into aromatic ring by treatment with formaldehyde and hydrogen chloride in the presence of zinc chloride (44%) [2490] (Blanc [2490] reaction).

– Also refer to: [2491,2492].

m.p. 145° [2490].

1-[5-Chloro-3-(chloromethyl)-2-hydroxyphenyl]ethanone[34987-36-5] $C_9H_8Cl_2O_2$ mol.wt. 219.07

Syntheses

– Preparation from 5-chloro-2-hydroxyacetophenone in ethylene dichloride solution by introduction of the chloromethyl group into aromatic ring by treatment with 37% formalin and hydrogen chloride in the presence of zinc chloride at 60–65° (76–68%) [2009,2493] [Blanc (Chloromethylation) reaction].

- Preparation by reaction of concentrated hydrochloric acid with 5-chloro-2-hydroxy-3-hydroxy-methylacetophenone for 5 days at 20° (95%) [2482].
- Also refer to: [2491,2492,2494].

m.p. 68°5–69° [2009], 67–68° [2482];

b.p., 130–135° [2009], b.p., 140–142° [2482]; IR [2493].

1-(2,3-Dichloro-4-hydroxy-6-methylphenyl)ethanone

[21472-87-7] $C_9H_8Cl_2O_2$ mol.wt. 219.07

Synthesis

- Obtained as a trace during the rearrangement of 1,2,3,3-tetrachlorocyclopropane-cis-1,2-diacetone by heating with a saturated solution of sodium bisulfate in acetic acid at 100° (<1%) [2495].

m.p. 107–108° [2495]; 1H NMR [2495], IR [2495].

1-(3,5-Dichloro-2-hydroxy-6-methylphenyl)ethanone

$C_9H_8Cl_2O_2$ mol.wt. 219.07

Syntheses

- Obtained by Fries rearrangement of 2,4-dichloro-5-methyl-phenyl acetate with aluminium chloride at 135° (21%) [2496].
- Obtained by reaction of pyridinium chloride on 3,5-dichloro-2-methoxy-6-methylacetophenone at 210° (21%) [2496].
- Also obtained by reaction of levulinic acid on 3,5-dichloro-2-hydroxy-6-methylacetophenone hydrazone in 1 N hydrochloric acid using a steam bath (15%) [2496].
- Also obtained by basic hydrolysis of 6,8-dichloro-2,5-dimethylchromone with 5% aqueous sodium hydroxide in refluxing methanol (4%) [2496].

m.p. 104–105° [2496].

1-(3,5-Dichloro-2,6-dihydroxy-4-methylphenyl)ethanone

[3361-23-7] $C_9H_8Cl_2O_3$ mol.wt. 235.07

Synthesis

- Preparation by reaction of sulfuryl chloride with 2,6-dihydroxy-4-methylacetophenone in ethyl ether (71%) [2497].

m.p. 164–165° [2497].

1-(2,3-Dichloro-4-hydroxy-5-methoxyphenyl)ethanone[154638-85-4] $C_9H_8Cl_2O_3$ mol.wt. 235.07

Synthesis

– Obtained by chlorination of acetoguaiacone in dioxane–water mixture at 40° (29%) [1789].

MS [1789].

1-(3,5-Dichloro-2-hydroxy-6-methoxyphenyl)ethanone[87953-94-4] $C_9H_8Cl_2O_3$ mol.wt. 235.07

Syntheses

- Preparation by reaction of chlorine on 2-hydroxy-6-methoxyacetophenone in chloroform at r.t. (50%) [1884].
- Preparation by reaction of sulfuryl chloride on 2-hydroxy-6-methoxyacetophenone in refluxing acetic acid [2021].
- Also obtained by reaction of dimethyl sulfate on 3,5-dichloro-2,6-dihydroxyacetophenone with potassium carbonate in refluxing benzene (very low yield) [2021].

m.p. 99° [1884], 97–98° [2021].

1-(2,6-Dichloro-3,4-dihydroxy-5-methoxyphenyl)ethanone[75322-34-8] $C_9H_8Cl_2O_4$ mol.wt. 251.07

Synthesis

– Preparation by chlorination of acetosyringone (main product) [2498].

Visible light absorption spectra [2498].

1-(2-Hydroxy-3,5-diiodo-4-methoxyphenyl)ethanone $C_9H_8I_2O_3$ mol.wt. 417.97

Syntheses

- Obtained by reaction of an aqueous iodine–iodic acid solution on paeonol in ethanol at r.t. (8%) [1924].
 - Also obtained by hydrolysis of 6,8-diiodo-7-methoxy-2-methylchromone by boiling 10% aqueous sodium hydroxide solution [1924].
- m.p. 98–99° [1924].

1-(2-Hydroxy-3,5-diiodo-6-methoxyphenyl)ethanone $C_9H_8I_2O_3$ mol.wt. 417.97

Syntheses

- Preparation by reaction of an aqueous iodine-iodic acid solution on 2-hydroxy-6-methoxyacetophenone in ethanol at r.t. (76%) [1924].
- Also obtained by hydrolysis of 6,8-diiodo-5-methoxy-2-methylchromone by boiling 10% aqueous sodium hydroxide solution [1924].

m.p. 111° [1924].

1-(3-Hydroxy-6-methoxy-2,4-dinitrophenyl)ethanone $C_9H_8N_2O_7$ mol.wt. 256.17

Synthesis

- Preparation by reaction of dimethyl sulfate on 3,6-di-hydroxy-2,4-dinitroacetophenone with sodium hydroxide in water at 60–65° (53%) [1941].

m.p. 94–96° [1941]; IR [1941], UV [1941].

1-(4-Hydroxy-1,3-benzodioxol-5-yl)ethanone

[23780-60-1]

 $C_9H_8O_4$ mol.wt. 180.16

Synthesis

- Obtained (poor yield) by reaction of methylene iodide with gallacetophenone in the presence of potassium carbonate in refluxing acetone for 48 h (9%) [2499,2500].

m.p. 85–86° [2499,2500]; TLC [2500];

column chromatography [2499];

 1H NMR [2499,2500], IR [2499,2500], UV [2499,2500].**1-(6-Hydroxy-1,3-benzodioxol-5-yl)ethanone**

[66003-50-7]

 $C_9H_8O_4$ mol.wt. 180.16

Syntheses

- Obtained by refluxing methylene iodide and 2,4,5-trihydroxyacetophenone in acetone in the presence of potassium carbonate (56%) [2501], (51%) [2420].
- Also obtained by Fries rearrangement of 5-acetoxy-1,3-benzodioxole with aluminium chloride in nitrobenzene at –10 to 7°, then 3 days at r.t. (5%) [2502].

- Also obtained by Friedel–Crafts acylation of 5-hydroxy-1,3-benzodioxole (*Sesamol*) with acetic anhydride in the presence of boron trifluoride etherate for 1 h at 80–90° (75%) [2503].
- Also obtained by reaction of acetonitrile with 5-hydroxy-1,3-benzodioxole (Hoesch reaction) [2501], (35%) [2504], (31%) [2505].
- Also obtained by reaction of acetyl chloride with sesamol methyl ether (b.p.₁₈ 110–114°) in the presence of aluminium chloride in ethyl ether at r.t. overnight (36%) [2504].
- Also obtained (poor yield) by reaction of acetic acid with sesamol in the presence of boron trifluoride for 3 h, then heating at 80–90° for 1.5 h (5%) [2504].
- Also refer to: [2504,2505].

m.p. 114° [2502], 113–114° [2504], 112° [2501], 111–112° [2503,2505];
¹H NMR [2501,2505], IR [2501,2504,2505], UV [2505], MS [2505].

1-(2-Bromo-6-hydroxy-4-methylphenyl)ethanone

C₉H₉BrO₂ mol.wt. 229.07

Synthesis

m.p. 50–52° [2506].

- Obtained by reaction of acetyl chloride with 3-bromo-5-methylanisole in the presence of aluminium chloride in refluxing carbon disulfide [2506].

1-(3-Bromo-2-hydroxy-5-methylphenyl)ethanone

[56609-15-5]

C₉H₉BrO₂ mol.wt. 229.07

Syntheses

- Preparation by Fries rearrangement of 2-bromo-4-methyl-phenyl acetate,
 - with aluminium chloride without solvent at 110° or in refluxing nitrobenzene (90%) [2507];
 - with zinc chloride or boron trifluoride in nitrobenzene at 100° (80–85%) [2507];
 - with ferric chloride or stannic chloride in nitrobenzene at 100° (55–70%) [2507].
- Preparation by reaction of bromine on 2-hydroxy-5-methylacetophenone in acetic acid at r.t. (quantitative yield) [2508], (65–70%) [1792,1815,2509,2510].
- Also refer to: [1783,1795,2511,2512].
- Preparation by reaction of N-bromosuccinimide with 2-hydroxy-5-methylacetophenone in DMF at r.t. (93–96%) [2513,2514].

N.B.: It is mentioned in the patent [2515] (page 26) that this hydroxyketone, the 1-(3-bromo-2-hydroxy-5-methylphenyl)ethanone (**I**) has been prepared by Fries rearrangement (AlCl₃/165°) of 4-bromo-3-methylphenyl acetate, itself obtained

from the 4-bromo-3-methylphenol. This is impossible. The Fries rearrangement of the above ester always leads to 1-(5-bromo-2-hydroxy-4-methylphenyl)ethanone (**II**). There are two possibilities:

- Either the ester used for Fries rearrangement was the 2-bromo-4-methylphenyl acetate and provides (**I**).
- Or the obtained hydroxyketone should be (**II**). This appears confirmed later on by obtaining 6-bromo-3,4-dihydro-2,2,7-trimethyl-2*H*-1-benzopyran-4-one with this hydroxyketone [2515].

m.p. 95° [2509], 94–95° [1792], 89° [1815], 88°5–89°5 [2508], 88–89° [2513,2514].

b.p.₂ 126–127° [2507]; p*K*_a [2516]; ¹H NMR [2513], MS [2513].

1-(3-Bromo-4-hydroxy-5-methylphenyl)ethanone

[127923-55-1] C₉H₉BrO₂ mol.wt. 229.07

Synthesis

– Preparation by reaction of bromine with 4-hydroxy-3-methyl-acetophenone in aqueous acetic acid, first at 5°, then at r.t. (89%) [1825].

m.p. 145–146° [1825].

1-(5-Bromo-2-hydroxy-3-methylphenyl)ethanone

[72422-80-1] C₉H₉BrO₂ mol.wt. 229.07

Syntheses

– Preparation by reaction of bromine with 2-hydroxy-3-methylacetophenone in acetic acid at r.t. (80%) [2517] (66%) [1792].

– Also refer to: [1795] (compound **1e**) and [1783] (compound **1a**).

m.p. 78–79° [2517], 77–78° [1792]; ¹H NMR [2517], IR [2517].

1-(5-Bromo-2-hydroxy-4-methylphenyl)ethanone

[50342-17-1] C₉H₉BrO₂ mol.wt. 229.07

Syntheses

– Preparation by reaction of bromine on 2-hydroxy-4-methyl-acetophenone in chloroform at <–10° (74%) [2518] or in acetic acid at r.t. (38%) [1792].

– Preparation by Fries rearrangement of 4-bromo-3-methyl-phenyl acetate with aluminium chloride without solvent at 165–180° [2515,2518], (80%) [2518].

– Also refer to: [1783].

m.p. 86° [1792], 81–82° [2515], 80° [2518]; ¹H NMR [2518].

1-(3-Bromo-2-hydroxy-4-methoxyphenyl)ethanone[39503-62-3] $C_9H_9BrO_3$ mol.wt. 245.07

Syntheses

- Preparation by reaction of bromine on 2-hydroxy-4-methoxyacetophenone with titanium tetrachloride in methylene chloride at r.t. (65%) [2519].
 - Also obtained (by-product) by reaction of cupric bromide with 2-hydroxy-4-methoxyacetophenone in refluxing dioxane (3%) [1978].
- m.p. 130–131° [2519], 120–122° [1978]; 1H NMR [1978,2519].

1-(3-Bromo-2-hydroxy-5-methoxyphenyl)ethanone[37113-61-4] $C_9H_9BrO_3$ mol.wt. 245.07

Syntheses

- Preparation by reaction of bromine on 2-hydroxy-5-methoxyacetophenone with aluminium chloride,
 - in chloroform at 10° (80%) [2520];
 - in carbon disulfide at r.t. (65%) [2521].
- m.p. 78–79° [2520], 76–76.5° [2521]; 1H NMR [2520], IR [2520].

1-(3-Bromo-2-hydroxy-6-methoxyphenyl)ethanone[37113-62-5] $C_9H_9BrO_3$ mol.wt. 245.07

Syntheses

- Preparation by diazotization of 3-amino-2-hydroxy-6-methoxyacetophenone and replacement of the diazonium group by bromine (Sandmeyer reaction) (28%) [2522], (19%) [2523].
 - Preparation by bromination of 2-hydroxy-6-methoxyacetophenone, with bromine [2522], in methylene chloride (76%) [2524], in chloroform [2520,2523,2525], (68%) [2523] or in acetic anhydride (44%) [2526] or with N-bromosuccinimide (41%) [2522].
- m.p. 102–103° [2525], 101–102° [2526], 101° [2524], 100–101° [2520,2522], 99–100° [2523]; 1H NMR [2520,2525,2526], IR [2520].

1-(3-Bromo-4-hydroxy-5-methoxyphenyl)ethanone[103653-14-1] $C_9H_9BrO_3$ mol.wt. 245.07

Syntheses

- Preparation by reaction of bromine with acetovanillone in aqueous acetic acid at 0°, then oil r.t. (54%) [2527].
 - Preparation by adding bromine to a solution of acetovanillone, sodium acetate and potassium bromide in aqueous methanol cooled to –60° [2528].
- m.p. 156–157° [2527], 155–157° [2528].

1-(4-Bromo-2-hydroxy-5-methoxyphenyl)ethanone

[90971-91-8]

 $C_9H_9BrO_3$ mol.wt. 245.07

Synthesis

– Preparation by reaction of methyl iodide on 4-bromo-2,5-dihydroxyacetophenone with potassium carbonate in refluxing methyl ethyl ketone [1987].

m.p. 115° [1987].

1-(5-Bromo-2-hydroxy-3-methoxyphenyl)ethanone $C_9H_9BrO_3$ mol.wt. 245.07

Syntheses

- Preparation by reaction of bromine on 2-hydroxy-3-methoxyacetophenone in the presence of sodium bromide in 1:1 aqueous ethanol at 25° (48%) [2215].
- Preparation by reaction of hydrobromic acid on 5-bromo-2,3-dimethoxyacetophenone in acetic acid (36%) [2215].

m.p. 108–109° [2215]; UV [2215].

1-(5-Bromo-2-hydroxy-4-methoxyphenyl)ethanone

[39503-61-2]

 $C_9H_9BrO_3$ mol.wt. 245.07

Syntheses

- Preparation by reaction of bromine on paeonol (2-hydroxy-4-methoxyacetophenone),
 - in methylene chloride at r.t. (quantitative yield) [2519];
 - in acetic acid at r.t. [1818,1836,2293,2529,2530], (60%) [1836];
 - in acetic anhydride (48%) [2526].
- Preparation by diazotization of 5-amino-2-hydroxy-4-methoxyacetophenone and replacement of the diazonium group by bromine (Sandmeyer reaction) [1836].
- Also obtained by reaction of dimethyl sulfate on 5-bromoresacetophenone in sodium hydroxide [1836].
- Also obtained as one of the products of bromination of paeonol acetate in carbon disulfide [2531].
- Also obtained as one of the products of reaction of cupric bromide on paeonol in refluxing dioxane (17%) [1978].
- Also obtained (by-product) by reaction of acetic anhydride on 4-bromoresorcinol dimethyl ether with aluminium chloride in refluxing carbon disulfide [2532].
- Also obtained (by-product) by reaction of N-bromosuccinimide on 2,4-dimethoxyacetophenone with benzoyl peroxide in refluxing carbon tetrachloride [2532].
- Also refer to: [2533].

m.p. 172–174° [2530], 172–172°5 [2519], 172° [1836], 171–172° [2532], 171° [2531], 170–172° [2526], 169–170° [1978], 169° [1818], 168–170° [2293]; ¹H NMR [1978,2519,2526].

1-(5-Bromo-4-hydroxy-2-methoxyphenyl)ethanone

C₉H₉BrO₃ mol.wt. 245.07

Synthesis

– Preparation by bromination of isopaeonol (4-hydroxy-2-methoxyacetophenone) in chloroform [1836].

m.p. 198° [1836].

1-(5-Bromo-2,4-dihydroxy-3-methoxyphenyl)ethanone

[62615-25-2]

C₉H₉BrO₄ mol.wt. 261.07

Synthesis

– Preparation by bromination of 2,4-dihydroxy-3-methoxy-acetophenone with bromine in 80% acetic acid at r.t. (64%) [1989].

m.p. 110°5–112°5 [1989]; ¹H NMR [1989].

1-(2-Chloro-6-hydroxy-4-methylphenyl)ethanone

[24490-25-3]

C₉H₉ClO₂ mol.wt. 184.62

Synthesis not yet described

– Refer to: [2534]; this sole reference mentioned for this compound (Chem. Abstr., **71**, 86368b (1969)) is erroneous. Actually, the ketone described as being the 2'-chloro-6'-hydroxy-4'-methylacetophenone is in fact the 5'-chloro-2'-hydroxy-4'-methylacetophenone in original publication.

1-(3-Chloro-2-hydroxy-5-methylphenyl)ethanone

[7507-88-2]

C₉H₉ClO₂ mol.wt. 184.62

Syntheses

- Preparation by Fries rearrangement of 2-chloro-4-methyl-phenyl acetate with aluminium chloride without solvent at 120° (quantitative yield) [2151].
- Obtained by reaction of aluminium chloride on a mixture of 2-chloro-4-methylphenyl acetate and 4-methylphenyl benzoate without solvent at 150° (33–37%) [2535].
- Obtained by reaction of aluminium chloride on a mixture of 2,4,6-trimethylphenyl acetate or 4-methylphenyl acetate and 2-chloro-4-methylphenyl benzoate without solvent at 150° (67% yield and small amounts, respectively) [2535].

m.p. 91° [2151,2535]; pK_a [2516].

1-(3-Chloro-2-hydroxy-6-methylphenyl)ethanone[85128-50-3] $C_9H_9ClO_2$ mol.wt. 184.62

Synthesis

– Refer to: [1881,1885] (ketone **13**).**1-(3-Chloro-4-hydroxy-5-methylphenyl)ethanone**[54556-95-5] $C_9H_9ClO_2$ mol.wt. 184.62

Syntheses

– Preparation by Fries rearrangement of 2-chloro-6-methylphenyl acetate in the presence of aluminium chloride without solvent at 140° (74%) [2536].

– Preparation by chlorination of 4-hydroxy-3-methylacetophenone [2536].

– Also refer to: [2537].

m.p. 123°5–124° [2536]; IR [2536].

1-(4-Chloro-2-hydroxy-3-methylphenyl)ethanone[198344-86-4] $C_9H_9ClO_2$ mol.wt. 184.62

Synthesis

– Refer to: [1873].

1-(4-Chloro-2-hydroxy-5-methylphenyl)ethanone[57051-51-1] $C_9H_9ClO_2$ mol.wt. 184.62

Synthesis

– Preparation by Fries rearrangement of 3-chloro-4-methylphenyl acetate with aluminium chloride without solvent at 125° [1814].

1-(4-Chloro-2-hydroxy-6-methylphenyl)ethanone[87239-37-0] $C_9H_9ClO_2$ mol.wt. 184.62

Synthesis

– Refer to: [2538].

1-(5-Chloro-2-hydroxy-3-methylphenyl)ethanone

[50343-12-9]

 $C_9H_9ClO_2$

mol.wt. 184.62

Syntheses

- Preparation by Fries rearrangement of 4-chloro-2-methyl-phenyl acetate with aluminium chloride without solvent at 120° (97%) [2482], (75%) [2539].
- Preparation by adding zinc dust to an acetic acid solution of 5-chloro-3-(chloromethyl)-2-hydroxyacetophenone at 100° (82%) [2482].
- Also obtained (by-product) by chloromethylation of 5-chloro-2-hydroxyacetophenone (5%) [2493].
- Also obtained (poor yield) by treatment of 5-chloro-3-(chloromethyl)-2-hydroxyacetophenone with zinc chloride in methylene chloride in the presence of water for 45 h at 60° (5%) [2493].

m.p. 70° [2539], 65–66° [2482], 63–64° [2493]; b.p.₁₆ 141° [2482].**1-(5-Chloro-2-hydroxy-4-methylphenyl)ethanone**

[28480-70-8]

 $C_9H_9ClO_2$

mol.wt. 184.62

Syntheses

- Preparation by reaction of acetic acid on 4-chloro-3-methylphenol with boron trifluoride at 70–100° (80–85%) [1969].
- Preparation by Fries rearrangement of 4-chloro-3-methyl-phenyl acetate with aluminium chloride without solvent between 110° and 155° [1867,1871,2011,2014,2151,2540,2541], (quantitative yield) [2014,2541], (64%) [1867,1871].
- Also obtained by reaction of acetyl chloride on 4-chlorothymol methyl ether with aluminium chloride in carbon disulfide at r.t. (8%) [2542].
- Also refer to: [2540] (compound CHMA).

m.p. 75°5 [2541], 71–72° [2151], 71° [2011], 70°5 [1969], 70° [2542], 69–70° [2014];

b.p.₁₅ 137° [2151], b.p.₂₁ 140–142° [1867,1871];¹H NMR [1820], UV [1820], fluorescence spectra [1820,2534].**1-[3-(Chloromethyl)-2-hydroxyphenyl]ethanone**

[87165-49-9]

 $C_9H_9ClO_2$

mol.wt. 184.62

Synthesis

- Preparation by reaction of polyoxymethylene with 2-hydroxyacetophenone in the presence of concentrated hydrochloric acid at 50–60° [2494].

m.p. 45° [2494]; ¹H NMR [2494], IR [2494].

1-[3-(Chloromethyl)-4-hydroxyphenyl]ethanone[24085-05-0] $C_9H_9ClO_2$ mol.wt. 184.62

Syntheses

- Preparation by introduction of the chloromethyl group into 4-hydroxyacetophenone by treatment with formaldehyde and hydrochloric acid [2543–2546], in the presence of zinc chloride [2547Blanc (Chloromethylation) reaction], (85–92%) [2543,2545,2546].
- Also refer to: [2548,2549].
- m.p. 160° (d) [2543,2546].

1-[4-(Chloromethyl)-2-hydroxyphenyl]ethanone[107223-42-7] $C_9H_9ClO_2$ mol.wt. 184.62

Synthesis

- Preparation by reaction of ethyl chloroformate with 4-(dimethylaminomethyl)-2-hydroxyacetophenone in toluene (22%) [2550].
- m.p. 34–37° [2550].

1-[5-(Chloromethyl)-2-hydroxyphenyl]ethanone[30787-43-0] $C_9H_9ClO_2$ mol.wt. 184.62

Syntheses

- Preparation by reaction of formaldehyde solution with hydrochloric acid on 2-hydroxyacetophenone at 25–30° (57–61%) [2551].
- Preparation by reaction of polyoxymethylene with 2-hydroxyacetophenone in the presence of hydrochloric acid at 50–60° [2494].
- m.p. 94–95° [2551].

1-(3-Chloro-2,6-dihydroxy-5-methylphenyl)ethanone[56581-46-5] $C_9H_9ClO_3$ mol.wt. 200.62

Synthesis

- Preparation by reaction of chlorine on 2,6-dihydroxy-3-methylacetophenone in acetic acid at r.t. [2552].
- m.p. 152° [2552];
- ¹H NMR [2552], IR [2552], MS [2552].

1-[5-Chloro-2-hydroxy-3-(hydroxymethyl)phenyl]ethanone[50317-52-7] $C_9H_9ClO_3$ mol.wt. 200.62

Syntheses

- Preparation by boiling an aqueous solution of 5-chloro-3-(chloromethyl)-2-hydroxyacetophenone for 6 h (73%) [2482].
- Also obtained as a labile intermediate product during the chloromethylation of 5-chloro-2-hydroxyacetophenone (<5%) [2493].

m.p. 82°5–84° [2482]; b.p.₁ 155° [2482].**1-(2-Chloro-4-hydroxy-3-methoxyphenyl)ethanone**[151340-06-6] $C_9H_9ClO_3$ mol.wt. 200.62

Synthesis

- Preparation from the acetate of 2-chlorovanillin by reaction with diazomethane and subsequent hydrolysis [2553,2554]

m.p. 97–98° [2553,2554];

¹H NMR [2553], ¹³C NMR [2553], MS [2553].**1-(2-Chloro-4-hydroxy-5-methoxyphenyl)ethanone**[69240-98-8] $C_9H_9ClO_3$ mol.wt. 200.62

Syntheses

- Obtained from the acetate of 6-chlorovanillin by reaction with diazomethane and subsequent hydrolysis [2553,2554], (11–17%) [2553,2555].
- Also refer to: [1991] (compound **XVIIe**).

m.p. 109–110° [2555], 107–108° [2553];

¹H NMR [2553], ¹³C NMR [2553], MS [2553].**1-(2-Chloro-6-hydroxy-4-methoxyphenyl)ethanone**[112954-19-5] $C_9H_9ClO_3$ mol.wt. 200.62

Syntheses

- Preparation by reaction of acetyl chloride with 3,5-di-methoxy-1-chlorobenzene in the presence of aluminium chloride (Friedel–Crafts reaction) (38%) [2556].

– Also refer to: [2557,2558].

¹H NMR [2556].

1-(3-Chloro-2-hydroxy-5-methoxyphenyl)ethanone[286931-53-1] $C_9H_9ClO_3$ mol.wt. 200.62

Synthesis

– Preparation by chlorination of 2-hydroxy-5-methoxyacetophenone with N-chlorosuccinimide in acetic acid containing magnesium acetate at r.t. for 24 h under nitrogen atmosphere (80%) [2559,2560].

m.p. 78–79° [2560]; 1H NMR [2560], MS [2560].

1-(3-Chloro-2-hydroxy-6-methoxyphenyl)ethanone[87953-91-1] $C_9H_9ClO_3$ mol.wt. 200.62

Syntheses

- Preparation by reaction of dimethyl sulfate on 3-chloro-2,6-dihydroxyacetophenone with potassium carbonate in refluxing benzene (38%) [2021].
- Preparation by diazotization of 3-amino-2-hydroxy-6-methoxyacetophenone with sodium nitrite in dilute sulfuric acid at 0°, and replacement of the diazonium group by chlorine with a solution of cuprous chloride in 2 N hydrochloric acid at 100° (Sandmeyer reaction) (37%) [1884].
- Also obtained (by-product) by reaction of sulfuryl chloride on 2-hydroxy-6-methoxyacetophenone in refluxing acetic acid [2021].
- Also obtained (crude product) by a one-pot acylation-deprotection of 4-methoxy-2-methoxy-methoxychlorobenzene (about 93%). No physical data available [2561].

m.p. 88°5–89° [2021], 82° [1884].

1-(3-Chloro-4-hydroxy-5-methoxyphenyl)ethanone[116296-35-6] $C_9H_9ClO_3$ mol.wt. 200.62

Syntheses

- Preparation from the acetate of 5-chlorovanillin by reaction with diazomethane and subsequent hydrolysis [2553–2555], (35%) [2553], (23%) [2555].
- Also obtained by chlorination of acetoguaiacone in dioxane–water mixture at 40° (21%) [1789].
- Preparation by adding sodium hypochlorite solution to a solution of acetovanillone and sodium acetate in methanol cooled to –60° [2528].
- Also obtained (by-product) by chlorination of apocynol in dioxane–ethyl ether mixture at 40° (3%) [1789].

m.p. 124–126° [2528], 124–125° [2555], 123–124° [2553]; MS [1789,2553].

1-(3-Chloro-6-hydroxy-2-methoxyphenyl)ethanone[87953-86-4] $C_9H_9ClO_3$ mol.wt. 200.62

Syntheses

- Preparation by reaction of sulfonyl chloride on 2-hydroxy-6-methoxyacetophenone in refluxing ethyl ether (93%) or in refluxing acetic acid (66%) [2021].
- Preparation by reaction of chlorine on 2-hydroxy-6-methoxyacetophenone in carbon tetrachloride at -20° (62%) [1884].

m.p. 31° [2021], $30-35^\circ$ [1884]; b.p._{0.001} 40° [2021], b.p.₂ 120° [1884].**1-(4-Chloro-2-hydroxy-5-methoxyphenyl)ethanone** $C_9H_9ClO_3$ mol.wt. 200.62

Synthesis

- Preparation by reaction of methyl iodide on 4-chloro-2,5-dihydroxyacetophenone with potassium carbonate in refluxing acetone [1987].

m.p. 130° [1987].**1-(4-Chloro-2-hydroxy-6-methoxyphenyl)ethanone**[140155-06-2] $C_9H_9ClO_3$ mol.wt. 200.62

Syntheses

- Preparation by reaction of acetyl chloride with 3,5-dimethoxy-1-chlorobenzene in the presence of aluminium chloride (Friedel-Crafts reaction) (38%) [2556].
- Also refer to: [2557,2558].

 1H NMR [2556].**1-(5-Chloro-2-hydroxy-4-methoxyphenyl)ethanone**[116265-99-7] $C_9H_9ClO_3$ mol.wt. 200.62

Syntheses

- Preparation by diazotization of 5-amino-2-hydroxy-4-methoxyacetophenone and replacement of diazonium group by chlorine (Sandmeyer reaction) [2530].
 - Preparation by reaction of acetyl chloride with 4-chloro-resorcinol dimethyl ether in the presence of aluminium chloride in ethylene dichloride (79%) [2562].
- Also refer to: [2563].
- m.p. $154-155^\circ$ [2562], $153-155^\circ$ [2530].

1-(2-Chloro-3,6-dihydroxy-5-methoxyphenyl)ethanone[34603-08-2] $C_9H_9ClO_4$ mol.wt. 216.62

Synthesis

– Preparation by metallation of 2-chloro-5-methoxyhydroquinone-bis-[tetrahydropyranyl-(2)-ether], followed by treatment of the intermediate aryllithium compound with acetic anhydride in tetrahydrofuran at r.t. (56%) [2564].

m.p. 100° [2564].

1-(3-Chloro-2,4-dihydroxy-6-methoxyphenyl)ethanone[200878-65-5] $C_9H_9ClO_4$ mol.wt. 216.62

Synthesis

– Refer to: [2565].

1-(3-Chloro-2,4,6-trihydroxy-5-methylphenyl)ethanone[23053-47-6] $C_9H_9ClO_4$ mol.wt. 216.62

Synthesis

– Preparation by reaction of sulfuryl chloride with methyl-phloroacetophenone in ethyl ether, first at 0°, then at r.t. (58%) [2566].

m.p. 223–224° [2566].

1-(3-Fluoro-2-hydroxy-6-methoxyphenyl)ethanone[117902-13-3] $C_9H_9FO_3$ mol.wt. 184.17

Synthesis

– Preparation by demethylation of 2,6-dimethoxy-3-fluoroacetophenone with boron tribromide (62%) [2054].

m.p. 87–88° [2054]; 1H NMR [2054].**1-(3-Fluoro-6-hydroxy-2-methoxyphenyl)ethanone**[117902-12-2] $C_9H_9FO_3$ mol.wt. 184.17

Synthesis

– Obtained (by-product) by demethylation of 2,6-dimethoxy-3-fluoroacetophenone with boron tribromide (6%) [2054].

 1H NMR [2054].

1-(2-Hydroxy-3-iodo-5-methylphenyl)ethanone[175655-10-4] $C_9H_9IO_2$ mol.wt. 276.07

Syntheses

- Preparation by iodination of 2-hydroxy-5-methyl-acetophenone with iodine (1 mol) and iodic acid (1 mol) in ethanol at 35–40° for 1.5 h (75–85%) [1802].
- Also refer to: [2567,2568].

m.p. 80° [1802]; 1H NMR [1802].**1-(2-Hydroxy-4-iodo-3-methylphenyl)ethanone**[40591-02-4] $C_9H_9IO_2$ mol.wt. 276.07

Synthesis

- Obtained (by-product) by Fries rearrangement of 3-iodo-4-methylphenyl acetate with aluminium chloride without solvent at 120° [1830].

m.p. 80° [1830]; 1H NMR [1830].**1-(4-Hydroxy-3-iodo-5-methylphenyl)ethanone**[292144-89-9] $C_9H_9IO_2$ mol.wt. 276.07

Synthesis

- Preparation by iodination of 4-hydroxy-3-methyl-acetophenone with iodine (1 mol) and iodic acid (1 mol) in ethanol at 35–40° for 1.5 h (75–85%) [1802].

m.p. 149° [1802]; 1H NMR [1802].**1-(2-Hydroxy-3-iodo-4-methoxyphenyl)ethanone** $C_9H_9IO_3$ mol.wt. 292.07

Syntheses

- Obtained from 8-iodo-7-methoxy-2-methylchromone by boiling 10% aqueous sodium hydroxide solution [1924].
- Preparation by adding an aqueous solution of iodine and iodic acid to an ethanolic solution of 2-hydroxy-4-methoxy-acetophenone (15%) [1924].

m.p. 152° [1924].

1-(2-Hydroxy-3-iodo-6-methoxyphenyl)ethanone[103440-57-9] $C_9H_9IO_3$ mol.wt. 292.07

Syntheses

- Preparation by reaction of iodine monochloride with 2-hydroxy-6-methoxyacetophenone in acetic acid at 17° (88%) [2524].

- Also obtained from 8-iodo-5-methoxy-2-methylchromone by boiling 10% aqueous sodium hydroxide solution [1924].
- Preparation by adding an aqueous solution of iodic acid and iodine to an ethanolic solution of 2-hydroxy-6-methoxyacetophenone (85%) [2569].
m.p. 115° [2524,2569], 57° [1924]; ¹³C NMR [2524], IR [2524].

1-(2-Hydroxy-5-iodo-4-methoxyphenyl)ethanone

$C_9H_9IO_3$ mol.wt. 292.07

Syntheses

- Obtained by reaction of an aqueous iodine–potassium iodide solution on paeonol in 22% aqueous ammonia; then, the mixture was poured into excess of dilute ice-cold sulfuric acid (13%) [1924].
- Also obtained by hydrolysis of 6-iodo-7-methoxy-2-methyl-chromone by boiling 10% aqueous sodium hydroxide solution [1924].
m.p. 161° [1924].

1-(4-Hydroxy-3-iodo-5-methoxyphenyl)ethanone

[103440-59-1]

$C_9H_9IO_3$ mol.wt. 292.07

Syntheses

- Preparation by reaction of iodine with acetovanillone in 0.8 N aqueous sodium hydroxide (94%) [2527].
- Preparation by adding an aqueous solution of iodine and potassium iodide to an aqueous solution of acetovanillone and sodium bicarbonate at 80° (82%) [2570].
- Preparation by adding potassium iodide and iodine to an aqueous solution of acetovanillone and sodium acetate at 90° [2528].
- Preparation by adding 0.1 M hydrogen peroxide to a solution of acetovanillone and potassium iodide in 0.025 M phosphate buffer (pH 3) (75%) [2571].
m.p. 179° [2527], 178–179° [2570,2572], 174–176° [2528];
¹H NMR [2571], MS [2571].

1-(6-Hydroxy-3-iodo-2-methoxyphenyl)ethanone

$C_9H_9IO_3$ mol.wt. 292.07

Synthesis

m.p. 116° [1924].

- Preparation by iodination of 2-hydroxy-6-methoxy-acetophenone with an aqueous iodine-iodic acid solution in ethanol at r.t. (68%) [1924].

1-(2,4-Dihydroxy-3-iodo-6-methoxyphenyl)ethanone[74047-32-8] $C_9H_9IO_4$ mol.wt. 308.07

Synthesis

– Preparation by adding an aqueous solution of iodine and periodic acid to an ethanolic solution of 2,4-dihydroxy-6-methoxyacetophenone at 60–70° [2064,2573,2574], (86%) [2574], (74%) [2573].

m.p. 198–200° [2574], 193–195° [2573];

 1H NMR [2574], ^{13}C NMR [2574], IR [2574], MS [2574].**1-(2,5-Dihydroxy-3-iodo-4-methoxyphenyl)ethanone** $C_9H_9IO_4$ mol.wt. 308.07

Synthesis

– Obtained from 2-hydroxy-3-iodo-4-methoxyacetophenone oxidised with potassium persulfate in aqueous sodium hydroxide solution (21%) [1924] (Elbs persulfate oxidation).

m.p. 174° (d) [1924].

1-(2-Hydroxy-3-methyl-4-nitrophenyl)ethanone[190730-40-6] $C_9H_9NO_4$ mol.wt. 195.17

Syntheses

- Preparation by reaction of acetyl chloride (1.3 mol) with 2-methyl-3-nitrophenol (1 mol) in nitrobenzene under nitrogen. The reaction mixture was warmed at 45°, a small amount of aluminium chloride was added and the reaction mixture was stirred at 45° for 1 h. After the addition of another portion of aluminium chloride (1 mol), the temperature rose to 60° and the reaction mixture was slowly heated at 120° and allowed to stirring for another 16 h (72%) [2575].
- Also refer to: [2576,2577].

m.p. 40–41° [2575]; 1H NMR [2575], IR [2575], MS [2575].**1-(2-Hydroxy-3-methyl-5-nitrophenyl)ethanone** $C_9H_9NO_4$ mol.wt. 195.17

Synthesis

– Preparation by reaction of nitric acid on 2-hydroxy-3-methylacetophenone in acetic acid at 0° (58%) [2578]; first at 0°, then 30° (72%) [1925].

m.p. 115–116° [2578], 114–114°5 [1925].

1-(2-Hydroxy-4-methyl-5-nitrophenyl)ethanoneC₉H₉NO₄ mol.wt. 195.17

Synthesis

– Preparation by reaction of nitric acid on 2-hydroxy-4-methylacetophenone in acetic acid first at 0°, then 30° (72%) [1925].

m.p. 99°5 [1925].

1-(2-Hydroxy-5-methyl-3-nitrophenyl)ethanone

[66108-30-3]

C₉H₉NO₄ mol.wt. 195.17

Syntheses

– Preparation by reaction of nitric acid on 2-hydroxy-5-methylacetophenone in acetic acid [1851,1852, 1925,2579], (90%) [1852], (64%) [1925].

– Preparation by reaction of potassium nitrate on 2-hydroxy-5-methylacetophenone in dilute sulfuric acid (77%) [2072].

– Also obtained by reaction of copper nitrate on 2-hydroxy-5-methylacetophenone in ice-cooled acetic anhydride solution (80%) [1851].

m.p. 135–136° [1852], 135° [1851], 132° [1925,2579], 130–130°5 [2072];

pK_a [2516].

1-(2-Hydroxy-5-methyl-4-nitrophenyl)ethanone

[56609-14-4]

C₉H₉NO₄ mol.wt. 195.17

Synthesis not yet described

– There is a single reference, erroneous. It concerns the 2-hydroxy-5-methyl-3-nitroacetophenone [2516] (see above).

1-(3-Hydroxy-2-methyl-4-nitrophenyl)ethanone

[89877-53-2]

C₉H₉NO₄ mol.wt. 195.17

Synthesis

– Refer to: [2580].

1-(3-Hydroxy-4-methyl-5-nitrophenyl)ethanoneC₉H₉NO₄ mol.wt. 195.17

Synthesis

– Preparation by diazotization of 3-amino-4-methyl-5-nitroacetophenone (m.p. 158–159°), followed by hydrolysis of the diazonium salt so obtained (62%) [2581].

m.p. 152°5–153°5 [2581].

1-(3-Hydroxy-5-methyl-2-nitrophenyl)ethanone $C_9H_9NO_4$ mol.wt. 195.17

Synthesis

– Obtained (by-product) by reaction of fuming nitric acid on 3-hydroxy-5-methylacetophenone in ethyl ether between -20° and -10° (4%) [2122].

m.p. $66-67^\circ$ [2122].**1-(3-Hydroxy-5-methyl-4-nitrophenyl)ethanone** $C_9H_9NO_4$ mol.wt. 195.17

Synthesis

– Preparation by reaction of fuming nitric acid on 3-hydroxy-5-methylacetophenone in ethyl ether between -20° and -10° (23%) [2122].

m.p. $148-150^\circ$ [2122].**1-(4-Hydroxy-2-methyl-5-nitrophenyl)ethanone** $C_9H_9NO_4$ mol.wt. 195.17

Synthesis

– Preparation by reaction of nitric acid on 4-hydroxy-2-methylacetophenone in acetic acid first at 0° , then 30° (61%) [1925].

m.p. $125-126^\circ$ [1925].**1-(4-Hydroxy-3-methyl-5-nitrophenyl)ethanone** $C_9H_9NO_4$ mol.wt. 195.17

Syntheses

– Preparation by reaction of nitric acid on 4-hydroxy-3-methylacetophenone in acetic acid first at 0° , then 30° (67%) [1925].

– Preparation by reaction of acetyl chloride on 2-methyl-6-nitrophenol with aluminium chloride in nitrobenzene at 130° (50%) [1925].

m.p. 131° [1925].

1-(5-Hydroxy-3-methyl-2-nitrophenyl)ethanoneC₉H₉NO₄ mol.wt. 195.17

Synthesis

– Preparation by reaction of fuming nitric acid on 3-hydroxy-5-methylacetophenone in ethyl ether between -20° and -10° (29%) [2122].

m.p. 148–150° [2122]; UV [2122].

1-(2,4-Dihydroxy-3-methyl-5-nitrophenyl)ethanone

[118824-94-5]

C₉H₉NO₅ mol.wt. 211.17

Synthesis

– Preparation by reaction of acetic anhydride on 2-methyl-4-nitroresorcinol with aluminium chloride in nitrobenzene at 80° (73%) [2582].

m.p. 178–179° [2582]; ¹H NMR [2582], IR [2582].**1-(2,5-Dihydroxy-4-methyl-3-nitrophenyl)ethanone**

[43140-83-6]

C₉H₉NO₅ mol.wt. 211.17

Synthesis

– Preparation by demethylation of 2-hydroxy-5-methoxy-4-methyl-3-nitroacetophenone with aluminium bromide in carbon disulfide at r.t. (96%) [2583].

m.p. 179° [2583]; ¹H NMR [2583], IR [2583].**1-(2-Hydroxy-4-methoxy-3-nitrophenyl)ethanone**C₉H₉NO₅ mol.wt. 211.17

Syntheses

– Preparation by reaction of dimethyl sulfate on 2,4-di-hydroxy-3-nitroacetophenone with potassium carbonate in refluxing acetone [2125].

– Also refer to: [2126].

m.p. 211–212° [2125].

1-(2-Hydroxy-4-methoxy-5-nitrophenyl)ethanone[102877-53-2] $C_9H_9NO_5$ mol.wt. 211.17

Syntheses

- Preparation by nitration of 2-hydroxy-4-methoxy-aceto-phenone (paeonol) with nitric acid ($d = 1.42$) in acetic acid [1818,1836,2530,2584], (47%) [1836].
 - Also obtained by reaction of concentrated nitric acid with 3,3'-diacetyl-4,4'-dihydroxy-6,6'-dimethoxydiphenyl thioether at r.t. overnight [2585].
 - Also refer to: [2484] (compound **1b**).
- m.p. 157–158° [2530], 155° [1818,2585], 154° [1836], 153° [2584].

1-(2-Hydroxy-5-methoxy-3-nitrophenyl)ethanone[90564-25-3] $C_9H_9NO_5$ mol.wt. 211.17

Syntheses

- Preparation from 2-hydroxy-5-methoxyacetophenone by reaction,
 - with nitric acid ($d = 1.2$) in acetic acid at $<15^\circ$ (83%) [2586];
 - with nitric acid ($d = 1.5$) in ice-cooled acetic acid and acetic anhydride mixture [1832,2587–2589], (57%) [2588].

m.p. 113–114° [2586], 112° [2588], 110–112° [2587,2589]; IR [1807,1853].

1-(2-Hydroxy-6-methoxy-3-nitrophenyl)ethanone[38226-01-6] $C_9H_9NO_5$ mol.wt. 211.17

Syntheses

- Obtained by reaction of acetic anhydride on 5-methoxy-2-nitrophenol with aluminium chloride in nitrobenzene at 135° [1940].
- Obtained by reaction of nitric acid ($d = 1.42$) on 2-hydroxy-6-methoxyacetophenone in acetic acid at r.t. [1807,1940,2522,2523], (43%) [2522], (26%) [1807].
- Also obtained by reaction of fuming nitric acid with 2-hydroxy-6-methoxyacetophenone in acetic acid, first at r.t. for 40 min, then at 45–50° for 16 h (30%) [2074].
- Also obtained (small quantity) by partial methylation of 2,6-dihydroxy-3-nitroacetophenone with dimethyl sulfate in the presence of potassium carbonate in boiling acetone [1940].

- Also obtained by partial demethylation of 2,6-dimethoxy-3-nitroacetophenone,
 - with aluminium chloride in nitrobenzene, heated on a steam bath (by-product) [1940];
 - with concentrated hydrochloric acid in boiling acetic acid [1940];
 - with boiling concentrated hydrochloric acid [1940];
 - with concentrated sulfuric acid at 30° [1940];
 - with potassium hydroxide in boiling ethanol [1940].
- Also obtained by reaction of nitric acid (d = 1.4) on 2,2'-dihydroxy-3,3'-diacetyl-4,4'-di-methoxyphenyl thioether at 0° [2485].
 m.p. 104–105° [2522], 102–103° [1940,2485], 100°5–101°5 [1807], 98–100° [2074];
¹H NMR [2074], ¹³C NMR [2590], IR [1807,2074].

1-(4-Hydroxy-2-methoxy-5-nitrophenyl)ethanone

C₉H₉NO₅ mol.wt. 211.17

Synthesis

- Obtained by reaction of fuming nitric acid on 4-hydroxy-2-methoxyacetophenone (isopaeonol) at 10° (24%) [1836].

m.p. 95° [1836].

1-(4-Hydroxy-3-methoxy-5-nitrophenyl)ethanone

[20716-41-0]

C₉H₉NO₅ mol.wt. 211.17

Synthesis

- Preparation by nitration of 4-hydroxy-3-methoxyacetophenone with 70% nitric acid in acetic acid, first at 10°, then at 25° (95%) [2215].

m.p. 148°1–149°5 [2215].

1-(4-Hydroxy-5-methoxy-2-nitrophenyl)ethanone

[418759-58-7]

C₉H₉NO₅ mol.wt. 211.17

Syntheses

- Preparation by treatment of 4-benzyloxy-5-methoxy-2-nitroacetophenone (m.p. 142–143°) with trifluoroacetic acid at r.t. for 14 h (89%) [2591].
- Also refer to: [2592].

m.p. 151°5–152°5 [2591]; Crystal data [2591];

¹H NMR [2591], ¹³C NMR [2591].

1-[2-Hydroxy-5-(methylsulfonyl)-3-nitrophenyl]ethanone[70978-46-0] $C_9H_9NO_6S$ mol.wt. 259.24

Syntheses

– Preparation by nitration of 2-hydroxy-5-(methylsulfonyl)-acetophenone in concentrated sulfuric acid,

- with 100% nitric acid at r.t. (89%) [1852];
- with nitric acid ($d = 1.42$) between -15° and -5° [1897,1898], (50%) [1897].

m.p. 192–193° [1852], 189–191° [1897,1898].

1-[3-(Azidomethyl)-4-hydroxyphenyl]ethanone[154603-69-7] $C_9H_9N_3O_2$ mol.wt. 191.19

Synthesis

– Preparation by action of sodium azide with 3-chloromethyl-4-hydroxyacetophenone in DMF at 30° for 4 h (60%) [2593].

1-[3-(Aminomethyl)-5-bromo-4-hydroxyphenyl]ethanone[109314-52-5] $C_9H_{10}BrNO_2$ mol.wt. 244.09

Synthesis

– Refer to: [2594] (Japanese patent).

1-(2-Hydroxy-3-methylphenyl)ethanone[699-91-2] $C_9H_{10}O_2$ mol.wt. 150.18

Syntheses

- Preparation by reaction of acetic acid on o-cresol with zinc chloride at reflux (Nencki reaction) (20%) [2595].
- Preparation by Fries rearrangement of o-tolyl acetate with aluminium chloride without solvent between 130° and 180° [2022,2023,2143,2151,2161,2203,2596,2597], (45–55%) [2151,2596,2597], (18–26%) [2022,2023,2143,2161].

- Also obtained (by-product) by Fries rearrangement of o-tolyl acetate with aluminium chloride, ferric chloride or titanium tetrachloride in nitrobenzene as solvent between 20° and 60° (3–5%) [2143,2598–2600].
 - Preparation by reaction of acetic anhydride on o-cresol without solvent, at 120°,
 - with 70% perchloric acid (56%) [2183];
 - with aluminium chloride (27%) [2578].
 - Also obtained (by-product) by reaction of acetyl chloride on o-cresol with aluminium chloride or titanium tetrachloride in nitrobenzene at 30–60° (3–6%) [2181,2600].
 - Preparation by treatment of methyl 4-hydroxy-8-methylcoumarin-3-carboxylate with potassium hydroxide (69%) [2191].
 - Also obtained by reaction of stannous chloride on 2-hydroxy-3-methylacetophenone 2,4-dinitro-phenylhydrazone in refluxing aqueous acetone-hydrochloric acid mixture (81%) [2255].
 - Also obtained by UV light irradiation of o-tolyl acetate at 25° (photo-Fries rearrangement), in the presence of potassium carbonate in hexane (74%) [2015] or without potassium carbonate in hexane (32%) [2015] or in ethyl ether (16%) [2193].
 - Also refer to: [2494].
- b.p.₁ 62–63° [2578], b.p.₅ 91°7–91°9 [2203], b.p.₉ 103–104° [2161],
 b.p.₉ 103–105° [2597], b.p.₁₀ 105° [2183], b.p._{10–10.5} 106–107° [2191,2595],
 b.p.₁₂ 107° [2255], b.p.₁₁ 108° [2015], b.p.₁₅ 111–112° [2215], b.p. 235–237° [2161];
¹H NMR [2203], UV [2203,2215].

1-(2-Hydroxy-4-methylphenyl)ethanone

[6921-64-8]

C₉H₁₀O₂

mol.wt. 150.18

Syntheses

- Preparation by treatment of methyl 4-hydroxy-7-methyl-coumarin-3-carboxylate with potassium hydroxide at 200° (87%) [2191].
- Preparation by Fries rearrangement of m-tolyl acetate [2596,2601–2603],
 - *with solvent*:
 - with aluminium chloride,
 - in tetrachloroethane at 130–135° (99%) [2604];
 - in nitrobenzene at 25–30° or at 165° (44–45%) [2143,2605];
 - with titanium tetrachloride in nitrobenzene at 165° (73%) [2143];
 - *without solvent*:
 - with aluminium chloride,

- at 165–170° (88–95%) [2143,2151,2606];
- between 120° and 165° (70–90%) [2022,2023,2152,2161,2607,2608];
- between 60° and 165° (38–65%) [2151,2597,2609];
- with titanium tetrachloride at 95° (83%) [2606];
- with hydrofluoric acid at 100° (80%) [2236];
- with zinc chloride at 140–160° (20%) [2191,2610].
- Preparation by reaction of acetic acid on m-cresol,
 - with boron trifluoride at 70° (65%) [2611];
 - with zinc chloride (Nencki reaction) (25%) [2595].
- Preparation by reaction of acetic anhydride on m-cresol with 70% perchloric acid,
 - at r.t. (63%) [2183];
 - at 125–135° (30%) [2306].
- Preparation by reaction of acetyl chloride on m-cresol,
 - with titanium tetrachloride,
 - in nitrobenzene at 60° (75%) [2181];
 - in ethylene dichloride at 25° (40%) [2181];
 - with aluminium chloride,
 - in nitrobenzene at 60° (48%) [2181];
 - in ethylene dichloride at 25° (42%) [2181];
 - with zinc chloride at r.t. (11%) [2610] or at 140–160° [2311].
- Preparation by dehydrogenation of 6-acetyl-3-methyl-2-cyclohexen-1-one,
 - with a 5% palladium-barium sulfate catalyst at reflux (47%) [2612];
 - with refluxing 16% solution of bromine in acetic acid [2612].
- Also obtained by treatment of 4-methylacetophenone with sodium trifluoroacetate in nitromethane–trifluoroacetic acid–trifluoroacetic anhydride mixture in the presence of a platinum electrode, followed by treatment of the intermediate trifluoroester with 10% aqueous potassium carbonate solution (33%) [2006], (hydroxylation of aromatic compound).
- Preparation by UV light irradiation of m-tolyl acetate, at r.t. (photo-Fries rearrangement) [2192], in ethanol (37%), with aqueous β -cyclodextrin solution (54%) or with β -cyclodextrin (solid) (95%).

Colourless oil [2607]; m.p. 21° [2151,2191,2306,2311], 20–21° [2236];
b.p._{0.6} 82–84° [2608], b.p._{0.22} 87° [2607], b.p.₈ 101° [2161,2597],
b.p._{7.5} 102–104° [2601], b.p.₇ 103° [2183,2191,2311], b.p.₉ 105–106° [2191],

¹H NMR [1963,2607], IR [1963,2607], MS [2607].

1-(2-Hydroxy-5-methylphenyl)ethanone[1450-72-2] $C_9H_{10}O_2$ mol.wt. 150.18**Syntheses**

- Obtained by treatment of methyl 4-hydroxy-6-methyl-coumarin-3-carboxylate with potassium hydroxide at 200° (82%) [2191].
 - Preparation by Fries rearrangement of p-tolyl acetate [1851,2613],
- *with solvent:*
- with titanium tetrachloride in nitrobenzene at 50° (92%) [2614,2615];
 - with alumina in methanesulfonic acid for 5 min at 160° (92%) [2046];
 - with zirconium chloride in nitrobenzene at 60° (86%) [2615];
 - with zirconium chloride in methylene chloride at r.t. for 24 h (83%). The same reaction performed in a simple ultrasound cleaning bath at r.t. for 24 h also leads to 83% yield [2616];
 - with stannic chloride in nitrobenzene at 60° (78%) [2615];
 - with aluminium chloride, (90%) [2617], (86%) [2071], at 130° (90%) [2618] or at 160° (70%) [2619];
 - in nitrobenzene at 60° (92%) [2598], (68%) [2615], at 25° (84%) [2143];
 - in diphenyl ether at 160° (30%) [2620];
 - in chlorobenzene, in a sealed tube and subjected to high power microwave irradiation for 2 min only (85%) [2013];
 - in the presence of 4-ethyl-2,6-dimethylphenyl chloroacetate at 150° (72%) [2535];
 - in the presence of 2-chloro-4-methylphenyl benzoate at 150° (50%) [2535];
 - on K 10 montmorillonite using microwave radiations (640 w, 5 min) (86%) or in refluxing DMF during 4 h (75%) [2109];
- *without solvent:*
- with aluminium chloride,
 - between 110° and 170° (85–99%) [1852,2012,2014,2143,2151,2606,2621];
 - between 120° and 150° (60–74%) [1967,2150,2622];
 - at 120° (36–45%) [2082,2597], (90%) [2013];
 - with titanium tetrachloride at 120° (70%) [2606];
 - with hydrofluoric acid at 120–125° (63%) [2236];
 - with beryllium chloride at 150° (63%) [2579,2623].
- Preparation by reaction of acetyl chloride on p-cresol,
- with titanium tetrachloride in nitrobenzene at 60° (93%) [2181];
 - with aluminium chloride,

- in nitrobenzene at 60° (75–80%) [2181,2624];
- in ethylene dichloride at 110–120° (56%) [2625];
- without solvent at 180° (64–72%) [2626].
- Preparation by reaction of acetyl chloride with p-cresol in the presence of aluminium chloride during 30 min at 180°, via a Fries rearrangement (98%) [2627].
- Preparation by acylation of p-cresol with acetic acid in the presence of alumina in methanesulfonic acid for 5 min at 120° (90%) [2046].
- Preparation by reaction of acetyl chloride on 4-methylanisole with aluminium chloride [2160,2161,2628].
- Also obtained by reaction of acetyl chloride on p-tolyl borate with aluminium chloride in refluxing carbon disulfide (15%) [2182].
- Preparation by reaction of acetic anhydride on p-cresol with 70% perchloric acid at 100° (53%) [2183], at 125–135° (30%) [2306].
- Preparation by reaction of acetic acid on p-cresol,
 - with boron trifluoride at 70° (95%) [2611];
 - with zinc chloride at reflux (14%) [2595] (Nencki reaction).
- Preparation by dealkylation of,
 - 2-methoxy-5-methylacetophenone,
 - with pyridinium chloride at reflux (56%) [2609];
 - with hydrobromic acid in acetic acid (7%) [2215];
 - 2-ethoxy-5-methylacetophenone with aluminium chloride [2251].
- Also obtained from 2-hydroxy-5-methyl- α -chloroacetophenone by treatment with zinc powder in acetic acid [2628].
- Also obtained by treatment of 2-hydroxy-5-methyl- α,α,α -trifluoroacetophenone with 2 N sodium hydroxide at r.t. (100%) [2629].
- Also obtained by reaction of stannous chloride on 2-hydroxy-5-methylacetophenone 2,4-dinitro-phenylhydrazone in refluxing aqueous acetic acid–hydrochloric acid mixture (80%) [2255].
- Also obtained by reaction of mesityl acetate on p-cresol with aluminium chloride at 150° (72%) [2535].
- Also obtained by reaction of various aryl acetates on p-tolyl benzoate with aluminium chloride at 150°, which produce the acetyl cation [2535],
 - with mesityl acetate (77%);
 - with 2-chloro-4-methylphenyl acetate (57%);
 - with 2,6-dimethylphenyl acetate (33%).
- Also obtained by degradation of 3-bromo-6-methylchromanone with alkali in boiling water [2630].
- Also obtained by hydrogenation of 2,4-dimethylindoxazen in acetic acid in the presence of Pd/BaSO₄ during 4–6 h [2631].
- Also obtained by hydrolysis of 2-(2-hydroxy-5-methylphenyl)-2-methyl-1,3-dioxolane by a catalytic amount of carbon tetrabromide (20%) in acetonitrile/water

solvent mixture under sonication in a commercial ultrasonic cleaning bath for 2 h at 45° (98%) [2632].

- Also obtained by UV light irradiation of p-tolyl acetate at 25°,
 - in hexane,
 - in the presence of potassium carbonate (86%) [2015];
 - without potassium carbonate (35%) [2015], (6%) [2198];
 - in ethyl ether (32%) [2193], in ethanol [2198,2633], (8%) [2198], in benzene (6%) [2198] or in methanol [2633].
- Also refer to: [1794] (compound **1a**), [1795,2634,2635] (compound **1c**), [2567].

Isolation from natural sources

- From the coriander seed essential oil [2636].
- Detected in the sorghum malt beverage [2637].
- Identified in powdered turmeric (curcuminoids) [2638].

1-(2-Hydroxy-6-methylphenyl)ethanone

[41085-27-2]

C₉H₁₀O₂ mol.wt. 150.18

Syntheses

- Preparation from 2-hydroxy-6-methylbenzonitrile and methylmagnesium bromide in ethyl ether–tetrahydrofuran mixture at 50° (67%) [2641].
- Preparation by adding a solution of methyl lithium in ethyl ether to 6-methylsalicylic acid in tetrahydrofuran and maintain a gentle reflux for 8 h. Then, the solution was cooled and acidified with hydrochloric acid (62%) [2642].

- Preparation by demethylation of 2-methoxy-6-methylacetophenone,
 - with pyridinium chloride at 200–215° (44%) [2496], (31%) [2643];
 - with boron tribromide in methylene chloride at r.t. [2644,2645], (70%) [2644].
- Preparation by diazotization of 2-amino-6-methylacetophenone, connected with hydrolysis of the diazonium salt obtained [2646].
- Also obtained by a potassium fluoride catalyzed self-condensation of 2,4-pentanedione in DMF solution [2647,2648].
- Also obtained by UV light irradiation of 3-methylphenyl acetate, in ethanol (36%) [2192] or in ethanol in the presence of β -cyclodextrin (42%) [2192].
- Also obtained (poor yield) by irradiation of dehydroacetic acid and vinyl acetate in an ethyl acetate solution [2648,2649], (4%) [2649].

Isolation from natural sources

- The 2-hydroxy-6-methylacetophenone was isolated as exocrine compound in several neotropical species of ants in the dolichoderine genus *Hypoclinea* (*Hypoclinea analis*, *Hypoclinea abrupta*, *Hypoclinea bidens* A). The ants were collected in Belem, Para, Brazil [2641,2650]. It was also isolated from the bodies of *Rhytidoponera aciculata* (Australian ponerine ant) [2651,2652].
- The hydrolytic cleavage of Peripentadenine gave the 2-hydroxy-6-methylacetophenone. The Peripentadenine was obtained from dried milled bark of *Peripentadenia mearsii* (Elaeocarpaceae), collected at Boonjie (North Queensland) [2653].
- From the essential oil of *Cistus ladanifer* L. (Cistaceae) [2654].
- From the aerial parts of *Gerbera ambigua* (Compositae), collected in Transvaal [2655].

Oil [2641–2644,2646,2649,2652,2655];

After two recrystallizations from water and two sublimations (130°/0.09 mm) gave a white powder, m.p. 93–98° [2643];

b.p.₇ 100° [2642], b.p.₁₈ 138–142° [2644];

$n = 1.5612$ [2646], $n = 1.5600$ [2642];

1-(3-Hydroxy-2-methylphenyl)ethanone

[69976-81-4]

C₉H₁₀O₂ mol.wt. 150.18

Syntheses

- Preparation by diazotization of 6-amino-3-hydroxy-2-methylacetophenone, followed by hydrolysis of the obtained diazonium salt in the presence of hypophosphorous acid at 0° (42%) [2455].

- Preparation by passing a solution of 3-hydroxy-2-methylbenzoic acid in hot acetic acid over a pelleted thoria catalyst at 470–480° during 4 h (32%) [2656].
m.p. 121° [2656], 120°8–121°7 [2455]; ¹H NMR [2455].

1-(3-Hydroxy-4-methylphenyl)ethanone

[33414-49-2] C₉H₁₀O₂ mol.wt. 150.18

Syntheses

- Preparation by diazotization of 3-amino-4-methylacetophenone, followed by hydrolysis of the obtained diazonium salt [1951,2294,2657], (75%) [2294], (40%) [1951].
- Obtained by treatment of 4-methylacetophenone with sodium trifluoroacetate in nitromethane–trifluoroacetic acid–trifluoroacetic anhydride mixture in the presence of a platinum electrode followed by treatment of the intermediate trifluoroacetate ester with 10% potassium hydrogen carbonate solution (40%) [2006] (of aromatic compounds).

Isolation from natural sources

- From *Laurencia chilensis* De Toni, Forte and Howe (Rhodomelaceae) [2658].
m.p. 119–120° [1951,2294], 105–107° [2658];
¹H NMR [2658], UV [2658], IR [2658] (Sadtlér: standard n° 8331),
MS [2658].

1-(3-Hydroxy-5-methylphenyl)ethanone

[43113-93-5] C₉H₁₀O₂ mol.wt. 150.18

Syntheses

- Preparation by diazotization of 3-amino-5-methylacetophenone, followed by hydrolysis of the obtained diazonium salt (70%) [2122].
- Preparation by hydrolysis of diethyl 3-acetoxy-5-methyl-benzoylmalonate with concentrated sulfuric acid in boiling aqueous acetic acid (70%) [2122].
- Also obtained by solvolysis of 3-acetyl-5-methylphenol tetrahydropyranyl ether with p-toluene-sulfonic acid in methanol at r.t. (73%) [2659].
- Preparation by aromatization of 5-acetyl-3-methyl-2-cyclohexen-1-one with cupric bromide and lithium bromide in boiling acetonitrile (46%) [2122].
- Also obtained by alkaline transformation of methyl, tert-butyl or benzyl esters of 4-acetyl-5-hydroxy-2,5-dimethyl-3-furoic acid with 2 N sodium hydroxide in ethanol at r.t. (35–50%) [2660].
- Preparation by oxidation of 5-acetyl-3-methyl-2-cyclohexen-1-one with air in alkaline medium or by catalytic hydrogenation of the latter in the presence of Pd/C in p-cymene [2660].

- Also obtained (poor yield) by alkaline degradation of a solution of D-xylose or D-glucose in 0.63 M sodium hydroxide at 96° under nitrogen [2276].
m.p. 122–123° [2122,2276], 118–121° [2660], 118–120°⁵ [2659];
¹H NMR [2659,2660], IR [2659,2660], UV [2660], MS [2659,2660].

1-(4-Hydroxy-2-methylphenyl)ethanone

[875-59-2] C₉H₁₀O₂ mol.wt. 150.18

Syntheses

- Preparation by dealkylation of 4-hydroxy-2-methyl-5-iso-propylacetophenone with aluminium chloride in chlorobenzene at 50° (80%) [2661].
- Also obtained by reaction of aluminium chloride on 4-acetoxy-2-methylacetophenone at 130° (51%) or on 4-(benzoyloxy)-2-methylacetophenone at 170° [2151].
- Preparation by Fries rearrangement of m-tolyl acetate,
 - with aluminium chloride in nitrobenzene at r.t. (80–85%) [2151], (60–66%) [2143,2535,2605,2662,2663], (54%) [2664];
 - with aluminium chloride without solvent [2143,2152,2161,2606,2609], at 65° (88%) [2606], at 60–70° (28%) [2609], at 130° (16%) [2152] and at 165° (7%) [2143];
 - with zinc chloride and hydrochloric acid at r.t. (30%) [2610];
 - with hydrofluoric acid at 20° (17%) [2236];
 - with titanium tetrachloride at 95° (7%) [2606].
- Also obtained by reaction of acetyl chloride on m-cresol,
 - with aluminium chloride in nitrobenzene at 25° (63%) [2181];
 - with titanium tetrachloride in nitrobenzene at 25° (25%) [2181];
 - with zinc chloride [2310,2311,2610], (14%) [2610];
 - with ferric chloride in carbon disulfide [1823].
- Also obtained by reaction of acetic acid on m-cresol,
 - with boron trifluoride at 70° (16%) [2611];
 - by heating the mixture with phosphorous oxychloride (by-product) [2596].
- Also obtained by reaction of acetic anhydride on m-cresol with 70% perchloric acid at r.t. (6%) [2183].
- Also obtained by UV light irradiation on p-tolyl acetate in methanol at 25° (26%) [2315]. (There is a 1,2-migration of the methyl group).
- Also obtained by UV light irradiation of m-tolyl acetate in ethanol (13%) [2192].
- Also obtained by reduction of 4-hydroxy-2-methyl- α -chloroacetophenone with zinc dust in aqueous ethanolic acetic acid [2665].

- m.p. 131° [2611], 129° [2661], 128–130° [2315], 128–129° [2663], 128° [2161,2183,2311,2606,2609,2664,2665], 127° [2143,2151,2610,2662], 126° [1823], 125° [2236];
 b.p.₁₇ 158–160° [2609], b.p. 313° [2311];
¹H NMR [2315,2663], IR [2315], UV [2605].

1-(4-Hydroxy-3-methylphenyl)ethanone

[876-02-8] C₉H₁₀O₂ mol.wt. 150.18

Syntheses

- Preparation by dealkylation of 4-hydroxy-5-methyl-2-iso-propylacetophenone with aluminium chloride in chloro-benzene at 50° (53%) [2661].
- Preparation by Fries rearrangement of o-tolyl acetate [2161,2171],

with solvent:

- with aluminium chloride in nitrobenzene at r.t. (83–85%) [2151,2598], (41–49%) [1825,2600,2666,2667] or at 60° (82%) [2143];
- with aluminium chloride in diphenyl ether at 175° (54%) [2620];
- with titanium tetrachloride in nitrobenzene at 30° (78%) [2599,2600];
- with ferric chloride in nitrobenzene at 50° (60%) [2600].

without solvent:

- with aluminium chloride at 160–180° (61%) [2143], (27%) [2597];
 - with ferric chloride (42%) [2600].
- Preparation by reaction of acetyl chloride on o-cresol,
 - with hydrofluoric acid at 50° (98%) [2668];
 - with aluminium chloride,
 - in refluxing carbon disulfide (96%) [1951];
 - in nitrobenzene at 60° (86%) [2181];
 - with titanium tetrachloride in nitrobenzene at 30° (66%) [2600] or at 60° (78%) [2181];
 - with ferric chloride in carbon disulfide [1823].
 - Preparation by reaction of acetonitrile on o-cresol with triflic acid at r.t. (67%) [2250].
 - Also obtained by reaction of acetic anhydride with o-cresol in anhydrous hydrofluoric acid at 50° (quantitative yield) [1825] or in 70% perchloric acid at 120° (31%) [2183].
 - Also obtained by reaction of acetic acid on o-cresol with zinc chloride (Nencki reaction) (10%) [2595].
 - Preparation by diazotization of 4-amino-3-methylacetophenone with sodium nitrite in dilute hydrochloric acid and replacement of the diazonium group by hydroxyl group [2253].

- Also obtained by UV light irradiation of o-tolyl acetate, at 25°,
 - in ethyl ether (10%) [2193];
 - in hexane, in the presence of potassium carbonate (12%) [2015] or without potassium carbonate (3%) [2015].
 - Also refer to: [1828].
- m.p. 110° [2620,2661], 108–109° [1825], 108° [2598], 107–109° [1951], 106–108° [2666], 105°5–106°5 [2250], 104–105° [2266], 104° [1823,2143,2161,2253,2595,2599,2600];
- b.p._{7.5} 166–167° [2597], b.p.₅ 170–175° [2620]; pK_a [1977];
¹H NMR [2250], IR [2250], MS [2250].

1-(5-Hydroxy-2-methylphenyl)ethanone

[40180-70-9] C₉H₁₀O₂ mol.wt. 150.18

Syntheses

- Preparation from 5-acetyl-4-methyl-3-cyclohexenone by aromatization promoted,
 - by cupric bromide with lithium bromide in refluxing acetonitrile (80%) [2030];
 - by 10% Pd/C in refluxing xylene (50%) [2030].

m.p. 28° [2030]; ¹H NMR [2030], IR [2030].

1-[2-Hydroxy-5-(methylthio)phenyl]ethanone

[135936-88-8] C₉H₁₀O₂S mol.wt. 182.24

Synthesis

- Refer to: [2272].

1-[4-Hydroxy-3-(methylthio)phenyl]ethanone

[66264-56-0] C₉H₁₀O₂S mol.wt. 182.24

Syntheses

- Preparation by reaction of methyl iodide on 4-hydroxy-3-mercaptoacetophenone with potassium carbonate in acetone at r.t. (83%) [2274,2275].
- Preparation by reaction of acetyl chloride on 2-(methyl-thio)phenol with aluminium chloride in nitrobenzene at 65° (34%) [2274,2275].
- Also refer to: [1828].

m.p. 117–120° [2274,2275].

1-(2,3-Dihydroxy-4-methylphenyl)ethanone[69751-81-1] $C_9H_{10}O_3$ mol.wt. 166.18

Syntheses

- Preparation by Fries rearrangement of 3-methylpro-catechol diacetate with a molten mixture of aluminium chloride and sodium chloride at 200° (15%) [2669].
- Also obtained by UV light irradiation of 3,6-dimethyl-1,2-benzisoxazole in 96% sulfuric acid (5%) [2284,2285].

m.p. 70° [2669], 67–68° [2284]; 1H NMR [2284], IR [2284,2669], UV [2284], MS [2284].

1-(2,3-Dihydroxy-5-methylphenyl)ethanone[69751-80-0] $C_9H_{10}O_3$ mol.wt. 166.18

Syntheses

- Preparation by reaction of acetic acid on creosol with boron trifluoride at 160° (78%) [2670].
- Also obtained by UV light irradiation of 3,5-dimethyl-1,2-benzisoxazole in 96% sulfuric acid (6%) [2284].

m.p. 87°5–88° [2284], 86–88° [2670]; 1H NMR [2284], IR [2284], UV [2284], MS [2284].

1-(2,3-Dihydroxy-6-methylphenyl)ethanone[59862-07-6] $C_9H_{10}O_3$ mol.wt. 166.18

Synthesis

- Obtained (poor yield) by alkaline degradation of a solution of D-xylose or D-glucose in 0.63 M sodium hydroxide at 96° under nitrogen [2276].

m.p. 82–83° [2276]; 1H NMR [2276], IR [2276], MS [2276].

1-(2,4-Dihydroxy-3-methylphenyl)ethanone[10139-84-1] $C_9H_{10}O_3$ mol.wt. 166.18

Syntheses

- Preparation by reaction of acetic anhydride on 2-methyl-resorcinol with boron trifluoride-ethyl ether complex at 70–80° (78%) [2582].
- Preparation by reaction of acetic acid on 2-methyl-resorcinol with zinc chloride (Nencki reaction) (59%) [2671].

- Preparation by reaction of acetonitrile on 2-methylresorcinol (Hoesch reaction) [2213,2672].
- Preparation by demethylation of 2-hydroxy-4-methoxy-3-methylacetophenone with hydriodic acid in a boiling mixture of phenol and acetic anhydride [2213,2672].
- Also obtained by catalytic reduction of 2',4'-dihydroxy-3'-(1-piperidylmethyl)acetophenone in the presence of Pd/C [2673,2674], (65%) [2674]. The starting material was obtained by treatment of resacetophenone in ethanol with methylene-bis-piperidine.
- Also refer to: [2675].

m.p. 157–158° [2582,2673,2674], 156–157° [2672], 155–156° [2213];

¹H NMR [2582,2674], ¹³C NMR [1821], IR [2582,2674], UV [2213], MS [2582].

1-(2,4-Dihydroxy-5-methylphenyl)ethanone

[93578-16-6]

C₉H₁₀O₃ mol.wt. 166.18

Syntheses

- Preparation by reaction of acetonitrile on 4-methylresorcinol (Hoesch reaction) (75%) [2676], (50–59%) [2302,2677].
- Preparation from 2,4-dimethoxy-5-methylacetophenone by reaction with boron tribromide in methylene chloride at r.t. (48%) [2678,2679].
- Preparation by reaction of acetic acid on 4-methylresorcinol with zinc chloride (Nencki reaction) (46–60%) [2330,2680–2682].
- Preparation by Fries rearrangement of 4-methylresorcinol diacetate with aluminium chloride in nitrobenzene (63%) [2680].

m.p. 170–171° [2330], 170° [2676,2682], 169° [2677], 168–169° [2680];

¹H NMR [2680], IR [2680], UV [2213].

1-(2,4-Dihydroxy-6-methylphenyl)ethanone

(*Orcacetophenone*; *Orsacetophenone*; β -*Orcacetophenone*)

[703-29-7]

C₉H₁₀O₃ mol.wt. 166.18

Syntheses

- Preparation by reaction of acetonitrile on orcinol (Hoesch reaction) [2301,2307,2683,2684], (75%) [2330], (62%) [2301].
- Preparation by reaction of acetyl chloride on orcinol with aluminium chloride in nitrobenzene (56%) [2308].
- Preparation by reaction of acetic acid with orcinol in the presence of boron trifluoride etherate at 102–115°, then hydrolysis of complex obtained with boiling dilute ethanol (65%) [2685].

- Preparation from 3,3'-dimethyl-5,5'-diisoxazolyl-methane by performing hydrogenolysis and subsequent hydrolysis with hydrochloric acid (80%) [2686] or with 50% sulfuric acid [2687].
- Preparation by reaction of 50% sulfuric acid with nonan-2,4,6,8-tetraone diethylene ketal for 10 min (77%) [2688].
- Preparation by hydrolysis of 2,8-di-(1-pyrrolidinyl)-2,7-nonanediene-4,6-dione (SM) $C_{17}H_{26}N_2O_2$ **4** (m.p. 196–199°) with refluxing 2 N sulfuric acid for 30 min (69%) [2689]. SM was obtained by reaction of 3-acetoacetyl-4-hydroxy-6-methyl-2-pyrone with an excess of pyrrolidine.
- Preparation by hydrolysis of an ionic complex $C_{22}H_{27}NO_5$ **10** (m.p. 161–162°) with refluxing 2 N sulfuric acid for 1 h (87%) [2689].
- Also obtained from 7-hydroxy-4,5-dimethylcoumarin by heating in a boiling water bath with 10% aqueous sodium hydroxide [2683].
- Also obtained by degradation of 3,8-diacetyl-4,5-dihydroxy-7-methylcoumarin by heating with aqueous sodium hydroxide solution [2690].
- Also obtained by decarboxylation of 3-acetyl-p-orsellinic acid (3-acetyl-2,6-dihydroxy-4-methyl-benzoic acid) with copper in boiling quinoline [2691].
- Also obtained (by-product) by reaction of trifluoroacetic anhydride on 2-acetoxy-4-methoxy-6-methylbenzoic in the presence of orcinol at 25° (8%) [2692].
- Also obtained (by-product) by Fries rearrangement of orcinol diacetate in the presence of aluminium chloride in nitrobenzene at 75–80° (5%) [2693].
- Also obtained (by-product) by reaction of acetyl chloride on orcinol dimethyl ether with aluminium chloride in carbon disulfide (3%) [2694].

Isolation from natural sources

- From *Scolecotrichum graminis* Fuckel [2695].
 m.p. 160–161° [2694], 159–160° [2308], 159° [2301,2307,2688,2690], 158–160° [2692], 158–159° [2330,2689], 158° [2686,2691], 157–159° [2683], 140° [2685];
 1H NMR [2686,2695], IR [2685,2695], UV [2213,2685,2695], MS [2686,2695].

1-(2,5-Dihydroxy-3-methylphenyl)ethanone

[274259-41-5]

 $C_9H_{10}O_3$

mol.wt. 166.18

Synthesis

- Preparation by demethylation of 2-hydroxy-5-methoxy-3-methylacetophenone with boron tribromide in methylene chloride at r.t. for 5 h (71%) [2696].

m.p. 111–113° [2696];

 1H NMR [2696], IR [2696], MS [2696].

1-(2,5-Dihydroxy-4-methylphenyl)ethanone

[54698-17-8]

 $C_9H_{10}O_3$

mol.wt. 166.18

Syntheses

- Preparation by Fries rearrangement of 2-methylhydro-quinone diacetate with aluminium chloride without solvent [2024,2697–2699], between 120° and 160° (53–54%) [2698,2699].
- Preparation by reaction of acetic acid on 2-methylhydro-quinone with boron trifluoride [2349,2350,2700], (85%) [2350].
- Also obtained by saponification of 2,5-diacetoxy-4-methylacetophenone with aqueous sodium hydroxide [2349].
- Also obtained by demethylation of 2-hydroxy-5-methoxy-4-methylacetophenone and 2,5-di-methoxy-4-methylacetophenone with boiling pyridinium chloride [2542].
- Also obtained by UV light irradiation of 3,6-dimethyl-1,2-benzisoxazole in 96–98% sulfuric acid (44%) [2284,2285].
- Also refer to: [2701–2703].

Isolation from natural sources

- From Chinese Moutan Cortex, the root of *Paeonia suffruticosa* Andrews (Paeoniaceae) [2323].
- m.p. 148–149° [2699], 147–147°5 [2284], 147° [2542], 145–146° [2698], 145° [2349], 141° [2024,2350];
¹H NMR [2284], IR [2284,2699], UV [2284], MS [2284].

1-(2,6-Dihydroxy-3-methylphenyl)ethanone

[29183-78-6]

 $C_9H_{10}O_3$

mol.wt. 166.18

Syntheses

- Obtained from 8-acetyl-4,6-dimethyl-7-hydroxycoumarin by alkaline degradation with 20% aqueous sodium hydroxide solution at reflux (42%) [2213,2682].
- Obtained from 4-acetoxy-3-acetyl-2-hydroxy-5-methyl-benzoic acid by hydrolysis with 10% ethanolic potassium hydroxide, followed by decarboxylation [2704].

Isolation from natural sources

- From dihydrousnic acid [2552,2705] or from tetrahydrodeoxyusnic acid [2705] (from Lichens substances) by potassium permanganate oxidation in 10% aqueous potassium hydroxide at r.t., followed by distillation (5%) [2552].
 - From methyl dihydrousnic acid [2704], either by potassium permanganate oxidation, followed by vacuum distillation [2706], or by vacuum distillation, followed by ozone oxidation [2706].
- m.p. 138–139° [2213], 138° [2552,2682,2705], 136–137° [2706], 134–136° [2704];
¹H NMR [2704], UV [2213,2704,2706].

1-(2,6-Dihydroxy-4-methylphenyl)ethanone (*γ*- or *p*-orcacetophenone)

[1634-34-0]

C₉H₁₀O₃ mol.wt. 166.18

Syntheses

- Preparation by reaction of acetic anhydride on orcinol,
 - with concentrated sulfuric acid at 130° (65%) [2307];
- with Amberlite IR-120 or Zeokarb-225, cation exchange resins (sulfonic acid type) at 160° (20%) [2026].
- Preparation by reaction of acetyl chloride on orcinol with aluminium chloride in boiling nitrobenzene (50%) [2213,2707].
- Preparation by reaction of acetic acid on orcinol,
 - with zinc chloride (Nencki reaction) [2708];
 - with phosphorous oxychloride at 100–110° [2301,2709,2710].
- Also obtained by reaction of acetyl chloride on 2,5-dimethoxytoluene (?) with aluminium chloride in carbon disulfide (26%) [2348].
- Also obtained by partial deacetylation of 2,4-diacetylorcinol with 85% sulfuric acid at r.t. [2335,2337,2691], (39%) [2337] or with boiling solution of 1 N sodium hydroxide [2691].
- Also obtained by decarboxylation of methyl 3-acetyl-2,4-dihydroxy-6-methylbenzoate,
 - by reaction of boiling solution of 1 N sodium hydroxide [2691];
 - by heating at 180°, followed by distillation [2711].
- Also obtained by reaction of boiling solution of 1 N sodium hydroxide on methyl 3,5-diacetyl-2,4-dihydroxy-6-methylbenzoate, decarbonylation and decarboxylation occurring simultaneously [2691].
- Also obtained by reaction of 2-acetoxy-4-methoxy-6-methylbenzoic acid on orcinol with trifluoroacetic anhydride at 25° (5%) [2692].
- Also obtained by degradation of 3,8-diacetyl-4,7-dihydroxy-5-methylcoumarin by heating with aqueous sodium hydroxide solution [2690].
- Also obtained by reaction of potassium hydroxide with 2-acetyl-3-dimethylamino-5-hydroxy-5-methyl-2-cyclohexenone in ethanol at 40° (48%) [2712].
- Also refer to: [2713].

Isolation from natural sources

- From *Rumex patientia* (Polygonaceae) [2714].
- The occurrence of 2-acetylorcinol and its monoglucoside was established in Tissue Cultures from *Rumex alpinus* (Polygonaceae) [2715].

m.p. 147–149° [2026], 146–147° [2213,2348], 146° [2301,2307,2337,2691,2708,2710,2711], 144–146° [2712], 142–144° [2707], 142–143° [2690,2692];

¹H NMR [2206,2348,2704,2712], ¹³C NMR [2206], IR [2348,2690,2711,2712]; UV [2213,2711], MS [2348,2712].

1-(3,4-Dihydroxy-2-methylphenyl)ethanone[66296-84-2] $C_9H_{10}O_3$ mol.wt. 166.18**Syntheses**

- Obtained (poor yield) by treatment of dihydroxyacetone in aqueous solution (pH 4.5) at 96° (2%) [2716].
- Also obtained (poor yield) by reaction of acetic anhydride on 3-methyl-1,2-benzenediol with perchloric acid [2717].
- Also obtained (poor yield) by Fries rearrangement of 3-methylpyrocatechol diacetate with aluminium chloride in nitrobenzene at 75–80° (< 19%) [2376].

m.p. 149–152° [2716]; 1H NMR [2716], MS [2716].**1-(3,4-Dihydroxy-5-methylphenyl)ethanone**[80547-86-0] $C_9H_{10}O_3$ mol.wt. 166.18**Syntheses**

- Preparation by heating 3-methylpyrocatechol in boron trifluoride-acetic acid at 60–70° (62%) [2669].
 - Preparation by Fries rearrangement of 3-methylpyrocatechol diacetate,
 - with aluminium chloride in chlorobenzene at 110° (71%) [2718] or in nitrobenzene at 75–80° (<19%) [2376];
 - with a molten mixture of aluminium chloride and sodium chloride at 200° (40%) [2669].
 - Also obtained from neutral glucose and fructose solutions heated at 120° [2390].
- m.p. 197–199° [2669], 139–140° [2718]; 1H NMR [2718], IR [2669,2718].

1-(3,5-Dihydroxy-2-methylphenyl)ethanone $C_9H_{10}O_3$ mol.wt. 166.18**Synthesis**

- Preparation by diazotization of (3 or 5)-amino-(5 or 3)-hydroxy-2-methylacetophenone hydrochloride (m.p. 110°5–111°), followed by hydrolysis of the diazonium salt so obtained (51%) [2581].

m.p. 160°5–161°2 [2581].

1-(3,5-Dihydroxy-4-methylphenyl)ethanone $C_9H_{10}O_3$ mol.wt. 166.18**Synthesis**

- Preparation by diazotization of 3-amino-5-hydroxy-4-methylacetophenone hydrochloride, followed by hydrolysis of the diazonium salt so obtained (43%) [2581].

m.p. 190–191° [2581].

1-(3,6-Dihydroxy-2-methylphenyl)ethanone[176177-16-5] $C_9H_{10}O_3$ mol.wt. 166.18**Synthesis**

– Preparation by total demethylation of 2,5-dimethoxy-6-methylacetophenone (SM) with aluminium chloride in refluxing chlorobenzene for 4 h (74%) [2719]. SM was obtained in three steps from 2,5-dimethoxy-6-methylaniline *via* the sequence: first, 6-bromo-2,5-dimethoxytoluene (m.p. 97–98°), then 6-(1-hydroxyethyl)-2,5-dimethoxy-toluene (m.p. 40°–42°) and finally SM (m.p. 59–59°).

m.p. 122°–123° [2719]; sublimation at 86–90°/0.1 mm [2719];

1H NMR [2719], IR [2719], MS [2719].

1-(4,5-Dihydroxy-2-methylphenyl)ethanone[18087-17-7] $C_9H_{10}O_3$ mol.wt. 166.18**Syntheses**

- Preparation by reaction of zinc powder on 4,5-dihydroxy-2-methyl- α -chloroacetophenone in dilute acetic acid between 40° and 70° [2280,2386], (good yield) [2280].
- Preparation by Fries rearrangement of 4-methylpyrocatechol diacetate with aluminium chloride in nitrobenzene at 75–85° (87–97%) [2376,2720], (34%) [2721].
- Also obtained (poor yield) by reaction of acetic anhydride with 3,4-dihydroxytoluene in the presence of 70% perchloric acid on a steam bath for 3 h (10%) [2722].
- Also obtained (by-product) by Fries rearrangement of creosol acetate with aluminium chloride in nitrobenzene at 80° for 1 h (6%) [2723].
- Also refer to: [2724].

m.p. 170°–171° [2722], 169° [2723], 168–170° [2721], 168–169° [2280,2720], 164° [2386], 160° [2376];

1H NMR [2722], MS [2722].

1-[2-Hydroxy-4-(hydroxymethyl)phenyl]ethanone[22518-00-9] $C_9H_{10}O_3$ mol.wt. 166.18**Isolation from natural sources**

- By acidic hydrolysis of two esters isolated from *Gaillardia aristata*, the 7-isobutyryloxy-8,9-epoxythymol and 7-(2-methylbutyryloxy)-8,9-epoxythymol isobutyrate [2725].
- From the aerial parts of *Calea nelsonii* Robinson and Greenman (Asteraceae) [2726].

m.p. 61°–62° [2725]; 1H NMR [2725], IR [2725], UV [2725].

1-[2-Hydroxy-5-(hydroxymethyl)phenyl]ethanone[31611-90-2] $C_9H_{10}O_3$ mol.wt. 166.18

Synthesis

– Obtained by hydrolysis of 2-hydroxy-5-chloromethyl-acetophenone [2727].

1-(2-Hydroxy-3-methoxyphenyl)ethanone (*ortho-Acetovanillone*)[703-98-0] $C_9H_{10}O_3$ mol.wt. 166.18

Syntheses

- Preparation from 2,3-dimethoxybenzotrile and methyl-magnesium iodide in refluxing ethyl ether (Grignard reaction) [1821,2728], (75%) [2728].
- Preparation by reaction of aluminium chloride on the 2,3-dimethoxyacetophenone, in boiling ethyl ether (96%) [2408] or in boiling toluene (67%) [2729].
- Also obtained by reaction of hydrobromic acid on 2,3-dimethoxyacetophenone in acetic acid at 25° [2215].
- The usual method of synthesis involves the successive conversion of o-veratraldehyde to the 2,3-dimethoxyphenyl methyl carbinol, 2,3-dimethoxyacetophenone and demethylation [2728].
- Preparation by UV light irradiation of guaiacol acetate, in benzene (48%) [2198] or in ethyl ether (20%) [2193].
- Also obtained (by-product) by Fries rearrangement of guaiacol acetate with zinc chloride at reflux [2729] or with aluminium chloride without solvent between 20° and 50° (9–11%) [2378].

m.p. 54° [2408], 53–54° [2729], 52–53° [2215], 50–53° [2728];

b.p._{0.5} 110–120° [2729];

¹H NMR [2198], ¹³C NMR [1821], IR [2198], UV [2215].

1-(2-Hydroxy-4-methoxyphenyl)ethanone (*Paeonol*)[552-41-0] $C_9H_{10}O_3$ mol.wt. 166.18

Syntheses

- Preparation by reaction of methyl iodide [2220,2730,2731], or dimethyl sulfate [1818,2227,2301,2529,2732–2737] on resacetophenone in sodium hydroxide or potassium hydroxide solution (quantitative yield) [2301], (70–75%) [1818], (good yield) [2731], (60%) [2735], (52%) [2732].
- Preparation by reaction of methyl iodide on resacetophenone,
- with potassium carbonate in boiling acetone (92%) [2738], (73%) [2368], (55–64%) [2739];
 - with lithium carbonate in DMF at 55° (81%) [2217].

- Preparation by reaction of dimethyl sulfate with resacetophenone in the presence of potassium carbonate in refluxing acetone (81%) [2740].
- Also obtained by reaction of methyl iodide on resacetophenone silver salt in boiling acetone [2293].
- Preparation by reaction of diazomethane with resacetophenone in ethyl ether/methanol solution (90%) [2302].
- Preparation by reaction of acetic acid,
 - on the resorcinol monomethyl ether, in the presence of polyphosphoric acid (25%) [2299] or zinc chloride at reflux (Nencki reaction) (29%) [2171];
 - on the resorcinol dimethyl ether with boron trifluoride at 125° (42%) [2298].
- Preparation by reaction of acetonitrile on resorcinol monomethyl ether (Hoesch reaction) (27%) [2301].
- Preparation by reaction of bromoacetyl bromide on resorcinol dimethyl ether with aluminium chloride [2741].
- Preparation by Fries rearrangement of 3-methoxyphenyl acetate with zirconium chloride in methylene chloride for 48 h at r.t. (85%) [2616].
- Also obtained by Fries rearrangement of 3-methoxyphenyl acetate with aluminium chloride in nitrobenzene at r.t. (13%) [2742,2743].
- Also obtained by reaction of zinc powder on 2,4-dimethoxy- α -bromoacetophenone in acetic acid in a water bath [2744].
- Also obtained (by-product) by reaction of zinc powder and silver chloride on 2-hydroxy-4-methoxy- α -chloroacetophenone in benzene and crotonaldehyde mixture at 60–70° [2745].
- Also obtained by reaction of 2 N sodium hydroxide on 2-hydroxy-4-methoxy- α,α,α -trifluoro-acetoacetophenone at r.t. (quantitative yield) [2629].
- Also obtained by acetylation of resorcinol monomethyl ether by treatment with complex mixture (acetyl chloride/acetic anhydride/acetic acid/anisole/sodium perchlorate) at 60° (8%) [2746].
- Also obtained by reaction of aluminium chloride on 2,4-dimethoxyacetophenone in benzene at 100–110° [2530] or in acetonitrile for 6 h at 45° (40%) [2747].
- Also obtained on treatment of ethyl 2-acetyl-5-methoxyphenoxyacetate with boron trichloride in methylene chloride, first at –70°, then at r.t. for 5 min (84%). The ethoxycarbonylmethyl group was selectively removed without difficulty [2748].

Isolation from natural sources

- From the root bark of *Paeonia Moutan* (Ranunculaceae) [2316,2331,2731,2749], of *Paeonia broteroi* [2256] and of *Paeonia suffruticosa* Andrews (mudanpi) (Paeoniaceae) [2323] or *Paeonia suffruticosa* Anhr. (mudanpi) (Ranunculaceae) (major component) [2750].
- From *paeonia radix* (SM) [2751–2753]. SM is the dried roots of *paeonia veitchii* Lynch or *paeonia lactiflora* Pall, yet named *paeonia albiflora* Pall.

- From macadamia nuts and shells [2754].
 - From the roots of *Pentecost rose* (*paeonia arborea*, also named *paeonia Moutan* in China or *paeonia Botan* in Japan) (Renonculaceae) by hydrolysis of its glucoside [2736,2749,2755].
 - From the roots of *cynanchum paniculatum* [2756–2758].
 - From the volatile oil of *dioscorea japonica* [2759].
 - From the leaves of *ficus krishnae* [2760].
 - As a major component in the steam distillates of the resins from various species of *Xanthorrhoea* (X.); *X. tateana* F. Muell. and *X. preissi* [2584], but also from *X. arborea* R. Br. and *X. reflexa* [2761].
 - By thermal decomposition of the resin from *Ferula pyramidata* (Kar. et Kir.) eug. kor. [2293].
- m.p. 51°₃ [2762], 51° [2299,2745], 50–51° [2737], 50° [1818,2171,2220,2732,2734,2331,2301,2763,2735,2742,2743,2316,2298,2530,2731], 49–50° [2368,2738], 49° [2293,2584,2730,2761], 48–50° [2739,2755], 48° [2740,2764], 47–49° [2217], 45° [2749];
- b.p._{0.001} 90–100° [2745], b.p.₃ 135–137° [2293], b.p.₂₀ 154° [2732], b.p.₁₈ 155–165° [2761];
- b.p.₂₀ 158° [2584], b.p.₅ 180° [2737], b.p.₃₀ 210° [2737];
- $n_D^{15} = 1.5745$ [2293]; $d_{20}^{40} = 1.1604$ [2293];
- TLC [2754,2765]; HPLC [2752,2766]; GC [2756,2759]; GC-MS [2759];
- ¹H NMR [1869,2256,2326,2327,2738], ¹³C NMR [1821,2210,2328,2329,2368,2767];
- IR [1963,2256], UV [2256,2326], MS [2331,2765].

1-(2-Hydroxy-5-methoxyphenyl)ethanone

[705-15-7] C₉H₁₀O₃ mol.wt. 166.18

Syntheses

- Preparation by reaction of dimethyl sulfate on 2,5-dihydroxyacetophenone [2345,2348,2529,2768],
 - with potassium carbonate in acetone at r.t. (74%) [2348];
 - with aqueous sodium hydroxide solution at reflux (35%) [2345,2768].
- Preparation by reaction of aluminium chloride on 2,5-dimethoxyacetophenone in refluxing ethyl ether (53%) [2408].
- Preparation by reaction of methyl iodide on 2,5-dihydroxyacetophenone with potassium carbonate in refluxing acetone [1984,2769], (55–64%) [2769].
- Also obtained by reaction of acetic acid on hydroquinone dimethyl ether with boron trifluoride at 70° (26%) [2298].
- Also obtained by Fries rearrangement of 4-methoxyphenyl acetate with aluminium chloride without solvent at 60–65° (24%) [2344].
- Also obtained by reaction of acetyl chloride on hydroquinone dimethyl ether with aluminium chloride,

- in boiling ethyl ether (57%) [2770];
 - in nitrobenzene, at r.t. (45%) [2771];
 - in methylene chloride, at r.t. (16%) [2772];
 - in carbon disulfide, at r.t. (7%) [2773] or by heating at 95°, after elimination of the solvent (72%) [2521].
- Preparation by UV light irradiation of 4-methoxyphenyl acetate at 25°,
- in hexane (75%) [2015];
 - in hexane with potassium carbonate, (89%) [2015];
 - in ethyl ether (38%) [2193];
 - in ethanol [2774,2775], (40–42%) [2775].
- Also obtained by UV light irradiation of 4-methoxyphenyl 3-(ethylenedioxy)-butanoate in hexane at r.t. (34%) [2776].
- Also obtained by UV light irradiation of 2,4-dimethoxyphenyl acetate in benzene or ethanol (11–13%) [2198].
- Also refer to: [2227,2494,2777].

Isolation from natural sources

- From the essential oil of the rhizomes of *Primula acaulis*, an European variety of stemless primrose [2352].
- m.p. 52° [2012,2298,2768,2771], 51° [2770], 50–51° [2344,2345,2408,2773], 50° [2015,2775], 49–49°5 [2772], 49° [2352,2521], 48–50° [2769,2778], 48–49° [1984,2215], 47–49° [2348], 46° [2774];
- b.p.₁₂ 138–142° [2408], b.p.₁₅ 146–150° [2298];
- ¹H NMR [1976,2348], ¹³C NMR [1821,1976,2328,2779], IR [1963,2348];
- UV [2215,2348]; pK_a [1977].

1-(2-Hydroxy-6-methoxyphenyl)ethanone

[703-23-1] C₉H₁₀O₃ mol.wt. 166.18

Syntheses

- Preparation by reaction of methyl iodide on 2,6-dihydroxyacetophenone with potassium carbonate in boiling acetone [1821,1984,2780], (56%) [2780].
- Preparation by reaction of dimethyl sulfate on 2,6-di-hydroxyacetophenone,
- with potassium carbonate in boiling benzene (71–73%) [1891,2781];
 - with potassium carbonate in boiling acetone [2219,2524] (quantitative yield) [2524];
 - with potassium hydroxide in benzene, in a water bath (54%) [2364];
 - with 20% solution of sodium hydroxide (68%) [2361];
 - with 30% solution of sodium hydroxide (20%) [2213,2369].
- Also obtained by partial demethylation of 2,6-dimethoxyacetophenone with aluminium chloride in acetonitrile for 6 h at 45° (30%) [2747].

- Also obtained from 3-acetyl-5-methoxy-2-methylchromone by refluxing with 2% sodium carbonate solution [2131].

m.p. 60° [2131,2361,2369,2781], 59–60° [2364], 58°5 [2780], 58–59° [2213], 57–59° [1891], 57–58° [2219], 55–56° [1984], 55° [2524];
¹H NMR [2374], ¹³C NMR [1821,2219], UV [2213].

1-(3-Hydroxy-2-methoxyphenyl)ethanone

[204781-71-5] C₉H₁₀O₃ mol.wt. 166.18

Isolation from natural sources

- Detected in liquid smoke flavouring preparations (compound **61**) [2782].

GC [2782]; GC/MS [2782].

1-(3-Hydroxy-4-methoxyphenyl)ethanone (*Isoacetovanillone*)

[6100-74-9] C₉H₁₀O₃ mol.wt. 166.18

Syntheses

- Preparation by saponification of 3-acetoxy-4-methoxyacetophenone [2783–2785], (90%) [2785], (59%) [2783].
- Preparation by hydrolysis of 3,4-dimethoxyacetophenone with concentrated sulfuric acid at 65° (58%) [2786].
- Preparation by reaction of methyl iodide on 3,4-dihydroxyacetophenone with lithium carbonate in DMF at 55° (90%) [2217].
- Preparation by reaction of activated zinc dust on 3-hydroxy-4-methoxy- α -chloroacetophenone with 10% acetic acid in refluxing ethanol (48%) [2787].
- Preparation by Fries rearrangement of guaiacol acetate,
 - with hydrofluoric acid at 0° (28%) [2236];
 - with zinc chloride at reflux (6%) [2729].
- Preparation by reaction of acetic acid on guaiacol,
 - with hydrofluoric acid at 0° (25%) [2236];
 - with phosphorous oxychloride on a steam bath (20%) [2171].
- Preparation by reaction of acetic anhydride on guaiacol,
 - with concentrated sulfuric acid at 80° (20–24%) [2784] (The in situ formed sulfoacetic acid during the reaction was the actual acylating agent);
 - with zinc chloride [2331].
- Obtained by reaction of sodium acetate on 3-chloroacetoxy-4-methoxyacetophenone in refluxing methanol [2788].
- Also refer to: [2789].

Isolation from natural sources

- From Chinese Moutan Cortex, the root of *Paeonia suffruticosa* Andrews or Anhr. (*mudanpi*) (minor component) (Paeoniaceae) [2323], (Ranunculaceae) [2750].

m.p. (anhydrous): 93° [2236], 92–93° [2750,2786], 92° [2783], 91–92° [2171,2785], 91° [2784], 89° [2217], 87–88° [2787];

m.p. (hydrate): 67–68° [2729,2785], 66–69° [2784], 65–68° [2788], 64–65° [2331], 59–60° [2171];

b.p.₁₅ 180–200° [2171], b.p.₁₈ 195–200° [2784];

¹H NMR (Sadler: standard n° 28211 M);

IR [2783] and (Sadler: standard n° 55283); UV [2783], MS [2331].

1-(3-Hydroxy-5-methoxyphenyl)ethanone

[35999-23-6]

C₉H₁₀O₃

mol.wt. 166.18

Synthesis

– Refer to: [2790].

**1-(4-Hydroxy-2-methoxyphenyl)ethanone** (*Isopaeonol*)

[493-33-4]

C₉H₁₀O₃

mol.wt. 166.18

Syntheses

– Preparation by reaction of acetonitrile on resorcinol monomethyl ether (Hoesch reaction) (27%) [2301], (10%) [2128].

– Preparation by reaction of acetic acid on resorcinol monomethyl ether,

- with polyphosphoric acid (27%) [2299];

- using perchloric acid liberated in situ, at 60° (6%) [2746].

- Preparation by hydrolysis of 4-acetyl-3-methoxyphenyl acetate with boiling 10% sodium hydroxide solution (58%) [2791] or 4-acetyl-3-methoxyphenyl benzoate with potassium hydroxide in refluxing methanol (85%) [2792].

- Also obtained (by-product) by Fries rearrangement of 3-methoxyphenyl acetate with aluminium chloride in nitrobenzene at r.t. (11%) [2742,2743] or at 90° (4%) [2128].

- Also refer to: [2777] and [2793] (compound **8**).

Isolation from natural sources

- This ketone was identified in the extract from “Redgold” apple flowers [2794].

m.p. 139–140° [2791,2792], 138° [2128,2301,2742,2743], 137–138° [2746], 134° [2299]; ¹³C NMR [2328].

1-(4-Hydroxy-3-methoxyphenyl)ethanone*(Apocynin; Acetovanillone; Acetoguaiacone)*[498-02-2] C₉H₁₀O₃ mol.wt. 166.18**Syntheses**

- Preparation by reaction of acetyl chloride on guaiacol [2784].
- Preparation by reaction of acetic anhydride on guaiacol with polyphosphoric acid in a water bath (29%) [2788].
- Preparation by Fries rearrangement of guaiacol acetate,
 - with aluminium chloride in nitrobenzene at r.t. [2378,2795–2798], (49–51%) [2378,2797] or at 80° (40%) [2796];
 - with hydrofluoric acid at 0° (50%) [2236];
 - with zinc chloride at 200° (25–26%) [2171,2729].
- Preparation by reaction of acetic acid on guaiacol,
 - with hydrofluoric acid at 0° (38%) [2236];
 - with polyphosphoric acid (36%) [2299];
 - with zinc chloride at reflux (4%) [2171];
 - with aluminium chloride–zinc chloride mixture at 140–150° [2784,2799], (low yield) [2799].
- Also obtained by hydrolysis of 4-acetyl-2-methoxyphenyl acetate with boiling water [2784].
- Also obtained by saponification of 4-acetyl-2-methoxyphenyl benzoate with boiling aqueous sodium hydroxide (56%) [2800].
- Also obtained (low yield) by treatment of 4-hydroxy-3-methoxybenzoic acid (vanillic acid) with calcium carbonate in boiling dilute acetic acid [2379].
- Also obtained from 4-hydroxy-3-methoxy- α -bromoacetophenone [2801] or 4-hydroxy-3-methoxy- α -chloroacetophenone [2802] by reductive removal of the halogen atom with iron filings and 10% sulfuric acid in aqueous ethanol at 60°.
- Also obtained by UV light irradiation,
 - of guaiacol acetate in benzene (12–14%) [2193,2198];
 - of 2,4-dimethoxyphenyl acetate in benzene (8%) [2198] or in ethanol (4%) [2198].
- Also refer to: [1828,2227].

Isolation from natural sources

- From rhizomes of Canadian hemp, *Apocynum cannabinum*, of *Apocynum androsaemifolium* (Apocynaceae) [2803,2804], of several species of *Apocynum* [2331].

- From the essential oil of the rhizomes of *Iris* (Iridaceae) [2805].
 - From the roots of *Paeonia broteroi* (Paeoniaceae) [2256].
 - From the root of *Paeonia suffruticosa* Andrews (Paeoniaceae) [2323].
 - From the bulbs of *Buphane disticha*, Herb. (Amaryllidaceae) [2806].
 - From spruce lignin sulfonic acid by treatment with hot aqueous alkali (0.2–0.3%) [2807].
 - Described by Shimamoto as one of the fragrant components of Soy [2798].
- m.p. 116° [2236], 115–116° [2729,2796], 115–115°5 [2805], 115° [2331,2379,2797,2799,2800,2802–2804,2806], 114–115° [2788], 114° [2299], 113°5–114°5 [2807], 113–114° [2171,2801], 112–114° [1789];

1-(4-Hydroxy-3-methoxyphenyl)ethanone-1-¹³C

[199793-91-4] C₉H₁₀O₃ mol.wt. 167.17

Synthesis

– Obtained by condensation of [1-¹³C]acetic acid with guaiacol [2808].

1-(5-Hydroxy-2-methoxyphenyl)ethanone

[31405-60-4] C₉H₁₀O₃ mol.wt. 166.18

Syntheses

- Preparation by reaction of concentrated hydrochloric acid on 5-(benzyloxy)-2-methoxyacetophenone in acetic acid at 65–70° (31%) [2358].
 - Also obtained (by-product) by reaction of dimethyl sulfate on 5-acetoxy-2-hydroxyacetophenone with potassium carbonate in acetone at r.t. (4%) [2348].
 - Preparation by reaction of methyl iodide on quinacetophenone with lithium carbonate in DMF at 60° (54%) [2217].
 - Preparation by partial demethylation of 2,5-dimethoxyacetophenone with sulfuric acid at 45–55° (42%) [2809].
- m.p. 83° [2358], 82–83° [2809], 81–83° [2217], 64–65° [2810], 62–63° [2348];
¹H NMR [2348], IR [2348], UV [2348,2810].

1-[2,4-Dihydroxy-5-(hydroxymethyl)phenyl]ethanone

[117705-66-5]

 $C_9H_{10}O_4$

mol.wt. 182.18

**Synthesis**

– Preparation by hydrogenation of 5-formyl-2,4-dihydroxyacetophenone in the presence of 10% Pd/C in ethanol (74%) [2671].

m.p. 51–52° [2671].

1-(2,3-Dihydroxy-4-methoxyphenyl)ethanone

[708-53-2]

 $C_9H_{10}O_4$

mol.wt. 182.18

**Syntheses**

- Preparation by reaction of acetic acid on pyrogallol 1-methyl ether,
 - with zinc chloride at reflux (155–160°) (Nencki reaction), (62%) [2781], (46%) [2811];
 - with boron trifluoride on a steam bath (77%) [2403].
- Preparation by reaction of methyl iodide on gallacetophenone monopotassium salt in boiling methanol [2812].
- Preparation by hydrolysis of 3-acetoxy-2-hydroxy-4-methoxyacetophenone with concentrated hydrochloric acid in refluxing aqueous ethanol (84%) [2813].
- Also obtained by reaction of acetyl chloride on 2,6-dimethoxyphenol with zinc chloride at r.t. (8%) [2406].
- Also obtained by Fries rearrangement of 2,6-dimethoxyphenyl acetate with zinc chloride at 120° (6%) [2406].
- Also obtained by partial dealkylation of 2-hydroxy-3,4-dimethoxyacetophenone [2406,2814] with hydrobromic acid in acetic acid at r.t. (46%) [2814] or by partial dealkylation of 3-ethoxy-2-hydroxy-4-methoxyacetophenone in the same conditions (22%) [2814].

Isolation from natural sources

- From the roots of *Paeonia broteroi* Boiss & Reuter (Paeoniaceae) [2256] or from the root cortex of *Paeonia suffruticosa* Anhr. [2256] (Ranunculaceae) (minor component) [2750].

m.p. 132–133° [2403,2406,2812,2815], 132° [2811], 131–132° [2750], 130–134° [2813], 130–132° [2814];

1H NMR [2256,2403], IR [2256,2403], UV [2256], MS [2256,2331].

1-(2,3-Dihydroxy-5-methoxyphenyl)ethanone

m.p. 120° [2408].

$C_9H_{10}O_4$ mol.wt. 182.18

Synthesis

– Obtained by reaction of potassium persulfate on 2-hydroxy-5-methoxyacetophenone in aqueous sodium hydroxide solution (1%) [2408].

1-(2,3-Dihydroxy-6-methoxyphenyl)ethanone

[56358-73-7]

– Preparation by reaction of 3% hydrogen peroxide on 3-acetyl-2-hydroxy-4-methoxybenzaldehyde into solution of 1 N sodium hydroxide (Dakin reaction) (62–65%) [2358,2816].

– Preparation by reaction of 3% hydrogen peroxide on the 3-acetyl-2-hydroxy-6-methoxyacetophenone into solution of 1 N sodium hydroxide at r.t. (33%) [2358].

– Also obtained by reaction of concentrated hydrochloric acid on 2,3-bis(benzyloxy)-6-methoxy-acetophenone in acetic acid at 60° [2358].

m.p. 148–149° [2358], 147° [2816]; 1H NMR [2374], MS [2374].

$C_9H_{10}O_4$ mol.wt. 182.18

Syntheses**1-(2,4-Dihydroxy-3-methoxyphenyl)ethanone**

[62615-26-3]

– Preparation by catalytic hydrogenolysis of 4-(benzyloxy)-2-hydroxy-3-methoxyacetophenone in the presence of 5% Pd/C in ethyl acetate [1989,2817], (90%) [2817].

– Preparation by reaction of boron trifluoride–acetic acid complex with the pyrogallol 2-methyl ether at 100° (79–85%) [2403,2818].

– Preparation by reaction of acetonitrile on pyrogallol 2-methyl ether with triflic acid at r.t. (60%) [2819].

– Also obtained by reaction of aluminium chloride on gallacetophenone trimethyl ether in boiling ethyl ether (15%) [2820].

– Also obtained by reaction of methyl iodide on gallacetophenone monopotassium salt in boiling methanol (10%) [2812,2821].

– Also obtained by hydrolysis of 2,4-diacetoxy-3-methoxyacetophenone with boiling aqueous sodium carbonate solution [2822].

$C_9H_{10}O_4$ mol.wt. 182.18

Syntheses

N.B.: The melting points of the 1-(2,4-dihydroxy-3-methoxyphenyl)ethanone are conflicting [2819]. One shall thus mention that the melting points of this product, that are in the range 130–135°, can be compared to those of the 1-(2,3-dihydroxy-4-methoxyphenyl)ethanone (132–133°). However, ¹H NMR spectral data of this ketone of m.p. 68° [2819] is identical with those reported for the compound of m.p. 141–144° [1989].

m.p. 141–144° [1989], 134–135° [2822], 132–133° [2812,2821], 130–131° [2820], 76° [2817,2818], 75–76° [2403], 68° [2819];
¹H NMR [1989,2819], IR [2403,2819], MS [2819].

1-(2,4-Dihydroxy-5-methoxyphenyl)ethanone

[7298-21-7]

C₉H₁₀O₄ mol.wt. 182.18

Syntheses

- Preparation by debenylation of 4-(benzyloxy)-2-hydroxy-5-methoxyacetophenone,
 - by catalytic hydrogenolysis with 5–10% Pd/C in ethyl acetate at r.t. (quantitative yield) [2823,2824];
 - with concentrated hydrochloric acid in boiling acetic acid [2417].
- Preparation by partial demethylation of 2,4,5-trimethoxyacetophenone with hydrobromic acid in acetic acid [2733,2734].
- Preparation by Fries rearrangement of 2,4-diacetoxyanisole with aluminium chloride [2410].

m.p. 174° [2417], 172–173° [2824], 171–172° [2410], 170–171° [2823], 166° [2733,2734].

1-(2,4-Dihydroxy-6-methoxyphenyl)ethanone

[3602-54-8]

C₉H₁₀O₄ mol.wt. 182.18

Syntheses

- Preparation by reaction of acetonitrile on phloroglucinol monomethyl ether (Hoesch reaction) [1821,2825–2828], (87%) [2828], (73%) [2825], (62%) [2827].
- Preparation by catalytic hydrogenolysis of 2,4-bis-(benzyloxy)-6-methoxyacetophenone in the presence of 10% Pd/C (89%) [2829] in ethyl acetate (64%) [2830].
- Preparation by reaction of aluminium chloride,
 - on the 2,4,6-trimethoxyacetophenone [2325,2826,2831–2833] in boiling chlorobenzene (29–35%) [2831,2832];
 - on the 2-hydroxy-4,6-dimethoxyacetophenone in boiling chlorobenzene [2432,2834–2836], (58%) [2835] according to the method [2836], (58%) [2432];
 - on the 4-hydroxy-2,6-dimethoxyacetophenone in boiling benzene [2837].

- Preparation by partial demethylation of 4-hydroxy-2,6-dimethoxyacetophenone with boron trichloride in cooled methylene chloride (74%) [2748].
- Also obtained by hydrolysis of 2,4-dihydroxy-6-methoxyacetophenone diacetate [2791].
- Also obtained by reaction of concentrated hydrochloric acid on 4-(benzyloxy)-2-hydroxy-6-methoxyacetophenone in acetic acid [2838].

Isolation from natural sources

- From the stem of *Kniphofia foliosa* (Asphodelaceae) [2839].
- From the aerial parts of *Tanacetum densum* subsp. *eginense* [2840].
- From the roots of *Sanguisorba officinalis* [2841].
- From phloroacetophenone 2,4-di-O-(2,3,4,6-tetra-O-acetyl)- β -D-galactopyranoside. This one was methylated with methyl iodide in the presence of silver carbonate in refluxing acetone for 8 h. The obtained methyl ether was deacetylated, then hydrolyzed with 5% sulfuric acid [2842].
- By reductive cleavage of *isofoliosone*, itself isolated from *Kniphofia foliosa* Hochst [2839].

N.B.: Mg (II) salt [2843].

m.p. 207–209° [2837], 207° [2833], 205–207° [2827,2842,2844,2845], 205–206° [2835], 205° [2325], 204–205° [2432], 203–204° [2791,2838], 203° [2828,2831,2834,2836], 201–202° [2829,2830], 195–198° [2839];
¹H NMR [2435,2830,2839], ¹³C NMR [1821,2839,2846], IR [2435,2830], UV [2847], MS [2830,2839].

1-(2,5-Dihydroxy-3-methoxyphenyl)ethanone

$C_9H_{10}O_4$ mol.wt. 182.18

Synthesis

- Obtained by reaction of potassium persulfate on 2-hydroxy-3-methoxyacetophenone in aqueous sodium hydroxide solution (26%) [2848], (2%) [2408].

m.p. 172–174° [2848], 172° [2408].

1-(2,5-Dihydroxy-4-methoxyphenyl)ethanone

[22089-12-9]

$C_9H_{10}O_4$ mol.wt. 182.18

Syntheses

- Preparation by Fries rearrangement of 2-methoxyhydroquinone diacetate,
 - with boron trifluoride in acetic acid (97%) [2849], (62%) [2850];
 - with aluminium chloride in nitrobenzene at r.t. [2410,2742,2743], (38%) [2743], (31%) [2742].

- Preparation by reaction of dimethyl sulfate with 2,4,5-trihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone (65%) [2418].
- Preparation from paeonol by persulfate oxidation [2410,2733,2734,2740], (Elbs reaction) (18–22%) [2733,2734,2740].
- Preparation by partial demethylation of 2-hydroxy-4,5-dimethoxyacetophenone with hydrobromic acid in refluxing acetic acid [2417].
- Preparation by diazotization of 5-amino-2-hydroxy-4-methoxyacetophenone, followed by decomposition of the diazonium salt obtained [2530].

Isolation from natural sources

- From Chinese Moutan Cortex, the root of *Paeonia suffruticosa* Andrews (Paeoniaceae) [2530] in Japanese [2323]. The root cortex of *Paeonia suffruticosa* Anhr. (Ranunculaceae) is also known as [2323] in Chinese. In this, the ketone is a minor component [2750].

m.p. 166–167° [2750], 166° [2849,2850], 165–166° [2742,2743], 164–166° [2418], 164–165° [2417,2530], 164° [2733,2734,2740];

¹H NMR [2850], IR [2850], MS [2331].

1-(2,6-Dihydroxy-4-methoxyphenyl)ethanone

[7507-89-3]

C₉H₁₀O₄

mol.wt. 182.18

Syntheses

- Obtained by reaction of boiling aqueous potassium hydroxide,
 - on the Methyl 3-acetyl-2,4-dihydroxy-6-methoxybenzoate (quantitative yield) [2851,2852];
 - on the 3-trichloroacetyl-2,6-dihydroxy-4-methoxyacetophenone [2368,2851,2852], (quantitative yield) [2851,2852].
- Preparation by adding a solution of 2,6-diacetoxy-4-hydroxyacetophenone in dioxane at r.t.. The residual pale yellow oil obtained after elimination of solvent was hydrolyzed with dilute hydrochloric acid in refluxing methanol (83%) [2853].
- Preparation by selective deacetylation of 2,4-diacetyl-5-methoxyresorcinol with sodium methoxide in refluxing methanol [2826,2854,2855], (76%) [2826] or with boiling 1 N sodium hydroxide (70%) [2856].
- Preparation by reaction of diazomethane on phloroacetophenone in ethyl ether at r.t. [2434,2827,2857,2858], (37%) [2857].
- Preparation by reaction of dimethyl sulfate on phloroacetophenone with potassium carbonate in refluxing acetone (62%) [2859].

Isolation from natural sources

- From the root tissue of *Sanguisorba minor* (Rosaceae) [2859].
- As a decomposition product of sakuranin, a glucoside isolated from the bark of *Prunus pseudocerasus* Lindl. (Var. Sieboldi Maxim.), also called *Prunus yedoensis* Matsumura [2844].

- By alkaline hydrolysis of artocarpetin, a flavonoid pigment isolated from the heartwood of *Artocarpus integrifolia* [2860].
- Claimed to be obtained as a minor component in the steam distillates of the resins from various species of *Xanthorrhoea* (X.); *X. tateana* F. Muell. and *X. preissi* (m.p. 79°) [2584], but also from *X. arborea* R. Br. and *X. reflexa*. (m.p. 79°) [2761]. Thus, this compound, the 2,6-dihydroxy-4-methoxyacetophenone has a melting point of 136–137° (see below). Two possibilities may then occur:

- either this compound is a monomethyl ether derived from phloroacetophenone, as the authors do pretend, and in this case, it would be at the time the 2,4-dihydroxy-6-methoxyacetophenone (m.p. 205–207°) [2827,2844,2845]. It is not possible;
- or, it is a dimethyl ether [2845], and in this case, it would be the 2-hydroxy-4,6-dimethoxy-acetophenone (*Xanthoxylin*) (m.p. 78–79°) [2861], (80°) [2845], (82°) [2862], what is later confirmed [2862].

m.p. 139–140° [2844], 139–139.5 [2853], 139° [2860], 138–140° [2857], 137–139° [2856], 136–137° [2826,2827,2833,2837,2845,2852], 134–136° [2368];

b.p._{0.5} 145–150° [2860];

¹H NMR [2206,2368,2826,2853,2856], ¹³C NMR [2206,2368];

IR [2826], UV [2859];

MS [2859].

1-(3,4-Dihydroxy-2-methoxyphenyl)ethanone

[27829-93-2] C₉H₁₀O₄ mol.wt. 182.18

Syntheses

– Obtained by debenylation of 3,4-bis(benzyloxy)-2-methoxyacetophenone with 15% ethanolic hydrochloric acid, on a steam bath (22%) [2403].

– Also refer to: [2863] (compound 5).

m.p. 84–85° [2403]; ¹H NMR [2403], IR [2403].

1-(3,4-Dihydroxy-5-methoxyphenyl)ethanone

[3934-89-2] C₉H₁₀O₄ mol.wt. 182.18

Syntheses

– Cyclic voltammetry showed the electrochemical oxidation of 3,5-dimethoxy-4-hydroxyacetophenone gave 3,4-di-hydroxy-5-methoxyacetophenone as the major product by a one electron oxidation process (20% isolated yield), but 30–40% estimated by thin layer chromatography [2864].

– Also refer to: [1787,2865–2867].

1-(3,5-Dihydroxy-4-methoxyphenyl)ethanone

[148204-58-4]

 $C_9H_{10}O_4$ mol.wt. 182.18

Isolation from natural sources

- Characterization in liquid wastes from eucalyptus wood and kraft lignin charring by flame-ionization gas-chromatography and gas-chromatography/mass-spectrometry [2868].

1-(3,6-Dihydroxy-2-methoxyphenyl)ethanone

[33539-20-7]

 $C_9H_{10}O_4$ mol.wt. 182.18

Syntheses

- Preparation from 2-hydroxy-6-methoxyacetophenone by persulfate oxidation (Elbs reaction) (26–33%) [2361,2780,2781].
- Preparation by reduction of 2-acetyl-3-methoxy-1,4-benzoquinone using conventional methods [2869].
- Also obtained (low yield) by reaction of 2-acetyl-1,4-benzoquinone with an excess of methanol at r.t., with exclusion of light [2869].

m.p. 91° [2780], 90° [2361,2781,2869]; 1H NMR [2374,2869], IR [2869], MS [2374].

1-(4,5-Dihydroxy-2-methoxyphenyl)ethanone $C_9H_{10}O_4$ mol.wt. 182.18

Synthesis

- Obtained by reaction of the Dakin solution on 2,4-diacetyl-5-methoxyphenol [2410].

m.p. 173–175° [2410].

1-(2,3,4-Trihydroxy-5-methylphenyl)ethanone

[59862-06-5]

 $C_9H_{10}O_4$ mol.wt. 182.18

Syntheses

- Preparation by reaction of acetic anhydride and acetic acid on 1,2,3-trihydroxy-4-methylbenzene with zinc chloride at 140–145°, then deacylation of keto esters mixture obtained with boron trifluoride etherate in methanol (25%) [2276].
- Also obtained (poor yield) by alkaline degradation of a solution of D-xylose or D-glucose in 0.63 M sodium hydroxide at 96° under nitrogen [2276].

m.p. 167–168° [2276]; 1H NMR [2276], IR [2276], MS [2276].

1-(2,4,6-Trihydroxy-3-methylphenyl)ethanone

[2657-28-5]

 $C_9H_{10}O_4$

mol.wt. 182.18

**Syntheses**

- Preparation by reaction of acetonitrile on 2-methyl-phloroglucinol (Hoesch reaction) [2027,2861,2870,2871], (83%) [2027], (70%) [2871], (33%) [2861].
 - Preparation by reduction of 3-formylphloroacetophenone with hydrochloric acid and amalgamated zinc in gently heated aqueous methanol (53%) [2872].
 - Preparation by demethylation of 2,4-dimethoxy-6-hydroxy-3-methylacetophenone,
 - with boron tribromide in methylene chloride at 0° (77%) [2873];
 - with aluminium chloride in refluxing benzene (87%) [2874].
 - Preparation by reaction of 2-methylphloroglucinol with boron trifluoride-acetic acid complex at 28–30° (50%) [2242].
 - Also obtained from phloroacetophenone using methyl iodide and alkali in methanolic solution [2276,2875–2878], (50%) [2876], (31%) [2877].
- m.p. 211–212° [2861,2870,2873,2874], 211° [2871], 210–211° [2027,2872,2876], 210° [2242], 209–210° [2879], 205–206° [2877];
¹H NMR [2027,2873,2879], IR [2873], UV [2878], MS [2027].

1-[2-Hydroxy-5-(methylsulfonyl)phenyl]ethanone

[20951-24-0]

 $C_9H_{10}O_4S$

mol.wt. 214.24

**Synthesis**

- Preparation by Fries rearrangement of 4-(methylsulfonyl)-phenyl acetate with aluminium chloride without solvent at 120° (42%) [1852].
- m.p. 139–140° [1852].

1-[4-Hydroxy-3-(methylsulfonyl)phenyl]ethanone

[56490-43-8]

 $C_9H_{10}O_4S$

mol.wt. 214.24

**Synthesis**

- Preparation by Fries rearrangement of 2-(methylsulfonyl)-phenyl acetate in the presence of aluminium chloride in nitrobenzene at 50–60° (75%) [2544].
- m.p. 168–169° [2544].

1-(2,3,6-Trihydroxy-4-methoxyphenyl)ethanoneC₉H₁₀O₅ mol.wt. 198.18

Syntheses

- Preparation by reduction of 2-acetyl-3-hydroxy-5-methoxy-quinone,
- with sulfur dioxide in water [2880];
 - with sodium hydrosulfite in boiling water (59%) [2881].
- m.p. 170–171° [2880,2881].

1-(2,4,6-Trihydroxy-3-methoxyphenyl)ethanone[16297-01-1] C₉H₁₀O₅ mol.wt. 198.18

Syntheses

- Preparation by reaction of acetonitrile on 2-methoxy-1,3,5-trihydroxybenzene (2-methoxyphloroglucinol or iretol), (Hoesch reaction) [2882,2883], (71%) [2883].
- Also obtained (poor yield) by partial demethylation of 2,4-di-hydroxy-3,6-dimethoxyacetophenone with aluminium chloride in nitrobenzene at 100° [2884].
- m.p. 188° [2884], 169–170° [2882], 168° [2883].

1-(3,4,6-Trihydroxy-2-methoxyphenyl)ethanone[73239-52-8] C₉H₁₀O₅ mol.wt. 198.18

Synthesis

- Refer to: [2885].
- TLC [2885].

1-(2,3,4,5-Tetrahydroxy-6-methylphenyl)ethanone[66296-85-3] C₉H₁₀O₅ mol.wt. 198.18

Synthesis

- Obtained (poor yield) by treatment of dihydroxyacetone in aqueous solution (pH 4.5) at 96° (2%) [2716].
- m.p. 178–181° [2716]; ¹H NMR [2716], MS [2716].

1-(2,3,4,6-Tetrahydroxy-5-methylphenyl)ethanone $C_9H_{10}O_5$ mol.wt. 198.18

Syntheses

- Preparation by reaction of sulfur dioxide on 2-acetyl-3,5-dihydroxy-6-methyl-2,5-cyclohexadiene-1,4-dione in dilute methanol (92%) [2886].
 - Preparation by hydrolysis of 3-amino-2,4,6-trihydroxy-5-methylacetophenone hydrochloride (89%) [2886].
 - Preparation by reaction of aluminium bromide on 2,5-dihydroxy-4,6-dimethoxy-3-methyl-acetophenone in chlorobenzene at 80–85° (61%) [2886].
- m.p. 191–192° [2886].

1-(2-Amino-3-hydroxy-5-methylphenyl)ethanone (Hydrochloride) $C_9H_{11}NO_2, HCl$ mol.wt. 201.65

Synthesis

- Preparation by reaction of hydrogen on 3-hydroxy-5-methyl-2-nitroacetophenone with Raney nickel in methanol (80%) [2122].
- m.p. 194–196° (d) [2122]; UV [2122].

1-(2-Amino-3-hydroxy-6-methylphenyl)ethanone[38968-45-5] $C_9H_{11}NO_2$ mol.wt. 165.19

Syntheses

- Obtained (trace) by photolysis of 3,4-dimethylantranil in 98% sulfuric acid [2454].
- Also obtained (trace) by thermal decomposition of 2-azido-6-methylacetophenone in 98% sulfuric acid [2454].

1-(2-Amino-5-hydroxy-3-methylphenyl)ethanone $C_9H_{11}NO_2$ mol.wt. 165.19

Synthesis

- Refer to: [2455] (compound **8e**).

1-(2-Amino-6-hydroxy-4-methylphenyl)ethanone[97066-15-4] $C_9H_{11}NO_2$ mol.wt. 165.19

Synthesis

– Obtained by reaction of potassium hydroxide with 2-acetyl-3-amino-5-hydroxy-5-methyl-2-cyclohexenone in ethanol at 40° (44%) [2712].

m.p. 91–92° [2712]; IR [2712], UV [2712], MS [2712].

1-(3-Amino-2-hydroxy-5-methylphenyl)ethanone[70977-71-8] $C_9H_{11}NO_2$ mol.wt. 165.19

Syntheses

– Preparation by hydrogenation of 2-hydroxy-5-methyl-3-nitroacetophenone using 5% Pd/C catalyst in ethanol (68%) [1898], (48%) [1897].

– Preparation by reduction of 2-hydroxy-5-methyl-3-nitroacetophenone with stannous chloride dihydrate in hydrochloric acid (50%) [2586].

m.p. 71–72° [2586], 56–58° [1898], 55–57° [1897].

1-(3-Amino-5-hydroxy-4-methylphenyl)ethanone (Hydrochloride) $C_9H_{11}NO_2, HCl$ mol.wt. 201.65

Synthesis

– Preparation by reduction of 3-hydroxy-4-methyl-5-nitroacetophenone with tin and 25% hydrochloric acid heated under reflux on a steam bath (87%) [2581].

1-(4-Amino-3-hydroxy-5-methylphenyl)ethanone (Hydrochloride) $C_9H_{11}NO_2, HCl$ mol.wt. 201.65

Synthesis

– Preparation by reaction of hydrogen on 3-hydroxy-5-methyl-4-nitroacetophenone with Raney nickel in methanol (92%) [2122].

m.p. 195–198° [2122]; UV [2122].

1-(5-Amino-4-hydroxy-2-methylphenyl)ethanone $C_9H_{11}NO_2$ mol.wt. 165.19

Synthesis

– Obtained by reduction of 4-hydroxy-2-methyl-5-nitroacetophenone with sodium hydrosulfite in boiling alkaline solution (66%) [2887].

m.p. 116° [2887].

1-(6-Amino-3-hydroxy-2-methylphenyl)ethanone[69976-76-7] $C_9H_{11}NO_2$ mol.wt. 165.19**Synthesis**

– Preparation by irradiation of 3,4-dimethyl-2,1-benzisoxazole in 96% sulfuric acid (91%) [2455].

1-[3-Hydroxy-4-(methylamino)phenyl]ethanone[54903-57-0] $C_9H_{11}NO_2$ mol.wt. 165.19**Syntheses**

– Preparation from 6-acetyl-3-methylbenzoxazolone by alkaline hydrolysis with boiling 10% aqueous sodium hydroxide solution (90–100%) [2471], (60%) [2888].

– Also refer to: [2472] (compound **VII**) and [2889].

m.p. 169–170° [2471,2888].

1-[5-Hydroxy-2-(methylamino)phenyl]ethanone[63609-52-9] $C_9H_{11}NO_2$ mol.wt. 165.19**Synthesis**

– Preparation by UV light irradiation of 1,3-dimethylindazole in aqueous sulfuric acid at 11–15° (38–44%) [2285,2467].

m.p. 142–143° [2467];

1H NMR [2467], IR [2467], UV [2467], MS [2467].

1-(2-Amino-5-hydroxy-3-methoxyphenyl)ethanone[126893-27-4] $C_9H_{11}NO_3$ mol.wt. 181.19**Synthesis**

– Obtained (by-product) by reaction of stannous chloride on 3,5-dimethoxy-2-nitroacetophenone in concentrated hydrochloric acid at r.t. [2890].

m.p. 136–138° [2890];

1H NMR [2890], ^{13}C NMR [2890], IR [2890];

UV [2890], MS [2890].

1-(3-Amino-2-hydroxy-5-methoxyphenyl)ethanone[55008-15-6] $C_9H_{11}NO_3$ mol.wt. 181.19

Syntheses

- Preparation by reduction of 2-hydroxy-5-methoxy-3-nitroacetophenone with stannous chloride dihydrate in hydrochloric acid (47%) [2586].
- Preparation according to [2075] by [2778].

m.p. 107–108° [2586].

1-(3-Amino-2-hydroxy-6-methoxyphenyl)ethanone[75452-86-7] $C_9H_{11}NO_3$ mol.wt. 181.19

Synthesis

- Preparation by reaction of stannous chloride on 2-hydroxy-6-methoxy-3-nitroacetophenone in refluxing concentrated hydrochloric acid [2522,2523], (51%) [2523].

m.p. 66° [2523].

1-(5-Amino-2-hydroxy-3-methoxyphenyl)ethanone $C_9H_{11}NO_3$ mol.wt. 181.19

Synthesis

- Preparation from 2-hydroxy-3-methoxyacetophenone that was coupled with diazotized sulfanilic acid and the resulting azo dye reduced with sodium hydrosulfite to 5-amino-2-hydroxy-3-methoxyacetophenone (41%) [2848].

m.p. 145°5–147° [2848].

1-(5-Amino-2-hydroxy-4-methoxyphenyl)ethanone $C_9H_{11}NO_3$ mol.wt. 181.19

Synthesis

- Preparation by reduction of 2-hydroxy-4-methoxy-5-nitroacetophenone [2530] with tin in concentrated hydrochloric acid heated in a water bath [1818,1836].

m.p. 113–114° [2530], 113° [1836], 112–113° [1818].

1-(3-Amino-2,4,6-trihydroxy-5-methylphenyl)ethanone (Hydrochloride) $C_9H_{11}NO_4$, HCl mol.wt. 233.65

Synthesis

– Preparation by reaction of stannous chloride on 2,4,6-trihydroxy-3-methyl-5-phenylazoacetophenone in acetic acid at 85–90°, in the presence of concentrated hydrochloric acid [2886].

m.p. 210–211° [2886].

1-[3-Amino-2-hydroxy-5-(methylsulfonyl)phenyl]ethanone[70977-88-7] $C_9H_{11}NO_4S$ mol.wt. 229.26

Synthesis

– Preparation by catalytic hydrogenation of 2-hydroxy-5-(methylsulfonyl)-3-nitroacetophenone in the presence of 5% Pd/C in ethanol at 25° [1898].

1-[2,4,6-Trihydroxy-3,5-bis[(trifluoromethyl)thio]phenyl]ethanone[66625-04-5] $C_{10}H_6F_6O_4S_2$ mol.wt. 368.28

Synthesis

– Preparation by reaction of trifluoromethanesulfonyl chloride with phloracetophenone in chloroform in the presence of a slight excess of pyridine and a small quantity of iron powder, first at –40°, then at 60° for 3 h (40%) [2480].

m.p. 113–115° [2480]; 1H NMR [2480], IR [2480].**1-[4-(Acetyloxy)-2-hydroxy-3,5-dinitrophenyl]ethanone** $C_{10}H_8N_2O_8$ mol.wt. 284.18

Synthesis

– Preparation by reaction of nitric acid on 4-acetoxy-2-hydroxyacetophenone in acetic acid or in acetic acid–ethanol mixture [1818].

m.p. 121–122° [1818].

1-[4-(Acetyloxy)-5-bromo-2-hydroxyphenyl]ethanone $C_{10}H_9BrO_4$ mol.wt. 273.08**Synthesis**

– Preparation by reaction of bromine on 4-acetoxy-2-hydroxyacetophenone in 80% acetic acid at r.t. (34%) [1836,1989].

m.p. 85° [1989], 84° [1836]; 1H NMR [1989].

1-[5-(Acetyloxy)-4-chloro-2-hydroxyphenyl]ethanone $C_{10}H_9ClO_4$ mol.wt. 228.63**Syntheses**

– Preparation by Fries rearrangement of 2-chlorohydroquinone diacetate with aluminium chloride [2024].
– Also obtained by partial acetylation of 4-chloro-2,5-dihydroxyacetophenone [2024].

m.p. 129° [2024].

1-[4-(Acetyloxy)-2-hydroxy-3-iodophenyl]ethanone

[149810-09-3]

 $C_{10}H_9IO_4$ mol.wt. 320.08**Synthesis**

– Preparation by reaction of acetyl chloride with 2,4-di-hydroxy-3-iodoacetophenone in the presence of triethyl-amine in methylene chloride for 1 h at 0° and for 2.5 h at r.t. (77%) [2891].

m.p. 101–102° [2891]; 1H NMR [2891], IR [2891], MS [2891].

1-[5-(Acetyloxy)-2-hydroxy-3-nitrophenyl]ethanone

[30095-73-9]

 $C_{10}H_9NO_6$ mol.wt. 239.18**Synthesis**

– Preparation by reaction of nitric acid (d = 1.5) on 5-acetoxy-2-hydroxyacetophenone in acetic acid at 10° (41%) [1832].

m.p. 112–113° [1832];
 1H NMR [1832], IR [1832], UV [1832].

1-(3-Bromo-4-ethoxy-2-hydroxy-5-nitrophenyl)ethanone[134716-11-3] $C_{10}H_{10}BrNO_5$ mol.wt. 290.09

Synthesis

– Refer to: [2484] (compound **1h**).**1-(3,5-Dibromo-2-hydroxy-4,6-dimethoxyphenyl)ethanone**[3410-83-1] $C_{10}H_{10}Br_2O_4$ mol.wt. 354.00

Syntheses

– Preparation by bromination of 2-hydroxy-4,6-dimethoxyacetophenone (Xanthoxilin) in chloroform containing 6% of pyridine (96%) [2892].

– Also refer to: [2893].

m.p. 111° [2892]; IR [2892].

1-(3,5-Dibromo-4-hydroxy-2,6-dimethoxyphenyl)ethanone[57393-65-4] $C_{10}H_{10}Br_2O_4$ mol.wt. 354.00

Synthesis

– Obtained (by-product) by reaction of bromine on 4-hydroxy-2,6-dimethoxyacetophenone in chloroform in the presence of aqueous sodium acetate solution (5%) [2894].

m.p. 117–118° [2894]; 1H NMR [2894].**1-[3,5-Bis(chloromethyl)-2-hydroxyphenyl]ethanone** $C_{10}H_{10}Cl_2O_2$ mol.wt. 233.09

Synthesis

– Preparation by reaction of 37% formaldehyde solution on 2-hydroxyacetophenone with hydrochloric acid in a boiling water bath (81–87%) [2551].

m.p. 83° [2551].

1-(2,6-Dichloro-4-hydroxy-3,5-dimethoxyphenyl)ethanone[94649-71-5] $C_{10}H_{10}Cl_2O_4$ mol.wt. 265.09

Syntheses

– Preparation by chlorination of acetosyringone (4-hydroxy-3,5-dimethoxyacetophenone) in dioxane with 2.0–2.5 mol. equiv. chlorine in acetic acid [2553,2554], (37%) [2553].

- Identified in wheat and rye straw pulp bleaching and combined mill effluents [1787].
 - Identified on control of effluent from the manufacturing of bleached pulp and paper from sugarcane bagasse [1788].
 - Also refer to: [2895].
- m.p. 114–115° [2553,2554]; ¹H NMR [2553], ¹³C NMR [2553], MS [2553].

1-(3,4-Dichloro-6-hydroxy-2,5-dimethoxyphenyl)ethanone

[88771-63-5] $C_{10}H_8Cl_2O_4$ mol.wt. 265.09

Synthesis

– Preparation by reaction of chlorine on 4-chloro-3,6-di-methoxy-2-hydroxyacetophenone in chloroform at r.t. (57%) [1884].

m.p. 96° [1884].

1-[4-(Ethenyloxy)-2-hydroxyphenyl]ethanone

[109661-95-2] $C_{10}H_{10}O_3$ mol.wt. 178.19

Synthesis

– Preparation by reaction of potassium tert-butoxide with 2-hydroxy-4-(2-chloroethoxy)acetophenone in refluxing tert-butanol (70%) [2295].

¹H NMR [2295], IR [2295].

1-[2-(Acetyloxy)-3-hydroxyphenyl]ethanone

[145723-28-0] $C_{10}H_{10}O_4$ mol.wt. 194.19

Synthesis

– Obtained by photooxygenation of 2,3-dimethyl-7-hydroxy-benzofuran in methylene chloride at –5° (13%) [2896].

m.p. 53–55° [2896];

¹H NMR [2896], ¹³C NMR [2896], IR [2896], UV [2896].

1-[2-(Acetyloxy)-4-hydroxyphenyl]ethanone

[52751-42-5] $C_{10}H_{10}O_4$ mol.wt. 194.19

Syntheses

– Preparation by Fries rearrangement of resorcinol diacetate with ferric chloride in boiling acetic acid (46%) [2314].

- Also obtained by enzymatic deacylation of 2,4-diacetoxy-acetophenone with porcine pancreas lipase in tetrahydrofuran at 42–45° (80%) [2388,2897].
m.p. 119–120° [2314], 87–88° [2897]; ¹H NMR [2897].

1-[2-(Acetyloxy)-5-hydroxyphenyl]ethanone

[144152-29-4] C₁₀H₁₀O₄ mol.wt. 194.19

Syntheses

- Obtained by photooxygenation of 2,3-dimethyl-5-hydroxy-benzofuran in methylene chloride at –5° (10%) [2896].
- Also obtained by alcoholysis of 2,5-diacetoxyacetophenone with n-butanol mediated by *Pseudomonas cepacia* lipase in cyclohexane/tert-amyl alcohol at 40° (65%) [2898].
- Also obtained by enzymatic deacylation of 2,5-diacetoxy-acetophenone with porcine pancreas lipase in tetrahydrofuran at 42–45° (60%) [2388,2897].
m.p. 105–106° [2896], 93–95° [2897];
¹H NMR [2896,2897], ¹³C NMR [2896], IR [2896], UV [2896].

1-[2-(Acetyloxy)-6-hydroxyphenyl]ethanone

[26674-05-5] C₁₀H₁₀O₄ mol.wt. 194.19

Syntheses

- Preparation by acylation of 2,6-dihydroxyacetophenone (compound **49**) [2899].
- Refer to: [2900]; this reference indicated in Chem. Abstr., **89**, 179792x (1978) for the monoacetate mentioned actually concerns the diacetate, that is to say the 1,3-diacetoxy-2-acetylbenzene.

1-[3-(Acetyloxy)-2-hydroxyphenyl]ethanone

[144224-87-3] C₁₀H₁₀O₄ mol.wt. 194.19

Synthesis

- Refer to: [2675].

1-[3-(Acetyloxy)-4-hydroxyphenyl]ethanone

[115436-75-4] C₁₀H₁₀O₄ mol.wt. 194.19

Synthesis

- Obtained (by-product) by reaction of acetic anhydride on pyrocatechol with zinc chloride at 145–150° (8%) [2184].

m.p. 74–76° [2184].

1-[4-(Acetyloxy)-2-hydroxyphenyl]ethanone

[42059-48-3]

 $C_{10}H_{10}O_4$ mol.wt. 194.19

Syntheses

- Preparation by reaction of acetic anhydride on resaceto-phenone,
- at reflux [1838,2129,2245,2901];
 - with sodium acetate [1833,2290,2613,2902], (78%) [2241];
 - with pyridine (95%) [2358], (54–59%) [1989,2901].
- Preparation by reaction of acetic acid on resacetophenone with polyphosphoric acid (39%) [2241].
- Also obtained by reaction of acetyl chloride on resorcinol at reflux [1838,2903].
- Also obtained (by-product) by reaction of acetic acid on resorcinol with polyphosphoric acid (3%) [2241].
- Also obtained by reaction of vinyl acetate on resacetophenone mediated by *Pseudomonas cepacia* lipase in cyclohexane/tert-amyl alcohol at 40° (55–65%) [2898].
- Also refer to: [2675].
- m.p. 76° [2241], 75–76° [2358,2613], 75° [2290], 74° [2245,2314], 72–73° [1833,2901], 72° [2129,2902], 69–71° [1989];
- b.p. 303° [2245,2901];
- ¹H NMR [1989,2898]; ¹³C NMR [2898], IR [2898].

1-[5-(Acetyloxy)-2-hydroxyphenyl]ethanone

[21222-04-8]

 $C_{10}H_{10}O_4$ mol.wt. 194.19

Syntheses

- Preparation by reaction of boiling acetic anhydride on quinacetophenone [2356].
- Preparation by reaction of acetic anhydride and sodium acetate mixture on quinacetophenone at 50° [2359].
- Preparation by Fries rearrangement of hydroquinone diacetate,
- with boron trifluoride etherate at 120° (90%) [2338];
 - with aluminium chloride at 115–120° [2338,2348,2354] (predominantly) [2354], (31%) [2338].
- Also obtained by UV light irradiation of hydroquinone diacetate in methanol (15%) [2343].
- Also obtained by reaction of vinyl acetate on quinacetophenone mediated by *Pseudomonas cepacia* lipase in cyclohexane/tert-amyl alcohol at 40° (97%) [2898].
- Also obtained by alcoholysis of quinacetophenone diacetate with n-butanol mediated by *Pseudomonas cepacia* lipase in cyclohexane/tert-amyl alcohol at 40° (28%) [2898].

m.p. 91° [2356,2359], 83–84° [2343], 81–82° [2338], 80–85° [2354];
¹H NMR [2338,2343,2348,2898], ¹³C NMR [2898];
 IR [2338,2343,2348,2898], UV [2348], MS [2348]; pK_a [1977].

1-[2-(Acetyloxy)-4,6-dihydroxyphenyl]ethanone

[52751-41-4] C₁₀H₁₀O₅ mol.wt. 210.19

Synthesis

– Refer to: [2904].

1-[4-(Acetyloxy)-2,6-dihydroxyphenyl]ethanone

[29376-65-6] C₁₀H₁₀O₅ mol.wt. 210.19

Synthesis

– Preparation by reaction of acetic anhydride on phloro-acetophenone in pyridine at r.t. (17–20%) [2368,2905].

m.p. 165–166° [2905]; ¹³C NMR [2368].

1-[5-(Acetyloxy)-2,4-dihydroxyphenyl]ethanone

[55168-29-1] C₁₀H₁₀O₅ mol.wt. 210.19

Syntheses

– Obtained by partial Fries rearrangement of 1,2,4-triacetoxy-benzene,

- with boron trifluoride-acetic acid complex at 100° (78%) [2906];
- with zinc chloride in acetic acid at 120° (21%) [2416] or at 140° (7%) [2899].

m.p. 171° [2416], 169–170° [2899], 163° [2906];

¹H NMR [2416,2899,2906], IR [2416,2899,2906].

1-(5-Bromo-3-ethyl-2-hydroxyphenyl)ethanone

[81591-17-5] C₁₀H₁₁BrO₂ mol.wt. 243.10

Synthesis

– Preparation by Fries rearrangement of 4-bromo-2-ethyl-phenyl acetate with aluminium chloride without solvent in an oil bath (40%) [2907].

m.p. 42° [2907].

1-(3-Bromo-2-hydroxy-4,5-dimethylphenyl)ethanone[112747-62-3] $C_{10}H_{11}BrO_2$ mol.wt. 243.10

Syntheses

- Preparation by reaction of hydrated sodium sulfide (containing 7–9 mol of water) with 2-dimethylamino-4-[3-bromo-2-hydroxy-4,5-dimethylphenyl]-1,3-dithiole bisulfate in refluxing ethanol (85%) [1874].
- Preparation by reaction of bromine with 2-hydroxy-4,5-di-methylacetophenone in chloroform (69%) [2908].

m.p. 105–106° [1874], 100–101° [2908]; 1H NMR [1874,2908], IR [1874,2908].

1-(3-Bromo-6-hydroxy-2,4-dimethylphenyl)ethanone[71582-57-5] $C_{10}H_{11}BrO_2$ mol.wt. 243.10

Syntheses

- Preparation by reaction of acetic acid on 4-bromo-3,5-di-methylphenol with boron trifluoride [2909].
- Preparation by Fries rearrangement of 4-bromo-3,5-di-methylphenyl acetate (b.p.₁₅ 110°) with aluminium chloride at 120° [2910].

m.p. 99–103° [2909], 95–97° [2910]; 1H NMR [2910], IR [2910].

1-(5-Bromo-2-hydroxy-3,4-dimethylphenyl)ethanone[319923-51-8] $C_{10}H_{11}BrO_2$ mol.wt. 243.10

Synthesis

- Preparation by reaction of bromine with 2-hydroxy-3,4-di-methylacetophenone in methylene chloride (61%) [2908].

m.p. 65–66° [2908]; 1H NMR [2908], IR [2908].

1-(5-Bromo-4-ethoxy-2-hydroxyphenyl)ethanone[131359-44-9] $C_{10}H_{11}BrO_3$ mol.wt. 259.10

Syntheses

- Preparation by reaction of bromine on 4-ethoxy-2-hydroxyacetophenone in acetic acid [2293].
- Also refer to: [2484]–[2911] (compound **1g**).

m.p. 109–110° [2293].

1-(3-Bromo-5-ethyl-2,4-dihydroxyphenyl)ethanoneC₁₀H₁₁BrO₃ mol.wt. 259.10**Synthesis**

– Preparation by bromination of 2,4-dihydroxy-5-ethylacetophenone with bromine in acetic acid [1839,2912] or in chloroform [2913].

m.p. 131° [2912], 123–125° [2913], 121° [1839].

1-(3-Bromo-4-hydroxy-5-methoxy-2-methylphenyl)ethanoneC₁₀H₁₁BrO₃ mol.wt. 259.10**Synthesis**

– Preparation by reaction of acetyl chloride on 2-bromo-6-methoxy-3-methylphenol with aluminium chloride in carbon disulfide at 50° (50%) [2914].

m.p. 82° [2914].

1-(5-Bromo-2-hydroxy-4-methoxy-3-methylphenyl)ethanoneC₁₀H₁₁BrO₃ mol.wt. 259.10**Synthesis**

– Preparation by reaction of bromine on 2-hydroxy-4-methoxy-3-methylacetophenone in carbon disulfide [2915].

m.p. 63–64° [2915].

1-(3-Bromo-2-hydroxy-4,6-dimethoxyphenyl)ethanone[18064-89-6] C₁₀H₁₁BrO₄ mol.wt. 275.10**Syntheses**

– Preparation by reaction of bromine on 2,4-dimethoxy-6-hydroxyacetophenone [2526,2916–2921],

- in acetic acid at r.t. (98%) [2526], (43%) [2916];
 - in carbon tetrachloride (85%) [2526];
 - in acetic anhydride (50%) [2526];
 - in chloroform [2526,2918], (33%) [2526].
- Preparation by bromination of 2,4-dimethoxy-6-hydroxyacetophenone with cupric bromide in refluxing chloroform–ethyl acetate mixture [1845,2922], (62%) [2922].

– Preparation by reaction of cupric bromide on 2-acetoxy-4,6-dimethoxyacetophenone in refluxing chloroform–ethyl acetate mixture (76%) [2922].

m.p. 188–189° [2919], 187–189° [2922], 187° [2918,2920,2921], 186–187° [2526,2916]; ¹H NMR [1845,2526,2922], MS [1845].

1-(3-Bromo-4-hydroxy-2,6-dimethoxyphenyl)ethanone

[57517-42-7] $C_{10}H_{11}BrO_4$ mol.wt. 275.10

Synthesis

– Preparation by reaction of bromine on 4-hydroxy-2,6-di-methoxyacetophenone in chloroform in the presence of aqueous sodium acetate solution (88%) [2894].

m.p. 156–157° [2894]; ¹H NMR [2894].

1-(3-Bromo-2,5-dihydroxy-4,6-dimethoxyphenyl)ethanone

$C_{10}H_{11}BrO_5$ mol.wt. 291.10

Synthesis

– This compound is obtained by reaction of alkaline potassium persulfate on 3-bromo-2-hydroxy-4,6-dimethoxy-acetophenone [2917].

m.p. 147–149° [2917].

1-(3-Chloro-5-ethyl-2-hydroxyphenyl)ethanone

[58483-48-0] $C_{10}H_{11}ClO_2$ mol.wt. 198.65

Synthesis

– Preparation by Fries rearrangement of 2-chloro-4-ethyl-phenyl acetate with aluminium chloride without solvent at 150° (75%) [2923].

m.p. 74° [2923].

1-(5-Chloro-3-ethyl-2-hydroxyphenyl)ethanone

[53347-06-1] $C_{10}H_{11}ClO_2$ mol.wt. 198.65

Synthesis

– Preparation by Fries rearrangement of 4-chloro-2-ethyl-phenyl acetate with aluminium chloride without solvent at 120° [2008] or by heating in an oil bath (50%) [2907].

oil [2008]; b.p.₁₂ 145–146° [2008], b.p. 265° [2907].

1-(6-Chloro-3-ethyl-2-hydroxyphenyl)ethanone[81591-14-2] $C_{10}H_{11}ClO_2$ mol.wt. 198.65

Synthesis

– Preparation by Fries rearrangement of 5-chloro-2-ethyl-phenyl acetate with aluminium chloride without solvent by heating in an oil bath (40%) [2907].

b.p. 258° [2907].

1-(3-Chloro-2-hydroxy-4,6-dimethylphenyl)ethanone[71582-56-4] $C_{10}H_{11}ClO_2$ mol.wt. 198.65

Synthesis

– Preparation by reaction of acetic acid on 2-chloro-3,5-di-methylphenol with boron trifluoride [2909].

m.p. 74–75° [2909].

1-(3-Chloro-2-hydroxy-5,6-dimethylphenyl)ethanone[90743-03-6] $C_{10}H_{11}ClO_2$ mol.wt. 198.65

Synthesis

– Refer to: [1885] (ketone 16).

1-(3-Chloro-6-hydroxy-2,4-dimethylphenyl)ethanone[50343-13-0] $C_{10}H_{11}ClO_2$ mol.wt. 198.65

Syntheses

- Preparation by Fries rearrangement of 4-chloro-3,5-di-methylphenyl acetate with aluminium chloride without solvent between 120° and 155° [2011,2909, 2924], (90%) [2924].
- Preparation by reaction of aluminium chloride on 3-chloro-6-methoxy-2,4-dimethylacetophenone without solvent at 140–150° [1811].
- Also obtained by ozonization of 6-chloro-3,4,5,7-tetramethylcoumarin in ethyl acetate, followed first by hydrolysis of the ozonide so formed, then saponification of the resulting oil by sodium hydroxide in refluxing aqueous methanol for 1 h (59%) [2925].

m.p. 110–112° [2925], 106–109° [1811], 94° [2924], 89° [2011].

1-[3-(Chloromethyl)-2-hydroxy-5-methylphenyl]ethanone[87165-62-6] $C_{10}H_{11}ClO_2$ mol.wt. 198.65

Syntheses

- Preparation from 2-hydroxy-5-methylacetophenone by introduction of the chloromethyl group into aromatic ring by treatment with formaldehyde and hydrogen chloride at 70° [2926] according to [2546].
- Also refer to: [2481] (compound **11**).
- m.p. 59–60° [2926]; b.p._{0.4} 110–116° [2494]; ¹H NMR [2926].

1-[4-(Chloromethyl)-2-hydroxy-3-methylphenyl]ethanone[97582-37-1] $C_{10}H_{11}ClO_2$ mol.wt. 198.65

Synthesis

- Preparation by reaction of ethyl chloroformate with 4-(dimethylaminomethyl)-2-hydroxy-3-methylacetophenone in toluene [2550,2927], (72%) [2550].
- m.p. 57–59° [2550]; b.p.₃ 190–200° [2927]; ¹H NMR [2927], IR [2927].

1-[5-Chloro-2-hydroxy-3-(methoxymethyl)phenyl]ethanone[87165-59-1] $C_{10}H_{11}ClO_3$ mol.wt. 214.65

Synthesis

- Obtained by reaction of sodium methoxide with 5-chloro-3-chloromethyl-2-hydroxyacetophenone in refluxing methanol for 2 h (28%) [2494].
- b.p._{0.6} 121–131° [2494]; ¹H NMR [2494], IR [2494].

1-[4-(2-Chloroethoxy)-2-hydroxyphenyl]ethanone[109661-96-3] $C_{10}H_{11}ClO_3$ mol.wt. 214.65

Synthesis

- Preparation by reaction of 1,2-ethylene dichloride with resacetophenone in the presence of n-tetrabutylammonium bromide and potassium hydroxide in water at 60° (41%) [2295].
- m.p. 98–100° [2295]; ¹H NMR [2295].

1-[3-(Chloromethyl)-2-hydroxy-5-methoxyphenyl]ethanone[87165-70-6] $C_{10}H_{11}ClO_3$ mol.wt. 214.65**Synthesis**

– Preparation by reaction of polyoxymethylene with 2-hydroxy-5-methoxyacetophenone in the presence of concentrated hydrochloric acid at 50° (61%) [2494].

m.p. 71° [2494]; 1H NMR [2494], IR [2494].**1-(2-Chloro-4-hydroxy-3,5-dimethoxyphenyl)ethanone**[94649-70-4] $C_{10}H_{11}ClO_4$ mol.wt. 230.65**Syntheses**

– Preparation by chlorination of acetosyringone (4-hydroxy-3,5-dimethoxyacetophenone) in dioxane with 1.0–1.1 mol. equiv. chlorine in acetic acid [2553,2554], (24%) [2553].

- Identified in wheat and rye straw pulp bleaching and combined mill effluents [1787].
- Identified on control of effluent from the manufacturing of bleached pulp and paper from sugarcane bagasse [1788].
- Isolated from the pyrolysis products of beech wood [2928].

m.p. 93–94° [2553,2554]; GC-MS [2928]; 1H NMR [2553], ^{13}C NMR [2553], MS [2553].**1-(3-Chloro-2-hydroxy-4,6-dimethoxyphenyl)ethanone**[81325-85-1] $C_{10}H_{11}ClO_4$ mol.wt. 230.65**Syntheses**

– Preparation by Fries rearrangement of 2-chloro-3,5-di-methoxyphenyl acetate with aluminium chloride in chloro-benzene at reflux (94%) [2929] or in nitrobenzene, from 90° to 130° (24%) [2930].

- Preparation by reaction of acetyl chloride with 2-chloro-3,5-dimethoxyphenol in the presence of aluminium chloride in nitrobenzene at r.t. (87%) [2858].
- Also obtained by reaction of chlorine with 2-hydroxy-4,6-dimethoxyacetophenone in carbon tetrachloride (15%) [2139].
- Preparation by diazotization of 3-amino-2-hydroxy-4,6-dimethoxyacetophenone and treating with cuprous chloride (Sandmeyer reaction) [2139].
- Preparation by partial demethylation of 3-chloro-2,4,6-trimethoxyacetophenone with aluminium chloride in acetonitrile for 4 h at 30° (95%) [2747].
- Also refer to: [2931].

m.p. 191–192° [2139,2858], 188° [2930]; 1H NMR [2139,2930], IR [2858].

1-(3-Chloro-6-hydroxy-2,4-dimethoxyphenyl)ethanone[81325-86-2] $C_{10}H_{11}ClO_4$ mol.wt. 230.65

Syntheses

- Preparation by reaction of chlorine with 2-hydroxy-4,6-di-methoxyacetophenone in carbon tetrachloride (57%) [2139].
 - Also obtained (poor yield) by Fries rearrangement of 4-chloro-3,5-dimethoxyphenyl acetate with aluminium chloride in nitrobenzene at 90° and then 130° (11%) [2932].
- Also refer to: [2931,2933].
- m.p. 193–194° [2932], 91° [2139]; 1H NMR [2139,2932].

1-(3-Chloro-6-hydroxy-2,5-dimethoxyphenyl)ethanone[88771-58-8] $C_{10}H_{11}ClO_4$ mol.wt. 230.65

Synthesis

- Preparation by reaction of N-chlorosuccinimide on 3,6-dimethoxy-2-hydroxyacetophenone in refluxing carbon tetrachloride (59%) [1884].
- m.p. 108° [1884]; 1H NMR [1884].

1-(4-Chloro-2-hydroxy-3,6-dimethoxyphenyl)ethanone[88771-46-4] $C_{10}H_{11}ClO_4$ mol.wt. 230.65

Synthesis

- Refer to: [1884].

1-(4-Fluoro-2-hydroxy-3,6-dimethoxyphenyl)ethanone[88771-57-7] $C_{10}H_{11}FO_4$ mol.wt. 214.19

Synthesis

- Refer to: [1884].

1-(6-Ethoxy-2-hydroxy-3-iodophenyl)ethanone[35292-36-5] $C_{10}H_{11}IO_3$ mol.wt. 306.10

Synthesis

- Preparation by adding an aqueous solution of iodic acid and iodine to an ethanolic solution of 2-ethoxy-6-hydroxyaceto-phenone (88%) [2569].
- m.p. 106° [2569].

1-(2-Hydroxy-3-iodo-4,6-dimethoxyphenyl)ethanone

[59656-68-7]

 $C_{10}H_{11}IO_4$ mol.wt. 322.10

Syntheses

- Preparation by adding an ethanolic solution of iodine and phloroacetophenone dimethyl ether to an aqueous solution of iodic acid at r.t. (81%) [2934].
 - Preparation by adding an acetic acid solution of nitric acid to an acetonic solution of iodine and phloroacetophenone dimethyl ether at 0° [2066,2935,2936], (75%) [2936].
 - Preparation by reaction of iodine with phloroacetophenone dimethyl ether in methanol in the presence of potassium hydroxide [2937].
 - Also refer to: [2931] (compound **23**).
- m.p. 201° [2936], 199°5–200°5 [2934].

1-(5-Ethyl-2-hydroxy-3-nitrophenyl)ethanone

[71002-71-6]

 $C_{10}H_{11}NO_4$ mol.wt. 209.20

Syntheses

- Preparation by nitration of 5-ethyl-2-hydroxyacetophenone,
 - with 100% nitric acid in acetic acid at r.t. (85%) [1852];
 - with nitric acid (d = 1.42) in concentrated sulfuric acid between –15° and –5° [1897,1898], (44%) [1897].
- m.p. 127–128° [1852], 120–122° [1898], 118–120° [1897].

1-(2-Hydroxy-3,6-dimethyl-5-nitrophenyl)ethanone

[207281-53-6]

 $C_{10}H_{11}NO_4$ mol.wt. 209.20

Synthesis

- Refer to: [2938].

1-(2-Hydroxy-4,5-dimethyl-3-nitrophenyl)ethanone $C_{10}H_{11}NO_4$ mol.wt. 209.20

Synthesis

- Preparation by reaction of nitric acid (d = 1.42) on 2-hydroxy-4,5-dimethylacetophenone in acetic acid at r.t. (71%) [2939].
- m.p. 143–144° [2939].

1-(6-Hydroxy-2,4-dimethyl-3-nitrophenyl)ethanone[125249-30-1] $C_{10}H_{11}NO_4$ mol.wt. 209.20

Synthesis

– Preparation is made by adding successively nitromethane, then 3-acetyl-2,6-dimethyl-4*H*-pyran-4-one in a suspension of potassium tert-butoxide in tert-butyl alcohol at 40° under nitrogen (40%) [2940].

m.p. 112–114° [2940]; 1H NMR [2940], IR [2940], MS [2940].**1-(4-Ethoxy-2-hydroxy-5-nitrophenyl)ethanone**[76951-07-0] $C_{10}H_{11}NO_5$ mol.wt. 225.20

Syntheses

– Prepared by nitration of 2-hydroxy-4-ethoxyacetophenone in glacial acetic acid [2941].
– Also refer to: [2484,2911] (compound **1f**).

m.p. 132° [2941].

1-(2-Hydroxy-5-methoxy-4-methyl-3-nitrophenyl)ethanone[43140-82-5] $C_{10}H_{11}NO_5$ mol.wt. 225.20

Synthesis

– Preparation by reaction of 10% nitric acid with 2-hydroxy-5-methoxy-4-methylacetophenone at 17–20° (40%) [2583].

m.p. 132° [2583]; 1H NMR [2583], IR [2583].**1-(4-Hydroxy-2-methoxy-3-methyl-5-nitrophenyl)ethanone**[118824-98-9] $C_{10}H_{11}NO_5$ mol.wt. 225.20

Synthesis

– Preparation by reaction of concentrated nitric acid on 4-hydroxy-2-methoxy-3-methylacetophenone in acetic acid [2582,2942], (64%) [2582].

m.p. 70° [2942], 69° [2582]; 1H NMR [2582], IR [2582], MS [2582].

1-(2-Hydroxy-3,4-dimethoxy-5-nitrophenyl)ethanone $C_{10}H_{11}NO_6$ mol.wt. 241.20

Synthesis

– Preparation by reaction of nitric acid with 3,4-dimethoxy-2-hydroxyacetophenone in ethanol (33%) [2814].

m.p. 83–83°8 [2814].

1-(2-Hydroxy-3,6-dimethoxy-5-nitrophenyl)ethanone[88771-59-9] $C_{10}H_{11}NO_6$ mol.wt. 241.20

Synthesis

– Preparation by reaction of nitric acid on 3,6-dimethoxy-2-hydroxyacetophenone in acetic acid at 10° (52%) [1884].

m.p. 120° [1884]; 1H NMR [1884].**1-(2-Hydroxy-4,6-dimethoxy-3-nitrophenyl)ethanone**[81325-87-3] $C_{10}H_{11}NO_6$ mol.wt. 241.20

Synthesis

– Obtained (poor yield) by adding nitric acid ($d = 1.42$) in acetic acid to an ice-cold solution of 2-hydroxy-4,6-dimethoxyacetophenone in acetic anhydride (2%) [2139].

m.p. 104–105° [2139]; 1H NMR [2139].**1-(2-Ethyl-4-hydroxyphenyl)ethanone** $C_{10}H_{12}O_2$ mol.wt. 164.20

Syntheses

– Obtained by Fries rearrangement of 3-ethylphenyl acetate with aluminium chloride,

- in nitrobenzene at 0° (varying yield, maximum 50%) [2943];
- without solvent between 130° and 165° (4–7%) [2152,2944].

m.p. 102° [2943,2944]; b.p._{0.45} 150–152° [2943], b.p.₂₀ 195–200° [2944].

1-(3-Ethyl-2-hydroxyphenyl)ethanone[103323-22-4] $C_{10}H_{12}O_2$ mol.wt. 164.20

Syntheses

- Obtained by Fries rearrangement of 2-ethylphenyl acetate with aluminium chloride at 130–140° [2233].
- Also refer to: [2080,2945].

b.p.₃ 90–95° [2945], b.p. 213° [2233].**1-(3-Ethyl-4-hydroxyphenyl)ethanone**[22934-47-0] $C_{10}H_{12}O_2$ mol.wt. 164.20

Syntheses

- Preparation by reaction of acetyl chloride on 2-ethylphenol with aluminium chloride,
 - in refluxing carbon disulfide (60%) [1951];
 - in nitrobenzene at 60° (39%) [1964].
 - Preparation by acetylation of 2-ethylphenol (60%) [2946].
- m.p. 95° [2946], 92–93° [1964], 89–91° [1951];
b.p.₁ 170–180° [2946], b.p.₂₀ 190–195° [1964]; UV [1964].

1-(4-Ethyl-2-hydroxyphenyl)ethanone[5896-50-4] $C_{10}H_{12}O_2$ mol.wt. 164.20

Syntheses

- Preparation by Fries rearrangement of 3-ethylphenyl acetate,
 - with aluminium chloride, without solvent between 120° and 165° (80–88%) [2152,2601,2944,2947–2949], in nitrobenzene at 25° (84–89%) [2948,2949] or at 60° (65%) [2947], in toluene or in xylene at 100° (56–57%) [2947];
 - with titanium tetrachloride, without solvent at 120° (88%) [2948] or in nitrobenzene at 25° (66%) [2948];
 - with stannic chloride, without solvent at 120° (84%) [2948] or in nitrobenzene at 25° (86%) [2948];
 - with zinc chloride, without solvent at 120° (56%) [2948] or in nitrobenzene at 25° (58%) [2948].

b.p._{2.5} 97° [2601], b.p.₄ 140° [2949], b.p.₂₀ 142° [2944].

1-(4-Ethyl-3-hydroxyphenyl)ethanone[73898-20-1] $C_{10}H_{12}O_2$ mol.wt. 164.20

m.p. 94–95° [1951].

Synthesis

- Preparation by diazotization of 3-amino-4-ethylacetophenone followed by hydrolysis of the diazonium salt obtained (46%) [1951].

1-(5-Ethyl-2-hydroxyphenyl)ethanone[24539-92-2] $C_{10}H_{12}O_2$ mol.wt. 164.20**Syntheses**

- Preparation by Fries rearrangement of 4-ethylphenyl acetate with aluminium chloride without solvent at 115–120° [1852,1869,2233], (96%) [1852], (70%) [2233].
- Preparation by reaction of acetyl chloride on 4-ethylphenol with aluminium chloride in ethylene dichloride at 110–120° (71%) [2625].

b.p._{2,3} 94–96° [1869], b.p.₄ 102–104° [2625], b.p.₁₀ 114–116° [1852],
 b.p.₁₂ 119–121° [2233]; ¹H NMR [1869], MS [1869].

1-(2-Hydroxy-3,4-dimethylphenyl)ethanone[5384-55-4] $C_{10}H_{12}O_2$ mol.wt. 164.20**Syntheses**

- Preparation by reaction of acetic anhydride on 2,3-di-methylphenol with 70% perchloric acid at 125–135° (35%) [2306].
- Preparation by Fries rearrangement of 2,3-dimethylphenyl acetate,
 - with aluminium chloride, without solvent, between 100° and 165° (85%) [2950], (70–80%) [1814,2951,2952], (54–69%) [2233,2953–2955] or in refluxing carbon disulfide (20%) [2952];
 - with titanium tetrachloride at 100° (60%) [1814,2161,2951].

colourless oil [2950]; m.p. 6–8° [2951];

b.p.₇ 105–110° [2306], b.p.₈ 120–124° [2955], b.p.₁₂ 122–124° [2233];b.p._{10,5} 127–129° [2955], b.p.₁₅ 131–132° [2951], b.p.₁₂ 140° [2953];¹H NMR [2950], ¹³C NMR [2950], IR [2950,2951], MS [2950].**1-(2-Hydroxy-3,5-dimethylphenyl)ethanone**[1198-66-9] $C_{10}H_{12}O_2$ mol.wt. 164.20**Syntheses**

- Preparation by reaction of acetyl chloride on 2,4-dimethylphenol with aluminium chloride in nitrobenzene at 50° (80%) [2181].

- Preparation by Fries rearrangement of 2,4-dimethylphenyl acetate with aluminium chloride, in nitrobenzene at 50° (80%) [2181] or in the presence of 2,4-dimethylanisole in refluxing carbon disulfide (50%) [2535] or without solvent [1814,2161,2535,2596,2697] at 130–140° (good yield) [2535], (42%) [2697].
 - Also obtained by Fries rearrangement of 2,5-dimethylphenyl acetate with aluminium chloride without solvent [2596,2956], at 80–90° (25%) [2956].
 - Also obtained (by-product) by Fries rearrangement of 2,6-dimethyl-4-ethylphenyl acetate with aluminium chloride without solvent (4%) [2957].
 - Also obtained by reaction of acetyl chloride on 2,4-dimethylanisole with aluminium chloride in refluxing carbon disulfide [2956].
 - Also obtained by reaction of zinc powder on 3,5-bis(chloromethyl)-2-hydroxyacetophenone in aqueous acetic acid (8%) [2551].
 - Preparation by UV light irradiation of 2,4-dimethylphenyl acetate at 25°, in benzene (54%) [2198] or in hexane, with potassium carbonate (90%) [2015] or without potassium carbonate (34%) [2015].
 - Preparation by reaction of ethyl acetoacetate with 2-methyl-2-pentenal in the presence of pyridine and piperidine as catalysts, in refluxing benzene (49%). The 2-methyl-2-pentenal was first obtained by self-condensation of propionaldehyde in the presence of 15% potassium hydroxide solution [2958–2960].
 - Also refer to: [2961,2962].
- m.p. 55° [2015], 54° [2181,2535,2956], 53–54° [2161,2551,2596], 53–53°5 [2958–2960];
- b.p.₁₂ 106–135° [2956], b.p.₁₆ 124°5–126° [2161], b.p.₃₃ 126–140° [2958,2959,2960];
- ¹H NMR [2198,2958–2960], IR [2198,2958–2960], UV [2958–2960].

1-(2-Hydroxy-3,6-dimethylphenyl)ethanone

[90743-02-5]

C₁₀H₁₂O₂ mol.wt. 164.20

Syntheses

- Obtained by UV irradiation of 2,5-dimethylphenyl acetate in methanol at 254 nm under nitrogen at r.t. (39%) [2963].
- Also refer to: [2964] and [1885] (ketone **14**).

viscous oil [2963]; ¹H NMR [2963], ¹³C NMR [2963],
IR [2963], MS [2963].

1-(2-Hydroxy-4,5-dimethylphenyl)ethanone

[36436-65-4]

C₁₀H₁₂O₂ mol.wt. 164.20

Syntheses

- Preparation by Fries rearrangement of 3,4-dimethylphenyl acetate with aluminium chloride without solvent between 110° and 150° [1814,2212,2596,2939,2952,2965–2967], (86–100%) [2965–2967], (70–72%) [2939,2952], (23%) [2212].

- Preparation by isomerisation of 2-hydroxy-4,6-dimethylacetophenone with an excess of aluminium chloride without solvent at 140–180° (quantitative yield) [2965].
 - Preparation by reaction of acetic acid on 3,4-dimethylphenol,
 - with boron trifluoride at 70° (80%) [2611];
 - with polyphosphoric acid (75%) [2966].
 - Preparation by demethylation of 2-methoxy-4,5-dimethylacetophenone with pyridinium chloride at reflux (81%) [2542].
 - Preparation by dehydrogenation of 6-acetyl-3,4-dimethyl-2-cyclohexen-1-one,
 - with a 5% palladium-barium sulfate catalyst at reflux [2612];
 - with refluxing 16% solution of bromine in acetic acid [2612].
 - Also obtained by reaction of sodium methoxide on 2-acetyl-4,5-dimethyl-4-nitro-1,4-dihydro-phenyl acetate in methanol [2968].
 - Also obtained (by-product) by reaction of aluminium chloride on 2,4,5-trimethylphenyl acetate (pseudocumenol acetate) without solvent at 130–140° [2596].
- m.p. 74° [2965], 71°5–72°5 [2612], 71–72°5 [2968], 71° [2596,2611,2952,2967], 70°9–71°7 [2212], 70–71° [2939], 70° [2542];
 b.p.₁₈ 143–144° [2611];
¹H NMR [1820,2968], ¹³C NMR [1821], IR [2212,2968], UV [1820], fluorescence spectra [1820], MS [2968].

1-(2-Hydroxy-4,6-dimethylphenyl)ethanone

[16108-50-2]

C₁₀H₁₂O₂ mol.wt. 164.20

Syntheses

- Preparation by reaction of acetic acid on 3,5-dimethylphenol with boron trifluoride at 60–70° (93%) [2611].
- Preparation by Fries rearrangement of 3,5-dimethylphenyl acetate,
 - with aluminium chloride,
 - without solvent, between 100° and 150° [1814,2947,2948,2955,2965,2969–2973], (81–100%) [2947,2948,2965], (67–75%) [2955,2972];
 - in nitrobenzene at 25° (78%) [2948] or at 60° (67%) [2947];
 - in toluene or xylene at 100° (61–62%) [2947];
 - in refluxing carbon disulfide (60%) [2969].
 - with titanium tetrachloride,
 - without solvent at 120° (82%) [2948];
 - in nitrobenzene at 25° (86%) [2948].

- with stannic chloride,
 - without solvent at 120° (78%) [2948];
 - in nitrobenzene at 25° (76%) [2948].
 - with zinc chloride,
 - without solvent at 120° (54%) [2948];
 - in nitrobenzene at 25° (52%) [2948].
 - Also obtained by reaction of 2 N sodium hydroxide on 4,6-dimethyl-2-hydroxy- α,α,α -trifluoro-acetoacetophenone at r.t. (quantitative yield) [2629].
 - Also obtained by reaction of acetyl chloride,
 - with 3,5-dimethylanisole with aluminium chloride (60–70%) [2974];
 - with 3,5-dimethylphenol in refluxing carbon disulfide (60%) [2969].
 - Also obtained by heating on a steam bath a mixture of 2-acetoxy-4,6-dimethylacetophenone and aluminium chloride (33%) [2973].
 - Also obtained by self-condensation of acetylacetone,
 - with refluxing 2 N sodium hydroxide, then by heating the residue at 145° [2975];
 - catalyzed with potassium fluoride in DMF solution [2648,2976], (64%) [2976]; also refer to “erratum” [2647].
 - Also obtained by reaction of acetic anhydride on 3,5-dimethylanisole with aluminium chloride in refluxing carbon disulfide (46%) [2977].
 - Preparation by dehydrogenation of 6-acetyl-3,5-dimethyl-2-cyclohexen-1-one with a 5% palladium-barium sulfate catalyst at reflux [2612].
 - Also obtained by photoreaction of dehydroacetic acid followed by hydrolysis of the obtained dimer (46%) [2973].
 - Also obtained by UV light irradiation of 3,5-dimethylphenyl acetate at 25°, in isopropanol or cyclohexane (32%) [2193] or in ethyl ether (9%) [2193].
 - Also refer to: [2025].
- m.p. 62° [2611], 60° [2965], 59–60° [2971], 58–59° [2612], 58° [2970,2975], 57–58° [2955], 57–58° [2969,2974], 56–58° [2648,2973], 55–56° [2647,2976];
- b.p.₁₈ 140–141° [2969,2974], b.p.₁₅ 140°5–141°5 [2611], b.p.₁₃ 144° [2955];
- ¹H NMR [2647,2648,2976], ¹³C NMR [2647,2976,2978], IR [2647,2970,2976]; MS [2647,2976]; pK_a [2516].

1-(3-Hydroxy-2,4-dimethylphenyl)ethanone

[99892-63-4]

C₁₀H₁₂O₂

mol.wt. 164.20

Synthesis

- The 1 α ,6 α ,8 α -trimethyl-2 α -H, 4 α -H, 5 α -H -3,9-dioxo-tricyclo[3.3.1.0^{2,4}]nonan-7-one was rearranged by treatment with sodium ethoxide in ethanol to form 3-hydroxy-2,4-dimethylacetophenone in 11% yield [2979].

m.p. 70° [2979]; ¹H NMR [2123], IR [2123], MS [2123].

1-(4-Hydroxy-2,3-dimethylphenyl)ethanone[5384-57-6] $C_{10}H_{12}O_2$ mol.wt. 164.20

Syntheses

- Obtained by Fries rearrangement of 2,3-dimethylphenyl acetate,
 - with aluminium chloride, in nitrobenzene at r.t. (50–60%) [2952,2953], in carbon disulfide at r.t. (10%) [2952] or without solvent at 100° (17%) [2951,2954];
 - with titanium tetrachloride without solvent at 100° (6%) [2951,2954].
- m.p. 148° [2952], 145° [2953], 144° [2951].

1-(4-Hydroxy-2,5-dimethylphenyl)ethanone[26216-10-4] $C_{10}H_{12}O_2$ mol.wt. 164.20

Syntheses

- Preparation by reaction of acetic acid on 2,5-dimethylphenol with boron trifluoride at 70° (95%) [2611].
 - Preparation by Fries rearrangement of 2,5-dimethylphenyl acetate with aluminium chloride without solvent at 80–90° (65–70%) [2596,2628], (49%) [2980].
- m.p. 131–132° [2611,2980], 130–131° [2596,2628]; 1H NMR [2980], MS [2980].

1-(4-Hydroxy-2,6-dimethylphenyl)ethanone[91060-92-3] $C_{10}H_{12}O_2$ mol.wt. 164.20

Synthesis

- Preparation by diazotization of 4-amino-2,6-dimethylaceto-phenone, followed by hydrolysis of the obtained diazonium salt (68%) [2981,2982].
- m.p. 119–120° [2978,2981–2983]; 1H NMR [2981], ^{13}C NMR [2978], IR [2981], MS [2981].

1-(4-Hydroxy-3,5-dimethylphenyl)ethanone[5325-04-2] $C_{10}H_{12}O_2$ mol.wt. 164.20

Syntheses

- Preparation by Fries rearrangement of 2,6-dimethylphenyl acetate,
 - with aluminium chloride [2984], without solvent at 120–140° [2233,2265,2985], (81–100%) [2233], in nitrobenzene at r.t. (75%) [2535] or in nitromethane, first at 0°, then at 50° for 48 h under argon atmosphere (61%) [2986];

- with aluminium bromide without solvent at 130° (71%) [2605].
 - Preparation by reaction of 46% hydrobromic acid solution with 4-(benzyloxy)-3,5-dimethyl-acetophenone in the presence of tetrabutylammonium bromide in refluxing methylene chloride (53%) [2987].
 - Also obtained by heating various 2,6-dimethyl-4-alkylphenyl acetates** with aluminium chloride without solvent, the reaction being accompanied by an alkyl group elimination,
 - **alkyl = benzyl (quantitative yield) [2957], ethyl (50%) [2233], (39%) [2957], dodecyl (38%) [2957], propyl (31%) [2957], butyl (27%) [2957] and heptyl (12%) [2957].
 - Also refer to: [2988].
- m.p. 162° [2987], 156–157° [2984], 151–152° [2605,2985,2986], 150–151° [2233], 150° [2535];
¹H NMR [2984,2986,2987], ¹³C NMR [2986], IR [2986,2987], MS [2986,2987].

1-(5-Hydroxy-2,3-dimethylphenyl)ethanone

[127701-70-6]

C₁₀H₁₂O₂ mol.wt. 164.20

Synthesis

- Preparation by rearrangement of 3-acetyl-4,4-dimethyl-cyclohexa-2,5-dienone with 49% sulfuric acid at 20° (quantitative yield) [2989].

¹H NMR [2989].

1-(5-Hydroxy-2,4-dimethylphenyl)ethanone

C₁₀H₁₂O₂ mol.wt. 164.20

Syntheses

- Preparation by demethylation of 5-methoxy-2,4-dimethyl-acetophenone with aluminium chloride (50%) [2956].
 - Also obtained by reaction of acetyl chloride on 2,4-di-methylphenol with aluminium chloride in nitrobenzene at 50° (9%) [2181].
 - Also obtained (by-product) by Fries rearrangement of 2,4-dimethylphenyl acetate with aluminium chloride, without solvent [2697] or in nitrobenzene at 50° (9%) [2181].
 - Also obtained by reaction of zinc powder on 5-hydroxy-2,4-dimethyl- α -chloro-acetophenone in acetic acid [2956].
- m.p. 135° [2181], 130–131° [2956].

1-(6-Hydroxy-2,3-dimethylphenyl)ethanoneC₁₀H₁₂O₂ mol.wt. 164.20

Synthesis

– Preparation by demethylation of 6-methoxy-2,3-dimethylacetophenone with aluminium chloride in boiling benzene (30%) [2212]. The above keto anisole itself was obtained by reaction of dimethylcadmium on 6-methoxy-2,3-dimethylbenzoyl chloride in boiling benzene.

m.p. 73°–75° [2212]; b.p._{4.5} 126° [2212]; IR [2212].

1-(2,4-Dihydroxy-3,5-dimethylphenyl)ethanone (Clavatul)

[577-45-7]

C₁₀H₁₂O₃ mol.wt. 180.20

Syntheses

– Preparation by reaction of acetonitrile on 2,4-dimethyl-resorcinol (Hoesch reaction) (56–68%) [2302,2990].

– Preparation by reaction of acetic acid on 2,4-dimethyl-resorcinol with zinc chloride (Nencki reaction) [2373,2991].

– Also obtained by reaction of methyl iodide with 2,4-di-hydroxy-5-methylacetophenone in the presence of potassium hydroxide in methanol, in an ice-chest overnight (19%) [2330].

From Microorganisms

– Also obtained by hydrolysis of Sorbicillin (a pigment produced by the mold *Penicillium notatum*) with refluxing 2 N sodium hydroxide solution (16%) [2330].

– Also obtained by direct methylation of resacetophenone or 3-methylresacetophenone using washed cells of *Streptomyces risomus* [2373].

– Isolated in small quantities from cultures of *Aspergillus clavatus* grown in Czapek-Doz medium with molasses as an additional substrate [2373,2992].

m.p. 184–186° [2992], 183° [2990], 181–182° [2330]; UV [2213,2330].

1-(2,4-Dihydroxy-3,6-dimethylphenyl)ethanone

[69082-35-5]

C₁₀H₁₂O₃ mol.wt. 180.20

Syntheses

– Obtained by reaction of methyl iodide with 2,4-dihydroxy-6-methylacetophenone in the presence of potassium hydroxide in methanol in an ice-chest overnight (27%) [2330].

– Preparation by reaction of acetonitrile on β-orscinol (1,3-dihydroxy-2,5-dimethylbenzene) (Hoesch reaction) [2693,2993], (70%) [2993].

m.p. 153° [2693], 149–150° [2330]; ¹H NMR [2993], IR [2993], UV [2213], MS [2993].

1-(2,5-Dihydroxy-3,4-dimethylphenyl)ethanone[71582-59-7] $C_{10}H_{12}O_3$ mol.wt. 180.20**Synthesis**

– Preparation by reaction of acetic acid on 2,3-dimethylhydroquinone with boron trifluoride, followed by saponification of the monoacetate [2909,2994] or diacetate [2349] obtained (84–91%) [2349,2994].

m.p. 151° [2349], 150° [2994].

1-(2,5-Dihydroxy-3,6-dimethylphenyl)ethanone $C_{10}H_{12}O_3$ mol.wt. 180.20**Synthesis**

– Obtained (poor yield) by reaction of acetic acid on 2,5-dimethylhydroquinone with boron trifluoride (1%) [2700].

m.p. 88–90° [2700].

1-(2,6-Dihydroxy-3,4-dimethylphenyl)ethanone[7743-16-0] $C_{10}H_{12}O_3$ mol.wt. 180.20**Syntheses**

- Obtained from 4,5-dimethylresorcinol by reaction,
- with acetyl chloride in the presence of aluminium chloride in nitrobenzene, first at r.t., then at 60° (9%) [2213];
 - with acetic acid in the presence of boron trifluoride etherate at reflux [2995].
- Also obtained (by-product) by Fries rearrangement of 4,5-dimethylresorcinol diacetate in the presence of aluminium chloride at 115–120° (10%) [2996].
- Preparation by heating a mixture of 2-acetyl-4,5-dihydroxy-4,5-dimethylcyclohexane-1,3-dione and zinc dust in 50% acetic acid at 65° (71%) [2996]. The same reaction carried out with 2-acetyl-6-hydroxy-5,6-dimethylcyclohex-4-ene-1,3-dione leads to 82% yield [2996].

m.p. 125–127° [2996], 122–124° [2995] and 82–83° [2213]. One of the reported melting points is obviously wrong.

1H NMR [2996], ^{13}C NMR [2996], IR [2996], UV [2213,2996].

1-(2,6-Dihydroxy-3,5-dimethylphenyl)ethanone

[37467-68-8]

 $C_{10}H_{12}O_3$ mol.wt. 180.20**Synthesis**

– Obtained by reaction of acetic anhydride with 4,6-dimethyl-resorcinol in the presence of 45% solution of boron trifluoride etherate at r.t. (15%) [2213] or boron trifluoride-acetic acid complex for 2 h at 100° [2997].

m.p. 144–146° [2997], 139–140° [2213]; UV [2213].

1-(3,6-Dihydroxy-2,4-dimethylphenyl)ethanone

[71582-58-6]

 $C_{10}H_{12}O_3$ mol.wt. 180.20**Syntheses**

– Preparation by reaction of acetic acid on 2,6-dimethyl-hydroquinone with boron trifluoride [2700,2909], (76%) [2700].

– Preparation by reaction of ammonium persulfate on 2-hydroxy-4,6-dimethylacetophenone (Elbs reaction) (34%) [2998].

m.p. 135–136° [2998], 133–134° [2700]; IR [2998].

1-(4,6-Dihydroxy-2,3-dimethylphenyl)ethanone $C_{10}H_{12}O_3$ mol.wt. 180.20**Synthesis**

– Preparation by reaction of acetonitrile on 3,5-dihydroxy-o-xylene (Hoesch reaction) (69%) [2330].

m.p. 155–156° [2330]; UV [2213].

1-(2-Ethoxy-6-hydroxyphenyl)ethanone

[2750-25-6]

 $C_{10}H_{12}O_3$ mol.wt. 180.20**Synthesis**

– Preparation by reaction of ethyl iodide on 2,6-dihydroxy acetophenone with potassium carbonate in refluxing acetone (64%) [2999].

m.p. 84–85° [2999].

1-(3-Ethoxy-4-hydroxyphenyl)ethanone[78268-45-8] $C_{10}H_{12}O_3$ mol.wt. 180.20

Syntheses

- Preparation by Fries rearrangement of 2-ethoxyphenyl acetate with aluminium chloride in nitrobenzene at r.t. (50%) [3000].
- Preparation by refluxing 4-(benzyloxy)-3-ethoxy-acetophenone in mixture of acetic acid and hydrochloric acid [2528] according to [3001].

m.p. 66° [3000], 59–60° [2528]; 1H NMR [3000].**1-(4-Ethoxy-2-hydroxyphenyl)ethanone**[37470-42-1] $C_{10}H_{12}O_3$ mol.wt. 180.20

Syntheses

- Preparation by reaction of ethyl iodide on resacetophenone,
 - with potassium hydroxide in refluxing ethanol [2186,2220,2289,2296,2730,3002,3003], (25%) [3002] or boiling acetone [2293];
 - with potassium carbonate in boiling acetone [3004,3005], (88%) [3005].
- Also obtained by reaction of aluminium chloride on 2,4-diethoxyacetophenone [2289].
- Also refer to: [2484,2911] (compound **1e**).

m.p. 50° [2186,2204], 49–50° [2293,3005], 49° [3002,3003], 48° [2220,2289,2730], 45–46° [3004]; UV [2186,2204].

1-(4-Ethoxy-3-hydroxyphenyl)ethanone[78269-19-9] $C_{10}H_{12}O_3$ mol.wt. 180.20

Synthesis

- Preparation by Fries rearrangement of 2-ethoxyphenyl acetate with aluminium chloride in nitrobenzene at r.t. (50%) [3000].

m.p. 100° [3000]; 1H NMR [3000].**1-(5-Ethoxy-2-hydroxyphenyl)ethanone**[56414-14-3] $C_{10}H_{12}O_3$ mol.wt. 180.20

Syntheses

- Preparation by reaction of ethyl bromide with quinacetophenone in the presence of potassium hydroxide in boiling ethanol [3006].
- Also obtained by condensation of hydroquinone diethyl ether with acetyl chloride according to the Friedel–Crafts method [3007,3008].

- Also obtained by reaction of aluminium chloride on quinacetophenone diethyl ether [3007,3008].
- Also obtained by alkaline degradation of 6,3'-diethoxyflavone* with sodium ethoxide in refluxing ethanol for some hours [3009].

N.B.: Former nomenclature (2,3'-diethoxyflavone*).

- Refer to: [2227,3010,3011].
m.p. 57° [3006], 55° [3007,3008].

1-(3-Ethyl-2,4-dihydroxyphenyl)ethanone

[111224-13-6] $C_{10}H_{12}O_3$ mol.wt. 180.20

Syntheses

- Preparation by reaction of acetic acid on 2-ethylresorcinol with zinc chloride (Nencki reaction) at 140° [2681,3012,3013], (73%) [3012].
- Preparation from 2-ethylresorcinol (SM) by reaction with acetyl chloride in the presence of aluminium chloride. The starting material (SM) was prepared by a three-step procedure from resorcinol dimethyl ether [3014].
- Also obtained by alkaline degradation of 8-acetyl-6-ethyl-4-methylumbelliferone (m.p. 137°) in refluxing N sodium hydroxide for 1 h (96%) [3015].
m.p. 137° [3012], 130° [3015]; 1H NMR [3014], MS [3014].

1-(3-Ethyl-2,6-dihydroxyphenyl)ethanone

[54337-59-6] $C_{10}H_{12}O_3$ mol.wt. 180.20

Syntheses

- Preparation by degradation of 8-acetyl-6-ethyl-7-hydroxy-4-methylcoumarin with refluxing 2 N sodium hydroxide [2308].
- Preparation by decarboxylation of 3-acetyl-5-ethyl-2,4-dihydroxybenzoic acid,
 - with refluxing aqueous hydrochloric acid (62%) [3016];
 - with 10% aqueous sodium hydroxide heated in a sand bath [2308].
- Also refer to: [2997].
m.p. 135° [2308], 130° [3016].

1-(4-Ethyl-2,5-dihydroxyphenyl)ethanone

$C_{10}H_{12}O_3$ mol.wt. 180.20

Synthesis

- Obtained (poor yield) by reaction of aqueous ammonium persulfate solution on 4-ethyl-2-hydroxyacetophenone with 10% potassium hydroxide, in aqueous pyridine solution at r.t. (3%) [2944].
m.p. 100° [2944].

1-(4-Ethyl-2,6-dihydroxyphenyl)ethanone[209746-96-3] $C_{10}H_{12}O_3$ mol.wt. 180.20

Synthesis

– Refer to: [3017].

1-(5-Ethyl-2,4-dihydroxyphenyl)ethanone[4460-42-8] $C_{10}H_{12}O_3$ mol.wt. 180.20

Syntheses

– Preparation by reaction of acetic acid on 4-ethylresorcinol with zinc chloride (Nencki reaction) [2671,2912, 2913,3018,3019], (67–77%) [2671,2913,3019].

- Preparation by Fries rearrangement of 4-ethylresorcinol diacetate with aluminium chloride in nitrobenzene at 50–60° (quantitative yield) [3020] or without solvent at 40–50° (47%) [3020].
- Preparation by reaction of acetonitrile on 4-ethylresorcinol (Hoesch reaction) [2912,2913].
- Preparation from 5-ethyl-2-hydroxy-4-methoxyacetophenone by demethylation with boiling pyridinium chloride (40%) [3013].
- Preparation from 5-ethyl-2,4-dimethoxyacetophenone by demethylation with boron tribromide in methylene chloride at r.t. (36%) [2678,2679].
- Also obtained by hydrolysis of 6-ethyl-7-hydroxy-2-methylchromone with refluxing aqueous 1 N sodium hydroxide solution [3021].

m.p. 118–119° [2913], 118° [2912,3021], 117–118° [3020], 116° [3013], 115–116° [2671], 115° [2676,3019].

1-(2-Hydroxy-3-methoxy-4-methylphenyl)ethanone[77869-43-3] $C_{10}H_{12}O_3$ mol.wt. 180.20

Synthesis

– Isolated as a co-product from the preparation of 2,3-di-methoxy-4-methylacetophenone, obtained by conversion of 2,3-dimethoxy-4-methylbenzoyl chloride with methyl cadmium (10%) [3022].

Crystalline compound [3022]; 1H NMR [3022], MS [3022].

1-(2-Hydroxy-3-methoxy-5-methylphenyl)ethanone[7452-85-9] $C_{10}H_{12}O_3$ mol.wt. 180.20**Syntheses**

- Preparation by reaction of methylmagnesium iodide on 2-acetoxy-3-methoxy-5-methylbenzonitrile in refluxing ethyl ether (72%) [3023].
 - Preparation by Fries rearrangement of 2-methoxy-4-methyl-phenyl acetate with aluminium chloride without solvent (24%) [2697].
 - Also obtained by reaction of dimethyl sulfate on 2,3-dihydroxy-5-methylacetophenone with potassium carbonate in acetone (18%) [2670].
 - Preparation by UV light irradiation (photo-Fries rearrangement) of 2-methoxy-4-methylphenyl acetate (creosol acetate) in ethanol (68%), in benzene or in hexane (56–55%) [2198].
- m.p. 84–85° [2670], 82–84° [3023]; 1H NMR [2198], IR [2198].

1-(2-Hydroxy-3-methoxy-6-methylphenyl)ethanone[4223-86-3] $C_{10}H_{12}O_3$ mol.wt. 180.20**Syntheses**

- Preparation by partial demethylation of 2,3-dimethoxy-6-methylacetophenone with aluminium chloride in refluxing methylene chloride (77%) [2524].
 - Preparation by chromic acid degradation of 7-methoxy-2,3,4-trimethylbenzofuran (46%) [3013].
 - Also obtained (poor yield) by photo-Fries rearrangement of 2-methoxy-5-methylphenyl acetate in ethanol under nitrogen (2%) [3024].
- Pale yellow oil [2524,3013,3024]; b.p.₁₂ 156–158° [3013]; $n_D^{23} = 1.5527$ [3013]; 1H NMR [3024], ^{13}C NMR [2524], IR [2524,3024].

1-(2-Hydroxy-4-methoxy-3-methylphenyl)ethanone[69469-91-6] $C_{10}H_{12}O_3$ mol.wt. 180.20**Syntheses**

- Preparation by reaction of acetonitrile on 3-methoxy-2-methylphenol (Hoesch reaction) (46%) [3025].
 - Preparation by reaction of methyl iodide on resacetophenone,
 - with potassium hydroxide in refluxing methanol [2294,2730,3026], (19–25%) [2294,2672,3026];
 - with sodium methoxide in boiling methanol [2915].
- m.p. 83–84° [2915,3026], 83° [3025], 82–83° [2672], 80–82° [2294], 80–81° [2730].

1-(2-Hydroxy-4-methoxy-5-methylphenyl)ethanone[81511-52-6] $C_{10}H_{12}O_3$ mol.wt. 180.20

Syntheses

- Preparation by partial methylation of 2,4-dihydroxy-5-methylacetophenone,
 - with methyl iodide in the presence of potassium carbonate in refluxing acetone (78%) [2871];
 - with diazomethane in solution of ethyl ether-methanol mixture (92%) [2302].

m.p. 94° [2871].

1-(2-Hydroxy-4-methoxy-6-methylphenyl)ethanone (*Acetoevernone*)[6540-66-5] $C_{10}H_{12}O_3$ mol.wt. 180.20

Syntheses

- Preparation by partial methylation of 2,4-dihydroxy-6-methylacetophenone (orcacetophenone or β -orcacetophenone), with diazomethane (78%) [2694] or dimethyl sulfate [2301,2684].
- Preparation by Fries rearrangement of 3-methoxy-5-methylphenyl acetate with aluminium chloride in nitrobenzene at r.t. (52%) [2742,2743].
- Preparation by reaction of acetonitrile on 3-methoxy-5-methylphenol with zinc chloride and hydrochloric acid in ethyl ether at r.t. (Hoesch reaction) [2301,2307], (28%) [2301].
- Also obtained (by-product) by reaction of acetyl chloride on orcinol dimethyl ether with aluminium chloride in carbon disulfide at r.t. [2348,2694,3027,3028], (5–8%) [2348,2694].

m.p. 79–80° [2348], 79° [2301,2307,2742,2743,3028], 78–78°5 [2694];
 1H NMR [2348,2694], IR [2348,2694], UV [2348,2694], MS [2348,2694].**1-(2-Hydroxy-5-methoxy-3-methylphenyl)ethanone**[77936-48-2] $C_{10}H_{12}O_3$ mol.wt. 180.20

Syntheses

- Preparation by Fries rearrangement of 4-methoxy-2-methyl-phenyl acetate,
 - with boron trifluoride in ethylene dichloride for 3 h (97%) [2696];
 - with aluminium chloride (11%) [2697].

m.p. 52–53° [2696]; sublimation 54–58°/0.2 mm [2696];
 1H NMR [2696], IR [2696], MS [2696,3029].

1-(2-Hydroxy-5-methoxy-4-methylphenyl)ethanone[4223-84-1] $C_{10}H_{12}O_3$ mol.wt. 180.20**Syntheses**

- Obtained by reaction of acetyl chloride on 2,5-dimethoxy-4-isopropyltoluene with aluminium chloride in boiling carbon disulfide (14%) [2542].
 - Also obtained by chromic acid degradation of 5-methoxy-2,3,6-trimethylbenzofuran (10%) [3013].
 - Also obtained (by-product) by reaction of acetyl chloride with 2,5-dimethoxytoluene in the presence of aluminium chloride in carbon disulfide at 20–25° (4%) [2583].
 - Also obtained by photo-Fries rearrangement of 4-methoxy-3-methylphenyl acetate in ethanol under nitrogen (19%) [3024].
- m.p. 114° [2583], 112° [2542], 111–112° [3013]; 1H NMR [2583], IR [2583].

1-(2-Hydroxy-6-methoxy-3-methylphenyl)ethanone[56504-43-9] $C_{10}H_{12}O_3$ mol.wt. 180.20**Syntheses**

- Preparation by partial methylation of 2,6-dihydroxy-3-methylacetophenone,
 - with methyl iodide in the presence of potassium carbonate in refluxing acetone (55%) [2871];
 - with diazomethane in ethyl ether at r.t. (16%) [2552].
 - Also obtained by reduction of 3-formyl-2-hydroxy-6-methoxyacetophenone with hydrochloric acid and amalgamated zinc in methanol at 50° (11%) [2871].
- m.p. 59° [2871], 58° [2552]; 1H NMR [2552], IR [2552].

1-(2-Hydroxy-6-methoxy-4-methylphenyl)ethanone[31405-63-7] $C_{10}H_{12}O_3$ mol.wt. 180.20**Syntheses**

- Preparation by reaction of acetic anhydride on orcinol monomethyl ether with concentrated sulfuric acid, at reflux (45%) [2307].
 - Also obtained by reaction of dimethyl sulfate on 2,6-dihydroxy-4-methylacetophenone (p-oracetophenone) with sodium hydroxide [2307] or potassium hydroxide [2708].
 - Also obtained by reaction of acetyl chloride on orcinol dimethyl ether with aluminium chloride in carbon disulfide at r.t. [2348,2694,3028], (11%) [2348], (4%) [2694].
- m.p. 81° [2307], 80–81° [2694], 76–77° [2713], 74–75° [2348]; 1H NMR [2348,2694], IR [2348,2694], UV [2348,2694], MS [2348,2694].

1-(4-Hydroxy-2-methoxy-3-methylphenyl)ethanone[118824-97-8] $C_{10}H_{12}O_3$ mol.wt. 180.20

Synthesis

– Preparation by catalytic hydrogenolysis of 4-(benzyloxy)-2-methoxy-3-methylacetophenone at r.t. under pressure in the presence of 10% Pd/C in ethanol (92%) [2582], (84%) [2942].

m.p. 130–132° [2582], 130° [2942]; 1H NMR [2582], IR [2582], MS [2582].**1-(4-Hydroxy-2-methoxy-6-methylphenyl)ethanone** (*Isoacetoevernone*) $C_{10}H_{12}O_3$ mol.wt. 180.20

Synthesis

– Preparation by reaction of acetonitrile on orcinol monomethyl ether (Hoesch reaction) (32%) [2301].

m.p. 150° [2301].

1-(4-Hydroxy-3-methoxy-5-methylphenyl)ethanone $C_{10}H_{12}O_3$ mol.wt. 180.20

Synthesis

– Preparation by Fries rearrangement of 2-methoxy-6-methyl-phenyl acetate with aluminium chloride in refluxing carbon disulfide (58%) [3030].

m.p. 94° [3030].

1-(4-Hydroxy-5-methoxy-2-methylphenyl)ethanone[162853-20-5] $C_{10}H_{12}O_3$ mol.wt. 180.20

Syntheses

- Preparation by reaction of acetyl chloride on isocresol (2-methoxy-5-methylphenol) with aluminium chloride in nitrobenzene at r.t. (87%) [3031].
- Preparation by Fries rearrangement of isocresol acetate with aluminium chloride in nitrobenzene at r.t. (75%) [2914].
- Also obtained by photo-Fries rearrangement of 2-methoxy-5-methylphenyl acetate under nitrogen in ethanol (20%) [3024] or in methanol at 254 nm at r.t. (21%) [2963].

m.p. 167–168° [2963], 124° [2914], 123° [3031];

 1H NMR [2963], ^{13}C NMR [2963], IR [2963], MS [2963].

1-(5-Hydroxy-4-methoxy-2-methylphenyl)ethanone[6948-37-4] $C_{10}H_{12}O_3$ mol.wt. 180.20

Syntheses

- Preparation by reaction of acetic acid on creosol (2-methoxy-4-methylphenol) with boron trifluoride at 25° [2198,2670], (88%) [2670].
 - Preparation by Fries rearrangement of creosol acetate with aluminium chloride, in methylene chloride at 0° [3032] or at 20° (82%) [3033], in nitrobenzene at 80° (70%) [2723] or without solvent (8%) [2697].
 - Also obtained by reaction of acetyl chloride on homoveratrole (3,4-dimethoxy-toluene) with aluminium chloride in carbon disulfide [3034].
- m.p. 129–130° [2670], 129° [2723,3033], 128–129° [3032], 124–126° [2198], 123° [3034];
 1H NMR [2198,3033] (Sadtlter: standard n°49332 M);
 IR [2198,3033] (Sadtlter: standard n° 76405 K); UV [3033].

1-(6-Hydroxy-3-methoxy-2-methylphenyl)ethanone[71452-36-3] $C_{10}H_{12}O_3$ mol.wt. 180.20

Synthesis

- Obtained by photo-Fries rearrangement of 4-methoxy-3-methylphenyl acetate in ethanol under nitrogen (18%) [3024].
- oil [3024]; 1H NMR [3024], IR [3024], MS [3024].

1-[2-Hydroxy-3-(methoxymethyl)phenyl]ethanone[87165-50-2] $C_{10}H_{12}O_3$ mol.wt. 180.20

Synthesis

- Preparation from 3-chloromethyl-2-hydroxyacetophenone (m.p. 45°) by reaction with methanol in the presence of concentrated hydrochloric acid and iron powder at reflux for 3.5–4 h (88%) [2494].
- b.p._{0.3} 89–91° [2494]; 1H NMR [2494], IR [2494].

1-[2-Hydroxy-6-(methoxymethyl)phenyl]ethanone[161358-64-1] $C_{10}H_{12}O_3$ mol.wt. 180.20

Synthesis

- Obtained by treatment of 2-(methoxymethoxy)-6-(methoxy-methyl)acetophenone with aqueous trifluoroacetic acid at r.t. for 16 h (93%) [2645].
- pale yellow oil [2645]; b.p.₁ 165–170° [2645];
 1H NMR [2645], IR [2645], MS [2645].

1-[2-Hydroxy-6-methoxy-3-(methylthio)phenyl]ethanone[126405-81-0] $C_{10}H_{12}O_3S$ mol.wt. 212.27

Synthesis

– Preparation by adding 2-hydroxy-3-iodo-6-methoxyacetophenone and cuprous oxide to a solution of sodium methyl sulfhydrylate, first prepared from methanethiol and sodium hydride in DMF [2524].

m.p. 83° [2524]; 1H NMR [2524], IR [2524].**1-(2,3-Dihydroxy-4-methoxy-6-methylphenyl)ethanone**[127940-12-9] $C_{10}H_{12}O_4$ mol.wt. 196.20

Synthesis

– Preparation by reaction of acetyl chloride on 1,2,3-tri-methoxy-5-methylbenzene with aluminum chloride in refluxing methylene chloride (45%) [3035].

m.p. 132° [3035]; 1H NMR [3035], ^{13}C NMR [3035], IR [3035], MS [3035].**1-(2,4-Dihydroxy-6-methoxy-3-methylphenyl)ethanone**[83459-37-4] $C_{10}H_{12}O_4$ mol.wt. 196.20

Syntheses

– Preparation by reduction of 3-formyl-2,4-dihydroxy-6-methoxyacetophenone with hydrochloric acid and amalgamated zinc in gently heated aqueous methanol (64%) [3036].

– Also obtained by reaction of acetonitrile on 3,5-dihydroxy-4-methylanisole (Hoesch reaction) [3037].

Isolation from natural sources

- From Yuexiandaji (*Euphorbia ebracteolata*) [3038].
- From the roots of *Euphorbia ebracteolata* Hayata [3039,3040].
- From *Pancreatium maritimum* (Amaryllidaceae) [3041].

m.p. 225° [3036], 224° [3037], 202–203° (d) [3041]; HPLC [3038]; 1H NMR [3041], ^{13}C NMR [3041], IR [3041], EIMS [3041], HRMS [3041].

1-(2,6-Dihydroxy-4-methoxy-3-methylphenyl)ethanone[69480-06-4] $C_{10}H_{12}O_4$ mol.wt. 196.20

Syntheses

– Preparation by reaction of acetonitrile on 3,5-dihydroxy-2-methylanisole (Hoesch reaction) (73%) [3037].

- Also obtained by reaction of 2 N aqueous sodium hydroxide on 2,4-diacetyl-3,5-dihydroxy-6-methylanisole at 80° (decarbonylation reaction) [3042].
- Preparation by catalytic hydrogenolysis of 6-(benzyloxy)-2-hydroxy-4-methoxy-3-methyl-acetophenone in the presence of Pd/C in acetic acid (75%) [3043].
- Also obtained (by-product) by reaction of acetic anhydride on 3,5-dihydroxy-2-methylanisole with boron trifluoride in ethyl ether at 20° [3042].

Isolation from natural sources

- From the pericarps of *Mallotus japonicus* Muell. Arg. (Euphorbiaceae) [3044–3046].
 - Also obtained by reductive alkaline cleavage of 3-(3,3-dimethylallyl)-5-(3-acetyl-2,4-dihydroxy-5-methyl-6-methoxybenzyl)phloroacetophenone (**I**) [3047], according to [3048]. The ketone (**I**) was isolated from *Mallotus japonicus* (Euphorbiaceae) [3047].
- m.p. 200–201° [3046], 198° [3042], 197–200° [3047], 197–198° [3037], 196–198° [3045], 196° [3043];
¹H NMR [3045–3047], UV [3045], MS [3045–3047].

1-(3,6-Dihydroxy-2-methoxy-4-methylphenyl)ethanone

[90377-24-5]

C₁₀H₁₂O₄ mol.wt. 196.20

Isolation from natural sources

- From *Trocholejeunea sandvicensis* (Lejeuneaceae) [3049].

1-(3,6-Dihydroxy-4-methoxy-2-methylphenyl)ethanone

[68531-86-2]

C₁₀H₁₂O₄ mol.wt. 196.20

Synthesis

- Preparation by nuclear oxidation of 2-hydroxy-4-methoxy-6-methylacetophenone with alkaline persulfate (Elbs reaction) (45%) [3050].

m.p. 164–165° [3050].

1-(4,6-Dihydroxy-2-methoxy-3-methylphenyl)ethanone (*Pseudoaspidinol-A*)

[52200-61-0]

C₁₀H₁₂O₄ mol.wt. 196.20

Syntheses

- Preparation by catalytic hydrogenolysis of 4,6-bis(benzyloxy)-2-methoxy-3-methylacetophenone in the presence of Pd/C in acetic acid (quantitative yield) [3051], (86%) [3043].

- Preparation by reaction of dimethyl sulfate on 4,6-bis-(benzoyloxy)-2-hydroxy-3-methylacetophenone with potassium carbonate in boiling acetone (46%) [3051].
- Also obtained by heating methyl 5-acetyl-2,6-dihydroxy-4-methoxy-3-methylbenzoate in aqueous glycerol at 180–200° for 30 min (29%) [3052].
- Also refer to: [3053,3054].

Isolation from natural sources

- From *stereocaulon vesuvianum*, a foliose lichen, abundantly growing over volcanic rocks [3055].

m.p. 143–144° [3055], 142° [3043,3051], 138–140° [3052]; TLC [3055];

¹H NMR [3052,3055], IR [3052,3055], UV [3055], MS [3055].

1-(2-Ethoxy-3,6-dihydroxyphenyl)ethanone

[33539-21-8] C₁₀H₁₂O₄ mol.wt. 196.20

Syntheses

- Easy preparation by reduction of 2-acetyl-3-ethoxy-1,4-benzoquinone using conventional methods [2869].
- Also obtained (low yield) by reaction of 2-acetyl-1,4-benzoquinone with an excess of ethanol at r.t., with exclusion of light [2869].

m.p. 102–103°5 [2869]; ¹H NMR [2869], IR [2869].

1-(2-Ethoxy-4,6-dihydroxyphenyl)ethanone

C₁₀H₁₂O₄ mol.wt. 196.20

Synthesis

- Preparation by reaction of acetonitrile on phloroglucinol monoethyl ether (Hoesch reaction) (63%) [2851].

m.p. 178° [2851].

1-(4-Ethoxy-2,3-dihydroxyphenyl)ethanone

C₁₀H₁₂O₄ mol.wt. 196.20

Syntheses

- Preparation by reaction of ethyl iodide on galactophenone monopotassium salt in boiling methanol [2812].
- Preparation by reaction of hydrobromic acid with 2,4-diethoxy-3-methoxyacetophenone (43%) or 3,4-diethoxy-2-hydroxyacetophenone (20%) in acetic acid at r.t. [2814].

m.p. 102°2–103°2 [2814], 102° [2812,2815].

1-(4-Ethoxy-2,5-dihydroxyphenyl)ethanone[58084-93-8] $C_{10}H_{12}O_4$ mol.wt. 196.20

Synthesis

– Preparation from 4-ethoxy-2-hydroxyacetophenone by persulfate oxidation (Elbs reaction) (quantitative yield) [3005], (24%) [3056].

m.p. 129–130° [3056], 125–126° [3005]; 1H NMR [3005].**1-(4-Ethoxy-2,6-dihydroxyphenyl)ethanone**[35028-01-4] $C_{10}H_{12}O_4$ mol.wt. 196.20

Synthesis

– Preparation from 2,4-diacetyl-5-ethoxyresorcinol by selective deacetylation by refluxing in 1 N sodium hydroxide for 1 h [2856].

m.p. 164–165° [2856]; 1H NMR [2856].**1-(3-Ethyl-2,4,6-trihydroxyphenyl)ethanone**[84653-58-7] $C_{10}H_{12}O_4$ mol.wt. 196.20

Synthesis

– Refer to: [2879] (compound VII).

m.p. 187–189° [2879]; 1H NMR [2879].**1-(5-Ethyl-2,3,4-trihydroxyphenyl)ethanone**[86989-84-6] $C_{10}H_{12}O_4$ mol.wt. 196.20

Syntheses

– Preparation by reaction of acetyl chloride on 4-ethylpyrogallol with aluminium chloride [2266].

– Preparation by reaction of acetic acid with 4-ethylpyrogallol in the presence of boron trifluoride in ethyl ether at 0° (78%) [2268].

m.p. 141° [2266,2268]; UV [2268].

1-(2-Hydroxy-3,4-dimethoxyphenyl)ethanone[5396-18-9] $C_{10}H_{12}O_4$ mol.wt. 196.20

Syntheses

– Preparation by reaction of acetyl chloride on pyrogallol trimethyl ether,

- with aluminium chloride in carbon disulfide [3057–3061], (50%) [3061], in boiling ethyl ether (77%) [2770] or in benzene at 45–50° (77%) [3062];
 - with mercuric chloride without solvent at 100° (40%) [3063,3064].
- Preparation by Fries rearrangement of 2,3-dimethoxyphenyl acetate with aluminium chloride in nitrobenzene at r.t. (61%) [2742,2743].
- Preparation by partial methylation of gallacetophenone,
- with methyl iodide,
 - in the presence of sodium methoxide in boiling methanol [2915,3065];
 - in the presence of potassium carbonate in refluxing acetone (47%) [3066] or in acetone–DMF mixture [3067].
 - with dimethyl sulfate,
 - in the presence of potassium carbonate in refluxing benzene (65%) [2820], (51%) [2811];
 - in the presence of 40% potassium hydroxide [2406,3058,3068].
- Preparation by partial methylation of 2,3-dihydroxy-4-methoxyacetophenone with methyl iodide in the presence of potassium hydroxide in methanol [2812,2815].
- Also obtained by selective demethylation of 2,3,4-trimethoxyacetophenone,
- with boron trichloride in methylene chloride at 0° (88%) [3069];
 - with aluminium chloride in refluxing ethyl ether [1821] or in acetonitrile at 30° for 3 h (95%) [2747];
 - with aniline hydriodide in aniline for 7 h at 95° (54%) [2693];
 - with cupric bromide in refluxing chloroform–ethyl acetate mixture (4%) [2922].
- m.p. 83° [2693,3057], 78–80° [3058], 78–79° [2406,2742,2743,3062,3066,3068], 78° [3067], 77–78° [2812,2915,3065], 77° [2820,3059–3061], 75–77° [2811], 72–76° [3069], 68–72° [2922],
¹H NMR [2922,3062,3069], ¹³C NMR [1821], IR [3062,3069].

1-(2-Hydroxy-3,5-dimethoxyphenyl)ethanone

[17605-00-4]

C₁₀H₁₂O₄

mol.wt. 196.20

Syntheses

- Preparation by reaction of dimethyl sulfate on 2,5-di-hydroxy-3-methoxyacetophenone with potassium carbonate in refluxing acetone (54%) [2848].
- Preparation by photo-Fries rearrangement of 2,4-di-methoxyphenyl acetate in ethanol (61%) or in benzene (55%) [2198].
- m.p. 84–86° [2848]; ¹H NMR [2198], IR [2198].

1-(2-Hydroxy-3,6-dimethoxyphenyl)ethanone

[52099-27-1]

 $C_{10}H_{12}O_4$

mol.wt. 196.20

**Synthesis**

– Preparation by reaction of concentrated hydrochloric acid on 2-(benzyloxy)-3,6-dimethoxyacetophenone in acetic acid at 60° (99%) [2408].

m.p. 61° [2408].

1-(2-Hydroxy-4,5-dimethoxyphenyl)ethanone

[20628-06-2]

 $C_{10}H_{12}O_4$

mol.wt. 196.20

**Syntheses**

- Preparation by partial methylation of 2,5-dihydroxy-4-methoxyacetophenone,
 - with methyl iodide in the presence of potassium carbonate in refluxing acetone (81%) [2850];
 - with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone (71%) [2418], in the presence of sodium methoxide in methanol (by-product) [2410,2733,2734,3070] or in the presence of sodium hydroxide in boiling aqueous ethanol (37%) [2742,2743];
 - with an excess of ethereal diazomethane in methanol (93%) [2740].
- Preparation by reaction of acetonitrile on 3,4-dimethoxyphenol with zinc chloride (Hoesch reaction) (47%) [3071].
- Also obtained (by-product) by reaction of acetyl chloride on 1,2,4-trimethoxybenzene with aluminium chloride in carbon disulfide at r.t. [2410,3070,3072].
- Also obtained by partial demethylation of 2,4,5-trimethoxyacetophenone with boiling aqueous hydrochloric acid [2410,3070] or aluminium chloride in acetonitrile for 6 h at 45° (50%) [2747].
- Preparation by reaction of boiling acetic acid on 3,4-dimethoxyphenyldiazonium borofluoride. The 3,4-dimethoxyphenyl acetate which was first formed was rearranged by the boron trifluoride produced during the reaction (62%) [3073].
- Also refer to: [3074].

Isolation from natural sources

- From various plants belonging to the Polypodiaceae family, namely *Inomotosou* (*Pteris multifide* Poiret), *Oobainomotosou* (*Pteris cretica* L.) and *Hitotsuba* (*Pyrrosia ingua* Farw.) [3075].

m.p. 115° [3070], 114–116° [2418], 114–115° [2733,2734], 112–114° [2740], 112° [2850,3071,3073], 111–112° [2742,2743]; b.p._{0.004} 125° [3071];

GC [3075], GC-MS [3075];

¹H NMR [2850], ¹³C NMR [2421], IR [2850,3075].

1-(2-Hydroxy-4,5-dimethoxyphenyl)ethanone-2-¹⁴C

[77184-92-0]

C₁₀H₁₂O₄ mol.wt. 198.20

Synthesis

– Preparation by heating a mixture of 3,4-dimethoxyphenol, boron trifluoride-acetic acid complex and sodium acetate-2-¹⁴C (250 μCi) at 100° for 25 min (54%) [3076].

m.p. 112–113° [3076];

specific radioactivity 1.50 μCi/mmol [3076].

1-(2-Hydroxy-4,6-dimethoxyphenyl)ethanone (*Xanthoxylin*; *Brevifolin*)

[90-24-4]

C₁₀H₁₂O₄ mol.wt. 196.20

Syntheses

– Preparation by reaction of acetonitrile on phloroglucinol dimethyl ether (Hoesch reaction) [2837,3077].

- Also obtained by partial methylation of phloroacetophenone,
 - with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone [2860,3078], (86%) [2860] or in solution of acetone–benzene mixture at reflux (78–83%) [2422,2936,3079], (65%) [3080];
 - with diazomethane in ethyl ether, at r.t. [2827,3081];
 - with methyl iodide in the presence of potassium carbonate in boiling acetone (83%) [2830], (6%) [2861].
- Also obtained by partial methylation of 2,4-dihydroxy-6-methoxyacetophenone [2845] or 2,6-di-hydroxy-4-methoxyacetophenone with diazomethane [2844,2845], (quantitative yield) [2844].
- Preparation by acetylation of phloroglucinol dimethyl ether,
 - with the boron trifluoride-acetic acid complex at 100° (24%) [2242];
 - with a mixture of acetic anhydride–acetic acid in the presence of boron trifluoride at 0° (54%) [3082];
 - with acetic anhydride in the presence of boron trifluoride in ethyl ether at 15° (49%) [3042];
 - with acetylating complex mixture at 60° (17%) [2746].
- Preparation by partial demethylation of phloroacetophenone trimethyl ether,
 - with hydriodic acid in acetic anhydride at r.t. (96%) [3083];
 - with aluminium chloride [2747,2832,2833,3084,3085], in nitrobenzene (sole product) [2832], in acetonitrile for 6 h at 45° (90%) [2747], in boiling ethyl ether (79%) [3084] or without solvent at 110° (30%) [3085];
 - with hydrobromic acid in acetic acid [3083].

- Also obtained by reaction of boron trifluoride etherate on 2,4-diacetyl-3,5-dimethoxyphenol in acetic acid (61%) [3042].
- Also obtained (major product) by reaction of acetyl chloride on phloroglucinol trimethyl ether with aluminium chloride in boiling petroleum ether [3086].
- Preparation by UV light irradiation of 3,5-dimethoxyphenyl acetate at 25° [2193] (photo-Fries rearrangement), in cyclohexane (62%), in isopropanol (45%) or in ethyl ether (32%).

Isolation from natural sources

- From the Bark of *Phytophthora* — and *Hendersonula* — infected *Citrus limon* [3087].
 - From *Xanthoxylum piperitum* De Candolle [3088,3089], from the essential oils of *Xanthoxylum aubertia* (*Evodia aubertia*) (10%) [2921] and of *Xanthoxylum alatum* Roxb. (Rutaceae) [2921].
 - From the root bark of *Fagara okinawaensis* Nakai (0.5%) [3081].
 - From the leaves of *Hippomane mancinella* L. [2920].
 - From the essential oil of *Artemisia brevifolia* Wallich [3090] or indigenous species of *Artemisia gallica* Willd. [3091].
 - From the essential oil of *Eucalyptus Bakeri* Maiden [2919].
 - From various species of *Geijera* [2919].
 - From *Blumea balsamifera* DC [2918,3092].
 - A new flavone, hinokiflavone was obtained from the leaves of *Chamaecyparis obtusa* Endlicher (Cupressaceae) [2259]. Hinokiflavone pentamethyl ether treated with alkali gave Xanthoxylin,
 - with potassium hydroxide [2260];
 - by boiling in methanolic barium hydroxide solution (77%) [3093].
 - A flavonoid, Sciadopitysin, was obtained from the leaves of *Sciadopitys verticillata*. Xanthoxylin was obtained in high yield by degradation of sciadopitysin trimethyl ether in boiling methanolic barium hydroxide solution [3093,3094].
 - A flavonoid, Tricin, was obtained from the Khapli wheat leaves (*Triticum Dicoccum*).
 - Xanthoxylin was obtained by degradation of triclin trimethyl ether in boiling 80% solution of potassium hydroxide in ethanol [3095].
 - In the steam distillates of resins from *Xanthorrhoea preissi*, *Xanthorrhoea reflexa*, *Xanthorrhoea tateana* F. Muell. and *Xanthorrhoea arborea* R. Br. [2584,2761,2862,2876].
- m.p. 87–88° [2432], 86° [3078], 85–88° [3086], 85° [2921], 84–85° [2746,2837], 83°5 [2920], 83° [2827,3079], 82–83° [2916,2918,2919,2936,3080,3081,3085,3096], 82° [2214,2242,2860,2862,3082], 81°5 [3042], 81° [3084], 80°5–81° [3087], 80–85° [3095], 80–81° [2139,3077], 80° [3090], 79° [2584,2761], 78°5–79°5 [2830], 78–80° [3089], 78–79° [2422,2861];
- b.p.₁₈ 175–185° [2761], b.p.₂₀ 185° [2584];
- ¹H NMR [2205,2830,3087], ¹³C NMR [1821], IR [2205,2830,3078,3081,3087]; UV [2214,2920,3087], MS [2830,3087].

1-(3-Hydroxy-2,4-dimethoxyphenyl)ethanone[23133-83-7] $C_{10}H_{12}O_4$ mol.wt. 196.20

Syntheses

- Preparation from 2,6-dimethoxyphenol or its acetate by reaction of refluxing acetic anhydride in the presence of few drops of concentrated sulfuric acid, followed by saponification of 3-acetoxy-2,4-dimethoxyacetophenone formed with 2 N sodium hydroxide (good yield) [3058].
 - Preparation from 3-acetoxy-2,4-dimethoxyacetophenone by hydrolysis with 2 N hydrochloric acid in refluxing methanol (78%) [2403].
- m.p. 79–80° [2403,3058]; 1H NMR [2403], IR [2403].

1-(3-Hydroxy-2,6-dimethoxyphenyl)ethanone[56358-74-8] $C_{10}H_{12}O_4$ mol.wt. 196.20

Isolation from natural sources

- Identification in liquid wastes from eucalyptus wood and kraft lignin charring [2868].

From Microorganisms

- Ketone identified from metabolism of 2,6-dimethoxyacetophenone in the rat [2374].

 1H NMR [2374], MS [2374].**1-(3-Hydroxy-4,5-dimethoxyphenyl)ethanone**[114012-82-7] $C_{10}H_{12}O_4$ mol.wt. 196.20

Isolation from natural sources

- Identified by flame-ionization gas-chromatography and gas chromatography–mass spectrometry into liquid wastes from eucalyptus wood and kraft lignin charring [2868].

1-(4-Hydroxy-2,5-dimethoxyphenyl)ethanone[13909-71-2] $C_{10}H_{12}O_4$ mol.wt. 196.20

Syntheses

- Preparation by Fries rearrangement of 2,5-dimethoxyphenyl acetate with aluminium chloride [2410].
- Preparation by nuclear oxidation of 2,5-dimethoxyacetophenone with peracetic acid [2410].

m.p. 117–118° [2410].

1-(4-Hydroxy-2,6-dimethoxyphenyl)ethanone

[13246-14-5]

 $C_{10}H_{12}O_4$

mol.wt. 196.20

Syntheses

- Preparation by reaction of acetic anhydride on phloroglucinol dimethyl ether with boron trifluoride,
 - in ethyl ether at 15° (49%) [3042];
 - in acetic acid at 0° (24%) [3082].
- Preparation by reaction of phloroglucinol dimethyl ether with boron trifluoride-acetic acid complex at 100° (40%) [2242].
- Preparation by reaction of acetonitrile on phloroglucinol dimethyl ether (Hoesch reaction) [2837,3077], (32%) [3077].
- Preparation by reaction of aluminium chloride on phloroacetophenone trimethyl ether in refluxing chlorobenzene [2837].
- Also obtained from 4-(benzyloxy)-2,6-dimethoxyacetophenone by heating with concentrated hydrochloric acid in acetic acid [2838].
- Also obtained by saponification of 4-(benzyloxy)-2,6-dimethoxyacetophenone with 8% methanolic potassium hydroxide at r.t. [3077].

Isolation from natural sources

- From *Pancreatium maritimum* (Amaryllidaceae) [3041].

m.p. 186° [2837], 185° [3077], 185° [2242], 184–185° [3082], 183–184° [2838], 76–78° [3041]. One of the reported melting points is obviously wrong.

¹H NMR [3041], ¹³C NMR [3041], IR [3041], EIMS [3041].

1-(4-Hydroxy-3,5-dimethoxyphenyl)ethanone (*Acetosyringone*)

[2478-38-8]

 $C_{10}H_{12}O_4$

mol.wt. 196.20

Syntheses

- Preparation by adding a solution of 4-hydroxy-3-iodo-5-methoxyacetophenone and cupric chloride in DMF to a solution of sodium methoxide in methanol and heating between 105° and 120° (86%) [2527].
- Preparation by reaction of sodium methoxide with 5-iodo-acetovanillone in methanol in the presence of copper catalyst (53%) [2570].
- Also obtained by debenzoylation of 4-(benzyloxy)-3,5-dimethoxyacetophenone by means of a cold saturated solution of hydrogen bromide in acetic acid (52%) [3097].
- Also obtained by Fries rearrangement of 2,6-dimethoxyphenyl acetate with aluminium chloride in nitrobenzene at r.t. (8–14%) [2807,3098,3099].
- Also refer to: [1828].

Isolation from natural sources

- From hairy roots cultures of *Nicotiana tabacum* and of *Atropa belladonna* [3100].

- In cell suspension cultures of *Hyoscyamus albus* [3101].
 - From birch lignin sulfonic acid by treatment with hot aqueous “alkali” (0.8%) [2807].
 - Identified by flame-ionization gas chromatography and gas chromatography–mass spectrometry into liquid wastes from eucalyptus wood and kraft lignin charring [2868].
- m.p. 125° [2527], 123–124° [2570], 122–123° [3098], 121–122° [3099], 120°5–121°5 [2807], 120–125° [2572], 117° [3097];
¹H NMR [3100], UV[2269,3100], MS [3100].

1-(5-Hydroxy-2,4-dimethoxyphenyl)ethanone

[91061-75-5] C₁₀H₁₂O₄ mol.wt. 196.20

Syntheses

- Preparation by Fries rearrangement of 2,4-dimethoxyphenyl acetate,
 - with aluminium chloride in nitrobenzene at 25° [2410,3102], (50%) [3102];
 - with 36.2% boron trifluoride in acetic acid, first at r.t. overnight, then at 70° for 2 h (81%) [3103].
 - Preparation by saponification of 5-acetyl-2,4-dimethoxyphenyl acetate with sodium hydroxide in dilute ethanol at 40° (90%) [2849].
- m.p. 155–156° [3102,3103], 154° [2849].

1-(6-Hydroxy-2,3-dimethoxyphenyl)ethanone

[22248-13-1] C₁₀H₁₂O₄ mol.wt. 196.20

Syntheses

- Preparation by reaction of dimethyl sulfate on 3,6-di-hydroxy-2-methoxyacetophenone with potassium carbonate in boiling benzene (67%) [2781].
 - Also refer to: [3104] (compound III).
- b.p.₂₂ 162–163° [2781].

1-[3-Hydroxy-5-(2-hydroxyethoxy)phenyl]ethanone

[63437-86-5] C₁₀H₁₂O₄ mol.wt. 196.20

Synthesis

- Obtained by reaction of 2-chloroethanol with 3,5-di-hydroxyacetophenone in refluxing aqueous sodium hydroxide for 5 h under nitrogen atmosphere (29%) [3105].
- m.p. 140° [3105].

1-[4-Hydroxy-3-(2-hydroxyethoxy)phenyl]ethanone

[63437-85-4]

 $C_{10}H_{12}O_4$

mol.wt. 196.20

**Synthesis**

– Preparation by hydrogenolysis of 4-(benzyloxy)-3-(2-hydroxyethoxy)acetophenone in ethanol under hydrogen atmosphere in the presence of 5% Pd/C for 45 min (98%) [3105].

m.p. 108–109° [3105].

1-[2-Hydroxy-4-(methoxymethoxy)phenyl]ethanone

[65490-08-6]

 $C_{10}H_{12}O_4$

mol.wt. 196.20

**Syntheses**

– Preparation by reaction of chloromethyl methyl ether,

- with resacetophenone in the presence of potassium carbonate in acetone at r.t. for 2.5 h (65%) [3106], at 20° for 20 h (70–75%) [3107] or at reflux for 3–6 h [3108];
- with resacetophenone disodium salt in a methanol/toluene mixture (27%) [3109].

N.B.: Preparation by selective methoxymethylation of resacetophenone (no accuracy) (91%) [3110].

– Also refer to: [3111].

oily residue [3106], colourless oil [3110]; TLC [3107];

b.p._{0.15} 110° [3107], b.p._{0.2} 118–122° [3109], b.p.₃ 138° [3106].

CAUTION! Traces of acids or water in the residue may result in a violent decomposition of the material during distillation [3106]; m.p. 36° [3109];

¹H NMR [3106,3107,3110], ¹³C NMR [3107], IR [3106,3107], MS [3107,3110].

1-[2-Hydroxy-6-(methoxymethoxy)phenyl]ethanone

[78646-28-3]

 $C_{10}H_{12}O_4$

mol.wt. 196.20

**Syntheses**

– Obtained by treatment of 2,6-dihydroxyacetophenone with methoxymethyl chloride in the presence of potassium carbonate in refluxing acetone for 2 h (85%) [3112].

– Also obtained by adding methoxymethyl chloride to a solution of 2,6-dihydroxyacetophenone monosodium salt prepared by reaction of sodium hydride with the keto phenol in DMF at r.t. (60%) [3113].

light yellow oil [3112]; ¹H NMR [3112], IR [3112], EIMS [3112].

1-(2,4,6-Trihydroxy-3,5-dimethylphenyl)ethanone[13383-63-6] $C_{10}H_{12}O_4$ mol.wt. 196.20

Syntheses

- Preparation by reaction of acetonitrile on 1,3-dimethyl-phloroglucinol (Hoesch reaction) [3114,3115], (66%) [3114].
- Preparation by Friedel–Crafts acylation of 1,3-dimethyl-phloroglucinol with acetic acid in the presence of boron trifluoride (63%) [3116].
- Also obtained by reaction of methyl iodide with phloroacetophenone in the presence of potassium hydroxide in 80% aqueous methanol (12%) [3117], of potassium hydroxide in anhydrous methanol (5%) [2437,2876] or sodium methoxide in methanol [2878].
- Also obtained by demethylation of 2-hydroxy-4,6-dimethoxy-3,5-dimethylacetophenone [3118].
- Also refer to: [3119–3121].

m.p. 226–229° [3116], 221–222° [3115], 220–222° [2876], 219° [3117], 218° [3114]; UV [2878,3117], MS [3114].

1-[4-Hydroxy-3-[(methylsulfonyl)methyl]phenyl]ethanone[49640-12-2] $C_{10}H_{12}O_4S$ mol.wt. 228.27

Syntheses

- Obtained by reaction of 3'-chloromethyl-4'-hydroxyacetophenone with magnesium methylsulfinate in refluxing aqueous methanol for 18 h (52%) [2544].
- Also refer to: [3122–3125].

m.p. 207–209° [2544].

1-(2,3-Dihydroxy-4,5-dimethoxyphenyl)ethanone[119892-31-8] $C_{10}H_{12}O_5$ mol.wt. 212.20

Synthesis

- Refer to: [3126] (Japanese patent).

1-(2,3-Dihydroxy-4,6-dimethoxyphenyl)ethanone[21919-66-4] $C_{10}H_{12}O_5$ mol.wt. 212.20

Syntheses

- Preparation by hydrolysis of 3-acetoxy-2-hydroxy-4,6-di-methoxyacetophenone,

- with 6 N hydrochloric acid in refluxing ethanol (92%) [3127];
 - with 10% potassium hydroxide at r.t. [3128,3129], (90%) [3128].
- Preparation by hydrolysis of 2-hydroxy-3,4,6-trimethoxyacetophenone with 30% hydrobromic acid in acetic acid at r.t. (42%) [2814].
- Preparation by catalytic hydrogenolysis of 2,3-bis(benzyloxy)-4,6-dimethoxyacetophenone in the presence of 10% Pd/C in ethyl acetate (89%) [3130].
- Also obtained by reaction of hydrobromic acid with 3-ethoxy-2-hydroxy-4,6-dimethoxyacetophenone in acetic acid at r.t. (major compound) [3131].
- Also obtained (by-product) by reaction of acetyl chloride with 1,2,3,5-tetramethoxybenzene in ethyl ether (3%) [3131].
- Also refer to: [3132,3133].
- m.p. 165°–166°5 [2814], 165–167°5 [3131], 164–165° [3128], 160–165° [3127], 160–162° [3130];
- ¹H NMR [3131], IR [3130,3131], MS [3131].

1-(2,4-Dihydroxy-3,5-dimethoxyphenyl)ethanone

[198203-68-8]

C₁₀H₁₂O₅ mol.wt. 212.20

Synthesis

- Obtained (poor yields) by treatment of 4-hydroxy-3,5-dimethoxyacetophenone or 3,4,5-trimethoxyacetophenone with alkaline hydrogen peroxide (pH 11) irradiating with UV light (254 nm) at 40° for 2 h (<1%) [3134].

N.B.: The silylated product was analyzed by gas chromatography–mass spectrometry (GC-MS).

1-(2,4-Dihydroxy-3,6-dimethoxyphenyl)ethanone

[7499-99-2]

C₁₀H₁₂O₅ mol.wt. 212.20

Syntheses

- Preparation by reaction of acetonitrile, (Hoesch reaction),
- on 2,6-bis(benzyloxy)-1,4-dimethoxybenzene (47%) [3135], (71%) [3136];
 - on 2,5-dimethoxyresorcinol [2884,3137,3138].

m.p. 129° [2884,3138], 128–129° [3136], 125–130° [3135].

1-(2,5-Dihydroxy-3,4-dimethoxyphenyl)ethanone

[69616-56-4]

C₁₀H₁₂O₅ mol.wt. 212.20

Synthesis

- Obtained from 2-hydroxy-3,4-dimethoxyacetophenone by persulfate oxidation (Elbs reaction) (30%) [2820], (10%) [3057].

m.p. 119–121° [3057], 119° [2820].

1-(2,5-Dihydroxy-3,6-dimethoxyphenyl)ethanone[6212-45-9] $C_{10}H_{12}O_5$ mol.wt. 212.20**Syntheses**

- Preparation by metallation of 2,5-dimethoxyhydroquinone-bis-[tetrahydropyranyl-(2)-ether], followed by treatment of the intermediate aryllithium compound with acetic anhydride in tetrahydrofuran at r.t. (82%) [2564].
 - Preparation by reaction of acetic acid on 2,5-dimethoxy-hydroquinone diacetate with boron trifluoride etherate at 75° [2998,3139], (55%) [3139].
 - Preparation by catalytic hydrogenolysis of 2,5-bis(benzyloxy)-3,6-dimethoxyacetophenone in the presence of palladium oxide in ethanol (96%) [2450].
- m.p. 170° [3139], 94° [2450,2564].

1-(2,6-Dihydroxy-3,4-dimethoxyphenyl)ethanone[74556-32-4] $C_{10}H_{12}O_5$ mol.wt. 212.20**Syntheses**

- Preparation by reaction of dimethyl sulfate on 2,3,4,6-tetrahydroxyacetophenone with sodium hydroxide in boiling ethanol (94%) [2443].
 - Also obtained by reaction of acetyl chloride on 5-hydroxy-1,2,3-trimethoxybenzene (antiarol) with aluminium chloride in nitrobenzene [3140].
 - Also obtained by reaction of acetyl chloride on 1,2,3,5-tetramethoxybenzene with aluminium chloride in nitrobenzene at r.t. [3140-3142].
 - Preparation by cleavage of 2,6-dihydroxy-3,4-dimethoxyacetophenone mono-2,4-dinitrophenyl ether with piperidine by heating in a steam bath (76%) [3127].
 - Also obtained by cleavage of 2,3,4-trimethoxy-6-isopropoxyacetophenone or 6-hydroxy-2,3,4-trimethoxyacetophenone with hydrobromic acid in acetic acid (23%) [3127].
- m.p. 166-168° [2443], 162-163° [3141,3142], 160-161° [3140], 135°6-135°9 [3127].

1-(3,6-Dihydroxy-2,4-dimethoxyphenyl)ethanone[6962-57-8] $C_{10}H_{12}O_5$ mol.wt. 212.20**Syntheses**

- Preparation by Fries rearrangement of 1,4-diacetoxy-2,6-di-methoxybenzene with aluminium chloride in nitrobenzene at r.t. [2446,3127,3143,3144], (57%) [3144], (47-56%) [3143] and (34%) [2446].
- Preparation by reaction of 2,6-dimethoxyhydroquinone with boron trifluoride-acetic acid complex at 28-30° (60%) [2242].
- Preparation from 2-hydroxy-4,6-dimethoxyacetophenone by persulfate oxidation (Elbs reaction) (36%) [3080], (7%) [2830].

- Also obtained (by-product) by reaction of acetyl chloride on 1,2,3,5-tetrahydroxybenzene with aluminium chloride in carbon disulfide [3145].
- Preparation by hydrolysis of 3-acetoxy-6-hydroxy-2,4-dimethoxyacetophenone with refluxing 5% methanolic hydrochloric acid (major product) [3146] or refluxing 10% ethanolic hydrochloric acid [3127].
- Also refer to: [2777,3147].

m.p. 164–165° [3080], 162–163° [2446,3144–3146], 162–162°5 [3127], 162° [2242,3143], 161–162° [2830];

¹H NMR [2830,3146], ¹³C NMR [2328], IR [2830,3146], UV [3146], MS [2830,3146].

1-(4,6-Dihydroxy-2,3-dimethoxyphenyl)ethanone

[103777-42-0] C₁₀H₁₂O₅ mol.wt. 212.20

Synthesis

- Preparation from 4-(benzyloxy)-6-hydroxy-2,3-dimethoxyacetophenone by hydrogenolysis with hydrogen in the presence of Pd/C [3148].

1-(2-Ethoxy-3,4,6-trihydroxyphenyl)ethanone

[63635-41-6] C₁₀H₁₂O₅ mol.wt. 212.20

Synthesis

- Preparation by hydrogenolysis of 2-ethoxy-3,4,6-tris(benzyloxy)acetophenone with 5% Pd/C in ethanol at r.t. (96%) [2442,3149].

m.p. 169° [2442,3149];

¹H NMR [2442,3149], IR [2442,3149].

1-(2,4,5-Trihydroxy-3,6-dimethoxyphenyl)ethanone

[15994-32-8] C₁₀H₁₂O₆ mol.wt. 228.20

Syntheses

- Obtained by hydrogenolysis of 4-benzyloxy-2,5-dihydroxy-3,6-dimethoxyacetophenone with hydrogen in the presence of 30% Pd/C [3150].
- Also obtained by persulfate oxidation of 2,4-dihydroxy-3,6-dimethoxyacetophenone (Elbs reaction) [3151].
- Also refer to: [3152,3153].

m.p. 142–144° [3152], 140–142° [3154], 137°5–138°5 [3150], 131–134° [3155];

¹H NMR [3151], IR [3151,3154].

1-(3-Amino-5-ethyl-2-hydroxyphenyl)ethanone[70977-78-5] $C_{10}H_{13}NO_2$ mol.wt. 179.22

Synthesis

– Preparation by catalytic hydrogenation of 5-ethyl-2-hydroxy-3-nitroacetophenone in the presence of 5% Pd/C in ethanol at 25° (70%) [1898], (60%) [1897].

m.p. 50–51° [1898], 48–51° [1897].

1-[4-(Dimethylamino)-2-hydroxyphenyl]ethanone[107070-69-9] $C_{10}H_{13}NO_2$ mol.wt. 179.22

Syntheses

– Preparation by reaction of dimethyl sulfate with 4-amino-2-hydroxyacetophenone in the presence of sodium carbonate in boiling water for 40 min (49%) [3156].

– Also refer to: [3157,3158].

m.p. 118° [3156]; 1H NMR [3156], ^{13}C NMR [3159], IR [3156].**1-[5-(Dimethylamino)-2-hydroxyphenyl]ethanone**[49619-68-3] $C_{10}H_{13}NO_2$ mol.wt. 179.22

Synthesis

– Preparation by catalytic hydrogenation of 2-hydroxy-5-nitroacetophenone with formalin in the presence of palladium chloride (82%) [2899].

m.p. 76°5–77°5 [2899]; 1H NMR [2899], IR [2899].**1-(3-Amino-2-hydroxy-4,6-dimethoxyphenyl)ethanone**[81325-91-9] $C_{10}H_{13}NO_4$ mol.wt. 211.22

Synthesis

– Preparation by adding a hot solution of stannous chloride in hydrochloric acid to a solution of 2-acetoxy-4,6-dimethoxy-3-nitroacetophenone in ethanol containing zinc dust and heating the mixture in a steam bath (48%) [2139].

m.p. 118–119° [2139]; 1H NMR [2139], IR [2139].

1-(3-Amino-2-hydroxy-4,6-dimethoxyphenyl)ethanone (Hydrochloride)

[81325-92-0]

 $C_{10}H_{13}NO_4$, HCl mol.wt. 247.68**Synthesis**

– Preparation by treatment of a solution of 2-hydroxy-4,6-di-methoxy-3-nitroacetophenone in ethanol with zinc dust and a solution of stannous chloride in hydrochloric acid, and heating in a steam bath (50%) [2139].

m.p. 171° [2139].

1-(3-Amino-6-hydroxy-2,4-dimethoxyphenyl)ethanone

[81325-95-3]

 $C_{10}H_{13}NO_4$ mol.wt. 211.22**Synthesis**

– Preparation by adding a solution of stannous chloride in hydrochloric acid to a hot solution of 6-hydroxy-2,4-di-methoxy-3-phenylazoacetophenone in ethanol containing zinc dust, and heating the mixture in a steam bath (73%) [2139].

m.p. 75° [2139]; 1H NMR [2139].**1-[4-(Acryloyloxy)-2-hydroxyphenyl]ethanone** $C_{11}H_{10}O_4$ mol.wt. 206.20**Synthesis**

– Preparation by reaction of acryloyl chloride with resacetophenone in the presence of triethylamine in ethyl ether (25%) [2295].

m.p. 55–57° [2295]; 1H NMR [2295], IR [2295].**1-[2,4-Dihydroxy-6-(2-propynyloxy)phenyl]ethanone**

[53771-24-7]

 $C_{11}H_{10}O_4$ mol.wt. 206.20**Synthesis**

– Obtained (poor yield) by reaction of 2-propynyl bromide with phloracetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone (5%) [3160].

m.p. 142–143° [3160]; UV [3160].

1-[3-Chloro-4-hydroxy-5-(2-propenyl)phenyl]ethanone

[51832-82-7]

 $C_{11}H_{11}ClO_2$

mol.wt. 210.66

Synthesis

– Preparation by Claisen rearrangement of 4-(allyloxy)-3-chloroacetophenone [3161,3162].

1-[5-Chloro-2-hydroxy-3-(2-propenyl)phenyl]ethanone

[186956-46-7]

 $C_{11}H_{11}ClO_2$

mol.wt. 210.66

Synthesis

– Obtained by Claisen rearrangement of 2-(allyloxy)-5-chloroacetophenone in refluxing N,N-diethylaniline at 220° for 4 h [3163].

Colourless oil [3163]; b.p._{0.1} 140° [3163];

¹H NMR [3163], IR [3163].

1-[2-Hydroxy-3-iodo-4-(2-propenyloxy)phenyl]ethanone

[72511-76-3]

 $C_{11}H_{11}IO_3$

mol.wt. 318.11

Synthesis

– Obtained by partial allylation of 2,4-dihydroxy-3-iodo-acetophenone with allyl bromide in the presence of potassium carbonate in refluxing acetone for 4–5 h (52%) [3164].

m.p. 91–92° [3164]; ¹H NMR [3164].

1-[2-Hydroxy-3-(1-propenyl)phenyl]ethanone

[67127-96-2]

 $C_{11}H_{12}O_2$

mol.wt. 176.22

Synthesis

– Preparation by isomerization of 3-allyl-2-hydroxy-acetophenone using bis(benzonitrile)-palladous chloride in refluxing toluene (90%) [1897,3165].

b.p.₁₈ 153–155° [1897,3165].

1-[2-Hydroxy-3-(2-propenyl)phenyl]ethanone

[58621-39-9]

 $C_{11}H_{12}O_2$

mol.wt. 176.22

Syntheses

- Preparation by thermal Claisen rearrangement of 2-(allyloxy)acetophenone (m.p. 19–21°) [3166],
- in refluxing N,N-diethylaniline at 220° for 4 h [3163];
 - in boiling dichlorobenzene (30%) [3167];
 - without solvent at 260–270° (85%) [3168];
 - without solvent at reflux under nitrogen atmosphere for 5 h [3169], (66%) [3166].
- Also obtained by photolysis of o-allylphenyl acetate in cyclohexane (major product) (photo-Fries rearrangement) [3170].
- Also refer to: [3171–3173].

light yellow liquid [3166], colourless oil [3163];

b.p._{0.3} 110° [3166], b.p.₂₀ 135–138° [3168], b.p._{0.1} 135–138° [3163], b.p. 258° [3172]; ¹H NMR [3163,3166,3167], ¹³C NMR [3166], IR [3163,3166,3167], MS [3166].**1-[3-Hydroxy-2-(2-propenyl)phenyl]ethanone**

[58621-37-7]

 $C_{11}H_{12}O_2$

mol.wt. 176.22

Syntheses

- Preparation by thermal Claisen rearrangement of 3-(allyloxy)acetophenone,
- in boiling dichlorobenzene (10%) [3167];
 - in DMF at 220° (53%) [2357];
 - without solvent at 220° (43%) [2357].
- oil [2357]; ¹H NMR [2357,3167], IR [2357,3167], MS [2357].

1-[3-Hydroxy-4-(1E)-1-propenylphenyl]ethanone

[430474-15-0]

 $C_{11}H_{12}O_2$

mol.wt. 176.22

Synthesis

- Obtained by isomerization of 1-[3-hydroxy-4-(2-propenyl)phenyl]ethanone in the presence of polymer-supported iridium catalyst in THF at r.t.
- (92% *trans*) [3174,3175].
¹H NMR [3175].

1-[3-Hydroxy-4-(2-propenyl)phenyl]ethanone

[58621-38-8]

 $C_{11}H_{12}O_2$ mol.wt. 176.22

Syntheses

– Preparation by thermal Claisen rearrangement of 3-(allyloxy)acetophenone,

- in boiling dichlorobenzene (50%) [3167];
 - in DMF at 220° (27%) [2357];
 - without solvent at 220° (22%) [2357].
- Also obtained by UV light irradiation of 3-(allyloxy)acetophenone in benzene or cyclohexane under nitrogen (8%) [3167].

m.p. 75–76° [3167], 62–64° [2357]; 1H NMR [2357,3167], IR [2357,3167], MS [2357].

1-[4-Hydroxy-3-(1-propenyl)phenyl]ethanone

[53889-99-9]

 $C_{11}H_{12}O_2$ mol.wt. 176.22

Synthesis

– Refer to: [3176].

1-[4-Hydroxy-3-(2-propenyl)phenyl]ethanone

[1132-05-4]

 $C_{11}H_{12}O_2$ mol.wt. 176.22

Syntheses

– Preparation by thermal Claisen rearrangement of 4-(allyloxy)acetophenone,

- in boiling N,N-dimethylaniline [3177];
 - in diphenyl ether at 185° [3178] or at reflux (76%) [3179];
 - without solvent at 200–210° (78%) [3180], at 200–230° (96%) [3181] or at 260–270° (64%) [3168].
- Also obtained by UV light irradiation of 4-(allyloxy)acetophenone in benzene or cyclohexane under nitrogen (13%) [3167].

m.p. 115°–116° [3179], 115–116° [3180], 115° [3177];

b.p.₄ 164–165° [3168], b.p.₂₁ 200–201° [3177];

1H NMR [3167], IR [3167], UV [3179], MS [3181].

1-[2,4-Dihydroxy-3-(2-propenyl)phenyl]ethanone

[38987-00-7]

 $C_{11}H_{12}O_3$ mol.wt. 192.21

Syntheses

- Preparation by thermal Claisen rearrangement of 4-(allyloxy)-2-hydroxyacetophenone without solvent at 200–210° (85%) [3182].
- Also refer to: [3182–3184].

m.p. 133° [3182]; UV [3183].

1-[2,4-Dihydroxy-5-(2-propenyl)phenyl]ethanone

[38987-01-8]

 $C_{11}H_{12}O_3$ mol.wt. 192.21

Syntheses

- Preparation by demethylation of 5-allyl-4-hydroxy-2-methoxyacetophenone with aluminium chloride in ethyl ether or acetonitrile [3183].
- Preparation by reaction of boron tribromide on 5-allyl-4-hydroxy-2-methoxyacetophenone in methylene chloride, first at -78°, then at -45° (52%) [2671, 2678, 2679].

m.p. 74–76° [2671, 2678, 2679], 55° [3183]; 1H NMR [2678, 2679], UV [3183].**1-[2,5-Dihydroxy-4-(2-propenyl)phenyl]ethanone**

[174901-51-0]

 $C_{11}H_{12}O_3$ mol.wt. 192.21

Synthesis

- Refer to: [3185].

1-[2,6-Dihydroxy-3-(2-propenyl)phenyl]ethanone

[17488-71-0]

 $C_{11}H_{12}O_3$ mol.wt. 192.21

Syntheses

- Obtained from 8-acetyl-6-allyl-7-hydroxy-4-methyl-coumarin by alkaline degradation with 12% aqueous sodium hydroxide solution by heating in a water bath (80%) [3186].

- Also refer to: [2590, 2997].

m.p. 63–65° [3186]; ^{13}C NMR [2590].

1-[3,6-Dihydroxy-2-(2-propenyl)phenyl]ethanone

[40815-79-0]

 $C_{11}H_{12}O_3$ mol.wt. 192.21

Syntheses

– Preparation by thermal Claisen rearrangement of 5-(allyloxy)-2-hydroxyacetophenone without solvent at 200–220° (36%) [3181] or at 220–230° (74–75%) [2357,3187].

– Also obtained by thermal reaction of 2-acetyl-1,4-benzo-quinone,

- with allyltrimethylstannane in benzene (27%) or acetonitrile (18%) [2355];
- with allyltributylstannane in benzene (29%) [2355].

m.p. 107°5 [3187], 103–104° [2357], 78–80° [2355];

¹H NMR [2355,2357,3181], IR [2355,2357], MS [2355,2357,3181].

1-[2-Hydroxy-4-(2-propenyloxy)phenyl]ethanone

[40815-74-5]

 $C_{11}H_{12}O_3$ mol.wt. 192.21

Syntheses

– Preparation by reaction of allyl bromide on resacetophenone with potassium carbonate,

- in refluxing methyl ethyl ketone (90%) [2671,2678,2679];
- in refluxing acetone (70%) [3182].

oil [2671,2678,2679]; b.p., 156–157° [3182].

1-[2-Hydroxy-5-(2-propenyloxy)phenyl]ethanone

[40815-75-6]

 $C_{11}H_{12}O_3$ mol.wt. 192.21

Synthesis

– Preparation by reaction of allyl bromide on quinacetophenone with potassium carbonate in refluxing acetone (86%) [2226,2357], (73%) [3187] or in refluxing methyl ethyl ketone (52%) [3181].

m.p. 59–60° [2226,2357,3187];

¹H NMR [2357,3181], IR [2357], MS [2357,3181].

1-[2-Hydroxy-6-(2-propenyloxy)phenyl]ethanone

[23226-84-8]

 $C_{11}H_{12}O_3$ mol.wt. 192.21

Synthesis

– Preparation by reaction of allyl bromide with 2,6-dihydroxy-acetophenone in the presence of potassium carbonate in refluxing acetone (52%) [2997].

m.p. 45°5–46°5 [2997]; b.p._{0.15} 128–132° [2997].

1-[3-(Acetyloxy)-2-hydroxy-5-methylphenyl]ethanone

[77347-23-0]

 $C_{11}H_{12}O_4$ mol.wt. 208.21

Synthesis

– Preparation by reaction of m-chloroperoxybenzoic acid with 2,6-diacetyl-4-methylphenol using chloroform and trifluoroacetic acid as solvent at r.t. (39%) [3188].

m.p. 80–81° [3188]; 1H NMR [3188], MS [3188].

1-[4-(Acetyloxy)-2-hydroxy-3-methylphenyl]ethanone

[144224-86-2]

 $C_{11}H_{12}O_4$ mol.wt. 208.21

Syntheses

– Preparation by reaction of acetyl chloride with 2,4-di-hydroxy-3-methylacetophenone in the presence of triethylamine in methylene chloride at 0° for 2 h then at r.t. overnight (82%) [2891].

– Also refer to: [2675].

m.p. 71–73° [2891]; 1H NMR [2891], ^{13}C NMR [2891], IR [2891].

1-[4-(Acetyloxy)-2-hydroxy-6-methylphenyl]ethanone

[57600-87-0]

 $C_{11}H_{12}O_4$ mol.wt. 208.21

Synthesis

– Preparation by treatment of a mixture of alkylated resorcinols with acetic anhydride and acetic acid in the presence of zinc chloride at 140–145°, followed by suitable separation [3189].

1-[5-(Acetyloxy)-2-hydroxy-4-methylphenyl]ethanone

[126570-32-9]

 $C_{11}H_{12}O_4$ mol.wt. 208.21

Syntheses

– Preparation by partial acetylation of 2,5-dihydroxy-4-methylacetophenone [2024].

– Also obtained (by-product) by Fries rearrangement of 2-methylhydroquinone diacetate with aluminium chloride [2024].

m.p. 109° [2024].

1-[2,3-Dihydroxy-4-(2-propenyloxy)phenyl]ethanoneC₁₁H₁₂O₄ mol.wt. 208.21**Synthesis**

– Obtained by reaction of allyl bromide on gallacetophenone with sodium bicarbonate in refluxing acetone–ethanol mixture (16%) [2817].

m.p. 84° [2817].

1-[2,4-Dihydroxy-6-(2-propenyloxy)phenyl]ethanone

[76609-35-3]

C₁₁H₁₂O₄ mol.wt. 208.21**Synthesis**

– Preparation by tosylation of phloracetophenone with p-toluenesulfonyl chloride (2.2 mol) in acetone in the presence of potassium carbonate, followed by allylation with allyl bromide (1.2 mol) and final detosylation with methanolic potassium hydroxide [3190].

m.p. 144–145° [3190].

1-[2,5-Dihydroxy-4-(2-propenyloxy)phenyl]ethanone

[92831-82-8]

C₁₁H₁₂O₄ mol.wt. 208.21**Synthesis**

– Preparation from 4-(allyloxy)-2-hydroxyacetophenone by persulfate oxidation (Elbs reaction) (24%) [3191].

m.p. 79–80° [3191]; ¹H NMR [3191].**1-[2,6-Dihydroxy-4-(2-propenyloxy)phenyl]ethanone**

[35028-03-6]

C₁₁H₁₂O₄ mol.wt. 208.21**Synthesis**

– Preparation from 2,4-diacetyl-5-(allyloxy)resorcinol by selective deacetylation by refluxing in 1 N sodium hydroxide for 1 h [2856].

m.p. 145–146° [2856]; ¹H NMR [2856].

1-[3,6-Dihydroxy-2-(2-propenyloxy)phenyl]ethanone[33539-24-1] $C_{11}H_{12}O_4$ mol.wt. 208.21

Syntheses

- Easy preparation by reduction of 2-acetyl-3-(allyloxy)-1,4-benzoquinone using conventional methods [2869].
- Obtained (low yield) by reaction of 2-acetyl-1,4-benzoquinone with an excess of allyl alcohol at r.t., with exclusion of light [2869].

m.p. 68–69° [2869]; 1H NMR [2869], IR [2869].**1-[2-Hydroxy-4-(oxiranylmethoxy)phenyl]ethanone**[61270-24-4] $C_{11}H_{12}O_4$ mol.wt. 208.21

Synthesis

- Preparation by reaction of epichlorohydrin with resaceto-phenone in the presence of potassium hydroxide, in refluxing ethanol [2270] or in a concentrated aqueous solution at 120° [3192].

m.p. 78° [3192], 72–73° [2270].

1-[2-Hydroxy-5-(oxiranylmethoxy)phenyl]ethanone[16139-53-0] $C_{11}H_{12}O_4$ mol.wt. 208.21

Synthesis

- Refer to: [3193,3194].

m.p. 76–79° [3194].

1-[2-Hydroxy-6-(oxiranylmethoxy)phenyl]ethanone[16130-28-2] $C_{11}H_{12}O_4$ mol.wt. 208.21

Synthesis

- Preparation by reaction of epichlorohydrin with 2,6-dihydroxyacetophenone in the presence of potassium hydroxide in refluxing ethanol [2270].

m.p. 61–63° [2270].

1-[2,4,6-Trihydroxy-3-(2-propenyl)phenyl]ethanone

[118062-86-5]

 $C_{11}H_{12}O_4$ mol.wt. 208.21

Synthesis

**1-[2-(Acetyloxy)-4,6-dihydroxy-3-methylphenyl]ethanone** $C_{11}H_{12}O_5$ mol.wt. 224.21

Synthesis

m.p. 161–164° [3197].

1-[2-(Acetyloxy)-5-hydroxy-4-methoxyphenyl]ethanone

[144152-30-7]

 $C_{11}H_{12}O_5$ mol.wt. 224.21

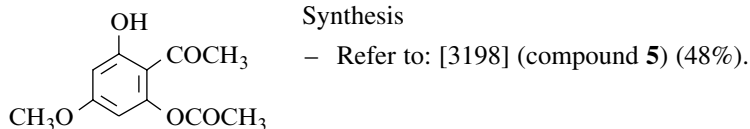

Synthesis

Pale yellow viscous oil [2897]; 1H NMR [2897].**1-[2-(Acetyloxy)-6-hydroxy-4-methoxyphenyl]ethanone**

[63013-36-5]

 $C_{11}H_{12}O_5$ mol.wt. 224.21

Synthesis

**1-[3-(Acetyloxy)-2-hydroxy-4-methoxyphenyl]ethanone** $C_{11}H_{12}O_5$ mol.wt. 224.21

Syntheses

– Preparation by reaction of acetyl chloride with 2,3-dihydroxy-4-methoxyacetophenone in pyridine at 0° (52%) [2403].

m.p. 123°4–125° [2813], 122–123° [2403]; 1H NMR [2403], IR [2403].

1-[4-(Acetyloxy)-2-hydroxy-6-methoxyphenyl]ethanone

[29376-66-7]

 $C_{11}H_{12}O_5$ mol.wt. 224.21

Synthesis

– Preparation by reaction of diazomethane with 4-acetoxy-2,6-dihydroxyacetophenone in tetrahydrofuran at r.t. (55%) [2905].

m.p. 86–89° [2905].

1-[5-(Acetyloxy)-2-hydroxy-4-methoxyphenyl]ethanone

[69470-86-6]

 $C_{11}H_{12}O_5$ mol.wt. 224.21

Syntheses

– Preparation by Fries rearrangement of 2-methoxyhydroquinone diacetate with boron trifluoride in acetic acid (90%) [2849].

– Obtained by reaction of methyl iodide with 5-acetoxy-2,4-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone (19%) [2906].

m.p. 104° [2849,2906].

1-(3-Bromo-4-ethyl-2-hydroxy-5-methoxyphenyl)ethanone $C_{11}H_{13}BrO_3$ mol.wt. 273.13

Synthesis

– Obtained by reaction of bromine on 4-ethyl-2-hydroxy-5-methoxyacetophenone in ethyl ether containing a trace of aluminium chloride [3199].

m.p. 83° [3199].

1-(5-Bromo-2-hydroxy-4-propoxyphenyl)ethanone

[57442-27-0]

 $C_{11}H_{13}BrO_3$ mol.wt. 273.13

Synthesis

– Preparation by bromination of 2-hydroxy-4-propoxyacetophenone (1 mol) in 80% acetic acid with bromine (1 mol) at r.t. (25–30°) (90%) [3200].

m.p. 118° [3200].

1-(3-Bromo-2-hydroxy-4,6-dimethoxy-5-methylphenyl)ethanone[39701-15-0] $C_{11}H_{13}BrO_4$ mol.wt. 289.13

Syntheses

– Preparation by adding an aqueous solution of bromine and potassium bromide to an ethanolic solution of 2-hydroxy-4,6-dimethoxy-5-methylacetophenone (46%) [2873].

m.p. 75–76° [2873]; 1H NMR [2873], IR [2873].**1-(3-Bromo-2-hydroxy-4,5,6-trimethoxyphenyl)ethanone** $C_{11}H_{13}BrO_5$ mol.wt. 305.13

Syntheses

– Preparation by methylation of 3-bromo-2,5-dihydroxy-4,6-dimethoxyacetophenone [2917].
– Preparation by bromination of 6-hydroxy-2,3,4-trimethoxyacetophenone [2917].

m.p. 89–90° [2917].

1-[4-(Chloromethyl)-3-ethyl-2-hydroxyphenyl]ethanone[97582-38-2] $C_{11}H_{13}ClO_2$ mol.wt. 212.68

Synthesis

– Preparation by reaction of ethyl chloroformate with 4-(dimethylaminomethyl)-3-ethyl-2-hydroxyacetophenone [2550,2927], (71%) [2550].

m.p. 55–57° [2550]; b.p._{0.5} 120–130° [2927]; 1H NMR [2927], IR [2927].**1-(3-Chloro-2,6-dihydroxy-5-propylphenyl)ethanone**[102624-59-9] $C_{11}H_{13}ClO_3$ mol.wt. 228.68

Syntheses

– Preparation according to literature procedures [1892] (compound **1c**).
– Also refer to: [3201].

1-[2-(3-Chloropropoxy)-6-hydroxyphenyl]ethanone[105277-74-5] $C_{11}H_{13}ClO_3$ mol.wt. 228.68**Synthesis**

– Preparation by reaction of 1-bromo-3-chloropropane with 2,6-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone for 24 h (quantitative yield) [3202].

m.p. 60°5–62°5 [3202]; 1H NMR [3202], MS [3202].

1-[4-(3-Chloropropoxy)-2-hydroxyphenyl]ethanone[172739-45-6] $C_{11}H_{13}ClO_3$ mol.wt. 228.68**Syntheses**

– Preparation by reaction of 1-bromo-3-chloropropane with resacetophenone [3203], in the presence of potassium carbonate in refluxing acetone for 5 h (84%) [3204] or for 16 h (69%) [3205].

– Also refer to: [3206].

m.p. 73–74° [3205], 73° [3204]; 1H NMR [3205], IR [3205].

1-[4-(3-Chloropropoxy)-3-hydroxyphenyl]ethanone[151719-65-2] $C_{11}H_{13}ClO_3$ mol.wt. 228.68**Syntheses**

– Obtained by demethylation of 1-[4-(3-chloropropoxy)-3-methoxyphenyl]ethanone in concentrated sulfuric acid at 65° for 23 h (22%) [3207].

– Also refer to: [3208].

m.p. 101–103° [3207]; 1H NMR [3207], MS [3207].

1-(3-Chloro-2-hydroxy-4,6-dimethoxy-5-methylphenyl)ethanone[31913-64-1] $C_{11}H_{13}ClO_4$ mol.wt. 244.67**Synthesis**

– Preparation by reaction of sulfuryl chloride with 6-hydroxy-2,4-dimethoxy-3-methylacetophenone in chloroform at –3° (59%) [3209].

Isolation from natural sources

– Also obtained by alkaline hydrolysis of sordidone dimethyl ether (8-chloro-5,7-dimethoxy-2,6-di-methylchromone) [3209,3210] with refluxing 5% aqueous potassium hydroxide under nitrogen (83%) [3209]. Sordidone is a metabolite isolated from the lichen *Lecanora rupicola* (L.) Zahlbr. (syn. *Lecanora sordida* Th. Fr.) [3209].

m.p. 94° [3209,3210]; 1H NMR [3209], IR [3209], MS [3209].

1-(3-Chloro-6-hydroxy-2,4-dimethoxy-5-methylphenyl)ethanone[23053-45-4] $C_{11}H_{13}ClO_4$ mol.wt. 244.67

Syntheses

- Preparation by adding of ethereal solution of diazomethane to a solution of 3-chloro-2,4,6-trihydroxy-5-methylacetophenone in a mixture of acetone–ethyl ether at r.t. (76%) [2566].
 - Preparation by reaction of sulfonyl chloride with 2-hydroxy-4,6-dimethoxy-3-methylacetophenone in chloroform at -3° (43%) [3209].
 - Also obtained by alkaline hydrolysis of isosordidone dimethyl ether (6-chloro-5,7-dimethoxy-2,8-dimethylchromone) with refluxing 5% aqueous potassium hydroxide under nitrogen (55%) [3209].
- m.p. 108–109° [2566], 108° [3209]; 1H NMR [3209], IR [3209], MS [3209].

1-[3-(Chloromethyl)-2-hydroxy-4,6-dimethoxyphenyl]ethanone[40356-82-9] $C_{11}H_{13}ClO_4$ mol.wt. 244.67

Synthesis

- Preparation by chloromethylation of 2-hydroxy-4,6-di-methoxyacetophenone with chloromethyl methyl ether in acetic acid for 1 h at r.t. (57%) [3211,3212].
- m.p. 133–135° (d) [3211,3212].

1-(3-Fluoro-2,6-dihydroxy-5-propylphenyl)ethanone[102624-71-5] $C_{11}H_{13}FO_3$ mol.wt. 212.22

Syntheses

- Preparation according to literature procedures [1892] (compound **1f**).
- Also refer to: [3201].

1-(5-Fluoro-2,4-dihydroxy-3-propylphenyl)ethanone[119257-53-3] $C_{11}H_{13}FO_3$ mol.wt. 212.22

Synthesis

- Refer to: [3213].

1-[2-Amino-4-hydroxy-3-(2-propenyl)phenyl]ethanone

[118684-00-7]

 $C_{11}H_{13}NO_2$

mol.wt. 191.23

**Synthesis**

– Preparation by thermal Claisen rearrangement of 4-(allyloxy)-2-aminoacetophenone without solvent at 200° (54%) [2464].

Colourless oil [2464]; 1H NMR [2464].

1-(2-Hydroxy-3-nitro-5-propylphenyl)ethanone

[70978-38-0]

 $C_{11}H_{13}NO_4$

mol.wt. 223.23

**Synthesis**

– Preparation by reaction of nitric acid ($d = 1.42$) on 2-hydroxy-5-propylacetophenone in concentrated sulfuric acid between -15° and -5° [1897,1898], (42%) [1897].

m.p. $67-69^\circ$ [1898], $67-68^\circ$ [1897].

1-(3-Hydroxy-4,5,6-trimethyl-2-nitrophenyl)ethanone

[13667-21-5]

 $C_{11}H_{13}NO_4$

mol.wt. 223.23

**Synthesis**

– Preparation by adding a solution of nitric acid ($d = 1.38$) in concentrated sulfuric acid to a solution of 5-hydroxy-2,3,4-trimethylacetophenone in acetic acid and carbon tetrachloride mixture between -5° and 0° (80%) [3214,3215].

m.p. $99-100^\circ$ [3214,3215]; IR [3215].

1-(2-Hydroxy-5-nitro-4-propoxyphenyl)ethanone

[70668-14-3]

 $C_{11}H_{13}NO_5$

mol.wt. 239.23

**Synthesis**

– Preparation by nitration of 2-hydroxy-4-propoxy-aceto-phenone in acetic acid with concentrated nitric acid at 0° [3216].

m.p. 104° [3216].

1-(2-Ethoxy-3,6-dihydroxy-4-methyl-5-nitrophenyl)ethanone

[43140-85-8]

 $C_{11}H_{13}NO_6$ mol.wt. 255.23

Synthesis

– Preparation by adding to a solution of 5-acetyl-2-methyl-3-nitro-1,4-benzoquinone in ethanol, a solution of pyrrolidine in ethanol. After stirring for 3 min, the solvent was eliminated, excess sulfurous acid was added, and the mixture was allowed to stand overnight (31%) [2583].

yellow viscous oil [2583]; 1H NMR [2583], IR [2583].

1-[3-Chloro-4-hydroxy-5-[(dimethylamino)methyl]phenyl]ethanone $C_{11}H_{14}ClNO_2$ mol.wt. 227.69

Synthesis

– Preparation by aminomethylation of 3-chloro-4-hydroxy-acetophenone with dimethylamine and formalin in water at 35–40° for 4 h (60%) [3217].

m.p. 112° [3217]; 1H NMR [3217], IR [3217].

1-(2-Ethyl-6-hydroxy-4-methylphenyl)ethanone

or

1-(4-Ethyl-2-hydroxy-6-methylphenyl)ethanone

(I)

or

(II)

 $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

– Mixture obtained by Fries rearrangement of 3-ethyl-5-methylphenyl acetate with aluminium chloride,

- at 160–170° for 3 h. The two isomeric ketones were separated via their semicarbazide derivatives. However, the respective structures of the isolated ketones have not been attributed. The melting point of one of them (I) or (II) is 93° (6% yield) and the melting point of the other (II) or (I) is 18–19° (30% yield) [3218];
- without solvent at 130° (80%) [2004];
- in nitrobenzene at 25° (85%) [2004].

N.B.: The 4-ethyl-2-hydroxy-6-methylacetophenone (II) is the most likely formula. However, one does not exclude to deal with a mixture (I + II), especially if working without solvent at 130° [2004].

b.p.₈ 170° [2004].

1-(3-Ethyl-2-hydroxy-5-methylphenyl)ethanone

[81591-15-3]

 $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Obtained by reaction of acetyl chloride on 2-ethyl-4-methylanisole with aluminium chloride in boiling carbon disulfide [2956].
- Also obtained by Fries rearrangement of 2-ethyl-4-methyl-phenyl acetate [2596,2907], (40%) [2907] or 2-ethyl-5-methylphenyl acetate (41%) [2596] with aluminium chloride at 130–140°.

b.p.₂₅ 144–146° [2956], b.p.₃₀ 153° [2596], b.p. 260° [2907].**1-(3-Ethyl-2-hydroxy-6-methylphenyl)ethanone**

[81591-16-4]

 $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Obtained (by-product) by reaction of acetyl chloride on 2-ethyl-5-methylanisole with aluminium chloride in carbon disulfide [2233].
- Preparation by Fries rearrangement of 2-ethyl-5-methyl-phenyl acetate by heating with aluminium chloride (30%) [2907].

b.p.₁₂ 137–138° [2233], b.p. 270° [2907].**1-(3-Ethyl-4-hydroxy-5-methylphenyl)ethanone** $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Preparation by Fries rearrangement at high temperature of 2-ethyl-6-methylphenyl acetate with aluminium chloride (50%) [2233].
- Also obtained (poor yield) by Fries rearrangement of 4-dodecyl-2-ethyl-6-methylphenyl acetate with aluminium chloride (13%) [2957].

m.p. 101–102° [2957], 95°5–96°5 [2233]; b.p.₁₂ 180–200° [2957].**1-(4-Ethyl-2-hydroxy-5-methylphenyl)ethanone**

[93351-16-7]

 $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Obtained by oxidation of 6-ethyl-2,3,5-trimethylbenzofuran with chromium trioxide in acetic acid at 50° for 30 min, followed by saponification of the resulting keto ester with potassium hydroxide in boiling aqueous ethanol for 2 h (65%) [3219].

- Also obtained by Friedel–Crafts acylation of 2,5-diethyl-4-methylanisole (SM) (1 mol) with acetyl chloride (1.5 mol) in the presence of aluminium chloride (1.5 mol) in boiling carbon disulfide. There is elimination of the ortho ethyl group in SM during the reaction [2956].
 - Also obtained by dehydrogenation of 6-acetyl-3-ethyl-4-methyl-2-cyclohexen-1-one,
 - with a 5% palladium–barium sulfate catalyst at reflux [2612];
 - with a refluxing solution of bromine (16%) in acetic acid [2612,3220].
 - Also refer to: [3221].
- Yellow oil [2956]; m.p. 52° [2612,3219–3221];
 b.p.₁₅ 144–147° [2956], b.p.₁₈ 154–155° [3219]; IR [3219].

1-(4-Ethyl-5-hydroxy-2-methylphenyl)ethanone

$C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Preparation by reaction of acetyl chloride on 2-ethyl-4-methylanisole with aluminium chloride in boiling carbon disulfide [2956].

- Preparation by reaction of aluminium chloride on 4-ethyl-5-methoxy-2-methylacetophenone [2956].
- m.p. 120–121° [2956].

1-(5-Ethyl-2-hydroxy-3-methylphenyl)ethanone

$C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Preparation by Fries rearrangement of 4-ethyl-2-methyl-phenyl acetate with aluminium chloride (77%) [223].

- Also obtained by heating the following phenyl esters with aluminium chloride at high temperature (in these reactions, there is elimination or migration of the bulky alkyl or arylalkyl group located in ortho position of the ester group),
 - from 2-allyl-4-ethyl-6-methylphenyl acetate (74%) [2957];
 - from 2-benzyl-4-ethyl-6-methylphenyl acetate (54%) [2957];
 - from 2-ethyl-6-methylphenyl acetate (noticeable quantity) [2233];
 - from 4-ethyl-2-methyl-6-propylphenyl acetate (12%) [2957].
- b.p.₂₀ 120–136° [2957], b.p.₁₁ 129–131° [2233], b.p.₁₂ 130–132° [2233],
 b.p.₁₈ 130–142° [2957],
 b.p.₁₃ 142–150° [2957].

1-(5-Ethyl-2-hydroxy-4-methylphenyl)ethanone

[27513-07-1]

 $C_{11}H_{14}O_2$

mol.wt. 178.23

Syntheses

- Preparation by Fries rearrangement of 4-ethyl-3-methyl-phenyl acetate with aluminium chloride at 120° (quantitative yield) [2151], (70%) [2233], (52%) [3222].
- Also obtained (by-product) by reaction of acetyl chloride on 2,4-diethyl-5-methylanisole with aluminium chloride in carbon disulfide [2233].
- Preparation by chromic acid degradation of 5-ethyl-2,3,6-trimethylbenzofuran (60%) [3222].
- Preparation by dehydrogenation of 6-acetyl-4-ethyl-3-methyl-2-cyclohexen-1-one,
- with a 5% palladium-barium sulfate catalyst at reflux [2612,3004];
 - with a refluxing solution of bromine (16%) in acetic acid [2612,3004].
- m.p. 96°–97° [2612], 96–97° [2151], 94–95° [2233], 94° [3222], 92–94° [3004];
b.p.₁₅ 142–143° [2151].

1-(5-Ethyl-4-hydroxy-2-methylphenyl)ethanone $C_{11}H_{14}O_2$

mol.wt. 178.23

Synthesis

- Obtained (by-product) by Fries rearrangement of 2-ethyl-5-methylphenyl acetate with aluminium chloride at 130–140° [2596].
- m.p. 117–118° [2596].

1-[2-Hydroxy-3-(1-methylethyl)phenyl]ethanone

[104175-18-0]

 $C_{11}H_{14}O_2$

mol.wt. 178.23

Synthesis

- Preparation by reaction of acetyl chloride with a suspension of aluminium tri-*o*-isopropylphenoxide in benzene in the presence of aluminium chloride, first at r.t. for 1 h, then on a water bath for 2 h (50%) [2945].
- b.p.₃ 108–110° [2945].

1-[2-Hydroxy-4-(1-methylethyl)phenyl]ethanone

[91969-72-1]

 $C_{11}H_{14}O_2$ mol.wt. 178.23

Synthesis

– Obtained by Fries rearrangement of 2-isopropylphenyl acetate with aluminium chloride without solvent at 140°, accompanied by an alkyl group migration (22%) [3223].

b.p.₁₂ 129–130° [3223].**1-[2-Hydroxy-5-(1-methylethyl)phenyl]ethanone**

[1634-36-2]

 $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

– Preparation by reaction of acetyl chloride on 4-isopropylanisole with aluminium chloride in carbon disulfide at r.t. (48%) [3224].

– Also refer to: [2227].

b.p.₁₀ 130–132° [3224].**1-[3-Hydroxy-4-(1-methylethyl)phenyl]ethanone**

[1634-62-4]

 $C_{11}H_{14}O_2$ mol.wt. 178.23

Synthesis

– Preparation by diazotization of 3-amino-4-isopropylacetophenone, followed by hydrolysis of the diazonium salt obtained (50%) [1951], (26%) [3224].

m.p. 100–101° [3224], 97–100° [1951].

1-[4-Hydroxy-3-(1-methylethyl)phenyl]ethanone

[1632-59-3]

 $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

– Preparation by reaction of acetyl chloride on 2-isopropylphenol with aluminium chloride in boiling carbon disulfide (44%) [1951].

– Preparation by demethylation of 4-methoxy-3-isopropylacetophenone with boiling pyridinium chloride (30%) [3224].

– Also obtained (poor yield) by Fries rearrangement of 2-isopropylphenyl acetate with aluminium chloride, without solvent at 104° (14%) [3223] or in nitrobenzene at r.t. (13%) [3224].

m.p. 143° [3224], 140° [3223], 139–140° [1951].

1-(2-Hydroxy-3-propylphenyl)ethanone[93915-84-5] $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Preparation by hydrogenation of 3-allyl-2-hydroxyacetophenone in the presence of 10% Pd/C and sodium hypophosphite,
- in dilute ethanol at 20° (92%) [3225];
 - in aqueous sodium hydroxide at 50° (88%) [3225].
- Refer to: [3226,3227] (Japanese patents).

 1H NMR [3225].**1-(2-Hydroxy-4-propylphenyl)ethanone** $C_{11}H_{14}O_2$ mol.wt. 178.23

Synthesis

- Preparation by reaction of acetic acid with 3-propylphenol in the presence of zinc chloride for 5 h at 180° (reflux) (Nencki reaction) (40%) [3228].
- b.p._{0.7} 93° [3228], b.p.₁₆ 128–131° [3228].

1-(2-Hydroxy-5-propylphenyl)ethanone[1990-24-5] $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Preparation by Fries rearrangement of 4-propylphenyl acetate with aluminium chloride [2957,3229] without solvent at 140° [3229].
- Preparation by reaction of acetyl chloride with 4-propylanisole in the presence of aluminium chloride in methylene chloride, first at 0°, then at reflux under nitrogen (86%) [3230].

Yellow liquid [3230];

b.p._{0.25} 80–85° [3229], b.p._{1.2} 98–105° [3230], b.p.₂₀ 145–147° [2957]; 1H NMR [3230]; $n_D^{20} = 1.5365$ [3229].**1-(4-Hydroxy-2-propylphenyl)ethanone**[104174-27-8] $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Obtained by boiling 3-propylphenol with acetic anhydride in the presence of a little sulfuric acid [3228].
- Also refer to: [3231].

b.p.₁₈ 121–123° [3228].

1-(4-Hydroxy-3-propylphenyl)ethanone[61270-28-8] C₁₁H₁₄O₂ mol.wt. 178.23**Syntheses**

- Preparation by reaction of acetyl chloride on 2-propyl-phenol with aluminium chloride in nitrobenzene at r.t. [2309].
- Also obtained by catalytic hydrogenation of 3-allyl-4-hydroxyacetophenone in the presence of Pd/C in ethanol [2270,2671,2946], (90–100%) [2270,2946] or Raney nickel in ethyl acetate (80%) [3181].

m.p. 90–91° [2270], 89–90° [2946], 87° [2309]; b.p.₂₅ 210° [2309]; MS [3181]; pK_a [3181].

1-(2-Hydroxy-3,4,5-trimethylphenyl)ethanone[58972-39-7] C₁₁H₁₄O₂ mol.wt. 178.23**Syntheses**

- Preparation by Fries rearrangement of 2,3,4-trimethylphenyl acetate with aluminium chloride at 130–140° (good yield) [2596].
- Preparation by reaction of acetyl chloride on 2,3,4-trimethylphenol with aluminium chloride in carbon disulfide at r.t. (55%) [3232].
- Also obtained from various aryl esters by heating with aluminium chloride between 130° and 150°, the reaction being accompanied by a migration of methyl groups,
 - 2,3,5-trimethylphenyl acetate [2596,2965], (86%) [2596];
 - 2,4,5-trimethylphenyl acetate (major compound) [2596];
 - 2,4,6-trimethylphenyl acetate [2535,2596], (major compound) [2596].
- Also obtained (poor yield) by heating a mixture of 2,4,6-trimethylphenyl acetate and 4-methylphenyl chloroacetate with aluminium chloride (10%) [2535].
- Also obtained by isomerization of 2-hydroxy-3,4,6-trimethylacetophenone by heating with aluminium chloride [2965].

m.p. 43–44° [2596], 42° [2535,2965]; b.p.₁₁ 142–144° [2596], b.p. 275–276° [2596];

¹H NMR [3232], IR [3232].

1-(2-Hydroxy-3,4,6-trimethylphenyl)ethanone[163429-79-6] C₁₁H₁₄O₂ mol.wt. 178.23**Syntheses**

- Preparation by Fries rearrangement of 2,3,5-trimethylphenyl acetate (isopseudocumenol acetate) with aluminium chloride [2965], at 100° for 1.5 h (85%) [3233].
 - Also refer to: [3234].
- m.p. 46° [2965], 32–34° [3233]; ¹H NMR [3233], ¹³C NMR [3233], IR [3233].

1-(2-Hydroxy-3,5,6-trimethylphenyl)ethanoneC₁₁H₁₄O₂ mol.wt. 178.23

Synthesis

– Obtained (by-product) by Fries rearrangement of 2,4,5-trimethylphenyl acetate (pseudocumenol acetate) with aluminium chloride at 130–140° [2596].

b.p.₁₁ 145–146° [2596].**1-(3-Hydroxy-2,4,5-trimethylphenyl)ethanone**

[99892-62-3]

C₁₁H₁₄O₂ mol.wt. 178.23

Synthesis

– Preparation by rearrangement of 1 α , 5 α , 6 α , 8 α -tetramethyl-2 α -H, 4 α -H -3,9-dioxatricyclo [3.3.1.0^{2,4}] nonan-7-one by treatment with sodium ethoxide in ethanol (81%) [2979].

m.p. 115° [2979]; ¹H NMR [2979], IR [2979], MS [2979].**1-(3-Hydroxy-2,4,6-trimethylphenyl)ethanone**C₁₁H₁₄O₂ mol.wt. 178.23

Synthesis

– Preparation by reaction of acetyl chloride on 2,4,6-trimethylanisole (mesitol methyl ether) with aluminium chloride in boiling carbon disulfide (20%) [2956].

m.p. 81–82° [2956].

1-(4-Hydroxy-2,3,5-trimethylphenyl)ethanone

[61405-64-9]

C₁₁H₁₄O₂ mol.wt. 178.23

Syntheses

– Preparation by Fries rearrangement of 2,3,6-trimethylphenyl acetate with aluminium chloride at 165–170° for 15 min (94%) [3220].

– Also obtained by dehydrogenation of 4-acetyl-2,3,6-trimethyl-2-cyclohexen-1-one at reflux for 30 min in the presence of 5% palladium–barium sulfate [2612], (10%) [3220].

m.p. 132–133° [2612,3220]; IR [3220], UV [3220].

1-(4-Hydroxy-2,3,6-trimethylphenyl)ethanone[156483-08-8] $C_{11}H_{14}O_2$ mol.wt. 178.23

Synthesis

– Refer to: [3235].

1-(5-Hydroxy-2,3,4-trimethylphenyl)ethanone[13667-28-2] $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Preparation from 2,3,4-trimethyl-5-nitroacetophenone via reduction with stannous chloride and following diazotization of the resulting 5-amino-2,3,4-trimethylacetophenone (68%) [3236], (53%) [3214].
- Also obtained by rearrangement of 3-acetyl-4,4,5-trimethyl-2,5-cyclohexadiene-1-one in 68% sulfuric acid at 40° (29%) [2989].

m.p. 168° [3214,3236]; 1H NMR [2989], IR [2989,3236], MS [2989].**1-(6-Hydroxy-2,3,4-trimethylphenyl)ethanone**[27192-99-0] $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Preparation by Fries rearrangement of 3,4,5-trimethylphenyl acetate with aluminium chloride without solvent at 130° [2596,3237], (50%) [3237].
- Preparation by reaction of acetyl chloride on 3,4,5-trimethylanisole with aluminium chloride in boiling carbon disulfide (45%) [1811].
- Also obtained via pyrolysis of 1,3,7,8-tetramethyl-2-oxabicyclo[4.2.0]octa-3,7-dien-5-one (2,6-dimethyl-4-pyrone–Butyne-2–Adduct) in refluxing o-dichlorobenzene [3237].

m.p. 83°5–84°5 [1811], 83–84° [2596], 58–60° [3237]; b.p.₁₃ 163–166° [2596]; 1H NMR [3237], IR [3237], UV [3237], MS [3237].**1-[2,4-Dihydroxy-3-(1-methylethyl)phenyl]ethanone**[118604-45-8] $C_{11}H_{14}O_3$ mol.wt. 194.23

Synthesis

- Preparation by total demethylation of 2,4-dimethoxy-3-iso-propylacetophenone with 48% hydrobromic acid in refluxing acetic acid [3238].

1-(2,3-Dihydroxy-5-propylphenyl)ethanone

[86253-71-6]

 $C_{11}H_{14}O_3$ mol.wt. 194.23**Synthesis**

- Preparation by reaction of acetic acid with 2-methoxy-4-propylphenol in the presence of boron trifluoride at 150–155° (81%) [3230].

oil [3230].

1-(2,4-Dihydroxy-3-propylphenyl)ethanone

[40786-69-4]

 $C_{11}H_{14}O_3$ mol.wt. 194.23**Syntheses**

- Preparation by reaction of acetonitrile on 2-propylresorcinol (Hoesch reaction) (86%) [3182].
- Preparation by catalytic hydrogenation of 3-allyl-2,4-di-hydroxyacetophenone using palladium chloride as catalyst in ethanol (quantitative yield) [3182] or Raney nickel in ethyl acetate [2671].
- Preparation by total demethylation of 2,4-dimethoxy-3-propylacetophenone with 48% hydrobromic acid in refluxing acetic acid for 19 h (73%) [3238].
- Also refer to: [2326,2327,3184].

N.B.: Pr indicates the *propyl* group $-C_3H_7$ in Chem. Abstr., **92**, 6368x (1980) and **98**, 54239b (1983), an usual abbreviation. However, in the two references [2326,2327], Pr represented the *prenyl* group $-CH_2CH=C(CH_3)_2$. Therefore they concern the 2,4-dihydroxy-3-prenylacetophenone and not the above mentioned 2,4-dihydroxy-3-propylacetophenone.

m.p. 127–128° [3182].

1-(2,4-Dihydroxy-5-propylphenyl)ethanone

[63411-87-0]

 $C_{11}H_{14}O_3$ mol.wt. 194.23**Syntheses**

- Preparation by reaction of acetic acid on 4-propylresorcinol with zinc chloride (Nencki reaction) [1839,3018].
- Preparation by reaction of acetonitrile on 4-propylresorcinol (Hoesch reaction) (75%) [2676].
- Preparation by Fries rearrangement of 4-propylresorcinol diacetate in the presence of 4-propylresorcinol with aluminium chloride in nitrobenzene at 50° (quantitative yield) [3020].
- Also refer to: [2326,2327].

N.B.: Pr indicates the *propyl* group $-C_3H_7$ in Chem. Abstr., **92**, 6368x (1980) and **98**, 54239b (1983), an usual abbreviation. However, in the two references [2326,2327], Pr represented the *prenyl* group $-CH_2CH=C(CH_3)_2$. Therefore they concern the 2,4-dihydroxy-5-prenylacetophenone and not the above mentioned 2,4-dihydroxy-5-propylacetophenone.

m.p. 110–111° [1839], 108–109° [3020], 108° [2676].

1-(2,5-Dihydroxy-3-propylphenyl)ethanone

[83812-26-4] $C_{11}H_{14}O_3$ mol.wt. 194.23

Synthesis

[106627-41-2] $C_{11}H_{14}O_3$ mol.wt. 194.23

Synthesis

m.p. 88° [3240] (monohydrate); MS [3181].

1-(2,5-Dihydroxy-3,4,6-trimethylphenyl)ethanone

[64794-45-2]

C₁₁H₁₄O₃ mol.wt. 194.23**Syntheses**

– Obtained by oxidation of 2,4,5,7,8-pentamethyl-4*H*-1,3-benzodioxin-6-ol (PBD)* in aqueous media via 2-(1-hydroxyethyl)-3,5,6-trimethylbenzo-1,4-quinone, without or with aldehyde trapping (method A or B, respectively) [3247].

Oxidant	Method	Yield (%)
FeCl ₃ ·6 H ₂ O	A (B)	38 (85)
K ₂ Cr ₂ O ₇	A (B)	38 (86)
AgNO ₃	A (B)	44 (83)
H ₂ O ₂	A (B)	44 (82)
KMnO ₄	A (B)	32 (68)
NMMO**	- (B)	- (81)

N.B.:

- PBD* is a novel 3-oxa-tocopherol-type stabilizer which is obtained as a mixture of two diastereoisomers by condensation of trimethylhydroquinone with acetaldehyde.
 - NMMO** = N-methylmorpholine-N-oxide.
 - Preparation by Fries rearrangement of 2,3,5-trimethylhydroquinone diacetate,
 - with aluminium chloride at 220° (51%) [3248];
 - with boron trifluoride–acetic acid complex, followed by saponification of the 3-acetoxy-6-hydroxy-2,4,5-trimethylacetophenone obtained [2909,2994,3249], (71%) [3249], (65%) [2994].
 - Also obtained by hydrolysis of 3-(acetyloxy)-6-hydroxy-2,4,5-trimethylacetophenone with 5% methanolic hydrogen chloride (50%) [3250].
 - Also refer to: [3251].
- m.p. 152° [3248], 111° [2994], 110–113° [3247], 107–109° [3250], 107–108° [3249];
¹H NMR [3247,3249,3250], ¹³C NMR [3247,3250], IR [3247,3249]
 UV [3248,3249], MS [3249].

1-(2,6-Dihydroxy-3,4,5-trimethylphenyl)ethanone

[66842-24-8]

C₁₁H₁₄O₃ mol.wt. 194.23**Syntheses**

– Obtained by Fries rearrangement of trimethylhydroquinone diacetate with aluminium chloride at 220°, via a secondary rearrangement of the normal product (I) (50%) [3249].

- Also obtained by reaction of aluminium chloride on 5-acetoxy-2-hydroxy-3,4,6-trimethylacetophenone at 220° (53–55%) [3249].
 - Also obtained by rearrangement of 2,5-dihydroxy-3,4,6-trimethylacetophenone (I) with aluminium chloride at 220° (29–34%) [3249].
- m.p. 136–145° [3249]; ¹H NMR [3249], IR [3249], UV [3249], MS [3249].

1-(2-Ethoxy-6-hydroxy-4-methylphenyl)ethanone

[78274-02-9] $C_{11}H_{14}O_3$ mol.wt. 194.23

Syntheses

- Obtained by reaction of sodium ethoxide with 3,5-diacetyl-2,6-dimethyl-4*H*-pyran-4-one in ethanol at r.t. (20%) [3252].
- Also obtained by heating 3-acetyl-2,6-dimethyl-4*H*-pyran-4-one with sodium ethoxide in ethanol (17%) [2940].

m.p. 95° [2940,3252,3253]; ¹H NMR [3252], IR [3252], MS [2940,3252].

1-(5-Ethyl-2,4-dihydroxy-3-methylphenyl)ethanone

[140660-34-0] $C_{11}H_{14}O_3$ mol.wt. 194.23

Synthesis

- Preparation by reaction of acetic acid on 4-ethyl-1,3-di-hydroxy-2-methylbenzene with zinc chloride at 95–100° (Nencki reaction) (24%) [2671].
- Crystalline product [2671].

1-(4-Ethyl-2-hydroxy-5-methoxyphenyl)ethanone

$C_{11}H_{14}O_3$ mol.wt. 194.23

Syntheses

- Preparation from 2-ethylhydroquinone dimethyl ether,
 - by reaction with acetic acid in the presence of boron trifluoride (55%) [3199];
 - by reaction with acetyl chloride in the presence of aluminium chloride in boiling ethyl ether (27%) [2944].
 - Preparation by partial methylation of 4-ethyl-2,5-hydroxyacetophenone with dimethyl sulfate in the presence of potassium carbonate in boiling acetone (47%) [2944].
 - Also obtained (poor yield) by partial demethylation of 4-ethyl-2,5-dimethoxyacetophenone with 6% aqueous hydrobromic acid in acetic acid at r.t. (9%) [3199].
- m.p. 60°4–61° [3199], 60° [2944]; UV [3199].

1-(4-Ethyl-2-hydroxy-6-methoxyphenyl)ethanone

[128546-82-7]

 $C_{11}H_{14}O_3$ mol.wt. 194.23

Syntheses

– Refer to: [3254–3259] (Japanese papers) and [3260].

Isolation from natural sources

– From *Juniperus semiglobosa* Regel (Cupressaceae) [3261].m.p. 85° [3261]; 1H NMR [3261], IR [3261], UV [3261], MS [3261].**1-(5-Ethyl-2-hydroxy-4-methoxyphenyl)ethanone**

[4223-85-2]

 $C_{11}H_{14}O_3$ mol.wt. 194.23

Syntheses

– Preparation by reaction of dimethyl sulfate [3018] or methyl iodide [3004] on 5-ethyl-2,4-dihydroxyacetophenone with potassium carbonate in refluxing acetone.

– Preparation by chromic acid degradation of 5-ethyl-6-methoxy-2,3-dimethylbenzofuran (21%) [3013].

m.p. 49–50° [3004], 48° [3013]; b.p.₂₀ 165–167° [3013].**1-(2-Hydroxy-4-methoxy-3,5-dimethylphenyl)ethanone** $C_{11}H_{14}O_3$ mol.wt. 194.23

Synthesis

– Preparation by treating 2,4-dihydroxy-3,5-dimethylacetophenone with diazomethane or with dimethyl sulfate and sodium hydroxide [2990].

m.p. 35–36° [2990]; b.p._{0.6} 90° [2990].**1-(2-Hydroxy-4-methoxy-3,6-dimethylphenyl)ethanone** $C_{11}H_{14}O_3$ mol.wt. 194.23

Synthesis

– Obtained by reaction of methyl iodide with 2,4-dihydroxy-6-methylacetophenone in the presence of potassium hydroxide (15%) [2330].

m.p. 90–91° [2330].

1-(4-Hydroxy-2-methoxy-3,6-dimethylphenyl)ethanone[97761-88-1] $C_{11}H_{14}O_3$ mol.wt. 194.23

Synthesis

– **N.B.:** Mentioned in the Chem. Abstr. **103**, 85031d (1985). However, this compound does not appear in the original paper [3052] which concerns only some ketones derived of phloroglucinol.

1-[2-Hydroxy-3-(methoxymethyl)-5-methylphenyl]ethanone[87165-63-7] $C_{11}H_{14}O_3$ mol.wt. 194.23

Syntheses

– Preparation from 3-chloromethyl-2-hydroxy-5-methyl-acetophenone (b.p._{0.4} 110–116°) [2494] by reaction with methanol in the presence of concentrated hydrochloric acid and iron powder at reflux for 3.5–4.5 h (82%) [3262], (49%) [2494].

– Also refer to: [3263].

m.p. 36–38° [3262]; b.p._{0.6} 95–103° [2494], b.p.₂₀ 160–165° [3262]; ¹H NMR [2494,3262], ¹³C NMR [3262], IR [2494,3262].

1-[2-Hydroxy-4-(1-methylethoxy)phenyl]ethanone[73473-62-8] $C_{11}H_{14}O_3$ mol.wt. 194.23

Synthesis

– Refer to: [3264] (Chinese reference) and [3265] (Japanese patent).

1-[2-Hydroxy-5-(1-methylethoxy)phenyl]ethanone[152810-05-4] $C_{11}H_{14}O_3$ mol.wt. 194.23

Syntheses

– Preparation by reaction of 2-bromopropane with quinacetophenone in the presence of sodium iodide and potassium carbonate in DMF at 60° for 24 h (51%) [3266].

– Also refer to: [2227,3267].

Oil [3266]; ¹H NMR [3266].

1-(2-Hydroxy-4-propoxyphenyl)ethanone

[55329-63-0]

 $C_{11}H_{14}O_3$

mol.wt. 194.23

Syntheses

- Preparation by reaction of propyl iodide [2220,3002,3004] or propyl bromide [2220] on resacetophenone,
- with potassium hydroxide in boiling ethanol [2220,3002];
 - with potassium carbonate in boiling acetone [3004].
- Also refer to: [2326,2327].

N.B.: Pr indicates the *propyl* group $-C_3H_7$ in Chem. Abstr., **92**, 6368x (1980) and **98**, 54239b (1983), an usual abbreviation. However, in the two references [2326,2327], Pr represented the *prenyl* group $-CH_2CH=C(CH_3)_2$. Therefore they concern the 2-hydroxy-4-prenyloxyacetophenone and not the above mentioned 2-hydroxy-4-propyloxyacetophenone.

m.p. 25° [2220]; b.p.₃₋₄ 136° [3002].

1-(2-Hydroxy-6-propoxyphenyl)ethanone

[14718-38-8]

 $C_{11}H_{14}O_3$

mol.wt. 194.23

Synthesis

- Preparation by reaction of propyl iodide on 2,6-di-hydroxy-acetophenone with potassium carbonate in refluxing acetone (66%) [2999].
- m.p. $70-71^\circ$ [2999].

1-[3-(Ethylthio)-2-hydroxy-6-methoxyphenyl]ethanone

[126405-82-1]

 $C_{11}H_{14}O_3S$

mol.wt. 226.30

Synthesis

- Preparation by adding 2-hydroxy-3-iodo-6-methoxy-acetophenone and cuprous oxide to a solution of sodium ethyl sulfhydrylate, previously prepared from ethanethiol and sodium hydride in DMF [2524].
- m.p. 57° [2524]; 1H NMR [2524], IR [2524].

m.p. 76–77° [2818]; 1H NMR [2818], IR [2818].

1-(4-Ethoxy-2-hydroxy-5-methoxyphenyl)ethanone

[75672-62-7]

 $C_{11}H_{14}O_4$ mol.wt. 210.23

Synthesis

- Preparation by reaction of dimethyl sulfate with 4-ethoxy-2,5-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone (82%) [3056].

m.p. 94–95° [3056].

1-(4-Ethoxy-2-hydroxy-6-methoxyphenyl)ethanone

[75654-80-8]

 $C_{11}H_{14}O_4$ mol.wt. 210.23

Syntheses

- Preparation by reaction of diazoethane on 2,4-dihydroxy-6-methoxyacetophenone [2845].
- Also refer to: [3272].

m.p. 56–57° [2845].

1-(5-Ethoxy-2-hydroxy-4-methoxyphenyl)ethanone

[75672-59-2]

 $C_{11}H_{14}O_4$ mol.wt. 210.23

Synthesis

- Preparation by reaction of diethyl sulfate with 2,5-di-hydroxy-4-methoxyacetophenone in the presence of potassium carbonate in refluxing acetone (71%) [3056].

m.p. 101–102° [3056].

1-(2-Hydroxy-3,4-dimethoxy-6-methylphenyl)ethanone

[63542-37-0]

 $C_{11}H_{14}O_4$ mol.wt. 210.23

Syntheses

- Preparation by reaction of acetyl chloride on 3,4,5-trimethoxytoluene with aluminium chloride,
 - in ethyl ether at r.t. [3273,3274], (50%) [3273];
 - in refluxing methylene chloride (67%) [3035].

m.p. 94° [3274], 92° [3273], 77–78° [3035];

 1H NMR [3035], ^{13}C NMR [3035], IR [3035], MS [3035].

1-(2-Hydroxy-3,5-dimethoxy-4-methylphenyl)ethanone[134255-78-0] $C_{11}H_{14}O_4$ mol.wt. 210.23

Synthesis

– Obtained by Fries rearrangement of 3-acetoxy-2,6-dimethoxytoluene (oil) with boron trifluoride etherate at 95° for 3 h (63%) [3275].

m.p. 73°5–75° [3275]; TLC [3275];
¹H NMR [3275], IR [3275], MS [3275].

1-(2-Hydroxy-4,5-dimethoxy-3-methylphenyl)ethanone[134255-79-1] $C_{11}H_{14}O_4$ mol.wt. 210.23

Synthesis

– Obtained by selective demethylation of 3-methyl-2,4,5-trimethoxyacetophenone (pale yellow oil) with boron tri-chloride in methylene chloride at 0° for 80 min (85%) [3275].

m.p. 86–87° [3275]; ¹H NMR [3275], MS [3275].

1-(2-Hydroxy-4,6-dimethoxy-3-methylphenyl)ethanone[23121-32-6] $C_{11}H_{14}O_4$ mol.wt. 210.23

Syntheses

- Preparation by reaction of acetonitrile on 3,5-dimethoxy-2-methylphenol (Hoesch reaction) (68%) [2870].
- Preparation by reaction of methyl iodide, in the presence of potassium carbonate in boiling acetone,
 - on 2,4-dihydroxy-6-methoxy-3-methylacetophenone [3036];
 - on 2,6-dihydroxy-4-methoxy-3-methylacetophenone [3037];
 - on phloroacetophenone [1821,2716,2861,2870,3276–3279], (37–42%) [3277,3279], (21–28%) [2861,2870,3278].
- Also obtained (by-product) by reaction of methyl iodide with phloroacetophenone in 10% methanolic potassium hydroxide (<3%) [2876].
- Preparation by partial methylation of 2,4,6-trihydroxy-3-methylacetophenone,
 - with diazomethane in ethyl ether–methanol mixture at 0° (good yield) [2861];
 - with dimethyl sulfate in the presence of potassium carbonate in boiling acetone [2877,3278], (71%) [3278];
 - with methyl iodide, in the presence of potassium carbonate in boiling acetone [2870,2886,3278].
- Preparation by partial demethylation of 2,4,6-trimethoxy-3-methylacetophenone with aluminium chloride in acetonitrile at 30° for 6 h (90%) [2747].

- Preparation by reaction of acetyl chloride,
 - with 2,4,6-trimethoxytoluene in the presence of aluminium chloride in ethyl ether at r.t. (51%) [2747];
 - with 2-hydroxy-4,6-dimethoxytoluene in the presence of aluminium chloride in nitrobenzene at r.t. [3054] according to [3280].
- Preparation by reaction of acetic anhydride and acetic acid,
 - on 3,5-dimethoxy-2-methylphenol with boron trifluoride at 20–30° (60%) [3042];
 - on 2,4,6-trimethoxytoluene with boron trifluoride at 20–30° or at 100° [3042].
- Also obtained on deacylation of 2,4-diacetyl-3,5-dimethoxy-6-methylphenol acetate with 10% hydrochloric acid in ethanol [3042].

Isolation from natural sources

- From the leaves and bark of *Acradenia franklinii* (Kippist) (Rutaceae) [3276].
 - From the stem wood of *Euphorbia quinquecostata* Volk. (Euphorbiaceae) [3281].
 - From *Euphorbia portulacoides* (Euphorbiaceae) [3282].
- m.p. 145° [3042], 144–145° [2861], 144° [3278], 143–144° [2870], 143° [3276], 142–143° [3279], 142° [2886], 141°5–143° [2747], 141–143° [3277], 141–142° [1956,3036,3037], 140–141° [2876], 130–131° [3281];

1-(4-Hydroxy-2,6-dimethoxy-3-methylphenyl)ethanone

C₁₁H₁₄O₄ mol.wt. 210.23

Synthesis

- Preparation by catalytic hydrogenolysis of 4-(benzyloxy)-2,6-dimethoxy-3-methylacetophenone with Pd/C in acetic acid (quantitative yield) [3051].

m.p. 121° [3051].

1-(6-Hydroxy-2,4-dimethoxy-3-methylphenyl)ethanone (*Bancroftinone*)

[14964-98-8] C₁₁H₁₄O₄ mol.wt. 210.23

Syntheses

- Preparation by hydrolysis of 6-(benzoyloxy)-2,4-dimethoxy-3-methylacetophenone with 3 N aqueous-methanolic potassium hydroxide at r.t. (75%) [3051].
- Preparation by Fries rearrangement of 3,5-dimethoxy-4-methylphenyl acetate with aluminium chloride in nitrobenzene (75–77%) [3283,3284].
- Preparation by reaction of methyl iodide with 4,6-dihydroxy-2-methoxy-3-methylacetophenone in the presence of potassium carbonate in refluxing acetone (93%) [3043].

- Preparation by reaction of acetyl chloride on 3,5-dimethoxy-4-methylphenol with aluminium chloride in ethyl ether first at 0°, then at r.t. [2877,3285,3286], (40%) [2877].

Isolation from natural sources

- From the leaf oils of *Backhousia bancroftii* F. M. Bailey and Muell. (Myrtaceae) as a major constituent [3287].
- The ketone was present to the extent of 35% in clove oil [2873].
- Swertisin was isolated from the whole herb of *Swertia japonica* Makino (Gentianaceae). Further, hydrolytic decomposition of its dimethyl ether with aqueous barium hydroxide gave a degradation product, the 3-C-β-D-glucopyranosyl-6-hydroxy-2,4-dimethoxyacetophenone. This one, by treatment with an excess of aqueous periodic acid followed by Clemmensen reduction gave 6-hydroxy-2,4-dimethoxy-3-methylacetophenone [3288].

m.p. 44–45° [2873], 38–39° [3284], 35° [3051];

oil [3043]; b.p._{0.2} 110–112° [3283], b.p.₂ 120–122° [2877], b.p.₁ 128–131° [3284];

GC [3287], GC/MS [3287];

1-(6-Hydroxy-3,4-dimethoxy-2-methylphenyl)ethanone

[62615-64-9]

C₁₁H₁₄O₄

mol.wt. 210.23

Syntheses

- Obtained by partial methylation of 2,5-dihydroxy-4-methoxy-6-methylacetophenone with dimethyl sulfate in acetone, in the presence of potassium carbonate (20%) [3050].
- Preparation by partial demethylation of 2,4,5-trimethoxy-6-methylacetophenone with boron trichloride in methylene chloride at 0° (85%) [3274].

Isolation from natural sources

- By hydrolysis of 4,6,7-trimethoxy-5-methylcoumarin, isolated from *Leonotis nepetaefolia* [3274].

m.p. 77° [3274], 76–77° [3050]; ¹H NMR [3274], IR [3274], UV [3274].

1-[2-Hydroxy-4-(2-hydroxypropoxy)phenyl]ethanone

[149454-57-9]

C₁₁H₁₄O₄

mol.wt. 210.23

Synthesis

- Obtained by reaction of resacetophenone with propylene oxide in the presence of sodium hydroxide in ethanol [3289].

Isolation from natural sources

- From the aerial parts of *Urolepis hecatantha*, flowers and leaves of *Chromolaena arnottiana* (compound **11**) [3290].

¹H NMR [3290], MS [3290].

1-[4-Hydroxy-3-(2-hydroxypropoxy)phenyl]ethanone

[63437-94-5]

 $C_{11}H_{14}O_4$ mol.wt. 210.23

Synthesis

– Preparation by hydrogenolysis of 4-(benzyloxy)-3-(2-hydroxypropoxy)acetophenone in ethanol under hydrogen atmosphere in the presence of 5% Pd/C for 45 min (81%) [3105].

m.p. 143° [3105].

1-[2-Hydroxy-5-methoxy-3-(methoxymethyl)phenyl]ethanone

[87165-71-7]

 $C_{11}H_{14}O_4$ mol.wt. 210.23

Synthesis

– Preparation from 3-chloromethyl-2-hydroxy-5-methoxy-acetophenone (m.p. 71°) by reaction with methanol in the presence of concentrated hydrochloric acid and iron powder at reflux for 3.5–4 h (69%) [2494].

b.p._{0.3} 110–114° [2494]; ¹H NMR [2494], IR [2494].**1-[3-[(Ethylsulfonyl)methyl]-4-hydroxyphenyl]ethanone**

[56490-62-1]

 $C_{11}H_{14}O_4S$ mol.wt. 242.30

Synthesis

– Obtained by reaction of 3'-chloromethyl-4'-hydroxyacetophenone with magnesium ethylsulfinate in refluxing aqueous methanol for 18 h (30%) [2544].

m.p. 137–141° [2544].

1-[2-Hydroxy-4,6-dimethoxy-3-(methylthio)phenyl]ethanone

[154389-63-6]

 $C_{11}H_{14}O_4S$ mol.wt. 242.30

Syntheses

- Preparation by partial demethylation of 2,4,6-trimethoxy-3-methylthioacetophenone with aluminium chloride in acetonitrile for 1 h at 30° (95%) [2747].
- Also obtained by reaction of acetyl chloride with 2,4,6-tri-methoxy-1-(methylthio)benzene in the presence of aluminium chloride in ethyl ether at 0° (24%) [2747].

m.p. 143–145° [2747].

1-[4-Hydroxy-3-[2-(methylsulfonyl)ethyl]phenyl]ethanone

[56490-44-9]

C₁₁H₁₄O₄S mol.wt. 242.30

Synthesis

– Obtained by Fries rearrangement of 2-(methylsulfonyl)ethyl-phenyl acetate (m.p. 80–82°) with aluminium chloride in nitrobenzene, first at r.t. for 1 h, then at 50–60° for 1.5 h (53%) [2544].

m.p. 176–178° [2544].

1-[2,4-Dihydroxy-6-(2-hydroxyethyl)-3-methoxyphenyl]ethanone

[165186-29-8]

C₁₁H₁₄O₅ mol.wt. 226.23

Isolation from natural sources

– One of seven metabolites produced by *Ophiostroma herpotricha* in liquid culture [3291].

1-(2,5-Dihydroxy-4,6-dimethoxy-3-methylphenyl)ethanoneC₁₁H₁₄O₅ mol.wt. 226.23

Syntheses

– Preparation by reaction of potassium persulfate on 2-hydroxy-4,6-dimethoxy-3-methylacetophenone in aqueous pyridine solution in the presence of potassium hydroxide [3292] or sodium hydroxide [2716,2886], (27–35%) [2886,3292], (10%) [2716].

m.p. 122–123° [2886], 121–122° [2716], 119–120° [3292];

¹H NMR [2716], UV [2886], MS [2716].**1-[3-(2,3-Dihydroxypropoxy)-4-hydroxyphenyl]ethanone**

[70064-44-7]

C₁₁H₁₄O₅ mol.wt. 226.23

Synthesis

– Preparation by hydrogenolysis of 4-(benzyloxy)-3-(2,3-dihydroxypropoxy)acetophenone in ethanol under hydrogen atmosphere in the presence of 5% Pd/C for 45 min (99%) [3105].

m.p. 136° [3105].

1-(2-Ethoxy-3,6-dihydroxy-4-methoxyphenyl)ethanoneC₁₁H₁₄O₅ mol.wt. 226.23

Synthesis

– Preparation by reaction of potassium persulfate on 2-ethoxy-6-hydroxy-4-methoxyacetophenone in dilute aqueous sodium hydroxide solution at 15–20° (25%) [2851].

m.p. 145° [2851].

1-(3-Ethoxy-2,6-dihydroxy-4-methoxyphenyl)ethanone

[105342-70-9]

C₁₁H₁₄O₅ mol.wt. 226.23

Synthesis

– Obtained (by-product) by reaction of hydrobromic acid with 3-ethoxy-2-hydroxy-4,6-dimethoxyacetophenone in acetic acid at r.t. [3131].

m.p. 108°5–110° [3131];

¹H NMR [3131], IR [3131], MS [3131].**1-(4-Ethoxy-2,5-dihydroxy-3-methoxyphenyl)ethanone**C₁₁H₁₄O₅ mol.wt. 226.23

Synthesis

– Preparation from 4-ethoxy-2-hydroxy-3-methoxyacetophenone by persulfate oxidation in 10% aqueous sodium hydroxide (Elbs reaction) [2818].

1-[2-Hydroxy-3-methoxy-4-(methoxymethoxy)phenyl]ethanone

[220504-99-4]

C₁₁H₁₄O₅ mol.wt. 226.23

Synthesis

– Preparation in two steps: first, reaction of acetic acid with a mixture (ca. 1:1) of 1-O- and 2-O-methylp-yrogallol in the presence of zinc chloride at reflux for 6 h (Nencki reaction); then, methoxymethylation of the obtained product (31%) [3110].

¹H NMR [3110]; MS [3110].

1-[2-Hydroxy-4-methoxy-6-(methoxymethoxy)phenyl]ethanone

[186693-85-6]

C₁₁H₁₄O₅ mol.wt. 226.23

Synthesis

– Obtained by treatment of 2,6-dihydroxy-4-methoxy-acetophenone with methoxymethyl chloride [3293] in the presence of potassium carbonate in refluxing acetone for 2 h (86%) [3112].

m.p. 59–61° [3112]; ¹H NMR [3112], IR [3112], EIMS [3112].

1-[2-Hydroxy-6-methoxy-4-(methoxymethoxy)phenyl]ethanone

[404597-93-9]

C₁₁H₁₄O₅ mol.wt. 226.23

Synthesis

– Obtained by treatment of 2,4-di(methoxymethoxy)-6-methoxyacetophenone with silica gel in mild acetic medium (97%) [3294].

1-(2-Hydroxy-3,4,5-trimethoxyphenyl)ethanone

[30225-96-8]

C₁₁H₁₄O₅ mol.wt. 226.23

Syntheses

– Preparation by reaction of dimethyl sulfate on 2,5-di-hydroxy-3,4-dimethoxyacetophenone with potassium carbonate in refluxing benzene (73%) [2820].

– Preparation by reaction of acetyl chloride on 1,2,3,4-tetramethoxybenzene with aluminium chloride in refluxing carbon disulfide (70%) [3067,3295,3296] or in boiling ethyl ether [2770,3296], (76%) [2770].

m.p. 88° [2770,3295,3296], 86° [2820,3067]; ¹H NMR [3067].

1-(2-Hydroxy-3,4,6-trimethoxyphenyl)ethanone (*Xanthoxylone*)

[7507-98-4]

C₁₁H₁₄O₅ mol.wt. 226.23

Syntheses

– Preparation by reaction of diazomethane on 2,4-dihydroxy-3,6-dimethoxyacetophenone in ethyl ether [2442,3149].

– Preparation by reaction of dimethyl sulfate,

- on 2,6-dihydroxy-3,4-dimethoxyacetophenone disodium salt (95%) [2443];
- on 2,4-dihydroxy-3,6-dimethoxyacetophenone with potassium carbonate in boiling acetone (75%) [3136];
- on 2,3,6-trihydroxy-4-methoxyacetophenone in the presence of potassium carbonate in refluxing acetone [2881];
- on 2,3,4,6-tetrahydroxyacetophenone [2443,3297].

- Also obtained by partial methylation of 2,4-dihydroxy-3,6-dimethoxyacetophenone [3298], according to [3136].
- Also obtained by Friedel–Crafts acylation of 1,2,3,5-tetramethoxybenzene [3299].
- Preparation by reaction of acetyl chloride on 1,2,3,5-tetramethoxybenzene with aluminium chloride,
 - in ethyl ether [2770,2820,3096,3131,3135,3300–3302], (81%) [2770], (64–70%) [2820,3096,3302], (53%) [3131], (35–36%) [2857,3135];
 - in carbon disulfide [3140,3141,3145,3297,3301,3303], (51%) [3297];
 - without solvent at 70° (44%) [3304].
- Preparation by reaction of acetic acid with 1,2,3,5-tetramethoxybenzene in the presence of boron trifluoride at 30° (81%) [3127].
- Also obtained by partial demethylation of 2,3,4,6-tetramethoxyacetophenone in the presence of aluminium chloride [2747,3305] in acetonitrile at 30° for 1 h (95%) [2747].
- Also refer to: [3306–3309].

Isolation from natural sources

- From the New Zealand liverwort, *Plagiochila fasciculata* [3310].
 - From *Croton aff. nepetifolius* Bail (Euphorbiaceae) [3311].
 - From hydrolysis of Wogonin (5,7-dihydroxy-8-methoxyflavone). Wogonin was isolated in small amounts in the roots of *Scutellaria baicalensis* Georgi (Labiatae) [3305].
 - From the fresh leaves of *Fagara okinawensis* Nakai (Rutaceae) [3096].
- m.p. 125–126° [2443], 113–115° [3135], 113–114° [3136], 113° [2881], 112–114° [3131], 112–113° [2770,3096,3297,3301,3303,3305], 111°5–113°5 [2857], 111–112° [3140], 110–112° [3298], 110–111° [2442,3149], 109–114° [3127], 109°5–111°5 [3302], 109–111° [3304], 105–107° [3141,3145,3312], 103–105° [2820,3313];
- ¹H NMR [2442,2857,3096,3131,3149,3298,3302,3310,3311], ¹³C NMR [3298]; IR [2442,2857,3096,3131,3149,3298,3302,3310,3311], UV [3096,3310]; MS [3298,3311].

1-(2-Hydroxy-3,5,6-trimethoxyphenyl)ethanone

[72424-28-3]

C₁₁H₁₄O₅

mol.wt. 226.23

Synthesis

- Preparation by partial demethylation of 2,3,5,6-tetramethoxyacetophenone with aluminium chloride in ethyl ether in an ice bath (55%) [3300] or in acetonitrile for 6 h at 45° (25%) [2747].

m.p. 62–63°5 [3300]; ¹H NMR [3300].

1-(3-Hydroxy-2,4,5-trimethoxyphenyl)ethanone

[97565-35-0]

C₁₁H₁₄O₅ mol.wt. 226.23

Isolation from natural sources

– Obtained by alkaline degradation of two octasubstituted flavones with 50% potassium hydroxide in refluxing ethanol under nitrogen atmosphere for 15 h. These flavones were isolated from the aerial parts of *Ageratum houstonianum* Mill (Asteraceae) (Eupatorieae) [3314].

- From *agehoustin C* (3'-hydroxy-5,6,7,8,2',4',5'-heptamethoxyflavone) (m.p. 145°).
- From *agehoustin D* (5,3'-dihydroxy-6,7,8,2',4',5'-hexamethoxyflavone) (m.p. 168–169°).

m.p. 98–100° [3314]; ¹H NMR [3314], IR [3314], UV [3314], MS [3314].

1-(3-Hydroxy-2,4,6-trimethoxyphenyl)ethanone

[103777-45-3]

C₁₁H₁₄O₅ mol.wt. 226.23

Syntheses

– Obtained by treatment of polygoacetophenoxide with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone for 24 h. Then, the formed oil was hydrolyzed with 10% sulfuric acid on a water bath for 3 h [3309].

- Also obtained (by-product) by reaction of dimethyl sulfate on 3,6-dihydroxy-2,4-dimethoxy-acetophenone in aqueous sodium hydroxide solution at r.t. (3%) [3135].

m.p. 128–129° [3309], 113–117° [3135];

¹H NMR [3309], ¹³C NMR [3309], IR [3309], MS [3309].

1-(3-Hydroxy-2,5,6-trimethoxyphenyl)ethanone

[73034-32-9]

C₁₁H₁₄O₅ mol.wt. 226.23

Synthesis

– Preparation by hydrolysis of 3-acetoxy-2,5,6-trimethoxy-acetophenone with 10% sodium hydroxide in methanol [3131,3300].

m.p. 71–72° [3131]; b.p._{0.1} 150–160° [3131];

¹H NMR [3131], IR [3131].

1-(6-Hydroxy-2,3,4-trimethoxyphenyl)ethanone

[22248-14-2]

C₁₁H₁₄O₅

mol.wt. 226.23

**Syntheses**

- Preparation by Fries rearrangement of antiarol acetate (3,4,5-trimethoxyphenyl acetate) with aluminium chloride in nitrobenzene at r.t. (54%) [3144], (45%) [3135].
- Preparation by reaction of antiarol (3,4,5-trimethoxyphenol) with boron trifluoride–acetic acid complex at 28–30° (50%) [2242].
- Also obtained by reaction of acetyl chloride,
 - on antiarol benzyl ether with aluminium chloride in ethyl ether, followed by subsequent debenylation of the keto compound obtained (22%) [3144];
 - on 1,2,3,5-tetramethoxybenzene with aluminium chloride in carbon disulfide at r.t. (9%) [3312].
- Also obtained by reaction of dimethyl sulfate,
 - on 3,6-dihydroxy-2,4-dimethoxyacetophenone,
 - with potassium carbonate in refluxing benzene [2820,3135,3144], (15–18%) [2820,3135] or in refluxing acetone–benzene mixture [3080,3146,3300], (70%) [3080], (36%) [3146];
 - with aqueous sodium hydroxide solution at r.t. (52%) [3135].
 - on 2,3,4,6-tetrahydroxyacetophenone [2443];
 - on 2,6-dihydroxy-3,4-dimethoxyacetophenone disodium salt, followed by acidification (<5%) [2443].
- Also obtained by alkaline degradation of 3',4',5,6,7-pentamethoxyflavone with potassium hydroxide in refluxing aqueous ethanol [2851].
- Also refer to: [2777,3315].

Isolation from natural sources

- From 5,6,7-trimethoxyflavone by alkaline hydrolysis in refluxing 50% methanolic potassium hydroxide. The 5,6,7-trimethoxyflavone is one of major constituents of the leaves of *Zeyhera tuberculosa* Bur. ex. Verlot (Bignoniaceae) [3146]. Yellow oil [2851,3080,3146];

m.p. 164–165° [2443], 105–107° [3312], 41–42° [3144], 32° [2242], 30°–31° [3135].

There is a discrepancy between the different melting points indicated in literature.

b.p._{0.35} 121–122° [3135], b.p.₁ 140° [2242], b.p.₂₀ 180–185° [3144], b.p.₁₄ 182–185° [3135], b.p.₂₇ 184–186° [2820];

¹H NMR [3146], ¹³C NMR [2328], IR [3146], UV [3146], MS [3146].

1-[3,4,6-Trihydroxy-2-(1-methylethoxy)phenyl]ethanone

[60840-21-3]

 $C_{11}H_{14}O_5$ mol.wt. 226.23**Synthesis**

- Preparation by catalytic hydrogenolysis of 3,4,6-tris-(benzyloxy)-2-isopropoxyacetophenone in the presence of 5% Pd/C in ethanol at r.t. (94%) [2442,3149].

m.p. 137° [2442,3149];

 1H NMR [2442,3149], IR [2442,3149], MS [2442,3149].**1-(2,4-Dihydroxy-3,5,6-trimethoxyphenyl)ethanone** $C_{11}H_{14}O_6$ mol.wt. 242.23**Synthesis**

- Obtained by hydrolysis of 1-(2,4-diacetoxy-3,5,6-trimethoxyphenyl)ethanone (SM) with aqueous 10% sodium hydroxide at r.t. for 10–15 min. SM was obtained by Friedel–Crafts acylation of 2,3,5,6-tetramethoxyphenyl acetate (m.p. 97–98°) with acetic anhydride/acetic acid in the presence of excess boron trifluoride at 50–60° for 5 h (65%, m.p. 82–84°) [3316].

N.B.: This ketone was not obtained by Friedel–Crafts reaction of 2,3,5,6-tetramethoxyphenol, and its acetate or benzyl ether with acetyl chloride and aluminium chloride in ethyl ether [3316,3317].

1-(2,5-Dihydroxy-3,4,6-trimethoxyphenyl)ethanone

[55742-65-9]

 $C_{11}H_{14}O_6$ mol.wt. 242.23**Syntheses**

- Obtained by persulfate oxidation of 2-hydroxy-3,4,6-trimethoxyacetophenone (Elbs reaction) [3307], (33%) [3299], (29%) [2820], (9%) [3318].
 - Also obtained by reduction of 2-acetyl-3,5,6-trimethoxy-1,4-benzoquinone with zinc dust in acetic anhydride, followed by hydrolysis of the acetic ester formed with dilute sulfuric acid [2443].
- Also refer to: [3319–3322].

m.p. 174–176° [2443], 116–117° [2820], 115–117° [3299,3307].

One of the reported melting points is obviously wrong.

1-(2,6-Dihydroxy-3,4,5-trimethoxyphenyl)ethanoneC₁₁H₁₄O₆ mol.wt. 242.23**Synthesis**

– Obtained by acylation of pentamethoxybenzene with acetyl chloride in the presence of aluminium chloride in ethyl ether, first for 14 h at r.t., then for 2 h at reflux (17%) [3323].

m.p. 86–88° [3323];

¹H NMR [3323], IR [3323], UV [3323].**1-(2-Amino-4-hydroxy-3-propylphenyl)ethanone**[87472-78-4] C₁₁H₁₅NO₂ mol.wt. 193.25**Synthesis**

– Preparation by hydrogenation of 3-allyl-2-amino-4-hydroxyacetophenone in the presence of 5% Pd/C in ethanol (quantitative yield) [2464].

Viscous oil [2464]; ¹H NMR [2464].**1-(3-Amino-2-hydroxy-5-propylphenyl)ethanone**[70978-22-2] C₁₁H₁₅NO₂ mol.wt. 193.25**Synthesis**

– Preparation by catalytic hydrogenation of 2-hydroxy-3-nitro-5-propylacetophenone in the presence of 5% Pd/C in ethanol at 25° [1897,1898], (77%) [1897].

m.p. 43–45° [1898], 42–43° [1897].

1-(4-Amino-2-hydroxy-3-propylphenyl)ethanone[75452-54-9] C₁₁H₁₅NO₂ mol.wt. 193.25**Synthesis**

– Preparation by hydrolysis of 4-acetamido-2-hydroxy-3-propylacetophenone with 6 N hydrochloric acid in refluxing ethanol (95%) [2464].

Yellow oil [2464]; b.p._{0.15} 120–122° [2464]; ¹H NMR [2464].

1-[2-(Dimethylamino)-6-hydroxy-4-methylphenyl]ethanone

[97066-06-3]

 $C_{11}H_{15}NO_2$

mol.wt. 193.25

Synthesis

– Preparation by reaction of potassium hydroxide with 2-acetyl-3-dimethylamino-5-hydroxy-5-methyl-2-cyclo-hexenone in ethanol at 40° (41%) [2712].

Yellow oil [2712]; m.p. -5° [2712];

¹H NMR [2712], IR [2712], UV [2712], MS [2712].

[118684-26-7]

 $C_{11}H_{15}NO_2$

mol.wt. 193.25

Synthesis

– A solution of 4-amino-2-hydroxyacetophenone and propionaldehyde in methanol was stored over 3 Å molecular sieves for 3 days. The solution of “2-hydroxy-4-propyl-iminoacetophenone” so obtained was then treated with hydrogen in the presence of 10% Pd/C (50%) [2464].

m.p. 73–75° [2464]; ¹H NMR [2464].

1-[2,3-Bis(acetyloxy)-4-hydroxyphenyl]ethanone

[144152-31-8]

 $C_{12}H_{12}O_6$

mol.wt. 252.22

Synthesis

– Obtained by enzymatic deacylation of 2,3,4-triacetoxyacetophenone with porcine pancreas lipase in tetrahydrofuran at 42–45° (55%) [2388,2897].

Pale yellow viscous oil [2897]; ¹H NMR [2897].

1-[2,4-Bis(acetyloxy)-6-hydroxyphenyl]ethanone

[17820-33-6]

 $C_{12}H_{12}O_6$

mol.wt. 252.22

Syntheses

– Obtained (by-product) by reaction of acetic anhydride on phloracetophenone with pyridine at r.t. (7%) [2368].

– Also obtained by photo-Fries rearrangement of 1,3,5-tri-acetoxybenzene in methanol (15%) [2343].

m.p. 86–87° [2853], 79–80° [2343];

¹H NMR [2343,2853], ¹³C NMR [2368], IR [2343].

1-[2,6-Bis(acetyloxy)-4-hydroxyphenyl]ethanone

[17820-32-5]

 $C_{12}H_{12}O_6$ mol.wt. 252.22**Syntheses**

- Preparation by reaction of acetic anhydride with phloracetophenone between 110° and 165° (40%) [2853].
- Also obtained by enzymatic deacylation of 2,4,6-triacetoxy-acetophenone with porcine pancreatic lipase in tetrahydrofuran at 42–45° (78%) [2388,2389,2897].

m.p. 154–155° [2853], 112° [2897]. One of the reported melting points is obviously wrong.

¹H NMR [2853,2897].

1-[3,4-Bis(acetyloxy)-2-hydroxyphenyl]ethanone

[27865-58-3]

 $C_{12}H_{12}O_6$ mol.wt. 252.22**Syntheses**

- Obtained by UV light irradiation of pyrogallol triacetate in methanol (15%) [2343].
- Also obtained by partial Fries rearrangement of pyrogallol triacetate with zinc chloride at 130–135° [3324].
- Also obtained by reaction of acetic anhydride on gallacetophenone with pyridine [2901].
- Also refer to: [2675].

m.p. 217–219° [3324], 110–112° [2343], 78–81° [2901];

¹H NMR [2343], IR [2343].

1-[3,6-Bis(acetyloxy)-2-hydroxyphenyl]ethanone

[104654-33-3]

 $C_{12}H_{12}O_6$ mol.wt. 252.22**Synthesis**

- Obtained by photo-Fries rearrangement of 1,2,4-triacetoxy-benzene in methanol (15%) [2343].

m.p. 116–118° [2343]; ¹H NMR [2343], IR [2343].

1-[4,5-Bis(acetyloxy)-2-hydroxyphenyl]ethanone

[42059-51-8]

 $C_{12}H_{12}O_6$ mol.wt. 252.22**Syntheses**

- Obtained by partial Fries rearrangement of 1,2,4-triacetoxy-benzene with zinc chloride in acetic acid at 140° (21%) [2414,2415], (8%) [2899].

- Preparation by reaction of acetic anhydride with 2,4,5-tri-hydroxyacetophenone in the presence of pyridine at 35° (52%) [2899].

m.p. 165–166° [2414,2415], 100–102° [2899]; ¹H NMR [2899], IR [2899].

1-[3-(2-Butenyl)-5-chloro-4-hydroxyphenyl]ethanone

$C_{12}H_{13}ClO_2$ mol.wt. 224.69

Synthesis

- Obtained by heating 4-(2-butenyloxy)-3-chloroacetophenone for 3 h under nitrogen atmosphere (Claisen rearrangement) [3162].

1-[5-(2-Butenyl)-2,4-dihydroxy-3-iodophenyl]ethanone

[91664-19-6]

$C_{12}H_{13}IO_3$ mol.wt. 332.14

Synthesis

- Preparation by condensation of 2,4-dihydroxy-3-iodoacetophenone with 1,3-butadiene in the presence of 85% orthophosphoric acid in xylene at 30–35° (75%) [3325].

m.p. 100–101° [3325]; ¹H NMR [3325].

1-[2-Hydroxy-3-iodo-6-methoxy-4-(2-propenyloxy)phenyl]ethanone

[74047-33-9]

$C_{12}H_{13}IO_4$ mol.wt. 348.14

Synthesis

- Preparation by reaction of allyl bromide with 2,4-di-hydroxy-3-iodo-6-methoxyacetophenone in the presence of potassium carbonate in refluxing acetone (58%) [2064].

m.p. 162–164° [2064]; ¹H NMR [2064].

1-(3,5-Dibromo-2,4-diethyl-6-hydroxyphenyl)ethanone

$C_{12}H_{14}Br_2O_2$ mol.wt. 350.05

Synthesis

- Preparation by reaction of potassium bromate and bromide on 2,4-diethyl-6-hydroxyacetophenone in solution of acetic acid–carbon tetrachloride mixture (quantitative yield) [2965].

m.p. 81° [2965].

1-[2-Hydroxy-3-methyl-6-(1-methylethyl)-4,5-dinitrophenyl]ethanone $C_{12}H_{14}N_2O_6$ mol.wt. 282.26

Synthesis

– Preparation by reaction of nitric acid ($d = 1.4$) on 2-hydroxy-3-methyl-5-nitro-6-isopropylacetophenone in acetic acid, between -5° and 0° (53%) [3326].

m.p. 119° [3326].**1-[4-Hydroxy-3-methyl-6-(1-methylethyl)-2,5-dinitrophenyl]ethanone** $C_{12}H_{14}N_2O_6$ mol.wt. 282.26

Synthesis

– Preparation by reaction of nitric acid ($d = 1.4$) on 4-hydroxy-5-methyl-3-nitro-2-isopropylacetophenone in acetic acid (59%) [3327].

m.p. 55° [3327].**1-[2-Hydroxy-5-methyl-3-(2-propenyl)phenyl]ethanone**

[108293-73-8]

 $C_{12}H_{14}O_2$ mol.wt. 190.24

Synthesis

– Preparation by thermal Claisen rearrangement of 2-(allyloxy)-5-methylacetophenone without solvent at 190° (95%) [2513] or at $260-270^\circ$ (84%) [3168].

Yellow oil [2513];

b.p._{0.15} $94-96^\circ$ [2513], b.p.₅ $103-105^\circ$ [3168]; 1H NMR [2513], ^{13}C NMR [2513], IR [2513], MS [2513].**1-[4-Hydroxy-3-(2-methyl-2-propenyl)phenyl]ethanone**

[57899-03-3]

 $C_{12}H_{14}O_2$ mol.wt. 190.24

Synthesis

– Preparation by thermal Claisen rearrangement of 4-(β -methallyloxy)acetophenone in boiling N,N -dimethylaniline [3177].

m.p. 86° [3177]; b.p.₁₆ 196° [3177].

1-[3-(2-Butenyl)-2,4-dihydroxyphenyl]ethanone

[91664-16-3]

 $C_{12}H_{14}O_3$

mol.wt. 206.24

Synthesis

– Preparation by condensation of resacetophenone with 1,3-butadiene in the presence of 85% orthophosphoric acid in xylene at 30–35° (38%) [3325].

m.p. 164–165° [3325]; 1H NMR [3325].

1-[5-(2-Butenyl)-2,4-dihydroxyphenyl]ethanone

[91664-17-4]

 $C_{12}H_{14}O_3$

mol.wt. 206.24

Syntheses

– Preparation by condensation of resacetophenone with 1,3-butadiene in the presence of 85% orthophosphoric acid in xylene at 30–35° (42%) [3325].

– Also obtained from 5-(2-butenyl)-2,4-dihydroxy-3-iodoacetophenone by heating with zinc dust and concentrated hydrochloric acid in refluxing ethanol (80%) [3325].

m.p. 103–104° [3325]; 1H NMR [3325], IR [3325].

1-[4-(2-Butenyloxy)-2-hydroxyphenyl]ethanone

[79557-72-5]

 $C_{12}H_{14}O_3$

mol.wt. 206.24

Synthesis

– Preparation by reaction of 3-chloro-1-butene with resacetophenone in the presence of potassium carbonate and sodium iodide in refluxing butanone (44%) [3184].

Oil [3184]; b.p._{0.1} 162–175° [3184].

1-[2,4-Dihydroxy-3-methyl-5-(2-propenyl)phenyl]ethanone

[77869-01-3]

 $C_{12}H_{14}O_3$

mol.wt. 206.24

Synthesis

– Preparation by thermal Claisen rearrangement of 4-(allyloxy)-2-hydroxy-3-methylacetophenone in boiling N,N-dimethylaniline [3328].

m.p. 139° [3328]; IR [3328].

1-[2,4-Dihydroxy-3-(1-methyl-2-propenyl)phenyl]ethanone

[79557-73-6]

 $C_{12}H_{14}O_3$ mol.wt. 206.24

Syntheses

- Preparation by thermal Claisen rearrangement of 4-(2-butenyloxy)-2-hydroxyacetophenone without solvent at 180–190° under nitrogen (40%) [3184].
- Also obtained (by-product) by condensation of resacetophenone with 1,3-butadiene in the presence of 85% orthophosphoric acid in xylene at 30–35° (3%) [3325].

m.p. 147–149° [3325], 146–147° [3184]; 1H NMR [3325].**1-[2,4-Dihydroxy-3-(2-methyl-2-propenyl)phenyl]ethanone**

[118683-89-9]

 $C_{12}H_{14}O_3$ mol.wt. 206.24

Synthesis

- Preparation by thermal Claisen rearrangement of 2-hydroxy-4-(2-methylprop-2-enyloxy)acetophenone without solvent at 210° (24%) [2464].

White solid [2464]; 1H NMR [2464].**1-[3,6-Dihydroxy-2-(2-methyl-2-propenyl)phenyl]ethanone**

[127870-07-9]

 $C_{12}H_{14}O_3$ mol.wt. 206.24

Synthesis

- Obtained by thermal reaction of 2-acetyl-1,4-benzoquinone (1 mol) with (2-methylallyl)trimethylstannane (2 mol) in benzene or acetonitrile under argon atmosphere (77%) [2355].

m.p. 78–80° [2355]; 1H NMR [2355], MS [2355].**1-[2-Hydroxy-3-methoxy-5-(2-propenyl)phenyl]ethanone**

[23343-04-6]

 $C_{12}H_{14}O_3$ mol.wt. 206.24

Synthesis

- Preparation by thermal Claisen rearrangement of 2-(allyloxy)-3-methoxyacetophenone [3329] without solvent at 210° [3330], (77%) [3330], (38%) [3329].

m.p. 43–44° [3330], 42–43° [3329];
 1H NMR [3329], IR [3329], UV [3329].

1-[2-Hydroxy-4-methoxy-3-(2-propenyl)phenyl]ethanone

[117156-86-2]

C₁₂H₁₄O₃ mol.wt. 206.24

Syntheses

- Preparation by thermal Claisen rearrangement of 2'-(allyloxy)-4'-methoxyacetophenone in boiling N,N-di-methylaniline (80%) [3331].
 - Preparation by reaction of dimethyl sulfate on 3-allyl-resacetophenone in 10% aqueous potassium hydroxide at 30° [3182].
- m.p. 61° [3182], 59° [3331]; ¹H NMR [3331], IR [3331], UV [3331].

1-[2-Hydroxy-4-methoxy-5-(2-propenyl)phenyl]ethanone

[117713-79-8]

C₁₂H₁₄O₃ mol.wt. 206.24

Synthesis

- Preparation by reaction of methyl bromide on 5-allyl-2,4-dihydroxyacetophenone with potassium carbonate and potassium iodide (41%) [2678,2679].

1-[2-Hydroxy-5-methoxy-3-(2-propenyl)phenyl]ethanone

[186956-47-8]

C₁₂H₁₄O₃ mol.wt. 206.24

Synthesis

- Obtained by Claisen rearrangement of 2-(allyloxy)-5-methoxyacetophenone in refluxing N,N-diethyl-aniline at 220° for 4 h [3163].

colourless oil [3163]; b.p._{0.1} 145° [3163];¹H NMR [3163], IR [3163].**1-[2-Hydroxy-6-methoxy-3-(2-propenyl)phenyl]ethanone**

[17488-68-5]

C₁₂H₁₄O₃ mol.wt. 206.24

Syntheses

- Preparation by reaction of dimethyl sulfate on 3-allyl-2,6-dihydroxyacetophenone with potassium carbonate in benzene in a water bath (89%) [3186].
 - Also obtained by thermal Claisen rearrangement of 2-(allyloxy)-6-methoxyacetophenone at 215–220°, in a sealed tube (35%) [3186].
- b.p.₂ 122–124° [3186], b.p.₃ 127° [3186]; d²⁰ = 1.0283 [3186]; n_D²⁰ = 1.5602 and 1.5598 [3186].

1-[3-Hydroxy-6-methoxy-2-(2-propenyl)phenyl]ethanone
 $C_{12}H_{14}O_3$ mol.wt. 206.24
Synthesis

– Preparation by thermal Claisen rearrangement of 5-(allyloxy)-2-methoxyacetophenone at 230° (74%) [3187].

m.p. 104° [3187].

1-[4-Hydroxy-2-methoxy-5-(2-propenyl)phenyl]ethanone

[117705-59-6]

 $C_{12}H_{14}O_3$ mol.wt. 206.24
**Synthesis**

– Preparation by Claisen rearrangement of 4-(allyloxy)-2-methoxyacetophenone at 210–215° (60%) [3182], (24%) [2671,2678,2679].

m.p. 136° [3182], <25° [2671]; ¹H NMR [2678,2679].

1-[2-Hydroxy-3-methyl-4-(2-propenyloxy)phenyl]ethanone

[77036-77-2]

 $C_{12}H_{14}O_3$ mol.wt. 206.24
**Synthesis**

– Preparation by reaction of allyl bromide on 2,4-di-hydroxy-3-methylacetophenone with potassium carbonate in refluxing acetone [3332].

1-[2-Hydroxy-4-methyl-5-(2-propenyloxy)phenyl]ethanone

[76267-82-8]

 $C_{12}H_{14}O_3$ mol.wt. 206.24
**Synthesis**

– Preparation by reaction of allyl bromide with 2,5-dihydroxy-4-methylacetophenone in the presence of potassium carbonate in refluxing acetone [2699].

Greenish yellow liquid [2699].

1-[2-Hydroxy-4-[(2-methyl-2-propenyl)oxy]phenyl]ethanone

[118683-88-8]

 $C_{12}H_{14}O_3$ mol.wt. 206.24
**Synthesis**

– Preparation by reaction of 3-chloro-2-methylpropene with resacetophenone in the presence of potassium carbonate in refluxing acetone (75%) [2464].

White solid [2464]; ¹H NMR [2464].

1-[4-(Acetyloxy)-2-ethyl-6-hydroxyphenyl]ethanone

[57600-88-1]

 $C_{12}H_{14}O_4$ mol.wt. 222.24

Synthesis

– Preparation by treatment of a mixture of alkylated resorcinols with acetic anhydride and acetic acid in the presence of zinc chloride at 140–145°, followed by suitable separation [3189].

1-[4-(Acetyloxy)-2-hydroxy-3,5-dimethylphenyl]ethanone $C_{12}H_{14}O_4$ mol.wt. 222.24

Synthesis

– Preparation by reaction of acetic anhydride with 2,4-di-hydroxy-3,5-dimethylacetophenone in the presence of pyridine [2990].

m.p. 95–96° [2990].

1-[4-(Acetyloxy)-2-hydroxy-3,6-dimethylphenyl]ethanone

[57600-89-2]

 $C_{12}H_{14}O_4$ mol.wt. 222.24

Synthesis

– Preparation by treatment of a mixture of alkylated resorcinols with acetic anhydride and acetic acid in the presence of zinc chloride at 140–145°, followed by suitable separation [3189].

1-[4-(Acetyloxy)-6-hydroxy-2,3-dimethylphenyl]ethanone

[57600-90-5]

 $C_{12}H_{14}O_4$ mol.wt. 222.24

Synthesis

– Preparation by treatment of a mixture of alkylated resorcinols with acetic anhydride and acetic acid in the presence of zinc chloride at 140–145°, followed by suitable separation [3189].

1-[5-(2-Butenyl)-2,3,4-trihydroxyphenyl]ethanone

[91664-14-1]

 $C_{12}H_{14}O_4$ mol.wt. 222.24

Synthesis

– Preparation by condensation of gallacetophenone with 1,3-butadiene in the presence of 85% orthophosphoric acid in xylene at 30–35° (60%) [3325].

m.p. 93–94° [3325]; 1H NMR [3325].

1-[2,4-Dihydroxy-3-methoxy-5-(2-propenyl)phenyl]ethanone $C_{12}H_{14}O_4$ mol.wt. 222.24**Synthesis**

– Preparation by heating 4-(allyloxy)-2-hydroxy-3-methoxyacetophenone at 220° under reduced pressure (Claisen rearrangement) (70%) [2817].

m.p. 94° [2817].

1-[2,4-Dihydroxy-5-methoxy-3-(2-propenyl)phenyl]ethanone $C_{12}H_{14}O_4$ mol.wt. 222.24**Synthesis**

– Preparation by thermal Claisen rearrangement of 4-(allyloxy)-2-hydroxy-5-methoxyacetophenone without solvent at 180° (85%) [2824].

m.p. 118° [2824].

1-[3,6-Dihydroxy-4-methoxy-2-(2-propenyl)phenyl]ethanone $C_{12}H_{14}O_4$ mol.wt. 222.24**Synthesis**

– Preparation by heating 5-(allyloxy)-2-hydroxy-4-methoxyacetophenone in glycerol at 200° (Claisen rearrangement) (81%) [2849].

m.p. 114° [2849].

1-[2-Hydroxy-3-methoxy-4-(2-propenyloxy)phenyl]ethanone $C_{12}H_{14}O_4$ mol.wt. 222.24**Syntheses**

– Preparation by reaction of allyl bromide on 2,4-di-hydroxy-3-methoxyacetophenone with potassium carbonate in boiling acetone (70%) [2817].

– Preparation by reaction of dimethyl sulfate on 4-(allyloxy)-2,3-dihydroxyacetophenone with potassium carbonate in boiling acetone (80%) [2817].

m.p. 63–64° [2817].

1-[2-Hydroxy-4-methoxy-5-(2-propenyloxy)phenyl]ethanoneC₁₂H₁₄O₄ mol.wt. 222.24

Synthesis

– Preparation by reaction of allyl bromide on 2,5-dihydroxy-4-methoxyacetophenone with potassium carbonate in boiling acetone (82%) [2849].

m.p. 80° [2849].

1-[2-Hydroxy-5-methoxy-4-(2-propenyloxy)phenyl]ethanone

[91497-16-4]

C₁₂H₁₄O₄ mol.wt. 222.24

Syntheses

– Preparation by partial methylation of 4-(allyloxy)-2,5-dihydroxyacetophenone with dimethyl sulfate in the presence of potassium carbonate in refluxing acetone (90%) [3191].

– Preparation by reaction of allyl bromide with 2,4-di-hydroxy-5-methoxyacetophenone in the presence of potassium carbonate in boiling acetone (60%) [2824].

m.p. 50–51° [3191], 50° [2824].

1-[2-Hydroxy-6-methoxy-3-(2-propenyloxy)phenyl]ethanone

[126405-78-5]

C₁₂H₁₄O₄ mol.wt. 222.24

Synthesis

– Preparation by adding 2-hydroxy-3-iodo-6-methoxy-acetophenone and cuprous iodide to a solution of sodium allyloxide, previously prepared from allyl alcohol and sodium hydride in DMF (45%) [2524].

Oil [2524]; ¹H NMR [2524], IR [2524].**1-[2-Hydroxy-6-methoxy-4-(2-propenyloxy)phenyl]ethanone**

[74047-37-3]

C₁₂H₁₄O₄ mol.wt. 222.24

Syntheses

– Preparation by reaction of allyl bromide with 2,4-di-hydroxy-6-methoxyacetophenone in the presence of potassium carbonate in refluxing acetone (61%) [2573].

– Also refer to: [3333].

m.p. 74–76° [2573]; ¹H NMR [2573].

1-[2-Hydroxy-3-(2-methyl-1,3-dioxolan-2-yl)phenyl]ethanone

[103867-84-1]

 $C_{12}H_{14}O_4$ mol.wt. 222.24

Syntheses

– Preparation by UV light irradiation of ethylene acetal of 2-acetoxyacetophenone in hexane,

- with potassium carbonate (76%) [3334];
- without potassium carbonate (10%) [3334,3335].

Oil [3335]; 1H NMR [3335], IR [3335], UV [3335].

1-[2-Hydroxy-5-(2-methyl-1,3-dioxolan-2-yl)phenyl]ethanone

[103867-87-4]

 $C_{12}H_{14}O_4$ mol.wt. 222.24

Syntheses

– Preparation by UV light irradiation of ethylene acetal of the 4-acetoxyacetophenone in hexane,

- with potassium carbonate (82%) [3334];
- without potassium carbonate (21%) [3334,3335].

m.p. 56–57° [3335];

1H NMR [3335], IR [3335], UV [3335].

1-[4-Hydroxy-3-(2-methyl-1,3-dioxolan-2-yl)phenyl]ethanone

[103867-88-5]

 $C_{12}H_{14}O_4$ mol.wt. 222.24

Synthesis

– Obtained (by-product) by UV light irradiation of ethylene acetal of 2-acetoxyacetophenone in hexane, with or without potassium carbonate (8–9%) [3334,3335].

m.p. 78–80° [3335];

1H NMR [3335], IR [3335], UV [3335].

1-[3-[2-(Acetyloxy)ethoxy]-4-hydroxyphenyl]ethanone

[63437-82-1]

 $C_{12}H_{14}O_5$ mol.wt. 238.24

Syntheses

– Preparation by Fries rearrangement of 2-(2-acetoxy-ethoxy)phenyl acetate (m.p. 142–146°) with aluminium chloride in nitrobenzene for 48 h at 20° (55%) [3105].

– Also refer to: [3336].

m.p. 103–104° [3105].

1-[3-(Acetyloxy)-2-hydroxy-4,6-dimethoxyphenyl]ethanone[21919-65-3] $C_{12}H_{14}O_6$ mol.wt. 254.24

Syntheses

- Preparation by reaction of acetic anhydride with 2,3-di-hydroxy-4,6-dimethoxyacetophenone in the presence of sodium acetate at 60° (80%) [3128].
 - Preparation by reaction of aluminium chloride with 3-acetoxy-2,4,6-trimethoxyacetophenone in nitrobenzene at 100° [3128,3129], (52%) [3128].
- m.p. 180° [3128].

1-[3-(Acetyloxy)-6-hydroxy-2,4-dimethoxyphenyl]ethanone[21919-63-1] $C_{12}H_{14}O_6$ mol.wt. 254.24

Syntheses

- Preparation by reaction of acetic anhydride with 3,6-di-hydroxy-2,4-dimethoxyacetophenone in the presence of sodium acetate at 60° [3128,3129], (80%) [3128].
- Preparation by Fries rearrangement of 2,6-dimethoxy-hydroquinone diacetate with aluminium chloride at 120–125° (80%) [3146].

Isolation from natural sources

- From *Euphorbia portulacoides* (Euphorbiaceae) [3337].

m.p. 112° [3128], 109–110° [3146];

 1H NMR [3146], IR [3146], UV [3146], MS [3146].**1-(3-Bromo-4,5-diethyl-2-hydroxyphenyl)ethanone** $C_{12}H_{15}BrO_2$ mol.wt. 271.15

Synthesis

- Preparation by reaction of potassium bromate and bromide on 4,5-diethyl-2-hydroxyacetophenone (quantitative yield) [2965].

m.p. 59° [2965].

1-[3-Bromo-5-(1,1-dimethylethyl)-2-hydroxyphenyl]ethanone[105340-27-0] $C_{12}H_{15}BrO_2$ mol.wt. 271.15

Synthesis

- Preparation by Fries rearrangement of 2-bromo-4-tert-butyl-phenyl acetate with aluminium chloride without solvent at 110° (54%) [3338].

b.p.₃ 142° [3338].

1-[3-Bromo-5-(1,1-dimethylethyl)-4-hydroxyphenyl]ethanone[153356-10-6] $C_{12}H_{15}BrO_2$ mol.wt. 271.15

Synthesis

– Refer to: [3339] (Japanese patent).

1-[4-(2-Bromoethoxy)-5-ethyl-2-hydroxyphenyl]ethanone[117706-54-4] $C_{12}H_{15}BrO_3$ mol.wt. 287.15

Synthesis

– Preparation by reaction of 2-bromoethyl bromide on 5-ethyl-2,4-dihydroxyacetophenone with potassium carbonate and potassium iodide at reflux (43%) [2678,2679].

m.p. 58–59° [2678,2679]; 1H NMR [2678,2679].**1-[3-Chloro-5-(1,1-dimethylethyl)-2-hydroxyphenyl]ethanone** $C_{12}H_{15}ClO_2$ mol.wt. 226.70

Synthesis

– Preparation by Fries rearrangement of 4-tert-butyl-2-chloro-phenyl acetate with aluminium chloride at 110–130° (82–85%) [2152,3340].

b.p.₃₃ 142° [3340].**1-[3-Chloro-5-(1,1-dimethylethyl)-4-hydroxyphenyl]ethanone**[153356-01-5] $C_{12}H_{15}ClO_2$ mol.wt. 226.70

Synthesis

– Refer to: [3339] (Japanese patent).

1-[3-Chloro-2-hydroxy-6-methyl-5-(1-methylethyl)phenyl]ethanone $C_{12}H_{15}ClO_2$ mol.wt. 226.70

Synthesis

– Preparation by reaction of acetyl chloride on 2-chloro-5-methyl-4-isopropylanisole with aluminium chloride in carbon disulfide at r.t. (35%) [3341].

Colourless oil [3341]; b.p.₁₂ 142° [3341].

1-[3-Chloro-6-hydroxy-2-methyl-5-(1-methylethyl)phenyl]ethanoneC₁₂H₁₅ClO₂ mol.wt. 226.70

Syntheses

– Preparation by Fries rearrangement of 4-chloro-5-methyl-2-isopropylphenyl acetate with aluminium chloride at 155° [2011].

– Also obtained by reaction of acetyl chloride on 4-chloro-5-methyl-2-isopropylanisole with aluminium chloride in carbon disulfide at r.t. (17%) [2542].

b.p.₃ 127–135° [2011], b.p.₂₁ 151–152° [2542].

1-[4-(Chloromethyl)-2-hydroxy-3-propylphenyl]ethanone[97582-36-0] C₁₂H₁₅ClO₂ mol.wt. 226.70

Syntheses

– Preparation by reaction of ethyl chloroformate with 4-(dimethylaminomethyl)-2-hydroxy-3-propylacetophenone in toluene (68–82%) [2550,2927].

– Also refer to: [3342,3343].

m.p. 55–57° [2550]; b.p._{0.2} 105–125° [2927]; ¹H NMR [2927], IR [2927].

1-[3-Chloro-5-(1,1-dimethylethyl)-2,6-dihydroxyphenyl]ethanone[120034-10-8] C₁₂H₁₅ClO₃ mol.wt. 242.70

Synthesis

– Preparation by reaction of tert-butyl chloride with 3-chloro-2,6-dihydroxyacetophenone in the presence of sulfuric acid [1892,3243].

1-[3-(1,1-Dimethylethyl)-5-fluoro-4-hydroxyphenyl]ethanone[153356-03-7] C₁₂H₁₅FO₂ mol.wt. 210.25

Synthesis

– Refer to: [3339] (Japanese patent).

1-[3-(1,1-Dimethylethyl)-4-hydroxy-5-iodophenyl]ethanone[153356-02-6] C₁₂H₁₅IO₂ mol.wt. 318.15

Synthesis

– Refer to: [3339] (Japanese patent).

1-[3-(1,1-Dimethylethyl)-4-hydroxy-5-nitrophenyl]ethanone[153356-04-8] $C_{12}H_{15}NO_4$ mol.wt. 237.26

Synthesis

– Refer to: [3339] (Japanese patent).

1-[5-(1,1-Dimethylethyl)-2-hydroxy-3-nitrophenyl]ethanone[100245-06-5] $C_{12}H_{15}NO_4$ mol.wt. 237.26

Synthesis

– Obtained (poor yield) by nitration of 5-tert-butyl-2-hydroxyacetophenone at -20° using standard reagents (2%) [1897].m.p. $80-81^\circ$ [1897].**1-[2-Hydroxy-3-methyl-6-(1-methylethyl)-5-nitrophenyl]ethanone** $C_{12}H_{15}NO_4$ mol.wt. 237.26

Synthesis

– Preparation by reaction of nitric acid ($d = 1.4$) on 2-hydroxy-3-methyl-6-isopropylacetophenone in acetic acid between -5° and 0° (67%) [3326].m.p. 151° [3326].**1-[4-Hydroxy-5-methyl-2-(1-methylethyl)-3-nitrophenyl]ethanone** $C_{12}H_{15}NO_4$ mol.wt. 237.26

Synthesis

– Preparation by reaction of nitric acid ($d = 1.4$) on 4-hydroxy-5-methyl-2-isopropylacetophenone in acetic acid at -5° (69%) [3327].m.p. 157° [3327].**1-[2-Hydroxy-5-(1-methylpropyl)-3-nitrophenyl]ethanone**[84942-36-9] $C_{12}H_{15}NO_4$ mol.wt. 237.26

Synthesis

– Preparation by reaction of 100% nitric acid on 5-sec-butyl-2-hydroxyacetophenone in acetic acid at r.t. (89%) [1852].

b.p._{0.05} $137-139^\circ$ [1852].

1-[4-Hydroxy-3-(1-methylpropyl)-5-nitrophenyl]ethanone[150313-75-0] $C_{12}H_{15}NO_4$ mol.wt. 237.26

Synthesis

– Refer to: [3344].

1-[4-(2-Azidoethoxy)-5-ethyl-2-hydroxyphenyl]ethanone[117706-27-1] $C_{12}H_{15}N_3O_3$ mol.wt. 249.27

Synthesis

– Preparation by reaction of sodium azide with 4-(2-bromo-ethoxy)-5-ethyl-2-hydroxyacetophenone in N,N-dimethyl-formamide at r.t. [2678,2679].

 1H NMR [2678,2679], MS [2678,2679].**1-(5-Butyl-2-hydroxyphenyl)ethanone**[50743-14-1] $C_{12}H_{16}O_2$ mol.wt. 192.26

Syntheses

– Preparation by Fries rearrangement of p-butylphenyl acetate with aluminium chloride at 130° (80%) [2899].

– Preparation by reaction of acetyl chloride on 4-butylphenol with aluminium chloride in ethylene dichloride at 110–120° (63%) [2625].

Oil [2899]; b.p._{1,5} 105–109° [2899], b.p.₄ 119–123° [2625].**1-(2,4-Diethyl-6-hydroxyphenyl)ethanone** $C_{12}H_{16}O_2$ mol.wt. 192.26

Synthesis

– Preparation by Fries rearrangement of 3,5-diethylphenyl acetate with aluminium chloride [2233], between 120° and 150° (quantitative yield) [2965].

b.p.₁₂ 140° [2233].**1-(3,5-Diethyl-2-hydroxyphenyl)ethanone** $C_{12}H_{16}O_2$ mol.wt. 192.26

Synthesis

– Preparation by Fries rearrangement of 2,4-diethylphenyl acetate with aluminium chloride (67%) [2233].

b.p.₁₂ 138–140° [2233].

1-(3,5-Diethyl-4-hydroxyphenyl)ethanoneC₁₂H₁₆O₂ mol.wt. 192.26

Synthesis

– Preparation by Fries rearrangement of 2,6-diethylphenyl acetate with aluminium chloride (60%) [2233].

m.p. 92–92°5 [2233].

1-(4,5-Diethyl-2-hydroxyphenyl)ethanone

[56394-40-2]

C₁₂H₁₆O₂ mol.wt. 192.26

Syntheses

– Preparation by Fries rearrangement of 3,4-diethylphenyl acetate with aluminium chloride without solvent at 120–150° (90–100%) [2943,2965].

– Also obtained by isomerization of 2,4-diethyl-6-hydroxy-acetophenone by heating with aluminium chloride without solvent between 140° and 180° (quantitative yield) [2965].

b.p._{0.75} 134–137° [2943].**1-[2-(1,1-Dimethylethyl)-4-hydroxyphenyl]ethanone**

[155982-91-5]

C₁₂H₁₆O₂ mol.wt. 192.26

Syntheses

– Preparation from 4-hydroxyacetophenone by reaction,

- with isobutylene in the presence of sulfuric acid in autoclave at 65° [3345];
- with tert-butyl chloride in the presence of aluminium chloride [3345].

Crystalline compound [3345].

1-[3-(1,1-Dimethylethyl)-2-hydroxyphenyl]ethanone

[24242-55-5]

C₁₂H₁₆O₂ mol.wt. 192.26

Syntheses

– Obtained by UV light irradiation of 2-tert-butylphenyl acetate in benzene (26%) [3346,3347].

– Also obtained (by-product) by reaction of acetyl chloride on bromomagnesium 2-tert-butylphenolate in toluene at r.t. (<3%) [3348].

pale yellow oil [3346–3348]; b.p.₅ 87° [3347];¹H NMR [3347,3348], IR [3347,3348], MS [3348].

-1-[3-(1,1-Dimethylethyl)-4-hydroxyphenyl]ethanone[16928-01-1] $C_{12}H_{16}O_2$ mol.wt. 192.26

Syntheses

- Obtained by UV light irradiation of,
 - 3,5-di-tert-butyl-4-hydroxyacetophenone in cyclohexane solution (photochemical partial dealkylation) (> 95%) [3346,3347];
 - 2-tert-butylphenyl acetate in benzene solution (photo-Fries rearrangement) (24%) [3346,3347].

m.p. 175–176° [3346,3347]; 1H NMR [3346,3347], IR [3347].**1-[4-(1,1-Dimethylethyl)-2-hydroxyphenyl]ethanone**[113027-08-0] $C_{12}H_{16}O_2$ mol.wt. 192.26

Syntheses

- Obtained by Fries rearrangement of 3-tert-butylphenyl acetate,
 - in the presence of hafnium triflate in 12 M lithium perchlorate in nitromethane at 50° (60%) [3349];
 - in the presence of aluminium chloride without solvent at 145° (68%) [3350].
- Also obtained by Friedel–Crafts acylation of 3-tert-butylphenol with acetyl chloride in the presence of hafnium triflate in 12 M lithium perchlorate in nitromethane (76%) [3349].
- Also obtained by acylation of 3-tert-butylphenol with acetic acid in the presence of hafnium triflate in 12 M lithium perchlorate in nitromethane at 50° (66%) [3351].
- Also refer to: [3352] (Japanese patent).

1-[4-(1,1-Dimethylethyl)-3-hydroxyphenyl]ethanone[18606-87-6] $C_{12}H_{16}O_2$ mol.wt. 192.26

Synthesis

- Preparation by diazotization of 3-amino-4-tert-butylacetophenone, followed by hydrolysis of the diazonium salt obtained [3353].

m.p. 127° [3353].

1-[5-(1,1-Dimethylethyl)-2-hydroxyphenyl]ethanone[57373-81-6] $C_{12}H_{16}O_2$ mol.wt. 192.26

Syntheses

- Preparation by reaction of acetyl chloride on 4-tert-butyl-anisole with aluminium chloride,
 - in methylene chloride, first at 0°, then at r.t. (55%) [3354];

- in ethylene dichloride, followed by demethylation of the acylanisole obtained with 4% hydrobromic acid in refluxing acetic acid (47–52%) [3355].
- Also obtained by Friedel–Crafts acylation of 4-tert-butylphenol with acetic anhydride in nitrobenzene in the presence of aluminium chloride at 60° (30%) [2518].
- Preparation by Fries rearrangement of 4-tert-butylphenyl acetate with aluminium chloride [2164,3355–3357],
 - without solvent at 120° (57%) [3356];
 - in 1,2,3-trichloropropane at 120° (60%) [3357] or in boiling nitroethane (22%) [2164].
- Preparation by Fries rearrangement of 4-tert-butylphenyl acetate in methylene chloride in the presence of zirconium chloride at r.t. for 48 h (52%). The same reaction performed in a simple ultrasound cleaning bath at r.t. for 10 h leads to 78% yield [2616].
- Also obtained *via* an intermolecular photo-Fries rearrangement, by irradiation of a solution of pinacolone and 4-tert-butylphenol in benzene for 5 h (42%) [3358].
- Also obtained by reaction of aluminium chloride on 4-(1,1,3,3-tetramethylbutyl)phenyl acetate at 120°, in 1,2,3-trichloropropane (60%) [3357] or in 1,1,2,2-tetrachloroethane (36%) [3357].

m.p. 26° [2518];

b.p.₂ 105–106° [2164], b.p.₅ 122–123° [2164], b.p.₁₂ 130° [3356];

¹H NMR [3354], IR [3354].

1-(2-Ethyl-6-hydroxy-3,5-dimethylphenyl)ethanone

C₁₂H₁₆O₂ mol.wt. 192.26

Synthesis

- Obtained (by-product) by Fries rearrangement of 5-ethyl-2,4-dimethylphenyl acetate with aluminium chloride at 130–140° [2233].

1-(3-Ethyl-2-hydroxy-4,5-dimethylphenyl)ethanone

C₁₂H₁₆O₂ mol.wt. 192.26

Synthesis

- Obtained (by-product) by heating some esters with aluminium chloride. There is simultaneously displacement and rearrangement of alkyl groups during the Fries reaction from 2-ethyl-4,6-dimethylphenyl acetate or from 2-ethyl-4,5-dimethylphenyl acetate [2233].

1-(3-Ethyl-2-hydroxy-4,6-dimethylphenyl)ethanone

[69051-59-8]

 $C_{12}H_{16}O_2$ mol.wt. 192.26

Synthesis

– Preparation by Fries rearrangement of 2-ethyl-3,5-dimethyl-phenyl acetate [3359].

1-(3-Ethyl-2-hydroxy-5,6-dimethylphenyl)ethanone $C_{12}H_{16}O_2$ mol.wt. 192.26

Syntheses

– Preparation by reaction of acetyl chloride on 2-ethyl-4,5-dimethylanisole with aluminium chloride in boiling carbon disulfide (50%) [2233].

– Preparation by heating 2-ethyl-4,5-dimethylphenyl acetate with aluminium chloride (major product) [2233].

b.p.₁₁ 143–145° [2233], b.p.₁₂ 145–147° [2233].**1-(3-Ethyl-6-hydroxy-2,5-dimethylphenyl)ethanone** $C_{12}H_{16}O_2$ mol.wt. 192.26

Synthesis

– Obtained by Fries rearrangement of 4-ethyl-2,5-dimethyl-phenyl acetate with aluminium chloride at 130° for 30 min (57%) [3219].

Pale yellow oil [3219]; b.p.₁₆ 156–158° [3219]; $n_D^{22} = 1.5410$ [3219]; IR [3219].**1-(4-Ethyl-2-hydroxy-3,5-dimethylphenyl)ethanone** $C_{12}H_{16}O_2$ mol.wt. 192.26

Syntheses

– Obtained by heating some esters* with aluminium chloride. There is simultaneously displacement and rearrangement of alkyl groups during the Fries reaction,

- 2-ethyl-4,6-dimethylphenyl acetate (major product) [2233];
- 4-ethyl-2,5-dimethylphenyl acetate (75%) [2956];
- 4-ethyl-2,6-dimethylphenyl acetate (by-product) [2233];
- 5-ethyl-2,4-dimethylphenyl acetate (major product) [2233].

m.p. 52–53° [2233];

b.p.₁₂ 145–147° [2233], b.p.₁₂ 146–152° [2956], b.p.₁₁ 153–155° [2233].

1-(4-Ethyl-2-hydroxy-3,6-dimethylphenyl)ethanoneC₁₂H₁₆O₂ mol.wt. 192.26

Synthesis

– Obtained by oxidation of 6-ethyl-2,3,4,7-tetramethyl-benzofuran with chromium trioxide in acetic acid at 50° for 30 min, followed by saponification of the resulting keto ester with potassium hydroxide in boiling aqueous ethanol for 2 h (40%) [3219].

b.p.₂₀ 165–167° [3219];
n_D²² = 1.562 [3219]; IR [3219].

1-(4-Ethyl-3-hydroxy-2,6-dimethylphenyl)ethanoneC₁₂H₁₆O₂ mol.wt. 192.26

Synthesis

– Obtained by reaction of acetyl chloride on 6-ethyl-2,4-dimethylanisole with aluminium chloride in boiling carbon disulfide [2233].

b.p.₁₅ 178–182° [2233].

1-[2-Hydroxy-3-methyl-6-(1-methylethyl)phenyl]ethanone

[162853-19-2]

C₁₂H₁₆O₂ mol.wt. 192.26

Syntheses

- Preparation by Fries rearrangement of carvacryl acetate,
- without solvent at 120°, with aluminium chloride (80–86%) [2947,2948], with titanium tetrachloride (86%) [2948], with stannic chloride (80%) [2948] or with zinc chloride (60%) [2948];
 - with aluminium chloride in nitrobenzene at 60° (67%) [2947], in toluene or xylene at 100° (58–61%) [2947].
- Preparation by reaction of acetyl chloride on carvacrol with aluminium chloride,
- in nitrobenzene at r.t. (49%) [3326];
 - in nitrobenzene in the presence of phosphorous oxychloride and magnesium chloride at r.t. (17%) [3326].
- Also obtained by UV irradiation of a carvacryl acetate solution in methanol/ water (2:1) at 254 nm at r.t. under nitrogen atmosphere (51%) [2963].

Viscous oil [2963]; m.p. 100–101° [3326];

¹H NMR [2963], ¹³C NMR [2963], IR [2963], MS [2963].

1-[2-Hydroxy-4-methyl-5-(1-methylethyl)phenyl]ethanone

[52774-08-0]

 $C_{12}H_{16}O_2$ mol.wt. 192.26

Syntheses

- Preparation by Fries rearrangement of 3-methyl-4-isopropyl-phenyl acetate, with titanium tetrachloride in nitromethane at 20° (95%) [3360] or with aluminium chloride at 125° (11%) [3341,3361].
- Preparation by reaction of acetic anhydride on 3-methyl-4-isopropylphenol (p-thymol) with 70% perchloric acid at 125–135° (32%) [2306].

N.B.: All the results of references [2306,3341,3361] were erroneous. Only the Fries rearrangement using titanium tetrachloride leads to the expected ketone and with a good yield [3360]. The 1H NMR spectra confirms the above structure [3360]. In addition, the reported melting point (29°) [3360] is in good agreement with those generally measured for o-hydroxy-ketones (below 80°) compared to those of p-hydroxyketones which are considerably higher (usually 120–200°).

m.p. 122°5 [3341,3361], 110–115° [2306], 29° [3360];

b.p.₁₇ 153° [3360], b.p.₁₅ 188–192° [3341];

1H NMR [3360] (Sadtlar: standard n° 52738 M);

IR [3341,3360] (Sadtlar: standard n° 79797 K); UV [3360], MS [3360].

1-[2-Hydroxy-5-methyl-3-(1-methylethyl)phenyl]ethanone

[35158-31-7]

 $C_{12}H_{16}O_2$ mol.wt. 192.26

Synthesis

- Preparation by reaction of ethyl acetoacetate with 2,5-di-methyl-2-hexenal in the presence of pyridine and piperidine as catalysts in refluxing benzene [2958–2960].

yellow oil [2958–2960]; b.p._{1,2} 70–80° [2958–2960];

IR [2958–2960], UV [2958–2960], MS [2958–2960].

1-[2-Hydroxy-6-methyl-3-(1-methylethyl)phenyl]ethanone

[105337-34-6]

 $C_{12}H_{16}O_2$ mol.wt. 192.26

Syntheses

- Preparation by reaction of acetic acid on thymol with aluminium chloride at reflux (80%) [3362].
- Preparation by Fries rearrangement of thymyl acetate,
 - without solvent at 120° with titanium tetrachloride (90%) [2948], with aluminium chloride (84–86%) [2947,2948], with stannic chloride (84%) [2948] or with zinc chloride (62%) [2948];
 - with aluminium chloride in nitrobenzene (68%) [2947], in toluene or xylene (59–60%) [2947].
- Also obtained by photo-Fries rearrangement of thymyl acetate in dilute methanol under nitrogen atmosphere at r.t. (48%) [2963].

viscous oil [2963]; b.p.₁₂ 119° [3362];
¹H NMR [2963], ¹³C NMR [2963], IR [2963], MS [2963].

1-[4-Hydroxy-2-methyl-3-(1-methylethyl)phenyl]ethanone

C₁₂H₁₆O₂ mol.wt. 192.26

Syntheses

– Preparation by demethylation of 4-methoxy-2-methyl-3-isopropylacetophenone with boiling pyridinium chloride (33%) [3224].

– Also obtained by Fries rearrangement of 3-methyl-2-isopropylphenyl acetate with aluminium chloride in nitrobenzene at r.t. (10%) [3224].

m.p. 128° [3224].

1-[4-hydroxy-2-methyl-5-(1-methylethyl)phenyl]ethanone

[37847-35-1]

C₁₂H₁₆O₂ mol.wt. 192.26

Syntheses

– Preparation by reaction of acetyl chloride on thymol, with aluminium chloride, in nitrobenzene [2309,2662,3363–3366], (97–100%) [2662,3363,3364], (75%) [2151] or with zinc chloride [2310,2311].

- Preparation by Fries rearrangement of thymyl acetate in nitrobenzene,
 - with aluminium chloride, at 40–47° (87–95%) [2082,2151,3367–3369], (65–75%) [2086], (51–55%) [3370] or at 20–25° (80–87%) [2151,2948];
 - at 25°, with titanium tetrachloride (88%), stannic chloride (78%) or zinc chloride (58%) [2948].
- Preparation from 4-methoxy-2-methyl-5-isopropylacetophenone by demethylation with pyridinium chloride at reflux (73–75%) [2542,3371,3372].
- Also obtained (by-product) by reaction of aluminium chloride on p-thymyl acetate without solvent at 140° (15%) [3373].
- Also obtained by UV light irradiation of thymyl acetate in methanol at 25° (41%) [2315].
- Also obtained (by-product) by reaction of acetyl chloride on 5-methyl-2-isopropylanisole with aluminium chloride in carbon disulfide at r.t. (6%) [3372].
- Also obtained by irradiation of thymyl acetate in methanol at 254 nm under nitrogen atmosphere at r.t. (24%) [2963].

m.p. 152–154° [2963], 135° [2315], 125° [2082,2151,2309,2662,3370–3372],

122°5–125° [3367,3369], 122°5 [3373], 122° [3368]. There is a discrepancy between the different melting points indicated in literature.

b.p.₁₈ 204–207° [3371], b.p._{0.8} 204–207° [3372];

¹H NMR [2315,2963,3368],

¹³C NMR [2963], IR [2315,2963,3368], MS [2963,3368].

1-[4-Hydroxy-3-methyl-2-(1-methylethyl)phenyl]ethanone[61405-65-0] $C_{12}H_{16}O_2$ mol.wt. 192.26

Synthesis

– Refer to: [3374] (Japanese patent).

1-[4-Hydroxy-3-methyl-5-(1-methylethyl)phenyl]ethanone[713-23-5] $C_{12}H_{16}O_2$ mol.wt. 192.26

Synthesis

– Refer to: [3375] (Japanese patent).

1-[4-Hydroxy-5-methyl-2-(1-methylethyl)phenyl]ethanone[37847-37-3] $C_{12}H_{16}O_2$ mol.wt. 192.26

Syntheses

- Preparation by reaction of acetyl chloride on carvacrol with aluminium chloride in nitrobenzene,
 - at r.t. [2662,3224,3327,3376,3377], (71%) [2662], (52%) [3377] and (31–39%) [3327,3376];
 - at 50° (80–90%) [3378].
- Preparation by Fries rearrangement of 2-methyl-5-isopropylphenyl acetate in nitrobenzene at r.t.,
 - with aluminium chloride (84–90%) [2151,2948], (20%) [3327];
 - with stannic chloride or titanium tetrachloride (86%) [2948];
 - with zinc chloride (58%) [2948].
- Preparation by reaction of pyridinium chloride on 4-methoxy-5-methyl-2-isopropylacetophenone [3224].
- Also obtained by irradiation of carvacryl acetate in methanol at 254 nm under nitrogen atmosphere at r.t. (15%) [2963].

m.p. 127° [3327], 120° [2151,3378], 101° [2662,3376], 86–88° [2963].

There is a discrepancy between the different melting points indicated in literature.

 1H NMR [2963], ^{13}C NMR [2963], IR [2963], MS [2963].

1-[5-Hydroxy-2-methyl-4-(1-methylethyl)phenyl]ethanone

[126570-37-4]

 $C_{12}H_{16}O_2$ mol.wt. 192.26

Synthesis

– Preparation by reaction of acetyl chloride with isothymol methyl ether in the presence of aluminium chloride in nitrobenzene at r.t. [3368].

m.p. 106–107° [3368]; 1H NMR [3368], IR [3368].

1-[6-Hydroxy-2-methyl-3-(1-methylethyl)phenyl]ethanone

[105337-35-7]

 $C_{12}H_{16}O_2$ mol.wt. 192.26

Syntheses

– Preparation by reaction of aluminium chloride on 3-tert-butyl-2-hydroxy-6-methyl-5-isopropylacetophenone in nitromethane at 20° (84%) [3360].

– Claimed to be prepared,

- by Fries rearrangement of 3-methyl-4-isopropylphenyl acetate with aluminium chloride, without solvent at 90° (85%) [3373] or at 125° (43%) [3341] and in nitrobenzene at 90° (>50%) [3373];
- by reaction of acetyl chloride on 3-methyl-4-isopropylanisole with aluminium chloride in boiling carbon disulfide (41%) [3361];
- by reaction of acetyl chloride on 3-methyl-4-isopropylphenetole with aluminium chloride in carbon disulfide at r.t. (37%) [3341];
- by heating 6-methoxy-2-methyl-3-isopropylacetophenone with pyridinium chloride at reflux [3361].

N.B.: All the results of references [3341,3361,3373] were erroneous. Only the first route was correct. The 1H NMR spectra confirms the above structure [3360].

m.p. 70° [3360]; amber-coloured liquid [3341,3361];

b.p.₁₄ 150° [3341], b.p.₁₉ 153–154° [3361]; $n_D^{20} = 1.5410$ [3341,3361];

1H NMR [3360] (Sadtler: standard n° 52739 M);

IR [3341,3360] (Sadtler: standard n° 79798 K);

UV [3360], MS [3360].

1-(2-Hydroxy-3-methyl-5-propylphenyl)ethanone $C_{12}H_{16}O_2$ mol.wt. 192.26

Syntheses

– Preparation by Fries rearrangement of 2-methyl-4-propyl-phenyl acetate with aluminium chloride without solvent at 100–110° [2957].

– Also obtained by reaction of aluminium chloride on 2-ethyl-6-methyl-4-propylphenyl acetate, with elimination of ethyl group (8%) [2957].

b.p.₁₂ 136° [2957].

1-(4-Hydroxy-2-methyl-5-propylphenyl)ethanoneC₁₂H₁₆O₂ mol.wt. 192.26

Synthesis

– Preparation by Fries rearrangement of 5-methyl-2-propyl-phenyl acetate with aluminium chloride in nitrobenzene at 20° (83%) [2151].

m.p. 113° [2151]; b.p.₁₈ 194° [2151].**1-(4-Hydroxy-3-methyl-5-propylphenyl)ethanone**C₁₂H₁₆O₂ mol.wt. 192.26

Syntheses

– Preparation by Fries rearrangement of 2-methyl-6-propyl-phenyl acetate with aluminium chloride without solvent at 130–140° [2957].

– Also obtained by reaction of aluminium chloride on 4-ethyl-2-methyl-6-propyl-phenyl acetate, with elimination of ethyl group (12%) [2957].

m.p. 101° [2957].

1-[2-Hydroxy-3-(1-methylpropyl)phenyl]ethanoneC₁₂H₁₆O₂ mol.wt. 192.26

Synthesis

– Obtained (poor yield) by reaction of acetyl chloride with a suspension of aluminium o-sec-butylphenoxide in benzene in the presence of aluminium chloride, first at r.t. for 12 h, then on a water bath for 2 h (11%) [2945].

m.p. 121° [2945].

N.B.: This o-hydroxyketone should be liquid. The authors probably intended to write b.p.₃ 121° instead of m.p. 121°. This b.p. would be in agreement with those of the other homologous o-hydroxyketones, that have been prepared by the authors [2945].

1-[2-Hydroxy-5-(1-methylpropyl)phenyl]ethanone[84942-39-2] C₁₂H₁₆O₂ mol.wt. 192.26

Syntheses

– Preparation by reaction of acetyl chloride with a suspension of aluminium p-sec-butylphenoxide in benzene in the presence of aluminium chloride, first at r.t. for 12 h, then on a water bath for 2 h (75%) [2945].

– Preparation by Fries rearrangement of 4-sec-butylphenyl acetate with aluminium chloride at 120° (84%) [1852].

b.p._{0,15} 86–87° [1852], b.p.₃ 115–119° [2945].

1-[4-Hydroxy-3-(1-methylpropyl)phenyl]ethanone $C_{12}H_{16}O_2$ mol.wt. 192.26

Synthesis

– Obtained (poor yield) by reaction of acetyl chloride with a suspension of aluminium *o*-sec-butylphenoxide in benzene in the presence of aluminium chloride, first at r.t. for 12 h, then on a water bath for 2 h (8%) [2945].

m.p. 123° [2945].

1-(2-Hydroxy-3,4,5,6-tetramethylphenyl)ethanone[118078-21-0] $C_{12}H_{16}O_2$ mol.wt. 192.26

Synthesis

– Preparation by acetylation of 2,3,4,5-tetramethylphenol [2025] according to [3379].

1-(2-Butoxy-6-hydroxyphenyl)ethanone[63438-68-6] $C_{12}H_{16}O_3$ mol.wt. 208.26

Synthesis

– Obtained by reaction of *n*-butyl iodide with 2,6-dihydroxyacetophenone in the presence of potassium carbonate in refluxing acetone (40%) [3242].

m.p. 59–60° [3242].

1-(4-Butoxy-2-hydroxyphenyl)ethanone[57221-60-0] $C_{12}H_{16}O_3$ mol.wt. 208.26

Synthesis

– Preparation by reaction of butyl iodide on resacetophenone with potassium hydroxide in boiling ethanol [2220,3002], (14%) [3002].

m.p. 43° [3002], 42° [2220].

1-(5-Butoxy-2-hydroxyphenyl)ethanone[152810-06-5] $C_{12}H_{16}O_3$ mol.wt. 208.26

Synthesis

– Refer to: [2227].

1-(3-Butyl-2,6-dihydroxyphenyl)ethanone[63411-82-5] $C_{12}H_{16}O_3$ mol.wt. 208.26

Synthesis

– Preparation from 2,6-dihydroxyacetophenone according to the method [3241], (70%) [3242].

m.p. 72–73° [3242].

1-(5-Butyl-2,4-dihydroxyphenyl)ethanone[81468-73-7] $C_{12}H_{16}O_3$ mol.wt. 208.26

Syntheses

– Preparation by reaction of acetonitrile on 4-n-butyl-resorcinol (Hoesch reaction) (80%) [2676].

– Preparation from 5-n-butyl-2,4-dimethoxyacetophenone by demethylation with boron tribromide in methylene chloride at r.t. (64%) [2671,2678,2679].

– Preparation by reaction of acetic acid on 4-n-butylresorcinol with zinc chloride (Nencki reaction) [1839,3018].

m.p. 95–96° [2676], 95° [1839].

1-(3,5-Diethyl-2,4-dihydroxyphenyl)ethanone $C_{12}H_{16}O_3$ mol.wt. 208.26

Synthesis

– Obtained by reaction of acetic acid with 2,4-diethyl-resorcinol in the presence of zinc chloride at 140° for 15 min (Nencki reaction) [3380].

m.p. 115° [3380].

1-(3,5-Diethyl-2,6-dihydroxyphenyl)ethanone[37467-65-5] $C_{12}H_{16}O_3$ mol.wt. 208.26

Synthesis

– Preparation by reaction of acetic anhydride with 4,6-diethyl-resorcinol in the presence of boron trifluoride–acetic acid complex for 2 h at 100° [2997].

m.p. 76–77° [2997].

1-[2,5-Dihydroxy-6-methyl-3-(1-methylethyl)phenyl]ethanone $C_{12}H_{16}O_3$ mol.wt. 208.26**Synthesis**

– Obtained by reaction of acetyl chloride on 2-methyl-5-isopropylhydroquinone dimethyl ether with aluminium chloride in carbon disulfide at 35–40° (6%) [2542].

b.p.₁₇ 148–149° [2542].

1-[2,4-Dihydroxy-3-(1-methylpropyl)phenyl]ethanone

[79557-74-7]

 $C_{12}H_{16}O_3$ mol.wt. 208.26**Synthesis**

– Preparation by hydrogenation of 2,4-dihydroxy-3-(1-methyl-2-propenyl)acetophenone in ethanol using 5% Pd/C as catalyst [3184].

m.p. 174–175° [3184].

1-[3-(1,1-Dimethylethyl)-2,5-dihydroxyphenyl]ethanone

[35205-23-3]

 $C_{12}H_{16}O_3$ mol.wt. 208.26**Synthesis**

– Obtained (trace) by reaction of di-tert-butyl diperoxyoxalate with tert-butyl-1,4-benzoquinone in acetaldehyde; the solution was kept in the dark at r.t. (<1%) [3381].

m.p. 141–142° [3381];

¹H NMR [3381], IR [3381], UV [3381].

1-[3-(1,1-Dimethylethyl)-2,6-dihydroxyphenyl]ethanone

[91124-33-3]

 $C_{12}H_{16}O_3$ mol.wt. 208.26**Synthesis**

– Preparation by reaction of 2,6-dihydroxyacetophenone with tert-butanol in the presence of concentrated sulfuric acid in benzene at 55° in a sealed tube [3382].

m.p. 183–186° [3382]; ¹H NMR [3382].

1-[4-(1,1-Dimethylethyl)-2,5-dihydroxyphenyl]ethanone

[35205-24-4]

 $C_{12}H_{16}O_3$ mol.wt. 208.26

Syntheses

- Preparation by reaction of acetic acid with 2-tert-butyl-hydroquinone in the presence of boron trifluoride at 80–90° (65%) [3383].
- Preparation by demethylation of 4-tert-butyl-2,5-dimethoxy-acetophenone with boron tribromide in methylene chloride at r.t. (58%) [3384].
- Also obtained (trace) by reaction of di-tert-butyl diperoxyoxalate with tert-butyl-1,4-benzoquinone in acetaldehyde; the solution was kept in the dark at r.t. (<1%) [3381].
- Also refer to: [3251,3385].

m.p. 195–196°5 [3381], 193°5–195°5 [3384];

 1H NMR [3381,3384], IR [3381,3384], UV [3381], MS [3384].**1-[5-(1,1-Dimethylethyl)-2,3-dihydroxyphenyl]ethanone**

[84296-64-0]

 $C_{12}H_{16}O_3$ mol.wt. 208.26

Syntheses

- Obtained by irradiation of a benzene solution of 4-tert-butyl-o-benzoquinone in the presence of a large excess of acetaldehyde (20%) [3386].
- Also obtained by treatment of a benzene solution of 4-tert-butyl-o-benzoquinone and acetaldehyde in the presence of di-tert-butyl diperoxyoxalate at 38° (26%) [3386].

m.p. 82–83° [3386]; 1H NMR [3386], IR [3386].**1-[5-(1,1-Dimethylethyl)-2,4-dihydroxyphenyl]ethanone**

[140660-31-7]

 $C_{12}H_{16}O_3$ mol.wt. 208.26

Synthesis

- Preparation by reaction of tert-butyl alcohol with resacetophenone in the presence of zinc chloride at 95° (53%) [2671].

Oil [2671].

1-(6-Ethoxy-3-ethyl-2-hydroxyphenyl)ethanone

or

1-(2-Ethoxy-3-ethyl-6-hydroxyphenyl)ethanoneC₁₂H₁₆O₃ mol.wt. 208.26

Syntheses

– Obtained by partial ethylation of 2-acetyl-4-ethylresorcinol with diethyl sulfate in refluxing 2 N sodium hydroxide for 30 min [3015].

– Also obtained by ethylation of 2-acetyl-resorcinol [3015].

m.p. 84° [3015].

1-(2-Ethyl-3,6-dihydroxy-4,5-dimethylphenyl)ethanone

[396639-83-1]

C₁₂H₁₆O₃ mol.wt. 208.26

Synthesis

– Obtained by diethylcadmium alkylation of 5-acetyl-2,3-di-methylbenzoquinone (71%) [3387].

m.p. 76° [3387];

¹H NMR [3387], ¹³C NMR [3387].

1-[4-Hydroxy-3-methoxy-5-(1-methylethyl)phenyl]ethanone

[133393-99-4]

C₁₂H₁₆O₃ mol.wt. 208.26

Synthesis

– Preparation from guaiacol by acetylation and isopropylation [3388].

1-(2-Hydroxy-3-methoxy-5-propylphenyl)ethanone

[23343-03-5]

C₁₂H₁₆O₃ mol.wt. 208.26

Syntheses

– Preparation by partial demethylation of 2,3-dimethoxy-5-propylacetophenone with aluminium chloride in refluxing methylene chloride (67%) [3230].

– Preparation by catalytic hydrogenation of 5-allyl-2-hydroxy-3-methoxyacetophenone [3329,3330] in the presence of 5% palladium on barium sulfate (97%) [3330].

m.p. 18–19° [3330], 17–19° [3329]; b.p._{0.2} 105–120° [3230];

¹H NMR [3230,3329], IR [3329], UV [3329].

1-(2-Hydroxy-4-methoxy-3-propylphenyl)ethanone[72018-33-8] $C_{12}H_{16}O_3$ mol.wt. 208.26

Synthesis not yet described

– Refer to: [2326,2327].

N.B.: Pr indicates the *propyl* group $-C_3H_7$ in Chem. Abstr., **92**, 6368x (1980) and **98**, 54239b (1983), an usual abbreviation. However, in the two references [2326,2327], Pr represented the *prenyl* group $-CH_2CH=C(CH_3)_2$. Therefore they concern the 2-hydroxy-4-methoxy-3-prenylacetophenone and not the above mentioned 2-hydroxy-4-methoxy-3-propylacetophenone.

1-(2-Hydroxy-4-methoxy-5-propylphenyl)ethanone[72018-35-0] $C_{12}H_{16}O_3$ mol.wt. 208.26

Syntheses

– Preparation by reaction of dimethyl sulfate on 2,4-di-hydroxy-5-propylacetophenone with calcinated potassium carbonate in refluxing acetone [3018].

– Also refer to: [2326,2327].

N.B.: Pr indicates the *propyl* group $-C_3H_7$ in Chem. Abstr., **92**, 6368x (1980) and **98**, 54239b (1983), an usual abbreviation. However, in the two references [2326,2327], Pr represented the *prenyl* group $-CH_2CH=C(CH_3)_2$. 1-(5-Hydroxy-4-methoxy-2-propylphenyl)ethanone[23343-08-0] $C_{12}H_{16}O_3$ mol.wt. 208.26

Syntheses

– Preparation by Fries rearrangement of dihydroeugenol acetate with aluminium chloride in nitrobenzene at 5° (13%) [3329].

– Also refer to: [3393].

m.p. 68° [3329]; b.p.₁ 138° [3329]; ¹H NMR [3329], IR [3329], UV [3329].**1-(2-Butoxy-3,6-dihydroxyphenyl)ethanone**[33539-23-0] $C_{12}H_{16}O_4$ mol.wt. 224.26

Syntheses

– Easy preparation by reduction of 2-acetyl-3-butoxy-1,4-benzoquinone using conventional methods [2869].

– Also obtained in low yield by reaction of 2-acetyl-1,4-benzoquinone with an excess of butanol at r.t., with exclusion of light [2869].

m.p. 62°5–63°5 [2869]; ¹H NMR [2869], IR [2869].**1-(2,4-Diethoxy-6-hydroxyphenyl)ethanone**[26207-59-0] $C_{12}H_{16}O_4$ mol.wt. 224.26

Syntheses

– Obtained from phloroacetophenone triethyl ether by heating with aluminium chloride [3085].

– Also obtained by reaction of acetonitrile on phloroglucinol diethyl ether (Hoesch reaction) (18%) [3042].

– Also obtained by reaction of ethyl iodide [3394,3395] or diethyl sulfate [3396] on phloroacetophenone with potassium carbonate in refluxing acetone (18%) [3394].

Isolation from natural sources

– By treatment of Sotetsuflavone pentaethyl ether with a methanolic barium hydroxide suspension [3396]. Sotetsuflavone was extracted of the plants of Coniferae and allied orders.

- By reaction of Kayaflavone triethyl ether with barium hydroxide octahydrate in refluxing methanol (55%) [3397]. Kayaflavone was isolated from dried leaves of *Torreya nucifera*.

m.p. 86–87° [3394], 85° [3042,3085], 83–84° [3396], 81–83° [3397].

1-(2,6-Diethoxy-4-hydroxyphenyl)ethanone

$C_{12}H_{16}O_4$ mol.wt. 224.26

Synthesis

- Preparation by reaction of acetonitrile on phloroglucinol diethyl ether (Hoesch reaction) (29%) [3042].

m.p. 186–187° [3042].

1-(3,4-Diethoxy-2-hydroxyphenyl)ethanone

[6342-86-5]

$C_{12}H_{16}O_4$ mol.wt. 224.26

Syntheses

1-(3,6-Diethoxy-2-hydroxyphenyl)ethanone

[88771-47-5]

$C_{12}H_{16}O_4$ mol.wt. 224.26

Synthesis

- Preparation by hydrogenolysis procedure on 2-(benzyloxy)-3,6-diethoxyacetophenone with 10% Pd/C as catalyst, and ethanol as solvent at 40° (99%) [1884].

m.p. 64° [1884]; 1H NMR [1884], IR [1884].

1-(4,5-Diethoxy-2-hydroxyphenyl)ethanone

[80938-23-4]

$C_{12}H_{16}O_4$ mol.wt. 224.26

Syntheses

- Refer to: [3398,3399].

1-(3,5-Diethyl-2,4,6-trihydroxyphenyl)ethanone

[19687-48-0]

$C_{12}H_{16}O_4$ mol.wt. 224.26

Syntheses

- Preparation by reaction of acetyl chloride with 2,4-diethyl-phloroglucinol in the presence of aluminium chloride in nitrobenzene (28%) [3401].
- Preparation by reaction of acetonitrile on 2,4-diethyl-phloroglucinol (Hoesch reaction) (39%) [3402].

m.p. 106–109° [3401], 102–105° [3402];
¹H NMR [3401], UV [3401,3402], MS [3401].

1-[5-(1,1-Dimethylethyl)-2,3,4-trihydroxyphenyl]ethanone

$C_{12}H_{16}O_4$ mol.wt. 224.26

Synthesis

- Preparation by reaction of tert-butyl chloride with gallacetophenone in the presence of ferric chloride in acetic acid and heating on a steam bath (52%) [2268].

m.p. 174° [2268]; UV [2268].

1-(3-Ethyl-2-hydroxy-4,6-dimethoxyphenyl)ethanone

$C_{12}H_{16}O_4$ mol.wt. 224.26

Synthesis

- Preparation by reaction of acetonitrile on 2-ethyl-3,5-di-methoxyphenol (Hoesch reaction) [3277,3403], (55%) [3277].

m.p. 111° [3403], 66–68° [3277].

1-(3-Ethyl-4-hydroxy-2,6-dimethoxyphenyl)ethanone

$C_{12}H_{16}O_4$ mol.wt. 224.26

Synthesis

- Obtained (poor yield) by reaction of acetonitrile on 2-ethyl-3,5-dimethoxyphenol (Hoesch reaction) (7%) [3277].

m.p. 184–186° [3277].

1-(2-Hydroxy-4,6-dimethoxy-3,5-dimethylphenyl)ethanone

[21722-31-6]

$C_{12}H_{16}O_4$ mol.wt. 224.26

Syntheses

- Preparation by adding of an ethereal solution of diazomethane to a methanolic solution of phloroacetophenone (25%) [2437]; this compound was obtained from 3,5-dimethylphloroacetophenone or from 2,6-dihydroxy-4-methoxy-3,5-dimethylacetophenone in the same conditions [2437].
- Also obtained (by-product) from phloroacetophenone by reaction with methyl iodide in the presence of potassium carbonate in refluxing acetone (6%) [3279].

Isolation from natural sources

- By chromatography of *Melaleuca cajuputi* oil; this oil was obtained from the leaves of *Melaleuca cajuputi* Powell (Myrtaceae) (10%) [3118]. Crystalline compound [3118]; m.p. 51–52° [3279], 51° [2437]; ¹H NMR [2437,3118], IR [2437,3118], UV [2437,3118], MS [3118].

1-[2-Hydroxy-4-(2-hydroxybutoxy)phenyl]ethanone

[149454-53-5]

C₁₂H₁₆O₄ mol.wt. 224.26

Synthesis

- Obtained by reaction of resacetophenone with 1,2-butylene oxide in the presence of sodium hydroxide in ethanol [3289].

1-[2-Hydroxy-3-methoxy-5-(1-methylethoxy)phenyl]ethanoneC₁₂H₁₆O₄

mol.wt. 224.26

Synthesis

- Preparation by partial alkylation of 2,5-dihydroxy-3-methoxyacetophenone with isopropyl sulfate in alkaline medium (41%) [2848].

m.p. 70–72° [2848].

1-[2-Hydroxy-4-methoxy-6-(1-methylethoxy)phenyl]ethanone

[76554-78-4]

C₁₂H₁₆O₄

mol.wt. 224.26

Syntheses

- Preparation by partial demethylation of 2,4-dimethoxy-6-isopropoxyacetophenone with aluminium bromide in acetonitrile at 0° (95%) [2747].

- Also refer to: [3272].

m.p. 65–66° [2747].

1-[2-Hydroxy-6-methoxy-4-(1-methylethoxy)phenyl]ethanone

[119136-15-1]

C₁₂H₁₆O₄

mol.wt. 224.26

Synthesis

- Preparation by action of 2-bromopropane with 2,4-di-hydroxy-6-methoxyacetophenone in the presence of potassium carbonate in DMF for 2 h at 100–110° (87%) [2830].

m.p. 71–72° [2830]; ¹H NMR [2830], IR [2830], MS [2830].

1-(2-Hydroxy-4-methoxy-6-propoxyphenyl)ethanone[76554-77-3] $C_{12}H_{16}O_4$ mol.wt. 224.26

Synthesis

– Refer to: [3272].

1-(2-Hydroxy-6-methoxy-3-propoxyphenyl)ethanone[126405-77-4] $C_{12}H_{16}O_4$ mol.wt. 224.26

Synthesis

– Preparation by adding 2-hydroxy-3-iodo-6-methoxyacetophenone and cuprous iodide to a solution of sodium propoxide, previously prepared from propyl alcohol and sodium hydride in DMF [2524].

m.p. 90° [2524]; 1H NMR [2524], IR [2524].**1-[4-Hydroxy-3-[(1-methylethyl)sulfonyl]methyl]phenyl]ethanone**[56490-64-3] $C_{12}H_{16}O_4S$ mol.wt. 256.32

Synthesis

– Obtained by reaction of 3-chloromethyl-4-hydroxyacetophenone with magnesium isopropylsulfinate in refluxing dilute methanol for 18 h (83%) [2544].

m.p. 96°5–100° [2544].

1-[4-Hydroxy-3-[3-(methylsulfonyl)propyl]phenyl]ethanone[56490-61-0] $C_{12}H_{16}O_4S$ mol.wt. 256.32

Synthesis

– Obtained by Fries rearrangement of 2-(methylsulfonyl-propyl)phenyl acetate with aluminium chloride in nitrobenzene, first at r.t. for 1 h, then at 50–60° for 1.5 h (48%) [2544].

m.p. 140–141° [2544].

1-[4-Hydroxy-3-[(propylsulfonyl)methyl]phenyl]ethanone[56490-63-2] $C_{12}H_{16}O_4S$ mol.wt. 256.32

Synthesis

– Obtained by reaction of 3-chloromethyl-4-hydroxyacetophenone with magnesium propylsulfinate in refluxing aqueous methanol for 18 h (36%) [2544].

m.p. 73°5–76° [2544].

1-(2,4-Diethoxy-3,6-dihydroxyphenyl)ethanone

$C_{12}H_{16}O_5$ mol.wt. 240.26

Synthesis

– Preparation from 2,4-diethoxy-6-hydroxyacetophenone by persulfate oxidation [2851,3394,3395], (Elbs reaction) (21%) [3394].

m.p. 130–131° [3394].

1-[2,4-Dihydroxy-6-(4-hydroxybutoxy)phenyl]ethanone

[121379-45-1]

$C_{12}H_{16}O_5$ mol.wt. 240.26

Isolation from natural sources

– From the bulbs of *Dioscorea bulbifera* [3404].

1-[3,6-Dihydroxy-2-methoxy-4-(1-methylethoxy)phenyl]ethanone

[119136-16-2]

$C_{12}H_{16}O_5$ mol.wt. 240.26

Synthesis

– Preparation from 4-(allyloxy)-2-hydroxy-6-methoxyacetophenone by persulfate oxidation (Elbs reaction) (20%) [2830].

oil [2830]; 1H NMR [2830], IR [2830], MS [2830].

1-[2,4-Dihydroxy-6-(methoxymethoxy)-3,5-dimethylphenyl]ethanone

[175465-97-1]

$C_{12}H_{16}O_5$ mol.wt. 240.26

Synthesis

– Refer to: [3405] (Japanese patent).

1-(3-Ethoxy-2-hydroxy-4,6-dimethoxyphenyl)ethanone

[89880-47-7]

$C_{12}H_{16}O_5$ mol.wt. 240.26

Synthesis

– Obtained (by-product) by reaction of acetyl chloride with 1,2,3,5-tetramethoxybenzene in the presence of aluminium chloride in ethyl ether (9–12%) [3131,3302].

m.p. 74–75° [3131], 71°5–72°5 [3302];

1H NMR [3131,3302], IR [3131,3302], MS [3131].

1-(4-Ethoxy-2-hydroxy-3,6-dimethoxyphenyl)ethanoneC₁₂H₁₆O₅ mol.wt. 240.26

Synthesis

– Preparation by Friedel–Crafts acylation of 1,3-diethoxy-2,5-dimethoxybenzene with acetyl chloride in the presence of aluminium chloride in ether (81%) [3313].

m.p. 106–107° [3313].

1-(5-Ethoxy-2-hydroxy-3,4-dimethoxyphenyl)ethanone[69616-62-2] C₁₂H₁₆O₅ mol.wt. 240.26

Synthesis

– Preparation by reaction of ethyl iodide with 2,5-dihydroxy-3,4-dimethoxyacetophenone in the presence of potassium carbonate in refluxing acetone (57%) [2818].

oil [2818]; b.p._{0,1} 120° [2818];¹H NMR [2818], IR [2818].**1-(6-Ethoxy-2-hydroxy-3,4-dimethoxyphenyl)ethanone**C₁₂H₁₆O₅ mol.wt. 240.26

Synthesis

– Preparation by reaction of acetyl chloride on anti-arol ethyl ether with aluminium chloride [3406].

m.p. 97–98° [3406].

1-[6-Hydroxy-3-(2-hydroxyethyl)-2,4-dimethoxyphenyl]ethanone[34288-73-8] C₁₂H₁₆O₅ mol.wt. 240.26

Synthesis

– Obtained from 6-(2'-hydroxyethyl)-5,7-dimethoxy-2-methylchromanone by degradation with potassium hydroxide in refluxing ethanol under nitrogen (32%) [3407].

m.p. 133–134° [3407]; ¹H NMR [3407], UV [3407].**1-[2-Hydroxy-4-[(2-methoxyethoxy)methoxy]phenyl]ethanone**[123253-31-6] C₁₂H₁₆O₅ mol.wt. 240.26

Syntheses

– Preparation by reaction of 2-methoxyethoxy-methyl chloride with resacetophenone,

- in the presence of N,N-diisopropylethylamine, in DMF at 0° for 1.5 h (83%) [3408] or in methylene chloride at r.t. for 20 h (48%) [3409];
- in the presence of potassium carbonate in acetone for 20 h at 20° (65–70%) [3107];
- also obtained in two steps: first, by adding sodium hydride (11 mmol) to a solution of resacetophenone (10 mmol) in DMF during 15–30 min at 20°; then, addition of methoxyethoxymethyl chloride (10 mmol) to the mixture between 0° and 5° (80–85%) [3107].

Pasty solid [3409]; TLC [3107];

¹H NMR [3107,3408,3409], ¹³C NMR [3107,3408], IR [3107,3409], MS [3107,3408].

1-[3-Hydroxy-4-[(2-methoxyethoxy)methoxy]phenyl]ethanone

[101140-09-4]

C₁₂H₁₆O₅ mol.wt. 240.26

Synthesis

– Preparation by action of sodium methoxide with the crude 3-(benzoyloxy)-4-(2-methoxy-ethoxy)

methoxyacetophenone (SM) in THF at r.t. in a nitrogen atmosphere for 30 min (92%). SM was previously prepared from 3-(benzoyloxy)-4-hydroxyacetophenone by etherification with 2-methoxyethoxymethyl chloride in the presence of N,N-diisopropylethylamine in methylene chloride at r.t. [3410].

colourless oil [3410]; ¹H NMR [3410], IR [3410], MS [3410].

1-(4-Ethoxy-2,5-dihydroxy-3,6-dimethoxyphenyl)ethanone

C₁₂H₁₆O₆ mol.wt. 256.26

Synthesis

– Preparation from 2-hydroxy-4-ethoxy-3,6-dimethoxy-acetophenone by persulfate oxidation (Elbs reaction) (31%) [3313].

m.p. 73–74° [3313].

1-[6-Hydroxy-2,4-dimethoxy-3-(methoxymethoxy)phenyl]ethanone

[104481-00-7]

C₁₂H₁₆O₆ mol.wt. 256.26

Synthesis

– Obtained from 3,6-dihydroxy-2,4-dimethoxyacetophenone by methoxymethylation with chloromethyl methyl ether in the presence of diisopropylamine in methylene chloride [3411,3412].

1-[2-Hydroxy-4,6-bis(methoxymethoxy)phenyl]ethanone

[65490-09-7]

C₁₂H₁₆O₆ mol.wt. 256.26

Syntheses

– Obtained by reaction of methoxymethyl chloride with phloracetophenone in the presence of potassium carbonate,

- in acetone at r.t. for 2.5 h (47%) [3106];
- in refluxing acetone for 15 min (43%) [3413] or for 1 h (60%) [3294].

– Also refer to: [3414–3420].

m.p. 52° [3413], 45–46°5 [3106]; ¹H NMR [3106,3413], IR [3106,3413], UV [3413].

1-(2-Hydroxy-3,4,5,6-tetramethoxyphenyl)ethanone

[3162-28-5]

C₁₂H₁₆O₆ mol.wt. 256.26

Syntheses

– Obtained by partial demethylation of 2,3,4,5,6-pentamethoxyacetophenone (**I**),

- with boron trifluoride etherate in acetic acid at 80°. (**I**) was obtained by metallation of pentamethoxybenzene, followed by treatment of the intermediate aryllithium compound with acetic anhydride at r.t. (85% yield) [2564];
- with aluminium chloride in ethyl ether at r.t. for 3 h (21%) [3318];
- with aluminium chloride in acetonitrile for 6 h at 30° (75%) [2747].

– Also obtained by acylation of pentamethoxybenzene with acetyl chloride in the presence of aluminium chloride in ethyl ether [2770,2820,3323,3421], (25–34%) [2770,2820] or first for 14 h at r.t., then for 2 h at reflux (14%) [3323].

– Also obtained by adding a methanolic solution of 2,5-dihydroxy-3,4,6-trimethoxyacetophenone to an ethereal solution of diazomethane and keeping the mixture overnight in a refrigerator [3299,3307], (80%) [3299].

– Also refer to: [3422–3427].

Isolation from natural sources

– By alkaline degradation of two substituted flavones with potassium hydroxide in boiling aqueous ethanol for 17–20 h under nitrogen,

(a) From *Lucidin dimethyl ether* (5,6,7,8-tetramethoxy-3',4'-methylenedioxy flavone) (m.p. 171–172°) (SM) (60% yield) [3428]. SM was obtained from two origins:

– Isolation from ground root of *Lindera lucida* (Lauraceae).

– Also prepared by methylation of *Lucidin* (5,7-dihydroxy-6,8-dimethoxy-3',4'-methylenedioxy-flavone) (m.p. 255–257°), itself isolated from ground root of *Lindera lucida*.

(b) From 5,6,7,8-tetramethoxyflavone (m.p. 112–113°) (SM), [3429], (53% yield) [3428]. SM was also isolated from the above mentioned plant.

Yellow oil [3323,3421], light orange oil [3428], oil [2564], liquid [3299,3307]; b.p.₂ 115° [3299,3307], b.p._{0.2} 130° [3428], b.p.₁₄ 183° [2820], b.p.₁₅ 183° [3421]; ¹H NMR [3323,3429], IR [3323,3429], UV [3323,3428,3429].

1-[3-Amino-4-hydroxy-5-methyl-2-(1-methylethyl)phenyl]ethanone

C₁₂H₁₇NO₂ mol.wt. 207.27

Syntheses

- Preparation by reduction of 4-hydroxy-5-methyl-3-nitro-2-isopropylacetophenone,
 - with sodium hydrosulfite in aqueous sodium hydroxide solution at 80–90° (92%) [3327];
 - with tin in dilute hydrochloric acid (46%) [3327].

m.p. 100° [3327].

1-[3-Amino-4-hydroxy-5-methyl-2-(1-methylethyl)phenyl]ethanone (Hydrochloride)

C₁₂H₁₇NO₂, HCl mol.wt. 243.73

Synthesis

- Preparation by reaction of hydrochloric acid on 3-amino-4-hydroxy-5-methyl-2-isopropylacetophenone in ethyl ether [3327].

m.p. 199–200° (d) [3327].

1-[3-Amino-6-hydroxy-5-methyl-2-(1-methylethyl)phenyl]ethanone

C₁₂H₁₇NO₂ mol.wt. 207.27

Syntheses

- Preparation by reduction of 2-hydroxy-3-methyl-5-nitro-6-isopropylacetophenone,
 - with sodium hydrosulfite in aqueous sodium hydroxide solution (87%) [3326];
 - with tin in dilute hydrochloric acid (50%) [3326].

m.p. 117° [3326].

1-[3-[(Dimethylamino)methyl]-4-hydroxy-5-methylphenyl]ethanone

[82506-14-7]

C₁₂H₁₇NO₂ mol.wt. 207.27

Synthesis

- Preparation by aminomethylation of 4-hydroxy-3-methyl-acetophenone with dimethylamine and formalin in water at 35–40° for 4 h (64%) [3217].

m.p. 44° [3217]; ¹H NMR [3217], IR [3217].

1-[2-[(1,1-Dimethylethyl)amino]-5-hydroxyphenyl]ethanone[63609-62-1] $C_{12}H_{17}NO_2$ mol.wt. 207.27

Synthesis

– Obtained by UV irradiation of a solution of 3-methyl-N-tert-butylantranilium perchlorate (SM) in 10% aqueous acetonitrile (64%) [3430]. SM was prepared according to [3431].

yellow oil [3430]; TLC [3430];

 1H NMR [3430], ^{13}C NMR [3430], IR [3430], MS [3430].**1-[2,4-Dihydroxy-5-(3-methyl-3-buten-1-ynyl)phenyl]ethanone**[193333-25-4] $C_{13}H_{12}O_3$ mol.wt. 216.24

Synthesis

– Obtained (by-product) by reaction of boron tribromide (4 equiv.) with 2,4-bis(benzyloxy)-5-(3-hydroxy-3-methyl-butynyl)acetophenone in methylene chloride for 5 min at 0° (14%) [3432].

m.p. 110–112° [3432]; 1H NMR [3432].**1-[4-[(1,1-Dimethyl-2-propynyl)oxy]-2-hydroxy-3-iodophenyl]ethanone**[82538-73-6] $C_{13}H_{13}IO_3$ mol.wt. 344.15

Synthesis

– Preparation by reaction of 3-chloro-3-methylbut-1-yne with 2,4-dihydroxy-3-iodoacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone (65%) [2064].

m.p. 100–101° [2064]; 1H NMR [2064].**1-[4-Hydroxy-3-(3-methyl-1,3-butadienyl)phenyl]ethanone** $C_{13}H_{14}O_2$ mol.wt. 202.10

Isolation from natural sources

– From the roots of *Helianthella uniflora* (Heliantheae) [3433].

m.p. 137–138° [3433];

 1H NMR [3433], IR [3433], UV [3433], MS [3433].

1-[4-[(1,1-Dimethyl-2-propynyl)oxy]-2-hydroxyphenyl]ethanoneC₁₃H₁₄O₃ mol.wt. 218.25**Synthesis**

– Obtained by treatment of resacetophenone with 3-chloro-3-methylbutyne in DMF in the presence of potassium carbonate and potassium iodide for 12 h at 75° (29%) [3434].

m.p. 62°5 [3434]; ¹H NMR [3434], IR [3434].

1-[4-(Acetyloxy)-2-hydroxy-3-(2-propenyl)phenyl]ethanone

[149810-10-6]

C₁₃H₁₄O₄ mol.wt. 234.25**Synthesis**

– Preparation by reaction of acetyl chloride with 3-allyl-2,4-di-hydroxyacetophenone in the presence of triethylamine in methylene chloride for 1 h at 0° and at 10° for 30 min (62%) [2891].

m.p. 56–57° [2891]; ¹H NMR [2891], ¹³C NMR [2891], IR [2891].

1-[2,4-Dihydroxy-5-(3-hydroxy-3-methyl-1-butynyl)phenyl]ethanone

[193333-24-3]

C₁₃H₁₄O₄ mol.wt. 234.25**Synthesis**

– Obtained (by-product) by reaction of boron tribromide (4 equiv.) with 2,4-bis(benzyloxy)-5-(3-hydroxy-3-methyl-butynyl)acetophenone in methylene chloride for 5 min at 0° (18%) [3432].

m.p. 148–150° [3432]; ¹H NMR [3432].

1-[2,4-Dihydroxy-3-iodo-5-(3-methyl-2-butenyl)phenyl]ethanone

[82538-74-7]

C₁₃H₁₅IO₃ mol.wt. 346.16**Synthesis**

– Obtained by reaction of 2-methylbut-3-en-2-ol with 2,4-di-hydroxy-3-iodoacetophenone in the presence of boron trifluoride etherate in dioxane at 35–40° (15%) [2064].

m.p. 135–137° [2064]; ¹H NMR [2064].

1-[2-Hydroxy-3-(3-methyl-2-butenyl)phenyl]ethanone

[310402-63-2]

C₁₃H₁₆O₂ mol.wt. 204.27

Synthesis

– Refer to: [3435] (compound **76**).**1-[3-Hydroxy-2-(3-methyl-2-butenyl)phenyl]ethanone**

[154520-54-4]

C₁₃H₁₆O₂ mol.wt. 204.27

Isolation from natural sources

– From the aerial parts of *Helichrysum stoechas* (L.) grown in Libya [3436].**1-[4-Hydroxy-3-(3-methyl-1-butenyl)phenyl]ethanone**

[35816-89-8]

C₁₃H₁₆O₂ mol.wt. 204.27

Synthesis

– Preparation by migration of a C=C double bond in 4-hydroxy-3-(2-isopentenyl) acetophenone by treatment with potassium hydroxide in triethylene glycol (Triglykol) at 150° (70%) [3437] (allylic/propenylic rearrangement).

b.p.₁ 120° [3437]; ¹H NMR [3437].**1-[4-Hydroxy-3-(3-methyl-2-butenyl)phenyl]ethanone**

[26932-05-8]

C₁₃H₁₆O₂ mol.wt. 204.27

Syntheses

– Obtained by reaction of 2-methyl-3-buten-2-ol with 4-hydroxyacetophenone in the presence of boron trifluoride etherate [2060,3438], (15%) [3438].

– Preparation by thermal Claisen rearrangement of 4-(2,2-di-methylallyloxy)acetophenone in diethylaniline at 165° (79%) [3437].

Isolation from natural sources

- From the aerial parts of *Ophryosporus chilca* (Compositae, tribe Eupatorieae) [3439].
- From the roots of *Flourensia cernua* DC (Compositae) [3440].
- From *Artemis campestris* silbsp. glutinosa (Compositae) [3441].
- From *Senecio phylloleptus* Cuatr., *Senecio viridis* Phil. and *Senecio nutans* sch. Bip. (Asteraceae) native of northern Chile [3442].
- From *Senecio nutans* sch. Bip. [3443].

- From the aerial parts of *Stevia hyssopifolia* Phil. var. *hyssopifolia* [3444].
- From the aerial parts of *Baccharis santelicii* Phil. (Compositae, tribe Cistereae, subtribe Baccharidinae) [3433].
- From sliced yacon tubers after inoculation with the bacterium *Pseudomonas cichorii* and incubation at 20° for 3 days, then extraction with acetone. Yacon (*Polymnia sonchifolia*) (Compositae) is cultivated in South America and has recently been introduced into Japan [3445].
- From the aerial parts of *Helichrysum italicum* (Compositae) (major compound) [3446].
- From the aerial parts of *Helichrysum stoechas* (Compositae) [3447] (trace amounts) [3446].
- From the aerial parts of *Werneria poposa* [3448].
- From the roots of *Helianthella uniflora* (Compositae) [3433,3449].
- From the leaves of *Ageratina altissima* (L) K & K (Compositae) [3450].
- Also refer to: [3451].

1-[3-(2-Butenyl)-2-hydroxy-4-methoxyphenyl]ethanone

[91664-24-3]

C₁₃H₁₆O₃ mol.wt. 220.27

Synthesis

N.B.: In the paper [3325], the formula of the compound **13** displayed page 131, which is the formula of the titled compound C₁₃H₁₆O₃, is incomplete and erroneous. It actually deals with

another compound C₁₄H₁₈O₄, the 1-[3-(2-butenyl)-2-hydroxy-4,6-dimethoxyphenyl]ethanone, which is described in the experimental part. This is detailed just below the formula, page 131.

1-[2,4-Dihydroxy-3-(3-methyl-1-butenyl)phenyl]ethanone

[80190-95-0]

C₁₃H₁₆O₃ mol.wt. 220.27

Syntheses

– Obtained by reaction of 2-methylbut-3-en-2-ol with resacetophenone in the presence of boron trifluoride etherate [3452] according to the method [3453].

– Also refer to: [3454] (Chinese paper).

1-[2,4-Dihydroxy-3-(3-methyl-2-butenyl)phenyl]ethanone

[19825-40-2]

C₁₃H₁₆O₃ mol.wt. 220.27**Syntheses**

- Preparation by reaction of prenyl bromide on resacetophenone with potassium hydroxide solution at r.t. [3455–3457], (21–25%) [3455,3456].
- Preparation by reaction of 2-methylbut-3-en-2-ol with resacetophenone in the presence of boron trifluoride etherate in dioxane at r.t. [2326,3453,3458], (33%) [3458], (13%) [3453].
- Isoprenylation of resacetophenone with prenyl bromide by photochemical method in the presence of benzoyl peroxide in dry benzene for 8 h (40%) [3455].
- Preparation from 6-acetyl-3-phenylthio-2,2-dimethylchroman-5-ol,
 - by reaction with potassium naphthalenide in tetrahydrofuran at r.t. (59%) [3459] or by reaction with lithium naphthalenide in tetrahydrofuran at –32° for 30 min (38%) [3459];
 - by electrolysis using a mercury cathode, and acetonitrile-tetraethylammonium bromide electrolyte (49%) [3459].
- Also obtained by reaction of potassium naphthalenide with 6-acetyl-2,2-dimethyl-3-phenyl-sulfonylchroman-5-ol in tetrahydrofuran at r.t. (25%) [3459].

Isolation from natural sources

- By cleavage of isobavachin with alkali. The isobavachin is a flavonoid compound obtained from *Psoralea Corylifolia* Linn. [3460].

m.p. 162° [3457], 157–158° [3456], 155–156° [3453,3460], 149–151° [3459], 148° [3458];

¹H NMR [2326,2327,3457–3460], IR [3456–3458,3460], UV [2326,3456], MS [3459].

1-[2,4-Dihydroxy-5-(3-methyl-1-butenyl)phenyl]ethanone

[41347-54-0]

C₁₃H₁₆O₃ mol.wt. 220.27**Synthesis**

- Obtained by reaction of 2-methylbut-3-en-2-ol with resacetophenone in the presence of boron trifluoride etherate [3452] according to the method [3453].

1-[2,4-Dihydroxy-5-(3-methyl-2-butenyl)phenyl]ethanone

[28437-37-8]

 $C_{13}H_{16}O_3$ mol.wt. 220.27

Syntheses

- Preparation by reaction of 2-methylbut-3-en-2-ol with resacetophenone in the presence of boron trifluoride etherate [2326,3453,3458], (20–29%) [3437,3453].
 - Preparation from 2,4-dihydroxy-3-iodo-5-prenyl-acetophenone by elimination of iodine with zinc dust and concentrated hydrochloric acid in refluxing ethanol (79%) [2064].
 - Preparation by reaction of prenyl bromide with resacetophenone in potassium hydroxide solution at r.t. [3457].
- m.p. 146° [3457], 144–145° [2064,3453]; 1H NMR [2326,2327,3457], IR [3457], UV [2326].

1-[3,4-Dihydroxy-5-(3-methyl-2-butenyl)phenyl]ethanone

[186966-70-1]

 $C_{13}H_{16}O_3$ mol.wt. 220.27

Synthesis

- Obtained (poor yield) by rearrangement of 4-(dimethyl-allyloxy)-3-hydroxyacetophenone in the presence of montmorillonite KSF (<10%) [3461].

1-[4-Hydroxy-3-(3-hydroxy-3-methyl-1-butenyl)phenyl]ethanone

[35816-94-5]

[26931-61-3] (*E*) $C_{13}H_{16}O_3$ mol.wt. 220.27

Isolation from natural sources

- From the aerial parts of *Ophryosporus floribundus* (Compositae, tribe Eupatorieae) [3462].
 - From the leaves and the roots of *Ageratina altissima* (L.) K. et R. (Compositae) [3450].
- From the roots of *Helianthella uniflora* (tribe Heliantheae) [3433].
 1H NMR [3433], IR [3433], UV [3433], MS [3433].

1-[4-Hydroxy-3-(4-hydroxy-3-methyl-2-butenyl)phenyl]ethanone

[68034-24-2]

 $C_{13}H_{16}O_3$ mol.wt. 220.27

Isolation from natural sources

- From the aerial parts of *Artemisia campestris*, L., subsp. *glutinosa* (Gay ex Besser), Batt (Compositae) [3463].

1-[4-Hydroxy-3-(4-hydroxy-3-methyl-2-butenyl)phenyl]ethanone (E)

[73869-86-0]

C₁₃H₁₆O₃ mol.wt. 220.27**Synthesis**

– Obtained by alkaline hydrolysis of 3-[4-acetoxyisopent-2(*E*)-enyl]-4-hydroxyacetophenone (SM) (viscous oil) with 10% potassium hydroxide in methanol (quantitative yield) [3464]. SM was isolated from the *Artemisia campestris* L., subsp. *glutinosa* (Gay ex Besser), Batt.

Isolation from natural sources

- From the aerial parts of *Artemisia campestris* L., subsp. *glutinosa* (Gay ex Besser), Batt (Compositae), (1.1%) [3465], (11.2%) [3441].
- From *Artemisia monosperma* [3466].

m.p. 84–85° [3465];

¹H NMR [3441,3465], IR [3465], UV [3465], MS [3441,3465].**1-[4-Hydroxy-3-(4-hydroxy-3-methyl-2-butenyl)phenyl]ethanone (Z)**

[123614-13-1]

C₁₃H₁₆O₃ mol.wt. 220.27**Synthesis**

– Obtained by alkaline hydrolysis of 3-[4-acetoxyisopent-2(*Z*)-enyl]-4-hydroxyacetophenone (SM) (viscous oil) with 10% potassium hydroxide in methanol (quantitative yield) [3464]. SM was isolated from the *Artemisia campestris* L., subsp. *glutinosa* (Gay ex Besser), Batt.

Isolation from natural sources

- From the aerial parts of *Artemisia campestris* L., subsp. *glutinosa* (Gay ex Besser), Batt (Compositae) [3463], (44.8%) [3441].
- From *Artemisia monosperma* [3466].

Viscid oil [3441]; ¹H NMR [3441], IR [3441], UV [3441], MS [3441].**1-[2-Hydroxy-5-methoxy-4-methyl-3-(2-propenyl)phenyl]ethanone**

[43037-66-7]

C₁₃H₁₆O₃ mol.wt. 220.27**Synthesis**

– Preparation by thermal Claisen rearrangement of 2-(allyloxy)-5-methoxy-4-methylacetophenone in *N,N*-dimethylaniline at 170° (42%) [3467].

1-[2-Hydroxy-5-methoxy-6-methyl-3-(2-propenyl)phenyl]ethanone

[43037-68-9]

 $C_{13}H_{16}O_3$

mol.wt. 220.27

Synthesis

– Obtained by thermal Claisen rearrangement of 2-(allyloxy)-5-methoxy-4-methylacetophenone in *N,N*-dimethylaniline at 170°, with a [2368,,3466] shift of the aromatic acetyl substituent (22%) [3467].

1-[2-Hydroxy-4-[(3-methyl-2-butenyl)oxy]phenyl]ethanone

[24672-83-1]

 $C_{13}H_{16}O_3$

mol.wt. 220.27

Syntheses

– Preparation by reaction of prenyl bromide on resacetophenone [3468],

- in the presence of potassium carbonate in refluxing acetone [2326,3455,3456,3469], (69%) [3456], (40%) [3455];
- in the presence of potassium hydroxide in methanol, at 0° (14%) or at r.t. (4%) [3456];
- by photochemical method in the presence of benzoyl peroxide in dry benzene for 8 h (10%) [3455].

m.p. 46–47° [3456]; 1H NMR [2326,2327,3456], IR [3456], UV [2326,3456].

1-[3-Hydroxy-4-[(3-methyl-2-butenyl)oxy]phenyl]ethanone

[186966-69-8]

 $C_{13}H_{16}O_3$

mol.wt. 220.27

Synthesis

– Preparation by reaction of 3,3-dimethylallyl chloride (2.5 equiv.) with 4-acetylcatechol in the presence of sodium carbonate and catalytic amounts of TBAI in DMF at r.t. (73%) [3461].

1-[3-(Acetyloxy)-6-hydroxy-2,4,5-trimethylphenyl]ethanone

[66901-79-9]

 $C_{13}H_{16}O_4$

mol.wt. 236.27

Syntheses

- Preparation by reaction of boron trifluoride–acetic acid complex,
- with trimethylhydroquinone [2994,3249], (90%) [3249];
 - with trimethylhydroquinone diacetate in ethylene dichloride *via* a Fries rearrangement (99%) [3250].
- Also refer to: [3251].

m.p. 75° [2994]; ^{13}C NMR [3250].

1-[3-(2-Butenyl)-2,4-dihydroxy-6-methoxyphenyl]ethanone

[91664-22-1]

 $C_{13}H_{16}O_4$ mol.wt. 236.27

Synthesis

– Preparation by condensation of 2,4-dihydroxy-6-methoxyacetophenone with 1,3-butadiene in the presence of 85% orthophosphoric acid in xylene at 30–35° (37%) [3325].

m.p. 134–135° [3325]; 1H NMR [3325].**1-[3-(2-Butenyl)-4,6-dihydroxy-2-methoxyphenyl]ethanone**

[91664-23-2]

 $C_{13}H_{16}O_4$ mol.wt. 236.27

Synthesis

– Preparation by condensation of 2,4-dihydroxy-6-methoxyacetophenone with 1,3-butadiene in the presence of 85% orthophosphoric acid in xylene at 30–35° (41%) [3325].

m.p. 128–129° [3325]; 1H NMR [3325].**1-[2,4-Dihydroxy-6-methoxy-3-(1-methyl-2-propenyl)phenyl]ethanone**

[91664-20-9]

 $C_{13}H_{16}O_4$ mol.wt. 236.27

Synthesis

– Obtained, or else its isomer (see below), (by-product) by condensation of 2,4-dihydroxy-6-methoxyacetophenone with 1,3-butadiene in the presence of 85% orthophosphoric acid in xylene at 30–35° (7%) [3325].

m.p. 130–140° [3325]; 1H NMR [3325].**1-[4,6-Dihydroxy-2-methoxy-3-(1-methyl-2-propenyl)phenyl]ethanone**

[91664-21-0]

 $C_{13}H_{16}O_4$ mol.wt. 236.27

Synthesis

– Obtained, or else its isomer (see above), (by-product) by condensation of 2,4-dihydroxy-6-methoxyacetophenone with 1,3-butadiene in the presence of 85% orthophosphoric acid in xylene at 30–35° (7%) [3325].

m.p. 130–140° [3325]; 1H NMR [3325].

1-[2-Hydroxy-3,4-dimethoxy-5-(2-propenyl)phenyl]ethanone

[75254-93-2]

 $C_{13}H_{16}O_4$ mol.wt. 236.27

Synthesis

– Preparation by thermal Claisen rearrangement of 2-(allyloxy)-3,4-dimethoxyacetophenone without solvent at 190–200° [3470].

1-[2-Hydroxy-4,6-dimethoxy-3-(2-propenyl)phenyl]ethanone

[35109-98-9]

 $C_{13}H_{16}O_4$ mol.wt. 236.27

Synthesis

– Preparation by thermal Claisen rearrangement of 2-(allyloxy)-4,6-dimethoxyacetophenone in refluxing N,N-dimethylaniline (90%) [3078].

m.p. 85–87° [3078]; 1H NMR [3078], IR [3078].

1-[3-Hydroxy-4,6-dimethoxy-2-(2-propenyl)phenyl]ethanone

[100612-87-1]

 $C_{13}H_{16}O_4$ mol.wt. 236.27

Syntheses

– Preparation by thermal Claisen rearrangement of 5-(allyloxy)-2,4-dimethoxyacetophenone,

- in boiling quinoline (65%) [2849];

- in glycerol at 200° (87%) [2849];

- by pyrolysis at 160° for 2 h under nitrogen [3471].

– Preparation by reaction of methyl iodide on 2-allyl-3,6-dihydroxy-4-methoxyacetophenone with potassium carbonate in acetone (41%) [2849].

m.p. 110° [2849].

1-[2-Hydroxy-4-[(tetrahydro-2H-pyran-2-yl)oxy]phenyl]ethanone

[111841-07-7]

 $C_{13}H_{16}O_4$ mol.wt. 236.27

Syntheses

– Obtained by reaction of 2,3-dihydropyran with resacetophenone in the presence of concentrated hydrochloric acid (some drops) at r.t. overnight (33%) [3472]. In later runs, p-toluene-sulfonic acid was used as catalyst.

– Also refer to: [3473].

m.p. 76–78° [3472].

1-[2-Hydroxy-6-[(tetrahydro-2H-pyran-2-yl)oxy]phenyl]ethanone[63854-17-1] $C_{13}H_{16}O_4$ mol.wt. 236.27

Syntheses

- Obtained by reaction of 2,3-dihydropyran with 2,6-dihydroxyacetophenone in the presence of p-toluenesulfonic acid in dioxane at r.t. for 3 h (64%) [3474] or for 20 h (69%) [2368].
- Also refer to: [3473].

Pale yellow crystals [3474];

 1H NMR [2368,3474], ^{13}C NMR [2368,3474], MS [3474].**1-[2,3,4-Trihydroxy-5-(3-methyl-2-butenyl)phenyl]ethanone**[35817-18-6] $C_{13}H_{16}O_4$ mol.wt. 236.27

Synthesis

- Obtained by reaction of 2-methyl-3-buten-2-ol with gallacetophenone in the presence of boron trifluoride etherate in dioxane [3437,3438] at 50–60° (21%) [3438].

m.p. 74–75° [3438]; 1H NMR [3438], IR [3438], UV [3438].**1-[2,3,4-Trihydroxy-6-(3-methyl-2-butenyl)phenyl]ethanone**[149876-26-6] $C_{13}H_{16}O_4$ mol.wt. 236.27

Synthesis

- **N.B.:** The titled ketone is mentioned in Chem. Abstr. Vol. **119**, 1993-FORMULA INDEX, p. 1525F under the reference 172870a. However, the original publication [3475] obtained from this reference does not include

the expected ketone. This publication [3475] concerns only an isomeric ketone, the 1-[2,3,4-tri-hydroxy-5-(3-methyl-2-butenyl)phenyl]ethanone [35817-18-6] already described [2018], p. 240.

1-[2,4,6-Trihydroxy-3-(3-methyl-2-butenyl)phenyl]ethanone[27364-71-2] $C_{13}H_{16}O_4$ mol.wt. 236.27

Syntheses

- Preparation from 2,4-dihydroxy-6-methoxy-5-iso-pentenylacetophenone (*Acronylin*) by demethylation with aluminium chloride in refluxing benzene [3476].
- Also obtained by reaction of 2-methylbut-3-en-2-ol with phloroacetophenone in the presence of boron trifluoride etherate in dioxane at 20° (10%) [3477].

- Also obtained by reaction of prenyl bromide with phloroacetophenone in solution of methanol in the presence of potassium hydroxide (26%) [3117] or sodium methoxide at r.t. (5%) [2878].

m.p. 182° [3476], 172° [2878,3117], 171–173° [3477], 169–171° [2879];
¹H NMR [2879,3476], UV [3477].

1-[2,4-Dihydroxy-6-[(tetrahydro-2H-pyran-2-yl)oxy]phenyl]ethanone

[136257-86-8]

C₁₃H₁₆O₅ mol.wt. 252.27

Syntheses

- Preparation by reaction of 3,4-dihydro-2H-pyran,
- on phloroacetophenone with p-toluenesulfonic acid in dioxane at r.t. (10%) [2368];
 - on 4-acetoxy-2,6-dihydroxyacetophenone with p-toluenesulfonic acid in dioxane (32–49%) [2368].

White solid [2368]; ¹H NMR [2368], ¹³C NMR [2368].

1-[2,6-Dihydroxy-4-[(tetrahydro-2H-pyran-2-yl)oxy]phenyl]ethanone

[136257-85-7]

C₁₃H₁₆O₅ mol.wt. 252.27

Syntheses

- Obtained by reaction of 3,4-dihydro-2H-pyran,
- on phloroacetophenone with p-toluenesulfonic acid in dioxane at r.t. (20%) [2368];
 - on 4-acetoxy-2,6-dihydroxyacetophenone with p-toluene sulfonic acid in dioxane (8–11%) [2368].

White solid [2368]; ¹H NMR [2368], ¹³C NMR [2368].

1-[2-Hydroxy-5-methoxy-3-(2-methyl-1,3-dioxolan-2-yl)phenyl]ethanone

[103867-85-2]

C₁₃H₁₆O₅ mol.wt. 252.27

Synthesis

- Preparation by UV light irradiation of ethylene acetal of 2-acetoxy-5-methoxyacetophenone with potassium carbonate in hexane (85%) [3334].

1-[2-Hydroxy-6-methoxy-3-(2-methyl-1,3-dioxolan-2-yl)phenyl]ethanone

[103867-86-3]

C₁₃H₁₆O₅ mol.wt. 252.27

Synthesis

- Preparation by UV light irradiation of ethylene acetal of 2-acetoxy-4-methoxyacetophenone with potassium carbonate in hexane (52%) [3334].

m.p. 120–123° [3334]; ¹H NMR [3334], IR [3334].

1-[2,4,6-Trihydroxy-3-(tetrahydro-2H-pyran-2-yl)phenyl]ethanone $C_{13}H_{16}O_5$ mol.wt. 252.27

Synthesis

– Obtained by reaction of 3,4-dihydro-2H-pyran on phloroacetophenone with p-toluenesulfonic acid in dioxane at r.t. (21%) [2368].

 1H NMR [2368], ^{13}C NMR [2368].**1-[2-Hydroxy-4-(β -D-xylopyranosyloxy)phenyl]ethanone**[54918-29-5] $C_{13}H_{16}O_7$ mol.wt. 284.14

Synthesis

– Preparation by reaction of sodium on 2',4'-dihydroxyacetophenone-4'- β -tri-O-acetyl-D-xylopyranoside in methanol (66%) [1936].

m.p. 204–205° [1936];

 $(\alpha)_D^{17} = -70^\circ$ (0.4%, THF) [1936].**1-[2-[(5-Bromopentyl)oxy]-6-hydroxyphenyl]ethanone**[28862-10-4] $C_{13}H_{17}BrO_3$ mol.wt. 301.18

Synthesis

– Preparation by reaction of 1,5-dibromopentane with 2,6-dihydroxyacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone [2270].

m.p. 35–36° [2270].

1-[3-Bromo-5-(1,1-dimethylethyl)-2-hydroxy-4-methoxyphenyl]ethanone[127371-47-5] $C_{13}H_{17}BrO_3$ mol.wt. 301.18

Synthesis

– Refer to: [3478] (patent).

1-[4-[(5-Bromopentyl)oxy]-2-hydroxyphenyl]ethanone[40785-72-6] $C_{13}H_{17}BrO_3$ mol.wt. 301.18

Synthesis

– Preparation by reaction of 1,5-dibromopentane with resacetophenone in the presence of potassium carbonate and potassium iodide in refluxing acetone (34%) [2270].

m.p. 64–66° [2270].

1-[4-(3-Bromopropoxy)-5-ethyl-2-hydroxyphenyl]ethanone

[117706-55-5]

 $C_{13}H_{17}BrO_3$ mol.wt. 301.18

Synthesis

– Preparation by reaction of 3-bromopropyl bromide on 5-ethyl-2,4-dihydroxyacetophenone with potassium carbonate and potassium iodide, at reflux (80%) [2678,2679].

m.p. 126–127° [2678,2679]; 1H NMR [2678,2679].**1-[3-Butyl-4-(chloromethyl)-2-hydroxyphenyl]ethanone**

[107223-43-8]

 $C_{13}H_{17}ClO_2$ mol.wt. 240.73

Synthesis

– Preparation by reaction of ethyl chloroformate with 3-n-butyl-4-(dimethylaminomethyl)-2-hydroxyacetophenone in toluene (78%) [2550].

m.p. 42–44° [2550].

1-[4-(Chloromethyl)-2-hydroxy-3-(2-methylpropyl)phenyl]ethanone

[97582-41-7]

 $C_{13}H_{17}ClO_2$ mol.wt. 240.73

Synthesis

– Preparation by reaction of ethyl chloroformate with 3-iso-butyl-4-(dimethylaminomethyl)-2-hydroxyacetophenone in toluene [2550,2927], (42%) [2550].

Oil [2550]; 1H NMR [2927], IR [2927].**1-[4-(2-Chloroethoxy)-2-hydroxy-3-propylphenyl]ethanone**

[104074-07-9]

 $C_{13}H_{17}ClO_3$ mol.wt. 256.73

Synthesis

– Preparation by action of 2-chloroethyl p-toluenesulfonate with 2,4-dihydroxy-3-propylacetophenone in the presence of potassium carbonate and potassium iodide in boiling acetone for 16 h (36%) [3479].

m.p. 72–73° [3479]; 1H NMR [3479].

1-[4-Hydroxy-3-(1-pyrrolidinylmethyl)phenyl]ethanoneC₁₃H₁₇NO₂ mol.wt. 219.28

Synthesis

– Preparation by reaction of 4-hydroxyacetophenone with formaldehyde and pyrrolidine in 75% ethanol at r.t. (60%) [3480] (Mannich reaction).

m.p. 97–98° [3480].

1-[4-Hydroxy-3-(1-pyrrolidinylmethyl)phenyl]ethanone (Hydrochloride)C₁₃H₁₇NO₂, HCl mol.wt. 255.74

Synthesis

– Preparation from 4-hydroxy-3-(1-pyrrolidinylmethyl)-acetophenone [3480].

m.p. 202–203° [3480].

1-[4-(3-Azidopropoxy)-5-ethyl-2-hydroxyphenyl]ethanone

[117706-26-0]

C₁₃H₁₇N₃O₃ mol.wt. 263.30

Synthesis

– Preparation by reaction of sodium azide with 4-(3-bromo-propoxy)-5-ethyl-2-hydroxyacetophenone in DMF at r.t. [2678,2679].

¹H NMR [2678,2679], MS [2678,2679].**1-(5-Butyl-2-hydroxy-3-methylphenyl)ethanone**C₁₃H₁₈O₂ mol.wt. 206.28

Synthesis

– Preparation by Fries rearrangement of 4-butyl-2-methyl-phenyl acetate with aluminium chloride without solvent at 100–110° (64%) [2957].

b.p.₁₂ 152–154° [2957].**1-(2,3-Diethyl-6-hydroxy-4-methylphenyl)ethanone**

[27193-00-6]

C₁₃H₁₈O₂ mol.wt. 206.28

Synthesis

– Obtained via pyrolysis of 7,8-diethyl-1,3-dimethyl-2-oxabicyclo [4.2.0] octa-3,7-dien-5-one (2,6-dimethyl-4-pyrone - Hexyne-3 - Adduct) in refluxing o-dichloro-benzene [3237].

IR [3237], UV [3237], MS [3237].

1-(2,5-Diethyl-6-hydroxy-3-methylphenyl)ethanoneC₁₃H₁₈O₂ mol.wt. 206.28

Synthesis

– Obtained (small amounts) by Fries rearrangement of 2,5-diethyl-4-methylphenyl acetate with aluminium chloride without solvent at 130° [2956].

1-(3,4-Diethyl-2-hydroxy-5-methylphenyl)ethanoneC₁₃H₁₈O₂ mol.wt. 206.28

Syntheses

– Obtained by heating some esters with aluminium chloride. There is simultaneously displacement and rearrangement of alkyl groups during the Fries reaction,

- 2,4-diethyl-5-methylphenyl acetate (65%) [2233];
- 2,5-diethyl-4-methylphenyl acetate (at 130°) (60%) [2956];
- 2,6-diethyl-4-methylphenyl acetate (60%) [2233].

b.p.₁₂ 136–137° [2233], b.p.₁₁ 143–145° [2233], b.p.₁₅ 154–162° [2956].

1-(4,5-Diethyl-2-hydroxy-3-methylphenyl)ethanoneC₁₃H₁₈O₂ mol.wt. 206.28

Synthesis

– Obtained by heating 2,4-diethyl-6-methylphenyl acetate with aluminium chloride at high temperature. In this reaction, a migration of an ethyl group occurs [2233].

m.p. 50–51° [2233].

1-[3,4-Dimethyl-2-hydroxy-5-(1-methylethyl)phenyl]ethanoneC₁₃H₁₈O₂ mol.wt. 206.28

Synthesis
