$C_{27}H_{43}NO_8$ 509.639
Alkaloid from *Veratrum viride* and other *Veratrum* spp. and *Zygadenus venenosus* (Liliaceae). Potent hypotensive agent with characteristic heart action, causing irregularity and prolongation of the beat. Also affects nerve impulses. Derivs. have been used to treat myasthenia gravis. Esters are hypotensive agents, with Germitrine being the most active of the nat. alkaloids. Many semisynthetic esters have also been evaluated. They show strong emetic activity with freq. an unacceptably narrow range of therapeutic usefulness. Mp 219-220°. $[\alpha]_D^{25}$ +5 (EtOH). Forms MeOH solvate which loses MeOH at 163-173°.
