

– Refer to: [7799].

Note: MNDO heat of formation [7799].

1-(3-Hydroxy-2-naphthalenyl)-1-propanone

[91902-70-4] C₁₃H₁₂O₂ mol.wt. 200.24

– Refer to: [7799].

Note: MNDO heat of formation [7799].

1-(4-Hydroxy-1-naphthalenyl)-1-propanone

[133181-63-2] C₁₃H₁₂O₂ mol.wt. 200.24

– Preparation from 4-methoxy-1-propionyl-naphthalene with boiling pyridinium chloride for 30 min [6667] or by heating at 240–250° for 1 h in a sealed tube (55%) [7770].

- Also obtained by reaction of propionic acid with α -naphthol,
 - in the presence of boron trifluoride at r.t. (20%) [7639], (10%) [7776];
 - in the presence of polyphosphoric acid at 100° for 15 min (1%) [7777].
- Also obtained by Fries rearrangement of 1-naphthyl propionate with aluminium chloride (4%) [7768], at 100° for 2 h, then at 120° for 1 h (6%) [7769] or in nitrobenzene at r.t. (23%) [7800].
- Also obtained by reaction of propionyl chloride with α -naphthol in the presence of zinc chloride in nitrobenzene (43%) [7756].
- Also obtained by heating 1-hydroxy-4-propionyl-2-naphthoic acid at >205° for 30 min [7767]. There is a carboxyl group elimination.

m.p. 190° [7776], 189° [7770], 188–189° [7769,7800], 187° [6667,7639], 185° [7777].

1-(5-Hydroxy-1-naphthalenyl)-1-propanone

[91307-45-8] $C_{13}H_{12}O_2$ mol.wt. 200.24

Synthesis

– Refer to: [7801].

1-(6-Hydroxy-1-naphthalenyl)-1-propanone

[175226-45-6] $C_{13}H_{12}O_2$ mol.wt. 200.24

Synthesis

– Refer to: [7799].

Note: MNDO heat of formation [7799].

1-(6-Hydroxy-2-naphthalenyl)-1-propanone

[33828-92-1] $C_{13}H_{12}O_2$ mol.wt. 200.24

Syntheses

- Preparation by treatment of 6-propionylnerolin (2-methoxy-6-propionyl-naphthalene) with boiling pyridinium chloride for 20 min (86%) [6667].
- Preparation by Fries rearrangement of 2-naphthyl propionate [7802] using hydrogen fluoride as catalyst [7803].
- Also refer to: [7804–7809].

m.p. 164° [6667]; MNDO heat of formation [7799].

1-(7-Hydroxy-1-naphthalenyl)-1-propanone[175226-47-8] $C_{13}H_{12}O_2$ mol.wt. 200.24

Synthesis

– Refer to: [7799].

Note: MNDO heat of formation [7799].**1-(7-Hydroxy-2-naphthalenyl)-1-propanone**[175226-46-7] $C_{13}H_{12}O_2$ mol.wt. 200.24

Synthesis

– Refer to: [7799].

Note: MNDO heat of formation [7799].**1-(8-Hydroxy-1-naphthalenyl)-1-propanone**[131421-22-2] $C_{13}H_{12}O_2$ mol.wt. 200.24

Syntheses

– Obtained by adding dropwise, at -78° under nitrogen, a solution of ethylmagnesium bromide in ethyl ether to a solution of 2*H*-naphtho[1,8-*bc*]furan-2-one (m.p. $99-101^\circ$) [7810] in THF over a period of 3 h. After heating the mixture to 0° , a saturated aqueous ammonium chloride solution was added (33%) [7811].

– Also refer to: [7812].

m.p. $114-117^\circ$ [7811]; 1H NMR [7811].**1-(1,4-Dihydroxy-2-naphthalenyl)-1-propanone**[75859-15-3] $C_{13}H_{12}O_3$ mol.wt. 216.24

Syntheses

– Obtained by demethylation of the corresponding 4-methyl ether with concentrated hydrobromic acid in acetic acid [7813].

– Also obtained by thermal reaction of 2-propionyl-1,4-naphthoquinone with allyltrimethylstannane in benzene under argon atmosphere (7%) [7814].

– Also obtained by photochemical reaction (409–429 nm) between 1,4-naphthoquinone and propionaldehyde, in benzene at r.t. for 5 days [7815] under argon (79%) [7816] according to the procedure [7817].

m.p. $186-188^\circ$ [7815], $182-184^\circ$ [7814]; 1H NMR [7814–7816], ^{13}C NMR [7816],

IR [7814–7816], MS [7814,7816].

1-(1,8-Dihydroxy-2-naphthalenyl)-1-propanone
 $C_{13}H_{12}O_3$ mol.wt. 216.24
Syntheses

- Obtained by reaction of propionic acid with 1,8-dihydroxy-naphthalene in the presence of zinc chloride at 145–150° [7818].
 - Also obtained by reaction of zinc chloride with 1,8-di-hydroxynaphthalene dipropionate in nitrobenzene at 140–150° [7819].
- m.p. 101–102° [7818].

1-(3,4-Dihydroxy-2-naphthalenyl)-1-propanone

[61983-10-6]

 $C_{13}H_{12}O_3$ mol.wt. 216.24
**Syntheses**

- Obtained by irradiation of 1,2-naphthoquinone and propionaldehyde,
 - in acetonitrile-benzene by UV in the presence of magnesium perchlorate (29%) [7820];
 - in benzene by a 300 W high-pressure mercury arc lamp between 15° and 20° for 2–10 days [7761], (19%) [7762].
 - Also refer to: [7821].
- m.p. 129–130.5° [7762]; ¹H NMR [7762], IR [7762].

1-(6,7-Dihydroxy-2-naphthalenyl)-1-propanone

[144289-53-2]

 $C_{13}H_{12}O_3$ mol.wt. 216.24
**Synthesis**

- Obtained by total demethylation of its dimethyl ether (SM) with 1 M boron tribromide at 0°. SM was prepared by reaction of propionic anhydride with 2,3-dimethoxy-naphthalene in nitrobenzene at 0° in the presence of aluminium chloride [7822].

BIOLOGICAL ACTIVITY: As lipoxygenase inhibitor [7822].

1-(5,6,7,8-Tetrahydro-1-hydroxy-2-naphthalenyl)-1-propanone

[100612-28-0]

 $C_{13}H_{16}O_2$ mol.wt. 204.27

Syntheses

- Obtained by Fries rearrangement of 5,6,7,8-tetrahydro-1-naphthyl propionate (b.p.₁₂ 152°) with aluminium chloride in nitrobenzene, first at 0° for 2–3 h, then at r.t. for 15–17 h (68%) [7800].
- Also obtained by Friedel–Crafts acylation of 5,6,7,8-tetrahydro-1-naphthol with propionyl chloride in the presence of titanium tetrachloride neat at 120° for 1 h (85%) [7823].

m.p. 87.5–88.5° [7800], 86–88° [7823];

¹H NMR [7823], ¹³C NMR [7823], IR [7823], MS [7823].**Oxime** $C_{13}H_{17}NO_2$ mol.wt. 219.28 (m.p. 141–141.5°) [7800].**1-(5,6,7,8-Tetrahydro-3-hydroxy-2-naphthalenyl)-1-propanone**

[60401-57-2]

 $C_{13}H_{16}O_2$ mol.wt. 204.27

Syntheses

- Obtained by Fries rearrangement of 5,6,7,8-tetrahydro-2-naphthyl propionate (b.p.₁₂ 160°) with aluminium chloride at 120° for 4 h (48%) [7824].
- Also obtained by Fries rearrangement of 5,6,7,8-tetrahydro-2-naphthyl propionate with aluminium chloride in nitrobenzene at r.t. overnight [7824].
- Also refer to: [7825,7826].

m.p. 58–59° [7824].

USE: Intermediate for the preparation of allergy inhibitor [7825].

Oxime $C_{13}H_{17}NO_2$ mol.wt. 219.28 (m.p. 134.5–135.5°) [7824].**1-(5,6,7,8-Tetrahydro-4-hydroxy-1-naphthalenyl)-1-propanone** $C_{13}H_{16}O_2$ mol.wt. 204.27

Syntheses

- Obtained by Fries rearrangement of 5,6,7,8-tetrahydro-1-naphthyl propionate (b.p.₁₂ 152°) with aluminium chloride in nitrobenzene, first at 0° for 2–3 h, then at r.t. for 15–17 h [7800].
- Also obtained by treatment of its methyl ether with aluminium chloride in refluxing benzene for 6 h (55%) [7403].

m.p. 152–153° [7403], 146–147.5° [7800].

Semicarbazone $C_{14}H_{19}N_3O_2$ mol.wt. 261.32 (m.p. 225–226.5°) [7800].

3,4-Dihydroxy-2-(1-oxopropyl)-1-naphthalenecarbonitrile

[61983-21-9]

 $C_{14}H_{11}NO_3$ mol.wt. 241.25

Syntheses

- Obtained by irradiation of 4-cyano-1,2-naphthoquinone and propionaldehyde in benzene by a 300 W high-pressure mercury arc lamp between 15° and 20° for 2–10 days [7761], (50%) [7762] or by exposition to sunlight for a fortnight (18%) [7827].

m.p. 171–174° [7762], 168° [7827]; 1H NMR [7762], IR [7762].**1-Hydroxy-4-(1-oxopropyl)-2-naphthoic acid** $C_{14}H_{12}O_4$ mol.wt. 244.25

Syntheses

- Obtained from 2,3-dimethyl-6-propionyl-1,4- α -naphthopyrone (m.p. 168°) by refluxing with 5% aqueous sodium hydroxide for 3 h [7767].
- Also refer to: [7756].

m.p. 205° [7756,7767].

1-(5-Bromo-6-methoxy-2-naphthalenyl)-1-propanone

[92189-66-7]

 $C_{14}H_{13}BrO_2$ mol.wt. 293.16

Syntheses

- Preparation by bromination of 1-(6-methoxy-2-naphthalenyl)-1-propanone with 1,3-dibromo-5,5-dimethylhydantoin in ethanol (99%) [7828].
- Also obtained by heating 5-bromo-6-methoxy-2-(α -bromopropionyl)naphthalene (m.p. 162°) with zinc in acetic acid for 3 h (75%) [7829].
- Also refer to: [7830–7833].

m.p. 127–128° [7829].

1-(5-Chloro-6-methoxy-2-naphthalenyl)-1-propanone

[69750-45-4]

 $C_{14}H_{13}ClO_2$ mol.wt. 248.71

Syntheses

- Preparation by reaction of propionyl chloride with 1-chloro-2-methoxynaphthalene (m.p. 66°) in the presence of aluminium chloride in methylene chloride, first at 0°, then at 5° for 15 min (97%) [7834].
- Also refer to: [7835] (Chinese paper).

m.p. 129–131° [7834]; crystal data [7834].

1-(2-Hydroxy-3-methyl-1-naphthalenyl)-1-propanone[185413-93-8] $C_{14}H_{14}O_2$ mol.wt. 214.26**Synthesis**

- Obtained (poor yield) from 2-methyl-1-phenylheptane-3,5-dione by treatment with manganese (III) acetate in acetic acid at 60° (ca. 4%) [7836].

GC-MS [7836]; MS [7836].

1-(1-Methoxy-2-naphthalenyl)-1-propanone $C_{14}H_{14}O_2$ mol.wt. 214.26**Syntheses**

- Preparation by reaction of dimethyl sulfate with 2-propionyl-1-naphthol in the presence of alkali [7760].
- Preparation by reaction of ethylmagnesium bromide with 1-methoxy-2-naphthonitrile (59%) [6973].
- Also obtained by treatment of 2-propionyl-1-naphthol with methyl iodide in the presence of potassium carbonate in refluxing acetone for 8 h (35%) [7837].
- Also refer to: [6755,7838].

b.p._{0.3} 125–126° [6973];

m.p. 50–51° [6973], 48–49.5° [7837], 45° [7760], 42–43° [7838].

Oxime $C_{14}H_{15}NO_2$ mol.wt. 229.28 (m.p. 112–113°) [7838].**Semicarbazone** $C_{15}H_{17}N_3O_2$ mol.wt. 271.32 (m.p. 192°) [7838].**1-(2-Methoxy-1-naphthalenyl)-1-propanone**[25801-58-5] $C_{14}H_{14}O_2$ mol.wt. 214.26**Syntheses**

- Obtained by reaction of propionyl chloride with 2-methoxy-naphthalene in the presence of aluminium chloride in methylene chloride for 5 min at 0° under nitrogen (74%) [7839].
- Also obtained by acylation of 2-methoxynaphthalene with propionic anhydride in nitrobenzene in the presence of zeolite-beta catalysts [7840].
- Also obtained by electrochemical acylation of 2-methoxynaphthalene with propionic anhydride in methylene chloride in the presence of $LiClO_4$ (74%) [7841].
- Also refer to: [7358,7842,7843].

b.p.₂₋₃ 141–143° [7791];¹H NMR [7839], IR [7839]; HPLC [7839].

1-(3-Methoxy-2-naphthalenyl)-1-propanone[17295-05-5] $C_{14}H_{14}O_2$ mol.wt. 214.26

Syntheses

- Obtained by adding methyllithium in diethyl ether to a solution of 4,4-dimethyl-2-[2-(3-methoxynaphthyl)]-oxazoline (m.p. 125–127°) in THF/diethyl ether at –95°. Then, the resulting orange clear solution was stirred at –78° for 6 h, quenched with neat methyl iodide and warmed to r.t. overnight (47%) [7844].
- Also obtained by condensation of 3-methoxy-2-naphthoyl chloride with diethylcadmium in benzene (63%) [7837].

yellowish oil [7844]; m.p. 48–49° [7837];

 1H NMR [7844], ^{13}C NMR [7844], MS [7844]; TLC [7844].**Semicarbazone** $C_{15}H_{17}N_3O_2$ mol.wt. 271.32 (m.p. 212–213°) [7837].**1-(4-Methoxy-1-naphthalenyl)-1-propanone**[5471-38-5] $C_{14}H_{14}O_2$ mol.wt. 214.26

Syntheses

- Preparation by reaction of propionic acid with 1-methoxynaphthalene in the presence of boron trifluoride, first at 0°, then at 70° for 10–15 h (84%) [7845].
 - Also obtained by reduction of 3-(dibutylamino)-1-(4-methoxynaphthalen-1-yl)-1-propanone with Adam's catalyst (22%) [7846].
 - Also refer to: [7292,7756,7847–7849].
- m.p. 58° [7756,7845], 56–57° [7846]; 1H NMR [7849].

1-(5-Methoxy-1-naphthalenyl)-1-propanone[904923-39-3] $C_{14}H_{14}O_2$ mol.wt. 214.26

Synthesis

- Refer to: [7847].

1-(5-Methoxy-2-naphthalenyl)-1-propanone

$C_{14}H_{14}O_2$ mol.wt. 214.26
Synthesis

– Preparation by reaction of ethylmagnesium bromide with 5-methoxy-2-naphthonitrile in benzene (84%) [7850].

m.p. 92–93° [7850].

Semicarbazone $C_{15}H_{17}N_3O_2$ mol.wt. 271.32 (m.p. 212°) [7850].

1-(6-Methoxy-1-naphthalenyl)-1-propanone

[81336-21-2]

$C_{14}H_{14}O_2$ mol.wt. 214.26
Synthesis

– Obtained from sodium-liquid ammonia reduction of 4,6-dimethoxy-1-naphthyl ethyl ketone in THF/EtOH mixture in presence of excess ammonium chloride [7851].

pale yellow oil [7851]; b.p._{0.1} 80° [7851];
¹H NMR [7851]; IR [7851].

1-(6-Methoxy-2-naphthalenyl)-1-propanone

[2700-47-2]

$C_{14}H_{14}O_2$ mol.wt. 214.26
Syntheses

– Obtained by reaction of propionyl chloride with 2-methoxynaphthalene in the presence of aluminium chloride,

- in methylene chloride and nitromethane (74%) [7852];
- in methylene chloride and nitrobenzene at 15° for 20 h (71%) [7839];
- in nitrobenzene (64%) [7853] at r.t. for 24 h (80%) [7854].

– Also obtained by reaction of propionyl chloride with 2-methoxynaphthalene (neroline) in the presence of stannic chloride in nitrobenzene, first at 0°, then at r.t. for 12 h (32–41%) [7855].

– Also obtained by acylation of 2-methoxynaphthalene with propionic anhydride in nitrobenzene in the presence of zeolite-beta catalysts [7840].

– Also refer to: [7829,7831–7833,7843,7856–7861].

b.p._{0.3} 180–185° [7854], b.p._{0.5} 190–220° [7855];

m.p. 114–115° [7839], 111.5–113.5° [7853], 109° [7854,7855];

¹H NMR [7839], IR [7839]; HPLC [7839].

1-(7-Methoxy-1-naphthalenyl)-1-propanone

[507272-84-6]

 $C_{14}H_{14}O_2$ mol.wt. 214.26

Syntheses

– Refer to: [7847,7862].

1-(8-Methoxy-2-naphthalenyl)-1-propanone $C_{14}H_{14}O_2$ mol.wt. 214.26

Synthesis

– Preparation by reaction of ethylmagnesium bromide with 8-methoxy-2-naphthonitrile in benzene (84%) [7850].

m.p. 69–70° [7850].

Semicarbazone $C_{15}H_{17}N_3O_2$ mol.wt. 271.32 (m.p. 188–189°) [7850].**1-(3,4-Dihydroxy-7-methyl-2-naphthalenyl)-1-propanone**

[61983-39-9]

 $C_{14}H_{14}O_3$ mol.wt. 230.26

Syntheses

– Obtained by irradiation of 6-methyl-1,2-naphthoquinone and propionaldehyde in benzene by a 300 W high-pressure mercury arc lamp between 15° and 20° for 2–10 days [7761], (15%) [7762].

m.p. 148–149° [7762]; 1H NMR [7762], IR [7762].**1-(1-Hydroxy-4-methoxy-2-naphthalenyl)-1-propanone**

[128462-64-6]

 $C_{14}H_{14}O_3$ mol.wt. 230.26

Synthesis

– Obtained by reaction of 2-propionyl-1,3-indandione with diazomethane in ethyl ether (66–72%) [7813].

1-(1-Hydroxy-5-methoxy-2-naphthalenyl)-1-propanone

[68047-77-8]

 $C_{14}H_{14}O_3$ mol.wt. 230.26

Syntheses

– Preparation by Fries rearrangement of 5-methoxy-1-naphthyl propionate with boron trifluoride etherate at 120° for 1 h (80%) [7863].

- Also obtained by photo-Fries rearrangement of 5-methoxy-1-naphthyl propionate in methanol [7864].

m.p. 102–103° [7864], 92–95° [7863]; IR [7864], MS [7864].

1-(4-Hydroxy-6-methoxy-1-naphthalenyl)-1-propanone

[81336-23-4] $C_{14}H_{14}O_3$ mol.wt. 230.26

Synthesis

- Obtained from sodium-liquid ammonia reduction of 4,6-dimethoxy-1-naphthyl ethyl ketone in THF (6%) [7851].

m.p. 130–132° [7851]; IR [7851], MS [7851].

1-(8-Hydroxy-4-methoxy-1-naphthalenyl)-1-propanone

[70340-72-6] $C_{14}H_{14}O_3$ mol.wt. 230.26

Syntheses

- Obtained by propionylation of 5-methoxy-1-propionyloxy-naphthalene with subsequent ester cleavage [7865], (96%) [7866].
- Also refer to: [7867].

m.p. 135–136° [7866]; 1H NMR [7866], IR [7866].

1-(5,6,7,8-Tetrahydro-4-methoxy-1-naphthalenyl)-1-propanone

$C_{14}H_{18}O_2$ mol.wt. 218.30

Synthesis

- Obtained by Friedel–Crafts acylation of 5,6,7,8-tetrahydro-1-methoxynaphthalene with propionyl chloride in the presence of aluminium chloride in nitrobenzene, first at 0° for 4 h, then at r.t. for 24 h (33%) [7403].

b.p.₁₀ 169–171° [7403]; m.p. 36–37° [7403].

1-[3-(Aminomethyl)-5,6,7,8-tetrahydro-2-hydroxy-1-naphthalenyl]-1-propanone

[75061-06-2] $C_{14}H_{19}NO_2$ mol.wt. 233.31

Synthesis

- Refer to: [7106].

Hydrochloride [75060-82-1] $C_{14}H_{19}NO_2 \cdot HCl$ mol.wt. 269.77.

USE: Antiinflammatory [7106].

1-[4-(Acetyloxy)-3-hydroxy-2-naphthalenyl]-1-propanone

[75089-89-3]

 $C_{15}H_{14}O_4$ mol.wt. 258.27

Synthesis

– Obtained by keeping a benzene solution of 1,2-naphthoquinone, 3-propionynaphthalene-1,2-diol, DTBP and acetaldehyde in the dark at 30° for 7 days (16%) [7821].

m.p. 130–131° [7821];

 1H NMR [7821], IR [7821], MS [7821]; TLC [7821].**1-[5-(Acetyloxy)-1,4-dihydroxy-2-naphthalenyl]-1-propanone**

[360790-46-1]

 $C_{15}H_{14}O_5$ mol.wt. 274.27

Synthesis

– Obtained by irradiation (409–429 nm) of 5,8-dioxo-5,8-dihydro-1-naphthalenyl acetate in the presence of propionaldehyde in benzene for 18 h at r.t. (41%) [7868].

m.p. 170–171° [7868];

 $C_{15}H_{16}O_3$ mol.wt. 244.29

Synthesis

– Preparation by reaction of propionyl chloride with 1,7-dimethoxynaphthalene in the presence of aluminium chloride in nitrobenzene at r.t. for 16 h (75%) [7851].

b.p._{0.4} 190–195° [7851]; m.p. 126–127° [7851];¹H NMR [7851], IR [7851].**1-(6,7-Dimethoxy-2-naphthalenyl)-1-propanone**

[72337-80-5]

 $C_{15}H_{16}O_3$ mol.wt. 244.29

Syntheses

– Preparation by reaction of propionic anhydride with 2,3-dimethoxynaphthalene

in the presence of aluminium chloride in nitrobenzene at 0° [7822].

- Also obtained by reaction of propionyl chloride with 2,3-dimethoxynaphthalene in the presence of aluminium chloride in nitrobenzene at r.t. overnight (77%) [7870].
- Also refer to: [7871,7872].

b.p.₁₇ 243–244° [7870]; m.p. 102° [7870], 101–103° [7872];¹H NMR [7872], IR [7872].**1-(1-Hydroxy-4,8-dimethoxy-2-naphthalenyl)-1-propanone**

[88792-61-4]

 $C_{15}H_{16}O_4$ mol.wt. 260.29

Synthesis

– Obtained by Fries rearrangement of 1-propionoxy-4,8-dimethoxynaphthalene (m.p. 109–110°) [7873] with boron trifluoride etherate (1.1 equiv) at 120° for 5 min (92%) [7873], (good yield) [7874] according to the procedure [7875].

m.p. 129–130° [7873,7874]; ¹H NMR [7873], IR [7873], MS [7873].

1-(5-Hydroxy-2,4-dimethoxy-3-methyl-6-nitroso-1-naphthalenyl)-1-propanone

[78377-72-7]

 $C_{16}H_{17}NO_5$ mol.wt. 303.31

Synthesis

– Obtained by treatment of 6,8-dimethoxy-7-methyl-5-(1-oxopropyl)-1,2-naphthalenedione [78377-71-6] (compound **9**) with hydroxylamine hydrochloride (excess) in ethanol at r.t. [7876].

USE: As intermediate in total synthesis of rifamycine S segment (compound **16b**) [7876].

m.p. 139–140° [7876]; 1H NMR [7876].

1-(2,4-Dihydroxy-5,8-dimethoxy-3-methyl-6-nitro-1-naphthalenyl)-1-propanone

[98291-50-0]

 $C_{16}H_{17}NO_7$ mol.wt. 335.31

Synthesis

– Obtained by treatment of 1-[5,8-dimethoxy-2,4-bis(methoxymethoxy)-3-methyl-6-nitro-1-naphthyl]-1-propanone (m.p. 89.5–90.5°) in THF with 1 N hydrochloric acid at 23° for 3 days (quantitative yield) [7877].

orange-yellow crystals [7877]; 1H NMR [7877]; TLC [7877].

1-(1-Ethyl-6-methoxy-2-naphthalenyl)-1-propanone

[195729-50-1]

 $C_{16}H_{18}O_2$ mol.wt. 242.32

Synthesis

– Refer to: [7809].

1-(6-Hydroxy-1-propyl-2-naphthalenyl)-1-propanone

[195729-60-3]

 $C_{16}H_{18}O_2$ mol.wt. 242.32

Synthesis

– Refer to: [7809].

1-(1,4-Dihydro-6,8-dimethoxy-7-methyl-1,4-epoxynaphthalene-5-yl)-1-propanone[90363-43-2] $C_{16}H_{18}O_4$ mol.wt. 274.32

Synthesis

– Obtained by Jones oxidation of 1-(1,4-dihydro-6,8-dimethoxy-7-methyl-1,4-epoxynaphthalene-5-yl)-1-propanol (80%) [7878].

m.p. 74–75° [7878]; 1H NMR [7878].**1-(1-Hydroxy-6,7-dimethoxy-3-methyl-2-naphthalenyl)-1-propanone**[125575-68-0] $C_{16}H_{18}O_4$ mol.wt. 274.32

Synthesis

– Preparation by treatment of ethyl 3,4-dimethoxy-6-(phenylsulfinyl)methylbenzoate (m.p. 102–104°), first with LDA in THF at –78°, then 4-hexen-3-one and the mixture refluxed for 12 h (80%) [7879].

 1H NMR [7879].**1-(8-Hydroxy-2,4-dimethoxy-3-methyl-1-naphthalenyl)-1-propanone**[90363-44-3] $C_{16}H_{18}O_4$ mol.wt. 274.32

Syntheses

- Preparation by reaction of 60% perchloric acid with 1-(1,4-dihydro-6,8-dimethoxy-7-methyl-1,4-epoxynaphthalen-5-yl)-1-propanone (m.p. 74–75°) in THF at 50° for 50 min (86%) [7878].
- Also obtained by treatment of 3,5-dimethoxy-4-methyl-2*H*-naphtho[1,8-*bc*]furan-2-one [90363-46-5] (m.p. 107–108°) with ethyllithium (1.05 equiv) in ethyl ether at 0° for 1.5 h [7878].

m.p. 179–181° [7878]; 1H NMR [7878], IR [7878], UV [7878].**1-[6-Methoxy-1-(methoxymethoxy)-2-naphthalenyl]-1-propanone**[195730-04-2] $C_{16}H_{18}O_4$ mol.wt. 274.32

Synthesis

– Refer to: [7809].

1-(2,4-Dihydroxy-5,8-dimethoxy-3-methyl-1-naphthalenyl)-1-propanone

[98291-47-5]

 $C_{16}H_{18}O_5$ mol.wt. 290.32

Synthesis

– Preparation by stirring a solution of 1-[2,4-bis(benzyloxy)-5,8-dimethoxy-3-methyl-1-naphthyl]-1-propanone in ethyl acetate with Pd in methanol at 25° for 20 min under hydrogen bubbling (quantitative yield) [7877].

m.p. 111–112° [7877];

 1H NMR [7877], IR [7877], UV [7877]; TLC [7877].**1-[5,6,7,8-Tetrahydro-3-hydroxy-4-(2-propenyl)-2-naphthalenyl]-1-propanone**

[60401-59-4]

 $C_{16}H_{20}O_2$ mol.wt. 244.33

Syntheses

– Preparation by Claisen rearrangement of 1-[5,6,7,8-tetrahydro-3-(2-propenyloxy)-2-naphthalenyl]-1-propanone [7825,7826].

USE: Intermediate for the preparation of allergy inhibitor [7825].

1-(5,6,7,8-Tetrahydro-2-hydroxy-3-propyl-1-naphthalenyl)-1-propanone $C_{16}H_{22}O_2$ mol.wt. 246.35

Synthesis

– Obtained by Fries rearrangement of 5,6,7,8-tetrahydro-3-propyl-2-naphthalenyl propionate (b.p.₂₀ 192°) with aluminium chloride at 150° for 3 h [7824].

m.p. 83–83.5° [7824].

1-[5,8-Bis(acetyloxy)-1,4-dihydroxy-2-naphthalenyl]-1-propanone

[360790-49-4]

 $C_{17}H_{16}O_7$ mol.wt. 332.31

Synthesis

– Obtained by irradiation (409–429 nm) of 4-(acetyloxy)-5,8-dioxo-5,8-dihydro-1-naphthalenyl acetate in the presence of propionaldehyde in benzene for 18 h at r.t. (60%) [7868].

m.p. 159–160° [7868];

 1H NMR [7868], ^{13}C NMR [7868], IR [7868], MS [7868]; HPLC [7868].

N-[1,6-Dihydroxy-8-methoxy-7-methyl-5-(1-oxopropyl)-2-naphthalenyl]acetamide

[78377-74-9]

 $C_{17}H_{19}NO_5$

mol.wt. 317.34

Synthesis

– Obtained by reaction of boron trichloride with N-[1-(acetyloxy)-6,8-dimethoxy-7-methyl-5-(1-oxopropyl)-2-naphthalenyl]acetamide in methylene chloride at -20° (94%) [7876].

m.p. 119–123° [7876].

1-(6-Methoxy-1-propyl-2-naphthalenyl)-1-propanone

[195729-54-5]

 $C_{17}H_{20}O_2$

mol.wt. 256.34

Synthesis

– Refer to: [7809].

1-[6-Methoxy-3-[(methoxymethoxy)methyl]-2-naphthalenyl]-1-propanone

[195730-12-2]

 $C_{17}H_{20}O_4$

mol.wt. 288.34

Synthesis

– Refer to: [7809].

1-(1,6,7-Trimethoxy-3-methyl-2-naphthalenyl)-1-propanone

[125575-55-5]

 $C_{17}H_{20}O_4$

mol.wt. 288.34

Synthesis

– Preparation by treatment of 1-(1-hydroxy-6,7-di-methoxy-3-methyl-2-naphthalenyl)-1-propanone with methyl iodide in the presence of potassium carbonate in refluxing acetone (95%) [7879].

m.p. 81–82° [7879]; 1H NMR [7879], MS [7879].**1-(1,4,5,8-Tetramethoxy-2-naphthalenyl)-1-propanone**

[275803-01-5]

 $C_{17}H_{20}O_5$

mol.wt. 304.34

Syntheses

– Obtained from 2-(1-hydroxypropyl)-1,4,5,8-tetramethoxy-naphthalene by oxidation with MnO_2 in refluxing benzene for 10 h (90%) [7880].
– Also refer to: [7881].

m.p. 68.3–69.5° [7880]; 1H NMR [7880], IR [7880].

1-(7-Bromo-2,4,5,8-tetramethoxy-3-methyl-6-nitro-1-naphthalenyl)-1-propanone

[90363-51-2]

 $C_{18}H_{20}BrNO_7$ mol.wt. 442.26

Synthesis

– Obtained by nitration of 1-(7-bromo-2,4,5,8-tetramethoxy-3-methyl-1-naphthalenyl)-1-propanone with copper(II) nitrate in acetic anhydride at -20° for 2 h (56%) [7878].

m.p. 154–155° [7878]; 1H NMR [7878].**1-(7-Bromo-2,4,5,8-tetramethoxy-3-methyl-1-naphthalenyl)-1-propanone**

[90363-49-8]

 $C_{18}H_{21}BrO_5$ mol.wt. 397.27

Synthesis

– Obtained by methylation of 1-(7-bromo-5,8-dihydroxy-2,4-dimethoxy-3-methyl-1-naphthalenyl)-1-propanone with dimethyl sulfate in acetone in the presence of potassium carbonate (74%) [7878].

m.p. 87–88° [7878]; 1H NMR [7878].**1-(2,4,5,8-Tetramethoxy-3-methyl-6-nitro-1-naphthalenyl)-1-propanone**

[90363-52-3]

 $C_{18}H_{21}NO_7$ mol.wt. 363.37

Syntheses

- Preparation by nitration of 1-(2,4,5,8-tetramethoxy-3-methyl-1-naphthalenyl)-1-propanone with copper (II) nitrate in acetic anhydride at -20° (80%) [7878].
- Also obtained by debromination of 1-(7-bromo-2,4,5,8-tetramethoxy-3-methyl-6-nitro-1-naphthalenyl)-1-propanone with sodium formate $[(Ph_3P)_4Pd, DMF, 100^\circ, 3 h]$ [7878].
- Also obtained by methylation of 1-(2,4-dihydroxy-5,8-dimethoxy-3-methyl-6-nitro-1-naphthalenyl)-1-propanone (SM) with dimethyl sulfate in the presence of potassium carbonate in acetone at 20° for 5 h (94%). SM was obtained by treatment of 1-(5,8-dimethoxy-2,4-bis(methoxymethoxy)-3-methyl-6-nitro-1-naphthalenyl)-1-propanone in THF with 1 N HCl at 23° for 3 days (100%) [7877].

m.p. 126–127° [7878]; 1H NMR [7877,7878],

IR [7877,7878], UV [7877,7878],

X-ray crystallography [7878]; TLC [7877,7878].

1-[6-Hydroxy-1-(3-methylbutyl)-2-naphthalenyl]-1-propanone[195729-79-4] $C_{18}H_{22}O_2$ mol.wt. 270.37

Synthesis

– Refer to: [7809] (Japanese patent).

1-(2,4,5,8-Tetramethoxy-3-methyl-1-naphthalenyl)-1-propanone[90363-50-1] $C_{18}H_{22}O_5$ mol.wt. 318.37

Syntheses

– Preparation by debromination of 1-(7-bromo-2,4,5,8-tetramethoxy-3-methyl-1-naphthalenyl)-1-propanone with zinc powder in 10% aqueous sodium hydroxide-dioxane (1:2 v/v) at 70° for 12 h (100%) [7878].

– Also obtained by reductive methylation of 5,7-dimethoxy-6-methyl-8-propionyl-1,4-naphthoquinone (60%) [7878].

m.p. 76–77° [7878]; 1H NMR [7878].**1-(6-Amino-2,4,5,8-tetramethoxy-3-methyl-1-naphthalenyl)-1-propanone**[90363-53-4] $C_{18}H_{23}NO_5$ mol.wt. 333.38

Synthesis

– Obtained by catalytic reduction of 1-(2,4,5,8-tetramethoxy-3-methyl-6-nitro-1-naphthalenyl)-1-propanone with hydrogen in methanol in the presence of 5% Pd/C [7878].

 1H NMR [7878].**1-[6-Methoxy-1-(3-methylbutyl)-2-naphthalenyl]-1-propanone**[195729-78-3] $C_{19}H_{24}O_2$ mol.wt. 284.40

Synthesis

– Refer to: [7809] (Japanese patent).

N-[1,4,6,8-Tetramethoxy-7-methyl-5-(1-oxopropyl)-2-naphthalenyl]acetamide[90363-54-5] $C_{20}H_{25}NO_6$ mol.wt. 375.42

Synthesis

– Obtained by acetylation of 1-(6-amino-2,4,5,8-tetra-methoxy-3-methyl-1-naphthalenyl)-1-propanone with acetic anhydride in the presence of pyridine (95%) [7878].

m.p. 193–194° [7878]; 1H NMR [7878].

1-[5,8-Dimethoxy-2,4-bis(methoxymethoxy)-3-methyl-6-nitro-1-naphthalenyl]-1-propanone

[98291-49-7]

 $C_{20}H_{25}NO_9$

mol.wt. 423.42

**Synthesis**

– Obtained by adding a solution of 1-[5,8-dimethoxy-2,4-bis(methoxymethoxy)-3-methyl-1-naphthalenyl]-1-propanone in acetic anhydride to a mixture of copper(II) nitrate trihydrate in acetic anhydride at -40° and stirring at -40° for 1 h (77%) [7877].

m.p. 89.5–90.5° [7877]; 1H NMR [7877], IR [7877], UV [7877].

1-[6-Hydroxy-3-[3-(3-methoxypropoxy)propyl]-2-naphthalenyl]-1-propanone

[181236-19-1]

 $C_{20}H_{26}O_4$

mol.wt. 330.42

**Synthesis**

– Refer to: [7882] (Japanese patent).

1-[5,8-Dimethoxy-2,4-bis(methoxymethoxy)-3-methyl-1-naphthalenyl]-1-propanone

[98291-48-6]

 $C_{20}H_{26}O_7$

mol.wt. 378.42

**Synthesis**

– Preparation by adding chloromethyl methyl ether to an ice-cold solution of 1-(2,4-dihydroxy-5,8-dimethoxy-3-methyl-1-naphthalenyl)-1-propanone in THF, solution previously treated with sodium hydride (95%) [7877].

pale yellow syrup [7877];

1H NMR [7877], IR [7877], UV [7877]; TLC [7877].

1-[6-Amino-5,8-dimethoxy-2,4-bis(methoxymethoxy)-3-methyl-1-naphthalenyl]-1-propanone

[98291-51-1]

 $C_{20}H_{27}NO_7$

mol.wt. 394.44

**Synthesis**

– Preparation by reaction of 1-[5,8-dimethoxy-2,4-bis(methoxymethoxy)-3-methyl-6-nitro-1-naphthalenyl]-1-propanone with hydrogen in methanol in the presence of 5% Pd/C (100%) [7877].

yellow-brown syrup [7877].

1-(6-Hydroxy-1-octyl-2-naphthalenyl)-1-propanone

[195729-93-2]

 $C_{21}H_{28}O_2$ mol.wt. 312.45

Synthesis

– Refer to: [7809].

**1-[6-Hydroxy-1-(3-phenylpropyl)-2-naphthalenyl]-1-propanone**

[195729-70-5]

 $C_{22}H_{22}O_2$ mol.wt. 318.42

Synthesis

– Refer to: [7809].

**1-[2-Hydroxy-6-methoxy-3-methyl-5-(phenylmethoxy)-1-naphthalenyl]-1-propanone**

[185413-94-9]

 $C_{22}H_{22}O_4$ mol.wt. 350.41

Synthesis

– Preparation by treatment of the tetralone 24—two diastereoisomeric 1-acetoxy-5-benzyl-oxo-3,4-dihydro-6-methoxy-3-methyl-1-propionyl-naphthalen-2(1*H*)-ones—in methylene chloride with silica gel for 16 h (81%) [7836].

**1-(6-Methoxy-1-octyl-2-naphthalenyl)-1-propanone**

[195729-92-1]

 $C_{22}H_{30}O_2$ mol.wt. 326.48

Synthesis

– Refer to: [7809].

**N-[6-Hydroxy-7-methyl-5-(1-oxopropyl)-4-(phenylmethoxy)-2-naphthalenyl]acetamide**

[185413-96-1]

 $C_{23}H_{23}NO_4$ mol.wt. 377.44

Synthesis

– Obtained by treatment of the tetralone 27—two diastereoisomeric 1-acetoxy-6-acetylamino-8-benzyl-oxo-3,4-dihydro-3-methyl-1-propionyl-naphthalen-2(1*H*)-ones—in methylene chloride with silica gel (pH 10) (80%) [7836].

m.p. 93–95° [7836];

 1H NMR [7836], ^{13}C NMR [7836], IR [7836], MS [7836].

1-[6-Methoxy-1-(3-phenylpropyl)-2-naphthalenyl]-1-propanone

[195729-68-1]

 $C_{23}H_{24}O_2$ mol.wt. 332.44

Synthesis

– Refer to: [7809].

1-(1-Dodecyl-6-hydroxy-2-naphthalenyl)-1-propanone

[195729-86-3]

 $C_{23}H_{32}O_2$ mol.wt. 340.51

Synthesis

– Refer to: [7809].

1-(1-Dodecyl-6-methoxy-2-naphthalenyl)-1-propanone

[195729-85-2]

 $C_{24}H_{34}O_2$ mol.wt. 354.53

Synthesis

– Refer to: [7809].

1-[2-Hydroxy-3-methyl-6,8-bis(phenylmethoxy)-1-naphthalenyl]-1-propanone

[185413-95-0]

 $C_{28}H_{26}O_4$ mol.wt. 426.51

Synthesis

– Obtained from 1-(3,5-dibenzyloxyphenyl)-2-methylheptane-3,5-dione by treatment with manganese (III) acetate in acetic acid (68%) [7836].

m.p. 36–38° [7836]; 1H NMR [7836], IR [7836], MS [7836].

1-[8-Hydroxy-3-methyl-2,4-bis(phenylmethoxy)-1-naphthalenyl]-1-propanone

[98291-44-2]

 $C_{28}H_{26}O_4$ mol.wt. 426.51

Syntheses

– Preparation by treatment of 1-[2,4-bis(benzyloxy)-5,8-dihydro-3-methyl-5,8-epoxy-1-naphthyl]-1-propanone (m.p. 112–114°) in THF with 60% perchloric acid at 25° for 35 h (81%) [7877].

– Also obtained by adding dropwise 1.60 M ethyllithium in ethyl ether to an ice-cold suspension of

3,5-bis(benzyloxy)-4-methyl-2*H*-naphtho[1,8-*bc*]furan-2-one (m.p. 136–137°) in ethyl ether. After being stirred at 0° for 1 h, a saturated aqueous ammonium chloride solution was added to the mixture (26%) [7877].

m.p. 188–190° (d) [7877];

1H NMR [7877], IR [7877], UV [7877]; TLC [7877].

23.3 Heterocyclic Derivatives

5-Hydroxy-4-(1-oxopropyl)-1,3-benzoxathiol-2-one

[112450-17-6] $C_{10}H_8O_4S$ mol.wt. 224.24

Synthesis

– Preparation by adding a solution of 2-propionyl-1,4-benzoquinone in acetic acid to a solution of thiourea in 2 N hydrochloric acid, stirring at r.t. for 30 min, then heating on a steam bath for 1 h (74%) [7883].

m.p. 194–195° [7883]; 1H NMR [7883], ^{13}C NMR [7883].

1-(6-Hydroxy-1,3-benzodioxol-4-yl)-1-propanone

$C_{10}H_{10}O_4$ mol.wt. 194.19

Synthesis

– Refer to: [7884] (*Hypothetical compound*).

1-(6-Hydroxy-1,3-benzodioxol-5-yl)-1-propanone (*Kakuol*)

2-Hydroxy-4,5-methylenedioxypropiophenone

[18607-90-4] $C_{10}H_{10}O_4$ mol.wt. 194.19

Syntheses

– Obtained from sesamolyl propionate with aluminium chloride in refluxing carbon disulfide for 1 h [7885].

– Synthesized from sesamol [7886].

Isolation from natural sources

- From *Asarum* root oil [7887] of China [7888].
- From *Asarum forbesii* [7889].
- From the essential oils from five species of *Asarum* namely, *Asarum heterotropoides* variety *mandshuricum*, *Asarum sieboldii* (cultivated), *Asarum caudigerellum* (from Sichuan), *Asarum sieboldii* (from Shandong), *Asarum sieboldii* (wild) [7890] and *Asarum sieboldii* rhizome [7891].
- From *Asarum sieboldii* forma *seoulense*, *Asarum forbesii*, *Asarum inflatum* variety *dinghugense* and *Asarum caudigerum* variety *cardiophyllum* [7892].
- From *Asiasarum* [7886].
- From *Asiasarum heterotropoides* MAEK. variety *mandshuricum* MAEK. [7893].

- From the root and rhizomes of *Asarum heterotropoides* variety *mandshuricum* [7894].
- From the leaves of *Piper marginatum* Jacq. (Piperaceae) [7895,7896].
- From volatile oil of the Chinese drug chichin, *Asiasarum heterotropoides* variety *seoulense* [7885].
- From essential oil of *Asiasari Radix* [7897].
- Absorption, distribution and excretion of [*3H*]-labeled *Kakuol* in mice and rats [7898].
- Also refer to: [7899–7901].

N.B.: The formula of *Kakuol* represented in Chem. Abstr., **104**, 199940a (1986) was erroneous.

m.p. 110° [7885]; ¹H NMR [7902], ¹³C NMR [7902];
GC-MS [7888,7890,7892,7896,7897]; GC [7885,7887].
USE: Fungicide [7886,7891].

BIOLOGICAL ACTIVITY: Antiviral [7894].

1-(5-Bromo-6-hydroxy-3-methyl-1,2-benzisoxazol-7-yl)-1-propanone[73860-03-4] $C_{11}H_{10}BrNO_3$ mol.wt. 284.11

Syntheses

- Preparation by reaction of bromine with 6-hydroxy-3-methyl-7-propionyl-1,2-benzisoxazole in acetic acid at r.t. for 2 h (87%) [7912].
- Also refer to: [7913].

m.p. 146–147° [7912,7913]; 1H NMR [7912], IR [7912,7913].**Oxime** [73860-07-8] $C_{11}H_{11}BrN_2O_3$ mol.wt. 299.12 (m.p. 216–217°) [7912].**1-(8-Hydroxy-5-quinazoliny)-1-propanone**[185437-45-0] $C_{11}H_{10}N_2O_2$ mol.wt. 202.22

Synthesis

- Refer to: [7914] (Japanese patent).

1-(4-Hydroxy-5-benzofuranyl)-1-propanone[124210-94-2] $C_{11}H_{10}O_3$ mol.wt. 190.20

Synthesis

- Obtained by ozonolysis of 3-allyl-2,4-dihydroxy-propiophenone in ethyl acetate at -10° for 1 h and subsequent ring closure of the resulting aldehyde using orthophosphoric acid (50%) [7915].

m.p. 92–94° [7915]; 1H NMR [7915], IR [7915].**1-(4,5-Dihydroxybenzo[b]thien-6-yl)-1-propanone**[912952-35-3] $C_{11}H_{10}O_3S$ mol.wt. 222.26

Synthesis

- Obtained by photoacylation of benzo[b]thiophene-4,5-dione with propionaldehyde in benzene (31%) [7916].

m.p. 138–140° [7916];
 1H NMR [7916], IR [7916].**1-(6-Hydroxy-3-methyl-1,2-benzisoxazol-7-yl)-1-propanone**[68241-22-5] $C_{11}H_{11}NO_3$ mol.wt. 205.21

Syntheses

- Preparation by Fries rearrangement of 6-propionyloxy-3-methyl-1,2-benzisoxazole with aluminium chloride at 140° for 2 h [7917], (70%) [7918].

– Also refer to: [7267,7912,7913,7919].

m.p. 88° [7918]; ¹H NMR [7918].

Oxime [68241-40-7] C₁₁H₁₂N₂O₃ mol.wt. 220.23 (m.p. 184°) [7918].

1-(5-Hydroxy-2-methyl-1H-benzimidazol-4-yl)-1-propanone

[137538-58-0] C₁₁H₁₂N₂O₂ mol.wt. 204.23

Synthesis

– Obtained by Friedel–Crafts acylation of 5-hydroxy-2-methylbenzimidazole with propionic anhydride [7920].

1-(2,3-Dihydro-5-hydroxy-1,4-benzodioxin-6-yl)-1-propanone

C₁₁H₁₂O₄ mol.wt. 208.21

Synthesis

– Refer to: [7921].

Oxime [34747-40-5] C₁₁H₁₃NO₄ mol.wt. 223.23.

– A reagent for photometric determination of titanium [7921].

1-(2,3-Dihydro-7-hydroxy-1,4-benzodioxin-6-yl)-1-propanone

[859403-57-9] C₁₁H₁₂O₄ mol.wt. 208.21

Synthesis

– Obtained by Fries rearrangement of 2,3-dihydro-6-propionyloxy-1,4-benzodioxin with titanium tetrachloride in 1,2-dichloroethane at r.t. [7922].

1-(4-Methoxy-1,3-benzodioxol-5-yl)-1-propanone

[340016-41-3] C₁₁H₁₂O₄ mol.wt. 208.21

Isolation from natural sources

– From *Anethum sowa* Roxb. (Apiaceae) [7923].

m.p. 67° [7923];

¹H NMR [7923], IR [7923], MS [7923].

1-(6-Methoxy-1,3-benzodioxol-5-yl)-1-propanone

[70342-29-9]

C₁₁H₁₂O₄ mol.wt. 208.21

Isolation from natural sources

- From the *Piper aleyreanum* [7924] (Piperaceae).
- From the roots of *Piper marginatum* [7902].
- From *Asiasarum sieboldi* roots [7925].

m.p. 69–71° [7895].

USE: Fungicide [7886].

1-(7-Methoxy-1,3-benzodioxol-5-yl)-1-propanone (*Crocatone*) (*Latifolone*)

[19937-86-1]

C₁₁H₁₂O₄ mol.wt. 208.21

Syntheses

- Preparation by methylation of 1-(3,4-methylenedioxy-5-hydroxyphenyl)-1-propanone with diazomethane [7909].
- Preparation by Jones oxidation of the intermediate alcohol obtained by reaction of ethylmagnesium bromide with 3-methoxy-4,5-(methylenedioxy) benzaldehyde [7926].

Isolation from natural sources

- From the root of *Laserpitium latifolium* L. (Umbelliferae) [7927–7930].
- From the roots of *Laserpitium siler* L. (Umbelliferae) [7907].
- From *Laser trilobum* L. BORKH (Umbelliferae) [7929].
- From the roots of *Ferula tunshanica* Su [7931].
- From *Ferula sinaica* (Umbelliferae) [7932,7933].
- From *Ferula arrigoni* (Umbelliferae) [7934].
- From *Ferula licentiana* variety *tunshanica* and *Ferula kingdonwardii* [7935,7936].
- From the roots of *Thapsia garganica* L. (Umbelliferae) [7911].
- From the roots of *Thapsia villosa* (Umbelliferae) [7937–7939].
- Also refer to: [7433,7940].

m.p. 89–90° [7929], 88–89° [7926], 88° [7927–7930], 86–88° [7937];

1-(4-Hydroxy-7-methoxy-1,3-benzodioxol-5-yl)-1-propanone

[119426-01-6]

 $C_{11}H_{12}O_5$ mol.wt. 224.21

Isolation from natural sources

– From the roots and aerial parts of *Ferula latipinna* (Umbelliferae) [7943].

m.p. 95–97° [7943];

 1H NMR [7943], IR [7943], MS [7943].**3,4-Dichloro-7-hydroxy-6-(1-oxopropyl)-2H-1-benzopyran-2-one**

[63876-51-7]

 $C_{12}H_8Cl_2O_4$ mol.wt. 287.10

Synthesis

– Obtained in two steps: First, reaction of aluminium chloride (6 mol) with respropionophenone (2 mol) in methylene chloride, the stirring continued till the evolution of hydrogen chloride gas ceased (3 h). Then, hexachloropropene (2 mol) was added and the reaction mixture was stirred for 3 more hours [7944].

m.p. 148–149° [7944]; 1H NMR [7944], IR [7944], MS [7944].**7-Hydroxy-8-(1-oxopropyl)-2H-1-benzopyran-2-one**

7-Hydroxy-8-propionylcoumarin

8-Propionylumbelliferone

[67752-18-5]

 $C_{12}H_{10}O_4$ mol.wt. 218.21

Synthesis

– Obtained by Fries rearrangement of 7-propionoxycoumarin (m.p. 94°) with aluminium chloride for 1 h at 150–160° (45%) [6806].

m.p. 168° [6806].

5-Bromo-6-hydroxy-3-methyl-7-(1-oxopropyl)benzofuran

[100953-75-1]

 $C_{12}H_{11}BrO_3$ mol.wt. 283.12

Synthesis

– Obtained by decarboxylation of 5-bromo-6-hydroxy-3-methyl-7-propionylcoumarilic acid on heating for 10 min at 255° [7945].

m.p. 104–105° [7945].

5-Chloro-6-hydroxy-3-methyl-7-(1-oxopropyl)benzofuran

[104095-32-1]

 $C_{12}H_{11}ClO_3$ mol.wt. 238.67

Synthesis

– Obtained by decarboxylation of 5-chloro-6-hydroxy-3-methyl-7-propionylcoumarilic acid on heating for 10 min at 255° [7945].

m.p. 114° [7945].

8-Hydroxy-5-(1-oxopropyl)quinoline

1-(8-Hydroxy-[5]quinolyl)-propane-1-one

[91569-25-4]

 $C_{12}H_{11}NO_2$ mol.wt. 201.22

Syntheses

– Obtained by Friedel–Crafts acylation of 8-hydroxy-quinoline with propionyl chloride in the presence of aluminium chloride in nitrobenzene [7946,7947] at 70–80° (20%) [7948,7949].

m.p. 127–128° [7949], 124–125° [7946], 91° [7948]. One of the reported melting points is obviously wrong.

USE: Fungicide [7946].

Hydrochloride $C_{12}H_{11}NO_2 \cdot HCl$ mol.wt. 237.68 (m.p. 279–280° (d) [7948], 224° [7949]).

One of the reported melting points is obviously wrong.

– Refer to: [7948,7949].

1-(5-Bromo-3-ethyl-6-hydroxy-1,2-benzisoxazol-7-yl)-1-propanone

[73860-04-5]

 $C_{12}H_{12}BrNO_3$ mol.wt. 298.16

Synthesis

– Preparation by reaction of bromine with 3-ethyl-6-hydroxy-7-propionyl-1,2-benzisoxazole in acetic acid at r.t. for 2 h (80%) [7912].

m.p. 109–110° [7912]; 1H NMR [7912], IR [7912].

Oxime [73860-08-9] $C_{12}H_{13}BrN_2O_3$ mol.wt. 313.15 (m.p. 185°) [7912].

1-(5-Hydroxy-2H-1-benzopyran-6-yl)-1-propanone

[457628-04-5]

 $C_{12}H_{12}O_3$ mol.wt. 204.23

Syntheses

– Refer to: [6524–6526].

1-(6-Hydroxy-3-methyl-7-benzofuranyl)-1-propanone

6-Hydroxy-3-methyl-7-propionylbenzofuran

[35093-15-3]

 $C_{12}H_{12}O_3$

mol.wt. 204.23

Syntheses

- Obtained by decarboxylation of 6-hydroxy-3-methyl-7-propionylcoumarilic acid on heating for 10 min at 248° [7950].
 - Also obtained from 3-chloro-4-methyl-8-propionyl-coumarin by heating with 10% aqueous sodium carbonate for 2 h on a water bath [7950].
 - Also obtained by treatment of 3-bromo-7-hydroxy-8-propionyl-4-methylcoumarin with refluxing 7% aqueous sodium carbonate for 1 h (25%) [7951].
- m.p. 98° [7950], 92° [7951].

1-(3-Ethyl-6-hydroxy-1,2-benzisoxazol-7-yl)-1-propanone

[68241-23-6]

 $C_{12}H_{13}NO_3$

mol.wt. 219.24

Syntheses

- Preparation by Fries rearrangement of 6-propionoxy-3-ethyl-1,2-benzisoxazole with aluminium chloride at 135–140° for 2 h (65%) [7918].
 - Also refer to: [7912].
- m.p. 65° [7918]; ¹H NMR [7918].

Oxime [68241-42-9] $C_{12}H_{14}N_2O_3$

mol.wt. 234.25 (m.p. 146°) [7918].

1-(4,5-Dimethoxy-1,3-benzodioxol-6-yl)-1-propanone $C_{12}H_{14}O_5$

mol.wt. 238.24

Synthesis

- Obtained by treatment of isoapiole dibromide (m.p. 105°) with potassium hydroxide [7952].
- N.B.:** This isoapiole was prepared from apiole (Dill) [6640] by allylic-propenylic rearrangement (Claisen).
b.p.₇₆₀ 260° [7952].

Semicarbazone $C_{13}H_{17}N_3O_5$

mol.wt. 295.30 (m.p. 159–160°) [7952].

1-(4,7-Dimethoxy-1,3-benzodioxol-5-yl)-1-propanone (Methoxylatifolone)

[107882-48-4]

 $C_{12}H_{14}O_5$

mol.wt. 238.24

Syntheses

- Obtained by treatment of isoapiole dibromide (m.p. 70–72°) with sodium methoxide in refluxing methanol for 5 h [7243].

N.B. This isoapiole is also named apiole (Parsley) [6640].

– Also refer to: [7953].

Isolation from natural sources

– From roots of *Ferula ovina* Boiss. (Umbelliferae) [7954] and *Ferula sinaica* Boiss growing in Egypt [7933].

m.p. 95.5° [7243].

6-Bromo-3-chloro-7-hydroxy-4-methyl-8-(1-oxopropyl)-2H-1-benzopyran-2-one

6-Bromo-3-chloro-7-hydroxy-4-methyl-8-propionylcoumarin

$C_{13}H_{10}BrClO_4$ mol.wt. 345.58

Synthesis

– Obtained by Fries rearrangement of 6-bromo-3-chloro-4-methyl-7-propionyloxycoumarin (m.p. 136°) with aluminium chloride for 90 min at 155° [7945].

m.p. 190° [7945].

3,4-Dichloro-7-hydroxy-8-methyl-6-(1-oxopropyl)-2H-1-benzopyran-2-one

[63876-52-8]

$C_{13}H_{10}Cl_2O_4$ mol.wt. 301.13

Synthesis

– Obtained in two steps: First, reaction of aluminium chloride (6 mol) with 2,4-dihydroxy-3-methylpropiophenone (2 mol) in methylene chloride, the stirring continued till the evolution of hydrogen chloride gas ceased (3 h). Then, hexachloropropene (2 mol) was added and the reaction mixture was stirred for 3 more hours [7944].

m.p. 191–192° [7944]; 1H NMR [7944], IR [7944], MS [7944].

3,6-Dichloro-7-hydroxy-4-methyl-8-(1-oxopropyl)-2H-1-benzopyran-2-one

3,6-Dichloro-7-hydroxy-4-methyl-8-propionylcoumarin

$C_{13}H_{10}Cl_2O_4$ mol.wt. 301.13

Synthesis

– Obtained by Fries rearrangement of 3,6-dichloro-4-methyl-7-propionyloxycoumarin with aluminium chloride for 90 min at 155° [7945].

5-Hydroxy-6-(1-oxopropyl)-2H-1-benzopyran-2-one-3-carboxylic acid

5-Hydroxy-6-propionylcoumarin-3-carboxylic acid

C₁₃H₁₀O₆ mol.wt. 262.22

Syntheses

- Preparation from cyanoacetic acid and 2,4-dihydroxy-3-formylpropiophenone in 20% sodium hydroxide solution (59%) [6768].
- Also refer to: [7955].

m.p. 185–186° [6768].

3-Bromo-7-hydroxy-4-methyl-8-(1-oxopropyl)-2H-1-benzopyran-2-one

[35093-14-2]

C₁₃H₁₁BrO₄ mol.wt. 311.13

Synthesis

- Obtained by reaction of bromine with 7-hydroxy-8-propionyl-4-methylcoumarin in hot acetic acid for 10 min (49%) [7951].

m.p. 214° [7951].

6-Bromo-7-hydroxy-4-methyl-8-(1-oxopropyl)-2H-1-benzopyran-2-one

6-Bromo-7-hydroxy-4-methyl-8-propionylcoumarin

[109099-37-8]

C₁₃H₁₁BrO₄ mol.wt. 311.13

Syntheses

- Obtained by Pechmann condensation of 4-bromo-2-propionylresorcinol with ethyl acetoacetate [6450].
- Also obtained by Fries rearrangement of 7-(propionyloxy)-6-bromo-4-methylcoumarin (m.p. 128°) with aluminium chloride (3.3 mol) at 150° for 1 h (36%) [6450].

m.p. 198° [6450].

5-Bromo-6-hydroxy-3-methyl-7-(1-oxopropyl)benzofuran-2-carboxylic acid

5-Bromo-6-hydroxy-3-methyl-7-propionylcoumarilic acid

[108245-61-0]

C₁₃H₁₁BrO₅ mol.wt. 327.13

Synthesis

- Obtained by Fries rearrangement of 5-bromo-3-methyl-6-(propionyloxy)coumarilic acid (m.p. 207–208°) with aluminium chloride by heating for 1 h at 150–160° [7945].

m.p. 273–274° [7945].

3-Chloro-7-hydroxy-4-methyl-8-(1-oxopropyl)-2H-1-benzopyran-2-one[110054-61-0] $C_{13}H_{11}ClO_4$ mol.wt. 266.68

Synthesis

– Obtained by Fries rearrangement of 3-chloro-4-methyl-7-(propionyloxy)coumarin (m.p. 140°) with aluminium chloride at 150–155° for 1 h [7950].

m.p. 206–207° [7950].

6-Chloro-7-hydroxy-4-methyl-8-(1-oxopropyl)-2H-1-benzopyran-2-one

6-Chloro-7-hydroxy-4-methyl-8-propionylcoumarin

[110030-74-5] $C_{13}H_{11}ClO_4$ mol.wt. 266.68

Syntheses

– Obtained by Pechmann condensation of 4-chloro-2-propionylresorcinol with ethyl acetoacetate (60%) [6450].

– Also obtained by Fries rearrangement of 6-chloro-4-methyl-7-(propionyloxy)coumarin (m.p. 111°) with aluminium chloride at 140–150° for 1 h (40%) [6450].

m.p. 181° [6450].

5-Chloro-6-hydroxy-3-methyl-7-(1-oxopropyl)benzofuran-2-carboxylic acid

5-Chloro-6-hydroxy-3-methyl-7-propionylcoumarilic acid

[109218-76-0] $C_{13}H_{11}ClO_5$ mol.wt. 282.68

Synthesis

– Obtained by Fries rearrangement of 5-chloro-3-methyl-6-(propionyloxy)coumarilic acid (m.p. 201°) with aluminium chloride by heating for 1 h at 150–160° [7945].

m.p. 276° [7945].

5-Hydroxy-4-methyl-6-(1-oxopropyl)-2H-1-benzopyran-2-one

5-Hydroxy-4-methyl-6-propionylcoumarin

[39818-44-5] $C_{13}H_{12}O_4$ mol.wt. 232.24

Syntheses

– Obtained by condensation of respropiphenone with ethyl acetoacetate in the presence of aluminium chloride in nitrobenzene at 120–130° (39%) [6750].

– Also obtained by Fries rearrangement of 4-methyl-5-(propionyloxy)coumarin with aluminium chloride at 120–130° for 2 h [6750].

m.p. 164–165° [6750].

7-Hydroxy-4-methyl-6-(1-oxopropyl)-2H-1-benzopyran-2-one

7-Hydroxy-4-methyl-6-propionylcoumarin

6-Propionyl-4-methylumbelliferone

[39818-42-3]

 $C_{13}H_{12}O_4$

mol.wt. 232.24

Syntheses

- Obtained by Fries rearrangement of 4-methylumbelliferone propionate with aluminium chloride at 160–165° for 1 h [6800].
 - Also obtained from 2,4-dihydroxy-5-propionyl- β -methyl-cinnamic acid by cyclisation with sulfuric acid or on heating above its melting point. It is partly dehydrated yielding the titled ketone [6800].
 - Also obtained by reaction of acetoacetic ester with resorpiophenone in the presence of phosphorous oxychloride in refluxing benzene for 3 h (25%) [6752].
- m.p. 228° [6800], 227–228° [6752].

Acetate $C_{15}H_{14}O_5$ mol.wt. 274.27 (m.p. 137°) [6800].**Benzoate** $C_{20}H_{16}O_5$ mol.wt. 336.34 (m.p. 138°) [6800].**7-Hydroxy-4-methyl-8-(1-oxopropyl)-2H-1-benzopyran-2-one**

7-Hydroxy-4-methyl-8-propionylcoumarin

8-Propionyl-4-methylumbelliferone

[3361-71-5]

 $C_{13}H_{12}O_4$

mol.wt. 232.24

Syntheses

- Obtained by Fries rearrangement of 4-methylumbelliferone propionate (m.p. 145–146°) [6801] with aluminium chloride for 60–70 min at 100–155° (68%) [6801], at 120–170° for 2–3 h [6802,6803], (69%) [6805] or at 160–165° for 1 h (29%) [6800].
 - Also obtained from 2-propionylresorcin by condensation with acetoacetic ester in the presence of concentrated sulfuric acid [6800].
- m.p. 200° [6800], 197–198° [6801], 192–195° [6802,6805], 187° [6803].

Acetate $C_{15}H_{14}O_5$ mol.wt. 274.27 (m.p. 168°) [6800].**Benzoate** $C_{20}H_{16}O_5$ mol.wt. 336.34 (m.p. 134°) [6800].**6-Hydroxy-3-methyl-7-(1-oxopropyl)benzofuran-2-carboxylic acid**

6-Hydroxy-3-methyl-7-propionylcoumarilic acid

[108881-73-8]

 $C_{13}H_{12}O_5$

mol.wt. 248.24

Syntheses

- Obtained by Fries rearrangement of 3-methyl-6-propionyl-oxycoumarilic acid (m.p. 229°) with aluminium chloride by heating for 1 h, first at 120–125°, then at 150–160° [7950].

- Also obtained by treatment of 3-bromo-7-hydroxy-8-propionyl-4-methylcoumarin with refluxing 7% aqueous sodium carbonate for 1 h (42%) [7951].
m.p. 240° [7950].

8-Hydroxy-2-methyl-5-(1-oxopropyl)quinoline

[100393-42-8] $C_{13}H_{13}NO_2$ mol.wt. 215.25

Synthesis

- Obtained by reaction of propionyl chloride with 8-quinolidinol (8-hydroxy-2-methylquinoline) in nitrobenzene in the presence of aluminium chloride [7946].

m.p. 97–98° [7946].

USE: Fungicide [7946].

1-(2-Ethyl-7-hydroxy-4-benzofuranyl)-1-propanone

[39544-07-5] $C_{13}H_{14}O_3$ mol.wt. 218.25

Synthesis

- Refer to: [7956].

1-(6-Hydroxy-3,7-dimethyl-5-benzofuranyl)-1-propanone

[39874-76-5] $C_{13}H_{14}O_3$ mol.wt. 218.25

Synthesis

- Obtained from 3-bromo-7-hydroxy-6-propionyl-4,8-dimethylcoumarin with refluxing 10% aqueous sodium carbonate solution for 1 h (25%) [7957].

m.p. 120° [7957].

1-(4,7-Dihydroxy-2,3-dimethyl-6-benzofuranyl)-1-propanone

[49812-94-4] $C_{13}H_{14}O_4$ mol.wt. 234.25

Synthesis

- Preparation by treatment of its dimethyl ether with pyridinium chloride (compound **10**) (63%) [7148].

m.p. 190° [7148].

USE: Radioprotective activity [7148].

1-(1-Ethyl-5-hydroxy-2-methyl-1*H*-benzimidazol-4-yl)-1-propanone

[137538-60-4]

 $C_{13}H_{16}N_2O_2$ mol.wt. 232.28

Synthesis

– Obtained by Friedel–Crafts acylation of 1-ethyl-5-hydroxy-2-methylbenzimidazole with propionic anhydride [7920].

3-Bromo-7-hydroxy-4,8-dimethyl-6-(1-oxopropyl)-2*H*-1-benzopyran-2-one

[39874-75-4]

 $C_{14}H_{13}BrO_4$ mol.wt. 246.26

Synthesis

– Obtained by reaction of bromine with 7-hydroxy-6-propionyl-4,8-dimethylcoumarin in hot acetic acid (45%) [7957].

m.p. 223° [7957].

7-Hydroxy-4,8-dimethyl-6-(1-oxopropyl)-2*H*-1-benzopyran-2-one

7-Hydroxy-4,8-dimethyl-6-propionylcoumarin

[25944-43-8]

 $C_{14}H_{14}O_4$ mol.wt. 246.26

Syntheses

– Obtained by Fries rearrangement of 4,8-dimethyl-7-propionoxycoumarin (m.p. 129°) [7958] with aluminium chloride at 160° for 2 h (60%) [7959].

– Also refer to: [7957].

m.p. 200° [7959].

7-Methoxy-4-methyl-6-(1-oxopropyl)-2*H*-1-benzopyran-2-one $C_{14}H_{14}O_4$ mol.wt. 246.26

Syntheses

– Obtained by reaction of dimethyl sulfate with 7-hydroxy-4-methyl-6-propionylcoumarin in aqueous alkaline solution [6800].

– Also obtained by oxidation of 7-methoxy-4-methyl-6-propionylcoumarin in diethyl ether with ceric ammonium nitrate in aqueous acetic acid (94%) [7960].

m.p. 180° [6800], 172° [7960]; 1H NMR [7960], IR [7960].

7-Methoxy-4-methyl-8-(1-oxopropyl)-2H-1-benzopyran-2-oneC₁₄H₁₄O₄ mol.wt. 246.26

Synthesis

– Obtained by reaction of dimethyl sulfate with 8-propionyl-4-methylumbelliferone in the presence of a N sodium hydroxide solution at r.t. for 2 h [6800].

m.p. 150° [6800].

6-Hydroxy-3-methyl-7-(1-oxopropyl)benzofuran-2-carboxylic acid methyl ester

[35093-16-4]

C₁₄H₁₄O₅ mol.wt. 262.26

Synthesis

– Obtained by esterification of the corresponding carboxylic acid with dimethyl sulfate and sodium bicarbonate in refluxing acetone for 2 h [7951].

m.p. 154° [7951].

6-Methoxy-3-methyl-7-(1-oxopropyl)benzofuran-2-carboxylic acid

6-Methoxy-3-methyl-7-propionylcoumarilic acid

[109103-25-5]

C₁₄H₁₄O₅ mol.wt. 262.26

Synthesis

– Preparation by reaction of methyl iodide with 6-hydroxy-3-methyl-7-propionylcoumarilic acid in the presence of potassium carbonate in acetone [7950].

m.p. 93° [7950].

5-Ethyl-6-hydroxy-3-methyl-7-(1-oxopropyl)benzofuran

[106379-22-0]

C₁₄H₁₆O₃ mol.wt. 232.28

Synthesis

– Obtained by decarboxylation of 5-ethyl-6-hydroxy-3-methyl-7-propionylcoumarilic acid on heating for 10 min at 255° [7945].

m.p. 64–65° [7945].

1-(5-Hydroxy-2,2-dimethyl-2H-1-benzopyran-6-yl)-1-propanone

[118585-45-8]

C₁₄H₁₆O₃ mol.wt. 232.28

Synthesis

– Refer to: [7961].

1-(3,4-Dihydro-7-hydroxy-8-iodo-2,2-dimethyl-2H-1-benzopyran-6-yl)-1-propanone

[117844-80-1]

C₁₄H₁₇IO₃ mol.wt. 360.19

Synthesis

– Obtained by reaction of isoprene (2-methyl-1,3-butadiene) with 2,4-dihydroxy-3-iodopropiophenone in petroleum ether in the presence of 85% phosphoric acid for 20 h at 30–35° (89%) [6530].

m.p. 91–92° [6530]; ¹H NMR [6530].**1-(3,4-Dihydro-5-hydroxy-2,2-dimethyl-2H-1-benzopyran-6-yl)-1-propanone**

[117844-76-5]

C₁₄H₁₈O₃ mol.wt. 234.30

Synthesis

– Obtained by reaction of isoprene (2-methyl-1,3-butadiene) with respropiophenone in petroleum ether in the presence of 85% phosphoric acid for 8 h at 30–35° (25%) [6530].

m.p. 95–96° [6530]; ¹H NMR [6530].**1-(3,4-Dihydro-7-hydroxy-2,2-dimethyl-2H-1-benzopyran-6-yl)-1-propanone**

[117844-77-6]

C₁₄H₁₈O₃ mol.wt. 234.30

Syntheses

- Obtained by reaction of isoprene (2-methyl-1,3-butadiene) with respropiophenone in petroleum ether in the presence of 85% phosphoric acid for 8 h at 30–35° (32%) [6530].
- Also obtained by refluxing the 8-iodo derivative with N,N-dimethylaniline for 2 h at 190–200° (98%) [6530].

m.p. 148–149° [6530]; ¹H NMR [6530].**1-(3,4-Dihydro-5,7-dihydroxy-2,2-dimethyl-2H-1-benzopyran-6-yl)-1-propanone**

[201035-07-6]

C₁₄H₁₈O₄ mol.wt. 250.29

Synthesis

– Refer to: [6887].

1-(3,4-Dihydro-5,7-dihydroxy-2,2-dimethyl-2H-1-benzopyran-8-yl)-1-propanone
2,2-Dimethyl-8-propionylchroman-5,7-diol

[201035-08-7]

C₁₄H₁₈O₄ mol.wt. 250.29

Syntheses

- Obtained by reaction of 2-methyl-2-buten-1-ol with phloropropiophenone in dioxane in the presence of Amberlite IR-120 resin (H⁺ form), first at 20° during 0.5 h, then at reflux for 24 h [7739].
- Also refer to: [6887].

5-Hydroxy-6-(1-oxopropyl)-2H-1-benzopyran-2-one-3-carboxylic acid ethyl ester
5-Hydroxy-2-oxo-6-propionyl-2H-chromene-3-carboxylic acid ethyl ester
5-Hydroxy-6-propionylcoumarin-3-carboxylic acid ethyl ester

C₁₅H₁₄O₆ mol.wt. 290.27

Synthesis

- Obtained by reaction of 5-hydroxy-6-propionyl-coumarin-3-carboxylic acid with ethanol in the presence of concentrated sulfuric acid for 18 h at reflux [7955].

m.p. 152–154° [7955].

3-Chloro-6-ethyl-7-hydroxy-4-methyl-8-(1-oxopropyl)-2H-1-benzopyran-2-one
3-Chloro-6-ethyl-7-hydroxy-4-methyl-8-propionylcoumarin

C₁₅H₁₅ClO₄ mol.wt. 294.73

Synthesis

- Obtained by Fries rearrangement of 3-chloro-6-ethyl-4-methyl-7-propionyloxycoumarin with aluminium chloride for 90 min at 155° [7945].

1-[2-Methoxy-6-(2-pyridinyl)phenyl]-1-propanone

[872630-73-4]

C₁₅H₁₅NO₂ mol.wt. 241.29

Synthesis

- Obtained by acylation of 2-(3-methoxyphenyl)pyridine (2 mmol) with ethylene (7 atm) and carbon monoxide (20 atm) in the presence of catalytic amounts of Rh₄(CO)₁₂ in DMA at 160° for 10 h (20%) [7962].

¹H NMR [7962], ¹³C NMR [7962], IR [7962], MS [7962]; GC [7962].

1-[4-Methoxy-2-(2-pyridinyl)phenyl]-1-propanone[188527-69-7] $C_{15}H_{15}NO_2$ mol.wt. 241.29

Synthesis

- Obtained by acylation of 2-(3-methoxyphenyl)pyridine (2 mmol) with ethylene (7 atm) and carbon monoxide (20 atm) in the presence of catalytic amounts of $Rh_4(CO)_{12}$ in DMA at 160° for 10 h (53%) [7962].

 1H NMR [7962], ^{13}C NMR [7962], IR [7962], MS [7962]; GC [7962].**1-[5-Methoxy-2-(2-pyridinyl)phenyl]-1-propanone**[872630-76-7] $C_{15}H_{15}NO_2$ mol.wt. 241.29

Synthesis

- Obtained by acylation of 2-(4-methoxyphenyl)pyridine (2 mmol) with ethylene (7 atm) and carbon monoxide (20 atm) in the presence of catalytic amounts of $Rh_4(CO)_{12}$ in DMA at 180° for 10 h (62%) [7962].

light yellow solid [7962]; m.p. 125–130° [7962];

 1H NMR [7962], ^{13}C NMR [7962], IR [7962], MS [7962];

GC [7962].

6-Ethyl-7-hydroxy-4-methyl-8-(1-oxopropyl)-2H-1-benzopyran-2-one

6-Ethyl-7-hydroxy-4-methyl-8-propionylcoumarin

[109402-62-2] $C_{15}H_{16}O_4$ mol.wt. 260.29

Syntheses

- Preparation by reaction of 4-ethyl-2-propionylresorcinol with ethyl acetoacetate in the presence of 80% sulfuric acid at r.t. overnight [6450].
- Also obtained by Fries rearrangement of 7-propionyloxy-6-ethyl-4-methylcoumarin (m.p. 154°) with aluminium chloride (3.3 mol) at 140–150° for 1 h (40%) [6450].

m.p. 111° [6450].

5-Ethyl-6-hydroxy-3-methyl-7-(1-oxopropyl)-2-benzofurancarboxylic acid[109402-64-4] $C_{15}H_{16}O_5$ mol.wt. 276.29

Synthesis

- Obtained by Fries rearrangement of 5-ethyl-3-methyl-6-propionyloxycoumarilic acid (m.p. 175°) with aluminium chloride by heating for 1 h at 150–160° [7945].

m.p. 243° [7945].

6-Hydroxy-3,7-dimethyl-5-(1-oxopropyl)-2-benzofurancarboxylic acid methyl ester

[39874-77-6]

 $C_{15}H_{16}O_5$ mol.wt. 276.29

Synthesis

– Obtained by reaction of dimethyl sulfate with the corresponding carboxylic acid in the presence of sodium bicarbonate in refluxing acetone (24%) [7957].

m.p. 172° [7957].

1-(3,4-Dihydro-7-hydroxy-2,2,8-trimethyl-2H-1-benzopyran-6-yl)-1-propanone

[117844-90-3]

 $C_{15}H_{20}O_3$ mol.wt. 248.32

Synthesis

– Refer to: [6530].

1-(3,4-Dihydro-6-methoxy-3,7-dimethyl-1H-2-benzopyran-8-yl)-1-propanone

[229003-30-9]

 $C_{15}H_{20}O_3$ mol.wt. 248.32

Synthesis

– Refer to: [7963].

1-[5-Hydroxy-2-(4-hydroxyphenyl)-7-benzoxazolyl]-1-propanone

[868853-56-9]

 $C_{16}H_{13}NO_4$ mol.wt. 283.28

Synthesis

– Refer to: [7964] (compound 72).

1-(6-Hydroxy-2H-naphtho[1,2-b]pyran-5-yl)-1-propanone

[127869-99-2]

 $C_{16}H_{14}O_3$ mol.wt. 254.29

Synthesis

– Obtained by thermal reaction of 2-propionyl-1,4-naphthoquinone with allyltrimethylstannane in benzene under argon atmosphere (3%) [7814].

m.p. 69–72° [7814];

 1H NMR [7814], IR [7814], MS [7814].

5-Hydroxy-6-methoxy-2-methyl-4-(1-oxopropyl)-3-benzofurancarboxylic acid ethyl ester

[78094-46-9]

C₁₆H₁₈O₆ mol.wt. 306.32**Synthesis**

– Obtained by Michael addition of ethyl acetoacetate to 2-(2-ethyl-1,3-dioxolan-2-yl)-6-methoxy-2,5-cyclo-hexadiene-1,4-dione [78094-44-7] in ethanol in the presence of 0.1 equiv of sodium ethoxide, at r.t. for 30 min; then, addition of 6 N hydrochloric acid which effected deketalization and dehydration of the adduct (37%) [7128].

m.p. 97–99° [7128];

¹H NMR [7128], IR [7128]; X-ray crystallography [7128].**1-[5-Hydroxy-2-(4-hydroxyphenyl)-7-benzofuranyl]-1-propanone**

[551002-14-3]

C₁₇H₁₄O₄ mol.wt. 282.30**Synthesis**

– Refer to: [7965].

1-(6-Hydroxy-1,4-dimethyl-9H-carbazol-3-yl)-1-propanone

[136950-73-7]

C₁₇H₁₇NO₂ mol.wt. 267.33**Synthesis**

– Obtained directly by reaction of propionic anhydride with 6-methoxy-1,4-dimethyl-9H-carbazole in refluxing toluene (55%) [7966].

m.p. 248° [7966];

¹H NMR [7966], IR [7966].**1-[2,3-Dihydro-5-hydroxy-3,3-dimethyl-2-(4-morpholinyl)-4-benzofuranyl]-1-propanone**

[116074-75-0]

C₁₇H₂₃NO₄ mol.wt. 305.37**Synthesis**

– Obtained by adding dropwise a solution of 2-propionyl-1,4-benzoquinone in methylene chloride to a stirred solution of 1-(N-morpholino)-2-methyl-1-propene (*enamine*) in methylene chloride at 5°, then the mixture stirred for 1 h at r.t. (50%) [7967].

m.p. 133–134° [7967]; ¹H NMR [7967], IR [7967].

1-(4-Hydroxy-3-methyl-6-phenyl-2-benzofuranyl)-1-propanone

[687184-53-7]

C₁₈H₁₆O₃ mol.wt. 280.32

Synthesis

– Refer to: [7968] (compound **11h**).

BIOLOGICAL ACTIVITY: Anticancer [7968].

1-[7-Methoxy-2,2-dimethyl-4-(1-methylethyl)-2H-1-benzopyran-6-yl]-1-propanone

[851036-32-3]

C₁₈H₂₄O₃ mol.wt. 288.39

Synthesis

– Refer to: [7969].

7-Hydroxy-8-methyl-6-(1-oxopropyl)-4-phenyl-2H-1-benzopyran-2-one

7-Hydroxy-8-methyl-4-phenyl-6-propionylcoumarin

[25944-41-6]

C₁₉H₁₆O₄ mol.wt. 308.33

Synthesis

– Obtained by Fries rearrangement of 8-methyl-4-phenyl-7-(propionyloxy)coumarin (m.p. 109°) [7958] with aluminium chloride at 160° for 2 h (55%) [7959].

m.p. 179° [7959].

1-(3,4,9,10-Tetrahydro-5-hydroxy-2,2,8,8-tetramethyl-2H,8H-benzo[1,2-b:3,4-b']dipyran-6-yl)-1-propanone

3,4,9,10-Tetrahydro-2,2,8,8-tetramethyl-6-propionyl-2H,8H-benzo[1,2-b:3,4-b']dipyran-5-ol

C₁₉H₂₆O₄ mol.wt. 318.41

Synthesis

– Obtained by reaction of 2-methyl-2-buten-1-ol with phloropropiophenone in dioxane in the presence of Amberlite IR-120 resin (4⁺ form), first at 20° during 0.5 h, then at reflux for 24 h [7739].

1-(7-Hydroxy-2,2-diphenyl-1,3-benzodioxol-5-yl)-1-propanone

[178678-85-8]

 $C_{22}H_{18}O_4$ mol.wt. 346.38

Synthesis

– Refer to: [7970].

**1-[6-Hydroxy-3-(4-methylphenyl)-2-phenyl-5-benzofuranyl]-1-propanone**

[438490-68-7]

 $C_{24}H_{20}O_3$ mol.wt. 356.42

Synthesis

– Refer to: [7971].

**1-[6-Hydroxy-3-(4-methoxyphenyl)-2-phenyl-5-benzofuranyl]-1-propanone**

[438490-65-4]

 $C_{24}H_{20}O_4$ mol.wt. 372.42

Syntheses

– Refer to: [7971,7972].

USE: Antifeedant [7971].

Chapter 24

Aromatic Ketones Containing One Isobutyryl Group

24.1 Benzene Derivatives

1-(3,5-Dibromo-4-fluoro-2-hydroxyphenyl)-2-methyl-1-propanone

[881190-43-8] $C_{10}H_9Br_2FO_2$ mol.wt. 339.99

USE: Preparation of piperidine compounds as NMDA receptor antagonists for treatment of dementia [7973].

1-(3-Bromo-6-fluoro-2-hydroxyphenyl)-2-methyl-1-propanone

[881190-64-3] $C_{10}H_9BrFO_2$ mol.wt. 261.09

USE: Preparation of piperidine compounds as NMDA receptor antagonists for treatment of dementia [7973].

1-(4-Bromo-5-fluoro-2-hydroxyphenyl)-2-methyl-1-propanone

[140896-93-1] $C_{10}H_9BrFO_2$ mol.wt. 261.09

1-(3,5-Dibromo-2-hydroxyphenyl)-2-methyl-1-propanone
 $C_{10}H_{10}Br_2O_2$ mol.wt. 322.00

Synthesis

m.p. 97° [7975].

– Obtained by reaction of bromine with o-isobutyrophenone in acetic acid [7975].

1-(3,5-Dichloro-4-hydroxyphenyl)-2-methyl-1-propanone

[124500-38-5] $C_{10}H_{10}Cl_2O_2$ mol.wt. 233.09

Syntheses

– Obtained by Fries rearrangement of 2,6-dichlorophenyl isobutyrate with aluminium chloride at 130–135° for 4.5 h (42%) [6401].

– Also refer to: [7976].

m.p. 112–113° [6401].

1-(4-Fluoro-2-hydroxy-5-nitrophenyl)-2-methyl-1-propanone

[119994-05-7] $C_{10}H_{10}FNO_4$ mol.wt. 227.19

Syntheses

– Obtained by reaction of fuming nitric acid with 4-fluoro-2-hydroxyisobutyrophenone in acetic acid at 0° for 30 min [6412].

– Also refer to: [7977].

Oxime [119994-06-8] $C_{10}H_{11}FN_2O_4$ mol.wt. 242.21 [7978].

1-(4-Bromo-2-hydroxyphenyl)-2-methyl-1-propanone

[140896-90-8] $C_{10}H_{11}BrO_2$ mol.wt. 243.10

Synthesis

– Obtained by Fries rearrangement of 3-bromophenyl isobutyrate [7974].

1-(5-Bromo-2-hydroxyphenyl)-2-methyl-1-propanone

[934524-37-5] $C_{10}H_{11}BrO_2$ mol.wt. 243.10

Syntheses

– Obtained by reaction of isobutyryl chloride with 4-bromo-anisole in the presence of aluminium chloride in carbon disulfide for 48 h at r.t. (35%) [7979].

– Also refer to: [7980].

b.p.₁₂ 144–145° [7979].

1-(5-Bromo-2,3,4-trihydroxyphenyl)-2-methyl-1-propanone

m.p. 135° [6454].

 $C_{10}H_{11}BrO_4$ mol.wt. 275.10**Synthesis**

– Preparation by reaction of bromine with 2,3,4-trihydroxy-isobutyrophenone in acetic acid [6454].

1-(4-Chloro-2-hydroxyphenyl)-2-methyl-1-propanone

[6618-61-7]

 $C_{10}H_{11}ClO_2$ mol.wt. 198.65**Syntheses**

– Obtained by using standard Friedel–Crafts acylation [7976].
– Also refer to: [6460,6463].

b.p.₁₁ 133–138° [6460].**1-(4-Chloro-3-hydroxyphenyl)-2-methyl-1-propanone**

[124500-32-9]

 $C_{10}H_{11}ClO_2$ mol.wt. 198.65**Synthesis**

– Obtained by using standard Friedel–Crafts acylation [7976].

1-(5-Chloro-2-hydroxyphenyl)-2-methyl-1-propanone

[90743-04-7]

 $C_{10}H_{11}ClO_2$ mol.wt. 198.65**Syntheses**

– Obtained by Fries rearrangement of 4-chlorophenyl isobutyrate (b.p.₁₁ 120°; m.p. 29°) with aluminium chloride at 110° for 3 h [7981] or in nitrobenzene at 140° for 2 h (55%) [7979].
– Also refer to: [6489,7980,7982,7983].

yellow oil [7981]; b.p.₂₀ 130° [7981], b.p.₁₈ 140–142° [7979].**1-(3-Chloro-2,5-dihydroxyphenyl)-2-methyl-1-propanone**

[918310-93-7]

 $C_{10}H_{11}ClO_3$ mol.wt. 214.65**Synthesis**

– Refer to: [7984].

USE: For preparation of agrochemical pesticides [7984].

1-(4-Chloro-2,5-dihydroxyphenyl)-2-methyl-1-propanone[88772-49-0] $C_{10}H_{11}ClO_3$ mol.wt. 214.65

Synthesis
– Refer to: [7985].

1-(2-Fluoro-6-hydroxyphenyl)-2-methyl-1-propanone[881190-63-2] $C_{10}H_{11}FO_2$ mol.wt. 182.19

Synthesis
– Refer to: [7973].

USE: Preparation of piperidine compounds as NMDA receptor antagonists for treatment of dementia [7973].

1-(3-Fluoro-2-hydroxyphenyl)-2-methyl-1-propanone[879339-62-5] $C_{10}H_{11}FO_2$ mol.wt. 182.19

Synthesis
– Refer to: [6517].

USE: Preparation of heteroaryl alkylidenetetrahydro-naphthalenamines as anti-inflammatory agents [6517].

1-(3-Fluoro-4-hydroxyphenyl)-2-methyl-1-propanone[879339-65-8] $C_{10}H_{11}FO_2$ mol.wt. 182.19

Syntheses
– Refer to: [6517,7986].

USE: Preparation of heteroaryl alkylidenetetrahydro-naphthalenamines as anti-inflammatory agents [6517]; preparation of δ -methylenebenzenebutanamines as anti-inflammatory agents [7986].

1-(4-Fluoro-2-hydroxyphenyl)-2-methyl-1-propanone[123450-86-2] $C_{10}H_{11}FO_2$ mol.wt. 182.19

Syntheses
– Refer to: [6412] (Japanese patent) and [7973].

USE: Preparation of piperidine compounds as NMDA receptor antagonists for treatment of dementia [7973].

1-(5-Fluoro-2-hydroxyphenyl)-2-methyl-1-propanone[183280-17-3] $C_{10}H_{11}FO_2$ mol.wt. 182.19

Synthesis

– Obtained by Fries rearrangement of p-fluorophenyl isobutyrate with aluminium chloride between 150° and 180° for 20 min (38%) [7987].

oil [7987]; 1H NMR [7987], MS [7987].**1-(2-Hydroxy-5-nitrophenyl)-2-methyl-1-propanone**[88521-75-9] $C_{10}H_{11}NO_4$ mol.wt. 209.20

Syntheses

– Obtained by reaction of isobutyryl chloride with p-nitrophenol in nitrobenzene in the presence of aluminium chloride (9%) [6538], according to the modified method [7988].

– Also refer to: [7989].

m.p. 74–74.5° [6538]; 1H NMR [6538], IR [6538].**1-(4-Hydroxy-3-nitrophenyl)-2-methyl-1-propanone**[82350-84-3] $C_{10}H_{11}NO_4$ mol.wt. 209.20

Synthesis

– Refer to: [7990].

1-(3,4-Dihydroxy-5-nitrophenyl)-2-methyl-1-propanone[134610-34-7] $C_{10}H_{11}NO_5$ mol.wt. 225.20

Synthesis

– Obtained by demethylation of 4-hydroxy-3-methoxy-5-nitroisobutyrophenone with pyridinium chloride at 180° for 45 min [7991].

BIOLOGICAL ACTIVITY: As catechol-O-methyltransferase inhibitor [7991].

m.p. 98–99° [7991].

1-(2-Hydroxyphenyl)-2-methyl-1-propanone[6640-69-3] $C_{10}H_{12}O_2$ mol.wt. 164.20

Syntheses

– Obtained by Fries rearrangement of phenyl isobutyrate,

- with aluminium chloride [7992],

- without solvent at 140–150° for 1 h [7794], (40%) [7993] or at 170° for 40 min (40%) [7994];
- in nitrobenzene at 50° for 18 h (25%) [6567] or in carbon disulfide (17%) [6683];
 - with ferric chloride in a boiling water bath for 6 h [7975].
- Also obtained by reaction of isobutyryl chloride with phenol in nitrobenzene on a steam-cone for 30 min (7%) [7993].
- Also obtained by reaction of *sec*-butyllithium (1.1 equiv) with 2-bromo-4-methylphenyl isobutyrate in tetrahydrofuran/ethyl ether/hexane at –95° for 30 min and –78° for 30 min, then hydrolysis with saturated ammonium chloride (62%) (metal-promoted Fries rearrangement) [6590].
- Also obtained by hydrolysis of 2-{2-methyl-1-[(1*R*)-1-phenylethyl]iminopropyl}phenol (4ea) with aqueous acetic acid/THF at 40° for 4 h (77%) [6593].
- Also refer to: [7980,7995–7998].

N.B.: The formula of the ketone obtained by [7999] is not compatible with the *o*-hydroxyketone of the title. In fact, the mentioned melting point (64–66°) [7999] should be much lower than the one of the *p*-isomer, that is of 56° [7975].

1-(3-Hydroxyphenyl)-2-methyl-1-propanone

[103323-37-1]

C₁₀H₁₂O₂ mol.wt. 164.20

Syntheses

- Obtained by treatment of 3-methoxyisobutyrophenone with pyridinium chloride at 210° for 30 min [6659].
 - Also obtained by treatment of 1-hydroxy-1-(3-hydroxy-phenyl)-2-methylpropane (m.p. 132–134°) with DDQ in dioxane for 72 h [6659].
 - Also obtained by diazotization of 3-aminoisobutyrophenone, followed by hydrolysis of the diazonium salt obtained (19%) [8000].
 - Also obtained by reaction of diisopropylcadmium with 3-acetoxybenzoyl chloride in benzene, followed by treatment of the acetate obtained with refluxing 10% sodium hydroxide for 2–3 h (15%) [6657].
- b.p.₁ 129° [6657]; MS [6628].

1-(4-Hydroxyphenyl)-2-methyl-1-propanone[34917-91-4] $C_{10}H_{12}O_2$ mol.wt. 164.20

Syntheses

- Preparation by reaction of isobutyronitrile with phenol in the presence of triflic acid at r.t. for 15 days (32%) [8001].
- Also obtained by Fries rearrangement of phenyl isobutyrate,
 - with aluminium chloride [7992,8002],
- in nitrobenzene at 25° for 40 h (86%) [7993], at 40° for 48 h under an argon atmosphere [8003] or at 50° for 18 h (62%) [6567];
- in carbon disulfide (15%) [6683];
- without solvent at 140–150° for 1 h (11%) [7993];
- with ferric chloride in a boiling water bath for 6 h (16%) [7975].
- Also obtained by reaction of isobutyryl chloride with phenol in nitrobenzene on a steam-cone for 30 min (73%) [7993].
- Also obtained by demethylation of 4-isobutyrylanisole with pyridinium chloride at 180° for 10 h (quantitative yield) [8004] or at reflux for 15 min (92%) [6672].
- Also refer to: [6664,6834,7985,7997,8005–8017].

USE: In determination of uranium by spectrophotometry [8023].

BIOLOGICAL ACTIVITY: Antimelanoma and skin depigmentation [6778]; catechol O-methyl-transferase inhibitor [8024,8025].

Uranium complex [68079-14-1] [8023].

1-(2,5-Dihydroxyphenyl)-2-methyl-1-propanone

[112450-27-8] C₁₀H₁₂O₃ mol.wt. 180.20

Syntheses

– Refer to: [7883, 8026].

1-(2,6-Dihydroxyphenyl)-2-methyl-1-propanone

[101386-02-1] C₁₀H₁₂O₃ mol.wt. 180.20

Synthesis

– Obtained from 2-chloro-2-isobutyryl-1,3-cyclohexanedione by rearrangement in 10–20% hydrogen chloride-DMF at 120–130° for 15–20 min, according to the procedure [6810], (66%) [6811].

b.p._{0.02} 105–110° [6811]; m.p. 112° [6811];
¹H NMR [6811], ¹³C NMR [6811], IR [6811].

1-(3,4-Dihydroxyphenyl)-2-methyl-1-propanone (*U-0521*)

[5466-89-7] C₁₀H₁₂O₃ mol.wt. 180.20

Syntheses

– Obtained by reaction of isobutyryl chloride with pyrocatechol in the presence of aluminium chloride in chlorobenzene, first at 55° for 30 min, then at 110–115° for 3 h (39%) [8027].

- Also obtained by treatment of a pyrocatechol and its diisobutyrate mixture with aluminium chloride in chlorobenzene at 110° for 3 h (18%) [8027].
- Also obtained by Fries rearrangement of pyrocatechol diisobutyrate (69%) [6727].
- Also obtained (35%) [8028] according to the procedure [8029].
- Also refer to: [6828,8030–8039].

b.p._{0.05} 150–155° [8027], b.p.₄ 200–210° [6727];
m.p. 106.5–107.5° [6727], 94–96° [8027,8029].

BIOLOGICAL ACTIVITY: Catechol O-methyltransferase inhibitor [8024,8025,8040]; pharmacology [6828]; antimelanoma and skin depigmentation [6778]; antihypertensive [8041]; tyrosine hydroxylase inhibition [8042].

1-(3,5-Dihydroxyphenyl)-2-methyl-1-propanone

$C_{10}H_{12}O_3$ mol.wt. 180.20

Synthesis

– Refer to: [8043] (Japanese patent).

2-Methyl-1-(2,3,4-trihydroxyphenyl)-1-propanone

$C_{10}H_{12}O_4$ mol.wt. 196.20

Synthesis

– Obtained by reaction of isobutyric acid with pyrogallol in the presence of zinc chloride at 140–145° (40%) (Nencki reaction) [6454].

b.p.₁₉ 198–200° [6454]; m.p. 118° [6454].

2-Methyl-1-(2,4,5-trihydroxyphenyl)-1-propanone

[99186-85-3]

$C_{10}H_{12}O_4$ mol.wt. 196.20

Syntheses

– Preparation by reaction of isobutyryl chloride with 1,2,4-benzenetriol in nitrobenzene in the presence of aluminium chloride [8044–8047].

– Also obtained by Fries rearrangement of 1,2,4-benzenetriol triisobutyrate with aluminium chloride in nitrobenzene [8045].

– Also refer to: [8048].

m.p. 136–138° [8044–8047].

USE: Antioxidizing agent [8048] for fats and oils [8044–8046], lard [8049] and paraffin waxes [8046].

2-Methyl-1-(2,4,6-trihydroxyphenyl)-1-propanone

[35458-21-0]

$C_{10}H_{12}O_4$ mol.wt. 196.20

Syntheses

– Obtained by reaction of isobutyronitrile with phloroglucinol (Hoesch reaction) [8050], (34%) [8051] according to the procedure [8052] or in the presence of triflic acid at r.t. for 13 days (41%) [8001].

- Preparation by reaction of isobutyryl chloride with phloroglucinol [7740] in the presence of aluminium chloride in a nitrobenzene/carbon disulfide solution (80%) [8053], (52–54%) [6880,8054,8055], (44%) [8056], (38%) [8057] or in a methylene chloride/nitromethane solution [8058].
- Also obtained by reaction of isobutyric acid with phloroglucinol,
 - in the presence of boron trifluoride etherate and the mixture heated on a steam bath for 2 h [8059,8060];
 - in the presence of phosphorous oxychloride and aluminium chloride under nitrogen, at 0° for 8 h (40–54%) [8061,8062].
- Also refer to: [8063–8071].
- Also obtained by reaction performed by VPS, (valerophenone synthase), a polyketide synthase, with isobutyryl-CoA [8072–8075].
- Also refer to: [6889, 8076–8078].

Isolation from natural sources

- From *Helichrysum species* [8079,8080].
- From Hops *Humulus lupulus* L. (Cannabinaceae) [8081].
- Formation in the biosynthesis of hop bitter acids in *Humulus lupulus* (Cannabaceae) [8082].

colourless oil [8079], yellowish oil [8081];

m.p. (hydrates) 78–82° [8056], 71–74° [8068], 70° [8055], 68° [8052,8083], 65–66.5° [8001]; (anhydrous) 177–178° [8050], 140° [6880], 138–140° [8052,8056], 138–139° [8057], 138° [8054,8055, 8084], 134–136° [8068]. One of the reported melting points is obviously wrong.

¹H NMR [8001,8057,8059,8079,8081],

¹³C NMR [8059,8081], IR [8001,8059,8068,8079,8081], UV [8057,8059,8075, 8085],

1-(4-Methoxyphenyl-2,6-d₂)-2-methyl-1-propanone[870456-80-7] $C_{11}H_{12}D_2O_2$ mol.wt. 180.24

Synthesis

– Obtained (low yield) by regioselective *ortho*-deuteration of 4-methoxyisobutyrophenone in the presence of $[Ir(PPh_3)_3(cod)]^+ \cdot BF_4^-$ [8101].¹H NMR [8101].

2-Hydroxy-5-(2-methyl-1-oxopropyl)benzoic acid

2-Hydroxy-5-isobutyrylbenzoic acid

 $C_{11}H_{12}O_4$ mol.wt. 208.21

Synthesis

– Obtained by saponification of methyl 2-hydroxy-5-isobutyrylbenzoate with sodium hydroxide in refluxing dilute ethanol for 2.5 h (81%) [8102].

m.p. 168–170° [8102].

1-(5-Bromo-2-methoxyphenyl)-2-methyl-1-propanone $C_{11}H_{13}BrO_2$ mol.wt. 257.13

Synthesis

– Obtained by reaction of dimethyl sulfate with 5-bromo-2-hydroxyisobutyrophenone in the presence of aqueous sodium hydroxide [7979].

b.p.₁₀ 158–163° [7979].**1-(5-Chloro-2-methoxyphenyl)-2-methyl-1-propanone** $C_{11}H_{13}ClO_2$ mol.wt. 212.68

Synthesis

– Refer to: [7979].

b.p.₉ 150–152° [7979].**1-(2-Fluoro-6-methoxyphenyl)-2-methyl-1-propanone**

[881190-66-5]

 $C_{11}H_{13}FO_2$ mol.wt. 196.22

Synthesis

– Refer to: [7973].

USE: Preparation of piperidine compounds as NMDA receptor antagonists for treatment of dementia [7973].

1-(3-Fluoro-4-methoxyphenyl)-2-methyl-1-propanone[879339-67-0] $C_{11}H_{13}FO_2$ mol.wt. 196.22

Syntheses

– Refer to: [6517, 7986].

USE: Preparation of heteroaryl alkylidenetetrahydro-naphthalenamines as anti-inflammatory agents [6517]; preparation of δ -methylenebenzene-butanamines as anti-inflammatory agents [7986].

1-(2-Hydroxy-5-methyl-3-nitrophenyl)-2-methyl-1-propanone[70978-42-6] $C_{11}H_{13}NO_4$ mol.wt. 223.23

Syntheses

– Preparation by nitration of 2-hydroxy-5-methyl-isobutyrophenone at -20° (76%) [6926].– Also obtained by nitration of 2-hydroxy-5-methyl-isobutyrophenone in methylene chloride using fuming nitric acid ($d = 1.5$) in acetic acid at r.t. for 6 h (76%) [6993].– Also obtained by reaction of phenyllithium with 2-bromo-4-methyl-6-nitrophenyl isobutyrate in THF at -78° (65%) [8103].m.p. $75-77^\circ$ [6926,6993].**1-(4-Hydroxy-3-methoxy-5-nitrophenyl)-2-methyl-1-propanone**[134610-33-6] $C_{11}H_{13}NO_5$ mol.wt. 239.23

Synthesis

– Obtained by reaction of 50% nitric acid with 4-hydroxy-3-methoxyisobutyrophenone in acetic acid at r.t. for 15 min [7991].

m.p. $85-87^\circ$ [7991].

BIOLOGICAL ACTIVITY: As catechol-O-methyltransferase inhibitor [7991].

1-[3-(Aminomethyl)-5-bromo-4-hydroxyphenyl]-2-methyl-1-propanone[104129-15-9] $C_{11}H_{14}BrNO_2$ mol.wt. 272.14

Syntheses

– Refer to: [6476,7008].

Oxime [104129-14-8] $C_{11}H_{15}BrN_2O_2$ mol.wt. 287.16.

BIOLOGICAL ACTIVITY: Diuretic and hypohypertensive agent [6476,7008].

1-(2-Hydroxy-3-methylphenyl)-2-methyl-1-propanone

[128291-79-2]

 $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Obtained by Fries rearrangement of o-tolyl isobutyrate [8104], (b.p.₁₅ 112°) [7981] with aluminium chloride at a higher temperature (56%) [8105], at 140° for 4 h (45%) [8106] or at 100–110° (20%) [7981].
 - Also obtained by reaction of isobutyryl chloride with o-cresol in the presence of aluminium chloride [8107].
- lightly yellow greenish oil [7981]; b.p.₂₃ 135–137° [8106]; IR [7078].

1-(2-Hydroxy-4-methylphenyl)-2-methyl-1-propanone

[116557-45-0]

 $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Obtained by Fries rearrangement of 3-methylphenyl isobutyrate in the presence of aluminium chloride (70%) [7992], (66%) [7019].
 - Also obtained by reaction of isobutyric acid with m-cresol in the presence of P_2O_5/SiO_2 at 100° for 24 h (52%) [8108].
 - Also refer to: [7276].
- b.p.₁₁ 120–121° [7019], b.p.₂₀ 130° [7992], b.p. 235° [8108];
¹H NMR [8108], IR [8108].

1-(2-Hydroxy-5-methylphenyl)-2-methyl-1-propanone

[64207-03-0]

 $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Preparation by Fries rearrangement of p-cresyl isobutyrate,
 - with aluminium chloride (92%) [7992], at 170° for 1.5 h (80–96%) [6492];
 - with aluminium chloride at 140–150° for 4–5 h (80%) [7981].
 - Also obtained by reaction of isobutyric acid with p-cresol in the presence of boron trifluoride at 70° for 2 h (79%) [6583].
 - Also obtained from 2-bromo-2-methyl-1-(2-hydroxy-5-methylphenyl)-1-propanone, named o-[α-bromoisobutyro]-p-cresol in the paper,
 - by treatment with zinc powder in acetic acid [8109];
 - by treatment with boiling dimethylaniline or diethylaniline [8110].
 - Also refer to: [6926,7033,7052,7980,8109,8111,8112].
- colourless oil [7981];

b.p.₁₀ 124–125° [7981], b.p.₁₀ 125° [7992], b.p.₁₁ 125–125.3° [7033],
 b.p.₁₈ 131–132° [6583], b.p.₇₆₀ 250–251° [7981], b.p.₇₆₃ 250.5–251.5° [7033];
 UV [7033,8111].

1-(4-Hydroxy-2-methylphenyl)-2-methyl-1-propanone

[761459-40-9] $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Obtained (by-product) by Fries rearrangement of 3-methyl-phenyl isobutyrate in the presence of aluminium chloride (7%) [7992].
- Also obtained by reaction of isobutyric acid with m-cresol in the presence of P_2O_5/SiO_2 at 100° for 24 h (26%) [8108].
- Preparation by heating 4-methoxy-2-methylisobutyrophenone with pyridinium chloride at reflux for 15 min (80%) [6672].

b.p.₁ 160° [7992].

USE: Intermediate in preparation of fungicidal acid amide derivatives [8113].

1-(4-Hydroxy-3-methylphenyl)-2-methyl-1-propanone

[73206-57-2] $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Obtained by Fries rearrangement of o-tolyl isobutyrate (b.p.₁₅ 112°) [7981] with aluminium chloride at 100–110° (major compound) [7981] or at 140° for 4 h (44%) [8106].
- b.p.₁₂ 182° [7981];
 m.p. 123–124° [8106], 122° [7981].

1-(2-Methoxyphenyl)-2-methyl-1-propanone

[74786-53-1] $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Preparation by reaction of dimethyl sulfate with 2-hydroxy-isobutyrophenone [7992].
- Also refer to: [8114–8117].

1-(3-Methoxyphenyl)-2-methyl-1-propanone

[6026-75-1] $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses

- Preparation by a Grignard reaction of isobutyryl chloride with (3-methoxyphenyl)magnesium chloride at –70° in THF according to the method [8118], (60%) [7356].
 - Also refer to: [8115,8119–8121].
- oil [7356].

1-(4-Methoxyphenyl)-2-methyl-1-propanone[2040-20-2] $C_{11}H_{14}O_2$ mol.wt. 178.23**Syntheses**

- Preparation by reaction of isobutyryl chloride with anisole,
 - in the presence of aluminium chloride [8122];
 - in the presence of graphite in refluxing ethylene dichloride for 3 h (89%) [8123,8124];
 - in the presence of bismuth triflate at 80° for 1 h (99%) [8125];
 - in the presence of bismuth (III) chloride at 80° for 2 h (71%) [8126];
 - in the presence of trifluoroacetic acid [8127].
- Also obtained by reaction of isobutyric acid with anisole,
 - on the solid surface of alumina in the presence of trifluoroacetic anhydride (90%) [7090];
 - in the presence of $Eu(NTf_2)_3$ (15 mol %) at 250° for 16 h (77%) (compound **9f**) [7091].
- Also obtained by reaction of isobutyric anhydride with anisole,
 - in the presence of chloroacetic acid for 48 h at 170–180° (93–97%) [7089];
 - in the presence of $TiCl(OTf)_3/TfOH$ in acetonitrile at r.t. for 12 h (90%) [8128];
 - in the presence of iodine for 3 h at reflux (42%) [6721].
- Also obtained by photo-oxidative fragmentation of 2-methyl-1-(4-methoxyphenyl)-1-propanol sensitized by titanium dioxide in acetonitrile in the presence of silver sulfate (18%) [8129].
- Also obtained by treatment of ethyl 2,2-dimethyl-3-oxo-3-(4-methoxyphenyl)propionate with sulfuric acid in refluxing acetic acid (41%) [8130].
- Also refer to: [6672,7033,7090,7095,8115,8121,8131–8133].

Isolation from natural sources

- From *Betula Alba* L., also named *Betula verrucosa* Ehr or *Betula pendula* Roth [8122].
 b.p._{2.1} 12–114° [7095], b.p.₁₃ 148° [8122], b.p.₁₄ 149–150° [7033],
 b.p.₁₄ 150° [8130], b.p.₁₆ 152.5–153° [7089], b.p.₄₀ 188–190° [6721],
 b.p. 276–277° [8122]; ¹³C NMR [7095], UV [7033].

Semicarbazone $C_{12}H_{17}N_3O_2$ mol.wt. 235.29 (m.p. 193–194° [8122], 188–189° [8130]).**1-(2-Hydroxy-3-methoxyphenyl)-2-methyl-1-propanone**[266310-09-2] $C_{11}H_{14}O_3$ mol.wt. 194.23**Synthesis**

– Refer to: [7131] (Chinese paper).

1-(2-Hydroxy-4-methoxyphenyl)-2-methyl-1-propanone

[29048-55-3]

 $C_{11}H_{14}O_3$ mol.wt. 194.23

Syntheses

- Obtained by partial methylation of 2,4-dihydroxy-isobutyrophenone with dimethyl sulfate in the presence of sodium methoxide in refluxing methanol [7276], (66%) [8020].
 - Other preparation (Japanese paper) (93%) [8021].
- b.p._{0.2} 120–123° [8020], b.p.₅ 127–128° [8021]; m.p. 27° [8020].

1-(2-Hydroxy-5-methoxyphenyl)-2-methyl-1-propanone

[176642-56-1]

 $C_{11}H_{14}O_3$ mol.wt. 194.23

Syntheses

- Refer to: [7150,7984].
- USE: For preparation of agrochemical pesticides [7984].

1-(4-Hydroxy-3-methoxyphenyl)-2-methyl-1-propanone

[14046-53-8]

 $C_{11}H_{14}O_3$ mol.wt. 194.23

Syntheses

- Preparation by reaction of isobutyric anhydride with guaiacol in the presence of zinc chloride at 155° for 3 min [7991].
 - Also obtained by Fries rearrangement of guaiacol isobutyrate with aluminium chloride in nitrobenzene, first at r.t. for 3 h, then at 90° for 30 min (14%) [6828].
 - Also refer to: [8134].
- b.p._{0.07} 118° [6828];
 m.p. 95–97.5° [6828], 86–87° [7991];
¹H NMR [6828], IR [6828].
 BIOLOGICAL ACTIVITY: As catechol-O-methyltransferase inhibitor [7991];
 pharmacology [6828].

1-(2,4-Dihydroxy-6-methoxyphenyl)-2-methyl-1-propanone (*Robustaol B*)

[102092-19-3]

 $C_{11}H_{14}O_4$ mol.wt. 210.23

Syntheses

- Obtained by reaction of isobutyronitrile with 5-methoxy-resorcinol (Hoesch reaction) [8135].
 - Total synthesis [8136] (Chinese paper).
- Isolation from natural sources
- From *Eucalyptus robusta* Sm. [8136].

– From *Kunzea sinclairii* and *Kunzea ericoides* (Myrtaceae) [8135].

¹H NMR [8135], ¹³C NMR [8135], spectral analyses [8136] (Chinese paper).

BIOLOGICAL ACTIVITY: Antiviral [8135,8137].

1-(2,6-Dihydroxy-4-methoxyphenyl)-2-methyl-1-propanone

[42541-62-8]

C₁₁H₁₄O₄ mol.wt. 210.23

Syntheses

– Preparation by reaction of diazomethane with phloroisobutyrophenone in ethyl ether at 0° for 5 days (59%) [8051].

– Also obtained (poor yield) by reaction of dimethyl sulfate with phloroisobutyrophenone in the presence of potassium bicarbonate in refluxing benzene overnight (6%) [8138].

– Also obtained by reaction of isobutyronitrile with 5-methoxyresorcinol (Hoesch reaction) [8135].

Isolation from natural sources

– From *Kunzea sinclairii* and *Kunzea ericoides* (Myrtaceae) [8135].

m.p. 162–163° [8138], 153–155° (d) [7175];

¹H NMR [8051,8135,8138], IR [8051,8138], UV [8051].

BIOLOGICAL ACTIVITY: Antiviral [8135].

1-(3,5-Dihydroxy-4-methoxyphenyl)-2-methyl-1-propanone

[148204-60-8]

C₁₁H₁₄O₄ mol.wt. 210.23

Isolation from natural sources

– Identification in liquid wastes from eucalyptus wood and kraft lignin charring [7259].

GC [7259], GC-MS [7259].

2-Methyl-1-(2,4,6-trihydroxy-3-methylphenyl)-1-propanone

[69480-03-1]

C₁₁H₁₄O₄ mol.wt. 210.23

Syntheses

– Preparation by reaction of isobutyronitrile with 2-methyl-phloroglucinol (Hoesch reaction) [6895,7255], (32%) [8139], (35%) [8140].

– Preparation by reaction of isobutyryl chloride with 2-methyl-phloroglucinol in the presence of aluminium chloride in carbon disulfide/nitrobenzene mixture (51%) [8054].

– Also refer to: [6891].

m.p. (monohydrate) 160–161° [8140]; (anhydrous) 161–162° [7255,8140], 160° [8054], 158–159° [6895];

CG [6895]; MS [6895].

BIOLOGICAL ACTIVITY: Antimicrobial for staphylococcus aureus [6891].

1-(3-Amino-2-hydroxy-5-methylphenyl)-2-methyl-1-propanone

[70977-80-9]

 $C_{11}H_{15}NO_2$

mol.wt. 193.25

Syntheses

– Preparation by hydrogenation of the 2-hydroxy-5-methyl-3-nitroisobutyrophenone using 5% Pd/C as catalyst in ethanol [6993], (89%) [6932].

m.p. 41–42° [6926,6993].

1-(2-Amino-5-methoxyphenyl)-2-methyl-1-propanone

[166973-19-9]

 $C_{11}H_{15}NO_2$

mol.wt. 193.25

Synthesis

– Refer to: [8141].

USE: Intermediate; preparation of triazoloquinolines which increase apo-A1 production for use in treatment of diseases or conditions caused by elevated levels of LDL-cholesterol or by inflammation.

1-[2-(Acetyloxy)-4-hydroxyphenyl]-2-methyl-1-propanone

[251463-58-8]

 $C_{12}H_{14}O_4$

mol.wt. 222.24

Synthesis

– Obtained by partial enzymatic regioselective deacetylation of 2,4-diacetoxyisobutyrophenone (oil) with porcine pancreatic lipase in THF in the presence of n-butanol for 48 h at 42–45° (55%) [8022].

semi-solid [8022]:

 1H NMR [8022], ^{13}C NMR [8022], IR [8022], UV [8022], MS [8022]; TLC [8022].**2-Hydroxy-5-(2-methyl-1-oxopropyl)benzoic acid methyl ester**

Methyl 2-hydroxy-5-isobutyrylbenzoate

 $C_{12}H_{14}O_4$

mol.wt. 222.24

Syntheses

– Obtained by reaction of isobutyryl chloride with methyl o-anisate in carbon disulfide in the presence of aluminium chloride, first at 0°, then at r.t. for 30 h (23%) [8102].

– Also obtained by Fries rearrangement of o-carbomethoxyphenyl isobutyrate (b.p.₁₀₋₁₂ 150–154.5°) [8102].

m.p. 97–99° [8102].

2-Methoxy-5-(2-methyl-1-oxopropyl)benzoic acid
 $C_{12}H_{14}O_4$ mol.wt. 222.24

Synthesis

– Obtained by treatment of methyl 2-methoxy-5-isobutyrylbenzoate with sodium hydroxide in dilute ethanol (37%) [8102].

m.p. 97.5–99.5° [8102].

2-Methoxy-6-(2-methyl-1-oxopropyl)benzoic acid
 $C_{12}H_{14}O_4$ mol.wt. 222.24

Synthesis

– Obtained by reaction of diisopropylcadmium with 3-methoxyphthalic anhydride (a mixture with its isomer below) [8102].

3-Methoxy-2-(2-methyl-1-oxopropyl)benzoic acid
 $C_{12}H_{14}O_4$ mol.wt. 222.24

Synthesis

– Obtained by reaction of diisopropylcadmium with 3-methoxyphthalic anhydride (a mixture with its isomer above) [8102].

1-[2-(Acetyloxy)-4,6-dihydroxyphenyl]-2-methyl-1-propanone

[62545-34-0]

 $C_{12}H_{14}O_5$ mol.wt. 238.24

Synthesis

– Obtained by acetylation of phloroisobutyrophenone [8058].

1-[4-(Acetyloxy)-2,6-dihydroxyphenyl]-2-methyl-1-propanone

[62545-45-3]

 $C_{12}H_{14}O_5$ mol.wt. 238.24

Synthesis

– Obtained by acetylation of phloroisobutyrophenone [8058].

1-(4-Chloro-2-hydroxy-3,6-dimethoxyphenyl)-2-methyl-1-propanone

[88771-65-7]

 $C_{12}H_{15}ClO_4$ mol.wt. 258.70

Synthesis

– Refer to: [7985].

1-(4-Fluoro-2,6-dimethoxyphenyl)-2-methyl-1-propanone[263010-96-4] $C_{12}H_{15}FO_3$ mol.wt. 226.24Syntheses
– Refer to: [8142,8143].**4-Hydroxy-3-(2-methyl-1-oxopropyl)acetanilide** $C_{12}H_{15}NO_3$ mol.wt. 221.26Synthesis
– Refer to: [7283].**1-(5-Ethyl-2-hydroxyphenyl)-2-methyl-1-propanone**[847344-76-7] $C_{12}H_{16}O_2$ mol.wt. 192.26Syntheses
– Refer to: [7980,8144].**1-(2-Hydroxy-3,5-dimethylphenyl)-2-methyl-1-propanone**[106141-17-7] $C_{12}H_{16}O_2$ mol.wt. 192.26

Syntheses

- Obtained by Fries rearrangement of 2,4-dimethylphenyl isobutyrate (b.p. 245°) with aluminium chloride at 120° for 3 h (70%) [7981].
- Also obtained by reaction of sec-butyllithium (1.1 equiv) with 2-bromo-4,6-dimethylphenyl isobutyrate in tetrahydrofuran/ethyl ether/hexane at –95° for 30 min and –78° for 30 min, then hydrolysis with saturated ammonium chloride (72%) (metal-promoted Fries rearrangement) [6590].
- Also refer to: [8110].

yellow oil [7981]; b.p.₁₃ 129° [7981];¹H NMR [6590], ¹³C NMR [6590], IR [6590].**1-(2-Hydroxy-4,5-dimethylphenyl)-2-methyl-1-propanone**[50342-15-9] $C_{12}H_{16}O_2$ mol.wt. 192.26

Synthesis

- Obtained by Fries rearrangement of 3,4-dimethylphenyl isobutyrate with aluminium chloride at 130° for 5 h [7276].

b.p.₂₀ 150° [7276].

Oxime C₁₂H₁₇NO₂ mol.wt. 207.27 (m.p. 136°) [7276].

1-(2-Hydroxy-4,6-dimethylphenyl)-2-methyl-1-propanone

[21009-91-6]

C₁₂H₁₆O₂

mol.wt. 192.26

Syntheses

- Obtained by reaction of isobutyryl chloride with 3,5-di-methylanisole in the presence of aluminium chloride in boiling carbon disulfide [7276,8110], (70–75%) [7052].
- Also obtained by Fries rearrangement of 3,5-dimethylphenyl isobutyrate with aluminium chloride at 140° for 30 min (25%) [8145] or at 130° for 5 h [7276].
- Also obtained by reaction of isobutyric acid with 3,5-dimethylphenol in the presence of boron trifluoride at 95° [6583].
- Also refer to: [8110].

b.p.₂₀ 150° [7276].

m.p. 93–94° [7052,8110], 93° [6583], 82–82.5° and 91–91.5° (dual m.p.) [8145];

¹H NMR [8145], IR [8145].

1-(4-Hydroxy-3,5-dimethylphenyl)-2-methyl-1-propanone

C₁₂H₁₆O₂

mol.wt. 192.26

Synthesis

- Preparation by Fries rearrangement of 2,6-dimethylphenyl isobutyrate with aluminium chloride at 125° for 3.5 h (94%) [6401].
- m.p. 106.5–107° [6401].

1-(2-Methoxy-3-methylphenyl)-2-methyl-1-propanone

[82053-90-5]

C₁₂H₁₆O₂

mol.wt. 192.26

Syntheses

- Preparation by reaction of dimethyl sulfate with 2-hydroxy-3-methylisobutyrophenone in the presence of potassium carbonate in boiling acetone for 10 h (93%) [8106].
- Also refer to: [8105].

b.p.₁₅ 124–125° [8106].

1-(2,6-Dimethoxyphenyl)-2-methyl-1-propanone

[52856-18-5] $C_{12}H_{16}O_3$ mol.wt. 208.26

Syntheses

- Preparation by condensation of 2,6-dimethoxyphenyllithium,
 - with isobutyryl chloride in ethyl ether at –78° (78%) [8158];
 - with methyl isobutyrate in refluxing ethyl ether for 5 h (46%) [8159].

m.p. 38.9–39.2° [8159].

1-(3,4-Dimethoxyphenyl)-2-methyl-1-propanone

[14046-55-0] $C_{12}H_{16}O_3$ mol.wt. 208.26

Syntheses

- Preparation by acylation of veratrole,
 - with isobutyryl chloride in the presence of aluminium chloride [7350], (85%) [6796], in benzene [8083], in ethylene dichloride (73%) [7356];
 - with isobutyric acid in the presence of PPA at 60° for 2.5 h [8160], (87%) [7360] or for 15 h (68%) [8161];
- with isobutyric anhydride in acetonitrile in the presence of $TiCl(OTf)_3/TfOH$ at r.t. for 12 h (89%) [8128].

- Also obtained by oxidation of 4-methoxyphenylpropane with DDQ in wet dioxane/silica gel under sonication (61%) [7093].
- Also obtained by reaction of 3,4-dimethoxybenzoic acid with isopropylmagnesium bromide (72%) [8162].
- Also obtained by oxidation of 1-(3,4-dimethoxyphenyl)-2-methyl-1-propanol with chromium trioxide in dilute sulfuric acid (Jones's reaction) (82%) [8163].
- Also refer to: [6828,7539,8164–8166].

clear oil [8162]; b.p._{0,2} 116–117° [6796,8083], b.p._{0,1–0,7} 117–126° [7360]; ¹H NMR [7093,8162,8163], ¹³C NMR [7093,8162].

USE: Fungicide [7539] or intermediate in preparation of fungicidal acid amide derivatives [8113].

BIOLOGICAL ACTIVITY: Antiinflammatory [7350].

1-(3,5-Dimethoxyphenyl)-2-methyl-1-propanone

[73109-77-0]

C₁₂H₁₆O₃ mol.wt. 208.26

Syntheses

- Obtained by reaction of isobutylmagnesium bromide on 3,5-dimethoxybenzocyanide (m.p. 87–88°) (88%) [8167].

- Also obtained by reaction of isopropylmagnesium bromide with 3,5-dimethoxybenzamide (71%) [8168].

oil [8168]; b.p.₁ 117–119° [8168], b.p.₂ 143–145° [8167].

Semicarbazone C₁₃H₁₉N₃O₃ mol.wt. 265.31 (m.p. 195–196°) [8167].

1-(4-Hydroxy-3-methoxy-5-methylphenyl)-2-methyl-1-propanone

C₁₂H₁₆O₃ mol.wt. 208.26

Synthesis

- Preparation by Fries rearrangement of 2-methoxy-6-methylphenyl isobutyrate with aluminium chloride in refluxing carbon disulfide for 3 h (60%) [7390].

b.p._{0,35} 122–130° [7390]; m.p. 52–53° [7390].

1-(2,4-Dihydroxy-6-methoxy-3-methylphenyl)-2-methyl-1-propanone

[91555-68-9]

C₁₂H₁₆O₄ mol.wt. 224.26

Synthesis

- Preparation by condensation of isobutyronitrile with 2,6-dihydroxy-4-methoxytoluene (Hoesch reaction) (63%) [7255].

Isolation from natural sources

- From the aerial parts of *Hypericum beanii* (Guttiferae) [8169].

mol.wt. 224.26

Syntheses

- Obtained by reaction of isobutyronitrile with 2-methyl-phloroglucinol 1-methyl ether (Hoesch reaction) (37%) [8170].
- Also obtained by reaction of isobutyric acid with 2,4-di-hydroxy-6-methoxytoluene (m.p. 114–117°) in the presence of boron trifluoride for 45 min (47%) [8171].
- Preparation by reaction of isobutyryl chloride with 3-methoxy-2-methylphloroglucinol in the presence of aluminium chloride in carbon disulfide/nitrobenzene mixture (69%) [8054].
- Also obtained by reaction of methyl iodide with 2,6-dihydroxy-4-methoxy-isobutyrophenone in methanol in the presence of sodium methoxide at 0° for 5 days (9%) [8051].
- Also obtained by partial methylation of 3-methylphloroisobutyrophenone with diazomethane in ethyl ether for 4 days at r.t. (24%) [7255].
- Also refer to: [8172].

Isolation from natural source

- From *Eucalyptus pulverulenta* [8173].

m.p. 145–147° [8051], 142° [8054], 141–142° [7255,8170], 136–138° [8171];

¹H NMR [8051,8171], ¹³C NMR [8171], IR [8051,8171],

UV [7255,8051], MS [8171].

1-(4,6-Dihydroxy-2-methoxy-3-methylphenyl)-2-methyl-1-propanone

(*Pseudoaspidinol-iB*)

[55382-30-4]

C₁₂H₁₆O₄

mol.wt. 224.26

Syntheses

- Obtained by alkaline cleavage of kosotoxin. Kosotoxin (m.p. 119–122°) was isolated from *Hagenia abyssinica* (Bruce) Gmel [6932].
- Also obtained by treatment of methyl 2,6-dihydroxy-4-methoxy-3-methyl-5-isobutyrylbenzoate (m.p. 88–90°) with refluxing 5–6% aqueous potassium hydroxide for 30 min (63%) [7255] or for 1 h (94%) [8171].

- Also obtained by treatment of 2,6-dihydroxy-4-methoxy-3-methyl-5-isobutyrylbenzoic acid with refluxing 2 N aqueous sodium carbonate for 90 min (86%) [7255].

- Also refer to: [8174–8177].

Isolation from natural sources

- From *Hagenia abyssinica* [8178].

m.p. 81–82° [8171], 79–80° [7255], 59–61° [6932];

¹³C NMR [8175,8179,8180], UV [7255]; GC [6895].

1-(4-Hydroxy-3,5-dimethoxyphenyl)-2-methyl-1-propanone

$C_{12}H_{16}O_4$ mol.wt. 224.26

Syntheses

- Obtained by partial demethylation of 3,4,5-trimethoxy-isobutyrophenone in concentrated sulfuric acid at 35–40° for 20 h (85%) [8181].
- Also obtained (by-product) on reaction of isobutylmagnesium bromide with 3,4,5-trimethoxybenzotrile (45%) [8181], 27% [8167].

m.p. 94° [8167], 93–93.5° [8181].

Semicarbazone $C_{13}H_{19}N_3O_4$ mol.wt. 281.31 (m.p. 162.5°) [8167].

1-[3-Chloro-5-[(3,3-dichloro-2-propen-1-yl)oxy]-2-hydroxyphenyl]-2-methyl-1-propanone

[918311-03-2]

$C_{13}H_{13}Cl_3O_3$ mol.wt. 323.60

Synthesis

- Refer to: [7984].

USE: For preparation of agrochemical pesticides [7984].

2-Methoxy-5-(2-methyl-1-oxopropyl)benzoic acid methyl ester

$C_{13}H_{16}O_4$ mol.wt. 236.27

Synthesis

- Preparation by reaction of dimethyl sulfate with methyl 2-hydroxy-5-isobutyrylbenzoate in the presence of sodium methoxide in methanol at 50–60° (98%) [8102].

m.p. 50–52° [8102].

2,6-Dihydroxy-4-methoxy-3-methyl-5-(2-methyl-1-oxopropyl)benzoic acid
 $C_{13}H_{16}O_6$ mol.wt. 268.27
Synthesis

– Obtained by treatment of methyl 2,6-dihydroxy-4-methoxy-3-methyl-5-isobutyrylbenzoate with an aqueous 6% potassium hydroxide solution (32%) [7255].

m.p. 103–105° [7255]; UV [7255].

1-[2,4-Dihydroxy-3-(iminomethyl)-6-methoxy-5-methylphenyl]-2-methyl-1-propanone

[98442-56-9]

 $C_{13}H_{17}NO_4$ mol.wt. 251.28
Synthesis

– Refer to: [8171].

1-(3-Ethyl-4-methoxyphenyl)-2-methyl-1-propanone

[111039-01-1]

 $C_{13}H_{18}O_2$ mol.wt. 206.28
Synthesis

– Preparation by Friedel–Crafts acylation of 2-ethylanisole with isobutyryl chloride in the presence of aluminium chloride [7350].

BIOLOGICAL ACTIVITY: Antiinflammatory [7350].

1-[2-Hydroxy-5-(1-methylethyl)phenyl]-2-methyl-1-propanone

[934524-36-4]

 $C_{13}H_{18}O_2$ mol.wt. 206.28
Synthesis

– Refer to: [7980].

1-(6-Hydroxy-2,3,4-trimethylphenyl)-2-methyl-1-propanone

[82490-57-1]

 $C_{13}H_{18}O_2$ mol.wt. 206.28
Synthesis

– Obtained by Fries rearrangement of 3,4,5-trimethylphenyl isobutyrate with aluminium chloride, first at 90°, then at 140° for 30 min (14%) [8182].

m.p. 86–87° [8182]; 1H NMR [8182].

1-(2-Methoxy-4,6-dimethylphenyl)-2-methyl-1-propanone

[38319-72-1]

 $C_{13}H_{18}O_2$ mol.wt. 206.28

Synthesis

– Obtained by methylation of 2-hydroxy-4,6-dimethyl-isobutyrophenone with dimethyl sulfate [8145].

b.p.₂ 109–110° [8145]; ¹H NMR [8145], IR [8145].**1-(4-Methoxy-3,5-dimethylphenyl)-2-methyl-1-propanone**

[124500-33-0]

 $C_{13}H_{18}O_2$ mol.wt. 206.28

Synthesis

– Refer to: [7976].

1-(2,4-Dihydroxy-3-propylphenyl)-2-methyl-1-propanone

[120072-80-2]

 $C_{13}H_{18}O_3$ mol.wt. 222.28

Synthesis

– Refer to: [8183].

1-(2,3-Dimethoxy-5-methylphenyl)-2-methyl-1-propanone

[882512-69-8]

 $C_{13}H_{18}O_3$ mol.wt. 222.28

Synthesis

– Obtained by treatment of 1-(2,3-dimethoxy-5-methylphenyl)-2-methyl-1-propanol with PCC and silica gel in methylene chloride for 2 h at r.t. (96%) [8184].

oil [8184];

¹H NMR [8184], ¹³C NMR [8184], IR [8184], MS [8184].**1-(3,4-Dimethoxy-2-methylphenyl)-2-methyl-1-propanone** $C_{13}H_{18}O_3$ mol.wt. 222.28

Synthesis

– Obtained by reaction of isobutyryl chloride with 3,4-dimethoxy-2-methylphenylmagnesium bromide in THF (51%) [7390].

b.p._{0.15} 99° [7390]; IR [7390], UV [7390].

2,4-Dinitrophenylhydrazone $C_{19}H_{22}N_4O_6$ mol.wt. 402.41 (m.p. 111–112°) [7390].

1-(3,4-Dimethoxy-5-methylphenyl)-2-methyl-1-propanone

$C_{13}H_{18}O_3$ mol.wt. 222.28

Synthesis

– Preparation by reaction of dimethyl sulfate with 4-hydroxy-3-methoxy-5-methylisobutyrophenone in methanol in the presence of sodium methoxide (40%) [7390].

b.p._{0.06} 103° [7390]; IR [7390], UV [7390].

1-(2,4-Dihydroxy-6-methoxy-3,5-dimethylphenyl)-2-methyl-1-propanone

[97761-90-5]

$C_{13}H_{18}O_4$ mol.wt. 238.28

Synthesis

– Obtained by hydrogenation of 2,6-dihydroxy-3-isobutyryl-4-methoxy-5-methylbenzaldehyde in acetic acid in the presence of 10% Pd/C for 1.5 h (61%) [8171].

Isolation from natural sources

– From *Hagenia abyssinica* (Rosaceae) [8171,8178].

m.p. 73° [8171];

¹H NMR [8171,8178], ¹³C NMR [8171,8178], IR [8171],

MS [8171,8178].

1-(2,6-Dihydroxy-4-methoxy-3,5-dimethylphenyl)-2-methyl-1-propanone

[138690-38-7]

$C_{13}H_{18}O_4$ mol.wt. 238.28

Isolation from natural sources

– From *Eucalyptus robusta* Smith leaves (Myrtaceae) [8185].

– Also refer to: [8172].

¹H NMR [8185], ¹³C NMR [8185], IR [8185],

UV [8185], MS [8185]; HPLC [8185].

BIOLOGICAL ACTIVITY: Phosphodiesterase inhibitory [8185].

1-(2-Hydroxy-4,6-dimethoxy-3-methylphenyl)-2-methyl-1-propanone (*Baeckeo*)

[479-88-9]

$C_{13}H_{18}O_4$ mol.wt. 238.28

Syntheses

– Preparation in two steps: First, reaction of isobutyric acid with 2,4,6-trimethoxytoluene (m.p. 24–26°) in the presence of boron trifluoride. Then, the complex obtained* (76%, m.p. 180°) was hydrolyzed in dilute methanol at 50° for 1 h (96%) [8139].

- 2,2-Difluor-1,2-dihydro-4-isopropyl-5,7-dimethoxy-8-methyl-1-oxa-3-oxonia-2-boratanaphthalin (5a) (in german).
- Also obtained by direct methylation of phloroisobutyrophenone with methyl iodide in the presence of potassium carbonate in refluxing acetone for 2 h (29%) [8186].
- Also obtained by reaction of diazomethane with 2,4,6-trihydroxy-3-methylisobutyrophenone in ethyl ether (20%) [8140], (13%) [7255,8139].

Isolation from natural sources

- From the essential oils of *Baeckea crenulata* and *Darwinia grandiflora* (Myrtaceae) [8140,8186–8188].
- From the leaves and terminal branches of *Thryptomene saxicola* (Myrtaceae) [8189].
- From *Calythrix angulata* Lindl. [8190].
- From *Baeckea frutescens* L. (Myrtaceae) [8191–8193] and *Baeckea gunniana* variety *latifolia* [8194].
- From steam volatile leaf oils of some *Melaleuca* species from western Australia (Myrtaceae) [8195].
- From the leaf oil of *Xanthostemon eucalyptoides* (Myrtaceae) [8196].
- Also refer to: [8172,8197].

oil [8189]; b.p._{0.1} 140° [7255];

m.p. 104° [8190], 103.5–104° [8194], 103–104° [7255,8186–8188,8193], 103° [8139], 102–103° [8140];

¹H NMR [8139,8189,8191], ¹³C NMR [8189,8191], UV [8085,8198], [7255,8139], MS [8191]; GC [8190,8196]; GC-MS [8195,8196].

BIOLOGICAL ACTIVITY: Antitumor [8191]; cytotoxic [8191].

1-(6-Hydroxy-2,4-dimethoxy-3-methylphenyl)-2-methyl-1-propanone (*o*-*Isobaeckeol*, *Isobaeckeol*)

[98442-62-7]

C₁₃H₁₈O₄

mol.wt. 238.28

Synthesis

– Obtained by reaction of isobutyric acid with 4-hydroxy-2,6-dimethoxytoluene (m.p. 144–146°) in the presence of boron trifluoride (51%) [8171].

Isolation from natural sources

- From the leaves and terminal branches of *Thryptomene saxicola* (Myrtaceae) [8189].
- From Australian *Austromyrtus* (*Austromyrtus dulcis* and *Austromyrtus tenuifolia*) (Myrtaceae) [8199].
- From the leaf essential oils of *Eucalyptus miniata* and *Eucalyptus chartaboma* [8200].
- From the leaf oil of *Xanthostemon crenulatus* and *Xanthostemon umbrosus* (Myrtaceae) [8196].
- Also refer to: [8172].

N.B.: This ketone gives a stable complex with boron trifluoride [8172], named “2,2-difluor-4-isopropyl-5,7-dimethoxy-6-methyl-1-oxa-3-oxonia-2-boratanaphthalin” (in German in the paper) (m.p. 141–142°) [8171].

oil [8189]; m.p. 56° [8171];

¹H NMR [8171,8189,8200], ¹³C NMR [8189,8200],

IR [8171,8189], MS [8189,8200];

GC [8196], GC-MS [8189,8196,8199].

2-Methyl-1-(2,4,6-trimethoxyphenyl)-1-propanone (*Conglomerone*)

[480-25-1]

C₁₃H₁₈O₄ mol.wt. 238.28

Synthesis

– Preparation by reaction of isobutyronitrile with 1,3,5-tri-methoxybenzene (Hoesch reaction) [7515].

Isolation from natural sources

– From *Eucalyptus conglomerata* (Myrtaceae) [8201].

– Also refer to: [8197].

m.p. 61–62° [7515], 57–60° [8001]; ¹H NMR [8001], IR [8001].

2-Methyl-1-(3,4,5-trimethoxyphenyl)-1-propanone

C₁₃H₁₈O₄ mol.wt. 238.28

Syntheses

– Obtained by reaction of isobutylmagnesium bromide on 3,4,5-trimethoxybenzonitrile (27%) [8167], (16%) [8181].

– Also obtained by reaction of diisobutylcadmium with 3,4,5-trimethoxybenzoyl chloride (50%) [7538], according to the method [7315].

Isolation from natural source

– From the essential oil of *Ocotea comoriensis* Kostermans (Lauraceae) [8202].

b.p._{0.9} 34–136° [7538], b.p.₁ 147–150° [8167], b.p.₆ 164–166° [8181];

m.p. 37–39° [8181]; GC [8202]; GC-MS [8202].

1-(6-Hydroxy-2,3,4-trimethoxyphenyl)-2-methyl-1-propanone

[853577-59-0]

C₁₃H₁₈O₅ mol.wt. 254.28

Syntheses

– Preparation by reaction of isobutyryl chloride with 3,4,5-trimethoxyphenol using boron trifluoride etherate as catalyst (80%) [8203].

– Also refer to: [8204].

USE: Preparation of chromenones as inhibitors of antiapoptotic BCL-2 family members for treatment of cancer [8204].

1-[3-Chloro-5-[(3,3-dichloro-2-propen-1-yl)oxy]-2-methoxyphenyl]-2-methyl-1-propanone
 $C_{14}H_{15}Cl_3O_3$ mol.wt. 337.63

Synthesis

USE: For preparation of agrochemical pesticides [7984].

Oxime [918311-05-4] $C_{14}H_{16}Cl_3NO_3$ mol.wt. 352.64.

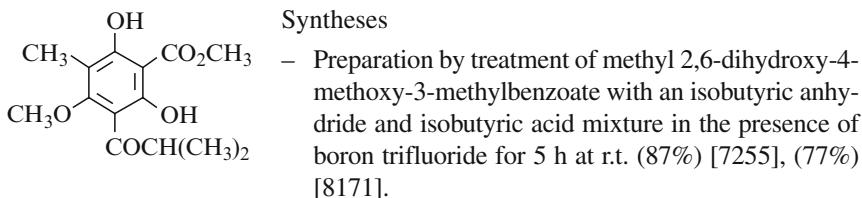

USE: For preparation of agrochemical pesticides [7984].

Methyl 2,6-dihydroxy-4-methoxy-3-methyl-5-(2-methyl-1-oxopropyl)benzoate

[67771-05-5]

 $C_{14}H_{18}O_6$ mol.wt. 282.29

Syntheses

[122585-57-3]

C₁₅H₂₀O₆ mol.wt. 296.32

Isolation from natural sources

- From *Helichrysum asperum* (Thunb.) Hilliard et Burtt. var. *albidulum* (DC) Hilliard (compound **14**) [8206].

¹H NMR [8206], IR [8206], MS [8206].

1-[3-(1,1-Dimethylethyl)-2-hydroxy-5-methylphenyl]-2-methyl-1-propanone

[133903-10-3]

 $C_{15}H_{22}O_2$ mol.wt. 234.34

Synthesis

– The reaction of $[AlMe(dbmp)_2]$ (Hdbmp = 2,6-di-tert-butyl-4-methylphenol) with $O:C(Cl)Pr^i$ leads to acylation of one of the dbmp ligands and affords $[AlMe(dbmp)-(bhmpp)]$ (SM). (Hbhmpp = 3-tert-butyl-2-hydroxy-5-methylisobutyrophenone). Hydrolysis of SM yields uncomplexed Hbhmpp, the titled ketone [7629].

1H NMR [7629], ^{13}C NMR [7629], IR [7629]; X-ray crystallography [7629].

1-[5-(1,1-Dimethylethyl)-2-methoxyphenyl]-2-methyl-1-propanone

[75060-47-8]

 $C_{15}H_{22}O_2$ mol.wt. 234.34

Synthesis

– Refer to: [7106].

1-[4-Methoxy-2-methyl-5-(1-methylethyl)phenyl]-2-methyl-1-propanone $C_{15}H_{22}O_2$ mol.wt. 234.34

Syntheses

– Preparation by acylation of 2-isopropyl-5-methylanisole with isobutyryl chloride in the presence of aluminium chloride in carbon disulfide [7319].

– Also refer to: [7583].

b.p.₂₀ 178° [7319], b.p.₁₆ 186° [7583].

2-Methyl-1-[2,4,6-trihydroxy-3-(3-methylbutyl)phenyl]-1-propanone

[22628-86-0]

 $C_{15}H_{22}O_4$ mol.wt. 266.34

Syntheses

- Obtained by reaction of isobutyryl chloride with isopentylphloroglucinol (m.p. 125–126.5°) in the presence of aluminium chloride in nitrobenzene for 4 days at 0° (17%) [8218].
- Preparation by hydrogenation of 2,4,6-trihydroxy-3-isopentenylisobutyrophenone in the presence of PtO_2 in methanol under a hydrogen atmosphere at r.t. for 1 h (87%) [6880].

– Also refer to: [8219,8220].

m.p. 184° [6880], 183–184° [8218];
¹H NMR [8218], UV [8218], MS [8220].

BIOLOGICAL ACTIVITY: Fungicide [6880].

2-Methyl-1-(2,4,6-trihydroxy-3-pentylphenyl)-1-propanone

[96756-26-2]

C₁₅H₂₂O₄ mol.wt. 266.34

Synthesis

– Preparation by reaction of isobutyryl chloride with 2,4,6-trihydroxypentylbenzene in the presence of aluminium chloride in a nitrobenzene/carbon disulfide solution, first at r.t., then at 30–35° for 6 h (31%) [6880].

m.p. 164° [6880].

USE: Fungicide [6880].

2-Methyl-1-(2,4,6-trimethoxy-3,5-dimethylphenyl)-1-propanone

(*Apodophyllone*, *Camfieldone*)

[25677-09-2]

C₁₅H₂₂O₄ mol.wt. 266.34

Isolation from natural sources

– From the leaves of *Eucalyptus apodophylla* (Myrtaceae) [8221], *Eucalyptus miniata* and *Eucalyptus Chartaboma* [8200], *Xanthostemon eucalyptoides* [8196].

– From the leaf oil of *Xanthostemon crenulatus* (Myrtaceae) [8196].

– Also refer to: [8197,8222].

¹H NMR [8200,8221], ¹³C NMR [8200,8221],

MS [8200,8221]; GC [8196,8221], GC-MS [8196,8221].

USE: Antiherbivore chem. of *Eucalyptus* involved cues and deterrents for marsupial folivores [8222].

1-[3-(Aminomethyl)-5-(1,1-dimethylethyl)-2-hydroxyphenyl]-2-methyl-1-propanone

[75060-94-5]

C₁₅H₂₃NO₂ mol.wt. 249.35

Synthesis

– Refer to: [7106].

1-[3-(Aminomethyl)-5-(1,1-dimethylethyl)-2-hydroxyphenyl]-2-methyl-1-propanone (Hydrochloride)

[75060-72-9]

C₁₅H₂₃NO₂, HCl

mol.wt. 285.81

Synthesis
– Refer to: [7106].

BIOLOGICAL ACTIVITY: Inflammation inhibitor [7106].

1-(4-Hydroxy[1,1'-biphenyl]-3-yl)-2-methyl-1-propanone

[868266-16-4]

C₁₆H₁₆O₂

mol.wt. 240.30

Synthesis
– Refer to: [8223].

1-(2-Hydroxy-4-phenoxyphenyl)-2-methyl-1-propanone

[307000-32-4]

C₁₆H₁₆O₃

mol.wt. 256.30

Synthesis
– Refer to: [7678].

USE: For inhibiting development of body odours in cosmetic compositions [7679–7683].

4-[3,5-Dihydroxy-4-(2-methyl-1-oxopropyl)phenoxy]-2-methyl-2-butenic acid methyl ester

[122585-60-8]

C₁₆H₂₀O₆

mol.wt. 308.33

Isolation from natural sources
– From *Helichrysum asperum* (Thunb.)
Hilliard et Burt. var. *albidulum* (DC)
Hilliard (Compositae) [8206].

¹H NMR [8206], IR [8206], MS [8206].

1-[2,4-Dihydroxy-6-methoxy-3-(3-methyl-2-butenyl)phenyl]-2-methyl-1-propanone

[71539-57-6]

C₁₆H₂₂O₄

mol.wt. 278.35

Synthesis
– Obtained by reaction of diazomethane with 3-isopentenyl-2,4,6-trihydroxy-isobutyrophenone [8067].

Isolation from natural sources

- From *Helichrysum gymnoconum* (Compositae) [8209].
- From *Helichrysum platypterum* [8080].

m.p. 122° [8067], 120–122° [8080];

¹H NMR [8080,8209], IR [8080,8209], MS [8080,8209].

1-[2,6-Dihydroxy-4-methoxy-3-(3-methyl-2-butenyl)phenyl]-2-methyl-1-propanone

[103771-68-2]

C₁₆H₂₂O₄ mol.wt. 278.35

Isolation from natural sources

- From *Helichrysum cephaloidium* (compound **19**) [8080].

N.B.: This methyl ether has been reported previously (compound **3**) in mixture with the 2-methylbutyryl isomer (compound **7**) [8209], but were erroneously assigned as 6-O-methyl ethers.

¹H NMR [8209], IR [8209], MS [8209].

1-[2-(β-D-Glucopyranosyloxy)-4,6-dihydroxyphenyl]-2-methyl-1-propanone

[17004-75-0]

C₁₆H₂₂O₉ mol.wt. 358.35

Isolation from natural sources

- From Hops *Humulus lupulus* L. (Cannabinaceae) [8081,8224].
- white powder [8081];

(α)_D²⁰ = –55.6°

(methanol) [8081];

¹H NMR [8081], ¹³C NMR [8081], IR [8081], MS [8081].

USE: Antioxidizing agent [8224]

BIOLOGICAL ACTIVITY: Antiallergic agent [8224].

1-[4-(β-D-Glucopyranosyloxy)-2,6-dihydroxyphenyl]-2-methyl-1-propanone

[868634-82-6]

C₁₆H₂₂O₉ mol.wt. 358.35

Isolation from natural sources

- From Hops *Humulus lupulus* L. (Cannabinaceae) [8081].
- beige powder [8081];

(α)_D²⁰ = –17.4°

(methanol) [8081];

¹H NMR [8081], ¹³C NMR [8081], IR [8081], MS [8081].

1-[2,6-Dimethoxy-4-(4-morpholinyl)phenyl]-2-methyl-1-propanone

[263010-97-5]

 $C_{16}H_{23}NO_4$ mol.wt. 293.36

Syntheses

– Refer to: [8142,8143].

1-[3,5-Dimethoxy-4-(2-methylpropyl)phenyl]-2-methyl-1-propanone $C_{16}H_{24}O_3$ mol.wt. 264.36

Syntheses

– Obtained (by-product) by reaction of isobutylmagnesium bromide on 3,4,5-trimethoxybenzonitrile [8167], (6%) [8181].

m.p. 183–184° [8181].

Semicarbazone $C_{17}H_{27}N_3O_3$ mol.wt. 321.42 (m.p. 184°) [8167].**1-[4-(1,1-Dimethylethyl)-2,5-dimethoxyphenyl]-2-methyl-1-propanone**

[120350-21-2]

 $C_{16}H_{24}O_3$ mol.wt. 264.36

Synthesis

– Preparation by reaction of isobutyryl chloride with 2-tert-butylhydroquinone dimethyl ether in the presence of aluminium chloride in carbon disulfide [7336].

 1H NMR [7336], IR [7336], UV [7336], MS [7336].**1-(4-Methoxy[1,1'-biphenyl]-3-yl)-2-methyl-1-propanone**

[868266-15-3]

 $C_{17}H_{18}O_2$ mol.wt. 254.33

Synthesis

– Refer to: [8223].

1-[4-[[4-(Acetyloxy)-3-methyl-2-butenyl]oxy]-2,6-dihydroxyphenyl]-2-methyl-1-propanone (E)

[122585-53-9]

 $C_{17}H_{22}O_6$ mol.wt. 322.36

Isolation from natural sources

– From *Helichrysum asperum* (Thunb.) Hilliard et Burt. var. *albidulum* (DC) Hilliard (compound 9) [8206]. 1H NMR [8206].

1-[3-[4-(Acetyloxy)-3-methyl-2-butenyl]-2,4,6-trihydroxyphenyl]-2-methyl-1-propanone (*E*)

[122585-62-0]

C₁₇H₂₂O₆ mol.wt. 322.36

Isolation from natural sources

– From *Helichrysum asperum* (Thunb.) Hilliard et Burt. (compound **24**) [8206].

¹H NMR [8206], IR [8206], MS [8206].

1-[3-[4-(Acetyloxy)-3-methyl-2-butenyl]-2,4,6-trihydroxyphenyl]-2-methyl-1-propanone

[261928-44-3]

C₁₇H₂₂O₆ mol.wt. 322.36

Isolation from natural sources

– From *Helichrysum caespitium* (Asteraceae) [8225].

BIOLOGICAL ACTIVITY: Antimicrobial properties [8225]; for treatment of tuberculosis and other infections [8226].

m.p. 140° [8225]; ¹H NMR [8225], ¹³C NMR [8225], MS [8225].

1-[2,4-Dihydroxy-6-[(1*E*)-2-(4-hydroxyphenyl)ethenyl]phenyl]-2-methyl-1-propanone

[352276-35-8]

C₁₈H₁₈O₄ mol.wt. 298.34

Synthesis

– Refer to: [8227].

Isolation from natural sources

– From the root bark of *Ekebergia benguelensis* C. DC. (Meliaceae) (compound **4**) [8228].

pale yellow amorphous powder [8228];

m.p. 80–72° (such as in the paper) [8228];

¹H NMR [8228], ¹³C NMR [8228], IR [8228], UV [8228], MS [8228].

1-[2,6-Dihydroxy-3-methyl-4-(phenylmethoxy)phenyl]-2-methyl-1-propanone

C₁₈H₂₀O₄ mol.wt. 300.35

Synthesis

– Obtained by reaction of phenyldiazomethane with 3-methylphloroisobutyrophenone in ethyl ether, first at r.t. for 2 h, then at reflux for 30 min (15%) [7255].

b.p._{0.3} 150° [7255]; m.p. 135° [7255]; UV [7255].

1-[4-(β -D-Glucopyranosyloxy)-2,6-dihydroxy-3,5-dimethylphenyl]-2-methyl-1-propanone

[241131-36-2]

C₁₈H₂₆O₉ mol.wt. 386.40

Isolation from natural sources

– From *Hypericum japonicum* [8229].

1-[3,5-Bis(1,1-dimethylethyl)-2-hydroxyphenyl]-2-methyl-1-propanone

[102520-04-7]

C₁₈H₂₈O₂ mol.wt. 276.42

Synthesis

– Preparation by reaction of isopropylmagnesium chloride and 2,4-di-tert-butyl-6-cyanophenol in ethyl ether, first at 0° for 30 min, then at r.t. overnight (83%) [8230].

m.p. 33.5–34.5° [8230]; ¹H NMR [8230], IR [8230].

1-[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl]-2-methyl-1-propanone

[14035-36-0]

C₁₈H₂₈O₂ mol.wt. 276.42

Syntheses

– Obtained in oxygenation of 2,4-dimethyl-3-[3,5-bis-(1,1-dimethylethyl)-4-hydroxyphenyl]-2-pentene (m.p. 66.2–67.0°) in the presence of Co(Salpr) in methylene chloride at 0° (20%) [8230].

- Preparation by acylation of 2,6-di-tert-butylphenol with isobutyric acid in trifluoroacetic anhydride at r.t. [8231], first at 0°, then at r.t. for 3 h (92%) [7727].
- Preparation by acylation of 2,6-di-tert-butylphenol with isobutyryl chloride in the presence of aluminium chloride [8232].
- Also refer to: [8233–8236].

m.p. 145–147° [7727,8231];

¹H NMR [7727,8230], IR [7727]; TLC [8230].

USE: Antioxidizing agent [8237].

O-methyloxime [81389-57-3] C₁₉H₃₁NO₂ mol.wt. 305.46 [7821].

1-[2-Hydroxy-6-[(1E)-2-(4-hydroxyphenyl)ethenyl]-4-methoxyphenyl]-2-methyl-1-propanone

[352276-34-7]

C₁₉H₂₀O₄ mol.wt. 312.37

Synthesis

– Refer to: [8227].

Isolation from natural sources

- From the root bark of *Ekebergia benguelensis* C. DC. (Meliaceae) (compound **3**) [8228].

reddish amorphous powder [8228]; m.p. 173–175° [8228];

¹H NMR [8228], ¹³C NMR [8228], IR [8228], UV [8228], MS [8228].

1-[4,6-Dihydroxy-2-(2-methoxyethyl)[1,1'-biphenyl]-3-yl]-2-methyl-1-propanone

[860152-81-1]

C₁₉H₂₂O₄ mol.wt. 314.38

CH₃OCH₂CH₂ COCH(CH₃)₂

Synthesis

– Refer to: [7664].

1-(2-Hydroxy-5-nonylphenyl)-2-methyl-1-propanone

[219906-66-8]

C₁₉H₃₀O₂ mol.wt. 290.45

Synthesis

– Obtained in two steps: First, 4-nonylphenol was heated with aluminium isopropoxide in toluene/isopropanol with distillation of isopropanol and some toluene. Then, the mixture was cooled to 50° and treated with isobutyraldehyde over 50 min followed by stirring for 1 h [8238].

3-[[2,4-Dihydroxy-6-methoxy-3-(2-methyl-1-oxopropyl)phenyl]methyl]-6-ethyl-4-hydroxy-5-methyl-2H-pyran-2-one (*Nor-auricepyrone*)

[103766-16-1]

C₂₀H₂₄O₇ mol.wt. 376.41

Isolation from natural sources

– From *Helichrysum cephaloides* (Compositae) (compound **25**) [8080].

yellow oil [8080]; ¹H NMR [8080],
IR [8080], MS [8080]; TLC [8080].

1-[3-[(2E)-3,7-Dimethyl-2,6-octadienyl]-2,4,6-trihydroxyphenyl]-2-methyl-1-propanone

(*E*) [72008-03-8]

C₂₀H₂₈O₄ mol.wt. 332.44

(*Z*) [72008-05-0]

Synthesis

- Obtained by alkylation of phloroisobutyrophenone with geranyl bromide in dioxane in the presence of sodium hydride (28%) [8067].

Isolation from natural sources

- From *Helichrysum infaustum* (Compositae) [8205].
- From *Helichrysum stenopterum* [8080].
- From *Helichrysum oxofilum* [8067].
- From *Helichrysum krookii* Moeser [8212].
- From *Helichrysum natalitium* DC [8211].
- From *Hypericum jovis* (Guttiferae) [6882,8239].
- From *Helichrysum monticola* Hilliard [8206].
- From *Esenbeckia nesiotica* (Rutaceae) [8240].
- From the aerial parts of *Achyrocline alata* (HBK) DC (tribe Inulae) [8241].
- From the leaves of *Hypericum styphelioides* [8242].

USE: Antioxidizing agent [8239]; taxonomy in relation to [8241].

m.p. 128–130° [8240];

¹H NMR [8211,8240,8242], ¹³C NMR [8211,8239,8240,8242],

IR [8240], UV [8240], MS [8211,8240].

[71539-65-6]

C₂₀H₂₈O₄

mol.wt. 332.44

Isolation from natural sources

- From *Helichrysum gymnoconum* (Compositae) [8209].
- From *Hypericum jovis* (Guttiferae) [8239].
- From *Helichrysum anomalum* Less (compound **7a**) (Compositae) [8206].

USE: Antioxidizing agent [8239].

¹H NMR [8209], ¹³C NMR [8239], IR [8209], MS [8209].

2-Methyl-1-[2,4,6-trihydroxy-3,5-bis(3-methyl-2-butenyl)phenyl]-1-propanone (*Deoxycohumulone*, *Desoxycohumulone*, *4-Deoxycohumulone*)

[5880-42-2]

C₂₀H₂₈O₄

mol.wt. 332.44

Syntheses

- Obtained by reaction of 2-methyl-3-buten-2-ol (3-hydroxy-3-methyl-1-butene) with phloroisobutyrophenone in the presence of zinc chloride [8058] or boron trifluoride etherate in dioxane [8064], at 20° for 8–9 h (18%) [8063], (11–14%) [8243].
- Also obtained by reaction of 1-chloro-3-methyl-2-butene with phloroisobutyrophenone in the presence of magnesium oxide and potassium iodide in refluxing acetone [8070] under nitrogen or argon [8071].
- Also obtained by reaction of 1-bromo-3-methyl-2-butene with phloroisobutyrophenone in the presence of a weakly basic resin DeAcidite 4-1P (OH form) in boiling benzene (14%) [7739].
- Also obtained by prenylation of 3-prenyl-2,4,6-trihydroxyisobutyrophenone [8208].
- Also obtained by phase transfer-catalyzed prenylation of 2,4,6-trihydroxyisobutyrophenone [7740].
- Also obtained by photolysis of colupulone [8243,8244] in isopropanol or methanol at 350 nm under nitrogen for 7 days (65%) [8245].
- Also refer to: [7739,8246,8247], [8077,8078,8082,8248,8249].

Isolation from natural sources

- In cohumulone formation in hop plant [8250].
- Formation from isobutyric acid and isovaleric acid in hop [8251].
- Formation from in vitro prenylation of phloroisobutyrophenone (SM) in *Humulus lupulus* (Cannabaceae). The first step, formation of SM from malonyl-CoA and isobutyryl-CoA, is catalyzed by valerophenone synthase (VPS) [8216].

- From the roots of *Helichrysum auriceps* and *Helichrysum cephaloideum* (Compositae) [8210,8261].

m.p. 115° [8261]; ^1H NMR [8210,8261], IR [8261], MS [8261].

3-[[2,4-Dihydroxy-6-methoxy-5-(3-methyl-2-butenyl)-3-(2-methyl-1-oxopropyl)phenyl]-methyl]-6-ethyl-4-hydroxy-5-methyl-2H-pyran-2-one

[103771-70-6]

$\text{C}_{25}\text{H}_{32}\text{O}_7$ mol.wt. 444.52

Isolation from natural sources

- From the roots of *Helichrysum cephaloideum* (Compositae) (compound **23**) [8080].

3-[[2,4-Dihydroxy-6-methoxy-3-(3-methyl-2-butenyl)-5-(2-methyl-1-oxopropyl)phenyl]-methyl]-6-ethyl-4-methoxy-5-methyl-2H-pyran-2-one

[74948-75-2]

$\text{C}_{26}\text{H}_{34}\text{O}_7$ mol.wt. 458.55

Synthesis

- Obtained by reaction of diazomethane with *Auricepyron* in ethyl ether at r.t. for 1 h [8261].

oil [8261];

^1H NMR [8261], ^{13}C NMR [8261]; TLC [8261].

2-Methyl-1-[2,4,6-trihydroxy-3-[1-(4-hydroxy-6-methoxy-1,3-benzodioxol-5-yl)-2-methylpropyl]-5-(3-methyl-2-butenyl)phenyl]-1-propanone (S) (*Helinudifolin*)

[103766-15-0]

C₂₇H₃₄O₈ mol.wt. 486.56

Isolation from natural sources

– From the roots of *Helichrysum nudifolium* (Compositae) (compound 27) [8080].

colourless oil [8080];

¹H NMR [8080], IR [8080], MS [8080];

TLC [8080].

3,3'-[[2,4,6-Trihydroxy-5-(2-methyl-1-oxopropyl)-1,3-phenylene]-bis(methylene)]bis-[6-ethyl-4-hydroxy-5-methyl-2H-pyran-2-one (*23-Methylitalidipyron*)

[75680-22-7]

C₂₈H₃₂O₁₀ mol.wt. 528.56

Isolation from natural sources

– From *Helichrysum italicum* (Compositae) [8210].

m.p. 178–182° [8210];

¹H NMR [8210], IR [8210], UV [8210], MS [8210].

3-[[3-(3,7-Dimethyl-2,6-octadienyl)-2,4,6-trihydroxy-5-(2-methyl-1-oxopropyl)phenyl]-methyl]-6-ethyl-4-hydroxy-5-methyl-2H-pyran-2-one (*E*) (*Achyroclinopyrone*)

[77820-39-4]

C₂₉H₃₈O₇ mol.wt. 498.62

Isolation from natural sources

– From the aerial parts of *Achyrocline alata* (HBK) DC, but only isolated as its tetraacetate by treatment of the crude phloroglucinol derivative with acetic anhydride for 1 h at 70° [8241].

Tetraacetate C₃₇H₄₆O₁₁ mol.wt. 666.30 [8241].

colourless gum [8241]; ¹H NMR [8241], IR [8241], MS [8241].

24.2 Naphthalene Derivatives

1-(7-Bromo-3,4-dihydroxy-2-naphthalenyl)-2-methyl-1-propanone

[61983-31-1]

C₁₄H₁₃BrO₃ mol.wt. 309.16

Synthesis

- Obtained by irradiation of 6-bromo-1,2-naphthoquinone and isobutyraldehyde in benzene by a 300 W high-pressure mercury arc lamp between 15° and 20° for 2–10 days (15%) [7762].

m.p. 116.5–118° [7762]; ¹H NMR [7762], IR [7762].

1-(6,7-Dihydroxy-5-nitro-2-naphthalenyl)-2-methyl-1-propanone

[404964-71-2]

C₁₄H₁₃NO₅ mol.wt. 275.26

Synthesis

- Refer to: [8262].

1-(1-Hydroxy-2-naphthalenyl)-2-methyl-1-propanone

[79387-88-5]

C₁₄H₁₄O₂ mol.wt. 214.26

Syntheses

- Obtained by Fries rearrangement of 1-naphthyl isobutyrate [8104],
 - with aluminium chloride (53%) [7768], at 100–120° for 3 h (60%) [8263];
 - with zinc chloride or stannic chloride (75%) [7768];
 - with yttrium triflate-methane sulfonic acid in toluene at 100° for 5 h under argon [8264], (87%) [8265].
 - Preparation by reaction of isobutyric acid with α -naphthol,
 - in the presence of boron trifluoride at 70° for 2 h (95%) [7775];
 - in the presence of zinc chloride at 170° (good yield) [6376];
 - in the presence of P₂O₅/SiO₂ at 130° for 24 h (74%) [8108].
 - The 4-isobutyryl-1-naphthol was quantitatively rearranged to the 2-isomer by refluxing with 35% sodium hydroxide solution for 2 h [7768].
 - Also obtained by irradiation of 2-isobutyryl-3,4-dihydronaphthalen-1(2*H*)-one (b.p._{0.3} 110°) in various solvents (hexane, acetonitrile or methanol) under bubbling air in 10–30% yield depending on the solvent used [8266].
 - Also obtained by dye-sensitized photooxidation of enolic tautomer of 1-(3,4-dihydro-1-hydroxy-2-naphthalenyl)-2-methyl-1-propanone [128838-13-1] (26–29%) [7780].
 - Also refer to: [7784,7785].
- m.p. 89–90° [8108], 87–88° [8266], 87° [7775], 79° [6376];
¹H NMR [8108,8266], IR [8108,8266], UV [8266].

1-(2-Hydroxy-1-naphthalenyl)-2-methyl-1-propanone[95455-11-1] $C_{14}H_{14}O_2$ mol.wt. 214.26

Syntheses

- Preparation by Fries rearrangement of 2-naphthyl isobutyrate in the presence of aluminium chloride [7992].
- Also obtained (poor yield) by treatment of 2-methoxy-naphthalene with isobutyryl chloride and aluminium chloride in refluxing carbon disulfide for 2 h (2%) [7794].

pure oil [7794]; b.p.₃ 164–166° [7992]; ¹³C NMR [7794].**1-(4-Hydroxy-1-naphthalenyl)-2-methyl-1-propanone**[761459-41-0] $C_{14}H_{14}O_2$ mol.wt. 214.26

Syntheses

- Obtained by Fries rearrangement of α -naphthyl isobutyrate with aluminium chloride (34%) [7768].
- Also obtained by reaction of isobutyric acid with α -naphthol in the presence of P_2O_5/SiO_2 at 130° for 24 h (20%) [8108].

1-(6-Hydroxy-2-naphthalenyl)-2-methyl-1-propanone[100886-06-4] $C_{14}H_{14}O_2$ mol.wt. 214.26

Syntheses

- Preparation by esterification of β -naphthol with isobutyryl fluoride in the presence of hydrogen fluoride at 0–40°, followed by Fries rearrangement of ester formed in situ [7802] at 60–100° [8267].

1-(1,4-Dihydroxy-2-naphthalenyl)-2-methyl-1-propanone[128462-67-9] $C_{14}H_{14}O_3$ mol.wt. 230.26

Synthesis

- Obtained by demethylation of the corresponding 4-methyl ether with concentrated hydrobromic acid in acetic acid [7813].

1-(1,8-Dihydroxy-2-naphthalenyl)-2-methyl-1-propanone $C_{14}H_{14}O_3$ mol.wt. 230.26

Syntheses

- Obtained by reaction of isobutyric acid with 1,8-dihydroxy-naphthalene in the presence of zinc chloride at 145–150° [7818].

– Also obtained by reaction of zinc chloride with 1,8-dihydroxynaphthalene diisobutyrate in nitrobenzene at 140–150° [7819].

m.p. 88° [7818].

Diacetate $C_{18}H_{18}O_5$ mol.wt. 314.34 (m.p. 105–106°) [7818].

1-(3,4-Dihydroxy-2-naphthalenyl)-2-methyl-1-propanone

[61983-12-8] $C_{14}H_{14}O_3$ mol.wt. 230.26

Syntheses

– Obtained by irradiation of 1,2-naphthoquinone and isobutyraldehyde in benzene by a 300 W high-pressure mercury arc lamp between 15° and 20° for 2–10 days [7761], (5%) [7762].

m.p. 105–107° [7762]; 1H NMR [7762], IR [7762].

1-(6,7-Dihydroxy-2-naphthalenyl)-2-methyl-1-propanone

[404964-94-9] $C_{14}H_{14}O_3$ mol.wt. 230.26

Synthesis

– Refer to: [8262].

1-(2-Methoxy-1-naphthalenyl)-2-methyl-1-propanone

$C_{15}H_{16}O_2$ mol.wt. 228.29

Syntheses

– Preparation by reaction of dimethyl sulfate with the sodium salt of 1-(2-Hydroxy-1-naphthalenyl)-2-methyl-1-propanone [7992].

– Also obtained by treatment of 2-methoxynaphthalene,

- with isobutyric anhydride and aluminium chloride in refluxing carbon disulfide (20%) [7794];
- with isobutyryl chloride and aluminium chloride in refluxing carbon disulfide for 5 h (2%) [7794].

yellow oil [7992]; b.p.₃ 176–178° [7992].

1-(4-Methoxy-1-naphthalenyl)-2-methyl-1-propanone

[36198-81-9] $C_{15}H_{16}O_2$ mol.wt. 228.29

Syntheses

– Preparation by reaction of isobutyric acid with 1-methoxy-naphthalene in the presence of boron trifluoride, first at 0°, then at 70° for 10–15 h (93%) [7845].

– Also obtained by Fries rearrangement of α -naphthyl isobutyrate with aluminium chloride (34%) [7768].

- Also obtained by reaction of isobutyryl chloride with 1-methoxynaphthalene in the presence of aluminium chloride in carbon disulfide (72%) [7846,7849] according to the procedure [8268].

m.p. 100–101° [7849], 97–97.5° [7846], 96° [7845];
¹H NMR [7849].

1-(6-Methoxy-1-naphthalenyl)-2-methyl-1-propanone

[69769-76-2]

C₁₅H₁₆O₂ mol.wt. 228.29

COCH(CH₃)₂ Synthesis

- Obtained from sodium-liquid ammonia reduction of 4,6-dimethoxy-1-naphthyl isopropyl ketone in THF/EtOH mixture in presence of excess ammonium chloride [7851].

b.p._{0,1} 140° [7851]; ¹H NMR [7851], IR [7851].

1-(6-Methoxy-2-naphthalenyl)-2-methyl-1-propanone

6-isobutyrylnerolin

[179930-43-9]

C₁₅H₁₆O₂ mol.wt. 228.29

Syntheses

- Preparation by action of potassium tert-butoxide and methyl iodide with 6-propionylneroline (methylation) (74%) [7855].
- Also obtained by condensation of isobutyryl chloride with neroline in the presence of aluminium chloride in nitrobenzene at r.t. for 24 h [7855,8269], according to [7854].
- Also obtained by hydrolysis of 2-[1-(N-isobutyrylimino)-1-isopropyl]-6-methoxynaphthalene (C₁₉H₂₃NO₂, m.p. 141.5–142°) [8269].
- Also refer to: [8270,8271].

b.p.₁₅ 213–214° [7855], b.p.₁₄ 220° [8269];
 m.p. 57–58° [7855,8269].

1-(3,4-Dihydroxy-7-methyl-2-naphthalenyl)-2-methyl-1-propanone

[61983-40-2]

C₁₅H₁₆O₃ mol.wt. 244.29

Synthesis

- Obtained by irradiation of 6-methyl-1,2-naphthoquinone and isobutyraldehyde in benzene by a 300 W high-pressure mercury arc lamp between 15° and 20° for 2–10 days (8%) [7762].

m.p. 155–156° [7762]; ¹H NMR [7762], IR [7762].

1-(1-Hydroxy-4-methoxy-2-naphthalenyl)-2-methyl-1-propanone

[128462-65-7]

 $C_{15}H_{16}O_3$ mol.wt. 244.29

Synthesis

– Obtained by reaction of 2-isobutyryl-1,3-indandione with diazomethane in ethyl ether (66–72%) [7813].

1-(1-Hydroxy-5-methoxy-2-naphthalenyl)-2-methyl-1-propanone

[92920-81-5]

 $C_{15}H_{16}O_3$ mol.wt. 244.29

Synthesis

– Obtained by photo-Fries rearrangement of 5-methoxy-1-naphthyl isobutyrate (m.p. 57–58°) in methanol [7864].

m.p. 92–93° [7864]; IR [7864], MS [7864].

1-(4,6-Dimethoxy-1-naphthalenyl)-2-methyl-1-propanone

[69769-73-9]

 $C_{16}H_{18}O_3$ mol.wt. 258.32

Synthesis

– Preparation by reaction of isobutyryl chloride with 1,7-dimethoxynaphthalene in the presence of aluminium chloride in nitrobenzene at r.t. for 16 h (81%) [7851].

b.p._{0.1} 180° [7851];

m.p. 73–74° [7851]; ¹H NMR [7851], IR [7851].

1-(6,7-Dimethoxy-2-naphthalenyl)-2-methyl-1-propanone

[337522-30-2]

 $C_{16}H_{18}O_3$ mol.wt. 258.32

Syntheses

– Preparation by Friedel–Crafts acylation of 2,3-di-methoxynaphthalene with isobutyryl chloride in the presence of aluminium chloride in methylene chloride (71%) [7872].

– Also refer to: [8272] (Japanese patent).

m.p. 107° [7872]; ¹H NMR [7872], IR [7872].

24.3 Heterocyclic Derivatives

5-Hydroxy-4-(2-methyl-1-oxopropyl)-1,3-benzoxathiol-2-one

[112450-18-7] $C_{11}H_{10}O_4S$ mol.wt. 238.26

Synthesis

– Preparation by adding a solution of 2-isobutyryl-1,4-benzo-quinone in acetic acid to a solution of thiourea in 2 N hydrochloric acid, stirring at r.t. for 30 min, then heating on a steam bath for 1 h (61%) [7883].

m.p. 182–184° [7883];

1H NMR [7883], ^{13}C NMR [7883].

1-(4,5-Dihydroxybenzo[*b*]thien-6-yl)-2-methyl-1-propanone

[912952-37-5] $C_{12}H_{12}O_3S$ mol.wt. 263.29

Synthesis

– Obtained by photoacylation of benzo[*b*]thiophene-4,5-dione with isobutyraldehyde in benzene (33%) [7916].

m.p. 117–120° [7916];

1H NMR [7916], IR [7916].

8-Hydroxy-5-(2-methyl-1-oxopropyl)quinoline

1-(8-Hydroxy-[5]quinoly1)-2-methylpropan-1-one

[101724-90-7] $C_{13}H_{13}NO_2$ mol.wt. 215.25

Synthesis

– Obtained by reaction of isobutyryl chloride with 8-quinolinol (8-hydroxyquinoline) in nitrobenzene in the presence of aluminium chloride [7946].

m.p. 75–76° [7946].

Note: Fungicide [7946].

1-(4,6-Dimethoxy-1,3-benzodioxol-5-yl)-2-methyl-1-propanone

[73213-22-6] $C_{13}H_{16}O_5$ mol.wt. 252.27

Isolation from natural sources

– From *Helichrysum chrysargyrum* (Compositae) [8273].

Colourless oil [8273];

1H NMR [8273], IR [8273], MS [8273].

1-[2,3-Dihydro-4,6-dihydroxy-2-(1-methylethenyl)-5-benzofuranyl]-2-methyl-1-propanone (*4,6-Dihydroxy-9,9-dimethyltremeton*)

[103771-74-0]

mol.wt. 278.35

Synthesis

– Obtained by reaction of methyl iodide with 8-isobutyryl-5,7-dihydroxy-2,2-dimethylchroman in the presence of potassium carbonate in refluxing acetone for 1.5 h (66%) [8138].

m.p. 68–69° [8138]; 1H NMR [8138], IR [8138].

1-[3,4-Dihydro-5,7-dihydroxy-6-(hydroxymethyl)-2,2-dimethyl-2H-1-benzopyran-8-yl]-2-methyl-1-propanone

$C_{16}H_{22}O_5$ mol.wt. 294.35

Synthesis

– Refer to: [8060].

1-(5,7-Dimethoxy-2,2-dimethyl-2H-1-benzopyran-6-yl)-2-methyl-1-propanone

[365947-69-9]

$C_{17}H_{22}O_4$ mol.wt. 290.36

Isolation from natural sources

– From *Hypericum species* native to South Brazil (Guttiferae) [8280].

– From the aerial parts of *Hypericum polyanthemum* Klotzsch ex Reichardt [8279, 8281].

viscous oil [8281];

1H NMR [8281], ^{13}C NMR [8281], IR [8281], UV [8281], MS [8281];

TLC [8280,8281]; HPLC [8280].

BIOLOGICAL ACTIVITY: MAO inhibitory on rat brain mitochondria [8280]; antitumor [8279]; antimicrobial [8282].

1-[7-Hydroxy-5-(methoxymethoxy)-2,2-dimethyl-2H-1-benzopyran-8-yl]-2-methyl-1-propanone

[72935-05-8]

$C_{17}H_{22}O_5$ mol.wt. 306.36

Synthesis

– Obtained by dehydrogenation of corresponding 3,4-dihydro derivative [72935-01-4] with DDQ in refluxing benzene for 1 h (83%) [8138].

m.p. 76–77° [8138]; 1H NMR [8138].

1-[3,4-Dihydro-7-hydroxy-5-(methoxymethoxy)-2,2-dimethyl-2H-1-benzopyran-8-yl]-2-methyl-1-propanone

[72935-01-4]

$C_{17}H_{24}O_5$ mol.wt. 308.37

Syntheses

– Obtained by reaction of chloromethyl methyl ether with 8-isobutyryl-5,7-dihydroxy-2,2-dimethylchroman in the presence of potassium carbonate in acetone at r.t. overnight (82%) [8138].

– Also refer to: [8060].

m.p. 95–96° [8138]; 1H NMR [8138], IR [8138].

2-Methyl-1-[5,7,8-trihydroxy-2-methyl-2-(4-methyl-3-pentenyl)-2H-1-benzopyran-6-yl]-1-propanone

[103784-23-2]

C₂₀H₂₆O₅ mol.wt. 346.42

Isolation from natural sources

– From South african *Helichrysum* species (Compositae) [8080].

1-[3,4-Dihydro-5,7-dihydroxy-2-methyl-2-(4-methyl-3-pentenyl)-2H-1-benzopyran-6-yl]-2-methyl-1-propanone

[72008-16-3]

2-Methyl-1-(3,4,6,7-tetrahydro-5-hydroxy-2,2,8,8-tetramethyl-2*H*,8*H*-benzo[1,2-*b*:5,4-*b'*]-dipyran-10-yl)-1-propanone

C₂₀H₂₈O₄ mol.wt. 332.44

Syntheses

- Obtained from colupulone when refluxing with zinc dust in acetic acid containing some hydrochloric acid for 1.5 h [8284].

- Also obtained from colupulone when refluxing in methanol in the presence of 12 N hydrochloric acid for 3.5 h [8056].

- Also obtained by oxidation of colupulone (m.p. 92–94°) with ammonium persulfate in refluxing ethanol for 50 min [8219].

- Also obtained from isomerization of 6-isobutyryl-3,4,9,10-tetrahydro-5-hydroxy-2,2,8,8-tetra-methylbenzo-[1,2-*b*:3,4-*b'*]dipyran by heating with concentrated sulfuric acid at 60° for 5 min [8056], (40%) [8287].

m.p. 170–172° [8219], 169.5° [8056], 169–170.5° [8287], 168–169° [8284];

[23067-91-6]

C₂₀H₂₈O₄ mol.wt. 332.44

Syntheses

- Obtained by reaction of 1-bromo-3-methyl-2-butene with phloroisobutyrophenone in chloroform (6%) [8056].
- Also obtained (poor yield) in two steps: First, dialkenylation of phloroisobutyrophenone with 1-bromo-3-methyl-2-butene using powdered sodium, then cyclisation during work-up with 5 N hydrochloric acid (1%) [8288].
- Also obtained from a mixture of phloroisobutyrophenone, 2-methyl-3-buten-2-ol and Amberlite IR 120 (H⁺ form) in refluxing dioxane for 24 h (6%) [7739].
- Also obtained from colupulone when refluxing with zinc dust in acetic acid containing some hydrochloric acid for 1.5 h [8284].
- Also obtained by oxidation of colupulone (m.p. 92–94°) with ammonium persulfate in refluxing ethanol for 50 min [8219].
- Also obtained by adding isobutyryl chloride to the solution of 3,4,9,10-tetrahydro-2,2,8,8-tetra-methylbenzo[1,2-*b*:3,4-*b'*]-dipyran-5-ol (compound VI) and aluminium chloride in nitrobenzene at –5° during 10 min. Then, the mixture was stirred at 20° for 4 days (16%) [8287].

m.p. 86–88° [8056], 85° [7739], 84° [8056,8288], 83–84° [8287], 82–83° [8284];

BIOLOGICAL ACTIVITY: Antibacterial [8283];

5,7-Dimethoxy-8-(3-methyl-2-butenyl)-6-(2-methyl-1-oxopropyl)-4-phenyl-2H-1-benzopyran-2-one

C₂₆H₂₈O₅ mol.wt. 420.51

Synthesis

Refer to: [8293].

Chapter 25

Aromatic Ketones Containing One Pivaloyl Group

25.1 Benzene Derivatives

1-[2-Fluoro-6-(hydroxy-*d*)phenyl]-2,2-dimethyl-1-propanone

[195871-76-2] $C_{11}H_{12}DFO_2$ mol.wt. 181.23

Syntheses
– Refer to: [7794,8296].

^{13}C NMR [8296], ^{19}F NMR [8296].

1-(2-Fluoro-6-hydroxyphenyl)-2,2-dimethyl-1-propanone

[158897-29-1] $C_{11}H_{13}FO_2$ mol.wt. 196.22

Synthesis
– Obtained (poor yield) by treatment of 6-fluoro-2-methoxy-benzonitrile with a threefold excess of tert-butyllithium in pentane for 1 h, followed by hydrolysis

in 10% hydrochloric acid. After, treatment of the obtained 6-fluoro-2-methoxy-pivalophenone (compound 19) with a large excess of aluminium chloride in carbon disulfide overnight (ca. 1%) (compound 6) [7794], (compound 8) [8296].

Sublimation on a cold-finger at 50° and 0.1 mbar [7794];

^{13}C NMR [7794,8296], ^{19}F NMR [8296].

1-(2-Hydroxyphenyl)-2,2-dimethyl-1-propanone

[22526-25-6] $C_{11}H_{14}O_2$ mol.wt. 178.23

Syntheses
– Obtained by reaction of sec-butyllithium (1.1 equiv) with 2-bromophenyl pivalate in tetrahydrofuran/ethyl ether/hexane at -95° for 30 min and -78° for 30 min, then hydrolysis with saturated ammonium chloride (76%) (metal-promoted Fries rearrangement) [6590].

- Also obtained by action of aluminium chloride with 2-methoxypivalophenone [7794].

^1H NMR [6590], ^{13}C NMR [6590,7794], IR [6590], MS [6628].

1-(3-Hydroxyphenyl)-2,2-dimethyl-1-propanone

[32578-14-6] $\text{C}_{11}\text{H}_{14}\text{O}_2$ mol.wt. 178.23

Syntheses

- Obtained by reaction of tricarbonyl-[(1,2,3,4-n)-1-acetoxy-5-*endo*-propionyl-1,3-cyclohexadiene]iron with trimethylamine N-oxide in DMA at r.t. for 1 h (16% and 59% of its acetoxy derivative) [8297].
- Also obtained by treatment of m-methoxypivalophenone with relaxing 45% hydrogen bromide in acetic acid for 4.5 h (72%) [8298].
- Also refer to: [8299].

b.p._{0.2} 126° [8298]; m.p. 65–67° [8298];

^1H NMR [8298], IR [8298], UV [8298], MS [6628,8298].

1-(4-Hydroxyphenyl)-2,2-dimethyl-1-propanone

[72569-10-9] $\text{C}_{11}\text{H}_{14}\text{O}_2$ mol.wt. 178.23

Syntheses

- Obtained by Fries rearrangement of phenyl pivalate (1 mol) in nitromethane at 20° for 6 days,
 - in the presence of hydrogen chloride (1 mol) and stannic chloride (2 mol) (23%) [8300];
 - in the presence of aluminium chloride (1.1 mol) (6%) [8300].
- Also obtained by Friedel–Crafts acylation of phenol (1 mol) with pivaloyl chloride (1 mol) in the presence of stannic chloride (2 mol) in nitromethane at 20° for 6 days (26%) [8300].
- Also obtained from p-acetoxybenzoyl chloride by treatment with lithium tert-butoxide and tert-butyllithium in a mixture pentane/tetrahydrofuran in the presence of cuprous iodide, followed by hydrolysis (80%) [6683].
- Also obtained by an ultrasound assisted iodine catalyzed Friedel–Crafts acylation of phenol with pivaloyl chloride for 10 min at r.t. (84%) [8301]. The same pivaloylation, carried out at silent (non-ultrasound) conditions, gave only, after 6 h at r.t., a yield of 62%.
- Also obtained by an ultrasound assisted aluminium chloride catalyzed Friedel–Crafts acylation of phenol with pivaloyl chloride in hexane for 10 min at r.t. (82%) [8302].
- Also refer to: [8303–8306].

b.p._{0.5} 157° [8302], b.p.₅ 170–174° [6683];

m.p. 90° [8300], 88–89° [6683];

^1H NMR (Sadtler: standard n° 35271M) [6683,8300,8302], ^{13}C NMR [6683], IR (Sadtler: standard n° 62639K) [6683,8300], UV [8300], MS [6628,6683,8300].

1-(2,3-Dihydroxyphenyl)-2,2-dimethyl-1-propanone

[100059-02-7]

 $C_{11}H_{14}O_3$ mol.wt. 194.23

Synthesis

– Obtained from 2-pivaloylacetyl-2,5-dimethoxy-tetrahydrofuran (b.p._{1,5} 106°) by refluxing with 0.1 N hydrochloric acid for 2 h (81%) [8307].

viscous, yellow liquid [8307]; b.p.₃ 114–119° [8307].

Diacetate [101103-44-0] $C_{15}H_{18}O_5$ mol.wt. 278.30 (m.p. 70–71°) [8307].

1-(2,4-Dihydroxyphenyl)-2,2-dimethyl-1-propanone

[60884-07-3]

 $C_{11}H_{14}O_3$ mol.wt. 194.23

Syntheses

– Preparation by total demethylation of 2,4-dimethoxy-pivalophenone (m.p. 150°) with aluminium chloride (3 mol) in refluxing benzene for 5 h (80%) [8308].

– Also obtained by reaction of pivalic acid with resorcinol in the presence of boron trifluoride etherate at r.t. for 30 h (28%) [8308].

m.p. 129° [8308].

USE: Aldose reductase inhibition [8309].

1-(2,5-Dihydroxyphenyl)-2,2-dimethyl-1-propanone

[35459-97-3]

 $C_{11}H_{14}O_3$ mol.wt. 194.23

Syntheses

– Obtained by total demethylation of 2,5-dimethoxy-pivalophenone,

- with 48% hydrobromic acid in refluxing acetic acid for 3 h (49%) [8310];
- with 45% hydrobromic acid in refluxing acetic acid for 1.5 h (54%) [8311].

– Also obtained by irradiation of a 1,4-benzoquinone and trimethylacetaldehyde mixture for 18 days (56%) [8312].

– Also refer to: [8313].

m.p. 95–98° [8310], 95° [8312], 93–95° [8311];

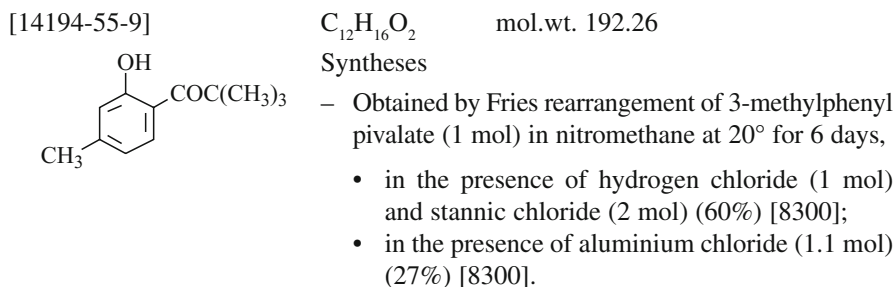

¹H NMR [8311,8312], IR [8310–8312], MS [8311,8312,8314].

USE: Antioxidizing agent [8315,8316].

1-(2,6-Dihydroxyphenyl)-2,2-dimethyl-1-propanone**1-(3,4-Dihydroxyphenyl)-2,2-dimethyl-1-propanone**

m.p. 127–129.5° [6828].

BIOLOGICAL ACTIVITY: Pharmacology [6828]; central nervous system depressant [6828].

1-(2-Fluoro-6-methoxyphenyl)-2,2-dimethyl-1-propanone**1-(2-Hydroxy-4-methylphenyl)-2,2-dimethyl-1-propanone**

– Also obtained by Fries rearrangement of 3-methylphenyl pivalate in nitrobenzene in the presence of aluminium chloride at r.t. for 142 h (22%) [6571].

– Also obtained by Friedel–Crafts acylation of 3-methylphenol (1 mol) with pivaloyl chloride (1 mol) in the presence of stannic chloride (2 mol) in nitromethane at 20° for 6 days (40%) [8300].

b.p._{7.5} 121–126° [6571], b.p.₂₁ 140–141° [8300];

1H NMR (Sadler: standard n° 30300M) [8300],

IR (Sadler: standard n° 57345K) [8300], UV [8300], MS [8300].

1-(2-Hydroxy-5-methylphenyl)-2,2-dimethyl-1-propanone[72569-13-2] $C_{12}H_{16}O_2$ mol.wt. 192.26

Syntheses

- Obtained by Fries rearrangement of 4-methylphenyl pivalate (1 mol) in nitromethane at 20° for 6 days,
 - in the presence of hydrogen chloride (1 mol) and stannic chloride (2 mol) (24%) [8300];
 - in the presence of aluminium chloride (1.1 mol) (9%) [8300].
 - Also obtained by Fries rearrangement of 4-methylphenyl pivalate in nitrobenzene in the presence of aluminium chloride at r.t. for 162 h (3%) [6571].
 - Also obtained by Friedel–Crafts acylation of 4-methylphenol (1 mol) with pivaloyl chloride (1 mol) in the presence of stannic chloride (2 mol) in nitromethane at 20° for 6 days (24%) [8300].
 - Preparation by heating 2-methoxy-5-methylisobutyrophenone with pyridinium chloride at reflux for 2 h (83%) [6672].
 - Also obtained by reaction of sec-butyllithium (1.0–1.1 equiv) with 2-bromo-4-methylphenyl pivalate (metal-promoted Fries rearrangement),
 - in tetrahydrofuran/ethyl ether/hexane at –95° for 30 min and –78° for 30 min, then hydrolysis with saturated ammonium chloride (71%) [6590];
 - in tetrahydrofuran at –100° for 2 h, followed by hydrolysis (25%) [8317].
 - Also refer to: [7987].
- oil [8300]; b.p._{0.3} 51° [8317], b.p.₇ 80° [6571];
 $n_D^{20} = 1.5341$ [8317];
 m.p. 32° [8317];
 1H NMR [6590,8300,8317], ^{13}C NMR [6590], IR [6590,8300,8317], UV [8300], MS [8300,8317].

1-(4-Hydroxy-3-methylphenyl)-2,2-dimethyl-1-propanone[72569-11-0] $C_{12}H_{16}O_2$ mol.wt. 192.26

Syntheses

- Obtained by Fries rearrangement of 2-methylphenyl pivalate (1 mol) in nitromethane at 20° for 6 days,
 - in the presence of hydrogen chloride (1 mol) and stannic chloride (2 mol) (45%) [8300];
 - in the presence of aluminium chloride (1.1 mol) (6%) [8300].

- Also obtained by Friedel–Crafts acylation of 2-methylphenol (1 mol) with pivaloyl chloride (1 mol) in the presence of stannic chloride (2 mol) in nitromethane at 20° for 6 days (38%) [8300].

m.p. 118° [8300];

¹H NMR (Sadtler: standard n° 35272M) [8300],

IR (Sadtler: standard n° 62640K) [8300], UV [8300], MS [8300].

1-(2-Methoxyphenyl)-2,2-dimethyl-1-propanone

[22526-24-5] C₁₂H₁₆O₂ mol.wt. 192.26

Syntheses

- Preparation by treatment of 2-methoxybenzoic acid with tert-butyllithium (3 equiv) in pentane (60%) [7794].
- Also refer to: [8318].

1-(3-Methoxyphenyl)-2,2-dimethyl-1-propanone

[32578-12-4] C₁₂H₁₆O₂ mol.wt. 192.26

Syntheses

- Preparation by treatment of 1-(3-methoxyphenyl)-2,2-dimethylpropanol with manganese dioxide in refluxing benzene for 15 h (81%) [8298].
- Also obtained by reaction of m-anisic acid with tert-butyllithium at -78° [8319].
- Also refer to: [8320].

b.p.₁₃ 129–130° [8298];

¹H NMR [8298,8319], IR [8298].

1-(4-Methoxyphenyl)-2,2-dimethyl-1-propanone

[2040-26-8] C₁₂H₁₆O₂ mol.wt. 192.26

Syntheses

- Preparation by reaction of pivaloyl chloride with anisole,
 - in the presence of bismuth (III) chloride at 100° for 3 h (94%) [8126];
 - in the presence of indium metal (1 equiv) at 100° for 6 h without solvent (76%) or in dioxane for 4 h (80%) [8321].
- Also obtained by reaction of pivalic anhydride with anisole in acetonitrile in the presence of TiCl(OTf)₃/TfOH at r.t. for 12 h (68%) [8128].
- Also refer to: [7095,8129,8302,8322–8324].

b.p.₂ 116–118° [7095], b.p.₈ 138–140° [8325]; ¹³C NMR [7095].

1-(2,4-Dihydroxy-6-methylphenyl)-2,2-dimethyl-1-propanone[60883-92-3] $C_{12}H_{16}O_3$ mol.wt. 208.26

Synthesis

– Obtained by reaction of pivalic acid with orcinol in the presence of boron trifluoride etherate at r.t. for 5 days (15%) [8308].

m.p. 148° [8308]; MS [8308]; TLC [8308].

1-(2,6-Dihydroxy-4-methylphenyl)-2,2-dimethyl-1-propanone[60884-09-5] $C_{12}H_{16}O_3$ mol.wt. 208.26

Synthesis

– Obtained by reaction of pivalic acid with orcinol in the presence of boron trifluoride etherate at r.t. for 5 days [8308].

pale yellow oil [8308]; b.p.₁ 220° [8308].

1-(2-Hydroxy-6-methoxyphenyl)-2,2-dimethyl-1-propanone[60884-04-0] $C_{12}H_{16}O_3$ mol.wt. 208.26

Synthesis

– Obtained by partial demethylation of 2,6-dimethoxy-pivalophenone (m.p. 86°) with aluminium chloride (3 mol) in refluxing benzene for 6 h (26%) [8308].

m.p. 82° [8308].

1-(2-Hydroxy-3,4-dimethylphenyl)-2,2-dimethyl-1-propanone[72569-14-3] $C_{13}H_{18}O_2$ mol.wt. 206.28

Syntheses

– Obtained by Fries rearrangement of 2,3-dimethylphenyl pivalate (1 mol) in nitromethane at 20°,

- in the presence of hydrogen chloride (1 mol) and stannic chloride (2 mol) for 24 h (47%), but only (41%) after 6 days of reaction [8300];
- in the presence of aluminium chloride (1.1 mol) for 6 days (29%) [8300].

– Also obtained by Friedel–Crafts acylation of 2,3-dimethylphenol (1 mol) with pivaloyl chloride (1 mol) in the presence of stannic chloride (2 mol) in nitromethane at 20° for 24 h (51%), but only (39%) after 6 days of reaction [8300].

m.p. 38° [8300];

¹H NMR (Sadtler: standard n° 35273M) [8300],

IR (Sadtler: standard n° 62641K) [8300], UV [8300], MS [8300].

1-(2-Hydroxy-3,5-dimethylphenyl)-2,2-dimethyl-1-propanone

[72569-15-4]

 $C_{13}H_{18}O_2$ mol.wt. 206.28

Syntheses

- Obtained by Fries rearrangement of 2,4-dimethylphenyl pivalate (1 mol) in nitromethane at 20° for 6 days,
- in the presence of hydrogen chloride (1 mol) and stannic chloride (2 mol) (13%) [8300];
 - in the presence of aluminium chloride (1.1 mol) (4%) [8300].
- Also obtained by Friedel–Crafts acylation of 2,4-dimethylphenol (1 mol) with pivaloyl chloride (1 mol) in the presence of stannic chloride (2 mol) in nitromethane at 20° for 6 days (10%) [8300].

m.p. 41° [8300];

¹H NMR (Sadler: standard n° 35274M) [8300],

IR (Sadler: standard n° 62642K) [8300], UV [8300], MS [8300].

1-(2-Hydroxy-4,5-dimethylphenyl)-2,2-dimethyl-1-propanone

[72569-16-5]

 $C_{13}H_{18}O_2$ mol.wt. 206.28

Syntheses

- Obtained by Fries rearrangement of 3,4-dimethylphenyl pivalate (1 mol) in nitromethane at 20° for 6 days,
- in the presence of hydrogen chloride (1 mol) and stannic chloride (2 mol) (64%) [8300];
 - in the presence of aluminium chloride (1.1 mol) (47%) [8300].
- Also obtained by Friedel–Crafts acylation of 3,4-dimethylphenol (1 mol) with pivaloyl chloride (1 mol) in the presence of stannic chloride (2 mol) in nitromethane at 20° for 6 days (62%) [8300].

m.p. 69° [8300];

¹H NMR (Sadler: standard n° 35275M) [8300],

IR (Sadler: standard n° 62643K) [8300], UV [8300], MS [8300].

1-(4-Hydroxy-3,5-dimethylphenyl)-2,2-dimethyl-1-propanone

[72569-12-1]

 $C_{13}H_{18}O_2$ mol.wt. 206.28

Syntheses

- Obtained by Fries rearrangement of 2,6-dimethylphenyl pivalate (1 mol) in nitromethane at 20° for 6 days,
- in the presence of hydrogen chloride (1 mol) and stannic chloride (2 mol) (42%) [8300];

- in the presence of aluminium chloride (1.1 mol) (3%) [8300].
- Also obtained by Friedel–Crafts acylation of 2,6-dimethylphenol (1 mol) with pivaloyl chloride (1 mol) in the presence of stannic chloride (2 mol) in nitromethane at 20° for 6 days (28%) [8300].

N.B.: By irradiation of 2,4,6-trimethylphenyl pivalate (mesityl pivalate) in acetonitrile at 254 nm for 8 h at 0°, there is a photodecarboxylation and formation of 2-tert-butylmesitylene (16%) [8326].

m.p. 67° [8300]; ¹H NMR [8300], IR [8300], UV [8300], MS [8300].

1-(2-Methoxy-5-methylphenyl)-2,2-dimethyl-1-propanone

[54696-08-1] C₁₃H₁₈O₂ mol.wt. 206.28

Synthesis

– Refer to: [6672].

1-(2-Methoxy-6-methylphenyl)-2,2-dimethyl-1-propanone

[162052-63-3] C₁₃H₁₈O₂ mol.wt. 206.28

Syntheses

– Obtained by oxidation of 2,2-dimethyl-1-(2-methoxy-6-methylphenyl)-1-propanol with PCC in methylene chloride (90%) [8327].

– Also refer to: [8328].

yellow liquid [8327];

¹H NMR [8327], IR [8327], MS [8327]; TLC [8327].

1-(4-Methoxy-2-methylphenyl)-2,2-dimethyl-1-propanone

[2234-19-7] C₁₃H₁₈O₂ mol.wt. 206.28

Syntheses

– Obtained by reaction of pivaloyl chloride with 3-methyl-anisole in petroleum ether in the presence of aluminium chloride, first at 0°, then at 55–60° for 15 min (63%) [8329].

– Also refer to: [7095].

b.p._{0.8} 100° [7095], b.p.₄ 126–128° [8329];

m.p. 73.5–74° [8329]; ¹³C NMR [7095].

1-(4-Methoxy-3-methylphenyl)-2,2-dimethyl-1-propanone[181260-67-3] $C_{13}H_{18}O_2$ mol.wt. 206.28

Syntheses

- Obtained by reaction of pivaloyl chloride with 2-methyl-anisole in petroleum ether in the presence of aluminium chloride, first at 0°, then at 55–60° for 15 min [8329].
- Also obtained by reaction of pivalic anhydride with 2-methyl-anisole in acetonitrile in the presence of $TiCl(OTf)_3/TfOH$ at r.t. for 12 h (64%) [8128].

b.p.₄ 127–129° [8329]; m.p. 51–52° [8329].**1-(5-Methoxy-2-methylphenyl)-2,2-dimethyl-1-propanone**[2030-70-8] $C_{13}H_{18}O_2$ mol.wt. 206.28

Syntheses

- Obtained by reaction of pivaloyl chloride with 4-methyl-anisole in petroleum ether in the presence of aluminium chloride, first at 0°, then at 55–60° for 15 min [8329].
- Also refer to: [7095].

b.p.₄ 130–132° [8329];m.p. 51–52° [7095], 50–51° [8329]; ^{13}C NMR [7095].**1-(2,4-Dihydroxy-3,5-dimethylphenyl)-2,2-dimethyl-1-propanone**[267001-74-1] $C_{13}H_{18}O_3$ mol.wt. 222.28

Synthesis

- Obtained by reaction of pivalic acid with 2,4-dimethyl-resorcinol in the presence of boron trifluoride etherate at 120° for 1–2 h under an argon atmosphere. Then, the resulting complex was refluxed for 30 min to 1 h in an aqueous THF (70–80%) [8155].

m.p. 61–62° [8155];

 1H NMR [8155], ^{13}C NMR [8155], IR [8155], MS [8155]; TLC [8155].**1-(2,4-Dimethoxyphenyl)-2,2-dimethyl-1-propanone**[60884-08-4] $C_{13}H_{18}O_3$ mol.wt. 222.28

Syntheses

- Preparation by reaction of pivaloyl chloride with 1,3-di-methoxybenzene in the presence of stannic chloride/hydrochloric acid gas in nitromethane at r.t. for 6 days (quantitative yield) [8300].

- Also obtained on hydrolysis of 2-(2,4-dimethoxyphenyl)-2-(1,1-dimethylethyl)-1,3-benzoxathiole [111122-89-5] (m.p. 110–111°) by mercury(II) oxide/35% aqueous tetrafluoroboric acid at r.t. according to [8330], (quantitative yield) [8331].
- Also refer to: [8309].

b.p.₁₂ 171–173° [8331], b.p.₄₀ 193–194° [8300];

¹H NMR (Sadler: standard n° 30301M) [8300], IR (Sadler: standard n° 57346) [8300],

UV [8300], MS [8300].

1-(2,5-Dimethoxyphenyl)-2,2-dimethyl-1-propanone

[39868-14-9] C₁₃H₁₈O₃ mol.wt. 222.28

Syntheses

- Preparation by reaction of pivaloyl chloride with hydroquinone dimethyl ether in the presence of aluminium chloride in carbon disulfide [7336].
- Also refer to: [8332].

m.p. 46.5–48.5° [8310],

¹H NMR [7336], IR [7336], UV [7336], MS [7336].

1-(3,4-Dimethoxyphenyl)-2,2-dimethyl-1-propanone

[30314-46-6] C₁₃H₁₈O₃ mol.wt. 222.28

Synthesis

- Obtained by reaction of pivalic anhydride with veratrole in acetonitrile in the presence of TiCl(OTf)₃/TfOH at r.t. for 12 h (66%) [8128].

1-[3-(Hydroxymethyl)-4-methoxyphenyl]-2,2-dimethyl-1-propanone

[201150-91-6] C₁₃H₁₈O₃ mol.wt. 222.28

Syntheses

- Refer to: [8333,8334].

USE: Intermediate for the preparation of anticonvulsants [8333,8334].

2,2-Dimethyl-1-(2,4,5-trihydroxy-3,6-dimethylphenyl)-1-propanone

[267001-65-0] C₁₃H₁₈O₄ mol.wt. 238.28

Synthesis

- Obtained by thermal rearrangement of 2,6-dimethyl-4-(trimethylacetyl)-3,6-dihydroxy-2,4-cyclohexadien-1-one in refluxing benzene for 12 h (93%) [8155].

Caution: The ketone obtained was stored under argon to prevent its oxidation to 3,6-dimethyl-5-(trimethylacetyl)-2-hydroxy-p-quinone.

yellow glass [8155];

^1H NMR [8155], ^{13}C NMR [8155], IR [8155], MS [8155]; TLC [8155].

1-(4-Hydroxy-3,5-dimethoxyphenyl)-2,2-dimethyl-1-propanone

[41247-25-0]

$\text{C}_{13}\text{H}_{18}\text{O}_4$ mol.wt. 238.28

Synthesis

– Obtained by enzymic dehydration of 2,6-dimethoxy-4-(1-hydroxyneopentyl)phenol [38775-76-7] only (44% yield) or in mixture with 4-hydroxy-3,5-dimethoxycinnamyl alcohol [537-33-7] (poor yield) [8335].

oil [8335]; ^1H NMR [8335], MS [8335]; TLC [8335].

1-(3,4-Dimethoxy-2-methylphenyl)-2,2-dimethyl-1-propanone

$\text{C}_{14}\text{H}_{20}\text{O}_3$ mol.wt. 236.31

Synthesis

– Obtained by reaction of pivalonitrile with 3,4-dimethoxy-2-methylphenylmagnesium bromide in THF (54%) [7390].

b.p._{0.04} 81° [7390]; m.p. 28° [7390].

2,2-Dimethyl-1-(2,4,6-trimethoxyphenyl)-1-propanone

[111122-82-8]

$\text{C}_{14}\text{H}_{20}\text{O}_4$ mol.wt. 252.31

Syntheses

– Obtained on hydrolysis of 2-(1,1-dimethylethyl)-2-(2,4,6-trimethoxyphenyl)-1,3-benzoxathiole [111122-92-0] by mercury(II) oxide/35% aqueous tetrafluoroboric acid at r.t. according to [8330], (quantitative yield) [8331].

m.p. 70–71° [8331]; ^1H NMR [8331], IR [8331], MS [8331].

1-[2-Hydroxy-6-(2-methyl-1,3-dioxolan-2-yl)phenyl]-2,2-dimethyl-1-propanone

[171609-26-0]

$\text{C}_{15}\text{H}_{20}\text{O}_4$ mol.wt. 264.32

Synthesis

– Refer to: [8336] (Japanese patent).

1-[3-(1,1-Dimethylethyl)-2-hydroxyphenyl]-2,2-dimethyl-1-propanone[5384-70-3] $C_{15}H_{22}O_2$ mol.wt. 234.34

Syntheses

- Obtained by irradiation (450 W Hanovia lamp) of o-tert-butylphenyl pivalate (b.p._{0.7} 93°) in pentane or benzene solutions (14%) [8337].
 - Also obtained by heating 6,11-di-tert-butyl-1,2,4-trioxa-spiro[4,6]undeca-6,8,10-triene (m.p. 78–79°) in methylcyclohexane at 100° for 1 h (60%) [8338].
 - Also refer to: [8339].
- m.p. 69–69.5° [8337]; IR [8337], UV [8337].

1-[3-(1,1-Dimethylethyl)-4-hydroxyphenyl]-2,2-dimethyl-1-propanone[5384-64-5] $C_{15}H_{22}O_2$ mol.wt. 234.34

Synthesis

- Obtained by irradiation (450 W Hanovia lamp) of o-tert-butylphenyl pivalate (b.p._{0.7} 93°) in pentane or benzene solutions (3%) [8337].
- m.p. 152–153° [8337]; IR [8337], UV [8337].

1-[4-(1,1-Dimethylethyl)-2-hydroxyphenyl]-2,2-dimethyl-1-propanone[186962-25-4] $C_{15}H_{22}O_2$ mol.wt. 234.34

Synthesis

- Obtained by demethylation of 5-tert-butyl-2-pivaloyl-anisole with aluminium chloride in benzene at 50° for 43 h (34%) [8340].
- colourless oil [8340]; ¹H NMR [8340], ¹³C NMR [8340], IR [8340].

1-[5-(1,1-Dimethylethyl)-2-hydroxyphenyl]-2,2-dimethyl-1-propanone[186962-23-2] $C_{15}H_{22}O_2$ mol.wt. 234.34

Synthesis

- Obtained by demethylation of 4-tert-butyl-2-pivaloyl-anisole with aluminium chloride in benzene at 50° for 27 h (63%) [8340].
- colourless oil [8340];
¹H NMR [8340], ¹³C NMR [8340], IR [8340].

1-[3-(1,1-Dimethylethyl)-4,5-dihydroxyphenyl]-2,2-dimethyl-1-propanone

[81389-67-5]

 $C_{15}H_{22}O_3$ mol.wt. 250.34

Syntheses

– Preparation by reduction of 4-pivaloyl-2,6-di-tert-butyl-6-hydroperoxy-2,4-cyclohexadienone (m.p. 112°) with dimethyl sulfide at r.t. (quantitative yield) [7727,8231].

m.p. 144–146° [8231]; 1H NMR [8231].

1-[4-(1,1-Dimethylethyl)-2,5-dihydroxyphenyl]-2,2-dimethyl-1-propanone

[35460-03-8]

 $C_{15}H_{22}O_3$ mol.wt. 250.34

Synthesis

– Obtained by total demethylation of its dimethyl ether with refluxing pyridinium chloride for 2 h (63%) [8310].

m.p. 185–186° [8310]; IR [8310].

2,2-Dimethyl-1-(2,3,4-trimethoxy-6-methylphenyl)-1-propanone

[162052-64-4]

 $C_{15}H_{22}O_4$ mol.wt. 266.34

Synthesis

– Obtained by oxidation of 2,2-dimethyl-1-(2,3,4-trimethoxy-6-methylphenyl)-1-propanol (b.p.₁ 115–117°) with PCC in methylene chloride (92%) [8327].

– Also refer to: [8328].

m.p. 93–94° [8327]; 1H NMR [8327], IR [8327], MS [8327].

1-[4-(1,1-Dimethylethyl)-2-methoxyphenyl]-2,2-dimethyl-1-propanone

[186962-24-3]

 $C_{16}H_{24}O_2$ mol.wt. 248.37

Synthesis

– Obtained by reaction of pivaloyl chloride with 3-tert-butylanisole in the presence of aluminium chloride in carbon disulfide at r.t. for 1 h (17%) [8340].

m.p. 45.5–46° [8340];

1H NMR [8340], ^{13}C NMR [8340], IR [8340].

1-[5-(1,1-Dimethylethyl)-2-methoxyphenyl]-2,2-dimethyl-1-propanone[186962-22-1] $C_{16}H_{24}O_2$ mol.wt. 248.37

Synthesis

– Obtained by reaction of pivaloyl chloride with 4-tert-butylanisole in the presence of aluminium chloride in carbon disulfide at r.t. for 1 h (25%) [8340].

m.p. 0–31° [8340];

 1H NMR [8340], ^{13}C NMR [8340], IR [8340].**1-(4-Hydroxy[1,1'-biphenyl]-3-yl)-2,2-dimethyl-1-propanone**[868266-11-9] $C_{17}H_{18}O_2$ mol.wt. 254.33

Synthesis

– Refer to: [8223].

1-[3,6-Dihydroxy-2-(phenylsulfonyl)phenyl]-2,2-dimethyl-1-propanone[145746-56-1] $C_{17}H_{18}O_5S$ mol.wt. 334.39

Synthesis

– Preparation by addition of sodium benzenesulfinate in water to pivaloyl-1,4-benzoquinone and trifluoroacetic acid in methylene chloride (66%) [8341].

m.p. 101.5–104° [8341];

 1H NMR [8341], IR [8341], MS [8341].**1-(4-Hydroxy-3,5-dipropylphenyl)-2,2-dimethyl-1-propanone** $C_{17}H_{26}O_2$ mol.wt. 262.39

Synthesis

– Preparation by heating a suspension of sodium pivalate and 2,6-dipropylphenol in neat triflic acid [6402].

1-[4-(1,1-Dimethylethyl)-2,5-dimethoxyphenyl]-2,2-dimethyl-1-propanone[39868-15-0] $C_{17}H_{26}O_3$ mol.wt. 278.39

Syntheses

– Preparation by reaction of pivaloyl chloride with 2-tert-butylhydroquinone dimethyl ether in the presence of aluminium chloride in carbon disulfide [7336] or in a mixture of nitrobenzene/tetrachloroethane (6%) [8310].

m.p. 62.5–63.5° [8310];

 1H NMR [7336,8310], IR [7336,8310], UV [7336], MS [7336].

1-(4'-Methoxy[1,1'-biphenyl]-2-yl-3,4,5,6-*d*)-2,2-dimethyl-1-propanone

[852290-70-1]

 $C_{18}H_{16}D_4O_2$ mol.wt. 272.38

Synthesis

– Refer to: [8342].

1-(4'-Methoxy[1,1'-biphenyl]-2-yl-3-*d*)-2,2-dimethyl-1-propanone

[852290-72-3]

 $C_{18}H_{19}DO_2$ mol.wt. 269.36

Synthesis

– Refer to: [8342].

1-(4'-Methoxy[1,1'-biphenyl]-2-yl)-2,2-dimethyl-1-propanone

[501374-20-5]

 $C_{18}H_{20}O_2$ mol.wt. 268.36

Synthesis

– Refer to: [8342].

1-(4-Methoxy[1,1'-biphenyl]-3-yl)-2,2-dimethyl-1-propanone

[868266-10-8]

 $C_{18}H_{20}O_2$ mol.wt. 268.36

Synthesis

– Refer to: [8223].

1-(5-Methoxy[1,1'-biphenyl]-2-yl)-2,2-dimethyl-1-propanone

[501374-02-3]

 $C_{18}H_{20}O_2$ mol.wt. 268.36

Syntheses

- Obtained from ruthenium-catalyzed phenylation of,
 - 2,4-dimethoxypivalophenone with phenylboronate via a carbon-oxygen bond cleavage (76%) [8318];
 - 4-methoxypivalophenone with phenylboronate [8342] (78%) [8343].

1-[3,5-Bis(1,1-dimethylethyl)-2-hydroxyphenyl]-2,2-dimethyl-1-propanone $C_{19}H_{30}O_2$ mol.wt. 290.45

Synthesis

– Refer to: [8344].

Oxime [161429-78-3] $C_{19}H_{31}NO_2$ mol.wt. 305.46.

USE: Cosmetics containing this compound as chelating photoprotectants [8344].

1-[3,5-Bis(1,1-dimethylethyl)-4-hydroxyphenyl]-2,2-dimethyl-1-propanone

[14035-38-2]

$C_{19}H_{30}O_2$ mol.wt. 290.45

Syntheses

- Preparation by acylation of 2,6-di-tert-butylphenol with pivalic acid in trifluoroacetic anhydride at r.t. [8231].
- Also refer to: [8234,8345].

m.p. 137–139° [8231].

Note: Toxicity to mosquito [8231].

USE: Stabilizer for plastics, oils and fats against heat, light and oxidation [8345].

O-methyloxime [14446-95-8] $C_{20}H_{33}NO_2$ mol.wt. 319.49 [8346].

2,2-Dimethyl-1-(3',4',5'-trimethoxy[1,1'-biphenyl]-2-yl)-1-propanone

[878555-18-1]

$C_{20}H_{24}O_4$ mol.wt. 328.41

Syntheses

- Obtained from cobalt(II)-catalyzed cross-coupling between 2-fluoropivalophenone and 3,4,5-trimethoxyphenylcopper (formed by transmetallation of 3,4,5-trimethoxyphenyl-magnesium chloride with $CuCN.2LiCl$) at 80° for 1 h (71%) [8347,8348].
- The same reaction realized with 2-chloropivalophenone at 80° for 30 min gives (81%) of the titled ketone [8347].
- Also refer to: [8349].

m.p. <30° [8348];

1H NMR [8348], ^{13}C NMR [8348], IR [8348], MS [8348].

2,2-Dimethyl-1-(2,2',6,6'-tetramethoxy[1,1'-biphenyl]-3-yl)-1-propanone

[475502-03-5]

$C_{21}H_{26}O_5$ mol.wt. 358.43

Synthesis

- Preparation by reaction of pivaloyl chloride with 2,2',6,6'-tetramethoxydiphenyl in the presence of zinc in toluene at 90° for 12 h under nitrogen (65%) [8350].

m.p. 93–94° [8350], 1H NM [8350], ^{13}C NMR [8350].

1-[3-Hydroxy-2-[2-(1-methyl-1*H*-indol-2-yl)ethenyl]phenyl]-2,2-dimethyl-1-propanone

[204569-03-9]

C₂₂H₂₃NO₂ mol.wt. 333.43

Synthesis

– Refer to: [8351].

1-[3-(9-Anthracenyl)-5-hydroxyphenyl]-2,2-dimethyl-1-propanone

[903583-32-4]

C₂₅H₂₂O₂ mol.wt. 354.45

Synthesis

– Refer to: [8352].

fluorescence spectra [8352].

25.2 Naphthalene Derivatives

1-(1-Hydroxy-2-naphthalenyl)-2,2-dimethyl-1-propanone

[100976-03-2]

C₁₅H₁₆O₂ mol.wt. 228.29

Syntheses

– Preparation by reaction of pivalic acid with α -naphthol in the presence of boron trifluoride at 70° for 2 h (72%) [7775].

- Also obtained by adding tert-butyllithium to 1-hydroxy-2-naphthoic acid at –78°; then the temperature was allowed to rise 25° (42%) [8263].
- Also obtained by Fries rearrangement of 1-naphthyl pivalate with stannic chloride [8353].

m.p. 68° [7775], 66–68° [8353]; IR [8353].

1-(3-Hydroxy-2-naphthalenyl)-2,2-dimethyl-1-propanone

[574001-78-8]

C₁₅H₁₆O₂ mol.wt. 228.29

Synthesis

– Refer to: [8354] (compound 8u).

¹H NMR [8354], ¹³C NMR [8354], IR [8354];
TLC [8354].

1-(4-Hydroxy-1-naphthalenyl)-2,2-dimethyl-1-propanone[882698-66-0] $C_{15}H_{16}O_2$ mol.wt. 228.29

Synthesis

– Refer to: [8355] (Japanese patent).

USE: Preparation of azoquinone compound suitable as electron transport agent for electrophotographic photoconductor to improve sensitivity [8355].

1-(1,4-Dihydroxy-2-naphthalenyl)-2,2-dimethyl-1-propanone[128462-68-0] $C_{15}H_{16}O_3$ mol.wt. 244.29

Synthesis

– Obtained by demethylation of the corresponding 4-methyl ether with concentrated hydrobromic acid in acetic acid [7813].

1-(2-Methoxy-1-naphthalenyl)-2,2-dimethyl-1-propanone[130138-40-8] $C_{16}H_{18}O_2$ mol.wt. 242.32

Synthesis

– Obtained by electrochemical acylation of 2-methoxy-naphthalene with pivalic anhydride in methylene chloride in the presence of $LiClO_4$ at 35° (22%) [7841].
– Also refer to: [8356].

1-(3-Methoxy-2-naphthalenyl)-2,2-dimethyl-1-propanone $C_{16}H_{18}O_2$ mol.wt. 242.32

Synthesis

– Obtained by reaction of N-methoxy-N-methyl-2,2-dimethyl-propanamide with 2-methoxynaphthalene (multistage) [8354].

1-(4-Methoxy-1-naphthalenyl)-2,2-dimethyl-1-propanone[36198-82-0] $C_{16}H_{18}O_2$ mol.wt. 242.32

Syntheses

– Preparation by reaction of pivaloyl chloride with 1-methoxy-naphthalene in the presence of aluminium chloride in carbon disulfide [7849], according to the procedure [8268].
– Also obtained by methylation of 1-methoxy-4-isobutyryl-naphthalene [7845], according to the procedure [8357].
m.p. 94° [7845], $92-94^\circ$ [7849]; 1H NMR [7849].

1-(4-Methoxy-2-naphthalenyl)-2,2-dimethyl-1-propanone

[177028-19-2]

C₁₆H₁₈O₂ mol.wt. 242.32

Synthesis

- Obtained (by-product) by reductive coupling of 2-pivaloyl-1,4-dimethoxynaphthalene (m.p. 93–94°) with (TiCl₃)₂LiAlH₄ in refluxing THF for 3 h under nitrogen (1%) [8358].

colourless oil [8358]; ¹H NMR [8358], MS [8358].

1-(6-Methoxy-2-naphthalenyl)-2,2-dimethyl-1-propanone

[67460-92-8]

C₁₆H₁₈O₂ mol.wt. 242.32

Syntheses

- Obtained by reaction of tert-butyllithium with N,N-dimethyl-6-methoxynaphthalene-2-carboxamide in THF at –78°, followed by quenching with ethyl iodide (73%) [8359].
- Also obtained by action of sodium amide and methyl iodide with 6-isobutyrylneroline (methylation) (54%) [7855].
- Also obtained by action of tert-butylmagnesium chloride with 2-cyanoneroline in ethyl ether (25%) [7855], according to [8360].
- Also obtained by reaction of pivaloyl chloride with 2-methoxynaphthalene (neroline) in the presence of stannic chloride in nitrobenzene, first at 0°, then at r.t. for 1.5 h (12%) [7855].
- Also refer to: [7802,8356].

b.p._{0.5} 180–185° [7855]; m.p. 83–84° [7855];

¹H NMR [8359], MS [8359].

1-(1-Hydroxy-4-methoxy-2-naphthalenyl)-2,2-dimethyl-1-propanone

[128462-66-8]

C₁₆H₁₈O₃ mol.wt. 258.32

Syntheses

- Obtained by reaction of 2-pivaloyl-1,3-indandione with diazomethane in ethyl ether (91%) [7813].
- Also obtained by reaction of pivaloyl chloride with 1-hydroxy-4-methoxynaphthalene in the presence of stannic chloride in 1,2-dichloroethane, first at –78° for 15 min, then at r.t. for 2 h under nitrogen (10%) [8358].

Isolation from Natural Sources

- From the sponge *Petrosia seriata* [8361].

m.p. 103–104° [8358]; ¹H NMR [8358], MS [8358].

BIOLOGICAL ACTIVITY: Natural cardioactive hydroquinone [8361].

1-(1-Hydroxy-5-methoxy-2-naphthalenyl)-2,2-dimethyl-1-propanone

[92920-82-6]

 $C_{16}H_{18}O_3$ mol.wt. 258.32

Syntheses

- Obtained by photo-Fries rearrangement of 5-methoxy-1-naphthyl pivalate (m.p. 123–124°) [7864], in methanol [7864,8362].
- Also refer to: [8363].

m.p. 76–77° [7864]; 1H NMR [8363], IR [7864], MS [7864].**1-(1,4-Dimethoxy-2-naphthalenyl)-2,2-dimethyl-1-propanone**

[177028-17-0]

 $C_{17}H_{20}O_3$ mol.wt. 272.34

Synthesis

- Preparation: 1.6 M n-butyllithium in hexane was added to a solution of 1,4-dimethoxynaphthalene in THF at 0° under a nitrogen atmosphere, and the mixture stirred at r.t. for 5 h. Then, in nitrogen atmosphere and at –78°, the reaction mixture was added to pivaloyl chloride in THF and stirred 30 min (58%) [8358].

m.p. 93–94° [8358]; 1H NMR [8358], ^{13}C NMR [8358]; TLC [8358].**25.3 Heterocyclic Derivatives****1-(4-Hydroxy-3-methyl-6-phenyl-2-benzofuranyl)-2,2-dimethyl-1-propanone**

[687184-57-1]

 $C_{20}H_{20}O_3$ mol.wt. 308.38

Synthesis

- Refer to: [7968] (compound 11i).

BIOLOGICAL ACTIVITY: Anticancer [7968].

1-[5-Hydroxy-2-phenyl-6-(phenylamino)-4-benzoxazolyl]-2,2-dimethyl-1-propanone

[65908-29-4]

 $C_{24}H_{22}N_2O_3$ mol.wt. 386.45

Synthesis

- Obtained by heating 2,5-dianilino-3-pivaloyl-1,4-benzoquinone with N-phenylbenzamidine at 120–125° for 1 h (26%) [8364].

m.p. 126° [8364];

 1H NMR [8364], IR [8364], UV [8364], MS [8364].

Part XI
Di- and Polyketones

Chapter 26

Aromatic Polyketones Containing Only Propionyl Groups

26.1 Propionyl Groups Located on the Same Ring

1,1'-(2,4-Dihydroxy-5-nitro-1,3-phenylene)bis-1-propanone

[105910-12-1]

$C_{12}H_{13}NO_6$ mol.wt. 267.24

Synthesis

– Obtained (poor yield) by Fries rearrangement of 4-nitroresorcinol dipropionate with aluminium chloride (3.3 equiv) in nitrobenzene, first at 95–100° for 2 h, then at r.t. for 72 h (3%) [6560].

m.p. 132–133° [6560].

1,1'-(4,6-Dihydroxy-5-nitro-1,3-phenylene)bis-1-propanone

[105905-84-8]

$C_{12}H_{13}NO_6$ mol.wt. 267.24

Syntheses

– Preparation by Fries rearrangement of 2-nitroresorcinol dipropionate (m.p. 66°) with aluminium chloride (3.3 equiv) in nitrobenzene at 100° for 3 h (67–80%) or without solvent at 100–110° for 3 h (23%) [6554].

– Also obtained from 4,6-dipropionylresorcinol by treatment with a concentrated sulfuric acid/concentrated nitric acid mixture in acetic acid at 0° for 1 h (75%) [6554].

– Also obtained by Friedel–Crafts acylation of 2-nitroresorcinol with propionic anhydride in nitrobenzene in the presence of aluminium chloride (3.3 equiv) at 120–130° for 3 h (57%) [6554].

m.p. 248° [6554].

1,1'-(4-Hydroxy-1,3-phenylene)bis-1-propanone

[56481-70-0]

 $C_{12}H_{14}O_3$

mol.wt. 206.24

Syntheses

- Preparation by Friedel–Crafts acylation of o-hydroxy-propiophenone with propionyl chloride in the presence of aluminium chloride in refluxing carbon disulfide for 2 h (94%) [8365].

- Also refer to: [6351].

m.p. 54–55° [8365], 53° [6351];

 1H NMR (Sadtler: standard n° 20025M) [8365], IR (Sadtler: standard n° 47033) [8365].**1,1'-(2,4-Dihydroxy-1,3-phenylene)bis-1-propanone**

[2999-19-1]

 $C_{12}H_{14}O_4$

mol.wt. 222.24

Syntheses

- Preparation by Fries rearrangement of resorcinol dipropionate in the presence of aluminium chloride [6560],
 - without solvent, $AlCl_3$ (2 equiv) at 130–135° for 4.5 h [7383] or at 180° for 30 min (55%) [6733], $AlCl_3$ (3 equiv) at 180–185° for 1.5 h (55%) [6745];
 - in nitromethane, $AlCl_3$ (2 equiv) at r.t. for 3 h (24%) [6733].
- Preparation by Fries rearrangement of resorcinol dipropionate in the presence of titanium tetrachloride [6733],
 - without solvent, $TiCl_4$ (2 or 5 equiv) at 100° for 2 h (63% and 74% yields, respectively) [6733];
 - in nitromethane, $TiCl_4$ (2 equiv) at r.t. for 3 h (36%) [6733].
- Also obtained by acylation of resorcinol,
 - with propionyl chloride (2 equiv) in nitromethane at r.t. for 5 h in the presence of titanium tetrachloride (5 equiv) (82%) or aluminium chloride (5 equiv) (17%) [6733];
 - with propionic anhydride, by heating in the presence of concentrated sulfuric acid (23%) [8366];
 - with propionic acid in the presence of boron trifluoride at 140° for 3 h in a sealed tube (poor yield) [6736].
- Also obtained by acylation of resorpiophenone,
 - with propionyl chloride (2 equiv) in nitromethane at 20° for 24 h in the presence of titanium tetrachloride (5 equiv) (78%) or aluminium chloride (5 equiv) (24%) [6733];

- with propionic acid in the presence of boron trifluoride at 130–150° in a sealed tube (poor yield) [6736].
 - Also obtained by action of sodium ethoxide in refluxing ethanol for 3 h,
 - with 2,3-dimethyl-7-hydroxy-8-propionylchromone (m.p. 161.5–162°) [8367];
 - with $\alpha,\beta,\alpha',\beta'$ -tetramethyl[benzo-1.6.3.2-di(γ -pyrone)] (m.p. 188–191°) [8367].
 - Also refer to: [8368].
- b.p.₂₄ 184–185° [7383],

1,1'-(2,5-Dihydroxy-1,4-phenylene)bis-1-propanone

[91497-44-8]

C₁₂H₁₄O₄ mol.wt. 222.24

Synthesis

- Obtained (poor yield) by condensation of hydroquinone with propionic acid in xylene in the presence of BF₃-HF by heating on a boiling water bath (7%) [6820].

m.p. 151–152° [6820].

1,1'-(4,6-Dihydroxy-1,3-phenylene)bis-1-propanone

[2999-20-4]

C₁₂H₁₄O₄ mol.wt. 222.24

Syntheses

- Preparation by Fries rearrangement of resorcinol dipropionate,
 - in the presence of zinc chloride at 130° [8369], (60%) [8367], (40–50%) [8370] or at 180° (33%) [6733];
 - in the presence of aluminium chloride (2 equiv) in nitromethane at r.t. for 2 h (41%) or without solvent at 180° for 30 min (24%) [6733];
 - in the presence of titanium tetrachloride (2 equiv) in nitromethane at r.t. for 2 h (16%) [6733].
- Also obtained by reaction of propionic anhydride with resorcinol,
 - in the presence of stannic chloride (5 equiv) at reflux for 5 h (63%) [6733];
 - in the presence of zinc chloride (0.5 equiv) at reflux for 30 min (39%) [6733];
 - in the presence of concentrated sulfuric acid at reflux [8366].

- Also obtained by reaction of propionyl chloride with resorcinol in nitromethane at r.t. for 2 h in the presence of aluminium chloride (5 equiv) (29%) or titanium tetrachloride (5 equiv) (10%) [6733].
 - Also obtained by reaction of propionyl chloride with resorpiophenone in nitromethane at r.t. for 5 h in the presence of aluminium chloride (5 equiv) (44%) or titanium tetrachloride (5 equiv) (19%) [6733].
 - Also obtained by reaction of propionic acid with resorpiophenone,
 - in the presence of polyphosphoric acid for 10 min in a boiling water bath (34%) [6738];
 - in the presence of zinc chloride (Nencki reaction) [6554].
 - Also refer to: [6452,8368,8371–8374].
- m.p. 128° [6733], 127° [6554], 125–126° [8367], 125° [6738,8366,8370];
¹H NMR (Sadtlar: standard n° 24408M), IR (Sadtlar: standard n° 52520) [6733],
 UV [6733].

1,1'-(2,4,6-Trihydroxy-1,3-phenylene)bis-1-propanone

(Dipropionylphloroglucinol) (Phlorodipropiophenone)

[3145-11-7]

C₁₂H₁₄O₅ mol.wt. 238.24

Syntheses

- Obtained by reaction of phloroglucinol with propionic anhydride,
 - by heating in the presence of concentrated sulfuric acid [8366];
 - in the presence of boron trifluoride etherate at reflux for 4 h [8375].
- Preparation by Friedel–Crafts acylation of phloroglucinol with propionic acid in the presence of boron trifluoride etherate (53–78%) [8059,8088,8376].
- Also obtained by reaction of 2-propionylphloroglucinol with propionic anhydride in the presence of boron trifluoride at 26–30° for 24–30 h [8377].
- Also refer to: [6888,8089,8378].

m.p. 152–154° [8375], 137–138° [8366]. One of the reported melting points is obviously wrong.

¹H NMR [8059,8088], ¹³C NMR [8059,8088], IR [8059,8088], UV [8059,8088].

USE: Fungicide [8377].

BIOLOGICAL ACTIVITY: Antimicrobial against *Bacillus subtilis* [8376]; vesicular stomatitis virus inhibition [8059]; as allergy inhibitor [8089]; for herpes virus control [8379]; as herpes virus inhibitor [8380].

1,1'-(4,5,6-Trihydroxy-1,3-phenylene)bis-1-propanone (*Gallodipropiophenone*)
4,6-Dipropionylpyrogallol[3811-86-7] $C_{12}H_{14}O_5$ mol.wt. 238.24

Synthesis

– Obtained by reaction of pyrogallol with propionic anhydride by heating in the presence of concentrated sulfuric acid [8366].

m.p. 186° [8366].

1,1'-(2-Hydroxy-5-methyl-1,3-phenylene)bis-1-propanone[105290-18-4] $C_{13}H_{16}O_3$ mol.wt. 220.27

Synthesis

– Refer to: [8381].

Note: Lanthanum, lutetium and yttrium complexes [8381].**1,1'-(4-Hydroxy-5-methyl-1,3-phenylene)bis-1-propanone**[137937-49-6] $C_{13}H_{16}O_3$ mol.wt. 220.27

Synthesis

– Preparation by Fries rearrangement of 3-methyl-4-propionyloxypropiophenone (m.p. 52–53°) [7070] with aluminium chloride without solvent at 160° for 2 h (80%) [7011].

m.p. 50° [7011]; 1H NMR [7011], IR [7011], UV [7011], MS [7011].**1,1'-(4-Methoxy-1,3-phenylene)bis-1-propanone**[60278-78-6] $C_{13}H_{16}O_3$ mol.wt. 220.27

Syntheses

– Preparation by reaction of dimethyl sulfate with 2,4-dipropionylphenol in the presence of 20% sodium hydroxide in methanol for 1.5 h at r.t. (81%) [6733].

– Also refer to: [7611].

Syntheses

– Preparation by Fries rearrangement of orcinol dipropionate with aluminium chloride at 145–150° for 90 min (60%) [6745,7125].

– Also obtained by condensing propionic anhydride with γ -orcpropiophenone in the presence of aluminium chloride in nitrobenzene [7119,7126].

m.p. 85–86° [6745,7119,7125].

1,1'-(4,6-Dihydroxy-5-methyl-1,3-phenylene)bis-1-propanone

[218591-69-6]

 $C_{13}H_{16}O_4$ mol.wt. 236.27

Synthesis

– Refer to: [8368].

1,1'-(4-Hydroxy-6-methoxy-1,3-phenylene)bis-1-propanone $C_{13}H_{16}O_4$ mol.wt. 236.27

Syntheses

– Obtained by Fries rearrangement of 3-methoxy-4-propionylphenyl propionate [6351].

– Also obtained by partial methylation of 4,6-dipropionyl-resorcinol [6351].

– Also obtained by reaction of propionic acid with 4-hydroxy-2-methoxypropiophenone in the presence of polyphosphoric acid for 10 min in a boiling water bath (31%) [6738].

– Also obtained by reaction of propionic acid with resorcinol monomethyl ether (by-product) in the presence of polyphosphoric acid for 10 min in a boiling water bath (1%) [6738].

m.p. 130° [6351], 127° [6738];

1H NMR (Sadler: standard n° 30293M), IR (Sadler: standard n° 57338).

1,1'-(5-Ethyl-2,4-dihydroxy-1,3-phenylene)bis-1-propanone $C_{14}H_{18}O_4$ mol.wt. 250.29

Synthesis

– Obtained by Fries rearrangement of 4-ethylresorcinol dipropionate in the presence of aluminium chloride (2 equiv) without solvent at 60–70° for 3–4 h or in nitrobenzene at 110° for 5 h [7383].

m.p. 81° [7383].

1,1'-(2-Hydroxy-4,6-dimethoxy-1,3-phenylene)bis-1-propanone

[94190-87-1]

 $C_{14}H_{18}O_5$ mol.wt. 266.29

Syntheses

– Obtained by reaction of propionic acid with phloroglucinol dimethyl ether in the presence of polyphosphoric acid at 60° for 1 h (41%) [7438].

– Also refer to: [7439].

m.p. 75–80° [7438]; 1H NMR [7438].**1,1'-(6-Hydroxy-2,4-dimethoxy-1,3-phenylene)bis-1-propanone** $C_{14}H_{18}O_5$ mol.wt. 266.29

Synthesis

– Obtained by treatment of phloroglucinol dimethyl ether with propionic acid in the presence of polyphosphoric acid at 100° for 15 min (30%) [7514].

m.p. 101° [7514].

1,1'-[4,6-Dihydroxy-5-(1-oxopropoxy)-1,3-phenylene]bis-1-propanone

[52597-50-9]

 $C_{15}H_{18}O_6$ mol.wt. 294.30

Synthesis

– Obtained by Fries rearrangement of pyrogallol tripropionyl ester with zinc chloride at 130° (40%) [8372].

m.p. 190° [8372]; 1H NMR [8372], IR [8372].

1,1',1''-(2,4,6-Trihydroxy-1,3,5-benzenetriyl)tris-1-propanoneC₁₅H₁₈O₆ mol.wt. 294.30

Synthesis

– Obtained by treatment of phloroglucinol with propionic acid in the presence of polyphosphoric acid [8383] at 100° for 10 min (20%) [7514].

m.p. 143° [7514].

1,1'-(1-Hydroxy-2,4-naphthalene)bis-1-propanoneC₁₆H₁₆O₃ mol.wt. 256.30

Syntheses

– Preparation by reaction of propionyl chloride with 2-propionyl-1-naphthol,

- in the presence of zinc chloride in nitrobenzene for 48 h at r.t. (nearly quantitative yield) [7767];
 - in the presence of aluminium chloride in the same conditions (45%) [7767].
- Also obtained (by-product) by Fries rearrangement of 1-naphthyl propionate with aluminium chloride, first at 100° for 2 h, then at 120° for 1 h (2%) [7769].
- Also refer to: [7756].

m.p. 103° [7756,7767], 100–101° [7769].

Na salt [7767].

1,1',1''-(2,4-Dihydroxy-6-methoxy-1,3,5-benzenetriyl)tris-1-propanoneC₁₆H₂₀O₆ mol.wt. 308.33

Synthesis

– Obtained by treatment of phloroglucinol monomethyl ether with propionic acid in the presence of polyphosphoric acid [8383] at 100° for 10 min (32%) [7514].

m.p. 104° [7514].

1,1'-[5-(1,1'-Dimethylethyl)-4-hydroxy-1,3-phenylene]bis-1-propanone

[54362-59-3]

 $C_{16}H_{22}O_3$

mol.wt. 262.35

Syntheses

– Obtained (by-product) by Fries rearrangement of 2-tert-butylphenyl propionate in nitromethane at 20° with antimony pentachloride (7%) [6570,7561,7576] or rhenium pentachloride (7%) in the same conditions [7576].

m.p. 64° [6570,7561]; easy sublimation [6570,7561];

 1H NMR [6570,7561], IR [6570,7561], UV [6570,7561],

MS [6570,7561]; TLC [6570,7561].

1,1'-[4-Hydroxy-5-iodo-6-phenoxy-1,3-phenylene]bis-1-propanone

[245407-10-7]

 $C_{18}H_{17}IO_4$

mol.wt. 424.23

Syntheses

– Obtained by oxidation of 5-propionyl-2,4-dihydroxy-propiophenone [8374] with phenyliodonium diacetate (PIDA) under three conditions (compound 4e) [6452]:

(a) (*basic*): in the presence of potassium hydroxide in methanol at 0° and stirring overnight (75%);

(b) (*neutral*): in refluxing methanol (40%);

(c) (*acidic*): in refluxing acetic acid (60%).

m.p. 119–120° [6452]; 1H NMR [6452], IR [6452]; TLC [6452].**1,1'-[4-Methoxy-2-(2-pyridinyl)-1,3-phenylene]bis-1-propanone**

[205983-85-3]

 $C_{18}H_{19}NO_3$

mol.wt. 297.35

Synthesis

– Obtained by acylation of 2-(3-methoxyphenyl)pyridine (2 mmol) with ethylene (7 atm) and carbon monoxide (20 atm) in the presence of catalytic amounts of $Rh_4(CO)_{12}$ in DMA at 160° for 10 h (7%) [7962].

Dark brown solid [7962]; m.p. 148° [7962];

 1H NMR [7962], ^{13}C NMR [7962], IR [7962], MS [7962]; GC [7962].

26.2 Propionyl Groups Located on Different Rings

1,1'-[Thiobis(5-bromo-4,6-dihydroxy-3,1-phenylene)]bis-1-propanone

[103096-89-5]

C₁₈H₁₆Br₂O₆S mol.wt. 520.20

Synthesis

- Obtained by adding a 10% solution of bromine (wt/vol) in acetic acid to a hot solution of 3,3'-dipropionyl-4,4',6,6'-tetrahydroxy diphenyl thioether in acetic acid [6368].

m.p. 212–213° [6368].

1,1'-[Sulfinylbis(6-chloro-4-hydroxy-3,1-phenylene)]bis-1-propanone

[50444-94-5]

C₁₈H₁₆Cl₂O₅S mol.wt. 415.29

Synthesis

- Obtained by treatment of 4-chloro-2-hydroxypropiophenone with thionyl chloride in the presence of aluminium chloride in carbon disulfide (56%) [6478].

m.p. 219° [6478]; ¹H NMR [6478], IR [6478].

USE: Fungicide [6478].

1,1'-(4,4'-Dihydroxy[1,1'-biphenyl]-3,3'-diyl)bis-1-propanone

[36677-69-7]

C₁₈H₁₈O₄ mol.wt. 298.34

Syntheses

- Preparation by Fries rearrangement of 4,4'-di-hydroxybiphenyl dipropionate with aluminium chloride without solvent at 120° (55%) [7467] or in refluxing chlorobenzene for 24 h (58%) [8384].
- Preparation by adding 4,4'-dipropionyloxybiphenyl to a melt of sodium chloride-aluminium chloride at 140°. The temperature of the melt was raised rapidly to 200° and maintained there for 2 min (97%) [8385].
- Also refer to: [8386].

m.p. 143–144° [8384,8385], 140–141° [7467]; IR [8384].

USE: Polymer with 1,3-propanediamine [386704-18-3] [8387]; polymer with 1,2-benzenediamine [401843-27-4] [8388]; polymer with 3-methoxy-1,2-benzenediamine [568600-66-8] [8389].

BIOLOGICAL ACTIVITY: Antibacterial against a cariogenic bacterium [8386].

1,1'-[Thiobis(6-hydroxy-3,1-phenylene)]bis-1-propanone

[95125-20-5]

$C_{18}H_{18}O_4S$ mol.wt. 330.40

Synthesis

– Obtained by reaction of thionyl chloride or sulfur dichloride with p-hydroxy-propiophenone in the presence of copper powder at r.t. overnight [6550].

m.p. 103° [6550].

1,1'-[Oxybis(4-hydroxy-3,1-phenylene)]bis-1-propanone

[880134-95-2]

$C_{18}H_{18}O_5$ mol.wt. 314.34

Synthesis

– Preparation by Fries rearrangement of 4,4'-dihydroxydiphenyl oxide dipropionate with aluminium chloride at 150° for 30 min (99%) [8390].

1H NMR [8390], ^{13}C NMR [8390], IR [8390].

1,1'-[Sulfonylbis(6-hydroxy-3,1-phenylene)]bis-1-propanone

[95699-99-3]

$C_{18}H_{18}O_6S$ mol.wt. 362.40

Synthesis

– Obtained by oxidation of 2,2'-dihydroxy-5,5'-dipropionylidiphenyl sulfide with hydrogen peroxide (100 vols.) in acetone at r.t. overnight (73%) [6550].

m.p. 105° (d) [6550].

1,1'-[Thiobis(4,6-dihydroxy-3,1-phenylene)]bis-1-propanone

[103154-02-5]

C₁₈H₁₈O₆S mol.wt. 362.40

Syntheses

– Obtained by reaction of thionyl chloride with respropiofenone in chloroform in the presence of finely divided copper at r.t. overnight (31%) [6368].

– The same thioether was obtained by interaction of the respropiofenone and sulfur monochloride or sulfur dichloride in ethyl ether, first at 5°, then at r.t. for 1 h (9% and 21% yields, respectively) [6368].

m.p. 161–162° [6368].

1,1'-[Methylenebis(4,6-dihydroxy-3,1-phenylene)]bis-1-propanone

[124300-19-2]

C₁₉H₂₀O₆ mol.wt. 344.36

Synthesis

– Obtained (poor yield) by reaction of ethoxymethyl chloride with respropiofenone in the presence of potassium carbonate in acetone at 60° for 3 h (6%) [6757].

m.p. 163° [6757]; TLC [6757].

1,1'-[Methylenebis[oxy(2-hydroxy-4,1-phenylene)]]bis-1-propanone

[66047-39-0]

C₁₉H₂₀O₆ mol.wt. 344.36

Synthesis

– Obtained by condensation of respropiofenone with methylene dibromide or methylene dichloride (25%) [8391].

m.p. 142° [8391].

Dioxime [66047-44-7] C₁₉H₂₂N₂O₆ mol.wt. 374.39 [8391].

1,1'-[Methylenebis(2,4,6-trihydroxy-3,1-phenylene)]bis-1-propanone

Bis(3-propionyl-2,4,6-trihydroxyphenyl)methane

[2828-37-7]

 $C_{19}H_{20}O_8$ mol.wt. 376.36

Synthesis

- Obtained by reaction of 35% formaldehyde solution with phloropropiophenone in ethanol in the presence of concentrated sulfuric acid at r.t. for 30 min [8392].

m.p. 300° (d) [8392].

1,1'-[Methylenebis(4,5,6-trihydroxy-3,1-phenylene)]bis-1-propanone

2,2',3,3',4,4'-Hexahydroxy-5,5'-dipropionyl-diphenylmethane

[124300-24-9]

 $C_{19}H_{20}O_8$ mol.wt. 376.36

Syntheses

- Obtained by reaction of ethoxymethyl chloride with 2,3,4-trihydroxy-propiophenone in the presence of potassium carbonate in acetone at 60° for 3 h (35%) [6757].
- Preparation by reaction of 35% aqueous formaldehyde with 4-propionylpyrogallol in the presence of hydrochloric acid in refluxing ethanol (90%) [6454].

m.p. 242–243° [6757], 238° [6454];

 1H NMR [6757], ^{13}C NMR [6757], IR [6757], UV [6757]; TLC [6757].**1,1'-[Thiobis(2-hydroxy-5-methyl-3,1-phenylene)]bis-1-propanone**

[103863-52-1]

 $C_{20}H_{22}O_4S$ mol.wt. 358.46

Syntheses

- Preparation from 2-hydroxy-5-methyl-propiophenone,
 - with refluxing thionyl chloride in the presence of copper powder for 3 h (61%) [7049,8393];
 - with refluxing sulfur monochloride or sulfur dichloride in the presence of copper powder for 3 h (15%) [7049,8393].

m.p. 110° [7049,8393].

1,1'-[Thiobis(4-hydroxy-5-methyl-3,1-phenylene)]bis-1-propanone

[103858-21-5]

 $C_{20}H_{22}O_4S$ mol.wt. 358.46

Syntheses

- Preparation, first, gradually adding copper powder to the mixture of 2-hydroxy-3-methylpropionophenone and thionyl chloride, then refluxing the mixture for 3 h [7017].
 - Also obtained by allowing 2-hydroxy-3-methylpropionophenone, sulfur dichloride and copper powder to react overnight at r.t. [7017].
- m.p. 98° [7017].

1,1'-[Thiobis(6-methoxy-3,1-phenylene)]bis-1-propanone

[97921-47-6]

 $C_{20}H_{22}O_4S$ mol.wt. 358.46

Synthesis

m.p. 175° [7003].

- Obtained by treatment of p-methoxy-propionophenone with thionyl chloride or sulfur dichloride in the presence of copper powder on a boiling water bath for 15 min and at r.t. overnight [7003].

1,1'-(6,6'-Dihydroxy-5,5'-dimethoxy[1,1'-biphenyl]-3,3'-diyl)bis-1-propanone

4,4'-Dipropionyl-6,6'-biguaiacol; Dehydrodipropioguaiacone

[18592-97-7]

 $C_{20}H_{22}O_6$ mol.wt. 358.39

Syntheses

- Obtained by enzymic dehydrogenation of propioguaiacone with horseradish peroxidase in water in the presence of hydrogen peroxide at 30° for 1 h (60%) (compound 10) [7161].
 - Also obtained by oxidation of 4-hydroxy-3-methoxypropionophenone in the HSO_3F-PbO_2 system [8394].
 - Also refer to: [8395].
- m.p. 207–208° [7161]; UV [7161]; photoelectron spectrum [7212]; Raman spectroscopy [8396]; ionization potential [7232].
- USE: As UV-absorbers for sunscreens and other products [8397]; as active oxygen scavengers for therapeutic uses [8398].

1,1'-[1,2-Ethanediybis[oxy(2-hydroxy-4,1-phenylene)]]bis-1-propanone

[66047-41-4]

 $C_{20}H_{22}O_6$ mol.wt. 358.39**Synthesis**

- Obtained by condensation of respropiofenone with ethylene dibromide or ethylene dichloride (25%) [8391].

m.p. 165° [8391].

Dioxime [66047-46-9] $C_{20}H_{24}N_2O_6$ mol.wt. 388.42 [8391].**1-[4-Hydroxy-3-methoxy-5-[2-methoxy-4-(1-oxopropyl)phenoxy]]phenyl]-1-propanone**

2-Hydroxy-3-methoxy-5-propionyl 2'-methoxy-4'-propionylphenyl ether

4'-Hydroxy-3''',5'-dimethoxy-3',4'''-oxydipropiophenone

[16737-81-8]

 $C_{20}H_{22}O_6$ mol.wt. 358.39**Syntheses**

- Isolation from the dehydrogenation resin of propioguaiacone through preparative TLC (6%) (compound 14) [7161].
- Also obtained by dehydrogenation of propioguaiacone in aqueous solution with hydrogen peroxide (small amount) [8399].

 1H NMR [7161], IR [7161], UV [7161].**1,1'-[Thiobis(4-hydroxy-6-methoxy-3,1-phenylene)]bis-1-propanone**

[103509-21-3]

 $C_{20}H_{22}O_6S$ mol.wt. 390.46**Syntheses**

- Obtained by methylating 3,3'-dipropionyl-4,4',6,6'-tetrahydroxydiphenyl thioether with dimethyl sulfate (1:1) in the presence of alkali (unspecified) at 100° [6368].
- Also obtained by reaction of thionyl chloride with 2-hydroxy-4-methoxypropiofenone in the presence of copper powder in ethyl ether at r.t. overnight (38%) [6368].
- Also obtained by reaction of sulfur monochloride or sulfur dichloride with 2-hydroxy-4-methoxy-propiofenone in the presence of copper powder in ethyl ether at r.t. overnight (13% and 26% yields, respectively) [6368].

m.p. 202–203° [6368].

1,1'-[(Methylethylidene)bis(4-hydroxy-3,1-phenylene)]bis-1-propanone

[3511-70-4]

 $C_{21}H_{24}O_4$ mol.wt. 340.42

Synthesis

- Obtained by Fries rearrangement of 4,4'-di-(propionyloxy)diphenyldimethylmethane also named 2,2-bis[(4-propionyloxy)phenyl]propane with aluminium chloride in nitrobenzene at 120–130° for 3 h (23%) [8400].

m.p. 150–151° [8400].

1,1'-[Methylenebis(6-hydroxy-4-methoxy-3,1-phenylene)]bis-1-propanone

[124300-15-8]

 $C_{21}H_{24}O_6$ mol.wt. 372.42

Synthesis

- Obtained by reaction of ethoxymethyl chloride with 2-hydroxy-4-methoxy-propionophenone in the presence of potassium carbonate in acetone at 60° for 24 h (20%) [6757].

m.p. 170° [6757];

 1H NMR [6757], IR [6757], UV [6757]; TLC [6757].**1,1'-[1,3-Propanediylbis[oxy(2-hydroxy-4,1-phenylene)]]bis-1-propanone**

[66047-42-5]

 $C_{21}H_{24}O_6$ mol.wt. 372.42

Synthesis

- Obtained by condensation of respropionophenone with 1,3-dibromopropane or 1,3-dichloropropane (18%) [8391].

m.p. 151° [8391].

Dioxime [66047-47-0] $C_{21}H_{26}N_2O_6$ mol.wt. 402.45 [8391].

1,1'-[Thiobis[6-(acetyloxy)-4-hydroxy-3,1-phenylene]]bis-1-propanoneC₂₂H₂₂O₈S mol.wt. 446.48**Synthesis**

- Obtained by partial acetylation of 3,3'-dipropionyl-4,4',6,6'-tetrahydroxydiphenyl thioether with acetic anhydride in the presence of pyridine [6368].

m.p. 216–217° [6368].

1,1'-[Thiobis(4,6-dimethoxy-3,1-phenylene)]bis-1-propanoneC₂₂H₂₆O₆S mol.wt. 418.51**Synthesis**

- Obtained by methylating 3,3'-dipropionyl-4,4',6,6'-tetrahydroxydiphenyl thioether with excess of dimethyl sulfate in the presence of alkali (unspecified) at 100° [6368].

m.p. 197–198° [6368].

1-[3-[[2,4-Dihydroxy-6-methoxy-5-methyl-3-(1-oxopropyl)phenyl]methyl]-2,4,6-trihydroxy-5-methylphenyl]-1-propanone (*Margaspidin PP*)

[57765-49-8]

C₂₂H₂₆O₈ mol.wt. 418.44**Isolation from natural sources**

- From *Dryopteris bissetiana* and *Dryopteris sacrosancta* of Japan [7262].
 - From *Dryopteris marginata* (WALL.) CHRIST and *Dryopteris inaequalis* [8401].
- m.p. 176° [8401], 169–173° [7262]; MS [7262,8401]; TLC [8401].

1,1'-[Methylenebis(2,6-dihydroxy-4-methoxy-5-methyl-3,1-phenylene)]bis-1-propanone

[49582-12-9]

 $C_{23}H_{28}O_8$ mol.wt. 432.47

Isolation from natural sources

– From *Dryopteris* species of Japan [7262].

MS [7393]; TLC [7262]; paper chromatography [7262].

1,1'-[Methylenebis(2-hydroxy-4,6-dimethoxy-3,1-phenylene)]bis-1-propanone

[124300-29-4]

 $C_{23}H_{28}O_8$ mol.wt. 432.47

Synthesis

– Preparation by reaction of ethoxymethyl chloride with 2-hydroxy-4,6-dimethoxy-propio-phenone in the presence of potassium carbonate in acetone at 60° for 4 h (91%) [6757].

m.p. 211–212° [6757]; ¹H NMR [6757], IR [6757], UV [6757]; TLC [6757].**1,1'-[[3,4-Dichlorophenyl)methylene]bis(4,5,6-trihydroxy-3,1-phenylene)]bis-1-propanone**

3'',4''-Dichloro-2,2'3,3',4,4'-hexahydroxy-5,5'-dipropionyltriphenylmethane

 $C_{25}H_{22}Cl_2O_8$ mol.wt. 521.35

Synthesis

– Obtained by reaction of 3,4-dichloro-benzaldehyde with 4-propionylpyrogallol in the presence of hydrochloric acid in refluxing ethanol for 30 min [6454].

m.p. 209–210° [6454].

1,1'-[[4-(4-Chlorophenyl)methylene]bis(4,5,6-trihydroxy-3,1-phenylene)]bis-1-propanone

4''-Chloro-2,2',3,3',4,4'-hexahydroxy-5,5'-dipropionyltriphenylmethane

m.p. 189–190° [6454].

$C_{25}H_{23}ClO_8$ mol.wt. 486.91

Synthesis

- Obtained by reaction of 4-chlorobenzaldehyde with 4-propionylpyrogallol in the presence of hydrochloric acid in refluxing ethanol for 30 min [6454].

1,1'-[(Phenylmethylene)bis(2,4,6-trihydroxy-3,1-phenylene)]bis-1-propanone

[147170-16-9]

$C_{25}H_{24}O_8$ mol.wt. 452.46

Synthesis

- Refer to: [8402] (Japanese patent).

1,1'-[(Phenylmethylene)bis(4,5,6-trihydroxy-3,1-phenylene)]bis-1-propanone

2,2',3,3',4,4'-Hexahydroxy-5,5'-dipropionyltriphenylmethane

$C_{25}H_{24}O_8$ mol.wt. 452.46

Synthesis

- Obtained by reaction of benzaldehyde with 4-propionylpyrogallol in the presence of hydrochloric acid in refluxing ethanol for 30 min [6454].

m.p. 162° [6454].

1,1'-[[2,3,4-Trihydroxyphenyl)methylene]bis(2,4,6-trihydroxy-3,1-phenylene)] bis-1-propanone

[143868-75-1]

 $C_{25}H_{24}O_{11}$ mol.wt. 500.46

Synthesis

- Refer to: [8403] (Japanese patent).

**1,1',1'',1'''-[Methylenebis(2,4,6-trihydroxy-5,1,3-benzenetriyl)]tetrakis-1-propanone**

[68223-29-0]

 $C_{25}H_{28}O_{10}$ mol.wt. 488.49

Syntheses

- Obtained by condensation of 2,4-di-propionylphloroglucinol with 40% formaldehyde [8404], (58–65%) [6879] or with methoxymethyl acetate in acetic acid in the presence of few drops of concentrated sulfuric acid [8405].

m.p. 235–237° [6879].

BIOLOGICAL ACTIVITY: Antischistosomal (an analog of agrimophol) [6879].

3,3-Bis[4-hydroxy-3-(1-oxopropyl)phenyl]phthalide $C_{26}H_{22}O_6$ mol.wt. 430.46

Synthesis

- Obtained by Fries rearrangement of 3,3-bis[4-(propionyloxy)phenyl]phthalide with aluminium chloride in nitrobenzene at 120–130° for 3 h (20%) [8400].

m.p. 199–200° [8400].

1,1'-[Methylenebis(1-hydroxy-4,2-naphthalenediyl)]bis-1-propanone

[76288-10-3]

 $C_{27}H_{24}O_4$ mol.wt. 412.49

Synthesis

– Refer to: [7789].

**Dioxime** [76288-07-8] $C_{27}H_{26}N_2O_4$ mol.wt. 442.51 [7789].**1,1'-[(1*R*)-2,2'-Dimethoxy[1,1'-binaphthalene]-6,6'-diyl]bis-1-propanone**

[373388-81-9]

 $C_{28}H_{26}O_4$ mol.wt. 426.51

Synthesis

– Refer to: [6445].

**1-[2'-Hydroxy-6-(2-hydroxy-3-methoxy-5-propionylphenoxy)-5,3'-dimethoxy-5'-propionyl[1,1'-biphenyl]-3-yl]-1-propanone**

4'-Hydroxy-4'''-(2-hydroxy-3-methoxy-5-propionylphenoxy)-5',5'''-dimethoxy-3',3'''-bipropiophenone

3,3'-Dimethoxy-2'-hydroxy-5,5'-dipropionylbiphenyl-2-yl 2''-hydroxy-3''-methoxy-5''-propionylphenyl ether

[18593-02-7]

 $C_{30}H_{32}O_9$ mol.wt. 536.58

Syntheses

– Isolation from the dehydrogenation resin of propioguaiacone through preparative TLC (trace amounts) (compound 15) [7161].

– Also obtained by dehydrogenation of propioguaiacone in aqueous solution with hydrogen peroxide (small amount) [8399].

m.p. 235–236° [7161];

 1H NMR [7161], IR [7161], UV [7161].

Propionic acid 4',2''-dihydroxy-3,5',3''-trimethoxy-5,5''-dipropionyl-[1,1':3',1'']terphenyl-2-yl ester

2,2'',4'-Triol-3,3'',5'-trimethoxy-5,5''-dipropionyl[m-terphenyl] 2-propionate
4',2''-Dihydroxy-5,5''-dipropionyl-2-propionoxy-3,5',3''-trimethoxyterphenyl

[16737-80-7]

$C_{30}H_{32}O_9$ mol.wt. 536.58

Syntheses

- Isolation from the dehydrogenation resin of propioguaiacone through preparative TLC (62%) (compound 11) [7161].
- Also obtained by dehydrogenation of propioguaiacone in aqueous solution with hydrogen peroxide (major compound) [8399].

1H NMR [7161], IR [7161], UV [7161].

Chapter 27

Aromatic Polyketones Containing At Least One Propionyl Group

27.1 Carbonyl Groups Located on the Same Ring

2-Hydroxy-3-(1-oxopropyl)benzaldehyde

[35888-90-5]

$C_{10}H_{10}O_3$ mol.wt. 178.19

Syntheses

– Preparation by ozonization of 2-hydroxy-3-propenyl-propiophenone in an acetic acid-formic acid mixture at 0° (67%) [6935].

– Also refer to: [6933].

2,6-Dihydroxy-3-(1-oxopropyl)benzaldehyde

2,4-Dihydroxy-3-formylpropiophenone

$C_{10}H_{10}O_4$ mol.wt. 194.19

Synthesis

– Obtained by adding zinc cyanide, potassium chloride, followed by aluminium chloride in ethyl ether to a solution of respropiophenone in ethyl acetate, then passing hydrogen chloride into the mixture for 30 min (64%) [6768].

m.p. 140–141° [6768].

2,4,6-Trihydroxy-3-(1-oxopropyl)benzaldehyde

[96573-29-4]

$C_{10}H_{10}O_5$ mol.wt. 210.19

Syntheses

– Preparation by reaction of ethyl orthoformate with phloropropiophenone in methylene chloride in the presence of aluminium chloride cooling in an ice bath for 30 min [8378,8406] (70%) [7007].

N.B.: Compound 27 [8406], compound 5 or 9 [8378] and compound 17 [7007].

- Also obtained by reaction of phosphorous oxychloride with phloropropiophenone in DMF at r.t. (70%) [6882].

m.p. 158–160° [7007]; ¹H NMR [7007], IR [7007], MS [7007].

2,4,6-Trihydroxy-5-(1-oxopropyl)-1,3-benzenedicarboxaldehyde

[96573-42-1] $C_{11}H_{10}O_6$ mol.wt. 238.20

m.p. 215° [7007];

¹H NMR [7007], IR [7007], MS [7007].

1-(3-Acetyl-4-hydroxyphenyl)-1-propanone

[79010-36-9] $C_{11}H_{12}O_3$ mol.wt. 192.21

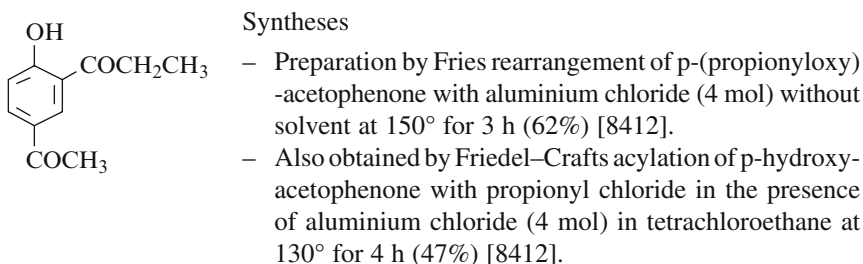

- Also refer to: [8409,8410].

m.p. 69° [8407,8411], 68–69° [8408]; ¹H NMR [8407], IR [8407].

PHARMACOLOGICAL DATA [8407].

1-(5-Acetyl-2-hydroxyphenyl)-1-propanone

[36039-26-6] $C_{11}H_{12}O_3$ mol.wt. 192.21

- Also obtained by Friedel–Crafts acylation of o-hydroxypropiophenone with acetyl chloride in the presence of aluminium chloride in refluxing carbon disulfide (90–95%) [8413], (90%) [8414], (72%) [8415].

- Also obtained by deacylation of 2-(DL-2'-acetoxypropionyloxy)-5-acetylpropionophenone (24%) [8416].

b.p.₄₋₅ 175–180° [8415];

m.p. 67–69° [8412], 64–65° [8415], 64° [8413];

¹H NMR [8412], IR [8412].

1-(5-Acetyl-2,4-dihydroxyphenyl)-1-propanone

C₁₁H₁₂O₄ mol.wt. 208.21

Synthesis

m.p. 122° [6738].

- Obtained by reaction of propionic acid with resacetophenone (m.p. 142°) in the presence of polyphosphoric acid [8383] for 10 min in a boiling water bath (32%) [6738].

1-(3-Acetyl-2,4,6-trihydroxyphenyl)-1-propanone

[3118-35-2]

C₁₁H₁₂O₅ mol.wt. 224.21

Syntheses

- Also refer to: [7007,8406].

m.p. 161° [7007], 149–150° [8375]; ¹H NMR [7007], IR [7007], MS [7007].

USE: Fungicide [8417].

BIOLOGICAL ACTIVITY: Anthelmintic and antibacterial [8418,8419]; antitumor promoting agent [8406].

2,4,6-Trihydroxy-3-methyl-5-(1-oxopropyl)benzaldehyde

[96573-37-4]

C₁₁H₁₂O₅ mol.wt. 224.21

Syntheses

- Also refer to: [8378].

N.B.: Compound 1 [8378] and compound 25 [7007].

m.p. 123–125° [7007]; ¹H NMR [7007], IR [7007], MS [7007].

1-(3-Acetyl-2-hydroxy-5-methylphenyl)-1-propanone

[91496-99-0]

 $C_{12}H_{14}O_3$ mol.wt. 206.24

Syntheses

- Preparation by reaction of propionyl chloride with 2-hydroxy-5-methylacetophenone in the presence of aluminium chloride in carbon disulfide at r.t. for 1 h (95%) [8420].
- Also refer to: [8421].

m.p. 51–52° [8420];

 1H NMR [8420,8422], 7Li NMR [8422], ^{13}C NMR [8422], IR [8420],

X-ray data [8422].

Lithium salt [199329-92-5] [8422] (compound 4).**1-(5-Acetyl-2-hydroxy-4-methoxyphenyl)-1-propanone** $C_{12}H_{14}O_4$ mol.wt. 222.24

Synthesis

- Obtained by reaction of acetic acid with 2-hydroxy-4-methoxypropiophenone in the presence of polyphosphoric acid for 10 min in a boiling water bath (38%) [6738].

m.p. 129° [6738].

1-(5-Acetyl-4-hydroxy-2-methoxyphenyl)-1-propanone $C_{12}H_{14}O_4$ mol.wt. 222.24

Synthesis

- Obtained by reaction of propionic acid with 2-hydroxy-4-methoxyacetophenone (m.p. 51°) in the presence of polyphosphoric acid [8383] for 10 min in a boiling water bath (26%) [6738].

m.p. 92° [6738].

3-Ethyl-2,4,6-trihydroxy-5-(1-oxopropyl)benzaldehyde

[96573-38-5]

 $C_{12}H_{14}O_5$ mol.wt. 238.24

Synthesis

- Preparation by reaction of ethyl iodide with formyl-phlorophenone (3-formyl-2,4,6-trihydroxypropiophenone) in the presence of potassium hydroxide in dilute methanol at 65° for 24 h (30%) [7007].

N.B.: Compound 14 [8378] and compound 26 [7007].m.p. 146–149° [7007]; 1H NMR [7007], IR [7007], MS [7007].

1-[2,4,6-Trihydroxy-3-(1-oxopropyl)phenyl]-1-butanone[96573-40-9] $C_{13}H_{16}O_5$ mol.wt. 252.27

Synthesis

– Preparation by Friedel–Crafts acylation of phloroglucinol [8406] according to the method (i) [7007].

N.B.: Compound 34 [8406] and compound 29 [7007].

m.p. 135° [7007];

1H NMR [7007], IR [7007], MS [7007].

2,4,6-Trihydroxy-3-(1-oxopropyl)-5-propylbenzaldehyde[96573-39-6] $C_{13}H_{16}O_5$ mol.wt. 252.27

Synthesis

– Preparation by reaction of propyl iodide with formyl-phlorophenone (3-formyl-2,4,6-trihydroxypropiofenone) in the presence of potassium hydroxide in dilute methanol at 65° for 24 h (30%) [7007].

N.B.: Compound 15 [8378] and compound 27 [7007].

m.p. 133–135° [7007]; 1H NMR [7007], IR [7007], MS [7007].

1-(2-Acetyl-3,5,6-trimethoxyphenyl)-1-propanone[100972-94-9] $C_{14}H_{18}O_5$ mol.wt. 266.29

Synthesis

– Preparation: 3,4,6-trimethoxy-2-propenylacetophenone (m.p. 80°) formed with osmium tetroxide an adduct which, when decomposed by sulfur dioxide in aqueous methanol, give the titled diketone [8423].

m.p. 94–97° [8423]; UV [8423].

3-Butyl-2,4,6-trihydroxy-5-(1-oxopropyl)benzaldehyde[120716-99-6] $C_{14}H_{18}O_5$ mol.wt. 266.29

Synthesis

– Preparation by reaction of n-butyl iodide with formyl-phlorophenone (3-formyl-2,4,6-trihydroxypropiofenone) in the presence of potassium hydroxide in dilute methanol at 65° for 24 h (30%) [7007,8378].

N.B.: Compound 16 [8378].

1-[2,4,6-Trihydroxy-3-(1-oxopropyl)phenyl]-1-pentanone

$C_{14}H_{18}O_5$ mol.wt. 266.29

Synthesis

– Preparation [8378] according to the method [7007].

PHARMACOLOGICAL DATA: The compound (n° 18) was assayed for its inhibition of the Hill reaction using chloroplasts isolated from the leaves of *Spinacia oleracea*; pl 50 = 4.9 [8378].

1-[4-Bromoacetyl-1-hydroxy-2-naphthalenyl]-1-propanone

$C_{15}H_{13}BrO_3$ mol.wt. 321.17

Synthesis

– Obtained by reaction of bromine with 4-acetyl-2-propionyl-1-naphthol in chloroform [7767].

m.p. 158° [7767].

1-[1-Hydroxy-4-(1-oxoethyl)-2-naphthalenyl]-1-propanone

$C_{15}H_{14}O_3$ mol.wt. 242.27

Syntheses

– Preparation by reaction of acetyl chloride with 2-propionyl-1-naphthol in the presence of zinc chloride in nitrobenzene (80%) [7767].

– Preparation by reaction of propionyl chloride with 4-acetyl-1-naphthol in the presence of aluminium chloride (75%) [7767].

– Also obtained by reaction of propionic acid with 4-acetyl- α -naphthol in the presence of polyphosphoric acid at 100° for 15 min (44%) [7777].

m.p. 142° [7767], 134° [7777].

1-[4-Hydroxy-3-(1-oxoethyl)-1-naphthalenyl]-1-propanone

$C_{15}H_{14}O_3$ mol.wt. 242.27

Syntheses

– Obtained by reaction of propionic acid with 2-acetyl- α -naphthol in the presence of polyphosphoric acid at 100° for 15 min (44%) [7777].

– Also obtained by heating 4-propionyl-1-naphthol with acetic acid in the presence of zinc chloride for 3 h [7756].

m.p. 119° [7777].

1-[3-Bromo-2,4,6-trihydroxy-5-(1-oxopropyl)phenyl]-1-hexanone

[98149-39-4]

 $C_{15}H_{19}BrO_5$ mol.wt. 359.22

Synthesis

– Refer to: [6879] (Chinese paper), (compound 8) (72–78%).

m.p. 183° [6879].

1-[3-(4-Fluorobenzoyl)-5-fluoro-2-hydroxyphenyl]-1-propanone

[2247-76-9]

 $C_{16}H_{12}F_2O_3$ mol.wt. 290.27

Synthesis

– Obtained by Fries rearrangement of 4-fluoro-2-propionylphenyl 4-fluorobenzoate (b.p._{0.5} 110°) with aluminium chloride (4–5 mol) at 150° for 5–6 h [8424].

m.p. 160–161° [8424].

1-(5-Benzoyl-2-hydroxyphenyl)-1-propanone $C_{16}H_{14}O_3$ mol.wt. 254.29

Synthesis

– Obtained by Friedel–Crafts acylation of o-hydroxy-propionophenone with benzoyl chloride [8425].

1-[3-(2-Bromo-1-oxopropyl)-4-hydroxy-1-naphthalenyl]-1-propanone $C_{16}H_{15}BrO_3$ mol.wt. 335.20

Synthesis

– Obtained by reaction of bromine with 2,4-dipropionyl-1-naphthol in acetic acid [7767].

m.p. 100° [7767].

1-(5-Benzoyl-2-hydroxy-3-methylphenyl)-1-propanone

[101597-03-9]

 $C_{17}H_{16}O_3$ mol.wt. 268.31

Syntheses

– Preparation by Fries rearrangement of 4-benzoyl-2-methylphenyl propionate with aluminium chloride (3.3 mol) at 160° for 2 h (70%) [7015].

- Also obtained by Friedel–Crafts acylation of 2-hydroxy-3-methylpropiophenone with benzoyl chloride in the presence of aluminium chloride at 160° for 2 h [7015].
m.p. 86° [7015].

1-(5-Benzoyl-2-methoxyphenyl)-1-propanone

[502924-43-8] $C_{17}H_{16}O_3$ mol.wt. 268.31

Synthesis
– Refer to: [6958].

3-(4-Chlorophenyl)-1-[2-hydroxy-5-(1-oxopropyl)phenyl]-2-propen-1-one

[141070-42-0] $C_{18}H_{15}ClO_3$ mol.wt. 314.77

Synthesis
– Preparation by Claisen–Schmidt condensation of p-chlorobenzaldehyde with 2-hydroxy-5-propionyl-acetophenone in the presence of potassium hydroxide in methanol at r.t. for 24 h (96%) [8408].

m.p. 103–104° [8408].

3-(4-Chlorophenyl)-1-[4-hydroxy-3-(1-oxopropyl)phenyl]-2-propen-1-one

[154185-30-5] $C_{18}H_{15}ClO_3$ mol.wt. 314.77

Syntheses
– Preparation by reaction of p-chlorobenzaldehyde with 5-acetyl-2-hydroxypropiophenone in the presence of potassium hydroxide in methanol at r.t. for 24 h (90%) [8413,8414].

m.p. 121–122° [8414], 120–121° [8413]; IR [8414].

3-(4-Chlorophenyl)-1-[4-hydroxy-3-(1-oxopropyl)phenyl]-2-propen-1-one (E)

[144728-36-9] $C_{18}H_{15}ClO_3$ mol.wt. 314.77

Synthesis
– Refer to: [8414].

1-[2-Hydroxy-5-(1-oxopropyl)phenyl]-3-phenyl-2-propen-1-one

[87544-99-8]

 $C_{18}H_{16}O_3$ mol.wt. 280.32

Synthesis

– Preparation by Claisen–Schmidt condensation of benzaldehyde with 2-hydroxy-5-propionyl-acetophenone in the presence of potassium hydroxide in methanol at r.t. for 24 h (96%) [8408].

m.p. 95–96° [8408].

1-[4-Hydroxy-3-(1-oxopropyl)phenyl]-3-phenyl-2-propen-1-one

[154185-29-2]

 $C_{18}H_{16}O_3$ mol.wt. 280.32

Syntheses

– Preparation by reaction of benzaldehyde with 5-acetyl-2-hydroxypropiophenone in the presence of potassium hydroxide in methanol at r.t. for 24 h (90%) [8413,8414].

m.p. 120–121° [8414], 120° [8413];

 1H NMR [8414], IR [8414].**1-[4-Hydroxy-3-(1-oxopropyl)phenyl]-3-phenyl-2-propen-1-one (*E*)**

[144728-32-5]

 $C_{18}H_{16}O_3$ mol.wt. 280.32

Synthesis

– Refer to: [8414].

1-[2-Hydroxy-5-(1-oxopropyl)phenyl]-3-(4-methylphenyl)-2-propen-1-one

[141070-41-9]

 $C_{19}H_{18}O_3$ mol.wt. 294.35

Synthesis

– Preparation by Claisen–Schmidt condensation of p-methylbenzaldehyde with 2-hydroxy-5-propionyl-acetophenone in the presence of potassium hydroxide in methanol at r.t. for 24 h (95%) [8408].

m.p. 101–102° [8408].

1-[4-Hydroxy-3-(1-oxopropyl)phenyl]-3-(4-methylphenyl)-2-propen-1-one

[154185-31-6]

C₁₉H₁₈O₃ mol.wt. 294.35

Syntheses

- Preparation by reaction of p-tolualdehyde with 5-acetyl-2-hydroxypropio-phenone in the presence of potassium hydroxide in methanol at r.t. for 24 h (90%) [8413,8414].

m.p. 142–143° [8414], 140–142° [8413]; IR [8414].

1-[4-Hydroxy-3-(1-oxopropyl)phenyl]-3-(4-methylphenyl)-2-propen-1-one (*E*)

[144728-37-0]

C₁₉H₁₈O₃ mol.wt. 294.35

Synthesis

- Refer to: [8414].

1-[2-Hydroxy-5-(1-oxopropyl)phenyl]-3-(4-methoxyphenyl)-2-propen-1-one

[87545-01-5]

C₁₉H₁₈O₄ mol.wt. 310.35

Synthesis

- Preparation by Claisen–Schmidt condensation of p-anisaldehyde with 2-hydroxy-5-propionyl-acetophenone in the presence of potassium hydroxide in methanol at r.t. for 24 h (94%) [8408].

m.p. 74–75° [8408]; ¹H NMR [8408], IR [8408].**1-[4-Hydroxy-3-(1-oxopropyl)phenyl]-3-(4-methoxyphenyl)-2-propen-1-one**

[154185-32-7]

C₁₉H₁₈O₄ mol.wt. 310.35

Syntheses

- Preparation by reaction of p-methoxybenzaldehyde with 5-acetyl-2-hydroxypropio-phenone in the presence of potassium hydroxide in methanol at r.t. for 24 h (88%) [8413,8414].

m.p. 129–130° [8414], 128–130° [8413], IR [8414].

1-[4-Hydroxy-3-(1-oxopropyl)phenyl]-3-(4-methoxyphenyl)-2-propen-1-one (*E*)

[144728-38-1]

 $C_{19}H_{18}O_4$ mol.wt. 310.35

Synthesis

– Refer to: [8414].

**3-(3,4-Dimethoxyphenyl)-1-[4-hydroxy-3-(1-oxopropyl)phenyl]-2-propen-1-one**

[154185-33-8]

 $C_{20}H_{20}O_5$ mol.wt. 340.38

Syntheses

– Preparation by reaction of 3,4-dimethoxybenzaldehyde with 5-acetyl-2-hydroxypropiophenone in the presence of potassium hydroxide in methanol at r.t. for 24 h (85%) [8413,8414].

m.p. 125–126° [8414], 124° [8413]; IR [8414].

3-(3,4-Dimethoxyphenyl)-1-[4-hydroxy-3-(1-oxopropyl)phenyl]-2-propen-1-one (*E*)

[144728-39-2]

 $C_{20}H_{20}O_5$ mol.wt. 340.38

Synthesis

– Refer to: [8414].

**1-[2-Acetyl-5,6-dimethoxy-3-(phenylmethoxy)phenyl]-1-propanone**

[102553-89-9]

 $C_{20}H_{22}O_5$ mol.wt. 342.39

Synthesis

– The 6-benzyloxy-3,4-dimethoxy-2-propenylacetophenone (m.p. 80°; IR, UV) formed with osmium tetroxide an adduct which, when decomposed by sulfur dioxide in 80% ethanol give the titled diketone [8423].

m.p. 111° [8423].

27.2 Carbonyl Groups Located on Different Rings

1-(2-Acetyl-7-hydroxy-4-benzofuranyl)-1-propanone

[59445-80-6]

 $C_{13}H_{12}O_4$

mol.wt. 232.24

Synthesis

– Obtained by treatment of its methyl ether with aluminium chloride (4 equiv) in methylene chloride at r.t. (89%) [8426].

m.p. 213° [8426].

3-Acetyl-5-hydroxy-6-(1-oxopropyl)-2H-1-benzopyran-2-one

3-Acetyl-5-hydroxy-6-propionylcoumarin

 $C_{14}H_{12}O_5$

mol.wt. 260.25

Synthesis

– Preparation from 2,4-dihydroxy-3-formylpropiophenone, ethyl acetoacetate and piperidine (45%) [6768].

m.p. 188–190° [6768].

1-(2-Acetyl-7-methoxy-4-benzofuranyl)-1-propanone

 $C_{14}H_{14}O_4$

mol.wt. 246.26

Syntheses

– Obtained by reaction of dimethyl sulfate with 7-hydroxy-4-methyl-6-propionylcoumarin in aqueous alkaline solution [6800].

– Also obtained by oxidation of 7-methoxy-4-methyl-6-propylcoumarin in diethyl ether with ceric ammonium nitrate in aqueous acetic acid (94%) [7960].

m.p. 180° [6800], 172° [7960]; 1H NMR [7960], IR [7960].

7-Hydroxy-2,3-dimethyl-8-(1-oxopropyl)-4H-1-benzopyran-4-one

7-Hydroxy-2,3-dimethyl-8-(1-oxopropyl)chromone

[100886-53-1]

 $C_{14}H_{14}O_4$

mol.wt. 246.26

Syntheses

– Preparation by Fries rearrangement of 7-propionyxy-2,3-dimethylchromone with aluminium chloride for 30 min at 120–130° (90%) [8367].

- Preparation by Friedel–Crafts acylation of 7-hydroxy-2,3-dimethylchromone with propionic anhydride in the presence of aluminium chloride at 155–160° for 90 min (55%) [8427].

m.p. 163° [8427], 161.5–162° [8367].

3,4-Dihydro-6,8-dihydroxy-7-methyl-5-(1-oxopropyl)-1(2*H*)-naphthalenone

[78377-69-2]

$C_{14}H_{16}O_4$ mol.wt. 248.28

Synthesis

- Obtained by reaction of propionic acid with 3,4-dihydro-6,8-dihydroxy-7-methyl-1(2*H*)-naphthalenone (m.p. 200–201°) [78377-68-1] in the presence of boron trifluoride at 90° (92%) [7876].

m.p. 89–90° [7876].

2-Bromo-5,7-dimethoxy-6-methyl-8-(1-oxopropyl)-1,4-naphthalenedione

[90363-47-6]

$C_{16}H_{15}BrO_5$ mol.wt. 367.20

Synthesis

- Obtained by oxidation of 8-hydroxy-2,4-dimethoxy-3-methyl-1-propionaphthone with 3 equiv *N*-bromo-succinimide in aqueous acetic acid at 25° for 1 h (61%) [7878].

m.p. 144–145° [7878]; 1H NMR [7878].

5,7-Dimethoxy-6-methyl-8-(1-oxopropyl)-1,4-naphthalenedione

[90363-48-7]

$C_{16}H_{16}O_5$ mol.wt. 288.30

Synthesis

- Obtained (by-product) by oxidation of 8-hydroxy-2,4-dimethoxy-3-methyl-1-propionaphthone with 3 equiv *N*-bromosuccinimide in aqueous acetic acid at 25° for 1 h (17%) [7878].

m.p. 145–150° [7878]; 1H NMR [7878].

2-(4-Fluorophenyl)-5,7-dihydroxy-6-(1-oxopropyl)-4*H*-1-benzopyran-4-one

4'-Fluoro-5,7-dihydroxy-6-propionylflavone

[848734-12-3]

$C_{18}H_{13}FO_5$ mol.wt. 328.30

Synthesis

- Obtained from 4-fluorobenzoylacetic acid ethyl ester and phloropropiophenone in boiling diphenyl ether for 3 h (56%) [8428].

m.p. 201–202° [8428];
 1H NMR [8428], MS [8428].

1-[3-[[2,4-Dihydroxy-6-methoxy-5-methyl-3-(1-oxopropyl)phenyl]methyl]-2,4,6-trihydroxy-5-methylphenyl]-1-butanone (*Margaspidin BP*)

[57765-48-7]

 $C_{23}H_{28}O_8$ mol.wt. 432.47

Isolation from natural sources

– From *Dryopteris marginata* (WALL.) CHRIST [8401].

m.p. 176° [8401];

MS [8401]; TLC [8401].

1-[2,6-Dihydroxy-4-methoxy-3-methyl-5-[[2,4,6-trihydroxy-3-methyl-5-(1-oxopropyl)-phenyl]methyl]phenyl]-1-butanone (*Margaspidin PB*)

[66655-97-8]

 $C_{23}H_{28}O_8$ mol.wt. 432.47

Isolation from natural sources

– From *Dryopteris marginata* (WALL.) CHRIST [8401].

m.p. 176° [8401];

MS [8401]; TLC [8401].

1-[2,4,6-Trihydroxy-3-methyl-5-[[2,4,6-trihydroxy-3,5-bis(1-oxopropyl)phenyl]methyl]-phenyl]-1-butanone

[68223-39-2]

 $C_{24}H_{28}O_9$ mol.wt. 460.48

Synthesis

– Refer to: [8404].

BIOLOGICAL ACTIVITY:
Antimalarial comparable to that of agrimol [8404].

1,1'-[Thiobis[2,4,6-trihydroxy-5-(1-oxopropyl)-3,1-phenylene]]bis-1-hexanone

[98149-26-9]

 $C_{30}H_{38}O_{10}S$ mol.wt. 590.69

Synthesis

– Refer to: [6879] (Chinese paper), (compound 23) (44–52%).

m.p. 124° [6879].

1-[3,5-Bis[[2,4-dihydroxy-6-methoxy-5-methyl-3-(1-oxopropyl)phenyl]methyl]-2,4,6-trihydroxyphenyl]-1-butanone

[49582-15-2]

 $C_{34}H_{40}O_{12}$ mol.wt. 640.68

Isolation from natural sources

– From African *Dryopteris* series [6890, 7262, 7393].

MS [7393].

1-[3,5-Bis[[2,6-dihydroxy-4-methoxy-3-(2-methyl-1-oxopropyl)-5-methylphenyl]methyl]-2,4,6-trihydroxyphenyl]-1-propanone (*Protokosin*)

 $C_{35}H_{42}O_{12}$ mol.wt. 654.71

Isolation from natural sources

– From *Hagenia abyssinica* (Bruce) Gmel. [6932].

Chapter 28

Aromatic Polyketones Containing Only Isobutyryl Groups

28.1 Isobutyryl Groups Located on the Same Ring

1,1'-(2,4,6-Trihydroxy-1,3-phenylene)bis[2-methyl-1-propanone

[3133-29-7]

$C_{14}H_{18}O_5$ mol.wt. 266.29

Syntheses

– Preparation by reaction of isobutyric acid with phloroglucinol in the presence of boron trifluoride (compound **20**) (53–78%) [8376], (compound **15**) (62%) [8060], (compound **12**) [8088], (compound **10**) [8059].

– Also refer to: [8382,8429–8431].

m.p. 133–135° [8060], 124–127° [8429,8430];

1H NMR [8059,8060,8088], ^{13}C NMR [8059,8088],

IR [8059,8060,8088], UV [8059,8088].

BIOLOGICAL ACTIVITY: Antimicrobial against *Bacillus subtilis* [8376]; vesicular stomatitis virus inhibition [8059]; as allergy inhibitor [8089]; for herpes virus control [8379]; as herpes virus inhibitor [8380].

1,1'-(2,6-Dihydroxy-4-methoxy-5-methyl-1,3-phenylene)bis[2-methyl-1-propanone

$C_{16}H_{22}O_5$ mol.wt. 294.35

Synthesis

– Refer to: [8172] (compound **8a**).

1,1'-(2-Hydroxy-4,6-dimethoxy-1,3-phenylene)bis[2-methyl-1-propanone

[60831-51-8]

 $C_{16}H_{22}O_5$ mol.wt. 294.35

Synthesis

– Preparation in two steps: First, reaction of isobutyric acid with 1,3,5-trimethoxybenzene in the presence of boron trifluoride. Then, the complex obtained* (27%, m.p. 150–151°) was hydrolyzed in dilute methanol at 50° (87%) [8139].

* 2,2-Difluor-1,2-dihydro-8-isobutyryl-4-isopropyl-5,7-dimethoxy-1-oxa-3-oxonia-2-borata-naphthalin (compound **6**).

m.p. 92–94° [8139]; 1H NMR [8139].

28.2 Isobutyryl Groups Located on Different Rings**1,1'-[Methylenebis(2,4,6-trihydroxy-3,1-phenylene)]bis[2-methyl-1-propanone** $C_{21}H_{24}O_8$ mol.wt. 404.42

Synthesis

– Obtained by reaction of phloroisobutyrophenone with 35% formaldehyde in the presence of aqueous 2 N sodium hydroxide [8050].

4-[2,6-Dihydroxy-4-methoxy-3-methyl-5-(2-methyl-1-oxopropyl)phenyl]methyl-3,5-dihydroxy-2,4-dimethyl-6-(2-methyl-1-oxopropyl)-2,5-cyclohexadien-1-one (*Kosotoxin*)

N.B.: Deleted Registry Number [55838-74-9]; other CAS registry [55382-25-7].

[1400-16-4]

 $C_{25}H_{32}O_8$ mol.wt. 460.52

Isolation from natural sources

– From *Hagenia abyssinica* (Rosaceae) [80 68,8175,8432–8440].

The Flowers of *Hagenia abyssinica* (Bruce) Gmel are known under their names (Kousso, Kosso, Kusso or Koso) [6932].

m.p. 119–122° [6932], 80° [8434,8435] (old papers);

$(\alpha)_D^{25} = +11.7^\circ$ – 12.1° (chloroform) [6932];

^1H NMR [6932,8437–8439], ^{13}C NMR [8175],
 IR [6932,8437–8439], UV [6932,8437–8439],
 MS [6932,8436–8439];
 GC [8438]; TLC [8437–8439]; HPLC [8433,8437–8439].

Note: Acute toxicity [8439].

BIOLOGICAL ACTIVITY: Spasmolytic [8432]; antitumor action [8439];
 anthelmintic against tapeworm [8441].

PHARMACOLOGICAL DATA [8442].

1-[3-[[2,6-Dihydroxy-4-methoxy-5-methyl-3-(2-methyl-1-oxopropyl)phenyl]methyl]-2,6-dihydroxy-4-methoxy-5-methylphenyl]-2-methyl-1-propanone

[99174-41-1]

$\text{C}_{25}\text{H}_{32}\text{O}_8$

mol.wt. 460.52

Synthesis

- Obtained by reaction of a 2,6-dihydroxy-4-methoxy-3-methylisobutyrophenone and 4,6-dihydroxy-2-methoxy-3-methyl-isobutyrophenone mixture with formaldehyde in the presence of 1% aqueous potassium hydroxide for 45 min at 0° (7%) [7255].

m.p. 170–171° [7255]; UV [7255].

1-[3-[[2,6-Dihydroxy-4-methoxy-5-methyl-3-(2-methyl-1-oxopropyl)phenyl]methyl]-4,6-dihydroxy-2-methoxy-5-methylphenyl]-2-methyl-1-propanone

[489-48-5]

$\text{C}_{25}\text{H}_{32}\text{O}_8$

mol.wt. 460.52

Synthesis

- Obtained by reaction of a 2,4-dihydroxy-6-methoxy-3-methylisobutyrophenone and 4,6-dihydroxy-2-methoxy-3-methyl-isobutyrophenone mixture with formaldehyde in the presence of 1% aqueous potassium hydroxide for 45 min at 0° (14%) [7255].

m.p. 164.5° [7255]; UV [7255].

1-[3-[[4,6-Dihydroxy-2-methoxy-5-methyl-3-(2-methyl-1-oxopropyl)phenyl] methyl]-2,6-dihydroxy-4-methoxy-5-methylphenyl]-2-methyl-1-propanone

[99174-42-2]

 $C_{25}H_{32}O_8$

mol.wt. 460.52

Synthesis

- Obtained by reaction of 2,4-dihydroxy-6-methoxy-3-methylisobutyrophenone and 2,6-dihydroxy-4-methoxy-3-methyl-isobutyrophenone mixture with formaldehyde in the presence of 1% aqueous potassium hydroxide for 45 min at 0° (15%) [7255].

m.p. 183° [7255]; UV [7255].

1-[3-[[2-Hydroxy-4,6-dimethoxy-3-methyl-5-(2-methyl-1-oxopropyl)phenyl] methyl]-2,4,6-trihydroxy-5-methylphenyl]-2-methyl-1-propanone (*β*-Kosin)

[1400-15-3]

 $C_{25}H_{32}O_8$

mol.wt. 460.52

Syntheses

- Obtained by alkali treatment of protokosin isolated from *Hagenia abyssinica* [7255,8085,8198,8435].

m.p. 120° [8198,8435]; IR [8085], UV [8085].

BIOLOGICAL ACTIVITY: Anthelmintic [8085].

Triacetate $C_{31}H_{38}O_{11}$ mol.wt. 586.64 (m.p. 155°) [8198].

1,1'-[Methylenebis(2,4-dihydroxy-6-methoxy-5-methyl-3,1-phenylene)] bis[2-methyl-1-propanone]

[568-50-3]

 $C_{25}H_{32}O_8$

mol.wt. 460.52

Syntheses

- Obtained by reaction of 2,6-dihydroxy-4-methoxy-3-methylisobutyrophenone with formaldehyde in the presence of 1% aqueous potassium hydroxide for 45 min at 0° (49%) [7255,8170].

m.p. 192–193° [7255,8170]; UV [7255].

Tetraacetate $C_{33}H_{40}O_{12}$ mol.wt. 628.67 (m.p. 141°) [7255].

1,1'-[Methylenebis(2,6-dihydroxy-4-methoxy-5-methyl-3,1-phenylene)]bis[2-methyl-1-propanone (α -Kosin)

[99174-40-0]

$C_{25}H_{32}O_8$ mol.wt. 460.52

Syntheses

- Obtained by reaction of 4,6-dihydroxy-2-methoxy-3-methylisobutyrophenone with formaldehyde in the presence of 1% aqueous potassium hydroxide for 45 min at 0° (36%) [7255,8170].
- Also obtained by alkaline cleavage of Kosotoxin [8068].
- Also obtained by treatment of Protokosin with zinc dust in boiling aqueous sodium hydroxide for 5 min [8085,8198].
- Also refer to: [8436].

Isolation from natural sources

- From flowers of *Hagenia abyssinica* also named *Brayera anthelmintica* [8175,8437,8439].

m.p. 160–160.5° [7255], 160° [8435], 158° [8170,8198].

^{13}C NMR [8175], IR [8085], UV [7255,8085];

HPLC [8433,8437].

Note: Acute toxicity [8439].

BIOLOGICAL ACTIVITY: Anthelmintic [8085]; antitumor [8439].

Triacetate $C_{31}H_{38}O_{11}$ mol.wt. 586.64 (m.p. 123°) [8198].

Tetraacetate $C_{33}H_{40}O_{12}$ mol.wt. 628.67 (m.p. 124°) [7255].

1,1'-[Methylenebis(4,6-dihydroxy-2-methoxy-5-methyl-3,1-phenylene)]bis[2-methyl-1-propanone]

$C_{25}H_{32}O_8$ mol.wt. 460.52

Synthesis

- Obtained by reaction of 2,4-dihydroxy-6-methoxy-3-methylisobutyrophenone with formaldehyde in the presence of 1% aqueous potassium hydroxide for 45 min at 0° (33%) [1484].

m.p. 205–207° [7255]; UV [7255].

Tetraacetate C₃₃H₄₀O₁₂ mol.wt. 628.67 (m.p. 172–174°) [7255].

2-[[3-Bromo-5,7-dihydroxy-2,2-dimethyl-8-(2-methyl-1-oxopropyl)-2H-1-benzopyran-6-yl]-methyl]-3,5-dihydroxy-4,4-dimethyl-6-(2-methyl-1-oxopropyl)-2,5-cyclohexadien-1-one (*Bromouliginosin B*)

[19647-29-1]

C₂₈H₃₃BrO₈ mol.wt. 577.47

Synthesis

- Preparation by treatment of *Uliginosin B* with bromine followed by dehydrohalogenation in pyridine [8443].

Isolation from natural sources

- From *Hypericum uliginosum*, a woody herb found in Mexico and Central America [8443].

X-ray diffraction study [8443].

BIOLOGICAL ACTIVITY: Antibiotic [8443].

2-[[5,7-Dihydroxy-2,2-dimethyl-8-(2-methyl-1-oxopropyl)-2H-1-benzopyran-6-yl]methyl]-3,5-dihydroxy-4,4-dimethyl-6-(2-methyl-1-oxopropyl)-2,5-cyclohexadien-1-one (*Uliginosin B-iBiB*)

[19809-79-1]

C₂₈H₃₄O₈ mol.wt. 498.57

Synthesis

- Obtained (poor yield) by adding a solution of DDQ in benzene over 30 min to a stirred solution of Uliginosin A-iBiB (8%) [8138].

Isolation from natural sources

- From the Mexican plant *Hypericum uliginosum* HBK (Tzotzil) [8060, 8138, 8207, 8444, 8445].

m.p. 142.5–143.5° [8138], 139.5–142° [8444, 8445];

¹H NMR [8138, 8444], IR [8138, 8444], UV [8138, 8444], MS [8444];

X-ray diffraction study [8443]; TLC [8138].

BIOLOGICAL ACTIVITY: Antibiotic [8060, 8138, 8207, 8444, 8445].

2-[[3,4-Dihydro-5,7-dihydroxy-2,2-dimethyl-6-(2-methyl-1-oxopropyl)-2H-1-benzopyran-8-yl]methyl]-3,5-dihydroxy-4,4-dimethyl-6-(2-methyl-1-oxopropyl)-2,5-cyclohexadien-1-one (*Isodihydrouliginosin B-iBiB*)

[19809-81-5]

 $C_{28}H_{36}O_8$

mol.wt. 500.59

Syntheses

- Obtained by reaction of 5,7-dihydroxy-6-isobutyryl-2,2-dimethylchroman with albaspidin-iBiB in the presence of sodium hydride in refluxing ethanol for 1 h (23%) [8060,8207].
- Also obtained by reaction of p-toluenesulfonic acid with Uliginosin A in refluxing benzene for 30 min [8444].
- Also refer to: [8138].

m.p. 163° [8060], 159° [8207], 156–158.5° [8444];

 ^1H NMR [8060,8444], IR [8060,8444], UV [8060,8444]; TLC [8444].

2-[[3,4-Dihydro-5,7-Dihydroxy-2,2-dimethyl-8-(2-methyl-1-oxopropyl)-2H-1-benzopyran-6-yl]methyl]-3,5-dihydroxy-4,4-dimethyl-6-(2-methyl-1-oxopropyl)-2,5-cyclohexadien-1-one (*Dihydrouliginosin B-iBiB*)

[19809-80-4]

 $C_{28}H_{36}O_8$

mol.wt. 500.59

Syntheses

- Obtained by reaction of albaspidin-iBiB with 5,7-dihydroxy-8-isobutyryl-2,2-dimethylchroman (m.p. 145–146°) in the presence of sodium hydride in refluxing ethanol for 45 min (83%) [8060], (ca. 80%) [8207].
- Also obtained by hydrogenation of Uliginosin B in ethyl acetate with hydrogen in the presence of 10% Pd/C [8444].

Isolation from natural sources

- From the Mexican plant *Hypericum uliginosum* HBK [8060,8138,8444]. pale yellow solid [8138]; m.p. 149° [8207], 141–142° [8060], 138–141° [8444]; ^1H NMR [8060,8138,8444], IR [8060,8444], UV [8060,8444], MS [8444].

3,5-Dihydroxy-4,4-dimethyl-2-(2-methyl-1-oxopropyl)-6-[[2,4,6-trihydroxy-3-(3-methyl-2-butenyl)-5-(2-methyl-1-oxopropyl)phenyl]methyl]-2,5-cyclohexadien-1-one

(*Uliginosin A-iBiB*)

[19809-78-0]

$C_{28}H_{36}O_8$

mol.wt. 500.59

Syntheses

- Obtained by reaction of albaspidin-iBiB with 2,4,6-trihydroxy-3-(3-methyl-2-butenyl)isobutyrophenone in the presence of sodium hydride in refluxing methanol for 1.5 h (50%) [8060,8207].

Isolation from natural sources

- From the Mexican plant *Hypericum uliginosum* HBK (Tzotzil) [8060, 8138,8207,8444,8445].

m.p. 164° [8207], 161–162° [8060], 160.5–161.5° [8444,8445];

¹H NMR [8060,8444], IR [8060,8444], UV [8060,8444], MS [8444];

X-ray diffraction study [8443].

BIOLOGICAL ACTIVITY: Antibiotic [8060,8138,8207,8444,8445].

1,1',1'',1'''-[Methylenebis(2,4,6-trihydroxy-5,1,3-benzenetriyl)]tetrakis[2-methyl-1-propanone

[68223-31-4]

$C_{29}H_{36}O_{10}$

mol.wt. 544.60

Syntheses

- Preparation by bimolecular condensation of 2,4-diisobutyryl-phloroglucinol with 40% formaldehyde [6879,8404] or with methoxymethyl acetate in the presence of a few drops of concentrated sulfuric acid [8405].

BIOLOGICAL ACTIVITY: Antischistosomal (an analog of agrimophol) [6879].

**1,1'-[Methylenebis(2,4,6-trimethoxy-5-methyl-3,1-phenylene)]
bis[2-methyl-1-propanone]**

$C_{29}H_{40}O_8$ mol.wt. 516.63

Synthesis

- Obtained by treatment of α or β -Kosins with dimethyl sulfate in the presence of N sodium hydroxide on a steam bath under nitrogen [8085].
gum [8085]; IR [8085], UV [8085].

1,1'-[Methylenebis(3,4-dihydro-5,7-dihydroxy-2,2-dimethyl-2H-1-benzopyran-6,8-diyl)]bis[2-methyl-1-propanone]

[72935-02-5]

$C_{31}H_{40}O_8$ mol.wt. 540.65

Syntheses

- Obtained by heating a solution of 8-isobutyryl-7-hydroxy-5-methoxy-methyleneoxy-2,2-dimethylchroman in 80% acetic acid containing 2 drops of concentrated sulfuric acid on a steam bath for 45 min (91%) [8138].
- Also obtained by hydrolysis of 8-isobutyryl-5-methoxymethyleneoxy-2,2-dimethylchroman-7-ol in the presence of an excess of isobutyrylfilicinic acid [8060].
 1H NMR [8060], IR [8060].

1,1'-(1,7a,13a,13b-Tetrahydro-5,8,10-trihydroxy-2,2,6,9,13,13-hexamethyl-2H,13H-bis[1]benzopyrano[5,4-bc:3',4'-e]pyran-4,11-diyl)bis[2-methyl-1-propanone]

2,4,6-Trihydroxy-5-(2-methyl-1-oxopropyl)-1,3-benzenedicarboxaldehyde

[245052-19-1]

$C_{12}H_{12}O_6$ mol.wt. 252.22

Isolation from natural sources

– From eucalyptus essential oil, *Eucalyptus apodophylla* (Myrtaceae) (compound **28**) (component C) [8221].

MS [8221]; GC [8221], GC-MS [8221].

1-(2-Acetyl-6-hydroxyphenyl)-2-methyl-1-propanone

[171609-28-2]

$C_{12}H_{14}O_3$ mol.wt. 206.24

Synthesis

– Refer to: [8336] (Japanese patent).

2,4-Dihydroxy-6-methoxy-5-methyl-3-(2-methyl-1-oxopropyl)benzaldehyde

$C_{13}H_{16}O_5$ mol.wt. 252.27

Synthesis

– Obtained (poor yield) by reaction of zinc cyanide with 2,6-dihydroxy-4-methoxy-3-methylisobutyrophenone in the presence of aluminium chloride according to the Gattermann–Adams reaction (10%) [8171].

m.p. 70° [8171];

1H NMR [8171], ^{13}C NMR [8171], IR [8171], MS [8171].

2,6-Dihydroxy-4-methoxy-5-methyl-3-(2-methyl-1-oxopropyl)benzaldehydeC₁₃H₁₆O₅ mol.wt. 252.27**Synthesis**

– Preparation by reaction of zinc cyanide with 4,6-dihydroxy-2-methoxy-3-methylisobutyrophenone in the presence of aluminium chloride according to the Gattermann–Adams reaction (54%) [8171].

Isolation from natural sources

– From *Hagenia abyssinica* (Rosaceae) [8178].

m.p. 65–66° [8171], 54–56° [8178]. One of the reported melting points is obviously wrong.

¹H NMR [8171,8178], ¹³C NMR [8178], IR [8171,8178], UV [8178], MS [8178].

29.2 Carbonyl Groups Located on Different Rings**1-[2-[2,6-Dihydroxy-3-(3-methyl-2-butenyl)benzoyl]-3-hydroxy-5-methylphenyl]-2-methyl-1-propanone (FD-549)**

[175413-69-1]

C₂₃H₂₆O₅ mol.wt. 382.46**Biosynthesis**

– From *Penicillium* sp. TF-0379 (FERMP-13534) [8448].

BIOLOGICAL ACTIVITY: Antitumor [8448].

1,1'-[Methylenebis(5-acetyl-2,4,6-trihydroxy-3,1-phenylene)]bis [2-methyl-1-propanone

[98149-24-7]

C₂₅H₂₈O₁₀ mol. t. 488.49**Synthesis**

– Obtained by condensation of 3-acetyl-2,4,6-trihydroxyisobutyrophenone (2 mol) in the presence of 40% formaldehyde (58–65%) [6879].

m.p. 180–182° [6879].

BIOLOGICAL ACTIVITY: Antischistosomal (an analog of agrimophol) [6879].

3-[[2,6-Dihydroxy-4-methoxy-3-methyl-5-(2-methyl-1-oxopropyl)phenyl]methyl]-2,4,6-trihydroxy-5-(3-methyl-1-oxobutyl)benzaldehyde (*Robustaol A*)

[78411-76-4]

C₂₅H₃₀O₉ mol.wt. 474.51

Synthesis

- Preparation from 4,6-dihydroxy-2-methoxy-3-methylisobutyrophe- none and 3-iso- valeryl-2,4,6-tri- hydroxybenzalde- hyde [8176].

Isolation from natural sources

- From *Eucalyptus robusta* [8176].

4,9-Dihydro-8-hydroxy-6-methoxy-2,2,4,4-tetramethyl-5-(2-methyl-1-oxopropyl)-9-(2-methylethyl)-1*H*-xanthene-1,3(2*H*)-dione (*Myrtucommulone B*)

C₂₅H₃₂O₆ mol.wt. 428.53

Synthesis

- Refer to: [8135].

4-[1-[2,4,6-Trihydroxy-5-methyl-3-(2-methyl-1-oxopropyl)phenyl]-2-methylpropyl]-5-hydroxy-2,2,6,6-tetramethyl-4-cyclohexene-1,3-dione (*Semimyrtucommulone*)

C₂₅H₃₄O₇ mol.wt. 446.97

Isolation from natural sources

- From plants of family Myrtaceae [6882,8449].

USE: Antioxidizing agent [6882,8449].

1-[6-[(3-Acetyl-2,4-dihydroxy-6-methoxy-5-methylphenyl)methyl]-5,7-dihydroxy-2,2-dimethyl-2H-1-benzopyran-8-yl]-2-methyl-1-propanone
(*Isobutyrylmallotochromene*)

[116964-16-0]

C₂₆H₃₀O₈ mol.wt. 470.52

Isolation from natural sources

– From the pericarps of *Mallotus japonicus* MUELL (Euphorbiaceae) [8450], (compound **11**) [8451], (compound **9**) [8452,8453].

m.p. 180–181° [8451]; ¹H NMR [8451], ¹³C NMR [8451], IR [8451], UV [8451], MS [8451].

Note: Cytotoxicity [8453].

1-[3-[(3-Acetyl-2,4-dihydroxy-6-methoxy-5-methylphenyl)methyl]-2,4,6-trihydroxy-5-(3-methyl-2-butenyl)phenyl]-2-methyl-1-propanone
(*Isobutyrylmallotojaponin*)

[96853-74-6]

C₂₆H₃₂O₈ mol.wt. 472.54

Isolation from natural sources

– From *Mallotus japonicus* MUELL ARG. (Euphorbiaceae) (compound D) [8454] (compound **5**) [8451,8455], (compound **6**) [8456] (compound **3**) [8452,8453], (compound **9**) [8457].

N.B.: The compound D was a mixture of butyrophenone and isobutyrophenone (2:1) [8454,8456].

m.p. 157–158° [8454]; ¹H NMR [8454], ¹³C NMR [8454], IR [8454], MS [8454].

Note: Cytotoxicity [8453,8455,8458].

BIOLOGICAL ACTIVITY: Antiviral and antitumor [8452].

1-[6-[(3-Acetyl-2,4-dihydroxy-6-methoxy-5-methylphenyl)methyl]-3,4-dihydro-3,5,7-trihydroxy-2,2-dimethyl-2H-1-benzopyran-8-yl]-2-methyl-1-propanone

(*Isobutyrylmallotochromanol*)

[129399-53-7]

$C_{26}H_{32}O_9$ mol.wt. 488.53

Isolation from natural sources

- From the pericarps of *Mallotus japonicus* MUELL. ARG. (Euphorbiaceae) (compound **13**) [8452], (compound **2**) [8457], (compounds **5**) [8459,8460].
- Also refer to: [8461–8466].

m.p. 211–212° [8457];

¹H NMR [8457], ¹³C NMR [8457], IR [8457], UV [8457], MS [8457].

Note: Cytotoxicity [8452,8457].

BIOLOGICAL ACTIVITY: Antiviral and antitumor [8452]; antiherpetic [8452]; drug-coated coronary stent system [8464]; catheter with balloon for the expansion of blood vessels carrying contrast agents and drugs [8466]; method and device for coating medical goods using ultrasound spraying [8465]; inhibition of lipopolysaccharide-induced pro-inflammatory cytokine expression *via* suppression of nuclear factor-κB activation [8460]; prostaglandin E₂ production and induction of prostaglandin endoperoxide synthase-2 is inhibited in a murine macrophage-like cell line RAW 264.7 [8459]; for treatment of carcinoid syndrome [8467]; expandable medical devices with Parylene C and paclitaxel coating [8468]; method for targeted delivery of therapeutic substances into cells using nanoparticles [8469].

1-[3-[(3-Acetyl-2,4-dihydroxy-6-methoxy-5-methylphenyl)methyl]-2,4,6-trihydroxy-5-(2-hydroxy-3-methyl-3-butenyl)phenyl]-2-methyl-1-propanone

(*Isobutyrylmallotolerin*), old name (*isomallotolerin*)

[126026-30-0]

$C_{26}H_{32}O_9$ mol.wt. 488.53

Isolation from natural sources

- From the pericarps of *Mallotus japonicus* MUELL. ARG. (Euphorbiaceae) [8450], (compound **1**) [8470], (compound **6**) [8452,8453], (compound **11**) [8457].

m.p. 216–217° [8470]; ¹H NMR [8470], ¹³C NMR [8470], IR [8470], UV [8470], MS [8470]; HPLC [8470].

Note: Cytotoxicity [8453].

BIOLOGICAL ACTIVITY: Antiviral and antitumor [8452].

1-[2,4,6-Trihydroxy-3-(2-methyl-1-oxopropyl)-5-[[2,4,6-trihydroxy-3-methyl-5-(1-oxobutyl)phenyl]methyl]phenyl]-1-butanone

[68223-53-0]

C₂₆H₃₂O₉ mol.wt. 488.53

Synthesis

- Preparation by bimolecular condensation of acylphloroglucinol derivatives [8404] (Chinese paper).

BIOLOGICAL ACTIVITY: Antimalarial [8404].

1-[2,4,6-Trihydroxy-3-methyl-5-[[2,4,6-trihydroxy-3,5-bis(2-methyl-1-oxopropyl)-phenyl]methyl]phenyl]-1-butanone

[68223-40-5]

C₂₆H₃₂O₉ mol.wt. 488.53

Synthesis

- Preparation by bimolecular condensation of acylphloroglucinol derivatives [8404] (Chinese paper).

BIOLOGICAL ACTIVITY: Antimalarial [8404].

4,9-Dihydro-8-hydroxy-6-methoxy-2,2,4,4-tetramethyl-5-(2-methyl-1-oxopropyl)-9-(2-methylpropyl)-1*H*-xanthene-1,3(2*H*)-dione

[139979-87-6]

C₂₆H₃₄O₆ mol.wt. 442.55

Synthesis

- Obtained by treatment of 4-[1-[2,6-Dihydroxy-4-methoxy-3-(2-methyl-1-oxopropyl)phenyl]-3-methylbutyl]-5-hydroxy-2,2,6,6-tetramethyl-4-cyclohexene-1,3-dione (compound **4**) with p-toluenesulfonic acid in refluxing benzene for 2.5 h [8135].

¹H NMR [8135], IR [8135], UV [8135], MS [8135].

4-[1-[2,6-Dihydroxy-4-methoxy-3-(2-methyl-1-oxopropyl)phenyl]-3-methylbutyl]-5-hydroxy-2,2,6,6-tetramethyl-4-cyclohexene-1,3-dione

[139955-98-9]

C₂₆H₃₆O₇ mol.wt. 460.57

Isolation from natural sources

1-[6-[1-[3,4-Dihydro-5,7-dihydroxy-2,2-dimethyl-8-(2-methyl-1-oxopropyl)-2H-1-benzopyran-6-yl]-6-methylheptyl]-3,4-dihydro-5,7-dihydroxy-2,2-dimethyl-2H-1-benzopyran-8-yl]-2-methyl-1-butanone

[103771-65-9]

C₃₉H₅₆O₈ mol.wt. 652.87

Isolation from natural sources

- From the aerial parts of *Helichrysum platypterum* DC (Compositae) (compound **6**) [8080].

2-Methyl-1-[2,4,6-trihydroxy-3-(3-methyl-2-butenyl)-5-[6-methyl-1-[2,4,6-trihydroxy-3-(3-methyl-2-butenyl)-5-(2-methyl-1-oxopropyl)phenyl]heptyl]phenyl]-1-butanone

[103771-73-9]

C₃₉H₅₆O₈ mol.wt. 652.87

Isolation from natural sources

- From the aerial parts of *Helichrysum platypterum* DC (Compositae) (compound **29**) [8080].

Protokosin

[1392-97-8]

Protokosin proved to be a mixture of isobutyryl, isovaleryl and 2-methylbutyryl side-chain homologues [6932]; (compound **7987**) [6640]. Protokosin was therefore represented by the general formula below:

C₄₁H₅₄O₁₂, C₄₀H₅₂O₁₂, C₃₉H₅₀O₁₂ and C₃₈H₄₈O₁₂ [6932]

Isolation from natural sources

- From koussou flowers
Hagenia abyssinica
(Bruce) Gmel
(*Brayera anthelmintica*) (Rosaceae)
[6932,8085,8178,
8198,8434,8435].

m.p. 182° [8198,8435], 181–183° [6932], 176° [8434], 174–176° [8473];

$(\alpha)_D^{25} = +13.4^\circ$ – 14.4° (chloroform) [6932];

$^1\text{H NMR}$ [6932], IR [6932,8085], UV [6932,8085], MS [6932].

BIOLOGICAL ACTIVITY: Anthelmintic [8085].

Chapter 30

Aromatic Polyketones Containing Only Pivaloyl Groups

30.1 Pivaloyl Groups Located on the Same Ring

1,1'-(2,5-Dihydroxy-1,4-phenylene)bis[2,2-dimethyl-1-propanone

[39868-19-4]

$C_{16}H_{22}O_4$ mol.wt. 278.35

Syntheses

- Obtained by total demethylation of its dimethyl ether with 48% hydrobromic acid in refluxing acetic acid for 24 h (32%) [8310].
- Also obtained by visible light irradiation of 1,4-benzoquinone and trimethylacetaldehyde mixture for 18 days (4%) [8312].

m.p. 184–185° [8312], 180–181° [8310];

¹H NMR [8310,8312], IR [8310,8312], MS [8310,8312].

1,1'-(2,5-Dimethoxy-1,4-phenylene)bis[2,2-dimethyl-1-propanone

[39868-16-1]

$C_{18}H_{26}O_4$ mol.wt. 306.40

Syntheses

- Refer to: [8310,8315].

m.p. 195–199° [8310].

Note: Antioxidant [8315].

30.2 Pivaloyl Groups Located on Different Rings

1,1'-[(1*R*)-2,2'-Dihydroxy[1,1'-binaphthalene]-3,3'-diyl]bis[2,2-dimethyl-1-propanone]

[574004-35-6]

C₃₀H₃₀O₄

mol.wt. 454.57

Synthesis

- Preparation from 3-hydroxy-2-pivaloylnaphthalene by oxidative biaryl coupling using cuprous iodide in the presence of (*S,S*)-1,5-diazadecalin in a methylene chloride/acetonitrile mixture under oxygen for 48 h at 40° (58%) (compound 9u) [7694].

¹H NMR [7694], ¹³C NMR [7694], IR [7694], MS [7694];(α)_D²⁵ = +81° (chloroform) [7694]; TLC [7694]; HPLC [7694].

1,1'-[(2,2'-Dihydroxy[1,1'-binaphthalene]-6,6'-diyl]bis[2,2-dimethyl-1-propanone]

[874183-64-9] (racemic)

C₃₀H₃₀O₄

mol.wt. 454.57

[874187-24-3] (1*R*)[874187-25-4] (1*S*)(CH₃)₃CCO

Synthesis

Note: Highly efficient chromatographic resolution of α,α'-dihydroxybiaryls [8474].

Chapter 31

Aromatic Polyketones Containing At Least One Pivaloyl Group

31.1 Carbonyl Groups Located on the Same Ring

1-(2-Acetyl-6-hydroxyphenyl)-2,2-dimethyl-1-propanone

[171609-27-1]

$C_{13}H_{16}O_3$

mol.wt. 220.27

Synthesis

– Refer to: [8336] (Japanese patent).

N.B.: No polyketone located on different rings is described in the literature till Dec., 31, 2007.

Molecular Formula Index

Volume 1

Bis(2,3,5,6-tetrachloro-4-hydroxyphenyl)methanone, 441

(2,3,4,5,6-Pentafluorophenyl)(2,3,5-trifluoro-4,6-dihydroxyphenyl)methanone, 409

(2,4-Dichlorophenyl)(2,3,5-trichloro-6-hydroxyphenyl)methanone, 190

(3,4-Dichlorophenyl)(2,3,5-trichloro-6-hydroxyphenyl)methanone, 190

(2-Hydroxyphenyl)(2,3,4,5,6-pentafluorophenyl)methanone, 143

(4-Bromophenyl)(2,3,5-trichloro-6-hydroxyphenyl)methanone, 191

Bis(3-bromo-4-hydroxy-5-nitrophenyl)methanone, 441

Bis(3,5-dibromo-2-hydroxyphenyl)methanone, 441

Bis(3,5-dibromo-4-hydroxyphenyl)methanone, 442

(3,5-Dibromo-2-hydroxyphenyl)(3,5-dibromo-4-hydroxyphenyl)methanone, 452

(2-Chlorophenyl)(2,3,5-trichloro-6-hydroxyphenyl)methanone, 191

(4-Chlorophenyl)(2,3,5-trichloro-6-hydroxyphenyl)methanone, 191

(2,3-Dichloro-4-hydroxyphenyl)(2,4-dichlorophenyl)methanone, 191

(2,3-Dichloro-4-hydroxyphenyl)(3,4-dichlorophenyl)methanone, 192

(2,4-Dichloro-6-hydroxyphenyl)(2,4-dichlorophenyl)methanone, 192

(2,4-Dichloro-6-hydroxyphenyl)(2,5-dichlorophenyl)methanone, 192

(2,4-Dichloro-6-hydroxyphenyl)(2,6-dichlorophenyl)methanone, 192

(2,4-Dichloro-6-hydroxyphenyl)(3,4-dichlorophenyl)methanone, 193

(2,5-Dichloro-4-hydroxyphenyl)(2,4-dichlorophenyl)methanone, 193

(2,5-Dichloro-4-hydroxyphenyl)(3,4-dichlorophenyl)methanone, 193

(2,6-Dichloro-4-hydroxyphenyl)(3,4-dichlorophenyl)methanone, 193

(3,5-Dichloro-4-hydroxyphenyl)(2,4-dichlorophenyl)methanone, 194

(3,5-Dichloro-4-hydroxyphenyl)(3,4-dichlorophenyl)methanone, 194

(3,6-Dichloro-2-hydroxyphenyl)(2,4-dichlorophenyl)methanone, 194

Bis(3,5-dichloro-4-hydroxyphenyl)methanone, 442

Bis(2-hydroxy-3,5-diiodophenyl)methanone, 442

Bis(4-hydroxy-3,5-diiodophenyl)methanone, 442

(2,4-Dihydroxy-3,5,6-trinitrophenyl)(4-hydroxy-3-nitrophenyl)
methanone, 480

(4-Bromophenyl)(2,4-dichloro-6-hydroxyphenyl)methanone, 194

(4-Bromophenyl)(2,6-dichloro-4-hydroxyphenyl)methanone, 195

(4-Bromophenyl)(3,5-dichloro-4-hydroxyphenyl)methanone, 195

- [936642-84-1] 1-(2-Hydroxy-3,4-dipropylphenyl)-1-propanone, 1928
- [936642-85-2] 1-(3,4-Diethyl-2-hydroxyphenyl)-1-propanone, 1890
- [936642-86-3] 1-(5,6,7,8,9,10-Hexahydro-1-hydroxy-2-benzocyclooctenyl)-1-propanone, 1923

Usual Names Index

Volume 1

Adlone. *see to Exifone*, 40

Alizarine yellow A. *2,3,4-Trihydroxybenzophenone*, 22–23

Anisaldehyde (o, m or p). *(2, 3 or 4)-Methoxybenzaldehyde*, 240, 325, 405

Anisic acid (o, m or p). *(2, 3 or 4)-Methoxybenzoic acid*, 173, 283–287, 299–300, 404, 420, 470

Anisole. *methoxybenzene*, 9, 143, 146–147, 150, 154, 168, 170–171, 175–176, 286–287, 536–537

Anisoyl chloride (o, m or p). *(2, 3 or 4)-Methoxybenzoyl chloride*, 3, 6, 26–27, 34, 145–146, 149, 154, 156, 168, 175–176, 182, 186–187, 240, 284, 287–288, 302, 307–308, 329, 404–405, 423, 432, 434, 436, 438, 470, 543, 567, 570–571, 573, 586, 598, 603, 652

Anthranil. *2,1-Benzisoxazole* and also *Benzopseudoxazole*, 160

Anthrone. *9(10H)-Anthracenone*, 524, 533

Aurin. *4-[Bis(4-hydroxyphenyl)methylene]-2,5-cyclohexadien-1-one* and also *p-Rosolic acid*, 19

Baishouwubenzophenone. *3-Acetyl-2,3',6,6'-tetrahydroxy-2'-methylbenzophenone*, 528, 654–655

Benzaurine. *Hydroxyfuchson*, 10, 84

Benzenyl chloride. *Benzenyl trichloride* or *(Trichloromethyl)benzene*, 139

Benzhydrol. *Benzohydrol* or *diphenylcarbinol*, 9, 143, 399

2,1-Benzisoxazole. *Anthranil*, 61, 160, 251

Benzofuran. *Coumarone*, 4, 14, 46–47, 50–54, 56–57, 63–72, 76, 79, 87–88, 91–93, 96, 98, 105–107, 112, 116, 122, 126, 173, 242, 261, 278, 282, 284, 286–287, 298–300, 324, 335, 365–366, 368, 372, 404, 417, 514, 532–533, 577, 579–581

Benzoresorcinol. *2,4-Dihydroxybenzophenone*, 11

Benzotrichloride. *(Trichloromethyl)benzene*, 4, 7, 13, 22, 44, 50, 53, 73–74, 77–78, 91, 115, 117–118, 123, 126, 130, 133, 136, 370–371, 382–383, 388–389, 391, 529–531

2-Benzoxazolinone. *2-Hydroxybenzoxazole*, 62, 85, 213, 252, 289, 428, 434

- Bisphenol A.** *4,4'-(1-Methylethylidene)bisphenol*, 554
- Carvacrol.** *2-Methyl-5-isopropylphenol*, 78, 118
- Cearoin.** *2, 5-Dihydroxy-4-methoxybenzophenone*, 379
- Cellosolve.** *2-Ethoxyethanol*, 13, 137
- Cotogenin.** *3',4'-Dihydroxy-2,4,6-trimethoxybenzophenone*, 408
- Cotoin.** *2,6-Dihydroxy-4-methoxybenzophenone*, 379–380
- Coumarin.** *2H-1-Benzopyran-2-one*, 15, 27, 100, 369, 381, 395–397
- Creosol.** *2-Methoxy-4-methylphenol*, 75, 99
- Cresol (o, m or p).** *(2, 3 or 4)-Methylphenol*, 71–73, 77–78, 218, 224–226, 231–232, 235, 238–240, 244, 252, 257, 268, 283–285, 429, 447, 504, 516, 529, 539, 582, 608–610, 612, 616–617, 619–620, 644
- o-Cresotic acid.** *2-Hydroxy-3-methylbenzoic acid or 3-methylsalicylic acid*, 474, 491
- m-Cresotic acid.** *2-Hydroxy-4-methylbenzoic acid*, 474, 491
- p-Cresyl anthranilate.** *4-Methylphenyl 2-aminobenzoate*, 255
- Cumene.** *(1-Methylethyl)benzene*, 95, 181
- Cyasorb UV-9.** *2-Hydroxy-4-methoxybenzophenone and Oxybenzone*, 79
- Cyasorb UV-24.** *2,2'-Dihydroxy-4-methoxybenzophenone or Dioxybenzone*, 432
- Cyasorb UV-531.** *2-Hydroxy-4-(octyloxy)benzophenone*, 134
- Dalbergin.** *6-Hydroxy-7-methoxy-4-phenylcoumarin*, 100
- Dastib 242.** *2-Hydroxy-4-(2-ethylhexyloxy)benzophenone*, 135
- Dehydrogriseofulvin.** *7-Chloro-2',4,6-trimethoxy-6'-methylspiro[benzofuran-2(3H),1'-[2,5]cyclo-hexadiene-3,4'-dione*, 458
- Diethylene glycol.** *2,2'-Oxybisethanol*, 134, 507
- Diglycol.** *Diethylene glycol*, 507
- Dioxocin.** *2H,6H-1,5-Dioxocin [292-95-5]*, 74, 225–226, 235, 238
- Dioxybenzone.** *2,2'-Dihydroxy-4-methoxybenzophenone*, 432
- Disyringylmethane.** *4,4'-Dihydroxy-3,3',5,5'-tetramethoxydiphenylmethane*, 450
- Epichlorohydrin.** *1-Chloro-2,3-epoxypropane*, 104
- Ethylcellosolve.** *Cellosolve or 2-Ethoxyethanol*, 13
- Evernic acid.** *2-Hydroxy-4-methoxy-6-methylbenzoic acid*, 482–483
- Exifone.** *2,3,3',4,4',5'-Hexahydroxybenzophenone*, 40, 495–496, 498, 575
- 9-Fluorenone.** *9-Oxofluorene*, 5, 57, 149, 167, 280
- Fluoresin chloride.** *2-(3,6-Dihydroxy-9H-xanthen-9-yl)-benzoic acid chloride*, 29
- Fuchson.** *(4-Diphenylmethylene-2,5-cyclohexadien-1-one)*, 84
- Gallacetophenone.** *2',3',4'-Trihydroxyacetophenone*, 23
- Gallic acid.** *3,4,5-Trihydroxybenzoic acid*, 35–36, 38, 40, 575
- Gentisein.** *1,3,7-Trihydroxyxanthone*, 33
- Gentisic acid.** *2,5-Dihydroxybenzoic acid*, 30
- Glyme.** *1,2-Dimethoxyethane*, 132
- Griseofulvin.** *7-Chloro-2',4,6-trimethoxy-6'-methylspiro[benzofuran-2(3H),1'-[2]cyclohexene]-3,4'-dione*, 497
- Griseophenone A.** *3-Chloro-2,4'-dihydroxy-2',4,6-trimethoxy-6'-methylbenzophenone*, 458
- Griseophenone B.** *3-Chloro-2,4',6-trihydroxy-2',4-dimethoxy-6'-methylbenzophenone*, 484, 487–488

- Griseophenone C.** *2,4',6-Trihydroxy-2',4-dimethoxy-6'-methylbenzophenone*, 336, 486
- Guaiacol.** *2-Methoxyphenol*, 83
- Hydrocotoin.** *2-Hydroxy-4,6-dimethoxybenzophenone*, 85, 88, 101, 531, 569
- Hydroquinone.** *1,4-Benzenediol*, 14–15, 26, 30, 81, 250, 288, 304–305, 313, 325–326, 339, 345, 361, 393–394, 396, 398, 406, 409, 422, 544, 571
- Hydroxyhydroquinone.** *1,2,4-Benzenetriol*, 37, 326, 337, 467
- 1,2-Indanedione.** α,β -*Dioxohydrindene*, 532
- Iriflophenone.** *2,4,4',6-Tetrahydroxybenzophenone*, 34, 573
- Isocotoin.** *2,4-Dihydroxy-6-methoxybenzophenone*, 387–388, 391
- Isoeugenol.** *2-Methoxy-4-propenylphenol*, 448
- b-Isoeuxanthone.** *2,7-Dihydroxyxanthone*, 29
- Isophthalic acid.** *1,3-Benzenedicarboxylic acid*, 537
- Light absorber HCB.** *5-Chloro-2-hydroxybenzophenone*, 53–54
- Maclurin.** *2,3',4,4',6-Pentahydroxybenzophenone*, 37, 499
- Melanoxoin.** *2,3',5-Trihydroxy-4,4'-dimethoxybenzophenone*, 481
- Mesityl chloride.** *2,4,6-Trimethylbenzoyl chloride*, 183, 333
- Mesitylene.** *1,3,5-Trimethylbenzene*, 182, 401
- 1-Methylpyrrolidone.** *1-Methyl-2-pyrrolidinone* or *N-Methylpyrrolidone*, 134, 137
- Mexenone.** *2-Hydroxy-4-methoxy-4'-methylbenzophenone*, 282
- Morin.** *2-(2,4-Dihydroxyphenyl)-3,5,7-trihydroxy-4H-1-benzopyran-4-one*, 37
- Nitrazepam.** *1,3-Dihydro-7-nitro-5-phenyl-2H-1,4-benzodiazepin-2-one*, 60
- Nizofenone.** *(2-Chlorophenyl)[2-[2-[(diethylamino)methyl]-1H-imidazol-1-yl]-5-nitrophenyl]methanone*, 206
- Octabenzene.** *2-Hydroxy-4-(octyloxy)benzophenone*, 134
- Orcinol.** *5-Methyl-1,3-benzenediol*, 376–377, 482–483, 485–486, 494–495, 497, 499
- Orsellinic acid.** *2,4-Dihydroxy-6-methylbenzoic acid*, 494
- o-Orsellinic acid.** *2,4-Dihydroxy-6-methylbenzoic acid* or *4,6-Dihydroxy-o-toluic acid*, 497
- γ -**Orsellinic acid.** *2,6-Dihydroxy-4-methylbenzoic acid*, 482
- Oxybenzone.** *2-Hydroxy-4-methoxybenzophenone*, 64, 68–69, 79
- Paeonol.** *2'-Hydroxy-4'-methoxyacetophenone*, 524, 526
- Phenetole.** *Ethoxybenzene*, 8, 146, 149, 158, 164, 169, 301, 567, 587, 598
- Phenstatin.** *3'-Hydroxy-3,4,4',5-tetramethoxybenzophenone*, 328
- Phenyl mesitoate.** *Phenyl 2,4,6-trimethylbenzoate*, 182
- Phlorobenzophenone.** *2,4,6-Trihydroxybenzophenone*, 23, 378, 388, 569
- Phloroglucinol.** *1,3,5-Benzenetriol*, 23, 33–34, 37–38, 101–102, 184, 308, 327, 329, 378–379, 408, 422, 464–468, 471, 475, 490, 492–493, 496–497, 520, 528, 541, 569, 656

- Propioguaiacone.** 1-(4-Hydroxy-3-methoxyphenyl)-1-propanone, 1814
- 6-Propionyl-2,5-dihydroxydiphenyl.** 1-(3,6-Dihydroxy[1,1'-biphenyl]-2-yl)-1-propanone, 1921
- 3-Propionylhexestrol.** 1-[5-[(1*R**S*,2*S**R*)-1-Ethyl-2-(4-hydroxyphenyl)butyl]-2-hydroxyphenyl]-1-propanone, 1955
- 6-Propionyl-4-methylumbelliferone.** 7-Hydroxy-4-methyl-6-(1-oxopropyl)-2*H*-1-benzopyran-2-one, 1999
- 8-Propionyl-4-methylumbelliferone.** 7-Hydroxy-4-methyl-8-(1-oxopropyl)-2*H*-1-benzopyran-2-one, 1999
- 2-Propionyl-6-nitrosophenol.** 1-(2-Hydroxy-3-nitrosophenyl)-1-propanone, 1756
- 3-Propionyl-6-nitrosophenol.** 1-(3-Hydroxy-4-nitrosophenyl)-1-propanone, 1756
- 4-Propionyl-2-nitrosophenol.** 1-(4-Hydroxy-3-nitrosophenyl)-1-propanone, 1756
- 4-Propionylpyrocatechol.** 1-(3,4-Dihydroxyphenyl)-1-propanone, 1770–1771
- 5-Propionylsalicylamide.** 2-Hydroxy-5-(1-oxopropyl)benzamide, 1795

- 3-Propionylsalicylic acid.** *2-Hydroxy-3-(1-oxopropyl)benzoic acid*, 1784
- 5-Propionylsalicylic acid.** *2-Hydroxy-5-(1-oxopropyl)benzoic acid*, 1784
- 8-Propionylumbelliferone.** *7-Hydroxy-8-(1-oxopropyl)-2H-1-benzopyran-2-one*, 1993
- Propiosyringone.** *1-(4-Hydroxy-3,5-dimethoxyphenyl)-1-propanone*, 1853–1854
- Propiovanillone.** *1-(4-Hydroxy-3-methoxyphenyl)-1-propanone*, 1787, 1814
- Propioveratrone.** *1-(3,4-Dimethoxyphenyl)-1-propanone*, 1843
- Protokosin.** *1-[3,5-Bis[[2,6-dihydroxy-4-methoxy-3-(2-methyl-1-oxopropyl)-5-methylphenyl]methyl]-2,4,6-trihydroxyphenyl]-1-propanone*, 2145, 2167
- Pseudoaspidinol-iB.** *1-(4,6-Dihydroxy-2-methoxy-3-methylphenyl)-2-methyl-1-propanone*, 2037–2038
- Radiatinol.** *1-(7-Hydroxy-1,3-benzodioxol-5-yl)-1-propanone*, 1989
- Respropiophenone.** *1-(2,4-Dihydroxyphenyl)-1-propanone*, 1759, 1767–1768
- Robustaol A.** *3-[[[2,6-Dihydroxy-4-methoxy-3-methyl-5-(2-methyl-1-oxopropyl)phenyl]methyl]-2,4,6-trihydroxy-5-(3-methyl-1-oxobutyl)benzaldehyde*, 2161
- Robustaol B.** *1-(2,4-Dihydroxy-6-methoxyphenyl)-2-methyl-1-propanone*, 2027
- Semimyrtocommulone.** *4-[1-[2,4,6-Trihydroxy-5-methyl-3-(2-methyl-1-oxopropyl)phenyl]-2-methylpropyl]-5-hydroxy-2,2,6,6-tetramethyl-4-cyclohexene-1,3-dione*, 2161
- 3,4,9,10-Tetrahydro-2,2,8,8-tetramethyl-6-propionyl-2H,8H-benzo[1,2-b;3,4-b']dipyrans-5-ol.** *1-(3,4,9,10-Tetrahydro-5-hydroxy-2,2,8,8-tetramethyl-2H,8H-benzo[1,2-b:3,4-b']dipyrans-6-yl)-1-propanone*, 2008
- Tricromyl.** *3-Methyl-4H-1-benzopyran-4-one*, 1762
- 2,4,6-Trihydroxypropiophenone-4-O-3,3'-dimethylallyl ether.**
1-[2,6-Dihydroxy-4-[(3-methyl-2-butenyl)oxy]phenyl]-1-propanone, 1907
- 2,2'',4'-Triol-3,3'',5''-trimethoxy-5,5''-dipropionyl[m-terphenyl] 2-propionate.**
Propionic acid 4',2''-dihydroxy-3,5',3''-trimethoxy-5,5''-dipropionyl-[1,1':3',1'']terphenyl-2-yl ester, 377
- Tripseudo-aspidinol iB, iB, iB.** *1,1'-[[2,4,6-Trihydroxy-5-(2-methyl-1-oxopropyl)-1,3-phenylene]bis[methylene(2,4-dihydroxy-6-methoxy-5-methyl-3,1-phenylene)]]bis[2-methyl-1-propanone*, 2156
- Uliginosin A-iBiB.** *3,5-Dihydroxy-4,4-dimethyl-2-(2-methyl-1-oxopropyl)-6-[[2,4,6-trihydroxy-3-(3-methyl-2-butenyl)-5-(2-methyl-1-oxopropyl)phenyl]methyl]-2,5-cyclohexadien-1-one*, 2152
- Uliginosin A-iViB.** *3,5-Dihydroxy-4,4-dimethyl-2-(3-methyl-1-oxobutyl)-6-[[2,4,6-trihydroxy-3-(3-methyl-2-butenyl)-5-(2-methyl-1-oxopropyl)phenyl]methyl]-2,5-cyclohexadien-1-one*, 2165
- Uliginosin B-iBiB.** *2-[[[5,7-Dihydroxy-2,2-dimethyl-8-(2-methyl-1-oxopropyl)-2H-1-benzopyran-6-yl]methyl]-3,5-dihydroxy-4,4-dimethyl-6-(2-methyl-1-oxopropyl)-2,5-cyclohexadien-1-one*, 2152
- Uliginosin B-iViB.** *2-[[[5,7-Dihydroxy-2,2-dimethyl-8-(2-methyl-1-oxopropyl)-2H-1-benzopyran-6-yl]methyl]-3,5-dihydroxy-4,4-dimethyl-6-(3-methyl-1-oxobutyl)-2,5-cyclohexadien-1-one*, 2165
- U-0521.** *1-(3,4-Dihydroxyphenyl)-2-methyl-1-propanone*, 2018–2019

Common Abbreviations

Volume 1

Common abbreviations used in the dictionary for organic chemistry

Å	Angström units
b.p.	Boiling point (for example, b.p. _{0.1} 100° means boils at 100° if the pressure is 0.1 mm Hg)
(d)	Decomposition
20°	20 degrees Celsius
d	Density (for example, d ²⁰ specific gravity at 20°C referred to water at 4°C)
DDQ	2,3-Dichloro-5,6-dicyanobenzoquinone
EPR	Electron paramagnetic resonance
HMPT	Hexamethylphosphoric Triamide
¹³ C NMR	Nuclear magnetic resonance relative to carbon 13
(E)	Geometric stereodescriptor used for compounds having achiral elements resulting from double bonds where the groups of highest priority are on the opposite sides of the vertical reference plane
¹⁹ F NMR	Nuclear magnetic resonance relative to fluorine 19
GC	Gas chromatography
GC-MS	Gas chromatography–mass spectrometry
GLC	Gas–liquid chromatography
h	Hour
¹ H NMR	Nuclear magnetic resonance relative to proton
HPLC	High pressure liquid chromatography
IR	Infrared (spectra)
iso-	Aliphatic hydrocarbon having two methyl groups on the terminal carbon atom of the chain (for example, isoamyl (CH ₃) ₂ CH-CH ₂ -CH ₂ -)
LDA	lithium diisopropylamide
m-	Meta-
M	Molar (concentration)
min	Minute

mol	Molecule
mol.wt.	Molecular weight
m.p.	Melting point
MS	Mass spectra
n-	Normal, as n-butyl
N	Normal (equivalents per liter, as applied to concentration)
NA	Not available
N.B.:	Nota bene
n_D^{20}	Index of refraction (n_D^{20} for 20°C and sodium light)
o-	Ortho-
p-	Para-
Pa	pascal
Pd/C	Palladium on charcoal
pK_a	Log of the reciprocal of the dissociation constant, $1/\log K_a$
Rh/C	Rhodium on charcoal
r.t.	Room temperature
Sadtler	Sadtler Research Laboratories, Philadelphia (USA)
SDS	Sodium dodecyl sulfate
sec-	Secondary
SM	Starting material
tert-	Tertiary-
TFAA	Trifluoroacetic anhydride
TFMS	Trifluoromethanesulfonic acid
TLC	Thin layer chromatography
UV	Ultraviolet (spectra)
Vol.	Volume
(Z)	Opposite of (E)

Volume 2

Common abbreviations used in the dictionary for organic chemistry

Å	Angström units
$(\alpha)_D^{20}$	Specific optical rotation at 20°C for D (sodium) line
b.p.	Boiling point (for example, b.p. _{0.1} 100° means boils at 100° if the pressure is 0.1 mm Hg)
d	Density (for example, d_4^{20} specific gravity at 20°C referred to water at 4°C)
20°	20 degrees Celsius
DEAD	Diethyl azodicarboxylate
dl	Racemic
DME	1,2-Dimethoxyethane (glyme)
DMF	Dimethylformamide
DMSO	Dimethyl sulfoxide

EIMS	Electron impact mass spectra
GC	Gas chromatography
GLC	Gas liquid chromatography
HMPA	Hexamethylphosphoramide (hexamethylphosphoric triamide),
HMPT	Hexamethylphosphorous triamide
HPLC	High performance (pressure, power) liquid chromatography
¹³ C NMR	Nuclear magnetic resonance relative to carbon 13
(<i>E</i>)	Geometric stereodescriptor used for compounds having achiral elements resulting from double bonds where the groups of highest priority are on the opposite sides of the vertical reference plane
¹⁹ F NMR	Nuclear magnetic resonance relative to fluorine 19
h	Hour
HREIMS	High resolution electron impact mass spectra
HRMS	High resolution mass spectra
¹ H NMR	Nuclear magnetic resonance relative to proton
IR	Infrared spectra
iso-	Aliphatic hydrocarbon having two methyl groups on the terminal carbon atom of the chain (for example, isoamyl (CH ₃) ₂ CH-CH ₂ -CH ₂ -)
m-	Meta-
M	Molar (concentration)
min	Minute
mol	Molecule
mol. equiv.	Molecular equivalent
mol.wt.	Molecular weight
m.p.	Melting point
MS	Mass spectra
n-	Normal (as n-butyl)
N	Normal (equivalents per liter, as applied to concentration)
NA	Not available
N.B.:	Nota bene
NBS	N-Bromosuccinimide
n _D ²⁰ =	Index of refraction (n _D ²⁰ for 20°C and sodium light)
o-	Ortho-
p-	Para-
Pd/C	Palladium on charcoal
PdCl ₂ /C	Palladium chloride on charcoal
PdO/C	Palladium oxide on charcoal
pH	Log of reciprocal of hydrogen ion concentration
pK _a	Log of the reciprocal of the dissociation constant, 1/log K _a
Pt/C	Platinum on charcoal
r.t.	Room temperature
sec-	Secondary (as sec-butyl)
SM	Starting material
TBAI	Tetrabutylammonium iodide

tert-	Tertiary (as tert-butyl)
TFE	2,2,2-Trifluoroethanol
THF	Tetrahydrofuran
TLC	Thin layer chromatography
UV	Ultraviolet spectra
(<i>Z</i>)	Opposite of (<i>E</i>)

Volume 3

Å	Angström units
(α) _D ²⁰	Specific optical rotation at 20°C for D (sodium) line
ART	2-Amino-1-(3,4-dihydroxyphenyl)ethanone
b.p.	Boiling point (for example, b.p. _{0.1} 100° means boils at 100° if the pressure is 0.1 mm Hg)
CAN	Ceric ammonium nitrate
m-CPBA	m-Chloroperoxybenzoic acid
20°	20 degrees Celsius
d	Density (for example, d ²⁰ specific gravity at 20°C referred to water at 4°C)
(d)	with decomposition
DEAD	Diethyl azodicarboxylate
dl	Racemic
DME	1,2-Dimethoxyethane (glyme)
DMF	Dimethylformamide
DMSO	Dimethyl sulfoxide
DMPU	1,3-Dimethyl-3,4,5,6-tetrahydro-2-[1 <i>H</i>]-pyrimidinone
DOPKET	1-(3,4-Dihydroxyphenyl)-2-hydroxyethanone
equiv	Equivalent
GC	Gas chromatography
HMPA	Hexamethylphosphoramide (hexamethylphosphoric triamide)
HMPT	Hexamethylphosphorous triamide
HPLC	High performance (pressure, power) liquid chromatography
¹³ C NMR	Nuclear magnetic resonance relative to carbon 13
(<i>E</i>)	Geometric stereodescriptor used for compounds having achiral elements resulting from double bonds where the groups of highest priority are on the opposite sides of the vertical reference plane
¹⁹ F NMR	Nuclear magnetic resonance relative to fluorine 19
h	Hour
HR-MS	High resolution mass spectra
¹ H NMR	Nuclear magnetic resonance relative to proton
IR	Infrared spectra
iso-	Aliphatic hydrocarbon having two methyl groups on the terminal carbon atom of the chain (for example, isoamyl (CH ₃) ₂ CH-CH ₂ -CH ₂ -)

LCEC	Liquid chromatography with electrochemical detection
LDA	Lithium diisopropylamide
m-	Meta-
M	Molar (concentration)
min	Minute
mol	Molecule
mol.wt.	Molecular weight
MOM-	Methoxymethyl-
m.p.	Melting point
MS	Mass spectra
n-	Normal (as n-butyl)
N	Normal (equivalents per litre, as applied to concentration)
N.B.	Nota bene
NBS	N-Bromosuccinimide
n_D^{20}	Index of refraction (n_D^{20} for 20°C and sodium light)
N,N'-MBA	N,N'-Methylenebisacrylamide
NPFA	Nitropentafluoroacetone
o-	Ortho-
p-	Para-
Pd/C	Palladium on charcoal
PdCl ₂ /C	Palladium chloride on charcoal
PdO/C	Palladium oxide on charcoal
pH	Log of reciprocal of hydrogen ion concentration
pK_A	Log of the reciprocal of the dissociation constant, $1/\log K_A$
pK_B	Log of the reciprocal of the dissociation constant, $1/\log K_B$
Ψ	pseudo
psi	per square inch
Pt/C	Platinum on charcoal
r.t.	Room temperature
sec-	Secondary (as sec-butyl)
SM	Starting material
TBAI	Tetrabutylammonium iodide
TEAF	Triethylammonium formate
tert-	Tertiary (as tert-butyl)
TFA	Trifluoroacetic acid
TFE	2,2,2-Trifluoroethanol
THF	Tetrahydrofuran
TLC	Thin layer chromatography
TMS	Tetramethylsilane
UV	Ultraviolet spectra
w/w	per cent "weight in weight" expresses the number of grams of an active constituent in 100 grams of solution or mixture
(Z)	Opposite of (E)

Volume 4

Common abbreviations used in the dictionary for organic chemistry

$(\alpha)_D^{20}$	Specific optical rotation at 20°C for D (sodium) line
atm	atmosphere
b.p.	Boiling point (for example, b.p. _{0.1} 100° means boils at 100° if the pressure is 0.1 mm Hg)
BF ₃	Boron trifluoride
BF ₃ -OBu ₂	Boron trifluoride-n-Butyl ether complex
BF ₃ -OAc	Boron trifluoride-acetic anhydride complex
CCL	Candida cylindracea lipase
¹³ C NMR	Nuclear magnetic resonance relative to carbon 13
d	Density (for example, d ₄ ²⁰ specific gravity at 20°C referred to water at 4°C)
(d)	with decomposition
20°	20 degrees Celsius
DDQ	2,3-Dichloro-5,6-dicyano-1,4-benzoquinone
DMA	Dimethylacetamide
DMF	Dimethylformamide
DMSO	Dimethyl sulfoxide
3D QSAR	Three-dimensional quantitative structure-activity relationship
(E)	Geometric stereodescriptor used for compounds having achiral elements resulting from double bonds where the groups of highest priority are on the opposite sides of the vertical reference plane
equiv	Equivalent
ESR	Electron spin resonance
EtOH	Ethyl alcohol
¹⁹ F NMR	Nuclear magnetic resonance relative to fluorine 19
GC	Gas chromatography
GLC	Gas liquid chromatography
h	Hour
HMG-coA	3-Hydroxy-3-methylglutaryl co-enzyme A reductase
¹ H NMR	Nuclear magnetic resonance relative to proton
HNTf ₂	Bis(trifluoromethanesulfonyl)amide
HPLC	High performance (pressure, power) liquid chromatography
HRMS	High resolution mass spectra
IR	Infrared spectra
iso-	Aliphatic hydrocarbon having two methyl groups on the terminal carbon atom of the chain (for example, isoamyl (CH ₃) ₂ CH-CH ₂ -CH ₂ -)
LD ₅₀	Median lethal dose, the quantity of a chemical that is estimated to be fatal to 50% of the organisms tested
LDA	Lithium diisopropylamide
m-	Meta-

μCi	Microcurie
min	Minute
mol	Molecule
mol.	equiv. Molecular equivalent
mol.wt.	Molecular weight
m.p.	Melting point
M	Molar(concentration)
MAO	Monoamine oxidase
MNDO	Modified Neglect of Diatomic Overlap
MS	Mass spectra
n-	Normal (as n-butyl)
N	Normal (equivalents per liter, as applied to concentration)
N.B.:	Nota bene
n_D^{20} =	Index of refraction (n_D^{20} for 20°C and sodium light)
nm	nanometre
NMDA	N-methyl-D-aspartic acid
o-	Ortho-
^{17}O	NMR Nuclear magnetic resonance relative to oxygen 17
p-	Para-
PCC	pyridinium chlorochromate
Pd/C	Palladium on charcoal
pH	Log of reciprocal of hydrogen ion concentration
PIDA	Phenyliodonium diacetate
pK_a	Log of the reciprocal of the dissociation constant, $1/\log K_a$
PPL	Porcine pancreas lipase
r.t.	Room temperature
sec-	Secondary (as sec-butyl)
SM	Starting material
tert-	Tertiary (as tert-butyl)
TfOH	Trifluoromethanesulfonic acid (Triflic acid)
THF	Tetrahydrofuran
TLC	Thin layer chromatography
UV	Ultraviolet spectra
VPS	Valerophenone synthase
w/w	per cent "weight in weight" expresses the number of grams of an active constituent in 100 grams of solution or mixture
(Z)	Opposite of (<i>E</i>)
