Foreword

Plants containing alkaloids have served humankind since ancient times. Indeed, some of the oldest surviving written records of commercial transactions involving medicinal plants are of alkaloid-containing plants. For thousands of years, indigenous groups around the world discovered, through self-experimentation with locally available plant extracts, that they could provide materials for hunting prey, culinary enhancement, amelioration from disease, relief of pain, and healing. These plants contributed significantly to the survival of indigenous groups throughout history. This same process of low-throughput clinical screening also identified many plants which were to be avoided because of their toxicity, again due to alkaloids. It is the oral and written records of these investigations which survive today and form the basis of both clinical care in much of the world and aspects of contemporary drug discovery.

A transition occurred at the beginning of the 19th century when investigations on the most significant medicinal and toxic plants of Europe commenced, these included studies on opium, colchicum, nux vomica, ipecac, belladonna, and pepper. As it transpired, all of the isolated, biologically active compounds were alkaloids, and it was these investigations which initiated the diverse studies of alkaloids as a class of natural products which continue today.

Since those early times, there have been six important phases to the study of alkaloids. The first was the tremendous increase in the number of structurally unique and complex alkaloids isolated from plants, structures which defined the new field of heterocyclic chemistry. The second was the dramatic reduction in time and the amount of material required to determine the precise stereochemical and conformational structure of an individual alkaloid as a result of the advances in spectroscopic and chromatographic techniques which permitted ever smaller samples to be structurally characterized. Third, there evolved the understanding that groups of structurally similar alkaloids could, sometimes, be related to each other based on one or two biosynthetic precursors from which chemically rational metabolic schemes could be used to generate the plethora of alkaloid skeleta and structures. Fourth, there was the recognition that this structural diversity, skeletal complexity, and stereo-uniqueness were at the same time a benefit and a bane. While the activity could be exquisite, alkaloids may also have significantly modulated biological activity based on a transformation at a single functional group or stereochemical center. Fifth, as more complex alkaloids were structurally elucidated they became challenging targets for synthetic organic chemists, and continue to be the basis for the stimulation of numerous brilliant synthetic strategies and innovations in organic chemistry. Finally, as knowledge of the biology associated with alkaloids grew in both breadth and depth, initially at the *in vivo* level and eventually at the molecular level, some alkaloids were established to be archetypal entity for a particular biological response.

Consequently, in this 200-year period, many alkaloids became critical components of the global pharmaceutical armamentarium, and tremendous healing has resulted from their clinical application. As our food and beverage practices have evolved, alkaloids have become a core component of every day life for almost everyone on the planet on a moment to moment basis, and caffeine, capsaicin, nicotine, theobromine, adrenaline, dopamine, serotonin, etc. are representative examples. Many of the colors of flowers and vegetables are due to alkaloids, and at the same time, alkaloids represent enormous and potent biological power. Sometimes this power can be ameliorated by dose reduction to produce health beneficent agents (for example, the ergot alkaloids and aconitine); in other instances they must simply be avoided by both animals and humans, such as those in many toxic plants, animals, and fungi. Alkaloids also have led medicinal chemists down productive pathways for drug development, although it is seldom appreciated that the molecular phylogeny of many synthetic drugs can be traced to classical alkaloids such as morphine and atropine. At the same time, there is a "dark side" to alkaloids, because at least three - morphine, cocaine, and nicotine - have powerful social implications causing tremendous human suffering through addiction, disease development, and wars which continue unabated today. It is this good, bad, and downright ugly aspect to alkaloids which has fascinated so many scientists for so long. As a global society we do indeed have this love-hate relationship with alkaloids unlike that of any other group of natural products.

As mentioned, with the rise of spectroscopy beginning in the 1950s, interest developed in examining alkaloids from wider sources than higher plants. Indeed, it appears now that almost every class of organism, insects, reptiles, birds, fungi, bacteria, the diversity of marine organisms, and mammals, including humans, all produce alkaloids. The last twenty years have witnessed an explosion in the numbers and the structural diversity of alkaloids from these sources, and these developments are dramatically reflected in this updated compilation.

From a chemical perspective, it transpires that there is almost no overlap in the structural diversity of plant, fungal, and marine alkaloids. Each is a chemically brilliant world unto itself. Thus, one would not expect to find a monoterpenoid indole alkaloid in a marine sponge, nor a manzamine alkaloid in a tropical liana. This unimaginable structural diversity places the alkaloid sciences on the cusp of a deeper understanding of their biosynthetic formation. While significant and successful efforts are underway to elucidate pathways and isolate genes which are related to both plant and fungal alkaloids, for marine organisms this aspect is completely unexplored, although the most spectacular new skeleta and potent biological activities are derived from these marine sources.

The past twenty years have witnessed the evolution of three new areas of alkaloid chemistry and biology. The first is that of the integrity of alkaloid biosynthesis. Alkaloids such the ansa macrolides from *Maytenus* and from *Colubrina*, as well as the ergot alkaloids of the Convolvulaceae are now established to be derived biosynthetically from parasitic or symbiotic fungal organisms, not through the metabolic pathways of the host plant. Second, structural conclusions regarding individual alkaloids can change; an α-hydroxy group of yesterday can become a β-hydroxy today based on refined chemical, spectroscopic, and crystallographic conclusions. As one looks through the *Dictionary of Alkaloids*, it is important to be aware that there are many examples where the synthesis of a proposed structure has failed to support that structure, or where new spectroscopic evidence does not support a proposed structure. While in some cases this has led to refinement of the structure, in others a dangling question remains as to the true identity of the natural alkaloid. Third, there is the connection of alkaloids to the biotechnology revolution, and the marvelous progress that has been made for certain alkaloid pathways in elucidating the enzymes and genes of alkaloid biosynthesis.

What, then, is the "fit" for the *Dictionary of Alkaloids,* and why is it such an important resource for researchers? Burgeoning efforts at structure elucidation and biological experimentation make it extremely difficult to quickly find key literature citations to original sources of information on individual compounds. It was recognized some years ago that there was a core global need for information systems on the isolation, spectral properties, and biological properties of alkaloids. The *Dictionary of Alkaloids* is a critical, absolutely essential component in filling that need. It is the only accumulation in the world of the taxonomy, chemistry, and biology of alkaloids derived from all sources. It provides extensive information to references for the isolation, spectroscopy, and biology of an individual alkaloid, and to its other attributes and uses. Importantly, the alkaloids are frequently collected as a group based on a parent structure. This simplifies the presentation, and accumulates alkaloids having quite different trivial names. The volume is easy to use, and the diverse indexes place the most significant information at one's fingertips. It is a unique resource, and one which is indispensable to any alkaloid chemist and biologist. The inclusion of a fully substructure searchable CD-ROM in this second edition makes the resource even more valuable.

In spite of the vast range of studies of alkaloids over the years, much remains to be done. There are many plant families which are known to contain alkaloids where the alkaloids remain to be identified; there are untold marine organisms and tens of thousands of microorganisms with unknown alkaloids. There is the genetics of alkaloid biosynthesis in more diverse organisms, and the tremendous potential for being able to produce alkaloids through isolated and stabilized systems in a sustainable manner. The key justification for alkaloid research, though, must be relevance to the enhancement of public health. For many years, justification for alkaloid research was based on their novelty; there was no relationship to biology. Indeed, it was shown several years ago that about 75% of all plant alkaloids had never been evaluated in a single bioassay. There remains a critical need for the wider biological study of known and new alkaloids in high throughput screening systems. Alkaloids will continue to have a critical role to play in the health of the Earth and of its inhabitants for the foreseeable future. They represent a significant aspect in the evolving concept of sustainable drugs and biological agents. However, only through the extensive collaboration of taxonomists, chemists, biologists, pharmacologists, formulation chemists, and clinicians can this potential be realized.

In the 12th century, according to Matthew Fox in "*Original Blessing,*" it was Saint Hildegard of Bingen who, in discussing the relationship of humankind and Nature in philosophical and practical terms, suggested that "*All nature is at the disposal of humankind. We are to work with it. For without it, we cannot survive.*" Rather like humankind, alkaloids, in all of their stunningly beautiful complexity and diversity, are an integral and essential aspect of nature with which we must work to survive.

Geoffrey A. Cordell, Ph.D.
Professor Emeritus
Evanston, IL USA

The Editors

John Buckingham is a former lecturer in organic chemistry at the University of London. He has been involved with the Chapman & Hall (now CRC) chemical database since its inception in 1980, initially as a Chapman & Hall employee, more recently as Editorial consultant. From the database has been produced various editions of the *Dictionary of Organic Compounds* and the *Dictionary of Natural Products* (both of which have been for some years solely electronic). In addition, he compiled (with I.W. Southon) the first edition of the *Dictionary of Alkaloids* (print only) in 1989. He is also the author of the popular science books *Chasing the Molecule* and *Bitter Nemesis; The Intimate History of Strychnine*

Keith H. Baggaley obtained his BSc (Hons) and PhD degrees from the University College of Wales, Aberystwyth followed by a post-doctoral fellowship in chemistry at the Royal Institute of Technology, Stockholm, Sweden, with Professor Holger Erdtman and Professor Torbjorn Norin. He then took up a Junior Research Fellowship with Professor David Ollis at the University of Sheffield before joining Beecham Research Laboratories in Surrey as a research chemist. At Beecham he worked on discovery projects concerned with cholesterol lowering drugs, platelet aggregation inhibitors and semisynthetic antibiotics as well as research on clavulanic acid biosynthesis. He has been an editor of the Chapman & Hall dictionaries since 1996.

Andrew D. Roberts took his BSc (Hons) degree at Trent Polytechnic, Nottingham (now Nottingham Trent University), UK 1973–1977 and completed studies in drug discovery projects at Pfizer (Sandwich) UK. He contributed to the *Dictionary of Organic Compounds* (Chapman & Hall) published in 1982 and has since been a Contributing Editor for other projects including the *Dictionary of Antibiotic Substances* (1988), *Dictionary of Drugs* (1990) and has since been an Editor on the *Dictionary of Natural Products* which was first published in 1993.

Lászloó Ferenc Szabó was born in Szentgotthárd (Hungary) on April 15, 1931 and studied in Pharmacy at University of Medicine, Budapest, 1949–54. Member of the Department of Medicinal Chemistry, later of the Department of Organic Chemistry of the Semmelweis University Budapest (scientific assistant, associate professor, ordinary professor), director of the same department 1977–1996, Ph.D. in organic chemistry, Doctor habilitatus. Research visitor at Université Libre de Bruxelles, 1972/73, several times in Merseburg (Germany). Presently professor emeritus of the Semmelweis University. Fields of activity: chemistry of natural products, mainly indole alkaloids (strychnine, strictosidine) and terpenoids (iridoids, secologanin), biogenetic formation of natural products, heterocyclic chemistry, mainly quinolizine compounds, polymer supported synthesis of small molecules, theoretical problems of organic chemistry (PMO theory, graph analysis).

Dr A.M. Hodgson, Consultant

Dr F.M. Macdonald, CRC Press, Boca Raton

Dr S.P. Walford, CRC Press, London

Additional data collected by contributors to the *CRC Chemical Database*

Introduction

1. COVERAGE

The *Dictionary of Alkaloids* is a comprehensive database containing over 40,000 compounds. It is a subset of the *Dictionary of Natural Products* (DNP) database. DNP is an ongoing project based on a 25-year review of the natural product literature. For the present project, the subset of DNP entries referring to alkaloids were carefully checked and reviewed and enhanced with a considerable amount of additional information relating to their natural occurrence. The intention is that the Dictionary should contain data on every known alkaloid, and various checks carried out during the compilation process indicate that it comes very close to achieving this aim. The Editors would be grateful to learn of any accidental omissions.

The compounds present in the Dictionary have been classified under the **Structural Types** section below. This section also includes biosynthetic information on these compound classes.

In compiling the printed version and the CD-ROM, the primary literature has been reviewed up to mid-2008.

2. ORGANISATION OF ENTRIES

The Dictionary is arranged alphabetically by entry name. Every entry is numbered to assist ready location. Many compounds are included as derivatives of main entry compounds but important derivatives have their own individual cross-referenced entries. Use of the CD-ROM indexes enables the rapid location of all compounds in the Dictionary by name or compound type, regardless of their location.

A representative dictionary entry is shown in **Figure 1.**

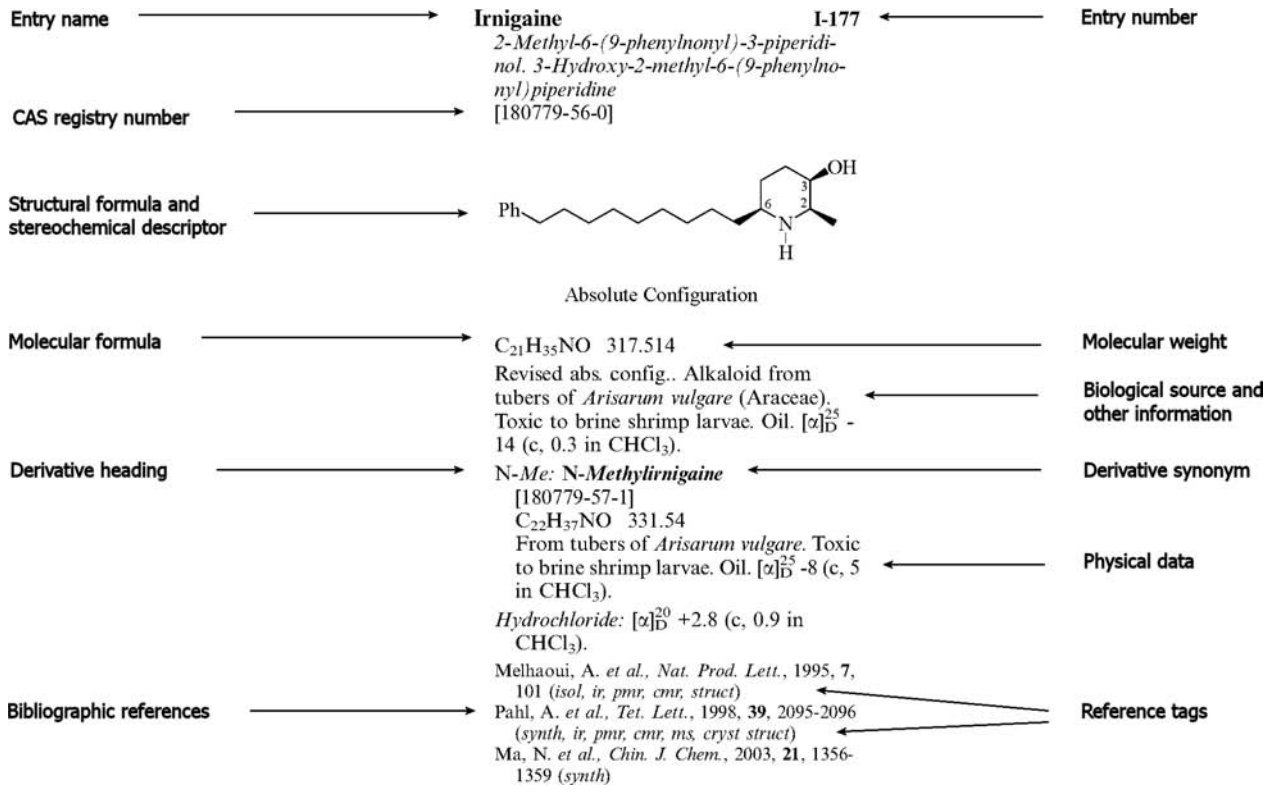

FIGURE 1

2.1 Chemical names and synonyms

The Dictionary contains a wide range of synonyms which may be (a) those found in the primary literature, (b) *Chemical Abstracts* names, or (c) names added editorially to achieve as much consistency as possible with other closely related substances. Names corresponding to those used by CAS during the 9th and subsequent

Collective Index periods (1973-) are labelled 9CI Names. All important derivatives embedded within entries are named (but see comment on CAS nomenclature below). If a compound cannot be located immediately in the main body of the entries, it is important to use the indexes. The CD-ROM version of the Dictionary is much more highly indexed than the printed version.

The most authoritative current statement of good practice on natural product nomenclature is the document *IUPAC Recommendations 1999* (*Pure Appl. Chem.*, 1999, **71**, 587–643) the full text of which can be read on the *Dictionary of Alkaloids on CD-ROM* (access from the Windows® Start menu item or via the Help menu in the main program).

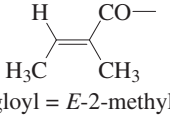
Some alkaloids have been given trivial names which duplicate those already in the literature, or which are simultaneously published for two or more non-identical substances. Where such a duplication is noticed this is indicated by the dagger symbol (‡) immediately following the name. Borderline cases, especially as between presence or absence of terminal e or suffix A or 1 are considered to constitute duplicates for this purpose.

2.1.1 Nomenclature

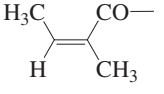
It is expected that this Dictionary will be used by a wide variety of scientists, not all of whom will be specialist organic chemists. Therefore compounds have been named so as to facilitate access to their factual data by keeping the nomenclature as simple as possible, whilst still adhering to good practice as determined by IUPAC (the International Union of Pure and Applied Chemistry). A great deal of care has been taken to achieve this aim as nearly as possible.

A much fuller description of the detailed nomenclature of individual classes of alkaloids is given in the **Structural Types** section. The following notes are of general applicability throughout the Dictionary.

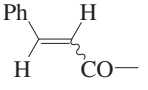
1. There are many examples in the primary literature of compounds being named in ways which are violations of good IUPAC practice, e.g. where the substituents are ordered non-alphabetically. These are not reported in their incorrect form but have been corrected.
2. The number of trivial names used for acylating substituents has been kept to a minimum but the following are used throughout the Dictionary.



Tigloyl = *E*-2-methyl-2-butenoyl



Angeloyl = *Z*-2-methyl-2-butenoyl



Cinnamoyl = 3-phenyl-2-propenoyl

3. Many other trivial appellations have from time to time appeared in the literature for other acyl groups (e.g. Senecioyl = 3-methyl-2-butenoyl, Feruloyl = 3-(4-hydroxy-3-methoxypheny1)-2-propenoyl or 4-hydroxy-3-methoxycinnamoyl).

The term **prenyl** for the common 3-methyl-2-butenyl substituent, $(H_3C)_2C{=}CHCH_2$-, is used throughout the Dictionary. Several other names for this substituent have from time to time been used and appear in the primary literature including the following:

3-Methyl-2-butenyl (systematic)
γ,γ-Dimethylallyl
3,3-Dimethylallyl
3,3-Dimethylpropenyl
Dimethallyl
Isoprenyl
Isopentenyl
β,β-Dimethylacrylyl

2.2 Cas registry numbers

CAS numbers are identifying numbers allocated to each distinctly definable chemical substance indexed by CAS since 1965 (plus some retrospective allocation of numbers by CAS to compounds from earlier index periods). The numbers have no chemical significance but they provide a label for each substance independent of any system of nomenclature. They are extensively used for exchanging information between individuals and databases. The numbers take the form NNNNNN-NN-R, where the total number of digits is five or more and R is a check digit.

For practical purposes, CAS numbers have certain shortcomings arising from their free allocation, resulting in one substance having more than one potential number. Duplication may arise for one of several reasons to do with the detailed chemistry of the substance, for example tautomerism, solvent formation, partially unspecified stereochemistry. There are also replaced numbers. For this reason, Dictionary entries will often contain one or more *Additional CAS numbers* which may help the user to obtain further information about the substance, especially by online searching.

Clearly, the additional CAS numbers given in this Dictionary have to be used with care. Their inclusion in the entry is the result of an editorial decision by the Dictionary contributor that they refer to what is essentially the same substance, but this decision may be a subjective one. Care has been taken to ensure that the main CAS number given in this Dictionary for each substance is the correct one.

Further information on CAS number allocation policy can be obtained from CAS indexes or *The Organic Chemist's Desk Reference.*

2.3 Structural formulae

Every attempt has been made to present the structures of chemical substances as accurately as possible according to best current practice and recommendations of IUPAC. As much consistency as possible has been aimed at between closely-related structures, for example, all sugars are shown as Haworth formulae, and whenever possible in complex structures the rings are oriented in the standard Haworth convention so that structural comparisons can be quickly made.

2.4 Molecular formula and molecular weight

The elements in the molecular formula are given according to the Hill convention (C, H, then other elements in alphabetical order). The molecular weights given are formula weights (or more strictly, molar masses in daltons) and are rounded to three places in decimals. In the case of some high molecular mass substances, such as proteins, the value quoted may be that taken from an original literature source and may be an aggregate molar mass.

2.5 Physical data

The Dictionary gives the following physical characteristics of substances, when available; appearance, melting point, boiling point, optical rotation, density, refractive index, solubility, p*K*a. All of these fields are searchable by numerical value (including range searching) in the CD-ROM version of the Dictionary.

2.5.1 Appearance

Organic compounds are considered to be colourless unless otherwise stated. Where the compound contains a chromophore which would be expected to lead to visible colour, but no colour is mentioned in the literature, the Dictionary entry will mention this fact if it has been noticed by the contributor. An indication of crystal form and recrystallisation solvent is often given but these are imprecise items of data; most compounds can be crystallised from several solvent systems and the crystal form often varies. In the case of the small number of compounds where crystal behaviour has been intensively studied (e.g. pharmaceuticals), it is found that polymorphism is a very common phenomenon and there is no reason to believe that it is not widespread among organic compounds generally.

2.5.2 Melting points and boiling points

The policy followed in the case of conflicting data is as follows:

a. Where the literature melting points are closely similar, only one figure (the highest or most probable) is quoted
b. Where two or more melting points are recorded and differ by several degrees (the most likely explanation being that one sample was impure) the lower figure is given in parentheses, thus Mp 139° (134–135°)

c. Where quoted figures differ widely and some other explanation such as polymorphism or incorrect identity seems the most likely explanation, both figures are quoted without parentheses, thus Mp 142°, Mp 205–206°
d. Known cases of polymorphism or double melting points are noted

Boiling point determination is less precise than that of melting points and conflicting boiling point data is not usually reported except when there appears to be a serious discrepancy between the different authors.

2.5.3 Optical rotations

These are given wherever possible, and normally refer to what the Dictionary contributor believes to be the best characterised sample of highest chemical and optical purity. Where available an indication of the optical purity (op) or enantiomeric excess (ee) of the sample measured follows the specific rotation value.*

Specific rotations are dimensionless numbers and the degree sign which was formerly universal in the literature has been discontinued.

2.6 Spectroscopic data

Many Dictionary entries include ultraviolet spectra which are presented in the format:

[neutral] λ_{max} 198 (log ε 1.55); 224 (sh) (log ε 0.61); 241 (sh) (log ε 0.55) (H_2O) (Berdy)

where ε is the absorption coefficient for a given UV maxima value (λ_{max}). A description of the solvent conditions used, if reported in the literature, is listed at the beginning and end of the UV data in parentheses. All peak absorptions cited are maxima unless otherwise described, e.g. shoulder/inflection (sh) and end absorption (end). In addition, UV data may be followed by the term 'Berdy' or 'DEREP' indicating from which database the data originated. The absence of these terms implies that the data was abstracted from the primary literature.

On the CD-ROM, all the λ_{max} values are indexed in the UV Maxima field and can be searched for numerically including range searching. Similarly, the solvent data associated with the UV data are indexed in the UV Solvent field.

2.7 Hazard and toxicity information

2.7.1 General

Toxicity and hazard information is highlighted by the symbol ▶ and has been selected to assist in risk assessments for experimental, manufacturing and manipulative procedures with chemicals.

The Publishers cannot be held responsible for any inaccuracies in the reported information, neither does the omission of hazard data in the Dictionary imply an absence of this data from the literature. Widely recognised hazards are included, however, and where possible key toxicity reviews are identified in the references. Further advice on the storage, handling and disposal of chemicals is given in *The Organic Chemist's Desk Reference.*

2.7.2 RTECS® Accession Numbers

Many entries in this Dictionary contain one or more RTECS® Accession Numbers.† Possession of these numbers allows users to locate toxicity information on relevant substances from the NIOSH *Registry of Toxic Effects of Chemical Substances*, which is a compendium of toxicity data extracted from the scientific literature.

2.8 Bibliographic references

The selection of references is made with the aim of facilitating entry into the literature for the user who wishes to locate more detailed information about a particular compound. The contents of most references are indicated by reference tags (suffixes) indicating their content and in particular the stereoisomers and derivatives of the parent

*For a recent discussion of the validity and applicability of these terms, see Gawley, R.E., *J. Org. Chem.*, 2006, **71**, 2411–2416.

† RTECS® Accession Numbers are compiled and distributed by the National Institute for Occupational Safety and Health Service of the U.S. Department of Health and Human Services of The United States of America. All rights reserved (1996).

compound which they document. The number of references cited does not indicate the relative importance of a compound; one key recent citation may supersede a number of older ones.

Journal abbreviations generally follow the practice of the Chemical Abstracts Service Source Index (CASSI), except for a short list of very well known journals where the Dictionary gives shorter abbreviations to save space (e.g. *J.A.C.S.* instead of *J. Am. Chem. Soc.*)

2.8.1 Further References

Further useful information on a variety of topics concerned with the structure, description, stereochemistry and nomenclature of organic compounds can be found in the *Organic Chemist's Desk Reference* (Chapman & Hall, 1995; new edition forthcoming).

3. INDEXES

There are two printed indexes:

1. A **Name Index** which lists every compound name and synonym in the Dictionary, and
2. A **Type of Compound** index listing all compounds given in the Dictionary.

The indexes refer to the entry number.

Searches on all text and numerical indexes, as well as structure and substructure searching can be carried out on the CD-ROM version of the Dictionary. For information on the Type of Compound codes used in the Type of Compound Index, please see the **Structural Types** section.

4. ABBREVIATIONS

The following is a selection of the most common Database abbreviations used:

Abbreviation	**Name**
[α]	specific rotation
abs config	absolute configuration
Ac	acetyl
acc	according
AcOH	acetic acid
Ac_2O	acetic anhydride
alk	alkaline
amorph	amorphous
amt	amount
anal	analytical applications, analysis of detection
anhyd	anhydrous
aq	aqueous
BAN	British Approved Name
bibl	bibliography
biosynth	biosynthesis
Bp	boiling point
c	concentration
ca	(*circa*) about
cd	circular dichroism
CAS	Chemical Abstracts Service
chromatog	chromatography
cmr	carbon (^{13}C) nuclear magnetic resonance
CNS	central nervous system
col	colour, coloration
coml	commercial(ly)
compd	compound
conc	concentrated
config	configuration

conformn	conformation
constit	constituent
cryst struct	X-ray crystal structure determination
d	density
dec	decomposes, decomposition
degradn	degradation
deg	degree
deriv(s)	derivative(s)
detn	detection, determination
dil	dilute, dilution
dimorph	dimorphic
diss	dissolves, dissolved
dist(n)	distil, distillation
DMF	dimethylformamide
DMSO	dimethyl sulfoxide
ee	enantiomeric excess
epr	electron paramagnetic (spin) resonance
equilib	equilibrium
esp	especially
Et	ethyl
EtOAc	ethyl acetate
EtOH	ethanol
EtOH aq	aqueous ethanol
exp	experimental
FEMA	Flavor and Extract Manufacturers' Association
fl p	flash point
fluor	fluoresces, fluorescence
formn	formation
Fp	freezing point
g	gram
glc	gas liquid chromatography
Glc	β-D-glucopyranosyl
GRAS	Generally Recognised As Safe
ham	hamster
haz	hazard
hplc	high performance liquid chromatography
hydrol	hydrolyses, hydrolysed, hydrolysis
ihl	inhalation
ims	intramuscular
INN	International Nonproprietary Name
intermed	intermediate
ipr	intraperitoneal
ir	infra-red spectrum
isol(n)	isolation, isolated
isom	isomerism, isomers, isomerises
ivn	intravenous
JAN	Japanese Accepted Name
JMAF	Japanese Ministry for Agriculture, Forestry and Fisheries
LC	lethal concentration
LD	lethal dose: LD_{50}, a dose which is lethal to 50% of the animals tested
M	molecular weight (formula weight)
manuf	manufacturer, manufactured
max	maximum
Me	methyl
MeOH	methanol

Me_2CO	acetone
MEL	maximum exposure limit
metab	metabolite, metabolism
misc	miscible
mixt	mixture
mod	moderately
Mp	melting point
ms	mass spectrum
mus	mouse
n	index of refraction, e.g. n_D^{20} for 20° and sodium light
nmr	nuclear magnetic resonance spectrum (general)
obt	obtained
oc	open cup
occup	occupational
OES	Occupational Exposure Standard
op	optical purity
ord	optical rotatory dispersion
orl	oral
Ph	phenyl (C_6H_5)
pharmacol	pharmacology
pmr	proton (^1H) nuclear magnetic resonance
polarog	polarography
polym	polymerises, polymer
ppd	precipitated
ppm	parts per million
props	properties
purifn	purification
Py	pyridine
rbt	rabbit
ref	reference
resoln	resolution
rev	review
rt	room temperature
scu	subcutaneous
sepn	separation
skn	skin
sl	slightly
sol	soluble
soln	solution
solv	solvent
sp	species (singular)
spar	sparingly
spp	species (plural)
ssp	subspecies
subl	sublimation, sublimes
synth	synthesis
tautom	tautomerism
THF	tetrahydrofuran
tlc	thin layer chromatography
TLV	Threshold Limit Value
tox	toxicity
unsatd	unsaturated
USAN	United States Adopted Name
uv	ultraviolet spectrum
v	very

var	variety
vis	visible
vol	volume

4.1 Reference tags

The following is a selection of the most common Reference Tag abbreviations used:

Abbreviation	**Name**
abs config	absolute configuration
anal	analysis
bibl	bibliography
biosynth	biosynthesis
cd	circular dichroism
chromatog	chromatography
cmr	^{13}C nuclear magnetic resonance spectrum
config	configuration
conformn	conformation
cryst struct	X-ray crystal structure determination
deriv(s)	derivative(s)
detn	determination, detection
dta	differential thermal analysis
glc	gas-liquid chromatography
hplc	high performance liquid chromatography
ir	infrared spectrum
isol	isolation
isom	isomerism
manuf	manufacture
metab	metabolism
ms	mass spectrum
nmr	nuclear magnetic resonance spectrum
occur	occurrence
ord	optical rotatory dispersion
pharmacol	pharmacology
pmr	proton (^{1}H) nuclear magnetic resonance spectrum
props	properties (chemical or physical)
Raman	Raman spectrum
resoln	resolution
rev	review
sepn	separation
struct	structure
synth	synthesis
tautom	tautomerism

5. THE DICTIONARY OF ALKALOIDS ON CD-ROM

The *Dictionary of Alkaloids* is published together with a fully searchable CD-ROM. Space considerations have precluded the inclusion of indexes other than the Name Index and the Type of Compound index in the hard-copy version. By contrast, the CD-ROM contains searchable indexes on the following 35 fields:

Accurate Mass	Chemical Name	Molecular Weight	Supplier
All Entries	Density	Optical Rotation	Type of Compound
All Text	Development Status	Partition Coefficient (Calc.)	Type of Compound Words
Biological Source	Dissociation Constant	Percent Composition	Type of Organism
Biological Use/Importance	Hazard & Toxicity	References	Type of Organism Words
Boiling Point	Hazard Flag	Refractive Index	Use/Importance
Boiling Point Pressure	Ion Charge	Rotation Conditions	UV Maxima
CAS Registry Number	Melting Point	RTECS Accession No.	UV Solvent
CRC Number	Molecular Formula	Source/Synthesis	

In addition to searching the above text fields, it is possible to search on structure and substructure.

Once installed, a Help file providing additional information on data content and guide to searching is available from the CRC Press folder in the Start Menu and from the Help menu on the CD-ROM.

When accessing the *Dictionary of Alkaloids on CD-ROM* the first screen that is obtained is the Search Form window (**Figure 2**).

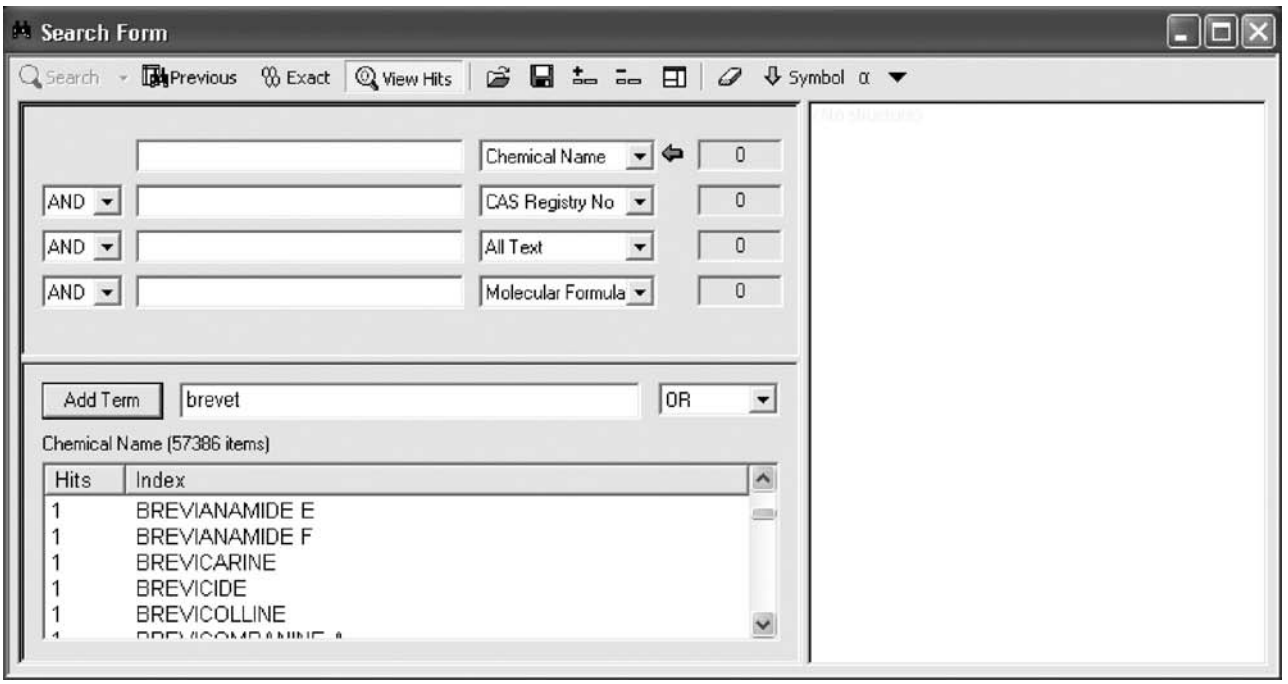

FIGURE 2

The Search Form window is split in to three panes:

1. Structure Search pane - allowing structure and substructure searching
2. Search Terms pane - search from one or more of the 35 available data/text fields
3. Index pane - displays the indexed terms within a selected field

From the Search Form window design your search profile using text, structure or text/structure searching. Once your search has been performed the resultant hits are listed alphabetically by chemical name in the Hit List screen. Clicking on any one of the hits in the Hit List screen will result in that entry being displayed in the Entry Display screen (**Figure 3**).

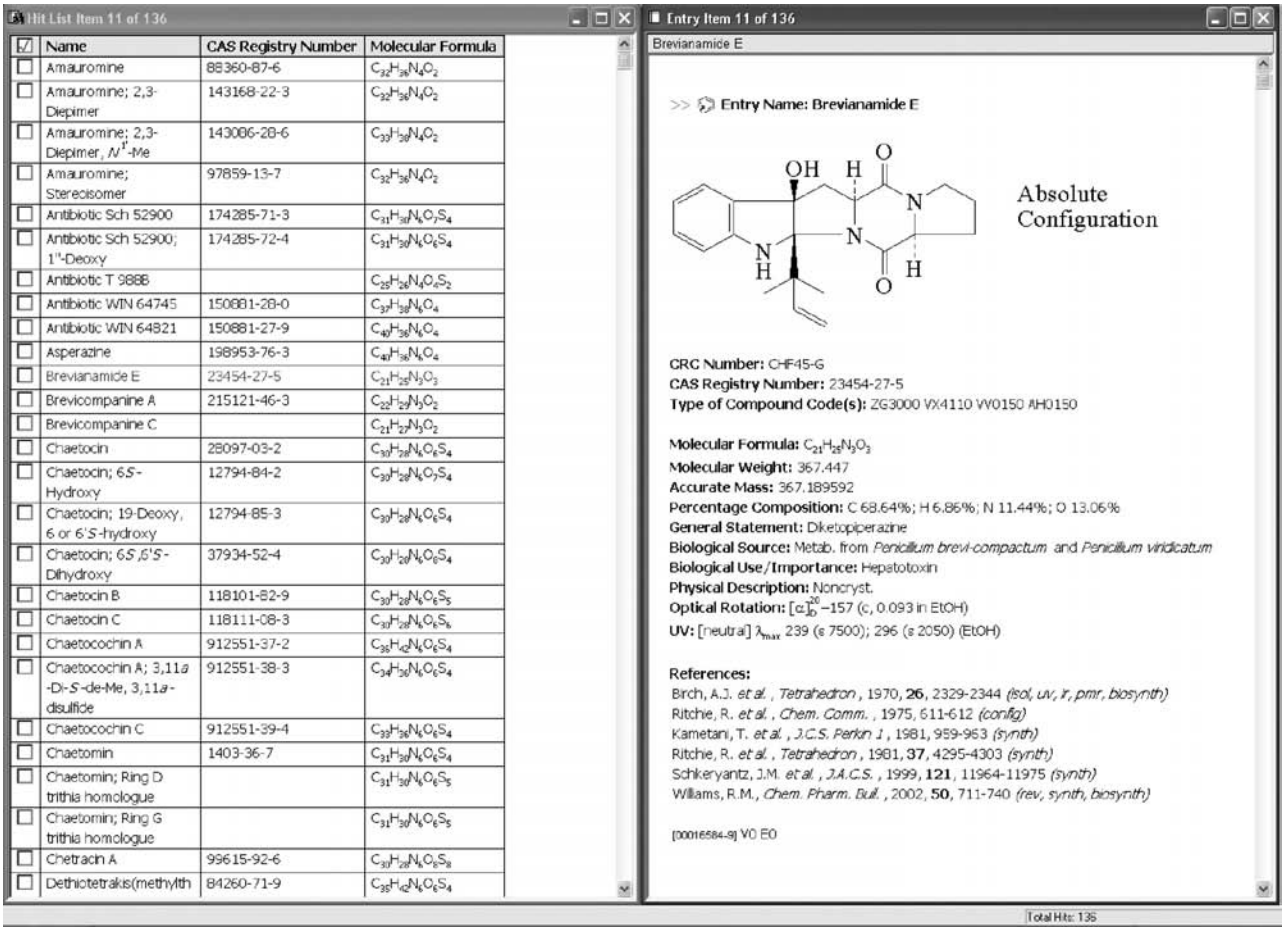

FIGURE 3

Any comments and suggestions for inclusion may be sent to:

Classification of Structural Types

1. DEFINITION OF AN ALKALOID

Alkaloids are a large group of nitrogen-containing secondary metabolites produced by almost every variety of organisms including humans.

The term was originally ascribed to pharmacologically active bases of plant origin, but the definition has subsequently been broadened so that it is now generally considered to include the majority of nitrogen-containing natural products with the exception of the simple amino acids and proteins, and nitrogen-containing glycosidic substances such as the aminoglycoside antibiotics. Alkaloids may be of plant, animal, insect or microbial origin. Basic properties may be weak or absent as in the various types of amide alkaloids. Not all higher plants produce alkaloids, but they are fairly widely distributed. An estimated 40% of plant families contain at least one species that is known to produce alkaloids. Traditional screening methods, e.g. using Dragendorff's reagent, may fail to detect weakly basic alkaloids.

A narrower definition has also been used, according to which the nitrogen atom(s) must be in a negative oxidation state, which excludes for example nitro and nitroso compounds. Other terms which have been used to narrow the definition include 'Imperfect alkaloids' (*Alkaloida imperfecta*), 'Pseudoalkaloid' (compounds in which the skeleton is not amino acid-derived) and 'Protoalkaloid' (bases that are amino acid-derived but acyclic, or contain rings not incorporating the amino acid-derived nitrogen). However, these terms are no longer in common use. Compounds of all of these types are in general included in the Dictionary, as well as most types of depsipeptide in which one or more amino acid residues are modified to a nitrogen heterocycle.

At the other extreme, many scientists in the life sciences/nutrition area tend to define an alkaloid as any nitrogenous toxin, including proteinaceous substances such as ptomaines. These are not included in this Dictionary.

In addition to the exclusions mentioned above, other types of nitrogenous natural product which are not covered by this Dictionary include the Sphingamines (aminolipids which are components of cerebrosides and other important biolipids) and the numerically limited but important polypyrroles, including haem, chlorophyll, etc., which can be considered as pyrrole alkaloids according to some definitions. Full entries for these are given in the parent work, *Dictionary of Natural Products*.

2. BIOSYNTHETIC CONSIDERATIONS

A great deal is now known about the biochemistry and enzymology involved in the synthesis of alkaloids by higher plants and microorganisms; because of experimental difficulties and the complexity of the ecosystems, much less is known about marine alkaloids. Purely chemical biosynthetic studies involving tracer elements are currently somewhat out of fashion, but important work in the 1970s and 1980s by several research groups delineated the framework of the biosynthetic pathways for most of the major groups of alkaloids.

In recent years, biosynthetic studies have extended into genomics, and for some important alkaloids, the whole process from nucleic acids to final assembly is now known in significant detail. The details of these pathways lie outside the scope of this Dictionary. An indication of the amount of information that is potentially available is given by the fact that, for example, eight different enzymes are involved in the construction of the relatively straightforward alkaloid Berberine, including one (berberine bridge enzyme) which is solely responsible for catalysing the insertion of the final methylene bridge into a C_{19} precursor. However, this section gives a general account of the biosynthetic and biogenetic routes to the different classes based on experimental evidence and theoretical ideas of structural interrelationships. Much more information can be obtained by consulting the biosynthesis references given in many of the individual dictionary entries.

3. NOMENCLATURE

As with all types of natural product, at least four different types of name can be distinguished. They are not given equal prominence in this Dictionary. Changes occur with time, notably associated with migrations in *Chemical Abstracts* nomenclature policy.

1. *Trivial names.* Example; Corynoxine. These convey no structural information, and if the structure of the alkaloid has not been determined, this will be the only name available. The oldest date from the first alkaloid isolations in the early nineteenth century and they are very frequently, though not always, derived from the Latin binomial or other name for the originating species, e.g. Strychnine from *Strychnos nux-vomica*. They are given prominence in this Dictionary, and every effort has been made to include every trivial name that has been used in the past. The names have the advantage that since they convey no structural information, they are unchanged if there is a structure revision of the alkaloid, a common event.

   There are a number of duplications of trivial names in the literature, and these are indicated by the sign ‡.

   Trivial names for at least plant-based alkaloids have traditionally ended in *–ine*.
2. *Systematic names.* Example: Methyl 6′-ethyl 1,2,2′,3,6′,7′,8′,8′*a*-octahydro-α-(methoxymethylene)-2-oxospiro[3*H*-indole-3,1′(5′*H*-indolizine]-7′-acetate, (α*E*,1′*S*,6′*S*,7′*S*,8′a*S*)- is the current CAS name for Corynoxine. The names are unambiguous and put natural products on the same footing as other organic compounds, but are of course cumbersome and typically not interpretable in terms of a recognizable structure. They are also subject to change if CAS nomenclature policy changes. These names are given in the Dictionary for relatively small molecules, and the name used to head the entry may be a systematic one if it is short and convenient. For larger molecules, such as Corynoxine, where this Dictionary does not give the systematic (CAS) name, it can be readily accessed using the CAS registry numbers that are given throughout the Dictionary. Systematic names, where they are shown in an entry, are usually presented without their stereodescriptors. These can be seen by examining the structure diagram or by consulting CAS.

   There are many cases in which CAS numbering does not correspond with the biogenetic schemes used by most natural products scientists, and which are given prominence in this Dictionary. Workers in the field are aware of such discrepancies which are inevitable. Another common complication is that structural changes which to the alkaloid specialist are minor (e.g. introduction of a methylenedioxy group) cause profound changes to the CAS name, in this case because the methylenedioxy being is recognised as an additional heterocyclic ring fusion. For further details, see the compound type descriptions given below and the individual dictionary entries.
3. *Semisystematic names.* Examples are the skeletons represented by Corynoxan and Ergoline. IUPAC gives lists of these and directions for introducing new ones. These semisystematic parents can be modified by operators such as nor-, abeo-, and seco-, etc. CAS still uses this type of name for some types of alkaloid such as ergolines (e.g. Ergometrinine =9,10-Didehydro-*N*-(2-hydroxy-1-methylethyl)-6-methylergoline-8-carboxamide), but has abandoned it for many other alkaloid classes, e.g. Corynoxans, in favour of systematic nomenclature. In general, the construction of semisystematic names of this type has not found universal support in view of the discovery of ever more structurally complex types of natural product, and also of the potential complexities caused by different authors deriving new parent skeletons in different ways. These names are not in general given in this Dictionary.
4. *'Semitrivial' names.* These are names which are derived by appending a systematically-derived operator to a trivial parent. Examples are 8-(1,1-Dimethylallyl)confusameline and *N*-Cyano-*sec*-pseudostrychnine. Such names are widespread, but are best avoided because of the possibilities for confusion, especially when there is a structure revision, or where there is more than one numbering scheme in use for the parent skeleton. Trivial names should be preferred. These semitrivial names are however, reported throughout the Dictionary where they are found in the literature. Where a semitrivial name is no longer accurate because there has been a structure revision, a note is given in the dictionary entry, and reference is often given to the possibility of confusion caused by the use of different numbering schemes.

4. PRINCIPAL LITERATURE SOURCES

4.1 Review series

Progress in the Chemistry of Organic Natural Products, formerly *Fortschritte der Chemie Organischer Naturstoffe*, (various editors), Springer Verlag, 1938- (***'Prog. Chem. Org. Nat. Prod.'***).

The leading annual review series for all types of natural product, although recent volumes contain fewer contributions on alkaloids.

Alkaloids, Chemistry and Biology (ed. Manske, R.H.F., then Rodrigo, R., then Brossi, A. then Cordell, G.A.), Academic Press, then Wiley, then Elsevier, 1949- (***'Alkaloids'***).
The leading review series devoted to alkaloids. Referred to in CAS as *'Alkaloids, N.Y.*', or *'Alkaloids (Academic Press)*', (but no longer abstracted)

Alkaloids, Chemical and Biological Perspectives (ed. Pelletier, S.W.), Pergamon/Elsevier, 1983–2000 (‘***Alkaloids Chem. Biol. Perspect***.’).
Another good review series, although no longer published.

Natural Product Reports, Royal Society of Chemistry, 1984-.
Timely, succinct and authoritative reviews; coverage depends on the availability of authors for particular topics.

Boit, H.-G., *Ergebnisse der Alkaloid-Chemie bis 1960*, Akademie Verlag, 1961.
Comprehensive compilation of all alkaloid isolations to 1960.

4.2 Recent books

Raffauf, R.F., *Plant Alkaloids: A Guide to their Discovery and Distribution*, Food Products Press, 1996
Alkaloids: Biochemistry, Ecology and Medical Applications (eds. Roberts, M.A. *et al.*), Plenum Press, 1998

Modern Alkaloids: Structure, Isolation, Synthesis and Biology (eds. Fattorusso, E. *et al.*), Wiley-VCH, 2007

5. TYPE OF COMPOUND CLASSIFICATION SCHEME

All alkaloids in the Dictionary carry one or more Type of Compound codes in the format VX1234, where VX is an invariable code denoting alkaloids (other codes starting with V refer to other types of natural product that can be found in the *Dictionary of Natural Products*. Some alkaloids carry additional non-alkaloid codes).

These codes are shown against the headings below and can be searched in the CD-ROM version of the Dictionary or in the parent *Dictionary of Natural Products* (DVD or web version). The VX code numbers assigned to an alkaloid type have no intrinsic significance. They are allocated so as to make the groups and subgroups appear in a reasonable biochemical sequence, and to provide gaps in the numerical order so that newly discovered types of alkaloid can be inserted.

Use of these codes in searching is complementary to searching by substructure. In some classes of alkaloid (such as the various types of steroidal alkaloid), the structures are fairly homogeneous, but in other classes (for example, the *Daphniphyllum* alkaloids), a wide variety of carbon skeleton may be produced by variation of an underlying biogenetic scheme. In such cases, substructure searching cannot locate all of the possibilities and the Type of Compound coding is of great value. Some alkaloids carry more than one code where they are of an intermediate type, or contain structural fragments that can be assigned to two different categories.

Biogenetically and structurally the alkaloids are diverse, and it is usual to discuss them in terms of biogenetic origin rather than purely on the basis of structural features. The classical plant alkaloids were from an early date recognised at being mostly derived from amino acids, notably ornithine (→ pyrrolidines, tropanes, etc.), lysine (→ piperidines), phenylalanine, and tryptophan (→ many alkaloids including the numerous and structurally diverse indole alkaloids). The order of Type of Compound codes in the first edition of this Dictionary followed this general scheme, which was also followed in most treatises on alkaloids. However, the subsequent discovery of many more diverse types of alkaloid, especially those of microbial and marine origin, has blurred these traditional biogenetic categories. New categories have now been inserted where it seemed appropriate on structural grounds, but these may not necessarily be biogenetically related to the established alkaloid types. To take one example, the Ericamycins (VX3900) have been placed at the end of the isoquinoline alkaloids because they contain a condensed isoquinoline nucleus, but they are of polyketide origin and have little in common biogenetically with the ‘traditional’ isoquinoline alkaloids. Even some well-established plant alkaloids were found on investigation to be polyketide in origin. The best-known example is Coniine, a long-known piperidine alkaloid which, however, is not lysine-derived. Other examples include Pinidine and (probably) Carpaine.

Much less is known about the biogenesis of marine alkaloids than their terrestrial counterparts because of experimental difficulties and the complexity of the ecosystems. Where structural similarities exist between certain marine alkaloids and their terrestrial counterparts, this is frequently indicated in the following sections, but this should not be taken to imply that their biosynthesis takes place by identical routes. There may be cases of biochemical parallelism arising from convergent evolution. In most instances the relevant information is simply not yet available for the marine alkaloids.

Details are now being uncovered about formerly unsuspected enzyme systems, which superimpose new biosynthetic possibilities on top of the traditional routes, thus blurring the traditional alkaloid subtypes.

Foremost among these are the 'Diels-Alderases' (not confined to alkaloids) which are capable of catalysing the formation of new carbon skeletons from known types. The Type of Compound categories in the database are therefore subject to future revision in the light of new research results.

Brief descriptions of the alkaloid types follow. These are not meant to be definitive, as the amount of information available for most groups of alkaloid is too great to summarise in such a brief introduction. However, the Dictionary as a whole will point the user to the key literature sources for every group; either via the general reviews given below under each category, or by going to the individual dictionary entries for the alkaloids in each group and from there to the references cited in the entry.

Moore, B.S., *Nat. Prod. Rep.*, 2005, **22**, 580–593; 2006, **23**, 615–629 (*rev*, *biosynth*)

Simple acyclic amine alkaloids with one N (VX0100)

These include simple amines of mostly widespread biological occurrence such as **Choline** and **Ethylamine**. Various miscellaneous polyamines are categorised under VX9000, miscellaneous acyclic alkaloids.

Simple guanidines (VX0150)

This heading covers low molecular weight guanidinoid bases, many of marine origin. Their high polarity demands special isolation techniques. The guanidine or modified guanidine group is common as a structural component of higher molecular weight alkaloids, including hybrid polyketide alkaloids and peptide-alkaloids which are classified elsewhere below.

Berlinck, R.G.S., *Prog. Chem. Org. Nat. Prod.*, 1995, **66**, 119–26 (*rev*)

Berlinck, R.G.S. *et al.*, *Nat. Prod. Rep.*, 2005, **22**, 516–520; 2008, **25**, 919–954 (*revs*)

Nitriles, isonitriles and related compounds (VX0200)

Compounds containing the -NC, -NCS and -NHCHO groups frequently occur together and are biogenetically related. Compounds having the same carbon skeleton are usually included in the same entry. It now appears that the thiocyanates are central in their biosynthesis.

Edenborough, M.S. *et al.*, *Nat. Prod. Rep.*, 1988, **5**, 229–246 (*rev*, *isonitriles*)
Fleming, F.F., *Nat. Prod. Rep.*, 1999, **16**, 597–606 (*rev*, *nitriles*)
Garson, M.J. *et al.*, *Nat. Prod. Rep.*, 2004, **21**, 164–179 (*rev*)

Simple isobutylamide alkaloids (VX0220); other simple amide alkaloids (VX0250)

Simple isobutylamide amides are common plant constituents, VX0250 includes a variety of other simple amides such as the marine **Variceramides** and a wide range of other miscellaneous amides. The most intensively studied are the capsaicinoids, such as **Capsaicin**, which are responsible for the pungent flavours of capsicum peppers (Solanaceae) and related plants.

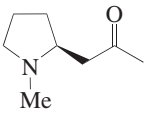
Suzuki, T. *et al., Alkaloids*, 1984, **23**, 228–300 (*rev, capsicum alkaloids*)
Cordell, G.A. et al., *Ann. Pharmacother.*, 1993, **27**, 330–336 (*rev*)

Azo and azoxy alkaloids (VX0280)

These are not very numerous and their classification as alkaloids is borderline. They include toxic (carcinogenic) metabolites such as **Cycasin**.

Simple pyrrolidine alkaloids (VX0300, VX0380)

Several simple pyrrolidine alkaloids are known from plants. These include **Hygrine** and **Stachydrine**. In *Nicandra physaloides*, Hygrine is biosynthesised from ornithine. Condensation of two ornithine units with acetoacetate gives **Cuscohygrine**. Other alkaloids containing a pyrrolidine ring include **Ficine** (in which the pyrrolidine ring is attached to a flavone nucleus), and **Brevicolline** (in which it is attached to a β-carboline unit). Clearly the biogenesis of these molecules requires other precursors.



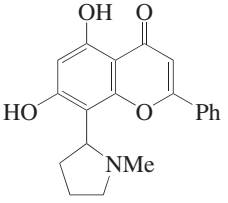
Hygrine

Other simple pyrrolidine alkaloids may arise by different biosynthetic pathways. The kainoids, e.g. **α-Kainic acid**; **Domoic acid,** are a group of non-proteinogenic pyrrolidinedicarboxylic acids. α-Kainic acid was first isolated from a rhodophyte alga but has since been found in terrestrial organisms. The kainoids are biosynthesised from glutamate and geranyl pyrophosphate, while many others are presumably proline-derived. Simple pyrrolidines based on a longer-chain skeleton such as the **Broussonetines** are biosynthesised analogously to sphingosines. Many other compounds indexed under miscellaneous pyrrolidine alkaloids (VX0380) contain a pyrrolidine function as part of a larger structure.

Massiot, G. *et al., Alkaloids,* 1986, **27**, 270–332 (*rev*)
Parsons, A.F., *Tetrahedron*, 1996, **52**, 4149–4174 (*kainoids*, *rev*)

Chromone and flavonoid alkaloids (VX0340, VX0350)

A structure consisting of a pyrrolidine, piperidine or pyridine ring linked to the A ring of chromone is referred to as a chromone alkaloid. This group of compounds can be sub-divided into two types, namely those in which the chromone nucleus exists as Noreugenin (5,7-Dihydroxy-2-methylchromone) — indexed as chromone alkaloids VX0340 — and those which bear a phenyl substituent at *C*-2 (indexed as flavonoid alkaloids, VX0350). The former group is typified by **Rohitukine** and **Schumannificine**. Typical flavonoid alkaloids include **Ficine** and **Vochysine**. Compared with the noreugenin-related alkaloids, which have only been isolated from the plant families Meliaceae and Rubiaceae, the flavonoid alkaloids are more widely distributed throughout the higher plants.

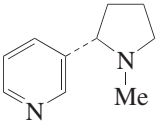


Ficine

Houghton, P.J. *et al., Alkaloids,* 1987, **31**, 67–100 (*chromone alkaloids*; *rev*)

Nicotine-like alkaloids (VX0360)

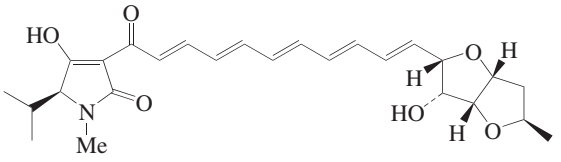
This is a small group of well-known pharmacological and toxicological importance, **Nicotine** being the major alkaloid of tobacco. The pyridine ring in nicotine is derived from nicotinic acid and the pyrrolidine ring from *N*-methylpyrrolinium derived from arginine or ornithine via putrescine. The genomics and enzymology of nicotine biosynthesis are well studied. **Nornicotine** is a deleterious tobacco constituent which is a major cause of carcinogenesis through *N*-nitrosation.



Nicotine

Tetramic acids (VX0390)

These are longer-chain pyrrolidines exemplified by the halogenated **Aurantosides** and **Rubrosides** from sponges (microbial products). A range of nonhalogenated tetramic acids has been isolated from terrestrial microorganisms, such as **Erythroskyrin** and the **Lipomycins**. They are polyketide in origin.

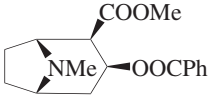


Erythroskyrin

Schobert, R. *et al., Bioorg. Med. Chem.*, 2008, **16**, 4203–4221 (*rev*)

Tropane alkaloids (VX0400)

These are characteristic constituents of the Solanaceae. Almost all of them are esters of mono-, di-, and trihydroxytropanes, with a wide variety of hydroxylation patterns (see for example **Calystegines**). In view of their pharmacological importance (**Cocaine**, **Atropine** and relatives) their synthesis and biosynthesis has been much studied since the nineteenth century. They are derived from ornithine and acetoacetate. One or two condensed structures occur, e.g. **Bellendine**, **Darlingine**.



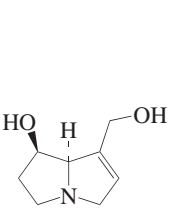
Cocaine

Hemschiedt, T., *Top. Curr. Chem.*, 2001, **209**, 175–206 (*rev*, *biosynth*)
Gossauer, A., *Prog. Chem. Org. Nat. Prod.*, 2003, **86**, 1–188 (*rev*)
Biastoff, S., *et al., Alkaloids,* 2007, **64**, 49–102 (*Calystegines*)

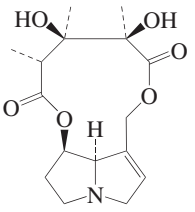
Pyrrolizidine alkaloids (VX0440, VX0500, VX0520)

These occur in species of the *Senecio* genus, and elsewhere in the Asteraceae and Fabaceae. They have been shown to be responsible for the toxic effects, particularly liver damage, in livestock grazing on pastures infested by these species, and are of public health interest in human liver disease. In view of this they have been extensively reviewed. Many, and perhaps the majority, of pyrrolizidine alkaloids occur in the plant as *N*-oxides, the *N*-oxide function being lost during isolation. Toxicity appears to be the result of oxidation *in vivo* to pyrrole derivatives. Pyrrolizidine alkaloids enter the food chain and become antifeedants in animal species such as butterflies.

The majority of pyrrolizidine alkaloids are either relatively simple esters formed from a pyrrolizidine base, the necine, exemplified by **Retronecine**, and a necic acid, such as senecioic (VX0440), or more complex cyclic esters formed between a necine and a necic acid (VX0500), an example being **Monocrotaline**. The necic acids are probably derived from an amino acid (e.g. isoleucine), rather than acetate or mevalonate. **Callosine** represents an unusual variation.



Retronecine



Monocrotaline

The category of miscellaneous pyrrolizine alkaloids includes some unusual pyrrolizidines from totally different sources, e.g. **Antibiotic PF 1018** from a fungus, **Nitropolyzonamine** from a millipede, and the cyclic polysulfide **Cassipourine** from a higher plant.

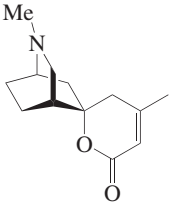
Simple piperidine alkaloids; miscellaneous piperidine alkaloids (VX0680, VX0700)

Like the pyrrolidines, these alkaloids may arise by different biosynthetic routes, so the class is structural rather than biosynthetic. Some may be derived from lysine, acetate, acetoacetate, etc., in analogous fashion to the simple pyrrolidine alkaloids. The majority of the alkaloids in this group are plant-derived. **Piperidine** itself is a lysine-derived alkaloid.

All these structural types have their analogues among the pyrrolidine alkaloids, and while it is tempting to assume biosynthesis from lysine it may not in all cases be true; **Coniine**, for example, is acetate-derived. The longer-chain **Batzellasides**, present in sponges, are iminoglycosides structurally related to the intensively-studied terrestrial iminosugars such as **Nojirimycin**, evidently with the incorporation of a fatty-acid derived fragment.

Dioscorine, from *Dioscorea hispida*, provides a fascinating example of the unexpected in alkaloid biosynthesis. At first sight it seems plausible to postulate that it may be formed from lysine and a polyketide fragment. However, lysine is not a precursor, and it would appear that Dioscorine is formed from nicotinic acid and, probably, a polyacetate unit.



Dioscorine

Strunz, G.M. *et al., Alkaloids*, 1985, **26**, 89–184 (*rev*)

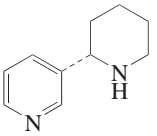
Andersen, R.J. *et al.*, *Alkaloids Chem. Biol. Perspect.,* 1996, **10**, 301 (*rev*, *3-alkylpiperidines*)

Anabasine alkaloids (VX0620)

These are piperidine homologues of the nicotine group (VX0360 above). They also occur in *Nicotiana* spp., in *Anabasis* spp. and others. The biosynthesis is, at least in its major features, analogous to that of the nicotine group, with lysine → cadaverine → *N*-methyl-Δ^1-piperideine replacing ornithine → putrescine → *N*-methyl-Δ^1-pyrrolideine. **Anabasine** has been isolated from marine animals and insects, as well as plants.



Anabasine

However, the piperidine ring in **Anatabine**, from *Nicotiana glutinosa*, appears not to be derived from lysine or from a polyacetate precursor; instead, both rings are derived from nicotinic acid.

Lobelia-type alkaloids (VX0660)

These have no analogy among the pyrrolidine alkaloids. An example is **Lobelanine**.

Felpin, F.X. *et al., Tetrahedron*, 2004, **60,** 10127–10153 (*rev*)

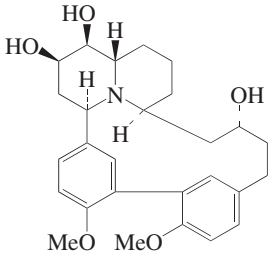
Xestospongins (VX0690)

These are a group of exclusively marine-elaborated piperidines. Their biosynthesis would appear to imply the involvement of a C_{10} dialdehyde equivalent as hypothesised for the Manzamine group (VX2250) below, and they appear closely related to intermediates postulated in the Baldwin scheme.

Baldwin, J.E. *et al.*, *Tet. Lett*., 1992, **33**, 2059–2062 (*biosynth*)

Lythraceae alkaloids (VX0760)

These are characterised by several unusual structural features. **Lythrancine** contains a quinolizidine ring system attached to a diphenyl residue, one of the benzene rings in which is derived from cinnamic acid. Other alkaloids in this group contain a diphenyl ether grouping, e.g. **Decaline**, and others a piperidine ring instead of a quinolizidine ring, e.g. **Lythranidine**. These alkaloids have not been studied recently, and their biosynthesis has not been fully worked out. It involves lysine as source of the quinolizidine or piperidine ring, and phenylalanine as precursor of one of the aromatic rings.



Lythrancine

The numbering system adopted here for the lactonic Lythraceae alkaloids (e.g. Decaline) is the one generally accepted, and corresponds closely to that for piperidine and quinolizidine metacyclophane alkaloids (e.g. Lythranidine, Lythrancine). The carbon atoms that correspond in biogenetic origin to the three alkaloid types thus maintain corresponding numbers. CAS originally employed stereoparent names for these alkaloids, but now uses systematic nomenclature; in each case the numbering is different.

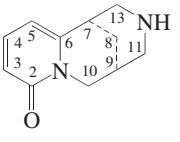
Golebiewski, W.M. *et al., Alkaloids*, 1981, **18**, 263–273 (*rev*)
Fuji, K., *Alkaloids*, 1989, **35**, 155–176 (*rev*)

Quinolizidine alkaloids (VX0900, VX0920, VX0940, VX0960, VX0980)

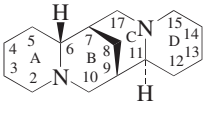
Quinolizidine alkaloids are sometimes reviewed alongside pyrrolizidine and indolizidine alkaloids under the joint heading 'Izidines'. The well-known alkaloids which have been long known were isolated from higher plants, particularly the Fabaceae, but the quinolizidine nucleus also occurs in some marine alkaloids and amphibian toxins.

Two-ring quinolizidine alkaloids (VX0900) come from various sources and range from simple bases such as **Epiquinamide**, from a frog toxin, to more elaborated examples such as the marine **Pictamine** and the Fabaceae alkaloid **Epilupinine**, to others which are clearly seco-derivatives of larger alkaloids, e.g. **Cadiamine**. A few relatively simple marine quinolizidine alkaloids are known such as **Pictamine** and the **Clavepictines**. The **Saraines** are more complex sponge products classified under miscellaneous quinolizidines (VX0980), together with **Halichlorine**, a popular synthetic target, and the **Petrosines**, further examples of dimeric alkaloids in which the units are linked in a medium-sized aliphatic ring.

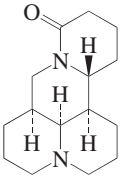
Of the three-ring alkaloids (VX0920) the most characteristic is **Cytisine**; other alkaloids such as **Angustifoline** having a carbon substituent are clearly intermediate between Cytisine and the four-ring alkaloids. The **Tsukushinamines** (which actually have four rings) represent an unusual variation.



(-)-Cytisine



(-)-Sparteine



Matrine

The four-ring alkaloids (VX0940) are the most studied group. Fusion of an additional ring onto the cytisine skeleton produces the **Sparteine** type with potentially increased (C_2) symmetry. Both enantiomers of Sparteine and many of its relatives occur naturally, the enantiomers (and sometimes the racemate) often being characterised in the older literature under different names. The symmetry properties mean that the nomenclature and numbering of Sparteine derivatives is confusing, especially since in the past many alkaloids have sometimes been poorly named. Every effort has been made to regularise the nomenclature and numbering, and to show the absolute configurations correctly.

Another type of four-ring alkaloid is represented by **Matrine** and its stereoisomers (**Isomatrine**, **Allomatrine**, **Sophoridine**, **Darvasamine**). These groups contain some dimers, e.g. **Dithermamine**.

The miscellaneous group (VX0980) includes some alkaloids with larger structures, for example **Jamine** and **Panamine** (each six rings).

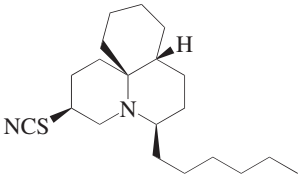
Cylindricine alkaloids (VX0960)

The Cylindricine/Fasicularine/Lepadiformine alkaloids (VX0960) are a small cluster of marine alkaloids containing the perhydrobenzo[*i*]quinolizine nucleus and ring-contracted homologues, plus some terrestrial alkaloids which are loosely related structurally.



Fasicularine

Biosynthetic studies do not yet appear to have been carried out. Benzologous structures have been proposed for a small group of terrestrial alkaloids (Menispermaceae) related to **Cohirsine**.

Weinreb, S.M., *Chem. Rev.*, 2006, **106**, 2531–2549 (*rev*, *synth*)

Azepine alkaloids (VX1000)

These are mostly microbial (or marine, presumably microbial) products; the exceptions are fungal pigments such as **Chalciporone** and its congeners. Marine alkaloids include the **Bengamides**, which are thought to be symbiotic products deriving from bacterial fatty acids, cyclised lysine and a 4-carbon diketide.

Nicotinic acid derived alkaloids (VX1020); Other pyridine alkaloids (VX1040)

The number of small alkaloids derived by the transformation of nicotinic acid is limited. There are, however, a large number of terpenoid ester alkaloids in which nicotinic acid itself esterifies a variety of terpenoid alcohols, for example dihydro-β-agarofurans (e.g. the **Cangorins** and many others).

Arecoline, from betel nuts, and **Ricinine**, from the castor oil plant, are clearly derivable from nicotinic acid; in the case of Ricinine this has been established.

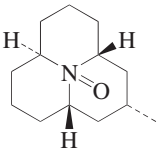
9*B*-Azaphenalene alkaloids (VX1120)

(Systematically pyrido[2,1,6-*de*]quinolizines). This small piperidine-based group is exemplified by **Coccinelline**, the defensive agent of the common ladybird, *Coccinella septempunctata*, and **Porantherine**, from the shrub

Poranthera corymbosa. The insect alkaloids appear to be genuine insect metabolites which are biosynthesised from a lipid chain forming the outer perimeter, plus glutamine as the preferred nitrogen source.



Coccinelline

Naphthalene-isoquinoline alkaloids (VX1140)

This group is isolated mainly from the plant family Ancistrocladaceae, with some isolations from the Dioncophyllaceae. Several skeletal types are known and are based on the point of linkage between the two ring systems, e.g. 5,1′-coupled alkaloids (**Ancistrocladine**, **Dioncophylline C**), 5,8′-coupled (**Korupensamine A**), 7,1′-coupled (**Ancistrocladisine**, **Dioncophylline A**), 7,3′-coupled (**Ancistrocladidine**), 7,6′-coupled (**Dioncophylline B**), etc. These alkaloids are chiral due to diastereoisomerism at the methyl groups and in the biaryl linkage due to restricted rotation. They are biosynthesised via construction of a naphthalenoid portion onto monomeric dihydroisoquinolines.

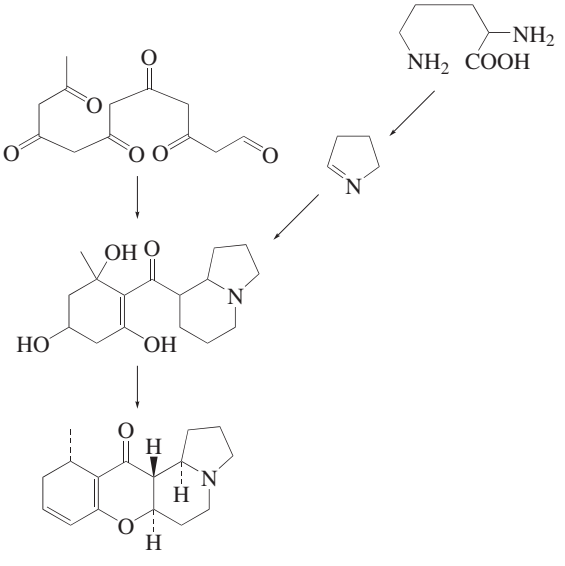
Elaeocarpus alkaloids (VX1160)

These are a series of mostly indolizidine-based alkaloids from Far-eastern *Elaeocarpus* spp. A proposed biosynthetic scheme which was suggested in 1969, and which apparently lacks experimental evidence, is through the condensation of a twelve-carbon polyketide chain with a 1-pyrroline derived from ornithine. Alternatively, the whole skeleton may be polyacetate derived.



Elaeocarpiline

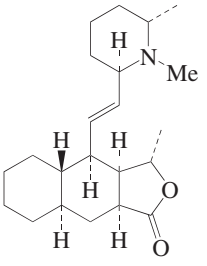
Johns, S.R. *et al., Alkaloids*, 1973, **14**, 325–346 (*rev*)

Galbulimima alkaloids (VX1240)

These are a numerically limited class of alkaloids e.g. **Himbacine,** based on the elaboration of a piperidine theme, and which are found in *Galbulimima* (*Himantandra*) spp. (Himantandraceae). A biosynthetic scheme for these alkaloids was suggested in 1967 which proposed their construction from a common polyacetate precursor. Synthetic studies have been carried out to provide a biomimetic route along these lines, however, direct experimental proof is still lacking.



Himbacine

Shah, U. *et al., Total Synthesis of Galbulimima Alkaloids*, VDM Verlag Dr. Muller, Aktiengesellschaft, 2008 (*rev*, *synth*)

Stemona alkaloids (VX1260)

These represent a unique type of alkaloid isolated only from the family Stemonaceae (monocots). Three main types are recognised, the **Croomine**, **Stichoneurine** and **Protostemonine** types, although a further subdivision into 11 subtypes can be made. Biosynthetic studies of Stemona alkaloids have not been reported, but a scheme based on a terpenoid origin of the C and D rings and a spermidine origin of the A ring has been proposed by Seger, and an alternative scheme involving a polyketide-geranate condensation by Pyne and co-workers.

Lycopodium alkaloids (VX1280)

These are constituents of the club mosses (Lycopodiaceae). Whereas the earliest proposal concerning their biosynthesis implicated two C_8 units derived from acetate, it was later established that two lysine units are involved. Numerous skeletal variants are known, all of which can be related to the Lycopodine skeleton; older

examples are **Fawcettidine** and **Serratinine**. More recently some intriguing new skeletons such as those in the **Lyconadines**, **Lyconesidine A**, the **Lycopladines** and **Neohuperzinine** have been found.

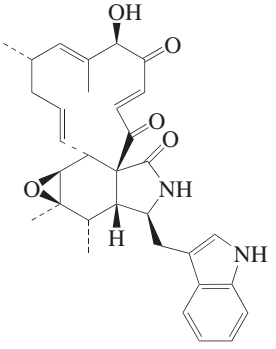
Cytochalasan alkaloids (VX1300)

Cytochalasins are metabolites of several different and unrelated fungi, including some marine actinomycetes. They are characterised structurally by the presence of a perhydroisoindolone system fused to a macrocyclic ring of 11, 13 or 14 atoms. The macrocycle may be a carbocycle, a lactone or a carbonate. In addition, the isoindole ring carries either a phenyl or an indolyl substituent at position 10; the latter group includes the **Chaetoglobosins**. Cytochalasins possess a range of distinctive biological properties; these include inhibition of cytoplasmic cleavage leading to polynucleate cells, nuclear extrusion and the inhibition of cell mobility. Biosynthetically, cytochalasins arise from phenylalanine or tryptophan and a polyketide derived from acetate and methionine. They have not been reviewed recently.

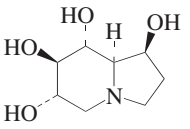


Chaetoglobosin A

Pendse, G.S., *Recent Advances in Cytochalasans*, Chapman & Hall, 1987

Indolizidine alkaloids (VX1360)

These are a significant class of plant alkaloids, e.g. **Castanospermine**, an important biologically active enzyme inhibitor and a major synthetic target, and **Swainsonine**, biosynthesised from lysine.



Castanospermine

A large number of indolizidine alkaloids known are amphibian skin toxins, of which the greatest number are 5,8-disubstituted, e.g. **Indolizidine 203A**. These are now all known to be of dietary origin, possibly entering the frogs through arachnid and insect prey. Many of these are available only in traces and have currently been characterised only by mass spectroscopic methods, with a number of structures uncertain or incomplete. They are

homologous with the ring-expanded quinolizidine series (see VX0900 above), and other related skeletons by ring enlargement. There are no conclusive studies on the biosynthesis of these related series of amphibian and related toxins, but a polyketide origin is plausible.

A few simple indolizidines (e.g. the **Stellettamides**) have been isolated from sponges.

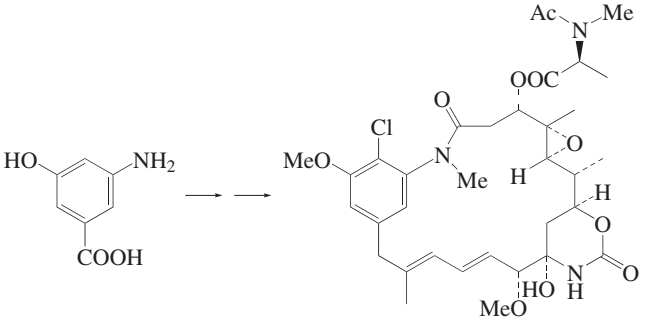
Simple anthranilic acid alkaloids (VX1460)

A number of diverse structural groups of alkaloid are derived biogenetically from anthranilic acid, the major ones being the quinolone, acridine and quinazoline groups categorised under their respective headings. The number of unelaborated anthranilic acid alkaloids is small and includes **Damascenine** from *Nigella damascena*. Biosynthetically, the alkaloid is derived from anthranilic acid (chorismate derived), which is then hydroxylated and methylated.

Maytansinoids (VX1470)

The maytansinoids are a group of ansa macrocyclic lactams originally isolated from three plant families (Euphorbiaceae, Celastraceae, Rhamnaceae), and subsequently isolated from a soil bacterium *Actinosynnema pretiosum*, other microorganisms and mosses. They are homologous with the **Ansamitocins** from microorganisms, and may be derived from plant-associated fungi. They show strong antitumour activity and are biosynthesised from the simple aromatic precursor 3-amino-5-hydroxybenoic acid, arising from the chorismate pathway, which is substituted by a polyketide chain and then amide ring formation.



Maytansine

Cassady, J.M. et al., *Chem. Pharm. Bull.*, 2004, **52**, 1–26 (*rev*)

Simple quinolines (VX1480); Furanoquinolines (VX1520); Pyranoquinolines (VX1540); Miscellaneous quinoline alkaloids (VX1580)

The majority of simple quinoline alkaloids are from higher plants, but a variety of simple heteroaromatic quinolines (VX1480) have been isolated from various marine sources, including **2-Heptyl-4-hydroxyquinoline** from a marine pseudomonad, and **4,8-Quinolinediol** from cephalopod ink. Plant alkaloids include **Echinopsine** and the phenethyl-quinoline, **Cusparine**. The plant-derived furanoquinoline (VX1520) (e.g. **Platydesmine**), and pyranoquinoline (VX1540) alkaloids (e.g. **Flindersine**) are straightforwardly derived from simple alkylquinolines (especially prenyl-substituted) by cyclisation. There are also more elaborated hydrogenated quinolines, especially the **Lepadins** from tunicates and flatworms.

Bryozoans contain a number of simple quinoline-quinone pigments and there are also the **Tridemnic acids** from ascidians. Simple hydrogenated quinolines also occur in amphibian toxin mixtures, for example the numerous ***Dendrobates* Alkaloids**. This extensive series of alkaloids occurs in amphibian skin extracts and in tunicates, flatworms and insects (myrmicine ants), in a mixture which includes hydrogenated quinolines, and structural variants such as indolizidines (VX1360, see for further information).

Macrorine, from *Macrorungia longistrobus*, is obviously derived from anthranilic acid and histidine.

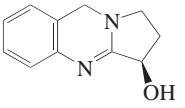
Michael, J.P., *Nat. Prod. Rep.*, 2008, **25**, 166–189 (*rev*)

Quinazoline alkaloids (VX1600)

These include **Vasicine**, first isolated in 1888 from *Adhatoda vasica*, and **Rutaecarpine**, from *Euodia rutaecarpa*; this latter base is clearly derived from tryptophan and anthranilic acid. Quinazoline alkaloids have been isolated from several plant families as well as from microorganisms, fungi and animal spp. **Febrifugine** is a pharmacologically important (antimalarial) member of the group. A number of simple quinazolines also occur, as well as **Bouchardatine**, which is a quinazoline-indole dimer. They have been well reviewed; see also Tryptoquivalines (VX6030) below.



Vasicine

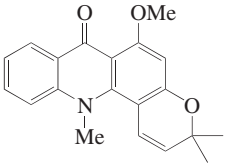
Acridone alkaloids (VX1620-VX1690)

These are higher plant alkaloids characteristic of the Rutaceae, and are biosynthesised from anthranilic acid by elaboration of an additional malonate-derived aromatic ring. The simple acridones (VX1620) may be exemplified by **Xanthevodine** and by a large number of alkaloids in which the nucleus is prenylated followed frequently by formation of a furano- or pyranoacridine ring system, e.g. **Acronycine**. Biosynthesis of the nucleus is from anthranilic acid and a malonate fragment. The **Acrimarines** are acridone-coumarin dimers (VX1690).



Acronycine

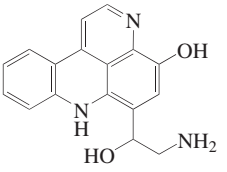
Michael, J.P., *Nat. Prod. Rep.*, 2008, **25**, 166–187 (*rev*)

Pyrido[2,3,4-*kl*]acridines (VX1700)

This is a group of exclusively marine alkaloids which includes the **Kuanoniamines**, the **Ascididemins**, the **Cystodytins**, the **Styelsamines**, the **Varamines** and others. The isolation of some of them from a variety of organisms argues for a microbial origin, but it could alternatively be a case of convergent evolution. They are biosynthesised from common amino acids.



Styelsamine A

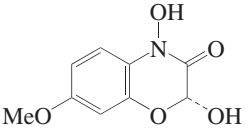
1,4-Benzoxazin-3-one alkaloids (VX1720)

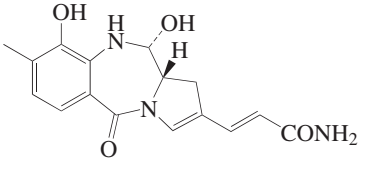
2,4-Dihydroxy-7-methoxy-2*H*-1,4-benzoxazin-3(4*H*)-one (known as DIMBOA) is the main representative of this group of alkaloids which have plant hormone significance. DIMBOA itself protects the maize plant against corn borer attack. They usually occur in the plant as glucosides, but cell injury releases a glucosidase which catalyses hydrolysis to the 2-hydroxy derivatives. All four oxygen atoms in DIMBOA arise by incorporation of molecular O_2.



DIMBOA

Benzodiazepine alkaloids (VX1760)

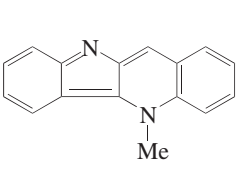
This is a growing class of microbial metabolites typified by **Anthramycin** and others. One or two, e.g. **Aplysepine**, are of marine origin; apparently no plant alkaloids with this skeleton are known to date. They are biosynthesised from amino acids via kynurenine and its derivatives.



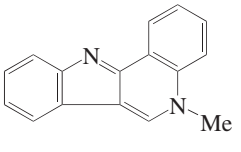
Anthramycin

Cryptolepine alkaloids (VX1800)

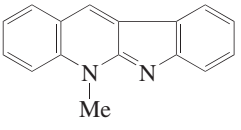
Cryptolepine (5-Methyl-5*H*-quindoline) is the most prominent representative of this small group isolated from *Cryptolepis* spp. The parent alkaloid, 10*H*-Indolo[3,2-*b*]quinoline (**Quindoline**), has been isolated from *Cryptolepis sanguinolenta*. Two isomeric skeletons (**Isocryptolepine**, **Neocryptolepine**) were also obtained. A further variant represented by **Cryptoheptine** is doubtful. The marine **Communesins** (currently classified under miscellaneous alkaloids VX9400) contain the Neocryptolepine skeleton embedded in a polycyclic ring system. No biosynthetic studies of these skeletons have been carried out, but a derivation from indole and anthranilic acid can be envisaged.



Cryptolepine



Isocryptolepine

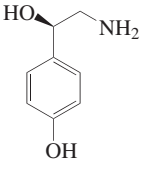


Neocryptolepine

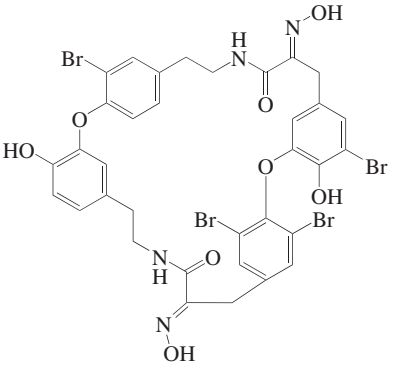
Simple phenethylamine alkaloids (VX2000, VX2005, VX2008, VX2015)

Alkaloids derived from phenylalanine or tyrosine represent an extremely large and varied major subdivision of the alkaloids, ranging from simple β-phenylethylamine derivatives to the much more complex structures exemplified by the alkaloids of the Amaryllidaceae and the very numerous isoquinoline alkaloids.

The simplest derivatives of phenylalanine or tyrosine are the β-phenylethylamines, which are presumably obtained by decarboxylation and obvious oxidative/alkylation stages, and which are widespread among plant alkaloids (e.g. **Mescaline**) and elsewhere. Compounds showing side-chain oxygenation (VX2005) include alkaloids from higher plants, such as **Macromerine**, as well as animal hormones such as **Adrenaline** and **Octopamine**, which is an endometabolic neurotransmitter of molluscs. Brominated compounds (VX2008) such as the **Purpuramines** and the **Bastadins** are common in marine organisms. These are biosynthesised from the simple brominated tyrosines.



Octopamine



Bastadin 9

Lundström, J., *Alkaloids*, 1989, **35**, 77–154 (*rev*)
Peng, J. *et al., Alkaloids*, 2005, **61**, 59–262 (*rev, marine bromotyrosine alkaloids*)
Bentley, K.W., *Nat. Prod. Rep.*, 2006, **23**, 444–463 (*rev*)

Ephedra alkaloids (VX2010)

This is a small, and important, group of low molecular weight alkaloids centred on **Ephedrine** and its relatives, isolated from *Ephedra* spp. (Ma Huang) and showing strong physiological activity. They carry a side-chain amino or substituted amino substituent. This structural feature is common in higher molecular weight alkaloids.

Ma Huang and the Ephedra Alkaloids, (ed. Karch, S.B.), Springer/Humana Press, 2007 (*book*)

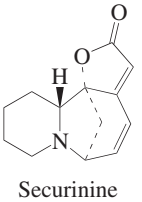
Cinnamic acid amides (VX2020)

***cis*-** and ***trans*-Fagaramide**, **Herclavine** and **Subaphylline** are simple members of this series, which are mostly isolated from terrestrial plants. These amides are typically derived from a *trans*-cinnamic acid; **Astrophylline** is an example of an *N-cis*-cinnamoyl derivative. Simple cinnamate residues are scarcer among marine alkaloids. Examples are found in the **Tunichromes**, for which phenylalanine can function as a biosynthetic precursor.

Taylor, S.W. *et al.*, *Chem. Rev.*, 1997, **97**, 333–346 (*rev*, *tunichromes*)

Securinega alkaloids (VX2100)

This small group of polycyclic alkaloids occurs in the Euphorbiaceae. The biosynthesis of these alkaloids, which is not readily apparent, has been shown to involve tyrosine and lysine in the case of **Securinine**. Alkaloids of both enantiomeric series occur naturally, sometimes in closely related plants.

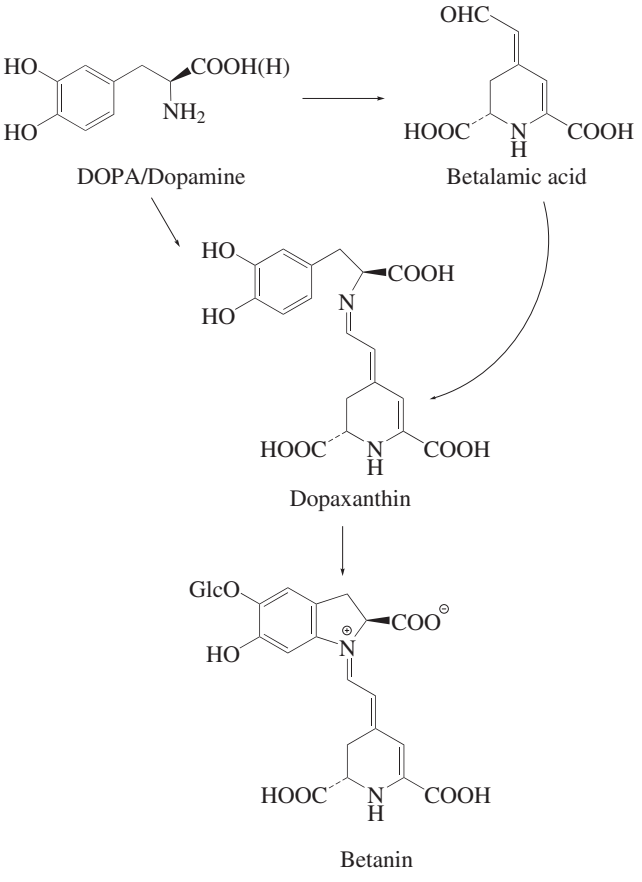


Securinine

Snieckus, V., *Alkaloids*, 1973, **14**, 425–506 (*rev*)

Betalain alkaloids (VX2140)

This is a group of zwitterionic water-soluble alkaloidal pigments whose distribution is limited to the order Caryophyllales of the dicots, (more or less coterminous with the older term Centrospermae), for which they have been used as a taxonomic marker, plus some basidiomycete fungi. **Betanin** (the red pigment of beetroot) is the best-known example, other examples include various flower pigments instead of anthocyanins. Both halves of the molecule are biosynthesised from DOPA/Dopamine via Dopaxanthin; the formation of the upper unit, Betalamic acid, involves an enzymatic aromatic ring fission process.



Stintzing, F. *et al.*, *Trends Food Sci. Technol.*, 2007, **18**, 514–525 (*rev*)

ISOQUINOLINE ALKALOIDS (VX2200-VX2400)

This is an extremely large group of mainly higher plant alkaloids, although one or two groups of isoquinolinoid marine alkaloids, notably the Manzamine group (VX2250) are also interpolated into the listing.

Bentley, K.W., *Nat. Prod. Rep.*, 2006, **23**, 444–463 (*rev*, *revs cited therein*)

Simple isoquinoline alkaloids (VX2200)

This group includes simple isoquinolines with (e.g. **Salsoline**) or without (e.g. **Anhalamine**) a *C*-1 substituent, and various quinones (**Mimosamycin**, **Renierone)**. Marine examples are restricted to some bases related to **Renierol** and the **Cribrostatins**.

Manzamine alkaloids (VX2250)

This fairly extensive group (a typical representative is **Manzamine A**) is exclusively of marine origin and represents the most structurally complex and characteristic type of marine alkaloid for which a biosynthetic scheme has been proposed. Their biosynthesis has been postulated to involve the condensation of tryptamine with one or more C_3 units and one or more straight-chain C_{10} dialdehyde equivalents, followed by an enzyme-assisted Diels-Alder cyclisation. The origin of the C_{10} and C_3 units is uncertain, but it has been suggested that they could arise by oxidative fission of a hydroxylated fatty acid. The full biosynthetic scheme is shown in the reviews below and more elaborately in the companion *Dictionary of Marine Natural Products*.

Benzylisoquinoline alkaloids (VX2320)

The simple benzylisoquinoline skeleton is derived from two molecules of tyrosine, via DOPA, and is the precursor of a wide variety of alkaloids in categories listed below, belonging to numerous different ring systems. The alkaloids with the unmodified benzylisoquinoline skeleton consist mainly of 1,2,3,4-tetrahydrobenzylisoquinolines, e.g. **Reticuline**, of central importance in the elaboration of other alkaloids, and their fully aromatic analogues, e.g. **Papaverine**. Alkaloids with a carbon substituent at *C*-2′, such as **Canadaline**, may be regarded as ring-opened berberines. There are also some benzylisoquinolines in which a pyrrolidine ring is attached to *C*-4, e.g. **Macrostomine**. The isolation of one or two marine benzylisoquinoline alkaloids (**Imbricatine**; **Theoneberine**) is noteworthy.

Deulofeu, V. *et al., Alkaloids*, 1968, **10**, 401–461 (*rev*)

Pseudobenzylisoquinoline alkaloids (VX2330)

The term pseudobenzylisoquinoline alkaloid is used to describe a benzylisoquinoline skeleton in which the pendant aromatic ring is oxygenated at *C*-2′, *C*-3′ and *C*-4′. These alkaloids are derived biogenetically from protoberberinium salts by *C*8-*C*8*a* bond scission. **Polycarpine**, **Taxilamine** and **Ledecorine** are typical examples.

Bisbenzylisoquinoline alkaloids (VX2340–VX2400)

This large group of alkaloids is composed of two benzylisoquinoline units attached to each other by one, two, or three bonds. In most cases the units are joined via ether linkages, but carbon-carbon bonds between the benzyl groups are also known. The monomeric units involved are mainly hydroxylated or methoxylated benzylisoquinolines, although aporphine units occur in many alkaloids, and a few contain a proaporphine component. The alkaloids may be subdivided into the five following major groups (the classification, proposed by Shamma, contains at least 28 subgroups). All alkaloids classified here are composed of unmodified benzylisoquinoline units. Dimeric alkaloids containing aporphine, proaporphine, or otherwise modified benzylisoquinoline components are discussed under separate headings).

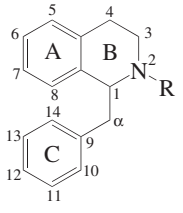
CAS used to employ a number of stereoparent skeletons, such as Berbaman, Thalicberan, Tubocuraran, in naming the cyclic bisbenzylisoquinoline alkaloids, but these have now been replaced by systematic nomenclature. Trivial nomenclature is given prominence in this Dictionary, but the main semisystematic parent skeletons are

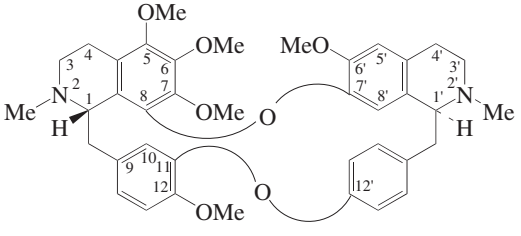
shown below. Care is needed in numbering the two benzylisoquinoline residues. In a few cases, CAS has in the past applied the primes to the opposite residue to that proposed in the Shamma-Moniot convention. The latter is used in this Dictionary.

The Shamma-Moniot convention is as follows;

1. The numbering system for a bisbenzylisoquinoline half of the dimer is as shown below. The lower aromatic ring, namely ring C, is always numbered so as to assign the smallest numbers to the substituents on that ring
2. Each bisbenzylisoquinoline half of the dimer is described in terms of its oxygenation pattern. The more highly oxygenated bisbenzylisoquinoline half constitutes the left hand side of the dimer. The right hand side of the dimer is given prime numbering.

For an example see the structure of Hernandezine below.





Hernandezine with Shamma-Moniot convention numbering

Shamma, M. *et al., Heterocycles*, 1976, **4**, 1817–1824 (*Shamma-Moniot numbering convention*)
Buck, K.T., *et al., Alkaloids*, 1987, **30**, 1–222 (*rev*)
Schiff, P.L., *J. Nat. Prod.*, 1997, **60**, 934–953 (*rev, revs cited therein*)

Bisbenzylisoquinoline alkaloids containing aryl links only (VX2340)

The bark of *Popowia pisocarpa* has yielded a group of alkaloids which contain a single aromatic linkage between *C*-11 and *C*-11′. See the entry for **Pisopowetine**. **Isopythaldine** and **Isopyruthaldine** represent another type in which the two benzylisoquinoline groups are joined by methylene bridges.

Bisbenzylisoquinoline alkaloids containing one ether link (VX2360)

The ether linkage is in most cases between *C*-11 and *C*-12′, as in **Dauricine**. However, other attachments are known, e.g. between *C*-10 and *C*-11′, as in **Vanuatine**, between *C*-10 and *C*-7′, as in **Malekulatine** and **Ambrimine**, and between *C*-11 and *C*-7′, as in **Neferine**.

Bisbenzylisoquinoline alkaloids containing one aromatic link and one or two ether links (VX2370, VX2390)

These alkaloids are mainly based on the **Rodiasine** and **Tiliacorine** skeletons.

Bisbenzylisoquinoline alkaloids containing two ether links (VX2380)

These are the most numerous. The largest subgroup containing two ether linkages possesses the berbaman skeleton, exemplified by **Berbamine**, which contains ether linkages between *C*-8 and *C*-7′, and between *C*-11 and *C*-12′. Almost as large as the berbaman group is the oxyacanthan group, e.g. **Oxyacanthine**, which contains ether linkages between *C*-7 and *C*-8′, and between *C*-11 and *C*-12′. Smaller groups include the **Thalicberine** (*C*-8 to *C*-6′

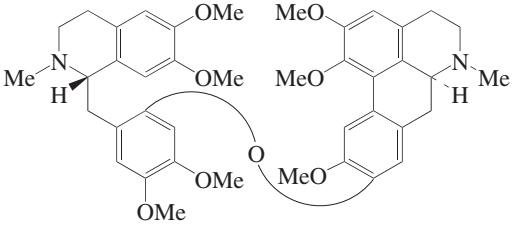
and *C*-11 to *C*-12′), **Thalidasine** (*C*-8 to *C*-5′ and *C*-11 to *C*-12′), and **Thalmine** (*C*-7 to *C*-5′ and *C*-11 to *C*-12′) types. All of these types contain ether linkages between the benzyl rings and between the aromatic rings of the tetrahydroisoquinoline component. The **Tubocurarine** sub-group contains ether linkages between the benzyl ring of one unit and the aromatic ring of the isoquinoline component of the other. Other linkages between benzyl and isoquinoline rings are also known.

Bisbenzylisoquinoline alkaloids with three ether links (VX2400)

These include alkaloids with 6′,7-epoxyoxyacanthan (e.g. **Trilobine**), 7,8′-epoxyoxyacanthan, and 8,12′-epoxytubocuraran skeletons.

Benzylisoquinoline-aporphine dimers (VX2700)

Some alkaloids consist of a benzylisoquinoline unit attached to an aporphine unit, through a single ether linkage. Of these, **Thalicarpine** is typical.



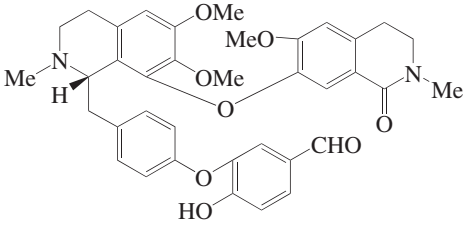
Thalicarpine

Miscellaneous bisbenzylisoquinoline-related alkaloids (listed under their component monomeric units) include those containing a dienone ring in one of the isoquinoline moieties (e.g. **Repanduline**), some with an aporphine unit attached to a pavine component (e.g. **Pennsylpavine)**, those with degraded benzylisoquinoline units (e.g. **Baluchistanamine**) or with a proaporphine unit (e.g. **Epiberbivaldine**), and **Cancentrine**, which is really a combination of cularine and morphinan components.

Buck, K.T. *et al., Alkaloids*, 1987, **30**, 1–222 (*rev*)
Schiff, P.L., *Alkaloids Chem.Biol. Perspect.,*1987, **5**, 271–638; 2000, **14**, 1–234 (*revs*)

Secobisbenzylisoquinoline alkaloids (VX2430)

The secobisbenzylisoquinolines are degraded alkaloids in which one of the benzylisoquinoline units is cleaved between the *C*-1 and the α-carbon atom. A typical example is **Baluchistanamine**, the apparent biogenetic precursor of which is Oxyacanthine. Different oxidation states are found; aldehyde lactams (e.g. **Baluchistanamine**, **Punjabine**), lactam esters (e.g. **Punjabine**, **Curacautine**) or aldehyde amines (**Jhelumine**, **Chenabine**).



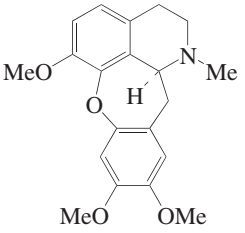
Baluchistanamine

Like the bisbenzylisoquinoline precursors, these alkaloids differ in the number and position of the diphenyl ether linkages. Karakoramine has only one such bond, Baluchistanamine has two, and Punjabine has three. **Secantioquine** and **Secolucidine** are examples of a biphenyl system.

Cularine alkaloids (VX2440)

The cularines are tetracyclic isoquinoline alkaloids which contain a dihydrooxepine or oxepine ring between *C*-8 and *C*-2′. They are formed by intramolecular oxidative coupling of 7,8,3′,4- or 7,8,4′,5′-tetraoxygenated

tetrahydrobenzylisoquinolines (classical cularines and isocularines, respectively), although the biogenesis of **Gouregine** probably proceeds via oxidation of an aporphine precursor. Note the parallelism between the cularine and aporphine alkaloids.



Cularine

A small number of **Cancentrine**-type alkaloids are known which are cularine-morphinan dimers.

Castedo, L. *et al., Alkaloids*, 1986, **29**, 287–324 (*rev*)

Secocularine alkaloids (VX2450)

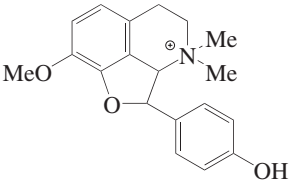
The secocularines can be divided into two sub-groups, namely B- and C-ring seco compounds. B-Ring secocularines, exemplified by **Secocularidine**, are structurally related to phenanthrene alkaloids derived from aporphines and are probably formed *in vivo* by Hofmann degradation of cularines. C-Ring cularines, represented by **Noyaine**, constitute a type of alkaloid without counterpart among aporphinoids.

Indenobenzazepine alkaloids (VX2500)

This is a small group, e.g. **Lahorine,** which may be derived from the spirobenzylisoquinolines (VX3220 below).

Quettamine alkaloids (VX2470)

Whereas the classical-type cularine alkaloids of the Fumariaceae are biogenetically derived from intramolecular oxidative coupling of tetraoxygenated tetrahydroisoquinoline precursors, the quettamines are obtained from *in vivo* intramolecular oxidation of a trioxygenated tetrahydroisoquinoline. So far, few naturally occurring quettamines are known. These alkaloids, all found in *Berberis baluchistanica*, incorporate either a benzofuran or a dihydrobenzofuran ring within the molecular framework, and the seco bases possess an *N*,*N*-dimethylaminoethyl substituent.



Quettamine

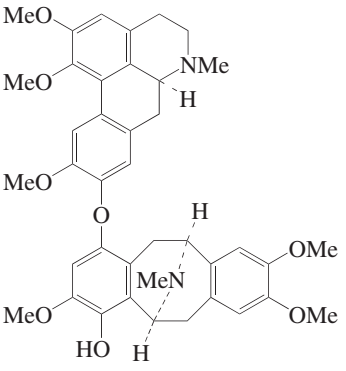
Dibenzopyrrocoline alkaloids (VX2480)

These alkaloids, only a few of which are known, are clearly derived by oxidation of a benzylisoquinoline precursor; indeed, the ring system was prepared *in vitro* by this route before it was encountered in nature. **Oubatchensine** is a 7,13-seco alkaloid presumably derived through 13-hydroxylation and tautomerism to the open-chain form.

Elliot, I.W., *Alkaloids*, 1987, **31**, 101–117 (*rev*)

Pavine and isopavine alkaloids (VX2520, VX2540)

These alkaloids are formed by alternative modes of oxidative cyclisation of benzylisoquinoline precursors. In addition there are bisbenzylisoquinoline alkaloids composed of pavine and aporphine units, e.g. **Pennsylpavine**.



Pennsylpavine

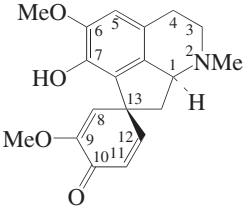
Because of the two-fold rotational symmetry of the pavane skeleton, there are numerous variations in numbering schemes in the literature. Numbering in this Dictionary has been regularised according to IUPAC principles.

Some mixed pavinoid-benzylisoquinoline and pavinoid-aporphine dimers (**Hervelines**, **Fauripavine**) have been isolated relatively recently.

Gözler, B. *et al., Alkaloids*, 1987, **31**, 317–390 (*rev*)

Proaporphine alkaloids (VX2600)

This group of alkaloids, e.g. **Orientalinone**, represents an intermediate stage in the conversion of the benzylisoquinoline alkaloids by phenol oxidative coupling into the aporphines. The spirocyclohexenone ring may occur in various oxidation levels from cyclohexadienone to cyclohexanol. There are various numbering schemes in the literature. That shown has been adopted here as standard.



Orientalinone

There are also proaporphine-tryptamine dimers centred on **Roehybridine**. These heptacyclic alkaloids, found in *Roemeria hybrid* (Papaveraceae) and *Phoebe grandis* (Lauraceae), are probably derived biogenetically by a Mannich-type condensation of a ketonic tetrahydroproaporphine with a tryptamine analogue.

Proaporphine-benzylisoquinoline alkaloid dimers (VX2620)

This group is self-explanatory, e.g. **Pakistanamine**.

Aporphine alkaloids (VX2640, VX2700)

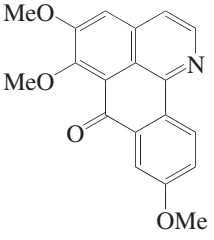
This large group of alkaloids contains the tetracyclic ring system formed by the phenol oxidative coupling of a benzylisoquinoline precursor. The structural variations among the numerous simple aporphines (VX2640) are mostly 6*a*,7-dehydrogenation and 7-oxidation, accompanied by isoquinoline-ring aromatisation in the so-called oxoaporphines, e.g. **Liriodenine** (VX2640). To this listing must be added a small group of bisaporphines. The majority of these alkaloids possess a carbon-to-carbon linkage between *C*-7 and *C*-7′ (e.g. **Urabaine**), although examples of C-C coupled bisaporphines and oxygen-bonded dimers (e.g. **Dehatriphine**) are also known. There is a considerable number of aporphine-benzylisoquinoline dimers listed separately (VX2700).

Various alkaloid groups which follow (VX2750-VX2840) may be considered as closely related to the true aporphines and are often reviewed alongside them.

Guinaudeau, H. *et al.*, *Lloydia*, 1975, **38**, 275–338; *J. Nat. Prod.*, 1979, **42**, 133–149, 325–360; 1983, **46**, 761–835; 1984, **47**, 565–580; 1988, **51**, 389–474, 1025–1053; 1994, **57**, 1033–1135 (*tabulations*)
Shamma, M., *Nat. Prod. Rep.*, 1986, **3**, 345–352 (*rev*)
Gözler, B. *et al.*, *J. Nat. Prod.*, 1990, **53**, 675–685 (*aporphine dimers*)

Oxoisoaporphines (VX2750)

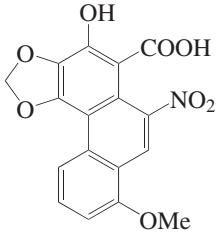
This is a small group of alkaloids, mostly from *Menispermum* spp. It has been suggested that they arise from aporphines via a spirodienone rearrangement, however, biosynthetic studies have not been reported. One of its representatives is **Menisporphine**. **Lakshminine**, from *Sciadoteria* sp., in the Menispermaceae, contains an additional nitrogen substituent.



Menisporphine

Aristolochic acids and aristolactams (VX2780, VX2800)

The aristolochic acids represent a class of phenanthrenoid alkaloid derived from an aporphinoid precursor with ring-B fission and the loss of *C*-5 (aporphine numbering). **Aristolochic acid VIa** is a typical alkaloid. Some of the alkaloids are esters of these acids with, for example, terpenoids, e.g. **Aristolin**. They are higher plant products characteristic of the Aristolochiaceae. Since they have a seco-aporphinoid skeleton, they have been numbered in the literature in different ways, either as aporphines or as phenanthrenes, and for many of them (such as those with a methylenedioxy function), the CAS systematic numbering is different again. In this Dictionary, the simpler members are named and numbered as substituted phenanthrenes, and different alkaloid groups are collected into entries under the parent phenanthrene.



Aristolochic acid VIa

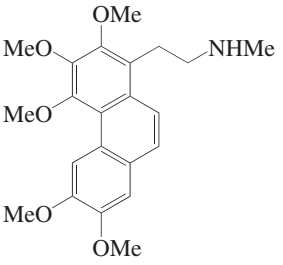
The biosynthetically-related Aristolactams, mostly nonbasic, have a five-membered lactam ring e.g. **Cepharanone A**.

These classes of alkaloid also include some members in which nitrogen has been oxidised to a nitro group, e.g. **Aristolochic acid A**.

Bick, I.R.C. *et al., Alkaloids*, 1985, **24**, 113–152 (*rev*)
Chen, Z., *Alkaloids*, 1987, **31**, 29–66 (*rev*)
Kumar, V. *et al.*, *Nat. Prod. Rep.*, 2003, **20**, 565–583 (*rev*)

Phenanthrene alkaloids (VX2820)

These alkaloids, e.g. **Thalicpureine**, are related to aporphines by fission of the *N*-6*a* bond. The group includes a few alkaloids showing oxidative changes elsewhere in the molecule (**Andesine**; **Chiloenine**; **Santiagonamine**). **Eupolauramine** is related by a further ring-contraction to a lactam.

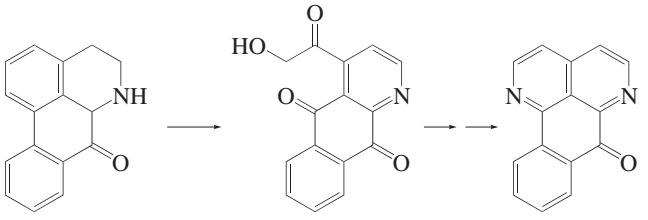


Thalicpureine

Taylor, W.C., *Aust. J. Chem.,* 1984, 37, 1095–1104 (*biosynth*)
Castedo, L. *et al., Alkaloids*, 1990, **39**, 99–138 (*rev*)

Azaaporphine alkaloids (VX2830)

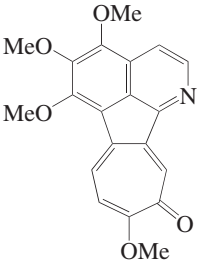
This fairly small group, e.g. **Sampangine**, is thought to arise by A-ring fission of an aporphinoid precursor to an azaanthraquinone intermediate, followed by ring closure.



Sampangine

Azafluoranthene alkaloids (VX2840)

This is another small group of alkaloids found in the Menispermaceae. Two biosynthetic mechanisms have been proposed; cyclisation of a 1-arylisoquinoline (which is considered unlikely since 1-arylisoquinolines are rare) or a more persuasive route involving the decarbonylation of an oxoaporphine. **Imerubrine** and its relatives are then related by an aryl →tropolone expansion. **Eupolauridine** could arise by a combination of this route and the aza-replacement shown above under VX2830.

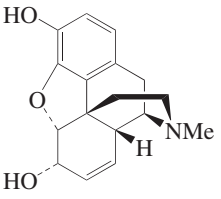


Imerubrine

Buck, K.T., *Alkaloids*, 1984, **23**, 301–327 (*rev*)
Taylor, W.C., *Aust. J. Chem.,* 1984, 37, 1095–1104 (*biosynth*)

Morphine alkaloids (VX2900)

This extremely important group is formed by phenol oxidative coupling of a hydroxylated benzylisoquinoline precursor such as Norlaudanosoline, itself originating from two molecules of tyrosine. The group may be subdivided into bases of the **Salutaridine** type, those related to **Morphine**, which have a 4,5-oxide bridge, and those related to **Sinoacutine**, which are enantiomeric with the salutaridine group. **Acutumine** and its congeners represent an *abeo* shift to a spiro skeleton.

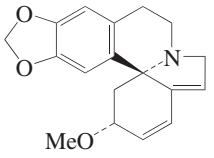


Morphine

Szantay, C. *et al., Alkaloids*, 1994, **45**, 128–232 (*rev*)

Erythrina alkaloids (VX2940)

This group of alkaloids is derived from two tyrosine units by oxidative coupling and intramolecular rearrangement. Alkaloids which contain the erythrinan skeleton (e.g. **Erythraline**) constitute the majority.



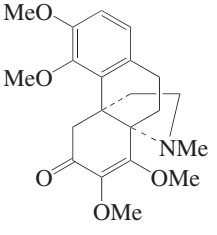
Erythraline

Major structural variations consist of oxidative modification of the aromatic ring to a lactone, e.g. **β-Erythroidine**, and a small group containing an additional nitrogen atom in ring D. These 16-azaerythrinanes, e.g. **Erymelanthine**, are possibly derived biogenetically by *in vivo* oxidation of the aromatic ring, followed by nitrogen uptake and recyclisation. There are also a few so-called dimeric alkaloids that incorporate a tryptophan moiety, e.g. **Erysopinophorine**.

Dyke, S.F. *et al., Alkaloids*, 1981, **18**, 1
Chawla, A.S. *et al., Alkaloids Chem. Biol. Perspect.,* 1991, **9**, 85–154 (*rev*)
Amer, M.E. *et al.*, *J. Nat. Prod.*, 1991, **54**, 329–363 (*rev*)
Tsuda, Y. *et al., Alkaloids*, 1996, **48**, 249–337 (*rev*)

Dibenzazecine and hasubanan alkaloids (VX2980, VX3000)

These two groups may appear at first sight to belong to quite different structural groups, but there is little doubt that biosynthetically they are related. Both groups are derived from two tyrosine units, but their biosynthesis is not simple. A pivotal intermediate appears to be a hydroxylated benzylisoquinoline which can cyclise, by alternative phenol oxidative coupling processes, to a hydroxysalutaridine, or its isomer. This biosynthetic route is exceptional since it would appear that two hydroxy-groups need to be present in one of the aromatic rings. In all other known cases of oxidative coupling, only one hydroxy-group seems to be essential. The biosynthesis has affinities with that of the morphine alkaloids, although there is clearly an important divergence in the later stages.

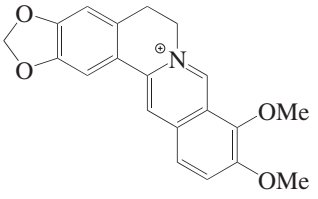


Hasubanonine

Inubushi, Y. *et al., Alkaloids*, 1977, **16**, 393–340 (*Hasubanans, rev*)
Matsui, M., *Alkaloids*, 1988, **33**, 307–347 (*Hasubanans, rev*)

Protoberberine alkaloids (VX3100, VX3240)

These tetracyclic alkaloids are derived from benzylisoquinolines by condensation with a one-carbon unit (the berberine bridge), the additional carbon atom coming from the methionine-derived C_1 pool. The alkaloids most closely related to benzylisoquinolines are the simple tetrahydroprotoberberines, e.g. **Tetrahydropalmatine**, which are dehydrogenated to Protoberberines, such as **Berberine**. There are also alkaloids carrying extra carbon substituents at *C*-12 and *C*-13 such as **Orientalidine** and **Corydaline**, respectively, and ring-opened protoberberines (secoberberines) which can be regarded as benzylisoquinolines with a carbon substituent at *C*-2′. The latter may occur in different oxidation states: as an aldehyde (e.g. **Aobamine**), an alcohol (e.g. **Macrantaline**) or as a carboxylic acid (e.g. **Macrantoridine**).



Berberine

Structure determination in this series, i.e. the assignment of correct regiochemistry to the substituents on the protoberberine ring system, has been a matter of some difficulty in the past and it is possible that some of the current assignments will prove to be incorrect.

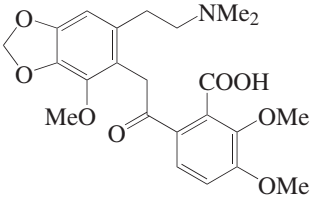
Grycova, L. *et al., Phytochemistry*, 2007, **68**, 150–175 (*rev*)

Isoindolobenzazepine alkaloids (VX3130)

This is a small group, one example is **Lennoxamine**, which is a popular synthetic target.

Narceine alkaloids (VX3140)

These alkaloids constitute further examples of oxidation products of protoberberines, in which the nitrogen to *C*-8 bond has been cleaved. The narceine group contain an ethanamine chain and, as well as relatives of **Narceine**, include bases which contain an enol lactone function, and those with a higher (**Bicucullinine**) or lower (**Peshawarine**) oxidation level than **Narceine**.

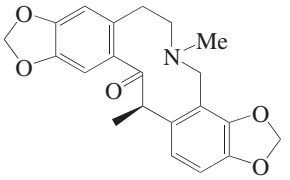


Narceine

Blaskó, G. *et al.*, *J. Nat. Prod.*, 1982, **45**, 105–122 (*rev*)

Protopine alkaloids (VX3160)

These tricyclic bases are simply formed by oxidative ring fission of protoberberine *N*-metho salts. Two of these bases (**Corycavamine**, **Corycavidine**) have an additional methyl group at *C*-13.

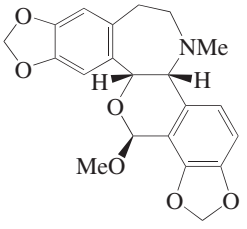


Corycavamine

Guinaudeau, H. *et al.*, *J. Nat. Prod.*, 1982, **45**, 237–246 (*rev*)
Onda, M. *et al., Alkaloids*, 1988, **34**, 181–209 (*rev*)

Rhoeadine alkaloids (VX3180)

This group of alkaloids has been encountered only in *Papaver* and related genera. Their biogenesis appears to be from two tyrosine units, via tetrahydroberberine and protopine intermediates. Oxidative fission of the nitrogen to *C*-8 bond followed by oxidative cyclisation of nitrogen on to *C*-15 and lactol formation results in a ring system in which *C*-8 becomes the lactol carbon atom.



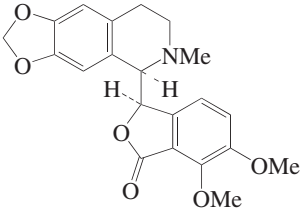
Rhoeadine

CAS formerly employed the semisystematic skeleton Rheadan for naming these alkaloids, but this has been abandoned in favour of systematic nomenclature (Rheadan = [2]Benzopyrano[3,4-*a*][3]benzazepine).

Rönsch, H., *Alkaloids*, 1986, **28**, 1–94 (*rev*)

Phthalideisoquinoline alkaloids (VX3200)

These are closely related to the rhoeadine group, and like them are formed in nature by oxidation of tetrahydroprotoberberines; **Hydrastine** and **Narcotine** are specifically derived from Reticuline via Scoulerine.

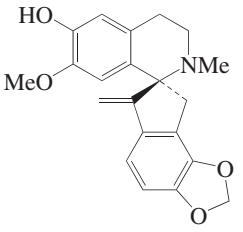


Hydrastine

MacLean, D.B., *Alkaloids*, 1985, **24**, 253–286 (*rev*)

Spirobenzylisoquinoline alkaloids (VX3220)

These alkaloids are derived from protoberberines by a 1,2-shift of *C*-8 from nitrogen to *C*-14. Several mechanisms are possible, but since several of the alkaloids contain oxygen at *C*-13 a route through an enolate ylid is attractive. **Ochotensine** and its relatives contain an additional carbon atom, again derived from methionine. Closely related to this group is **Lahorine**, an indenobenzazepine derivative, which may be derived biogenetically from the spirobenzylisoquinolines. **Hyperectine** represents a unique type of alkaloid substituted with an imidazole group.



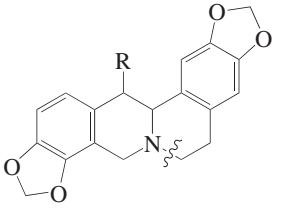
Ochotensine

Presiner, R.M. *et al.*, *J. Nat. Prod.*, 1980, **43**, 305–318 (*rev*)

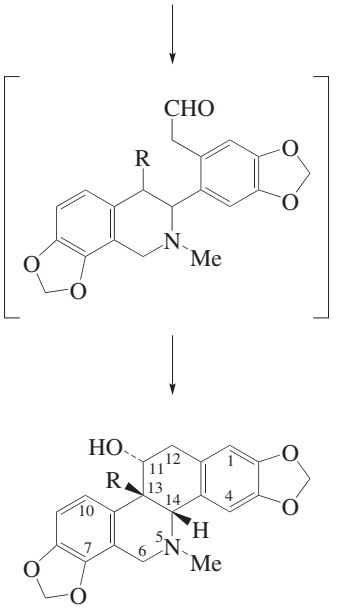
Benzo[*c*]phenanthridine alkaloids (VX3300)

These alkaloids are derived from tetrahydroprotoberberine precursors by oxidative cleavage of the *C*-6 to nitrogen bond, followed by cyclisation of *C*-6 on to position 13. Various oxidation stages exist, e.g. partially reduced benzophenanthridines, as in **Chelidonine**, and fully aromatic systems, as in **Sanguinarine**. There are also secoalkaloids (**Arnottianamide**), dimers, e.g. **Sanguidimerine**, and a group formed by the addition of a carbon substituent to *C*-8 e.g. **Corynolamine**, which in some alkaloids has undergone further elaboration (**Buesgeniine**, **Chelelactam**, **Nitrotyrasanguinarine**).

Several numbering systems have been used for the benzophenanthridine alkaloids, but the one shown below, based on biogenetic considerations, has been adopted in this Dictionary (this is not the numbering scheme for Benzo[*c*]phenanthridine itself).



Tetrahydrocoptisine, R = H
Tetrahydrocorysamine, R = Me



Chelidonine, R = H
Corynoline, R = Me

Simanek, V., *Alkaloids*, 1985, **26**, 185–240 (*rev*)
Iwasa, K. *et al., J.A.C.S.*, 1989, **111**, 7925–7931 (*biosynth*)

Phenethylisoquinoline alkaloids (VX3360)

This group (e.g. **Autumnaline**) arises from a phenethylisoquinoline precursor, which is itself generated by condensation of tyrosine with a C_6-C_3 unit derived from phenylalanine, probably via cinnamic acid.

In addition to the small group of simple phenethylisoquinolines (including dimers; **Jolantinine**; **Melanthioidine**), several other members of the following groups are related to them by further elaboration.

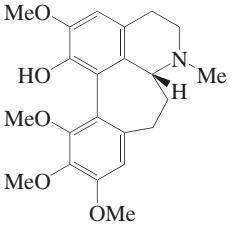
Kametani, T. *et al., Alkaloids*, 1973, **14**, 265–323; 1989, **36**, 172–223 (*revs*)

Homomorphinandieone alkaloids (VX3370)

This is a small group, e.g. **Androcymbine**, which are biosynthetic intermediates between the phenethylisoquinolines and the colchicines (VX3400). Androcymbine arises by phenol oxidative coupling, probably of Autumnaline, by a process analogous to that involved in the biosynthesis of the morphine alkaloids.

Homoaporphine and homoproaporphine alkaloids (VX3380, VX3390)

The sequence from tyrosine and phenylalanine through a phenethylisoquinoline to the homoproaporphines and homoaporphines appears superficially to be exactly analogous to the course of biosynthesis of the aporphine alkaloids. However, although Autumnaline (VX3360 above) is an efficient precursor for both **Kreysiginone** and **Kreysigine** in *Kreysigia multiflora*, dienone intermediates such as Kreysiginone are not involved in the biosynthesis of the homoaporphines, such as Kreysigine. **Bitlisine** represents an anomalous type.

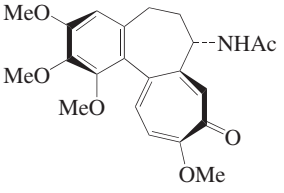


(-)-Kreysigine

Tojo, E., *J. Nat. Prod.*, 1989, **52**, 909–921 (*listing*)

Colchicine alkaloids (VX3400)

Autumnaline (VX3360) and *O*-Methylandrocymbine (VX3370) (but not Androcymbine itself) are efficient precursors for **Colchicine**, an important pharmaceutical and research tool, and the details of the biosynthesis have been studied in detail**.**



Colchicine

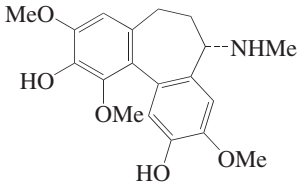
Lumicolchicines are the product of u.v. irradiation of Colchicine, and while they have been reported to occur naturally, they could be regarded as artifacts. The rearrangement product **Demecolcinone** has also been isolated more recently.

Capraro, H.-G. *et al., Alkaloids*, 1984, **23**, 1–72 (*rev*)
Boyè, O. *et al., Alkaloids*, 1992, **41**, 125–176 *(rev)*
Battersby, A.R. *et al., J. Chem. Soc., Perkin Trans. 1*, 1998, 2989–2994; 2995–3001; 3002–3009 (*biosynth*)
Le Hello, C., *Alkaloids*, 2000, **53**, 287–352 (*pharmacol*)

Dibenzocycloheptylamine alkaloids (VX3410)

Dibenzocycloheptylamine alkaloids are found in plants of the genera *Colchicum* and *Androcymbium*. To date only a few are known; these include **Jerusalemine** and **Salimine**. Jerusalemine may be formed through decarbonylation

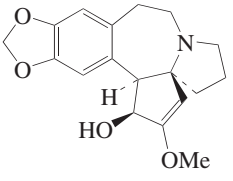
of the tropolone ring of 2-Demethyldemecolcine by a peroxidase system present in the plant, with accompanying oxidation. Salimine, on the other hand, may arise from Colchicine by enzymatic peroxidation of ring C followed by hydroxylation and methylation.



Jerusalemine

Cephalotaxus alkaloids (VX3420)

A group of alkaloids from *Cephalotaxus* spp. (Cephalotaxaceae) in which the hydroaromatic component of the Erythrina group (VX2940 above) has undergone skeletal rearrangement. A typical alkaloid of this group is **Cephalotaxine**. Alkaloids occur in both enantiomeric series and some are potent antitumour agents.

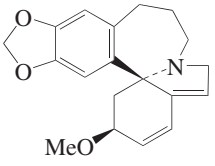


Cephalotaxine

Huang, L., *Alkaloids*, 1984, **23**, 157–227 (*rev*)
Miah, M.A.J., *Alkaloids*, 1998, **51**, 199–269 (*rev*)

Homoerythrina alkaloids (VX3440)

E.g. **Schelhammeridine**. These would appear to be formed by a route analogous to that adopted in the Erythrina group (VX2940). **Selaginoidine** and **Phellibiline** represent unusual types involving oxidative degradation of the aryl ring.



Schelhammeridine

Bick, I.R.C. al, Alkaloids Chem. Biol. Perspect., 1989, **7**, 1–42 (rev)

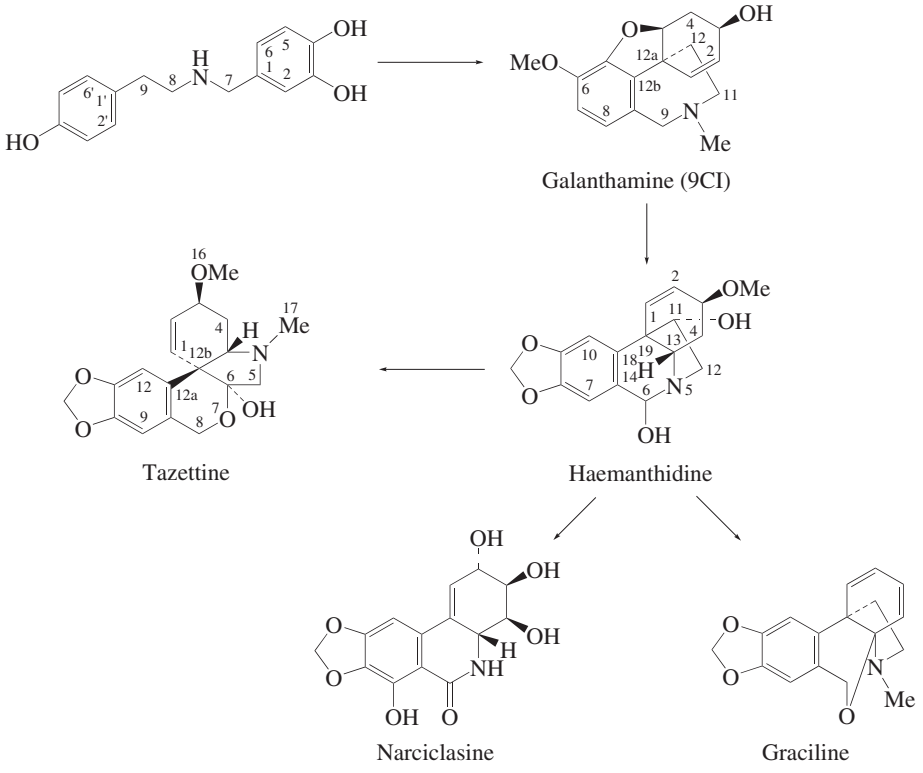
Amaryllidaceae (narcissus) alkaloids (VX3510-VX3599)

This large group of alkaloids is also derived from two tyrosine units which combine, with loss of one carbon atom, to give a benzylphenylethylamine precursor unit, e.g. **Norbelladine**. Various oxidative cyclisation processes, prominent among which are phenol oxidative coupling reactions, can give rise to the major skeletal groups. The unprimed aromatic ring derives from a simple aromatic precursor such as vanillin.

Oxidation of a norbelladine-type precursor at *C*-7, followed by cyclisation at *C*-2′, gives the simple 1-aryltetrahydroisoquinolines (VX3510) exemplified by **Cryptostylines I** and **II**. Some representatives are also found in the Orchidaceae; and both enantiomers of Cryptostyline and of some other Amaryllidaceae alkaloids have been isolated from different plants. Oxidation at the alternative benzylic position (*C*-9) and cyclisation at *C*-6 gives the 4-aryltetrahydroisoquinolines related to **Cherylline** (VX3520). Some 4- aryltetrahydroquinolines (e.g. **Viridicatin**) have been isolated from microorganisms. Oxidative coupling of positions 2 and 2′ gives the apogalanthamine skeleton of **Nivalidine** (VX3530), although this may be an artifact derived from Galanthamine.

Oxidative coupling of *C*-2 with *C*-1′ in Norbelladine gives the **Galanthamine** (VX3540) skeleton which, by a straightforward cyclisation process (nitrogen to position 1), can give rise to the **Haemanthidine** (VX3550) ring system. The more recently discovered **Graciline** subgroup (VX3555) is related to Haemanthidine by *N*(5)-*C*(6) fission and pyran ring formation.

Opening of the carbinolamine function in Haemanthidine, followed by a redox reaction and cyclisation of the oxygen at *C*-6 on to position 11 (Haemanthidine numbering), then affords the **Tazettine** (VX3560) skeleton.



A further possibility is the migration of *C*-18 in the haemanthidine skeleton to position 11, which gives rise to the ring systems present in **Pancracine** (VX3570) type alkaloids.

A double cyclisation of *C*-2 to *C*-3′ and nitrogen to *C*-2′ provides the tetracyclic skeleton characteristic of **Lycorine** and its analogues (VX3580). Further modification of this ring system by oxidative fission of the nitrogen to *C*-7 bond followed by attachment of oxygen at *C*-7 to position 1 (galanthan numbering) then gives rise to the **Lycorenine** group (VX3585). A small number of Lycorenine alkaloids exemplified by **Galanthindole** show aromatisation of the indole portion, leading to a type of non-tryptophan-derived, biogenetically distinct type of indole alkaloid.

The small **Narciclasine** group (VX3590) also stems from Norbelladine, and appears to be formed via Crinine (but not 3-Epicrinine) by loss of the two-carbon bridge and appropriate oxidations.

Category VX3599, Miscellaneous Amaryllidaceae alkaloids, includes **Ismine**, an aromatised biaryl derived from a Haemanthidine precursor, and some novel two-nitrogen alkaloids such as **Plicamine**, and **Augustamine**, which cannot be assigned to known subtypes. There also remain a considerable number of alkaloids from earlier work to which structures were not assigned. **Varadine**, isolated in 1979, deserves reinvestigation.

Mesembrenoid alkaloids (VX3600)

Derived from two phenylalanine units with loss of one of the ethanamine sidechains, this smallish group of alkaloids is typified by **Mesembrine**; a second sub-group contains alkaloids in which the pyrrolidine ring has not

been formed, as in **Joubertiamine**. A third variant contains bases in which a pyridine ring has been fused on, as in **Sceletium alkaloid A4** and **Tortuosamine.** Mesembrenoid alkaloids occur in *Sceletium* spp. (Aïzoaceae).

Emetine (Ipecac) alkaloids (VX3690)

The emetine alkaloids are unique among the isoquinoline group in that they are derived from a monoterpenoid unit via Secologanin in an analogous manner to the monoterpenoid indole alkaloids. They occur in the Alangiaceae, Rubiaceae and Icacinaceae. Incorporation of one phenylalanine/tyrosine unit gives the alkaloids exemplified by **Ipecoside** and **Protoemetine**; the latter, by combination with a second amino acid unit, gives rise to the **Emetine** subgroup. Alternatively, combination with a tryptamine unit gives the typical alkaloids of *Alangium lamarckii,* e.g. **Tubulosine**.

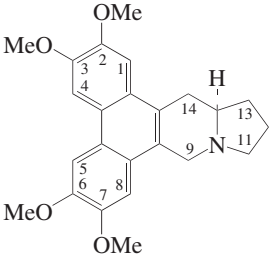
Phenanthroindolizidine and phenanthroquinolizidine alkaloids (VX3700, VX3760)

These alkaloids are derived from two molecules of phenylalanine or tyrosine, together with, presumably, ornithine (phenanthroindolizidines. e.g. **Tylophorine**) or lysine (phenanthroquinolizidines, e.g. **Cryptopleurine**).



Tylophorine

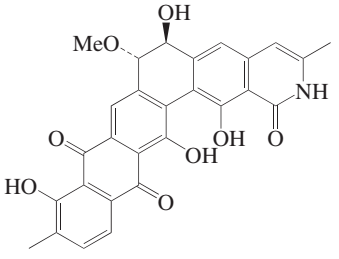
Ericamycins (VX3900)

This is a relatively small group of polycyclic substances containing a fused isoquinoline system which has been little reviewed. The name Ericamycins is used here; although they are also referred to as the Albofungin group. They are of polyketide origin, with some unusual features to their biosynthesis. Various numbering systems have been used, and the numbering in CAS changes for trivial reasons (presence or absence of additional alicyclic rings, etc.)



Ericamycin

INDOLE ALKALOIDS

The group of alkaloids derived from tryptophan constitutes the largest, most varied and most fascinating of all alkaloid groups. The alkaloids include simple tryptamine derivatives, carbazoles (in which the ethanamine chain has been lost), a variety of alkaloids in which tryptamine has combined with one or more prenyl residues, and others in which regular monoterpenoid or diterpenoid units have been incorporated. However, the largest group, and the most extensively studied, is the thousands of alkaloids derived from tryptophan and a monoterpenoid unit based on Secologanin. The classical researches on indole alkaloids were carried out on terrestrial plant alkaloids, and then moved to studies of fungal-derived alkaloids. Indole alkaloids are also numerous in marine organisms, and the range of structural types differs from those found in terrestrial organisms. Many of the 'traditional' indole alkaloid types produced by terrestrial plants have not been found; polyhalogenation is a common feature of these alkaloids.

Simple indole alkaloids (VX4000)

Under this heading appear various unhalogenated (plant) and halogenated (marine) indoles, together with higher molecular weight alkaloids containing unsubstituted indole ring systems, such as **Aplysinopsin** and its relatives (which are also imidazoles). Also included are a variety of simple indoles carrying prenyl, etc. substituents. The simplest plant indole alkaloid is **Gramine**.

Husson, H.-P., *Alkaloids*, 1985, **26**, 1–51 (*rev*)
Higuchi, K. *et al.*, *Nat. Prod. Rep.*, 2007, **24**, 843–865 (*rev*)

Bisindoles (VX4020)

This category includes **Indirubin**, **6,6′-Dibromoindigotin** and other bisindoles; many from marine sources are polybrominated.

Yang, C.G. *et al., Curr. Org. Chem.*, 2004, **8**, 1691–1720 (*rev, bisindole alkaloids from sponges*)
Kam, T.-S. *et al., Alkaloids,* 2006, **63**, 181–337 (*rev*)

Simple tryptamine alkaloids (VX4040)

Tryptamine itself and some simple relatives have been isolated from marine tissues, and **Bufotenine**, long known as an amphibian product, has more recently been detected in a gorgonian. More highly elaborated marine alkaloids containing a (dehydro)tryptamine residue include the **Kottamides**. There are also some simple tryptamine dimers and oligomers such as the **Gelliusines**.

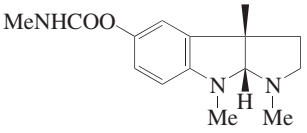
Kam, T.-S. *et al., Alkaloids,* 2006, **63**, 181–337 (*rev*)

Cyclotryptamine alkaloids (VX4100)

This group is formally derived from tryptophan by cyclisation and decarboxylation. (The presence of the cyclised form, cyclotryptophan, can be demonstrated in tryptophan solutions). **Physostigmine**, the prototype of this group of alkaloids, was first isolated from *Physostigma venenosum* and has also been produced by *Streptomyces* spp. The alkaloid is characterised by a urethane group which is readily hydrolysed with aqueous base to afford Eseroline. In addition to plant alkaloids with this skeleton, other representatives of this class have been isolated from marine organisms (e.g. the **Flustramines**) and from skin extracts of the Australian frog *Pseudophryne coriacea* (e.g. **Pseudophrynamine A**, where there is evidence for *de novo* biosynthesis by the amphibian rather than a dietary source). A number of interesting oligomers of this class occur in plants, e.g. **Chimonanthine**, a dimer, **Hodgkinsine** (a trimeric species), the **Quadrigemines** (tetramers) and higher.



Physostigmine

Kam, T.-S. *et al., Alkaloids,* 2006, **63**, 181–337 (*rev*)

Chaetocin alkaloids (VX4110)

Also called Epipolythiodioxopiperazines, although some members of the series lack the polysulfur bridge. These are microbial products, but a considerable number, including the extensive series of **Leptosins**, have been isolated from marine sources. The prototype is **Echinulin**, from *Aspergillus echinulatus*. They are biosynthesised from diketopiperazines, which are cyclic amino acid anhydrides.

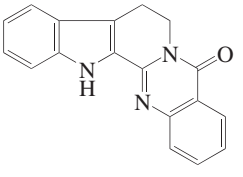
Kawasaki, T. *et al., Nat. Prod. Rep.*, 2005, **22**, 761–793 (*rev*)

Euodia (quinazolinocarbazole) alkaloids (VX4120)

These alkaloids are characteristic of the Rutaceae. The most studied is **Rutaecarpine**, which has useful hypotensive activity. They arise by incorporation of a C_1 unit into a β-carboline precursor.

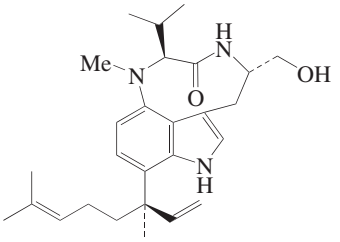


Rutaecarpine

Bergmann, J., *Alkaloids*, 1983, **21**, 29–55 (*rev*)

Indolactam alkaloids (VX4200)

The indolactam group contains an unusual nine-membered lactam ring derived from tryptophan and valine, via *N*-Methyl-L-isoleucyl-L-tryptophanol. The grouping occurs in the tumour-promoting **Teleocidins** and **Lyngbyatoxins**, which are microbial products. These contain a monoterpenoid portion which is derived from glucose, not mevalonate.

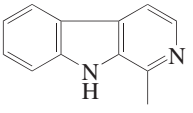


Lyngbyatoxin A

Irie, K *et al., Tet. Lett*., 1990, **31**, 7337–7340; 1998, **39**, 7929–7930 (*biosynth*)

β-Carboline alkaloids (VX4240)

A large number of relatively simple β-carboline (pyrido[3,4-*b*]indole) derivatives occur naturally. These include β-carbolines unsubstituted at *C*-1, e.g. **1,2,3,4-Tetrahydro-6-methoxy-2-methyl-β-carboline**, those containing a methyl group at *C*-1, i.e. the **Harman** group, and several which contain a substituent at *C*-1 and/or *C*-3. The substituents at position 1 may be acyl, carboxyl, or they may be more complex, as in **Perlolyrine**



Harman

Long known as terrestrial alkaloids, these are also widespread in marine organisms. β-Carboline (**Norharman**) itself has been found in an ascidian and in dinoflagellates, and examples of simple brominated analogues include the **Eudistomins** and some of the **Arborescidines**. Another group of β-carboline derivatives, presumably derived from tryptophan and cysteine, have been isolated from *Eudistoma olivaceum*, a Caribbean tunicate. The β-Carboline nucleus is also found in some of the **Manzamines** and other more complex alkaloids.

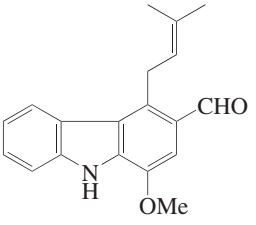
Kawasaki, T. *et al.*, *Nat. Prod. Rep.*, 2005, **22**, 761–793 (*rev*)

Carbazole alkaloids (VX4300)

Nearly all carbazole alkaloids have a substituent at *C*-3, although **Carbazole** itself and one or two simple marine halogenated derivatives have also been characterised. The main source of carbazole alkaloids are the plants of the Rutaceae subfamily Aurantioideae, especially the genera *Clausenia*, *Murraya* and *Glycosmis*. They are also found in some other higher plants, as well as streptomycetes and cyanobacteria. **3-Methylcarbazole** appears to be the key biosynthetic intermediate, although there is little direct experimental evidence. Elaboration into prenylcarbazoles (e.g. **Ekeberginine**) and dimerisation occurs. They have been well-reviewed.



Ekeberginine

Indolo[2,3-*a*]carbazole alkaloids (VX4350)

These are a class of alkaloids exemplified by **Staurosporine**, which was first isolated in 1977 from a terrestrial microorganism, and which has since been found to be widely distributed. They are essentially microbial metabolites from a variety of organisms (field-collected or cultured), and show a wide range of biological activities. Others are the **Tjipanazoles** (from the blue-green alga *Tolypothrix tjipanasensis*) and several metabolites from slime moulds of the genus *Arcyria* (e.g. the **Arcyriarubins** and **Arcyriaflavins**). The isolation of **4′-*N*,*O*-Didemethylstaurosporine** from a flatworm *Pseudoceros* sp. is noteworthy. Their biosynthesis has been intensively studied; they are produced from bisindolyl precursors resembling **Violacein**; the indolyl residues are derived from tryptophan via 7-chlorotryptophan followed by an oxidative ring closure.

Indolonaphthyridine alkaloids (VX4400)

These are the canthinones, a numerous and relatively straightforward subgroup of the β-carbolines, e.g. **Canthin-6-one**, in which an additional C_3 unit is attached between C-1 and the indole nitrogen to form an additional ring. The C-3 unit appears to be derived from ketoglutarate. The group includes a few dimeric examples, e.g. **Haplophytine**. They occur especially in the Simaroubaceae and Rutaceae, and some representatives have been isolated from basidiomycete fungi.

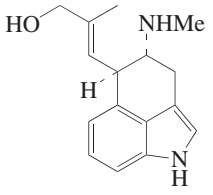
Ohmoto, T. *et al., Alkaloids* 1989, **36**, 135–170 *(rev)*

Ergot alkaloids (VX4460)

These alkaloids, which classically occur in the fungus *Claviceps purpurea* which in the past was responsible for ergotism, are derived from 4-prenyltryptophan by cyclisation to give a tricyclic base related to **Chanoclavine I**, a representative of the simplest subgroup. Further elaboration gives the tetracyclic ergoline skeleton, as in

Elymoclavine, which is present in the majority of alkaloids in this group. The most important alkaloids, many of which have useful medical applications, are more complex peptide alkaloids formed from lysergic acid, in which *C*-17 in the elymoclavine-type precursor has been oxidised to a carboxyl group, by attachment to one or more amino acids. **Ergocristine**, which is based on the ergotaman nucleus, is typical.



Chanoclavine I

They have been considered exclusively the metabolites of terrestrial fungi and microorganisms, but the recent isolation of the **Pibocines**, simple brominated analogues of Festuclavine, from *Eudistoma ascidians*, have provided a first marine occurrence. The presence of the bromine substituent in the Pibocines argues for their being genuine ascidian products and this is presumably a case of biochemical parallelism.

A few other metabolites, which may also be included in this group, are the result of skeletal rearrangement. **Clavicipitic acid** is one such compound; another is **α-Cyclopiazonic acid**. However, whereas the former is definitely a product of prenyl-tryptophan metabolism the latter, from *Penicillium cyclopium* is not, since it appears to arise from reaction of a tryptophan-acetoacetate unit with prenyl pyrophosphate.

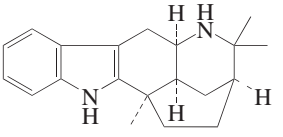
Indoloterpenoid alkaloids (VX4620)

This group consists of a variety of alkaloids in which a tryptamine unit is attached to a terpenoid unit. It includes the *Aristotelia* alkaloids, of which **Aristoteline** is typical, and some other terrestrial alkaloids isolated from *Borreria* spp. There are numerous variations in the structure of the terpenoid part of the skeleton. Also included here are the **Hapalindoles** and related alkaloids mostly from freshwater cyanophytes, which are mostly isocyano/isothiocyanato substituted.



Aristoteline

Alkaloids included in this classification code are not 'monoterpenoid indole alkaloids' in the strict sense as defined below for subsequent categories derived from secologanin. They are also distinguished in the classification code from the Penitrem group, VX6470.

MONOTERPENOID-DERIVED INDOLE ALKALOIDS (VX4640-VX5980)

The extremely important and varied group of monoterpenoid indole alkaloids originate from the condensation of tryptophan with secologanin to give **Strictosidine**, which is further elaborated to give the corynanthe alkaloids, together with an impressive array of structural variants which are divided here into the numerous sub-groups

tabulated in Table 1, and which are also described in the category descriptions which follow. Not all of the smaller groups of indole alkaloids are described in detail in the paragraphs which follow. If there is no description, their generic structure can be seen in Table 1, and any important references and reviews concerning them can be accessed from the individual dictionary entries.

Various schemes have been used to divide the indole alkaloids into major groups based on the major biogenetic branch points. The most widely used recognises classes 1-5, where class 1 contains those skeletons most closely related to secologanin. These schemes are not further referred to in the discussion which follows. Certain biogenetic generalisations can be made, e.g. class 3 alkaloids are found only in the Apocynaceae.

Biogenetic numbering is used throughout this introduction and the individual entries. (Le Men, J.*, et al., Experientia*, 1965, **21**, 508–510; Anon., *Alkaloids*, 2001, **56**, xxiii–xxiv). This almost invariably differs from systematic (e.g. CAS) numbering. However, it allows the biogenetic origin of the individual carbons in the different types of indole alkaloid to be traced in the numerous skeletons. It does have the slight disadvantage that the numbering becomes discontinuous whenever there are new bond-making and bond-breaking processes, as illustrated in the chart. CAS numbering may be encountered for some groups, such as the Iboga alkaloids, but the Le Men biogenetic scheme is preferred by the majority of specialists in the field.

In the main types of indole alkaloids having the secologanin subunit in unrearranged form, stereoisomerism at positions 3, 19, and 20 is common, but *C*-15 is invariant based on the corresponding carbon in secologanin. *C*-22 is frequently absent (for example, in all known actual alkaloids of the Pleiocarpamine group VX5220), but is shown in the skeletons.

Some indole alkaloids in various groups are found as variants resulting from indole to indoxole or pseudoindoxyl rearrangement. These are often treated as a separate category, oxindole alkaloids, but here they have been listed under the corresponding parent indole structure type (change from the first edition), as new types continue to be found. For example, **Rhynchophylline**, based on the corynoxan skeleton, is here categorised as a corynanthe alkaloid, VX4800. Another type of rearrangement found in some of the groups (Camptothecins, Cinchona alkaloids) is conversion of the indole to a quinoline nucleus. This means that the resulting structures do not strictly speaking contain an indole nucleus. However, they are considered to be indole alkaloids on biogenetic grounds.

Indole alkaloids are most common in the Apocynaceae, Loganiaceae and Rubiaceae, and are also found in the Alangiaceae, Icacinaceae, Nyssaceae, and possibly other families.

Strictosidine alkaloids (VX4640)

This category covers alkaloids related to the biogenetic parent alkaloid **Strictosidine** without further carbon-skeleton modification.

Camptothecin alkaloids (VX4700)

These alkaloids, which contain the quinoline ring system, are probably derived from Strictosidine via an intermediate related, possibly, to **Rubescine**. In this case, conversion of the indole group into the quinoline ring involves ring enlargement of ring B at the expense of ring C; otherwise the changes in the formation of **Camptothecin** from Strictosidine are straightforward.

Soepenberg, O. *et al., Alkaloids*, 2003, **60**, 1–50 (*rev*, *biochem*)

Corynanthean alkaloids (VX4800)

This large group, formed by simple cyclisation of the precursor, is exemplified by **Geissoschizine** and **Sitsirikine**.

In corynanthe alkaloids and other groups closely related to them (e.g. yohimbanes, below), stereoisomeric variation is common except at *C*-15, which is invariably 15α*H*-.

Szántay, C. *et al., Alkaloids,* 1986, **27**, 131–269 (*rev*)

Secologanin-derived sesquimer alkaloids (VX4820)

These are derived from two biogenic amine subunits and one monoterpenoid subunit (normal sesquimers), or one biogenic amine subunit and two secologanin units (reversed sesquimers). The greatest number are formed by condensation of a (usually) Corynanthe portion with an additional tryptamine or canthine subunit, as in the **Ochrolifuanines** and **Usambarensines.** The dictionary entries carry the code numbers for the constituent fragments also.

Brown, R.T., *The Chemistry of Heterocyclic Compounds: Indoles-The Monoterpenoid Indole Alkaloids*, (ed. Saxton, J.E.), Wiley, 1983, **25**, part 4, 63–146 (*rev*)
Kam, T.-S. *et al., Alkaloids,* 2006, **63**, 181–337 (*rev*)

Akageran and related alkaloids (VX4840)

This relatively small group of alkaloids typified by **Akagerine** appears to be formed by bond-breaking of a corynanthe precursor followed by formation of a 7-membered ring. Included here are a small number related to **Adifoline**.

Ajmalicine-like alkaloids (VX4860)

These are based on a 17,19-secoyohimban skeleton which is invariably present as an ether (oxayohimban). **Ajmalicine** was formerly considered a key intermediate in indole alkaloid biosynthesis, but this has been disproved.

Lewis, S.E., *Tetrahedron*, 2006, **62**, 8655–8681 (*rev*)

Macroline alkaloids (VX4900)

This group is related to the Akuammilines (VX5200 below) by scission of the *C*-21 to *N*-4 bond. The macroline skeleton mostly occurs in bisindole alkaloids; Macroline itself has not yet been found as a free alkaloid and only a small number of monomeric analogues are known.

Malindan alkaloids; Cadamban alkaloids; Vallesiachotaman alkaloids (VX4920, VX4940, VX4960)

See chart. These are small groups, e.g. **Malindine; Cadambine, Vallesiachotamine**, some alkaloids having an elaborate additional pyridine ring.

Gelsemium alkaloids (VX5000)

These alkaloids contain an oxindole function and a cage-like, hydroaromatic residue which can be imagined, in a formal sense, to arise from an intermediate related to anhydrovobasinediol by formation of a 6,20 bond and rearrangement to an oxindole. The major alkaloids in this group are related to **Gelsemine**; however, a smaller group, characterised by **Gelsedine**, lack the 6,20 bond, and have also lost *C*-21.

Takayama, H. *et al., Alkaloids,* 1997, **49**, 1–78 (*rev*)

Yohimbinoid alkaloids (VX5040)

The Yohimbinoid alkaloids contain a carbocyclic ring E arising through *C*-17 to *C*-18 bond formation in a corynantheine precursor. As in the corynantheine and ajmalicine groups, stereoisomerism at all chiral centres, except *C*-15, is known. Structural variations include the presence of methoxy-groups in the aromatic ring, hydroxy- or acyloxy- groups at *C*-18, as in **Reserpine**, and various degrees of unsaturation in rings C-E, as in **Alstoniline**.

Brown, R.T., *The Chemistry of Heterocyclic Compounds: Indoles-The Monoterpenoid Indole Alkaloids*, (ed. Saxton, J.E.), Wiley, 1983, **25**, part4, 147–199 (*rev*)
Szántay, C. *et al., Alkaloids*, 1986, 27, 131–269 (*rev*)
Baxter, E.W. *et al., Alkaloids Chem. Biol. Perspect.*, 1990, **8**, 197–319 (*rev, synth*)

Sarpagine alkaloids (VX5100)

The Sarpagine (Akuammidine) group, based on the sarpagan nucleus, arises from bond formation between *C*-16 and *C*-5 of the corynantheine precursor and consists of simple **Akuammidine** derivatives and oxindoles obtained following the migration of *C*-3 from *C*-2 to *C*-7, e.g. **Gardneramine.** The closely related Vobasine (VX5140) and Ervatamia (VX5180) groups are now listed separately.

Joule, J.A., *The Chemistry of Heterocyclic Compounds: Indoles-The Monoterpenoid Indole Alkaloids*, (ed. Saxton, J.E.), Wiley, 1983, **25**, part 4, 201–264 (*rev*)
Hamaker, L.K. *et al, Alkaloids Chem. Biol. Perspect.*, 1994, **9**, 23–84 (*rev, synth*)
Lounasmaa, M. *et al., Alkaloids*, 1999, **52**, 103–195 (*rev*)
Lewis, S.E., *Tetrahedron*, 2006, **62**, 8655–8681 (*rev*)

Ajmaline alkaloids (VX5120)

The ajmaline group contains both 5,16 and 7,17 bonds. **Ajmaline** itself is the best known example. Almost all the bases in this group contain the same skeleton, but **Perakine** and its congeners afford a rare structural variation in which the 21,*N* bond has been replaced by a 19,*N* bond.

Lewis, S.E., *Tetrahedron*, 2006, **62**, 8655–8681 (*rev*)
Lounasmaa, M. *et al., Alkaloids*, 2001, **55**, 1–87 (*rev*)

Vobasine alkaloids (VX5140)

These are related to the sarpagine group by C-3 to *N*-4 bond scission.

Koumine alkaloids (VX5150)

These are 7,20-cyclovobasine alkaloids.

Ervatamia alkaloids (VX5180)

These alkaloids (e.g. **Ervatamine**, **Methuenine**) can be successfully produced *in vitro* from vobasine-type alkaloids (VX5140) and this has also been achieved by enzymic preparations. The process involves 5,6- bond cleavage and 6,16- bond formation.

Thai, C. *et al.*, *J.A.C.S.*, 1981, **103**, 4956–4957 (*biosynth*)

Akuammiline alkaloids (VX5200)

The ring system in this group is formed from a precursor of the corynantheine type by bond formation between *C*-16 and *C*-7. In addition to close relatives of **Akuammiline**, variations in this subgroup include alkaloids derived by *C*-3 to *N*-4 bond fission and *C*-2 to *N*-4 bonding, e.g. **Echitamine,** and alkaloids in which the *N*-4 to *C*-5 bond in the Akuammiline skeleton has been severed, e.g. **Aspidodasycarpine**. **Nareline** is a unique alkaloid with an additional bond between *C*-21 and *C*-6.

Lewis, S.E., *Tetrahedron*, 2006, **62**, 8655–8681 (*rev*)

Pleiocarpaman alkaloids (VX5220)

In this group, a corynantheine precursor has cyclised via *C*-16 on to *N*-1, as in **Pleiocarpamine**.

Gilbert, B., *Alkaloids*, 1968, **11**, 205–306 (*rev*)

Cinchona alkaloids (VX5240)

This important and well-known group, which includes the valuable antimalarial quinine, consists of two subgroups: the **Cinchonamine** group, derived from a corynantheine-type precursor by fission of the *N*-4 to *C*-5 bond plus attachment of *N*-4 to *C*-17, and the **Quinine** group, which contain a quinoline ring system generated from a precursor of the cinchonamine type by 2,7-bond fission followed by bonding of *N*-1 to *C*-5. **Corialstonine** represents an abeo-variant.

Grethe, G. *et al., The Chemistry of Heterocyclic Compounds: Indoles-The Monoterpenoid Indole Alkaloids*, (ed. Saxton, J.E.), Wiley, 1983, **25**, part 4, 729–752 (*rev*)
Hoffmann, H.M.R. *et al., Eur. J. Org. Chem.*, 2004, 4293–4312 (*rev*)

Akuammicine (curan) alkaloids (VX5260)

The biogenesis of these alkaloids presumably involves migration of *C*-3 in a corynanthe precursor from *C*-2 to *C*-7, followed by formation of the 2,16-bond. An early alkaloid in the group is therefore **Preakuammicine,** which loses formaldehyde to give **Akuammicine**. Included in this group is **Stemmadenine**, a 3,7-secoalkaloid which appears to be the intermediate on the pathway to the Ulean group below (VX5860).

Strychnidine alkaloids (VX5280)

Formation of the skeleton of these typical *Strychnos* alkaloids involves the addition of two carbon atoms to a curan precursor, presumably, from an acetate unit

Husson, H,-P., *The Chemistry of Heterocyclic Compounds: Indoles-The Monoterpenoid Indole Alkaloids*, (ed. Saxton J.E.), Wiley, 1983, **25**, part 4, 293–330 (*rev*)
Bosch, J. *et al., Alkaloids*, 1996, **48**, 75–189 (*rev*)
Ohshima, T., *Chem. Pharm. Bull.*, 2004, **52**, 1031–1052 (*rev, synth*)
Shibasaki, M. *et al., Alkaloids*, 2007, **64**, 103–138 (*rev, synth*)

Condylocarpan alkaloids (VX5320)

These alkaloids contain a ring system similar to that of the curan group, but are formed by cyclisation of *C*-21 on to *C*-7 in a Corynanthe precursor, rather than the formation of a 3,7 bond; **Condylocarpine** is representative. Note that loss of the ethanamine carbons 5 and 6 gives the ring system of uleans (VX5860 below), which thus suggests an alternative biogenetic route to the one given below. Extensive modification of this skeleton appears to have occurred in the formation of **Goniomine**, which can be postulated to be formed by ring-opening and epoxidation of an indolenine related to Condylocarpine followed by *N*-1 to *C*-19 bonding.

Lounasmaa, M., *Prog. Chem. Org. Nat. Prod.*, 1986, **50**, 27–56 (*rev*)

Secodine alkaloids (VX5360, VX4740)

This group of tricyclic alkaloids is formed by ring-opening of a precursor of the Preakuammicine type. The alkaloids occur in various stages of reduction, and in monomeric and dimeric forms. **Andranginine**, the product of an unusual cyclisation of a dehydrosecodine, may also be included here.

Hájiček, J., *Collect. Czech Chem. Commun.*, 2004, **69**, 1681–1767 (*rev*, *synth*)

Aspidosperma alkaloids (VX5400)

The skeleton of the aspidospermidine alkaloids is formed by cyclisation of a dehydrosecodine, itself obtained from a precursor related to Preakuammicine. The alkaloids in this group are based on several structural variants. A methoxycarbonyl group at *C*-16 may be present (**Tabersonine**) or absent (**Aspidospermine)**; in each case, *C*-18/*C*-19 may be an ethyl group, or may be functionalised, e.g. into a lactone system. **Obscurinervidine** contains a dihydro-1,4-oxazine ring between *N*-1 and *C*-12.

Saxton, J.E., *The Chemistry of Heterocyclic Compounds: Indoles-The Monoterpenoid Indole Alkaloids*, (ed. Saxton, J.E.), Wiley, 1983, **25**, part 4, 331–437 (*rev*)
Overman, L.E. *et al., Alkaloids Chem. Biol. Perspect.*, 1985, **3**, 275–307 (*rev*)
Cordell, G.A., *Alkaloids*, 1997, **50**, 327–384 (*rev*)
Saxton, J.E., *Alkaloids*, 1998, **51**, 1–197 (*rev*)
Hájiček, J., *Collect. Czech Chem. Commun.*, 2004, **69**, 1681–1767 (*rev, synth*)

Rhazinilam alkaloids (VX5450)

These are alkaloidal artifacts related to the aspidosperma group by *C*2-*C*7 fission, the indole functionality thus being lost.

Hájiček, J., *Collect. Czech Chem. Commun.*, 2007, **72**, 821–898 (*rev*, *synth*)

Melonine alkaloids (VX5460)

This small group has undergone a (6 →2) abeo shift from an Aspidosperma-like precursor.

Quebrachamine alkaloids (VX5500)

Quebrachamine alkaloids are derived from the Aspidosperma group (type III skeleton) by fission of the 7,21-bond. They may have lost the *C*-16 methoxycarbonyl group (e.g. **Quebrachamine**) or it may have been retained, as in **Vincadine**.

Hájiček, J., *Collect. Czech Chem. Commun.*, 2004, **69**, 1681–1767; 2007, **72**, 821–898 (*rev*, *synth*)

Aspidofractine alkaloids (VX5540)

These are related to the Aspidosperma group by formation of a *C*-2 to *C*-18 bond.

Hájiček, J., *Collect. Czech Chem. Commun.*, 2007, **72**, 821–898 (*rev*, *synth*)

Vindolinine alkaloids (VX5550)

These are related to the Aspidosperma group by formation of a *C*-2 to *C*-19 bond.

Kopsane alkaloids (VX5560)

The skeleton of the kopsane group of alkaloids is simply formed by attachment of *C*-22 (the methoxycarbonyl carbon) of Venalstonine to *C*-6, as in **Kopsine**. Skeletal variations include the alternative acyloin structure, as in **Fruticosine**, in which *C*-22 is attached to *C*-17.

Hájiček, J., *Collect. Czech Chem. Commun.*, 2007, **72**, 821–898 (*rev*, *synth*)
Kam, T. S. *et al., Alkaloids,* 2008, **66**, 1–111 *(rev)*

Melodinus alkaloids (VX5580)

These have been isolated only from *Melodinus* and *Kopsia* spp. (e.g. **Meloscine**, **Scandine**). They are plausibly biosynthesised from alkaloids of the Tabersonine type (VX5400). There are two known dimer alkaloids.

Hugel, G. *et al., J.O.C.*, 1986, **51**, 1594–1595 (*biosynth*)

Iboga alkaloids (VX5700)

A further mode of cyclisation of a secodine-type precursor involves formation of a 16,21 bond, which gives rise to the bridged ring system (type II indole alkaloid) found in **Ibogamine**, **Catharanthine**, and numerous related alkaloids. They are often components of heterodimer indole alkaloids.

This group of alkaloids exists in both enantiomeric series which may be defined by the chirality of *C*-14. The best-known example of the 14*S* series is Catharanthine. Most other alkaloids of this group belong to the 14*R* series. Many alkaloids retain the methoxycarbonyl group, whereas others (e.g. Ibogamine) have lost it. Other variations include oxidation at *C*-7 to give the related hydroxyindolenines, e.g. **Iboxygaine hydroxyindolenine**; oxidation followed by rearrangement to the related indoxyl, e.g. **Desmethoxyiboluteine**, oxidative rearrangement to the corresponding oxindole, as in **Tabernoxidine**; and oxidation at *C*-19, *C*-3, *C* -5, or *C*-6 with, occasionally, ether formation between oxidised positions.

Also **16-Hydroxyalloibogamine**, the only alkaloid having the analogous but isomeric bridged ring system (type III skeleton) is also ranked into this class of alkaloids.

Cordell, G.A., *The Chemistry of Heterocyclic Compounds: Indoles-The Monoterpenoid Indole Alkaloids*, (ed. Saxton, J.E.), Wiley, 1983, **25**, part 4, 467–537 (*rev*)
Popik, P. *et al., Alkaloids*, 1998, **52**, 197–231 (*rev, pharmacol*)
Sundberg, R.J. *et al., Alkaloids*, 2002, **59**, 281–366 (*rev*)
Hájiček, J., *Collect. Czech Chem. Commun.*, 2004, **69**, 1681–1767 (*rev, synth*)

Pandoline alkaloids (VX5800)

The Pandoline (pseudoaspidospermidine) (type II indole alkaloid) nucleus can be imagined to be formed by cyclisation of a secodine derivative isomeric with that postulated as a precursor for Aspidospermidine. **Ibophyllidine** represents an obvious ring contraction, **Iboxyphylline** a ring extension.

Cleavamine alkaloids (VX5820)

The small **Cleavamine** group is more often encountered as degradation products of other alkaloids; these may arise by fission of the 3,7-bond. Alternatively, and perhaps more likely, this ring system can be generated by fission of the 16,21-bond in an Iboga skeleton (see below).

Hájiček, J., *Collect. Czech Chem. Commun.*, 2004, **69**, 1681–1767; 2007, **72**, 821–898 (*rev*, *synth*)

Pyridocarbazole alkaloids (VX5840)

This small and pharmacologically important group is based on the 6*H*-pyrido[4,3-*b*]carbazole ring system, and is exemplified by **Ellipticine** and **Olivacine**. Although these aromatic bases may superficially seem to be unrelated to the mainstream indole monoterpenoid alkaloids a possible biogenesis from Stemmadenine can be postulated. However, the details of the biosynthesis do not appear to have been investigated experimentally since the 1970s, when only low incorporation of tryptophan was found.

There are two subtypes in that Ellipticine is derived biogenetically from the Ajmalicine type (VX4860) and Olivacine from the Malindan type (VX4920). Because of this biogenetic diversity and their separation structurally from the mainstream indole alkaloids, systematic (CAS) numbering is now usually employed in the literature for the ellipticine nucleus.

Gribble, G.W. *et al.*, *Heterocycles*, 1985, **23**, 1277–1315 (*rev*, *synth*)
Kansai, V.K. *et al.*, *Tetrahedron*, 1986, **42**, 2389–2408 (*rev*)
Alvarez, M. *et al., Alkaloids*, 2001, **57**, 235–272 (*rev*)

Ulean and Vallesaman alkaloids (VX5860, VX5880)

These alkaloids may well arise, like the Ellipticine group, from an oxidative fission of a Stemmadenine-like intermediate. The genesis of the three types, e.g. **Vallesamine**, **Uleine**, and **Appariceine** can thus readily be explained.

Joule, J.A., *The Chemistry of Heterocyclic Compounds: Indoles-The Monoterpenoid Indole Alkaloids*, (ed. Saxton, J.E.), Wiley, 1983, **25**, part 4, 265–292 (*rev*)
Alvarez, M. *et al., Alkaloids*, 2001, **57**, 235–271 (*rev*)

Eburna and Schizozygine alkaloids (VX5900; VX5930)

The skeleton of the Eburna alkaloids is generated by rearrangement of the aspidospermidine ring system, involving migration of *C*-21 from *C*-7 to *C*-2, fission of the 2,16-bond, and attachment of *C*-16 to *N*-1. This rearrangement has been very successfully imitated *in vitro*. **Vincamine** and its derivatives retain the methoxycarbonyl group; **Eburnamine** and **Eburnamenine** have lost it. There are some alkaloids in which *C*-18 or *C*-19 is oxidised, e.g. **Cuanzine**.

The **Schizozygine** group (VX5930) contain an additional bond between *C*-2 and *C*-18. Included are **Andrangine** and **Vallesamidine**, which can be considered as secoschizozygines or as Eburna alkaloids in which *C*-21 has simply migrated to *C*-2.

Saxton, J.E., *The Chemistry of Heterocyclic Compounds: Indoles-The Monoterpenoid Indole Alkaloids*, (ed. Saxton, J.E.), Wiley, 1983, **25**, part 4, 439–465 (*rev*)
Lounasmaa, M. *et al., Alkaloids*, 1992, **42**, 1–116 (*rev*)

Tacaman alkaloids (VX5920)

A small group is apparently obtained by processes analogous to the formation of the Eburna group, but from a precursor to a pseudoaspidospermidine (type II skeleton) derivative, by the formation of new bonds at *C*-2 → *C*-3 and *C*-14 → *C*-17. Again, *C*-22 may be present (**Tacamine**) or absent (**Tacamonine**).

Danieli, B. *et al., Alkaloids*, 1986, 27, 95–103 (*rev*)

Chippiine alkaloids (VX5940)

These represent a numerically limited group. Their structures can be derived from an Iboga-type precursor by cleavage of the *C*-3 to *N*-4 bond and formation of an *N*-1 to *C*-3 bond.

Bisindole alkaloids (VX5980)

This large group of complex alkaloids consists of a wide variety of structures, depending on the identity of the monomeric alkaloid components. The individual alkaloids are normally coded in addition with the Type of Compound codes relevant to the component halves of the molecule. (e.g. **Conodurine** = a Vobasine (VX5140)-Iboga (VX5700) dimer). The most practically important indole alkaloid dimers are those of the Cleavamine-Aspidosperma group. **Vinblastine** and **Vincristine** are the best known examples.

Whilst in these dimers and many others the monomeric units are linked by single covalent bonds, in others the assembly is more complex. The **Vobtusine** group, for example, is composed of two aspidospermidine-type units linked by a spirocyclic system involving *C*-14 (two bonds) of one unit with *C*-22′ of another unit, together with an additional carbon atom attached to *N*-1′. A small group contains three inter-unit bonds as in **Ervafoline**.

Other types of dimeric alkaloids from *Strychnos* Spp. form the major constituents of calabash curare. These are composed of two units linked via *N*-1 and *C*-17′, and *N* -1′ and *C*-17; ***C*-Toxiferine** is representative. In some alkaloids additional bonds are present; for example, ***C*-Curarine** has an ether bridge between *C*-16 and *C*-16′, and ***C*-Calebassine** has an additional carbon-carbon bond between *C*-17 and *C*-17′.

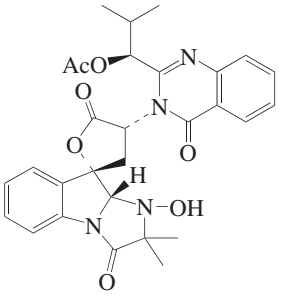
Cordell, G.A, *Alkaloids,* 1981, **20**, 3-295; 1983, **25,** 539–728 (*revs*)
Hájiček, J., *Collect. Czech Chem. Commun.*, 2004, **69**, 1681–1767; 2007, **72**, 821–898 (*rev*, *synth*)
Kam, T.-S. *et al., Alkaloids*, 2006, **63**, 181–337 (*rev*)

Isoindoles (VX6000)

This is a heterogeneous group including terpenoids which are also coded as such. Small isoindoles include microbial products, e.g. **Cichorine.**

Tryptoquivalines (VX6030)

The **Tryptoquivalines**, which are toxic metabolites from *Aspergillus clavatus*, are derived from anthranilic acid and tryptophan precursors, and half of the molecule is related to the Quinazoline alkaloids above (VX1600). The reviews of quinazoline alkaloids cited there normally cover the tryptoquivalines.



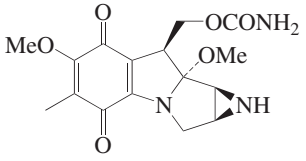
Tryptoquivaline A

There has been some uncertainty concerning their absolute configurations. It seems now established that they all have the (2*S*,3*S*,12*R*)- stereochemistry, but in the case of a few of the tryptoquivalines corrected stereochemistries have not been published.

The group also includes some more recently isolated analogues such as the **Fumiquinazolines.**

Mitomycins (VX6050)

This is a small group of purple microbial pigments (their typical representative is **Mitomycin A**) showing antitumour properties. They are usually quinones containing an aziridinyl function. They are biosynthesised from 3-amino-5-hydroxybenzoic acid, the aziridine nitrogen coming from glucosamine. The **Albomitomycins**, rearrangement products of mitomycins, contain a diazatricyclic ring system unique among natural products.

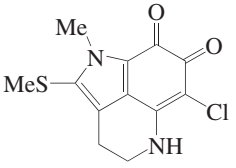


Mitomycin A

Remers, W.A. *et Alkaloids Chem. Biol. Perspect.*, 1987, **5**, 1–74 (*rev*)

Pyrrolo[4,3,2-*de*]quinoline alkaloids (VX6070)

This skeleton is characteristic of and almost exclusive to marine (sponge) alkaloids. Major subgroups include the simple **Batzellines**, **Makaluvamines** and **Damirones**, and those in which the pyrroloquinoline nucleus forms part of a larger skeleton such as in the **Discorhabdins** and the closely related **Epinardines**. They are thought to be biosynthesised from tyrosine via **3,5-Dibromoverongiaquinol**.



Batzelline A

Ding, Q. *et al.*, *Curr. Med. Chem.*, 1999, **6**, 1–27 (*rev*)

Miscellaneous indole alkaloids (VX6100)

Under this heading are listed indole alkaloids for which a classification remains premature, either because they currently belong to a very limited subtype, and/or because there has been no work on their biosynthesis. Many of them probably represent minor branches on the biosynthetic pathways to the larger groups; for example the **Rhopaladins** are probably biosynthetically close to the indolo[2,3-α]carbazole alkaloids (VX4350), but this is not yet established experimentally. **Granulatimide** may represent a lower benzologue of these alkaloids incorporating a histamine residue in place of one tryptamine. Plant alkaloids representing variations in skeleton of which only one or two examples are known include **Pandine**, **Iboxyphylline** and **Ibophyllidine** (all skeletal variations apparently related to the Pandoline type). Others are degraded indole alkaloids of unknown parental type.

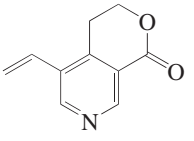
Somei, M. *et al.*, *Nat. Prod. Rep.*, 2004, **21**, 278–311 (*rev*)
Kawasaki, T. *et al.*, *Nat. Prod. Rep.*, 2005, **22**, 761–793 (*rev*)

TERPENOID ALKALOIDS (VX6240–VX6500)

Further information on terpenoid structures and biosynthesis generally can be found in the *Dictionary of Natural Products.*

Monoterpenoid alkaloids (VX6240)

This is a diverse group. The carbon skeleton is mostly $C_{10,}$ but in many alkaloids it is C_9 and in some it is C_{11}. There are two major groups; those derived from iridodial-like precursors, e.g. **α-Skytanthine**, and those derived from Secologanin, typified by **Gentianine**, **Bakankoside**, and **Gentioflavine**. However, this heading also covers a variety of miscellaneous amines and amides based on small terpenoid skeletons, e.g. **Alfileramine** (menthane-type) and **Fontaineine** (simple acyclic monoterpenoid).



Gentianine

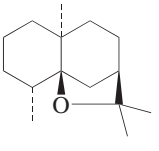
Cordell, G.A., *Alkaloids*, 1998, **52**, 260–327 (*rev*)

Sesquiterpene alkaloids (VX6300)

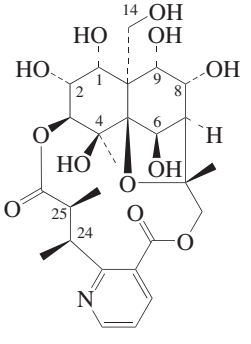
A variety of sesquiterpene alkaloids have been isolated from plant (e.g. **Guaipyridine**; **Muscicapines**) and marine sources and are nearly all relatively simple amine or amide derivatives of well-known sesquiterpenoid (or meroterpenoid) skeletons. They may be acyclic (e.g. **Axinyssimides**), monocyclic (**Smenospongine**) or bicyclic (**Nakijiquinones**).

Macrocyclic sesquiterpene alkaloids (VX6320)

This group of plant alkaloids contains the ring system of dihydroagarofuran, a sesquiterpene of the eudesmane group, esterified with nicotinic acid, or with any of several dicarboxylic acids. Most of the alkaloids, which occur in *Euonymus* and *Maytenus* species among others, contain a medium ring dilactone involving one of the dicarboxylic acids; **Evonine** is typical. Some alkaloids with two dilactone medium rings have also been isolated.



Dihydroagarofuran



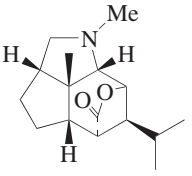
Per(deacyl)euojaponin

In the dictionary entries, series of these alkaloids which are esters of the same basic skeleton are usually shown as derivatives of the parent polyol, such as **Per(deacyl)euojaponin** (parent alkaloidal polyol of the **Euojaponins** and of various other alkaloids, e.g. **Cathedulins**). The names chosen for these parent structures (often uncharacterised as such) in the Dictionary are chemically reasonable, but may not be found elsewhere in the literature.

Dendrobium alkaloids (VX6340)

These alkaloids fall biogenetically into two quite distinct groups; a group of sesquiterpene alkaloids typified by **Dendrobine**, from *Dendrobium nobile*, with variants involving oxygenation at *C*-2 or *C*-6, and fission of the

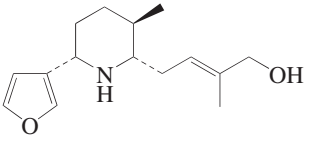
nitrogen to *C*-2 bond, and a group of indolizidine bases exemplified by **Crepidamine** from *Dendrobium crepidatum*. These are probably not terpenoid in origin, and may be derived from shikimic acid, acetate, and ornithine.



Dendrobine

Nuphar alkaloids (VX6360)

The *Nuphar* (water-lily) alkaloids contain a normal sesquiterpene carbon skeleton, and can be divided into two main sub-groups: furylpiperidines, e.g. **Nuphamine**; and furylquinolizidines, e.g. **Deoxynupharidine**. The latter group includes a number of sulfur-containing dimers such as **Neothiobinupharidine**, plus a few miscellaneous bases. A number of these alkaloids have also been isolated from the scent glands of beavers, *Castor* spp., acquired presumably by a dietary route.

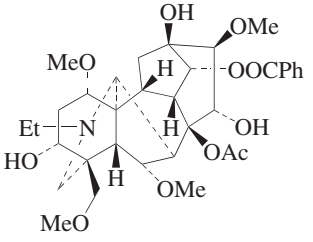


Nuphamine

Wróbel, J.T., *Alkaloids*, 1977, **16**, 181–214 (*rev*)
Cybulski, J. *et al., Alkaloids*, 1989, **35**, 215–257 (*rev*)
Michael, J.P., *Nat. Prod. Rep.*, 2004, **21**, 625–649; 2005, **22**, 603–626; 2008, **25**, 139–165 (*revs*)

C_{19} and C_{20} Diterpenoid alkaloids and 4-nor analogues (VX6400, VX6420)

These alkaloids are very numerous and include some highly toxic bases with strong physiological properties, such as **Aconitine**. Although they are obviously diterpenoid in origin, few biogenetic studies have been reported, apart from relatively early reports of the incorporation of acetate and mevalonate into **Browniine** and **Lycoctonine**, and of mevalonate and glycine into **Delcosine**. A recent hypothesis suggests their formation directly from the complete diterpenoids by a process involving Mannich reactions.



Aconitine

The first group (VX6400) is based on the C_{19} aconitane ring system, characteristic of the Ranunculaceae. Alkaloids of this group are fairly homogeneous structurally and differ only in the pattern of substitution by hydroxy, methoxy, acetyloxy, benzoyloxy and, frequently, anthranilate-based groups (e.g. **Delsemines**), although recently other structural variations such as unsaturation and epoxidation have been found.

The simpler alkaloids are collected in the Dictionary under the parent aconitane skeleton. Note that in the CAS parent aconitane, *C*-18 is missing, and following CAS nomenclature, the parent skeleton is 4-methylaconitane. The extra carbon atom is numbered *C*-18.

A few alkaloids belong to the heteratisane group, formed from the aconitane framework by oxidative fission of the 13,14-bond.

The second major group are the C_{20} alkaloids (VX6420), based on atidane and more widely distributed among dicot families. Few alkaloids, as it happens, are based on the parent ring system, since many skeletal variations

are known. These include the hetisans (e.g. **Davisine**), in which additional rings are introduced into the atidane ring system by formation of 14,20 and *N*,6 bonds. The unmodified hetisans are presented in the Dictionary under the systematic hetisan name. There is a small group of atidane 7,20 cyclic ethers (**Ajaconine**) and various other modifications involving ring fission, contraction, migration etc. of the hetisan skeleton (**Denudatine**, **Delnudine**, **Cardionidine**, etc.)

Another major modification leads to the veatchine skeleton, as in **Cuauchichicine**. There are also 7,20-Cycloveatchine bases, e.g. **Lucidusculine**, 14,20-Cycloveatchine bases, e.g. **Anopterine** and miscellaneous bases.

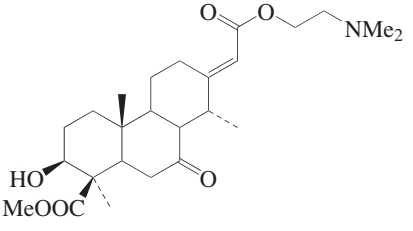
Erythrophleum alkaloids (VX6460)

The alkaloids of *Erythrophleum* spp. (Fabaceae) are based on the diterpene skeleton related to Cassaic acid. The oxidation pattern is relatively simple, involving only *C*-3, *C*-6, *C*-7 and *C*-19. In most alkaloids, *C*-19 is at the carboxylic acid oxidation level. All the alkaloids are esters or amides of a *C*-16 carboxylic acid with *N*,*N*-dimethylethanolamine or *N*-methylethanolamine. **Erythrophlamine** is a typical example. There have been some confusing structure revisions in this series; they have been little studied recently.

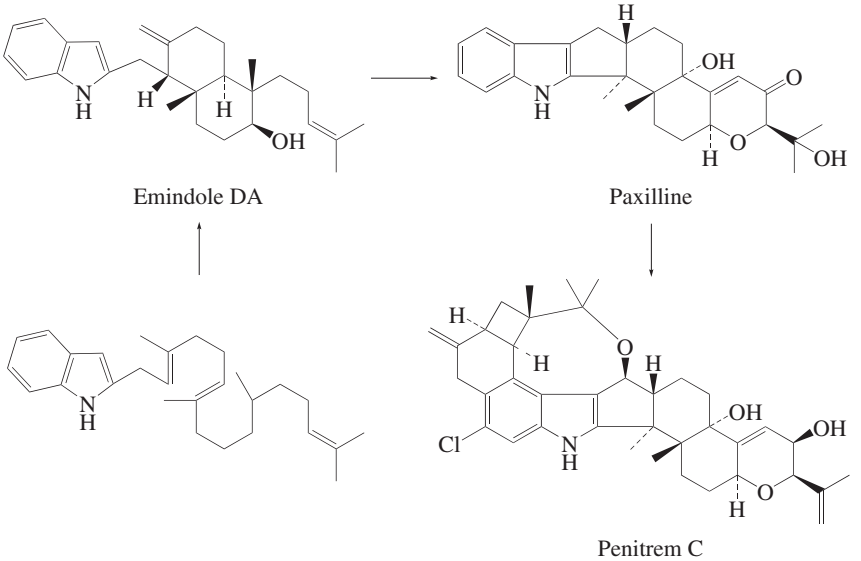


Erythrophlamine

Morin, R.B., *Alkaloids*, 1967, **10**, 287–303 (*rev*)

Penitrems (VX6470)

This heading covers indoloterpenoid metabolites from microorganisms including the **Penitrems**, **Emindoles**, **Nodulisporic acids** and others. They are mostly toxic, many with tremorigenic activity. The intermediary of **Emindole DA** and **Paxilline** in their biosynthesis from geranylindole has been recently demonstrated. **Shearinine I** is an interesting ring-cleaved compound which has lost the indolo functionality.



Emindole DA

Paxilline

Penitrem C

Steyn, P.S., *Prog. Chem. Org. Nat. Prod.*,1985, **48**,1–80 (*rev*)

Fueki, S. *et al.*, *Org. Lett.*, 2004, **6**, 2697–2700 (*biosynth*)

Miscellaneous diterpenoid alkaloids (VX6480)

This category includes diterpenes linked by an ester function to a non-terpenoid nitrogen-containing unit. Examples are **Ryanodine**, **Concavine** and the **Decaturins**. The **Agelasines**, **Agelasimines** and related alkaloids are a series of guanidinoid- or purinoid- substituted simple acyclic, mono- or bi-cyclic terpenoids, and there are one or two simple amino-substituted cembranoids.

Appendino, G. *et al., Alkaloids Chem. Biol. Perspect.*, 1996, **11**, 237–268 (*rev, Taxus alkaloids*)

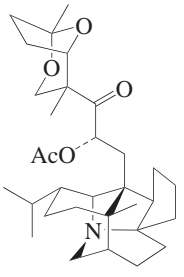
Sesterterpene alkaloids (VX6490)

A few nitrogen-containing sesterterpenoids are present in marine organisms, however, the number so far characterised is relatively low in comparison with the number of nitrogen-free tetracyclic sesterterpenes, which are common in marine organisms. The **Spongidines** and the **Molliorins**, in which a ring-E pyridine or pyrrole ring, respectively, is fused to one of the common tetracyclic skeletons, are the main types. There are also linear pyrrolic compounds including the **Sarcotrines** and **Sarcotragins** which are considered to have a common biosynthetic origin, the latter being degraded norsesterterpenoids.

Liu, Y. *et al.*, *Nat. Prod. Rep.*, 2006, **23**, 630–651 (*rev*)

Daphniphylline alkaloids (VX6500)

The alkaloids of *Daphniphyllum* species constitute a unique group of complex bases derived from squalene. They are structurally diverse and a number of different numbering schemes have been used in the literature. The structures given in this Dictionary and their numbering have been revised to follow the scheme given by Kobayashi and Morita (2003), which is based on current knowledge about their biosynthesis. This system is based on various cyclisations of squalene-like intermediates, which have been modelled with success *in vitro*. The origin of the nitrogen atom is not certain; it may come from pyridoxamine or from an amino acid.



Daphniphylline

The first Edition of this Dictionary distinguished six structural subtypes of Daphniphyllum alkaloid. However, since new structural variations continue to be discovered regularly (e.g. **Bukittinggine**, **Calydaphninone**, containing a unique 4-membered ring), it is best to browse the individual entries or to consult the reviews listed below.

STEROIDAL ALKALOIDS (VX6640-VX6790)

The large number of steroidal alkaloids may be divided into several subgroups, of which the simplest are various types of aminopregnanes. Steroidal alkaloids are typically from higher plants, and are most numerous in the Apocynaceae, Liliaceae, Buxaceae and Solanaceae, however, some are from other sources, including amphibians.

A few naturally occurring steroidal aminoglycosides have been found (e.g. Holacurtinol), but these are not included in the Dictionary.

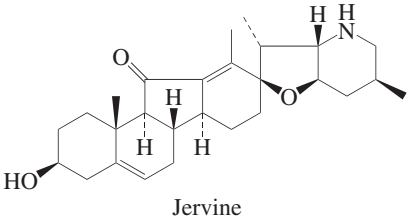
Steroidal alkaloids (salamandra type) (VX6640)

The small class of Salamandra-type alkaloids were isolated from amphibians, and are ring-A modified, mostly into aza-homosteroids, except for **Cycloneosamandione**.

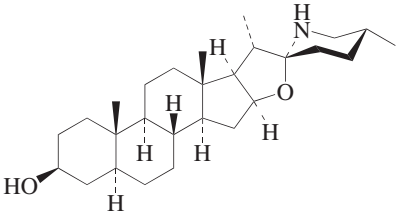
Habermehl, G., *Alkaloids*, 1967, **9**, 427–440 (*rev*)

Steroidal alkaloids (jerveratrum, spirosolane and solanidine types) (VX6660, VX6720, VX6740)

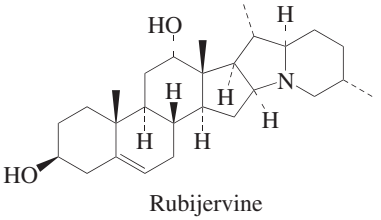
These are alkaloids in which the side-chain of a C_{27} steroid has been converted into a piperidine ring. In the jerveratrum (VX6660) (e.g. **Jervine**) and spirosolane (VX6720) (e.g. **Soladulcidine**) types, the piperidine ring is part of a spiro system, in the latter type forming an aza-analogue of the numerous and well- known spirostane steroids. Like the spirostanes, they show variation in the stereochemistry of the two new centres of chirality formed in the side-chain. In the solanidine type (VX6740), e.g. **Rubijervine**, an additional ring is formed by *C*-16 to *N* bond formation. They are present in the Solanaceae, and are of significance as potential trace toxins present in potatoes, tomatoes and other food crops.



Jervine



Soladulcidine



Rubijervine

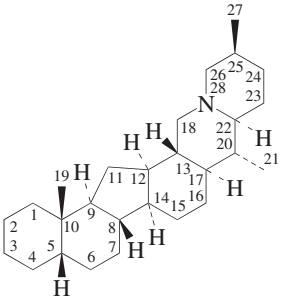
Keeler, R.F. *et al.*, *Alkaloids Chem. Biol. Perspect.,* 1986, **4**, 389–425 (*rev*, *teratogenic steroidal alkaloids*)

Steroidal alkaloids (cerveratrum (cevane) type) (VX6680)

In this group of alkaloids, from Monocot families such as the Orchidaceae, there has been an abeo shift from a Procevine-type precursor, in which ring D has been enlarged at the expense of ring C. They show extensive stereochemical variation within the basic cevane skeleton, and the stereochemistry of the various alkaloids is still being studied. See for example the numerous stereoisomers of **3,6-Cevanediol**.



Cevane (IUPAC)

The semisystematic nomenclature of cevanes, especially unsaturated ones, has shown some annoying minor variations over the years, e.g. Cev-5-enine, Cev-5-enene, Δ^5-Cevenine, 4,5-Didehydrocevane, etc. In this Dictionary the shortest form Cev-5-ene is used.

Ussuriedine represents an interesting tricyclic variation.

Tomko, J. *et al.*, *Alkaloids*, 1973, **14**, 1–82 (*rev*)

Steroidal alkaloids (conanine type) (VX6700)

Alkaloids containing the conanine skeleton occur in the Apocynaceae. Nearly all of these bases contain an amino or an oxygen function at *C*-3. There are some skeletal variations, such as *C*-4 methylation (**Kurcholessine**) and 9,10-seco-A ring aromatisation (**Didymeline)**.

Atta-ur-Rahman *et al., Alkaloids*, 1988, **32**, 79–237 (*rev*)

Steroidal alkaloids (buxus type) (VX6760)

The *Buxus* alkaloids are a large group of bases, the majority of which are pentacyclic 4,4,14-trimethyl-9,19-cyclopregnanes. A smaller number contain a tetracyclic system in which 9,10 bond fission has occurred to give a seven-membered ring B. In some, one or both of the carbon atoms attached to *C*-4 have been lost. All the alkaloids have a nitrogen function at *C*-3 and/or *C*-20, which may be unmethylated, partially methylated, or fully methylated. Further minor structural variations continue to be isolated from various *Buxus* spp. The suffix letters used in the nomenclature of this group indicate the degree of methylation of the nitrogen atom(s):

In this Dictionary, the entries for these alkaloids are organised under the (usually unknown) unsubstituted parents of the I, O, or P type.

The recent characterisation of the **Cortistatin** alkaloids from a *Corticium* sponge, represent a new development. Structurally their 9(10→19)-abeosteroid moiety resembles that of one subgroup of the terrestrial *Buxus* alkaloids, but the presence of an isoquinoline ring system at the other end of the molecule is without precedent. They are coded as Buxus alkaloids on structural grounds, although presumably this is a case of evolutionary parallelism.

Černy, V. *et al., Alkaloids*, 1967, **9**, 305–426 (*rev*)
Tomko, J. *et al., Alkaloids*, 1973, **14**, 1–82 (*rev*)
Atta-ur-Rahman *et al., Alkaloids*, 1988, **32**, 79–237 (*rev*)
Ata, A. *et al., Alkaloids,* 2008, **66**, 191–213 (*rev*)

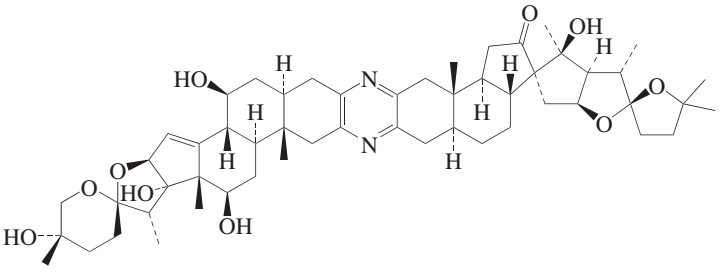
Steroidal alkaloids (pregnane type) (VX6780)

These are fairly numerous and occur in the Apocynaceae, Buxaceae and Didymelaceae. The majority contain amino or related functions at C-3 and/or C-20, and often at other positions.

Steroidal alkaloids (cephalostatins/ritterazines) (VX6785)

An important new group of marine steroidal metabolites isolated since the 1980s are the **Cephalostatins/ Ritterazines**, which are dimeric steroidal pyrazines (also coded as pyrazine alkaloids). One of their representatives is **Ritterazine A**. They show significant biological activities, but are isolable only in small amounts and are the subject of intense synthetic efforts.

Flessner, T. *et al., Prog. Chem. Org. Nat. Prod.*, 2004, **87**, 1–80 (*rev*)



Ritterazine A

Miscellaneous steroidal alkaloids (VX6790)

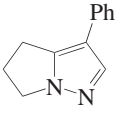
This includes non-nitrogenous steroids linked by an ester or acetal bond to a nitrogen containing unit, as in **Bufotoxin**, the **Batrachotoxins** (elaboration of a basic pregnane theme), and a small number of marine steroidal alkaloids of novel type such as the **Plakinamines**, as well as biologically active D-ring azahomosteroids based on **15-Azasterol**. **Petisidine**, **Tomatillidine** and their congeners are the only group of steroidal alkaloids containing a pyrrolidinyl side-chain. A 7-membered azepinyl ring structure was proposed for certain alkaloids such as **Edpetilidinine**, but most of these have now been reassigned as piperidines.

Azaanthracene and Azafluorene alkaloids (VX6820, VX6840)

There have been a number of structural reassignments in these groups, and some structures are still uncertain. It now appears that they are related to each other, and to the azaaporphine alkaloids (VX2830) above, via the azaanthraquinone intermediate as shown in the biosynthesis of Sampangine. They are therefore currently misplaced in the Type of Compound classification scheme.

Pyrazole alkaloids (VX6900)

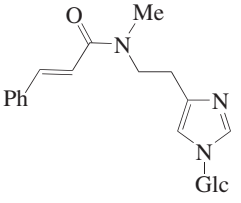
This is a small scattered group containing a few miscellaneous azapurine bases and simple hydrogenated pyrazoles. The most interesting alkaloid is **Withasomnine**. Little is known of its biosynthesis. Some early tracer studies showed incorporation of phenylalanine and ornithine, but at very low levels, and the significance of this is unclear. There is one marine example, **1-Methyl-1*H*-pyrazole-5-carboxylic acid**, from a gorgonian.



Withasomnine

Imidazole alkaloids (VX6920)

This group contains many structurally diverse examples, especially among marine and microbial alkaloids. There are various bases obviously containing a histamine moiety, e.g. **Casimiroedine**, and some more complex plant alkaloids. The bases isolated from marine sources include **Aplysinopsin** and related alkaloids and the **Rhopaladins**. They show a range of biological activities and considerable pharmaceutical potential. The most pharmacologically significant is **Pilocarpine**, obtainable only from *Pilocarpus* spp. (Rutaceae). Two possible biosynthetic pathways were suggested; the most probable involves condensation of a polyketide precursor of the lactone ring with a late intermediate in histidine biosynthesis as the source of the imidazole. This work of the 1970s does not appear to have been followed up more recently. **Anosmine** is biosynthesised from lysine.



Casimiroedine

Hill, R.K., *Alkaloids Chem.Biol. Perspect.*,*Pelletier*, 1982, **2**, 49–104 (*rev*)
Maat, L. *et al., Alkaloids*, 1983, **22**, 282–334 (*rev*, *biosynth*)
Jin, Z. *et al.*, *Nat. Prod. Rep.*, 2006, **23**, 464–496 (*rev*)

Pyrrole-imidazole alkaloids (VX6922)

These form a varied class of marine alkaloid exemplified by **Oroidin** which with various relatives (e.g. the dimeric **Sceptrine**) appears to be a genuine sponge product. Their significance appears to be as key intermediates in the biogenesis of many of the more complex marine alkaloids. A recent biogenetically-based classification (see Hofmann) recognises a class of nearly 100 pyrrole-imidazole alkaloids arising in various ways from this key intermediate and containing 0-4 further rings, additional to the pyrrole and imidazole rings already present. Future organisation of this database may recognise this category; at present, many of these are placed in the miscellaneous categories VX9000–VX9400.

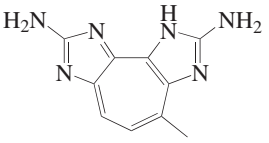
Walsh, C.T. *et al.*, *Nat. Prod. Rep.*, 2006, **23**, 577–531 (*rev*, *biosynth*)

Cycloheptadiimidazoles (Zoanthoxanthins) (VX6925)

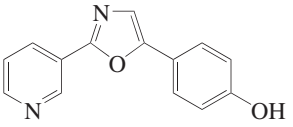
These are a group of marine alkaloids which are condensed imidazoles closely related in structure, and which in this Dictionary are grouped under just two entries; those for **Pseudozoanthoxanthin A** and **Parazoanthoxanthin A**. Their biosynthesis does not appear to have been studied in detail, however, they are presumably derived from histidine.



Pseudozoanthoxanthin A

Oxazole and benzoxazole alkaloids (VX6930)

Numerous naturally occurring oxazoles are known. Structurally they are diverse and may be open-chain (e.g. **Bengazoles**) or macrocyclic (e.g. **Patellamides**). Like the imidazoles, they show considerable drug potential. They have been isolated from various sources-plants of the Poaceae (e.g. **Annuloline**) and Rutaceae (e.g. **Halfordinol**), nudibranch egg masses (**Ulapualides**), algae and microorganisms. The latter have furnished the majority of the alkaloids, ranging from the simple indolyl alkaloids (**Pimprinine**) to complex peptide antibiotics such as the **Virginiamycin** family. The marine and bacterial oxazoles appear to have been formed from peptides of aliphatic amino acids, while the oxazoles of the Poaceae and Rutaceae arise from the chorismic acid-phenylalanine pathway.



Halfordinol

Jacobs, H.M. *et al., Alkaloids*, 1989, **35**, 259–310 (*rev*)

Yeh, V.S.C., *Tetrahedron*, 2004, **60**, 11995–12042 (*rev*, *synth*)
Jin, Z. *et al.*, *Nat. Prod. Rep.*, 2006, **23**, 464–496 (*rev*)

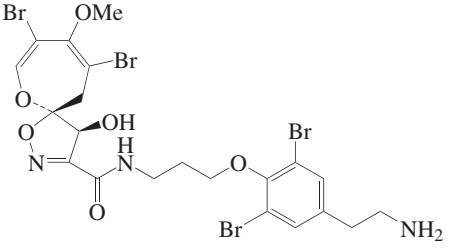
Isoxazole alkaloids (VX6932)

This is a fairly small group, most of which are modified amino acids (e.g. **Ibotenic acid**).

Rahboek, L. *et al., Alkaloids*, 2001, **57**, 185–233 (*rev*)

Spirobenzoxazoline alkaloids (VX6934)

These exclusively marine alkaloids, such as the **Psammaplysins,** are derived by cyclisation of open-chain halogenated tyrosinoid oxime precursors (see VX2008 above). This is probably through the intermediacy of an arene oxide, although attempts to replicate this chemically have given only low yields.



Psammaplysin A

Okamoto, K.T. *et al.*, *Tet. Lett.*, 1987, **28**, 4969–4972 (*biosynth*)

Thiazole alkaloids (VX6935, VX6936, VX6937)

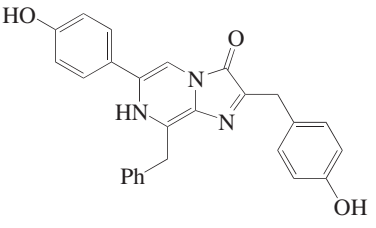
A large number of naturally occurring alkaloids that incorporate the thiazole nucleus have now been isolated. Some simple thiazoles (e.g. **2,4-Dialkylthiazoles**; **Benzothiazole**) have been obtained from plant and animal sources, but typically they are microbial products, including from marine sources. These alkaloids are a heterogeneous group ranging in complexity from **Aeruginoic acid** and the simple peptide **Herbamide A** to antineoplastic cyclopeptides such as **Ulicyclamide**, **Ulithiacyclamide**, **Patellamides** and **Dolastatins**. The **Latrunculins** (VX6936) are a subclass of mostly macrocyclic tetrahydrothiazoles isolated from sponges. Thiazoles show a range of interesting drug activities.

The biosynthesis of the thiazole ring in the highly bioactive **Curacin A** has been shown to be from cysteine, with the remainder of the carbon chain, including the cyclopropane functionality, being acetate-derived.

Pattenden, G., *J. Het. Chem.*, 1992, **29**, 607–618 (*rev*, *synth*)
Jin, Z. *et al.*, *Nat. Prod. Rep.*, 2005, **22**, 196–229; 2006, **23**, 464–496 (*revs*)
Mulzer, J., *Prog. Chem. Org. Nat. Prod.*, 2009, **90**, 1–237 (*Epothilones, rev, synth, biosynth, pharmacol*)

Pyrazine and quinoxaline alkaloids (VX6940)

Pyrazines have been isolated from widely differing sources: from microorganisms, plants, mushrooms, animals, insects (especially ants, where they are considered to function as alarm pheromones) and various marine organisms, where they are the actual light emitters in bioluminescence processes. Bioluminescence emitters are found scattered throughout different types of organism, which implies multiple independent origins during the course of evolution. The imidazopyrazine, **Coelenterazine**, and closely related alkaloids though account for the great majority of observed bioluminescence. There is evidence for Coelenterazine *de novo* biosynthesis in shrimps. ***Cypridina* Luciferin** is biosynthesised from arginine and tryptophan. A series of tetrahydroquinoxalines has been isolated from the scent gland of the Canadian beaver, *Castor fiber*.



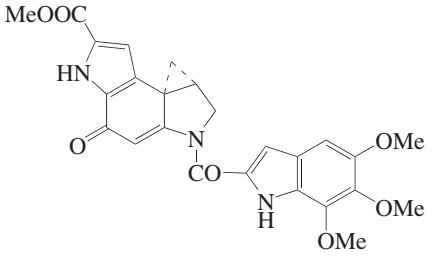
Coelenterazine

Pyrazines also contribute to the aroma of various foodstuffs, including coffee, cocoa, tea and cooked meats. However, from these sources they are generated by pyrolytic processes and are not true alkaloids. The cephalostatin group of alkaloids described under VX6785 are steroidal dimers linked by pyrazine formation.

Rees, J.-F. *et al.*, *J. Exp. Biol.*, 1998, **201**, 1211–1221 (*rev*, *bioluminescence*)

Benzo[1,2-*b*:3,4-*b*']dipyrroles (VX6945)

This is a numerically limited group of alkaloid antibiotics all isolated from Streptomycetes. **Duocarmycin SA** appears to be a key biosynthetic intermediate, however, detailed biosynthetic studies have not been reported. They are DNA alkylating agents. Some members, e.g. **Rachelmycin**, are cyclopropa-compounds, however, this feature does not appear to be necessary for activity.



Duocarmycin SA

Pyrrolo[1,2-*a*]pyrazines (VX6950)

These are mostly cyclic anhydrides of proline plus another amino acid residue. Their inclusion in this Dictionary is a marginal decision. Other cyclodipeptides not based on proline are not included; they are classified under the amino acid code VV0150 (diketopiperazine) and are found in the *Dictionary of Natural Products*.

Morpholine alkaloids (VX6955)

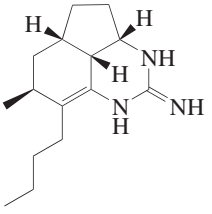
These are relatively few in number, e.g. **Agropine**, **Chelonins A** and **C** and the **Oxazinines**.

Pyrimidine alkaloids (VX6960)

Simple thymine-derived bases such as **Thyminol** are found in various organisms, together with some more highly elaborated substances such as the **Meridianins**. The category also includes miscellaneous hydrogenated pyrimidines, e.g. **Aberiamine**.

Ptilocaulins (VX6970)

This group is based on the (partially hydrogenated) cyclopenta[*de*]quinazoline skeleton, which contains a pyrimidine nucleus. It comprises **Ptilocaulin** and relatives, the **Mirabilins** and a few other related alkaloids, mostly isolated from sponges, but which may be symbiont metabolites. It has been suggested that these compounds arise by a late-stage addition of guanidine to a polyketide precursor.



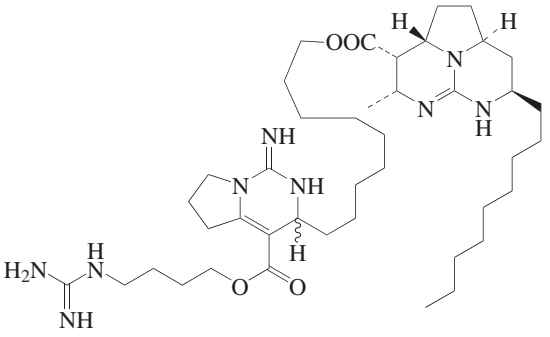
Ptilocaulin

Snider, B.B. et al., *J.Org.Chem*, 1993, **58**, 3828–3839 (*biosynth*)

Triazaacenaphthylene alkaloids (VX6980)

This is another group based on a tricyclic pyrimidine-related nucleus, and includes the **Batzelladines** and the **Crambescidins**. They are isolated from sponges and echinoderms. Their biosynthesis does not appear to have been

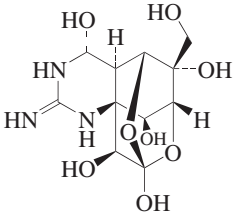
studied in detail. However, they are formally composed of a guanidine unit, with which the biological activity is associated, embedded in a linear unbranched perimeter, presumably derived from a lipid precursor.



Batzelladine A

Tetrodotoxins (VX6990)

Tetrodotoxin and its homologues are well-known and important causes of human poisoning and are known principally from certain tissues of the Japanese puffer fish, and also found in other organisms; they are now thought to be *Pseudomonas* products. They have been extensively reviewed. The carbocycle ring in tetrodotoxins may be of isoprenoid origin.



Tetrodotoxin

Daly, J.W., *J. Nat. Prod.*, 2004, **67**, 1211–1215 (*rev*, *occur*)

Phenazine and phenoxazine alkaloids (VX7000, VX7005)

An increasing number of simple phenazines (e.g. the **Pelagiomicins**) and phenoxazines have been reported from microorganisms, including marine bacteria from sponges. There are also some more complex diphenazines such as **Saphenamycin** and the **Esmeraldines**. These, as well as the simpler phenazines, are biosynthesised by the shikimic acid pathway.

Van't Land, C.W. *et al., J. Org. Chem*., 1993, **58**, 6576–6582 (*biosynth*)

Simple pyrrole alkaloids; miscellaneous pyrrole alkaloids (VX7010, VX7014)

The category VX7010 includes very simple brominated pyrroles (e.g. **2,3-Dibromo-1*H*-pyrrole**, which come from a variety of sources. Marine examples include the dimeric **Tambjamines**. Pyrrole-imidazole alkaloids are now listed above under VX6922, while the metabolically important tetrapyrroles, (chlorophyll, haem and their relatives) are not included in this Dictionary; consult the parent *Dictionary of Natural Products*. The pyrrole nucleus is a component of the indole alkaloids, but whereas these are tryptophan-derived, the polypyrroles are biosynthesised from 5-Amino-4-oxopentanoic acid (5-aminolaevulinic acid, ALA). Lower molecular weight alkaloids may arise from either route, or from proline/ornithine pathways via pyrrolidines (see above under VX0300); in the **Prodigiosins**, each of the three pyrrole residues is biosynthesised differently. The process of biohalogenation differs between Cl and Br. Chlorination takes place oxidatively by a combination of chloride ion, dioxygen and reduced FAD producing a Cl^+ equivalent, whilst bromination is mediated by vanadium bromoperoxidases.

Polyamine alkaloids (VX7018, VX7020, VX7025, VX7050, VX7060, VX7080, VX7085, VX7090)

These categories cover the various types of alkaloid containing one or more -$N(CH_2)_nN$- groups, with *n* usually 3 or 4, less often 2 or 5. A useful subclassification scheme uses PA numbers defining the constituent diamine units, e.g. **Spermine** $H_2N(CH_2)_3NH(CH_2)_4NH(CH_2)_3NH_2$ is the parent substance of the PA343 subclass. They show markedly different properties (reactivity, basicity, complexing ability, mass spectrometry) from monobasic amines. Alkaloids based on the ornithine-derived **Putrescine** (PA4 alkaloids) (VX7020) are common in terrestrial plants where they are mostly simple cinnamoylputrescines, e.g. **Subaphylline**. Some have been characterised from marine organisms, such as the **Monodontamides** from gastropods. Numerous other alkaloids, again, many terrestrial and some marine, are derived from **Spermine** (PA343) (VX7080) or **Spermidine**, (PA34) (VX7050) themselves derived (in plants, certainly) from ornithine via putrescine. See for example the **Penaramides** and the unusual medium-ring azaaliphatic **Motuporamines**. Classes PA33, PA35, PA44 and PA33433 have also been found in nature, but less frequently. The largest number are the arachnid toxins, such as the extensive series of **Agel toxins** from the spider *Agelenopsis*. PA structures also occur in more complex alkaloids such as **Crambescidin 816** (PA34 substructure) and as steroidal conjugates, in **Squalamine** and related compounds from fish livers (PA34 and PA343 substructures). In terrestrial plants it is well established that these alkaloids derive from the decarboxylation and coupling of amino acids.

The spermidine group includes a variety of medium ring cyclic examples, e.g. **Codonocarpine**, **Lunaridine**, **Cannabisativine**. The PA44 class, the so-called homospermidine alkaloids, includes derivatives of the PA44 amine **Solamine** isolated from the Solanaceae.

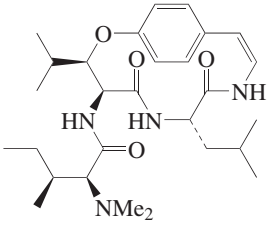
Ansa-peptide alkaloids (VX7100)

Peptides consisting only of unmodified proteinaceous amino acid chains, whether linear or cyclic, lie outside the scope of this Dictionary. Among the marine natural products there are a considerable number of peptide-like alkaloids containing highly modified residues, e.g. the Lissoclinamides. These are classified elsewhere (in the case of the Lissoclinamides, under VX6737, macrocyclic thiazole alkaloids).

A large class of peptide derivatives occurring exclusively in higher plants, particularly in the Rhamnaceae, are the ansa-peptide alkaloids, in which a medium-sized ring is formed by meta- or para-substitution of an aromatic peptide residue, as in **Frangulanine**. Many of these alkaloids incorporate D-amino acid residues, but the stereochemical information concerning them is sometimes incomplete. They have however been fully reviewed, with extensive tabulations.



Frangulanine

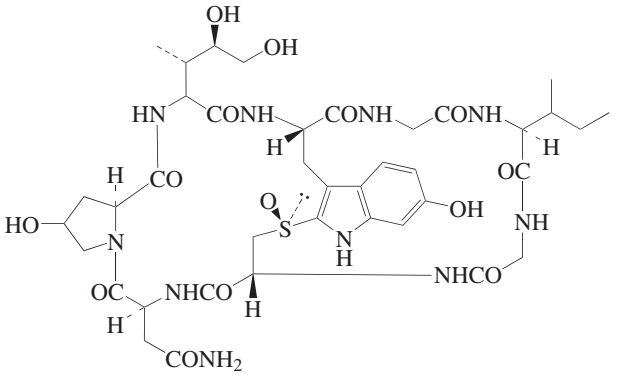
Amanita alkaloids (VX7120)

The toxins of the European death cap mushroom *Amanita phalloides* and other *Amanita* spp. constitute a complex group of macrocyclic peptides, mostly containing sulfur. These include the amatoxins (e.g. **α-Amanitin**, **β-Amanitin**), the phallotoxins (e.g. **Phalloidin**) and the virotoxins (e.g. **Viroidin**). They have been little studied recently apart from a new synthesis of Phalloidin.



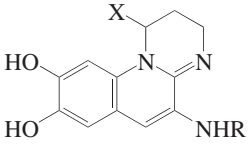
α-Amanitin

Other cyclopeptide alkaloids (VX7150)

This is a heterogeneous group.

Pyoverdins (VX7170)

These are a fairly extensive and increasing series of peptide-alkaloidal siderophore pigments secreted by plant-growth promoting rhizobacteria *Pseudomonas* spp. under conditions of restricted iron availability. Their chelating properties protect the plant against attack by fungi and other pathogens by depriving them of iron. Although they were described in the nineteenth century, the first structure was not elucidated until 1981; by 1999 about 50 were known, some still with only partially determined structures.



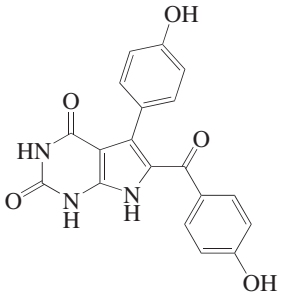
The chromophore is a pyrimido[1,2-α]quinoline system, sometimes modified as in the **Azotobactins**. The chromophoric properties of this heterocycle are associated with the predominance of a zwitterionic form having a positively charged quaternary nitrogen with delocalisation of charge over the two *N*s, but for clarity they are all shown in the Dictionary in the uncharged form. The chromophore is linked to a short nitrogenous substituent –NHR (R = usually a dioic acid, sometimes glycine) and an oligopeptide chain X, giving a typical total molecular weight of about 1000-1500. The peptide chain may be cyclic or acyclic, and may contain one or more unusual modified amino acid residues, such as 3-Amino-1-hydroxy-2-piperidinone (*N*-hydroxycycloornithine).
Caution; Compilation of Dictionary entries for this group has been complicated by inconsistencies in the literature concerning their structures and comparison with the molecular formulae, which are often not reported. Some inconsistencies remain in the Dictionary entries; checking continues.

Budzikiewicz, H., *Prog. Chem. Org. Nat. Prod.*, 2004, **87**, 81–237 (*rev*)

Pyrrolo[2,3-*d*]pyrimidine alkaloids (VX7200)

This is a numerically limited group consisting of the nucleosides **Tubercidin**, the **Mycalisines** and related bases and some simple halogenated pyrrolopyrimidines, as well as the **Rigidins**. They have been isolated from marine

organisms, and appear to be microbial products. It has been shown that the pyrimidine ring is derived intact from a purine base precursor which undergoes ring opening and reformation with the incorporation of a C_2 fragment to form the pyrrole ring.



Rigidin A

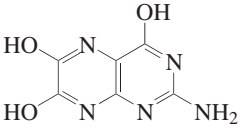
Purine alkaloids (VX7300)

Purines are involved along with pyrimidines as bases in DNA and RNA. The ubiquitous, well-known oxypurines, exemplified by **Caffeine**, are usually considered alkaloidal, alongside adenine derivatives such as the plant hormone, **Zeatin**; and various miscellaneous bases. The well-known purines, **Xanthine**, **Inosine**, **Theobromine** and **Theophylline**, long known as plant alkaloids, have now been found in marine organisms along with substituted purines (e.g. **Phidolopin**) and a range of terpenoid-purine alkaloids, such as the **Agelines** and others.

Rosemeyer, H., *Chem. Biodiversity*, 2004, **1**, 361–401 (*rev*)

Pteridine alkaloids (VX7350)

Pteridines are a widely distributed class of naturally occurring alkaloids. They owe their exceptional position in the field of heterocyclic chemistry mainly to their unusual chemical properties, their conspicuous fluorescence and their importance in metabolism, and partly to their discovery as pigments in butterfly wings. Three of the most common butterfly pigments are **Leucopterin**, **Xanthopterin** and **Isoxanthopterin**. The red pigments in the eye of the fruitfly *Drosophila melanogaster*, e.g. **Drosopterin**, **Isodrosopterin** and **Neodrosopterin** are more complex pteridines. **Folic acid**, a water-soluble growth factor in bacteria and an anti-pernicious anaemia factor in animals is also a pterin derivative with a *p*-aminobenzoylglutamic acid sidechain at the 6-position. It occurs naturally as the dihydro derivative. Marine pteridines are represented by **Leucettidine**, the **Urochordamines** and **Isoxanthopterin**.



Leucopterin

The biosynthesis of pteridine pigments has been well studied in terrestrial organisms. As in the case of the pyrrolopyrimidines above, the imidazole ring is derived unchanged from a purine precursor, in this case guanosine triphosphate, and the pyrazine ring is built by ring fission and incorporation of two carbons derived from a ribose fragment.

Pfleiderer, W., *J. Het. Chem.*, 1992, **29**, 583–605 (*rev*)
Chemistry and Biology of Pteridines and Folates, (eds. Milstien, S. *et al.*), Kluwer, 2002

Saxitoxins (VX7400)

The saxitoxins are a group of highly important modified purinoid toxins known as Paralytic Shellfish Toxins or PSTs. Originally characterised as a cause of dangerous shellfish poisoning, they are now known to be biosynthesised only by dinoflagellates (and some freshwater cyanobacteria), although it is possible that the red

alga *Jania* also produces them. Their presence in shellfish tissues probably results by diffusion according to a yet unknown mechanism. Their exact biosynthesis is not yet known, but it appears from radiolabelling experiments that the two guanidine groups derive from arginine and the carbamoyl side-chain from methionine.

Alkaloidal metal complexes (VX7450)

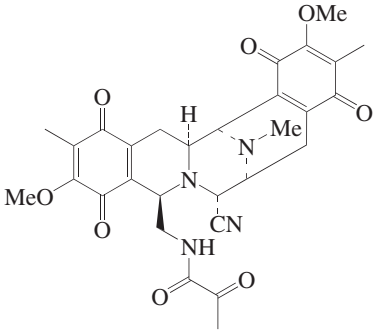
Alkaloidal chelates are additionally indexed here for ease of reference. The metals which have been identified so far in alkaloidal complexes are iron, copper, molybdenum and nickel.

Naphthyridinomycins (VX7700)

This is a small group of microbial products, and labelling experiments have demonstrated the incorporation of tyrosine, ornithine and methionine.

Saframycins (VX7800)

These are representative of the group known as the tetrahydroisoquinoline antitumour antibiotics, including some having slightly different skeletons, such as **Lemonomycin**. They are microbial products produced by *Streptomyces* spp. Close analogues such as the **Renieramycins** and the **Ecteinascidins** were isolated from marine organisms (sponges or tunicates) and are all presumably microbial products. The skeleton (studied for **Saframycin A**) is derived from two tyrosine molecules and the methyl groups from methionine.



Saframycin A

Murkami, Y. *et al.*, *J. Biol. Chem.*, 1985, **260**, 344–348 (*biosynth*)

Miscellaneous alkaloids with 0-4+ rings (VX9000, VX9100, VX9200, VX9300, VX9400)

These categories are self-explanatory. They include alkaloids whose relationships with the main groups has not been established, and individual alkaloids or small groups of alkaloids which are clearly related to one of the main groups, but which contain a modified carbon skeleton and are not numerous enough to merit special treatment.

Alkaloids of unknown structure (VX9999)

The Dictionary documents over 1000 alkaloids from the older literature where the structure has remained completely or partially undetermined. In cases where the Authors were able to propose a structural class for the

unknown isolate, the dictionary entry also carries the classification code relevant to that category, e.g. Buxus alkaloid.

Many of these isolates will remain forever unidentified, because the original sample is no longer available and the properties reported in the literature are not precise enough for a definite identification. Others, especially from the early literature, were doubtless ill-defined mixtures. However, the number of reinvestigations of these old isolations on a year-by-year basis is now surprisingly small, and renewed investigation of certain groups, for example the Amaryllidaceae alkaloids, using modern methods would probably yield interesting results.

6. DATABASE UPDATES

The database from which this Dictionary is produced, and which is represented by the CD-ROM version, is a specially enhanced subset of the *Dictionary of Natural Products*. Updates to the alkaloid information are being continuously incorporated into the DNP database and released to DNP subscribers. New editions of the *Dictionary of Alkaloids* (probably electronic only) will be published at future intervals.

Subscription information for DNP is available from **e-reference@taylorandfrancis.com** and www.chemnetbase.com.

Any comments and suggestions for inclusion to DNP may be sent to:

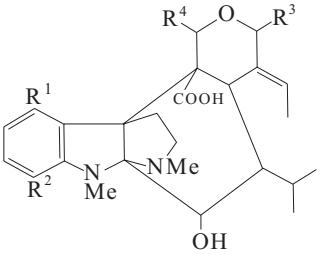
Abereamine 1 A-8

[104386-96-1]



$R^1 = R^2 = OH$, $R^3 = R^4 = H$

$C_{25}H_{34}N_2O_6$ 458.553
Related to the Corymine/Isocorymine groups but with an additional isopropyl group the origin of which is not yet clear. Alkaloid from the seeds of *Hunteria umbellata* (Apocynaceae). Yellow solid. Sol. H_2O. Mp 199° dec.

Adegoke, E.A. *et al., Phytochemistry*, 1986, **25**, 1461-1468 (*isol, ir, pmr, ms, struct*)

Abereamine 2 A-9

[104406-77-1]
As Abereamine 1, A-8 with
$R^1 = R^3 = H$, $R^2 = R^4 = OH$
$C_{25}H_{34}N_2O_6$ 458.553
See note under Abereamine 1, A-8. Alkaloid from the seeds of *Hunteria umbellata* (Apocynaceae). Red solid. Sol. H_2O. Mp 230° dec.

Adegoke, E.A. *et al., Phytochemistry*, 1986, **25**, 1461-1468 (*isol, ir, pmr, ms, struct*)

Abereamine 3 A-10

[104386-97-2]
As Abereamine 1, A-8 with
$R^1 = R^2 = H$, $R^3 = R^4 = OH$
$C_{25}H_{34}N_2O_6$ 458.553
See note under Abereamine 1, A-8.

Alkaloid from the seeds of *Hunteria umbellata* (Apocynaceae). Brown solid. Sol. H_2O. Mp 280° dec.

Adegoke, E.A. *et al., Phytochemistry*, 1986, **25**, 1461-1468 (*isol, ir, pmr, cmr, ms, struct*)

Abereamine 4 A-11

[104386-98-3]
As Abereamine 1, A-8 with
$R^1 = R^4 = H$, $R^2 = R^3 = OH$

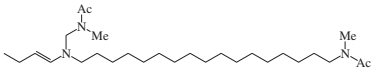
$C_{25}H_{34}N_2O_6$ 458.553

See note under Abereamine 1, A-8. Alkaloid from the seeds of *Hunteria umbellata* (Apocynaceae). Red solid. Sol. H_2O. Mp 260-262°.

Adegoke, E.A. *et al., Phytochemistry*, 1986, **25**, 1461-1468 (*isol, ir, pmr, ms, struct*)

Aberiamide A-12

[283167-82-8]

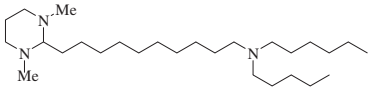


$C_{28}H_{55}N_3O_2$ 465.761
Alkaloid from the leaves of *Aberia caffra*. Pale yellow solid. $[\alpha]_D^{25}$ +20 (c, 1 in MeOH). Aberia is not a recognised genus (in the Kew system a synonym for *Dovyalis*).

Sayed, H.M. *et al., Indian J. Chem., Sect. B*, 2000, **39**, 215-219 (*isol, pmr, cmr, ms*)

Aberiamine A-13

N-*Hexylhexahydro-1,3-dimethyl*-N-*pentyl-2-pyrimidinedecanamine, 9CI*
[283167-81-7]

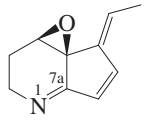


$C_{27}H_{57}N_3$ 423.767
Alkaloid from the leaves of *Aberia caffra*. Pale yellow solid. $[\alpha]_D^{25}$ +3 (c, 1 in MeOH). Aberia is not a generally recognised genus (in the Kew system a synonym for *Dovyalis*).

Sayed, H.M. *et al., Indian J. Chem., Sect. B*, 2000, **39**, 215-219 (*isol, pmr, cmr, ms*)

Abikoviromycin A-14

*7-Ethylidene-1*a*,2,3,7-tetrahydrocyclopent[*b*]oxireno[*c*]pyridine, 9CI, 8CI. 5-Ethylidene-4,4*a*-epoxy-2,3,4,4*a*-tetrahydro-1-pyrindene. Virocidin. SF 973A. Antibiotic SF 973A. Thomsomycin. Latumcidin*
[31774-33-1]



Absolute Configuration

$C_{10}H_{11}NO$ 161.203
Pyrindine numbering shown, for uniformity with other related compds. Prod. by *Streptomyces abikoensis, Streptomyces rubescens* and *Streptomyces latumcidicus*. Polyketide synthase inhibitor. Antifungal and antiviral agent. Highly unstable, polymerising on isol. from broth cultures. Can be handled in dilute soln. $[\alpha]_D^{21}$ +148.9 (c, 1 in 0.1*N* NaOH). λ_{max} 238 (ϵ 9980); 338 (ϵ 11600) (0.1*N* HCl) (Derep). λ_{max} 245 (ϵ 8690); 290 (ϵ 7730) (0.1*N* NaOH) (Derep). λ_{max} 243 (ϵ 9000); 289 (sh) (ϵ 8710); 345 (sh) (ϵ 4000) (EtOH or pH 7) (Derep). λ_{max} 244 (ϵ 13900) (MeOH) (Derep).

Sulfate: [43043-59-0]
Cryst. Mp 140-141° dec. $[\alpha]_D^{25}$ +24 (c, 1 in H_2O).

▶ GY8431000

Picrate:
Yellow needles (EtOAc/MeOH). Mp 136-137°.

*1,7*a*-Dihydro:* ***Dihydroabikoviromycin***. *Dihydrolatumcidin. Antibiotic SF 973B. SF 973B*
[20421-29-8]
$C_{10}H_{13}NO$ 163.219
Prod. by *Streptomyces olivaceus, Streptomyces viridochromogenes, Streptomyces reticuli* and *Streptomyces anulatus*. Mutagenic and genotoxic agent. Mp 60-61° (57-59°). $[\alpha]_D^{22}$ +276 (c, 1 in MeOH). pK_a 7.7 (50% EtOH aq.). pK_a 8.07. λ_{max} 244 (E1%/1cm 850) (MeOH) (Berdy).

*1,7*a*-Dihydro; hydrochloride:* Mp 130-132°.

*1,7*a*-Dihydro, 7-hydroxy:* ***Dihydro-N-hydroxyabikoviromycin***. N-*Hydroxydihydroabikoviromycin*
[109292-19-5]
$C_{10}H_{13}NO_2$ 179.218
From *Streptomyces* sp. SANK 65986. Exhibits antimicrobial activity. Sol. MeOH, $CHCl_3$; poorly sol. H_2O, hexane. λ_{max} 210 ; 242 (MeOH) (Berdy). λ_{max} 243 (MeOH-HCl) (Berdy). λ_{max} 210 ; 242 (MeOH-NaOH) (Berdy).

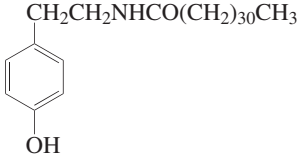
N-*[2-(4-Hydroxyphenyl)ethyl]dotriacontanamide*
[81119-33-7]



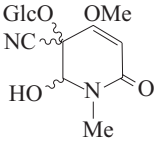
$C_{40}H_{73}NO_2$ 600.022
Isol. from *Acalypha indica*. Mp 135°.

Ac:
Amorph. solid ($CHCl_3$/MeOH). Mp 126°.

Talapatra, B. *et al., Indian J. Chem., Sect. B*, 1981, **20**, 974

Acalyphin A-22

3-(β-D-Glucopyranosyloxy)-1,2,3,6-tetrahydro-2-hydroxy-4-methoxy-1-methyl-6-oxo-3-pyridinecarbonitrile, 9CI
[81861-72-5]

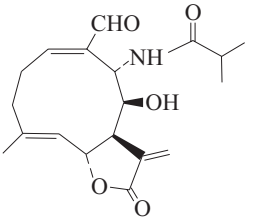


$C_{14}H_{20}N_2O_9$ 360.32
Alkaloid from the aerial parts of *Acalypha indica* (Euphorbiaceae). Also reported from Te Xian Cai (*Acalypha australis*) and *Acalypha farnesiana*. Hygroscopic powder. Mp 185-186° (182-184°). λ_{max} 223 (ε 6310); 255 (sh) (ε 2450) (EtOH) (Derep).

Nahrstedt, A. *et al., Phytochemistry*, 1982, **21**, 101 (*uv, ir, pmr, cmr, struct*)
Li, T.S.C. *et al., Chinese and Related North American Herbs*, CRC Press, 2002, 4 (*occur*)

Acanthamolide A-23

[64852-96-6]

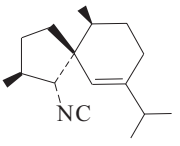


$C_{19}H_{25}NO_5$ 347.41
Constit. of *Acanthospermum glabratum*. Cryst. (C_6H_6/MeOH). Mp 249-251°. λ_{max} 225 (ε 10000) (MeOH) (Derep).

Saleh, A.A. *et al., J.C.S. Perkin 1*, 1980, 1090

Acanthisonitrile 3 A-24

[112766-99-1]



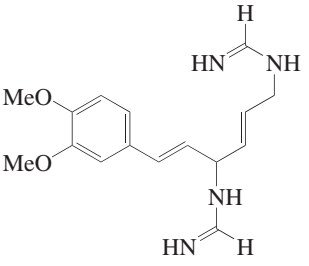
$C_{16}H_{25}N$ 231.38
Metab. of marine sponge *Acanthella acuta*. Oil. $[\alpha]_D$ -31.5 (c, 1.2 in $CHCl_3$).

Isothiocyanate: ***Acanthisothiocyanate 3***
[112767-00-7]
$C_{16}H_{25}NS$ 263.446
Metab. of *Acanthella acuta*. Oil. $[\alpha]_D$ -12.9 (c, 0.3 in $CHCl_3$). Has -NCS replacing -NC.

Mayol, L. *et al., Tetrahedron*, 1987, **43**, 5381-5388

Acanthoine A-25

N,N″-*[1-(3,4-Dimethoxystyryl)-2-butenylene]diformamidine, 8CI*
[6793-31-3]



$C_{16}H_{22}N_4O_2$ 302.375
Alkaloid from *Carduus acanthoides* (Asteraceae). Mp 221° (192-193°) (as dihydrochloride). $[\alpha]_D^{29}$ +7.1 (c, 0.4 in H_2O).

Tetrahydro: ***Acanthoidine***. *Ruscopine*
[94347-15-6]
[4192-85-2]
$C_{16}H_{26}N_4O_2$ 306.407
Alkaloid from *Carduus acanthoides* (Asteraceae). Mp 250-251° (as hydrochloride). $[\alpha]_D^{22}$ +6.8 (c, 0.4 in H_2O). Saturated at both olefinic double bonds. The duplication of

trivial names is unexpected since both clearly refer to the same isol.

Frydman, B. *et al., Tetrahedron*, 1962, **18**, 1063-1072 (*Acanthoine, Acanthoidine*)

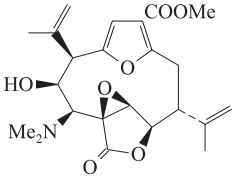
Aceropterine A-29

[176227-10-4]



Relative configuration

$C_{23}H_{29}NO_7$ 431.485
Alkaloid from the Caribbean sea plume *Pseudopterogorgia acerosa*. $[\alpha]_D$ +0.44 (c, 2.0 in $CHCl_3$). Closely related to Tobagolide and Pseudopterolide. λ_{max} 258 (ϵ 3750) (MeOH) (Berdy).

Rodríguez, A.D. *et al., Tet. Lett.*, 1996, **37**, 2687 (*isol, pmr, cmr, ms, struct*)

Acetamide, 9CI A-30

Ethanamide. Methanecarboxamide
[60-35-5]
H_3CCONH_2
C_2H_5NO 59.068
Isol. from some plants e.g. *Chimonanthus fragrans.* Produced industrially by distillation of ammonium acetate or by hydration of Acetonitrile. Solubiliser, plasticiser, stabiliser, used industrially as solv. in molten form. Dissolves virtually all classes of organic and inorganic compds. Deliquescent, hexagonal cryst. Odourless when pure but usually has characteristic "mouse" odour. V. sol. H_2O, EtOH; sol. $CHCl_3$; prac. insol. Et_2O. Mp 82-83°. Bp 222° Bp_5 92°. pK_{a1} -1.4 (25°). Triboluminescent.
▶ Fl. p. >104°. Possible human carcinogen (IARC 2B). Irritant. Exp. carcinogen (v. large dose). Exp. reprod. and teratogenic effects (large doses). AB4025000

N-*(13-Methyltetradecyl):* ***Capsiamide***
[64317-66-4]
$C_{17}H_{35}NO$ 269.47
Constit. of fruit of hot pepper varieties of *Capsicum annuum.*

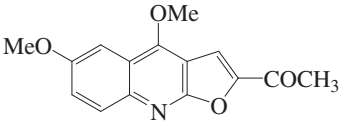
2-Acetyl-4,6-dimethoxyfuro[2,3-*b*]quinoline A-50

2-Acetylpteleine



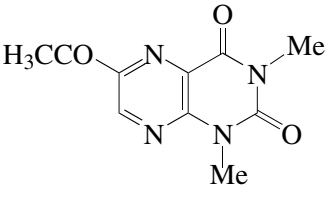
$C_{15}H_{13}NO_4$ 271.272
Alkaloid from the root bark of *Melicope semecarpifolia*. Yellow needles (MeOH). Mp 123-126°. λ_{max} 236 (log ϵ 4.01); 303 (log ϵ 3.7); 330 (log ϵ 3.76) (MeOH).

*6-Demethoxy, 7-methoxy: 2-Acetyl-4,7-dimethoxyfuro[2,3-*b*]quinoline.* ***2-Acetylevolitrine***
$C_{15}H_{13}NO_4$ 271.272
Alkaloid from the root bark of *Melicope semecarpifolia*. Yellow needles (MeOH). Mp 121-124°. λ_{max} 235 (log ϵ 4.41); 260 (log ϵ 4.4); 351 (log ϵ 4.43) (MeOH).

Chen, I.S. *et al., J. Nat. Prod.*, 2001, **64**, 1143-1147

6-Acetyl-1,3-dimethyl-2,4(1*H*,3*H*)-pteridinedione, 9CI A-51

6-Acetyl-1,3-dimethyllumazine
[94591-18-1]



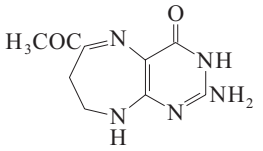
$C_{10}H_{10}N_4O_3$ 234.214
Isol. from the marine polychaete worm *Odontosyllis undecimdonta*. Needles (MeOH). Mp 177-178° (173°).

Kakoi, H. *et al., Heterocycles*, 1995, **41**, 789-797 (*isol, synth, pmr, cmr*)

6-Acetylhomopterin **A-52**

*6-Acetyl-2-amino-1,7,8,9-tetrahydro-4*H*-pyrimido[4,5-*b*][1,4]diazepin-4-one, 9CI. Quench spot*

[80003-63-0]



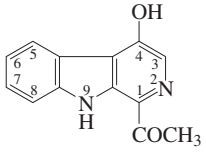
$C_9H_{11}N_5O_2$ 221.218

Naturally occurring diazepine from *Drosophila melanogaster*. Intermed. involved in the biosynth. of Drosopterin, D-941. Greenish-yellow cryst.

Wiederrecht, G.J. *et al., J. Biol. Chem.*, 1981, **256**, 10399 (*isol, struct, ms, pmr*)
Jacobson, K.B. *et al., Biochemistry*, 1982, **21**, 5700 (*isol, struct, pmr, cmr, uv*)
Boyle, P.H. *et al., Tet. Lett.*, 1987, **28**, 5331 (*synth*)

1-Acetyl-4-hydroxy-β-carboline **A-53**

*1-(4-Hydroxy-9*H*-pyrido[3,4-*b*]indol-1-yl)ethanone, 9CI*



$C_{13}H_{10}N_2O_2$ 226.234

Me ether: ***1-Acetyl-4-methoxy-β-carboline***
[65236-63-7]
$C_{14}H_{12}N_2O_2$ 240.261
Alkaloid from the bark and roots of *Ailanthus malabarica* and from the root bark of *Ailanthus altissima* (Simaroubaceae). Prisms. Mp 208° 204-205° Mp 212.5-214°. λ_{max} 238 (log ϵ 4.15); 270 (log ϵ 4.26); 288 (log ϵ 4.23); 370 (log ϵ 3.82) (EtOH).

Suzuki, H. *et al., Tetrahedron*, 1997, **53**, 1593-1606 (*synth*)

1-Acetyl-6-hydroxy-β-carboline **A-54**

*1-(6-Hydroxy-9*H*-pyrido[3,4-*b*]indol-1-yl)ethanone, 9CI*

$C_{13}H_{10}N_2O_2$ 226.234

O-*(4-*O*-Methyl-β-*D*-glucopyranoside):* ***BB 4***
$C_{20}H_{22}N_2O_7$ 402.403
Isol. from the oriental crude drug bombyx batryticatus (dried larvae of *Bombyx mori*).

Kikuchi, H. *et al., Tet. Lett.*, 2004, **45**, 367-370 (*BB4*)

1-Acetyl-7-hydroxy-β-carboline **A-55**

*1-(7-Hydroxy-9*H*-pyrido[3,4-*b*]indol-1-yl)ethanone, 9CI.* ***Arenarine D***
[123520-96-7]

$C_{13}H_{10}N_2O_2$ 226.234
Alkaloid from *Arenaria kansuensis* (Caryophyllaceae). Pale yellow needles (EtOAc). Mp 176-177° dec.

O-*(4-*O*-Methyl-β-*D*-glucopyranoside):* ***BB 3***
$C_{20}H_{22}N_2O_7$ 402.403
Isol. from the oriental crude drug, bombyx batryticatus (dried silkworms, *Bombyx* spp.).

Me ether: 1-Acetyl-7-methoxy-β-carboline. ***Arenarine C***
[62230-10-8]
$C_{14}H_{12}N_2O_2$ 240.261
Alkaloid from *Banisteriopsis caapi* (Malphigiaceae) and from the whole plant of *Arenaria kansuensis* (Caryophyllaceae). Light yellow needles ($CHCl_3$ or hexane/EtOAc). Mp 224-225° dec. (190° dec.). λ_{max} 260 (log ϵ 4.18); 289 (log ϵ 4.37); 334 (log ϵ 4.02) ($CHCl_3$).

Hashimoto, Y. *et al., Phytochemistry*, 1976, **15**, 1559-1560 (*Me ether, isol, synth, pmr*)
Wu, F. *et al., Chem. Pharm. Bull.*, 1989, **37**, 1808 (*isol, uv, ir, pmr, cmr, ms*)
Kikuchi, H. *et al., Tet. Lett.*, 2004, **45**, 367-370 (*BB 3*)

1-Acetyl-8-hydroxy-β-carboline **A-56**

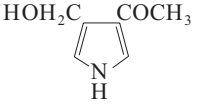
*1-(8-Hydroxy-9*H*-pyrido[3,4-*b*]indol-1-yl)ethanone, 9CI*

$C_{13}H_{10}N_2O_2$ 226.234
Alkaloid from *Hypodematium squamuloso-pilosum*. Pale yellow powder (MeOH aq.). Mp 242-243°. λ_{max} 256 ; 277 ; 310 ; 390 (MeOH).

Zhou, T.-S. *et al., Phytochemistry*, 1998, **49**, 1807-1809 (*isol, uv, ir, pmr, cmr, ms*)

3-Acetyl-4-(hydroxymethyl)-pyrrole **A-57**

*1-[4-(Hydroxymethyl)-1*H*-pyrrol-3-yl]ethanone, 9CI.* ***Verrucarin E***
[24445-13-4]



$C_7H_9NO_2$ 139.154

Pyrrole antibiotic. Metab. of *Myrothecium verrucaria*. Shows cytostatic activity. Cryst. (Et_2O/Me_2CO). Sol. EtOAc; poorly sol. H_2O, acids, bases. Mp 90.5-91°. λ_{max} 260 (ϵ 17800) (MeOH or EtOH) (Derep). λ_{max} 249 (ϵ 10000) (EtOH) (Berdy).

Ac:
$C_9H_{11}NO_3$ 181.191
Cryst. (Et_2O/Me_2CO). Mp 102°.

Härri, E. *et al., Helv. Chim. Acta*, 1962, **45**, 839 (*isol, props*)
Pfäffli, P. *et al., Helv. Chim. Acta*, 1969, **52**, 1911-1920; 1921-1929 (*struct, biosynth*)

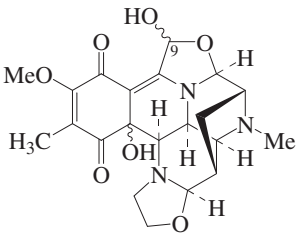
Aclidinomycin B A-82

[342814-66-8]



$C_{21}H_{25}N_3O_7$ 431.444

Related to Naphthyridinomycin A, N-32. Prod. by *Streptomyces halstedi* KB012 and a marine-derived *Streptomyces* sp. $[\alpha]_D$ +188 (c, 0.16 in MeOH). λ_{max} 286 (ϵ 21500); 398 (ϵ 5000) (MeOH).

N-*De-Me:* ***Aclidinomycin D***

$C_{20}H_{23}N_3O_7$ 417.418

Prod. by a marine-derived *Streptomyces* sp.

9-Deoxy: ***Aclidinomycin A***

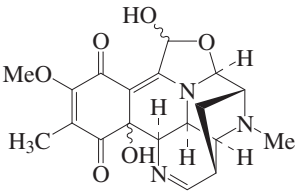
[342814-65-7]

$C_{21}H_{25}N_3O_6$ 415.445

Prod. by *Streptomyces halstedi* KB012. $[\alpha]_D$ 0 (MeOH). λ_{max} 282 (ϵ 19000); 403 (ϵ 3500) (MeOH).

Thorwest, M. *et al., Dissertation*, Univ. of Göttingen, 2001, (*marine, isol*)
Cang, S. *et al., J. Antibiot.*, 2001, **54**, 304-307 (*isol, pmr, cmr*)

Aclidinomycin C A-83



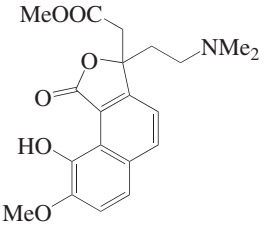
$C_{19}H_{21}N_3O_6$ 387.391

Prod. by a marine-derived *Streptomyces* sp.

Thorwest, M. *et al., Dissertation*, Univ. of Göttingen, 2001,

Aconcaguine A-84

[96624-39-4]



$C_{20}H_{23}NO_6$ 373.405

Alkaloid from the twigs of *Berberis actinacantha* (Berberidaceae). Yellow amorph. solid. Positive opt. rotn.

Weiss, I. *et al., Chem. Comm.*, 1985, 3-4 (*uv, ir, pmr, cmr, ms, struct*)

Aconitane-1,4,6,7,8,14,16-heptol A-85

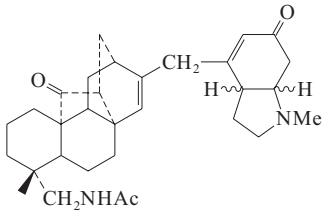
Acozerine A-108

[155210-48-3]



$C_{31}H_{42}N_2O_3$ 490.684

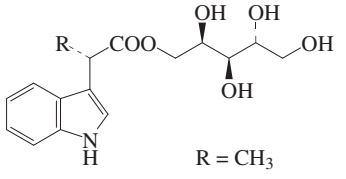
Alkaloid from *Aconitum zeravshanicum* (Ranunculaceae).

Vaisov, Z.M. *et al., Mendeleev Commun.*, 1993, 237; *CA*, **120**, 299052m (*isol, ir, pmr, ms*)

Acremoauxin A A-109

2-(3-Indolyl)propanoyl-D-arabinitol

[125537-93-1]



$C_{16}H_{21}NO_6$ 323.345

Prod. by *Acremonium roseum*. Plant growth regulator. Needles (EtOH/EtOAc). Sol. MeOH, EtOAc; poorly sol. H_2O. Mp 142-144° (135-136°). $[\alpha]_D^{19}$ +53.6 (c, 0.35 in MeOH). λ_{max} 219 (ϵ 25000); 225 (ϵ 9600); 278 (ϵ 7000); 286 (ϵ 5700); 288 (ϵ 6000) (MeOH) (Berdy).

Sassa, T. *et al., Agric. Biol. Chem.*, 1989, **53**, 3105 (*isol, struct*)

Yoshida, N. *et al., Agric. Biol. Chem.*, 1990, **54**, 2681 (*synth*)

Acremoauxin B A-110

3-Indolylacetyl-D-arabinitol, 9CI

[138111-07-6]

As Acremoauxin A, A-109 with R = H

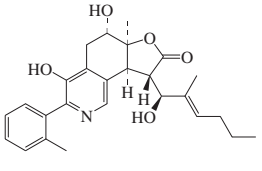
$C_{15}H_{19}NO_6$ 309.318

Prod. by *Acremonium roseum*. Plant growth regulator. Cryst.

Japan. Pat., 1991, 91 83 968; *CA*, **116**, 39794a

Acremolactone B A-111

[850723-60-3]



Absolute Configuration

$C_{26}H_{31}NO_5$ 437.535

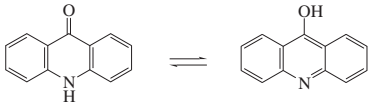
Prod. by *Acremonium roseum* I4267. Phytotoxin. Needles (Me_2CO). Mp 255-256°. $[\alpha]_D^{24}$ +37 (c, 0.08 in Me_2CO). λ_{max} 212 (ϵ 26700); 240 (sh) (ϵ 8600); 283 (ϵ 15400); 330 (ϵ 1000) (MeOH).

Sassa, T. *et al., Biosci., Biotechnol., Biochem.*, 2004, **68**, 2633-2636 (*isol, pmr, cmr*)

Acridone A-112

9(10H)-Acridinone, 9CI. 9-Hydroxyacridine. 9-Acridinol. Acridol

[578-95-0]



NH-*form* OH-*form*

$C_{13}H_9NO$ 195.22

NH-form predominates. Constit. of the roots and rhizomes of *Thamnosma montana* (Rutaceae). Antineoplastic agent. Yellow leaflets (EtOH). Insol. Et_2O, C_6H_6, $CHCl_3$. Mp 356-358° Mp 362-365° dec. pK_{a1} -0.32 (20°, H_2SO_4 aq.).

▶ AR6976000

NH-form

N-*Benzoyl: 10-Benzoyl-9(10H)-acridinone, 9CI*
[57479-66-0]
$C_{20}H_{13}NO_2$ 299.328
Yellow plates (hexane or by subl.). Mp 198-200°.

N-*Me:* see 10-Methylacridone, M-382

N-*Et: 10-Ethylacridone*
[2207-41-2]

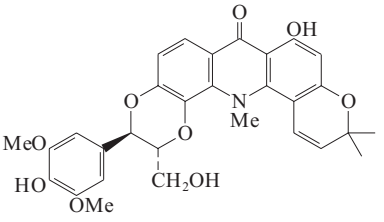
Acrignine A A-113

[149155-25-9]



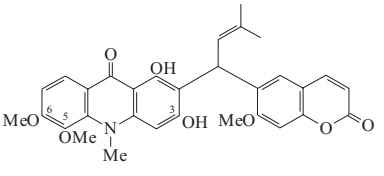
$C_{30}H_{29}NO_9$ 547.56

Acridone-lignan hybrid. Alkaloid from roots of *Citrus grandis* f. Hirado and *Citrus yuko* (Rutaceae). Yellow prisms. Mp 177-179°. Racemic.

Takemura, Y. *et al., Chem. Pharm. Bull.*, 1993, **41**, 406 (*isol, uv, ir, pmr, cmr, cryst struct*)

Acrimarine A A-114

[119152-47-5]



$C_{31}H_{29}NO_8$ 543.572

Alkaloid from the roots of *Citrus funadoko* (Rutaceae). Pale yellow oil. $[\alpha]_D$ -9.76 (c, 0.082 in $CHCl_3$).

3-Me ether: ***Acrimarine N***
$C_{32}H_{31}NO_8$ 557.599
Alkaloid from roots of Yalaha [several hybrid seedlings resulting from a cross of Duncan grapefruit (*Citrus paradisi*) x Dancy tangerine (*Citrus tangerina*)].

Yellow oil. Opt. inactive.

3-Me ether, N-*de-Me:* ***Acrimarine B***
[119152-48-6]
$C_{31}H_{29}NO_8$ 543.572
Alkaloid from the roots of *Citrus funadoko* (Rutaceae). Yellow prisms (Me_2CO). Mp 288-290°. $[\alpha]_D$ -7.14 (c, 0.056 in $CHCl_3$).

O^6*-De-Me:* ***Acrimarine K***
[147395-91-3]
$C_{30}H_{27}NO_8$ 529.545
Alkaloid from roots of *Citrus funadoko* (Rutaceae). Yellow oil. $[\alpha]_D^{25}$ 0 (c, 0.0695 in $CHCl_3$).

O^6*-De-Me, 3-Me ether:* ***Acrimarine F***
[129722-89-0]
$C_{31}H_{29}NO_8$ 543.572
Alkaloid from the roots of *Citrus funadoko* (Rutaceae). Pale yellow powder.

O^6*-De-Me, 3-Me ether,* N^6*-de-Me:* ***Acrimarine E***
[129722-88-9]
$C_{30}H_{27}NO_8$ 529.545
Alkaloid from the roots of *Citrus funadoko* (Rutaceae). Pale yellow prisms (Me_2CO). Mp 274-276°. $[\alpha]_D$ +20.1 (c, 0.05 in Me_2CO).

6-Demethoxy, O^5*-de-Me:* ***Acrimarine G***
[129722-97-0]
$C_{29}H_{25}NO_7$ 499.519
Alkaloid from the roots of *Citrus funadoko* (Rutaceae). Yellow oil. $[\alpha]_D$ +8 (c, 0.075 in $CHCl_3$).

6-Demethoxy, O^5*-de-Me, 3-Me ether:* ***Acrimarine H***
[132185-44-5]
$C_{30}H_{27}NO_7$ 513.546
Alkaloid from roots of *Citrus* spp. Yellow oil. $[\alpha]_D$ 0 (Me_2CO).

Bis(demethoxy): ***Acrimarine M***
[147513-68-6]
$C_{29}H_{25}NO_6$ 483.52
Alkaloid from roots of *Citrus funadoko* (Rutaceae). Yellow oil. $[\alpha]_D^{25}$ 0 (c, 0.052 in $CHCl_3$).

Ito, C. *et al., Chem. Pharm. Bull.*, 1990, **38**, 2586 (*Acrimarine H*)

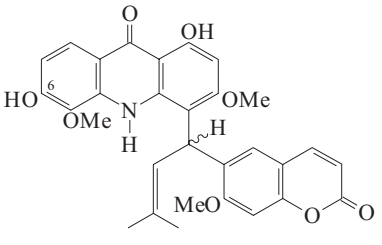
Acrimarine C A-115

[119206-24-5]



$C_{30}H_{27}NO_8$ 529.545

(-)-*form*
Alkaloid from the roots of *Citrus funadoko* (Rutaceae). Yellow oil. $[\alpha]_D$ -6.17 (c, 0.081 in $CHCl_3$).

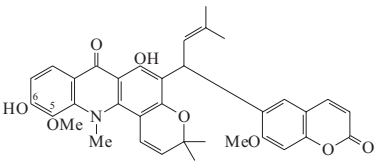
6-Me ether: ***Acrimarine D***
[129722-87-8]
$C_{31}H_{29}NO_8$ 543.572
Alkaloid from the root of *Citrus funadoko* (Rutaceae). Yellow oil. $[\alpha]_D$ -3 (c, 0.103 in $CHCl_3$).

(±)-*form*
Acrimarine L
[147512-44-5]
From roots of *Citrus funadoko* (Rutaceae). Yellow oil.

Furukawa, H. *et al., J.C.S. Perkin 1*, 1990, 1593 (*Acrimarine C, Acrimarine D*)
Takemura, Y. *et al., Heterocycles*, 1992, **34**, 2363 (*Acrimarine L*)

Acrimarine J A-116

[147395-90-2]



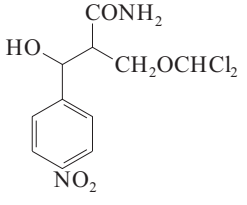
$C_{35}H_{33}NO_8$ 595.648
Alkaloid from roots of Yalaha [several hybrid seedlings resulting from a cross of Duncan grapefruit (*Citrus paradisii*) × Dancy tangerine (*Citrus tangerina*)] (Rutaceae). Yellow oil. $[\alpha]_D^{28}$ 0 (c, 0.106 in $CHCl_3$).

6-Deoxy, O^5*-de-Me:* ***Acrimarine I***
[147395-89-9]
$C_{34}H_{31}NO_7$ 565.621
Alkaloid from roots of Yalaha (Rutaceae). Yellow oil. $[\alpha]_D^{26}$ +27.8 (c, 0.036 in $CHCl_3$).

Takemura, Y. *et al., Heterocycles*, 1992, **34**, 2363 (*isol, uv, ir, pmr, cmr, ms, struct*)

Acrodontiolamide A-117

α-(Dichloromethoxymethyl)-β-hydroxy-4-nitrobenzenepropanamide
[152053-09-3]

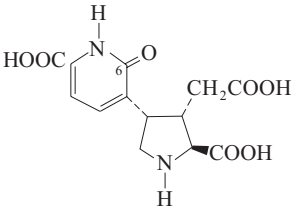


$C_{11}H_{12}Cl_2N_2O_5$ 323.132
Metab. of the fungus *Acrodontium salmoneum*. Antifungal agent. Plates (MeOH). Mp 145-147°. λ_{max} 273 (ϵ 386000) (MeOH) (Berdy).

Buarque de Gusmao, N. *et al., Spectrosc. Lett.*, 1993, **26**, 1373 (*isol, uv, ir, ms, pmr, cmr*)
Steiman, R. *et al., Pharmazie*, 1995, **50**, 693 (*isol, activity*)

Acromelic acid A A-118

5-[5-Carboxy-4-(carboxymethyl)-3-pyrrolidinyl]-1,6-dihydro-6-oxo-2-pyridinecarboxylic acid, 9CI. Acromelinic acid A
[86630-09-3]



$C_{13}H_{14}N_2O_7$ 310.263
Trace alkaloid from fruiting bodies of the poisonous mushroom *Clitocybe acromelalga*. Shows very potent neuroexcitatory action. Cryst. Sol. H_2O; poorly sol. Me_2CO, hexane. Mp 310°. $[\alpha]_D$ +27.8 (c, 0.35 in H_2O). Struct. established by synth. Phys. props. are of synthetic material. λ_{max} 240 (ϵ 4370); 315 (ϵ 8910) (pH 2) (Derep). λ_{max} 241 (ϵ 5130); 312 (ϵ 9120) (pH 12) (Derep). λ_{max} 243 (ϵ 5500); 315 (ϵ 9550) (H_2O pH 7) (Derep). λ_{max} 242 ; 317 (pH 7 buffer) (Berdy). λ_{max} 240 ; 313 (pH 2 buffer) (Berdy). λ_{max} 241 ; 312 (pH 12 buffer) (Berdy). λ_{max} 240 (ϵ 5130); 313 (ϵ 9550) (H_2O) (Berdy).

6-Deoxo, 5,6-didehydro: ***Acromelic acid D***
[102329-71-5]
$C_{13}H_{14}N_2O_6$ 294.263
Minor constit. of the toxic mushroom *Clitocybe acromelalga*. Sol. H_2O. $[\alpha]_D$ +17.6 (c, 0.07 in H_2O). λ_{max} 221 ; 269 (H_2O) (Berdy).

6-Deoxo, 5,6-didehydro, 4-decarboxy, 6-carboxy: Acromelic acid E
[145237-01-0]
$C_{13}H_{14}N_2O_6$ 294.263
Minor constit. of the toxic mushroom *Clitocybe acromelalga*. Sol. H_2O. λ_{max} 266 (H_2O) (Berdy).

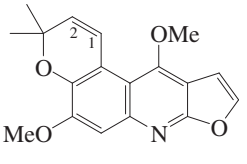
Acronydine A-121

*5,11-Dimethoxy-3,3-dimethyl-3*H*-furano[2,3-*b*]pyrano[3,2-*f*]quinoline, 9CI*
[518-68-3]



$C_{18}H_{17}NO_4$ 311.337
Alkaloid from *Acronychia baueri, Melicope leptococca* and *Sarcomelicope leiocarpa* (Rutaceae). Prisms (MeOH). Mp 151-153°.

Picrate:

Yellow needles (propanol or EtOH). Mp 216-218°. dec.

*1,2-Dihydro, 1*R,*2*R*-dihydroxy:* **cis-*1,2-Dihydro-1,2-dihydroxyacronydine*.** cis-*1,2-Dihydroxy-1,2-dihydroacronydine*
[126661-84-5]
$C_{18}H_{19}NO_6$ 345.351
Alkaloid from bark of *Sarcomelicope dogniensis*. Noncryst. $[\alpha]_D$ +2 (c, 0.25 in MeOH). λ_{max} 225 (sh) (log ϵ 4.17); 254 (log ϵ 4.43); 303 (sh) (log ϵ 3.88); 317 (log ϵ 4.05); 329 (log ϵ 4.04); 344 (sh) (log ϵ 3.83) (MeOH).

*1,2-Dihydro, 1*R,*2*S*-dihydroxy:* **trans-*1,2-Dihydro-1,2-dihydroxyacronydine*.** trans-*1,2-Dihydroxy-1,2-dihydroacronydine*
[126661-85-6]
$C_{18}H_{19}NO_6$ 345.351
Alkaloid from bark of *Sarcomelicope dogniensis*. Mp 178-180°. $[\alpha]_D$ -8 (c, 0.2 in MeOH). λ_{max} 225 (sh) ; 254 (log ϵ 4.43); 303 (sh) (log ϵ 3.88); 317 (log ϵ 4.05); 329 (log ϵ 4.04); 344 (sh) (log ϵ 3.83) (MeOH).

*5-Demethoxy: 11-Methoxy-3,3-dimethyl-3*H*-furano[2,3-*b*]pyrano[3,2-*f*]quinoline.* ***Medicosmine***
[35306-86-6]
$C_{17}H_{15}NO_3$ 281.31
Alkaloid from *Boronella koniambiensis* and *Medicosma cunninghamii*. Pale cream needles (EtOH or ETOAc/petrol). Mp 138.5-139.5°.

5-Demethoxy, picrate:
Fine yellow needles (EtOH). Mp 190-191°.

*5-Demethoxy, 1,2-dihydro, 1*R**,2**R*-dihydroxy:* **cis-*1,2-Dihydro-1,2-dihydroxymedicosmine*.** cis-*1,2-Dihydroxy-1,2-dihydromedicosmine*
$C_{17}H_{17}NO_5$ 315.325
Alkaloid from the aerial parts of *Boronella koniambiensis*. Amorph. solid. $[\alpha]_D$ -5 (c, 0.1 in $CHCl_3$). λ_{max} 245 ; 300 ; 312 ; 342 ; 357 (MeOH).

Acsine A-122

[1353-77-1]

$C_{21}H_{29}NO_5$ 375.464

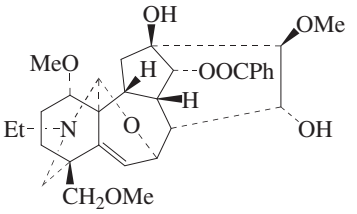
Struct. unknown. Alkaloid from the roots of *Aconitum excelsum* (Ranunculaceae). Mp 182-185° (slow heating) Mp 192-195° (rapid heating). Contains OAc and 2 OH groups, plus an ether linkage.

Sulfate: Mp 220° dec.

Platonova, T.F. *et al., J. Gen. Chem. USSR (Engl. Transl.)*, 1958, **28**, 259 (*isol, ir*)

Acsonine A-123

[367452-76-4]



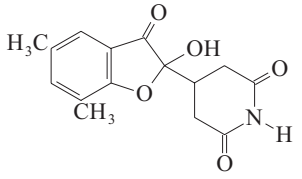
$C_{31}H_{41}NO_8$ 555.667

Unusual 7,17-epoxyaconitane struct. Alkaloid from the roots of *Aconitum kusnezoffii*. Amorph. powder.

Zinurova, E.G. *et al., Russ. Chem. Bull. (Engl. Transl.)*, 2001, **50**, 311-312 (*isol, pmr, cmr*)

Actiketal A-124

4-(2,3-Dihydro-2-hydroxy-5,7-dimethyl-3-oxo-2-benzofuranyl)-2,6-piperidinedione, 9CI. RK 4415. Antibiotic RK 4415
[133658-47-6]

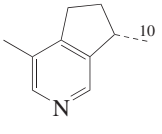


$C_{15}H_{15}NO_5$ 289.287

Glutarimide-type antibiotic. Prod. by *Streptomyces pulveraceus* ssp. *epiderstagenes*. Antitumour agent. Powder. Mp 96-100°. $[\alpha]_D$ 0. λ_{max} 222 (ϵ 9710); 264 (ϵ 7630); 350 (ϵ 2490) (MeOH) (Derep).

Sonoda, T. *et al., J. Antibiot.*, 1991, **44**, 160 (*isol, pmr, cmr*)
Japan. Pat., 1991, 91 255 082; *CA*, **116**, 126985g (*isol*)
Kiyota, H. *et al., Tet. Lett.*, 2000, **41**, 5887-5890 (*synth*)

Actinidine A-125



(*S*)-*form*

$C_{10}H_{13}N$ 147.219

(*R*)-*form* [15524-81-9]
Synthetic. Liq. Bp_{10} 92-94°. $[\alpha]_D^{20}$ +10.8 (c, 0.36 in $CHCl_3$).

Picrate: Mp 146-147°.

(*S*)-*form* [524-03-8]
Alkaloid from *Actinidia arguta* (taravine), *Actinidia polygama, Tecoma fulva, Tecoma radicans* and *Valeriana officinalis* (valerian). Constit. of defensive secretions of various insects incl. *Megacrania alpheus*, *Ontholestes murinus* and *Tapinoma erraticum*). Powerful attractant for Felidae (cats). Oil. Bp_9 100-103°. $[\alpha]_D^{11}$ -7.2 ($CHCl_3$).

Picrate: Mp 143°.

N-*[2-(4-Hydroxyphenyl)ethyl]:* **N-*(p-Hydroxyphenethyl)actinidine***
[15794-92-0]
$C_{18}H_{22}NO^{\oplus}$ 268.378
Quaternary alkaloid from the roots of *Valeriana officinalis* (valerian). Mp 201-203° dec. (as chloride). $[\alpha]_D^{22}$ +50.5 (MeOH).

10-Acetoxy: ***10-Acetoxyactinidine***
$C_{12}H_{15}NO_2$ 205.256
Alkaloid from the roots of *Argylia radiata*. Amorph. solid. Stereochem. not certain.

(±)-*form* [79254-93-6]
Synthetic. Oil. Mp 146-146.5° (as picrate). Bp_9 100-103°.

1-Hydroxy: ***Narceimicine***
[116368-95-7]
$C_{21}H_{21}NO_8$ 415.399
Alkaloid from the seeds of *Fumaria indica* (Papaveraceae). Pale-yellow granules (MeOH aq.). Mp 242-246° dec. Shown in the paper as the enediol tautomer.

1-Hydroxy, Me ester: ***Paprafumine***
[169626-17-9]
$C_{22}H_{23}NO_8$ 429.426
Alkaloid from aerial parts of *Fumaria indica* (Papaveraceae). Amorph. solid. Shown in the paper as the enediol tautomer.

1-Oxo: ***Narceimine****. Bicucullinine. Alkaloid F45*
[59443-00-4]
$C_{21}H_{19}NO_8$ 413.383
Alkaloid from *Fumaria indica* and *Corydalis ochroleuca* (Papaveraceae). Mp 268° (259-260°).

1-Oxo, Me ester: Mp 188°.

1-Oxo, N-*Me:* **N-*Methylnarceimine***. N-*Methylnarceimicine (incorr.)*
[777007-71-3]
$C_{22}H_{22}NO_8^{\oplus}$ 428.418
Quaternary alkaloid from *Corydalis saxicola*. Yellow cryst. (MeOH). Mp 194-196°. Counterion not specified. λ_{max} 207 (log ϵ 4.48); 331 (log ϵ 4.02) (MeOH).

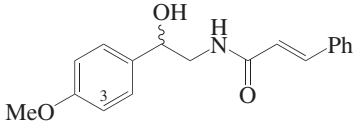
Aegeline A-153

N-*[2-Hydroxy-2-(4-methoxyphenyl)ethyl]-3-phenyl-2-propenamide, 9CI.* N-*β-Hydroxy-β-*p-*methoxyphenethylcinnamamide.* N-*Cinnamoyl-2-hydroxy-2-(4-methoxyphenyl)ethylamine. Cinnamic acid 2-hydroxy-2-(*p-*methoxyphenyl)ethylamide. Egeline*
[456-12-2]



$C_{18}H_{19}NO_3$ 297.353
Originally assigned the formula $C_{18}H_{18}O_4$.

(+)-*form* [15298-36-9]
Synthetic. Cryst. (EtOH). Mp 196-197°. $[\alpha]_D^{22}$ +36 (c, 0.4 in $CHCl_3$). $[\alpha]_D^{21}$ -48.1 (c, 0.5 in EtOH).

(-)-*form* [15298-37-0]
Synthetic. Cryst. (EtOH). Mp 196-197°. $[\alpha]_D$ -35.1 ($CHCl_3$). $[\alpha]_D$ +47.5 (c, 0.5 in EtOH).

(±)-*form* [37791-13-2]
Alkaloid from the leaves of *Aegle marmelos* (bael), *Zanthoxylum coriaceum* and *Zanthoxylum ocumarense* (Rutaceae). Antihyperglycaemic and antidyslipidaemic agent. Cryst. (EtOH/EtOAc). Mp 176° (173-175°).

Ac:
$C_{20}H_{21}NO_4$ 339.39
Plates (EtOAc). Mp 124°.

Me ether: N-*[2-Methoxy-2-(4-methoxyphenyl)ethyl]cinnamide. 7-*O-*Methylaegeline*
[70546-93-9]
$C_{19}H_{21}NO_3$ 311.38
Isol. from *Aegle marmelos* (bael). Cryst. (C_6H_6/hexane). Mp 135°. Artifact.

Et ether: N-*[2-Ethoxy-2-(4-methoxyphenyl)ethyl]cinnamide*
[70546-94-0]
$C_{20}H_{23}NO_3$ 325.407
Isol. from *Aegle marmelos* (bael). Cryst. (C_6H_6/hexane). Mp 99-100°. Artifact.

3-Methoxy: ***3-Methoxyaegeline***
$C_{19}H_{21}NO_4$ 327.379
Alkaloid from the leaves of *Zanthoxylum syncarpum*. Cryst. (EtOAc/MeOH). Mp 138-139°. λ_{max} 218 (log ϵ 4.37); 225 (log ϵ 4.57); 278 (log ϵ 4.65) (MeOH).

*3-Methoxy, Ac: 7-***O-*Acetyl-3-methoxyaegeline***
$C_{21}H_{23}NO_5$ 369.416
Alkaloid from the leaves of *Zanthoxylum syncarpum*. Pale yellow powder. λ_{max} 242 (log ϵ 4.82); 252 (log ϵ 4.67); 282 (log ϵ 4.98) (MeOH).

Aerophobin 2 A-155

[87075-23-8]

As Aerophobin 1, A-154 with

n = 3, X = NH_2

$C_{16}H_{19}Br_2N_5O_4$ 505.165

Isol. from the sponges *Verongia aerophoba* and *Aiolochroia crassa*. $[\alpha]_D$ +139 (c, 1.9 in MeOH).

N-*Me (X = NHMe):* **N-*Methylaerophobin 2***

[209472-96-8]

$C_{17}H_{21}Br_2N_5O_4$ 519.192

Alkaloid from the sponge *Aiolochroia crassa*.

13,14-Dihydro, 14-oxo: ***14-Oxoaerophobin 2***

[232259-26-6]

$C_{16}H_{19}Br_2N_5O_5$ 521.165

Isol. from *Aplysina insularis.*

Cimino, G. *et al., Tet. Lett.*, 1983, **24**, 3029 (*Aerophobin 2*)
Assmann, M. *et al., Z. Naturforsch., C*, 1998, **53**, 398-401 (*N-Methylaerophobin 2*)

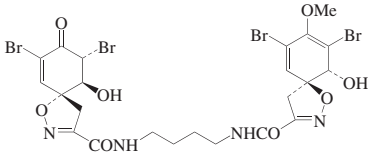
Aeroplysinillin A-156

[1056030-28-4]



Relative Configuration

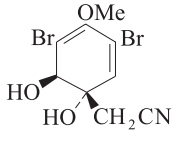
$C_{23}H_{24}Br_4N_4O_8$ 804.081

Closely related to Aerothionin, A-158. Isol. from an *Aplysinella* sp. Powder. $[\alpha]_D^{20}$ +38.2 (c, 0.2 in MeOH). λ_{max} 223 (log ϵ 5.5); 256 (log ϵ 5.48) (MeOH).

Ankudey, F.J. *et al., Planta Med.*, 2008, **74**, 555-559 (*isol, cd, pmr, cmr*)

Aeroplysinin 1 A-157

3,5-Dibromo-1,6-dihydroxy-4-methoxy-2,4-cyclohexadiene-1-acetonitrile, 9CI. 3,5-Dibromo-1-cyanomethyl-4-methoxy-3,5-cyclohexadiene-1,2-diol. Zamamistatin



(+)–*form*

$C_9H_9Br_2NO_3$ 338.983

Structure of Zamamistatin revised twice; finally shown to be the same as Aeroplysinin 1 in 2008.

(+)-*form* [28656-91-9]

Constit. of the sponges *Aplysina aerophoba (Verongia aerophoba*), *Aplysina archeri*, *Aiolochroia crassa*, *Verongula rigida*, *Psammaplysilla purpurea*, *Ianthella* sp. and others. Cytotoxic and antibacterial agent. Protein-tyrosine kinase inhibitor. Algicide, molluscicide. Sol. MeOH, Et_2O, Me_2CO; poorly sol. hexane. Mp 120-121° (112-113°). $[\alpha]_D$ +193 (c, 0.63 in Me_2CO). $[\alpha]_D^{20}$ +185 (c, 0.17 in MeOH). λ_{max} 284 (ϵ 4910) (MeOH) (Derep). λ_{max} 231 (ϵ 3220); 284 (ϵ 4910) (MeOH) (Berdy).

▶ GU4735000

Di-Ac:

Cryst. (C_6H_6/petrol). Mp 114°. $[\alpha]_D$ +218 ($CHCl_3$).

(-)-*form*

Constit. of the sponges *Ianthella ardis*, *Verongula gigantea*, *Suberea creba*, *Psammaplysilla arabica* and *Pseudoceratina crassa*. Mp 116-117°. $[\alpha]_D^{20}$ -176 (c, 0.125 in MeOH). $[\alpha]_D$ -198 (c, 0.5 in Me_2CO). λ_{max} 284 (ϵ 4910) (MeOH) (Derep).

(±)-*form*

Constit. of *Verongula gigantea* and *Aiolochroia crassa*. Mp 153-154°. λ_{max} 284 (ϵ 4910) (MeOH) (Derep).

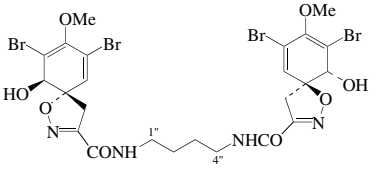
Aerothionin A-158

[28714-26-3]



$C_{24}H_{26}Br_4N_4O_8$ 818.107

Numbering systems vary. Isol. from *Aplysina aerophoba* (*Verongia aerophoba*), *Aplysina fistularis* and *Aplysina thiona*. Also from *Pseudoceratina durissima*, *Psammaplysilla purpurea* and the crinoid *Himerometra magnipinna*. Plates (Me_2CO/C_6H_6). Mp 134-137° dec. $[\alpha]_D$ +252 (Me_2CO). λ_{max} 234 (ϵ 14450); 284 (ϵ 13490) (EtOH) (Derep). λ_{max} 284 (ϵ 12660) (MeOH) (Berdy).

Di-Ac:

Needles (Me_2CO). Mp 206-208°. $[\alpha]_D$ +236 ($CHCl_3$).

2″-Hydroxy: ***11-Hydroxyaerothionin***

[73622-27-2]

$C_{24}H_{26}Br_4N_4O_9$ 834.107

Constit. of *Aplysina caissara*, *Aplysina lacunosa* and *Pseudoceratina durissima*. Glass. $[\alpha]_D$ +189 (c, 0.15 in MeOH). λ_{max} 233 (ϵ 19780); 284 (ϵ 11100); 295 (ϵ 18900) (MeOH) (Berdy).

2″,3″-Dihydroxy: ***Dihydroxyaerothionin***

[122759-72-2]

$C_{24}H_{26}Br_4N_4O_{10}$ 850.106

Metab. of *Verongula rigida*. Powder. Mp 162-164°. $[\alpha]_D^{25}$ -64.2 (c, 0.1 in MeOH).

2″-Oxo: ***11-Oxoaerothionin***

[73622-23-8]

$C_{24}H_{24}Br_4N_4O_9$ 832.091

Metab. from the Caribbean sponge *Aplysina lacunosa* and from *Verongia cavernicola*. Exhibits pronounced and selective antitumour activity against human colon (HCT116) cell line. Powder. Sol. MeOH, $CHCl_3$; poorly sol. H_2O. Mp 174.6-176.6° dec. $[\alpha]_D^{25}$ +181.15 (c, 2.17 in DMSO). λ_{max} 262 (ϵ 11600); 284 (ϵ 11500) (MeOH) (Berdy).

*2″-Oxo, 3″*R*-hydroxy:* ***12R-Hydroxy-11-oxoaerothionin***

[157544-68-8]

$C_{24}H_{24}Br_4N_4O_{10}$ 848.09

Metab. from the Caribbean sponge *Aplysina fistularis* forma *fulva*. $[\alpha]_D^{25}$ +160.7.

*2″-Oxo, 3″*S*-hydroxy:* ***12S-Hydroxy-11-oxoaerothionin***

[157497-57-9]

$C_{24}H_{24}Br_4N_4O_{10}$ 848.09

Metab. from the sponge *Aplysina fistularis* forma *fulva*. $[\alpha]_D^{25}$ +152.5.

Homologue: ***Homoaerothionin***

[34232-66-1]

[35036-48-7]

$C_{25}H_{28}Br_4N_4O_8$ 832.134

Constit. of the sponges *Aplysina aerophoba*, *Verongia thiona* and *Verongia cavernicola*. Amorph. solid. Mp 166-167° (as di-Ac). $[\alpha]_D$ +191.5 ($CHCl_3$) (di-Ac). Has a C_5 bridging chain instead of C_4. λ_{max} 289 (ϵ 13348) (MeOH) (Berdy).

Homologue, 2″ξ-hydroxy: 11-Hydroxy-homoaerothionin. ***Caissarine C***

$C_{25}H_{28}Br_4N_4O_9$ 848.134

Constit. of *Aplysina caissara*. Amorph. solid. $[\alpha]_D^{28}$ +175 (c, 0.002 in MeOH).

Homologue, 3″-hydroxy: ***12-Hydroxyhomoaerothionin***

[938464-19-8]

$C_{25}H_{28}Br_4N_4O_9$ 848.134

Isol. from the crinoid *Himerometra magnipinna*. Yellow powder. $[\alpha]_D^{20}$ +106 (c, 0.39 in MeOH). λ_{max} 231 (log ϵ 4.33); 281 (log ϵ 3.99) (MeOH).

Homologue, 2″-oxo: ***11-Oxohomoaerothionin***

[191112-17-1]

$C_{25}H_{26}Br_4N_4O_9$ 846.118

Constit. of *Aplysina cavernicola*. λ_{max} 232 (ϵ 19000); 284 (10500) (MeOH).

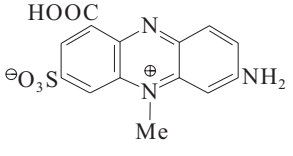
Aeruginosin B A-162

7-Amino-1-carboxy-5-methyl-3-sulfophenazinium hydroxide inner salt, 9CI. 7-Amino-1-carboxy-5-methyl-3-sulfophenazinium betaine. Eruginosin B
[6508-65-2]



$C_{14}H_{11}N_3O_5S$ 333.324

Pigment from *Pseudomonas aeruginosa*. Red cryst. (aq. acid). Sol. H_2O. Dec. on heating without melting.

Herbert, R.B. *et al., J.C.S.(C)*, 1969, 2517 (*struct, ir, uv*)
Bentley, R.K. *et al., J.C.S.(C)*, 1970, 2447 (*synth*)

Aestivine† A-163

Estivine
[1356-93-0]
Struct. unknown
$C_{17}H_{21}NO_4$ 303.357

Amaryllidaceae alkaloid. Isol. from the bulbs of *Leucojum aestivum* (Amaryllidaceae). Cryst. + $1H_2O$ (EtOH). Mp 194-195°. $[\alpha]_D$ -151 (c, 0.1 in EtOH).

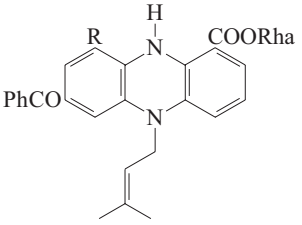
Hydrochloride:
Cryst. + ½ H_2O. Mp 205-207°.

Hydrobromide: Mp 153-154°.

Proskurnina, N.F. *et al., J. Gen. Chem. USSR (Engl. Transl.)*, 1963, **33**, 1643-1644 (*isol*)

Aestivophoenin A A-164

[171864-91-8]



R = H

$C_{31}H_{32}N_2O_7$ 544.603

Phenazine antibiotic. Prod. by *Streptomyces purpeofuscus*. Neuronal cell protecting agent, neuroprotectant, lipid peroxidation inhibitor. Orange powder. Sol. MeOH, EtOAc, Me_2CO. Mp 59-61°. $[\alpha]_D^{20}$ -106.3 (c, 0.005 in MeOH). λ_{max} 229 (ϵ 28900); 245 (ϵ 27400); 296 (ϵ 26000); 367 (ϵ 4000); 490 (ϵ 11700) (MeOH) (Berdy).

Shin-ya, K. *et al., J. Antibiot.*, 1995, **48**, 1378 (*isol, pmr, cmr, uv, ir*)

Aestivophoenin B A-165

[171864-92-9]
As Aestivophoenin A, A-164 with
R = $-CH_2CH{=}C(CH_3)_2$
$C_{36}H_{40}N_2O_7$ 612.721

Phenazine antibiotic. Prod. by *Streptomyces purpeofuscus*. Neuronal cell protecting agent, neuroprotecant, lipid peroxidation inhibitor. Orange powder. Sol. MeOH, Me_2CO, EtOAc. Mp 63-64°. $[\alpha]_D$ -139.8 (c, 0.006 in MeOH). λ_{max} 232 (ϵ 26900); 245 (ϵ 25800); 298 (ϵ 19000); 368 (ϵ 3300); 495 (ϵ 9700) (MeOH) (Berdy).

Debenzoyl: ***Aestivophoenin C***
$C_{29}H_{36}N_2O_6$ 508.613
Prod. by *Streptomyces purpeofuscus*. Neuronal cell protecting agent, antioxidant. Yellow powder. Mp 61-62°.

λ_{max} 247 (ϵ 24600); 328 (ϵ 2000); 453 (ϵ 4100) (MeOH).

Shin-ya, K. *et al., J. Antibiot.*, 1995, **48**, 1378 (*isol, pmr, cmr, uv, ir*)

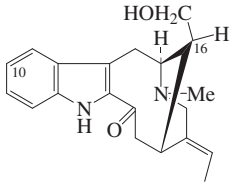
Affinine† A-166

17-Hydroxyvobasan-3-one, 9CI

[2134-82-9]



Absolute Configuration

$C_{20}H_{24}N_2O_2$ 324.422

Alkaloid from *Peschiera affinis*, *Peschiera laeta* and *Tabernaemontana psychotrifolia* (Apocynaceae). Cryst. (MeOH/EtOAc, CH_2Cl_2/heptane, or EtOH). Mp 273-275° (264-265°) dec. $[\alpha]_D^{24}$ -180 (c, 0.78 in EtOH). λ_{max} 236 (sh) (ϵ 13200); 320 (ϵ 13400) (EtOH).

Hydrochloride:

Cryst. (MeOH/EtOAc). Mp 267-269° dec. $[\alpha]_D^{25}$ -105.4 (c, 0.5 in MeOH).

O-*Ac:*

Cryst. as solvate (Me_2CO). Mp 95-115°.

10-Methoxy: ***Pelirine***

[30435-26-8]

$C_{21}H_{26}N_2O_3$ 354.448

Alkaloid from the roots of *Rauwolfia perakensis* (Apocynaceae). Pale yellow plates (MeOH aq.). Mp 130-131°. $[\alpha]_D^{22}$ -121 (c, 1 in EtOH). The 16-config. was uncertain until 1987.

10-Methoxy, sulfate (1:2):

Cryst. + ½ H_2O. Mp 223-224° dec.

10-Methoxy, picrate:

Yellow needles (EtOH). Mp 159-159.5°.

16-Epimer: ***16-Epiaffinine***

[38990-09-9]

$C_{20}H_{24}N_2O_2$ 324.422

Alkaloid from the stem bark of *Pleiocarpa talbotii* (Apocynaceae). Cryst. (Et_2O/pentane). Mp 152-154°. $[\alpha]_D^{23}$ -190 (c, 0.95 in $CHCl_3$). pK_a 6.9 (methylcellosolve).

16-Epimer, picrate:

Cryst. (MeOH). Mp 187-189°.

16-Epimer, N-*Me:* ***16-Epi-N-methylaffinine***. N-*Methyl-16-epiaffinine*

[58262-66-1]

$C_{21}H_{26}N_2O_2$ 338.449

Alkaloid from *Tabernaemontana accedens* (Apocynaceae). Plates (MeOH). Mp 208-210° dec. $[\alpha]_D^{20}$ -243 (c, 0.05 in $CHCl_3$).

16-Epimer, Me ether: ***Hystrixnine***. *16-Epi-17-O-methylaffinine*

$C_{21}H_{26}N_2O_2$ 338.449

Alkaloid from the root bark of *Tabernaemontana hystrix*. Amorph. solid. $[\alpha]_D^{25}$ -100 (c, 0.66 in MeOH). λ_{max} 223 (ϵ 42570); 282 (ϵ 6290) (MeOH).

16-Epimer, 10-hydroxy: ***16-Epi-10-hydroxyaffinine***. *10-Hydroxy-16-epiaffinine*

[82513-70-0]

$C_{20}H_{24}N_2O_3$ 340.421

Alkaloid from *Hunteria zeylanica* (Apocynaceae). Amorph. $[\alpha]_D$ -122 (c, 0.46 in $CHCl_3$). λ_{max} 212 (log ϵ 4.46); 228 (sh) (log ϵ 4.29); 277 (sh) ; 328 (log ϵ 4.17) (MeOH).

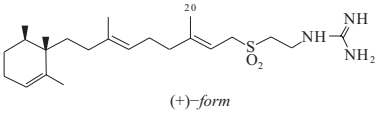
Agelasidine C A-180



$C_{23}H_{41}N_3O_2S$ 423.662

(+)-*form* [96617-52-6]
Isol. from the sponges *Agelas nakamurai* and *Agelas dispar*. Shows antispasmodic and antibacterial activity. Syrup (as hydrochloride). Sol. MeOH, $CHCl_3$. $[\alpha]_D^{25}$ +8.5 (c, 2.0 in MeOH) (hydrochloride).

(-)-*form* [139757-42-9]
Isol. from *Agelas clathrodes*. Oil. Sol. MeOH, $CHCl_3$. $[\alpha]_D^{29}$ -5.6 (c, 7.2 in MeOH).

20-Hydroxy: ***Agelasidine D***
[139680-61-8]
$C_{23}H_{41}N_3O_3S$ 439.661
Isol. from *Agelas clathrodes*. Oil. Sol. MeOH, $CHCl_3$. $[\alpha]_D^{29}$ -3.6 (c, 2.75 in MeOH).

[96617-52-6]

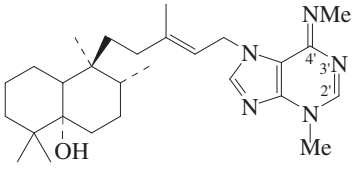
Agelasimine A A-181

[114216-85-2]



$C_{27}H_{43}N_5O$ 453.67
Metab. from the marine sponge *Agelas mauritiana*. Exhibits cytotoxicity, inhibition of adenosine transfer into rabbit erythrocytes, $Ca^{2\oplus}$-channel antagonistic action and α_1 adrenergic blockade. Yellowish oil. Sol. MeOH, EtOH, $CHCl_3$. $[\alpha]_D^{25}$ +2.3 (MeOH). λ_{max} 223 (ϵ 9700); 287 (ϵ 14700) (MeOH) (Berdy).

*2′,3′-Dihydro, 3′*N*-Me,* $N^{4'}$*-de-Me:* ***Agelasimine B***
[114216-87-4]
$C_{27}H_{45}N_5O$ 455.685
Metab. from the marine sponge *Agelas mauritiana*. Exhibits cytotoxicity, inhibition of adenosine transfer into rabbit erythrocytes, $Ca^{2\oplus}$-channel antagonistic action and α_1 adrenergic blockade. Viscous yellowish oil. Sol. MeOH, $CHCl_3$, EtOH. $[\alpha]_D^{25}$ +2.46 (MeOH). λ_{max} 245 (ϵ 7100); 327 (ϵ 5400) (MeOH) (Berdy).

Ohba, M. *et al., Tetrahedron*, 1997, **53**, 16977-16986 (*synth, abs config*)

Agelasine† A-182

Struct. unknown

$C_{26}H_{40}N_5^{\oplus}$ 422.635

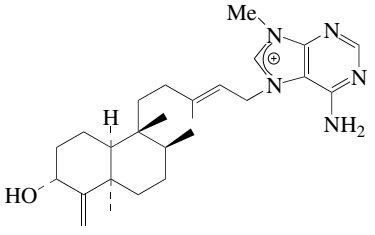
Quaternary 9-methyladenine deriv. of an unidentified bicyclic diterpene. Isol. from the sponge *Agelas dispar*. Cryst. (butanone/THF) (as chloride). Mp 197-200°

dec. (chloride). Mp of chloride does not appear to correspond with any of the Agelasines of known struct. λ_{max} 212 (ϵ 18100); 272 (ϵ 10000) (EtOH/HCl) (Derep). λ_{max} 212 (ϵ 18100); 272 (ϵ 10000) (EtOH) (Derep).

Cullen, E. *et al., Can. J. Chem.*, 1975, **53**, 1690-1691 (*isol, uv, ir, pmr, ms*)

Agelasine I A-183

[205382-10-1]



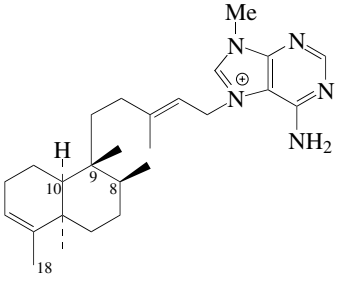
$C_{26}H_{40}N_5O^{\oplus}$ 438.635

Isol. from a sponge *Agelas* sp. Amorph. solid (as chloride). $[\alpha]_D$ -2.5 (c, 0.2 in MeOH). λ_{max} 272 (ϵ 8230) (MeOH).

Fu, X. *et al., J. Nat. Prod.*, 1998, **61**, 548-550 (*isol, uv, ir, pmr, cmr*)

Agelasine A† A-184

[56271-74-0]



$C_{26}H_{40}N_5^{\oplus}$ 422.635

Constit. of the Okinawan sponge *Agelas nakamurai*. ATPase inhibitor, spasmolytic agent, smooth muscle contractant. Cryst. (as chloride). Sol. MeOH, $CHCl_3$; poorly sol. H_2O, hexane. Mp 173-174° (chloride). $[\alpha]_D^{25}$ -31.3 (c, 0.59 in MeOH). λ_{max} 212 (ϵ 18100); 272 (ϵ 10000) (EtOH/HCl) (Derep). λ_{max} 212 (ϵ 18100); 272 (ϵ 10000) (EtOH) (Derep).

18-Hydroxy: ***Agelasine H***
[205382-09-8]
$C_{26}H_{40}N_5O^{\oplus}$ 438.635
Constit. of an *Agelas* sp. Amorph. solid (as chloride). $[\alpha]_D$ -63.9 (c, 0.36 in MeOH). λ_{max} 272 (ϵ 9015) (MeOH).

*18-Hydroxy, 18-*O*-(2-pyrrolecarbonyl):* ***Ageline B***
[88874-28-6]
[88855-18-9 , 88855-19-0]
$C_{31}H_{43}N_6O_2^{\oplus}$ 531.72
Constit. of sponge *Agelas* sp. Active against gram-positive bacteria. ATPase inhibitor. Smooth muscle contractor. Phytotoxin. Weak ichthyotoxin. Sol. MeOH, $CHCl_3$; poorly sol. H_2O. λ_{max} 210 (ϵ); 274 (ϵ) (EtOH) (Derep). λ_{max} 268 (ϵ 8320) (MeOH) (Berdy). λ_{max} 212 (ϵ 18100); 272 (ϵ 10111) (EtOH) (Berdy). λ_{max} 212 (ϵ 18100); 272 (ϵ 10000) (EtOH/HCl) (Berdy).

*18-Hydroxy, 18-*O*-(4-bromo-2-pyrrolecarbonyl):* ***Agelasine G***
[142808-37-5]
$C_{31}H_{42}BrN_6O_2^{\oplus}$ 610.616
Isol. from the Okinawan marine sponge *Agelas* sp. Exhibits cytotoxicity against murine lymphoma L1210 cells *in vitro*. $[\alpha]_D^{27}$ -85 (c, 0.02 in $CHCl_3$) (as chloride). λ_{max} 212 (ϵ 24000); 272 (ϵ 19000) (MeOH) (Berdy).

8,9,10-Triepimer: ***Agelasine B***
[92664-76-1]
$C_{26}H_{40}N_5^{\oplus}$ 422.635
Constit. of *Agelas nakamurai*. ATPase inhibitor, spasmolyic agent. Cryst. (as chloride). Sol. MeOH, $CHCl_3$; poorly sol. H_2O, hexane. Mp 167-170° (chloride). $[\alpha]_D^{25}$ -21.5 (c, 1.00 in MeOH). λ_{max} 212 (ϵ 18100); 272 (ϵ 10000) (EtOH/HCl) (Derep). λ_{max} 212 (ϵ 18100); 272 (ϵ 10000) (EtOH) (Derep).

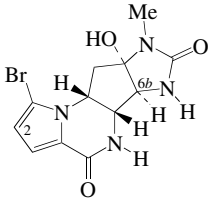
Agelastatin A A-189

[152406-28-5]



Absolute Configuration

$C_{12}H_{13}BrN_4O_3$ 341.164
Alkaloid from the sponge *Agelas dendromorpha* and *Cymbastela* sp. Exhibits marked cytotoxicity; insecticide. Antineoplastic agent. Prevents metastatic cancer spread. $[\alpha]_D^{20}$ -84.3 (c, 0.3 in EtOH) (as *N,N,O*-tri-Me). Not obt. completely pure. λ_{max} 203 (ϵ 12400); 232 (ϵ 8400); 279 (ϵ 11900) (EtOH) (Derep).

N-*De-Me:* ***Agelastatin D***
[201338-45-6]
$C_{11}H_{11}BrN_4O_3$ 327.137
Alkaloid from the sponge *Cymbastela* sp. Insecticide. Solid. λ_{max} 227 (ϵ 7900); 277 (ϵ 10800) (MeOH).

2-Bromo: ***Agelastatin B***
[159903-65-8]
$C_{12}H_{12}Br_2N_4O_3$ 420.06
Minor alkaloid from *Agelas dendromorpha*. $[\alpha]_D$ -84.4 (c, 0.49 in EtOH) (as *N,N,O*-tri-Me). Obt. as insep. mixt. with Agelastatin A but characterised as the tri-Me deriv.

*6*b-*Hydroxy:* ***Agelastatin C***
[201338-44-5]
$C_{12}H_{13}BrN_4O_4$ 357.163
Alkaloid from the sponge *Cymbastela* sp. Cytotoxic; insecticide. Solid. $[\alpha]_D$ -5 (c, 0.06 in MeOH). λ_{max} 228 (ϵ 7900); 278 (ϵ 11000) (MeOH).

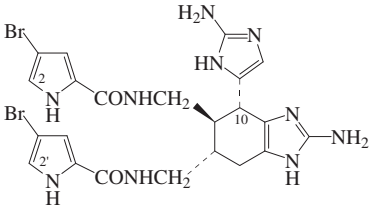
Ageliferin A-190

[117417-64-8]



$C_{22}H_{24}Br_2N_{10}O_2$ 620.305
Alkaloid from the marine sponges *Agelas conifera*, *Agelas novaecaledoniae*, *Agelas* cf. *mauritiana* and *Xestospongia* sp. Potent actomyosin ATPase activator. Antifouling agent. Somatostatin antagonist. Sol. MeOH, EtOAc, $CHCl_3$; poorly sol. H_2O. $[\alpha]_D^{33}$ +15.5 (c, 0.11 in MeOH). λ_{max} 204 (ϵ 25500); 220 (ϵ 27100); 267 (ϵ 25900); 393 (ϵ 300) (MeOH) (Derep).

1′-N-*Me:* ***1′-N-Methylageliferin***
[175861-97-9]
$C_{23}H_{26}Br_2N_{10}O_2$ 634.332
Alkaloid from the sponge *Astrosclera willeyana*. Pale yellow glass (as bis(trifluoroacetate)). $[\alpha]_D$ +40 (c, 0.01 in MeOH).

1,1′-Di-N-*Me:* ***N^{I},N$^{I'}$-Dimethylageliferin***
[175861-98-0]
$C_{24}H_{28}Br_2N_{10}O_2$ 648.359
Alkaloid from the sponge *Astrosclera willeyana*. Pale buff glass (as dihydrochloride). $[\alpha]_D$ +40 (c, 0.01 in MeOH).

2-Bromo: ***2-Bromoageliferin***
[117417-67-1]
$C_{22}H_{23}Br_3N_{10}O_2$ 699.201
Alkaloid from the sponges *Agelas conifera*, *Agelas* cf. *mauritiana* and *Astrosclera willeyana*. Potent actomyosin ATPase activator. Sol. MeOH, EtOAc, $CHCl_3$; poorly sol. H_2O. $[\alpha]_D^{33}$ +8.8 (c, 0.08 in MeOH). λ_{max} 203 (ϵ 30600); 220 (ϵ 26300); 270 (ϵ 24500); 396 (ϵ 700) (MeOH) (Derep). λ_{max} 204 (ϵ 15000); 222 (ϵ 12200); 274 (ϵ 12500); 396 (ϵ 700) (EtOH) (Berdy).

2-Bromo, 1′-N-*Me:* ***1′-N-Methyl-2-bromoageliferin***
[175862-01-8]
$C_{23}H_{25}Br_3N_{10}O_2$ 713.228
Alkaloid from the sponge *Astrosclera willeyana*. Off-white glass (as bis(trifluoroacetate)). $[\alpha]_D$ +50 (c, 0.01 in MeOH).

2′-Bromo, 1′-N-*Me:* ***1′-N-Methyl-2′-bromoageliferin***
[175862-02-9]
$C_{23}H_{25}Br_3N_{10}O_2$ 713.228
Alkaloid from the sponge *Astrosclera willeyana*. Off-white glass (as bis(trifluoroacetate)). $[\alpha]_D$ +40 (c, 0.01 in MeOH).

2,2′-Dibromo: ***2,2′-Dibromoageliferin***
[117417-69-3]
$C_{22}H_{22}Br_4N_{10}O_2$ 778.098
Alkaloid from the sponges *Agelas conifera*, *Agelas* cf. *mauritiana* and *Astrosclera willeyana*. Potent actomyosin ATPase activator. Sol. MeOH, EtOAc, $CHCl_3$; poorly sol. H_2O. $[\alpha]_D^{33}$ +3 (c, 0.1 in MeOH). λ_{max} 204 (ϵ 12200); 220 (ϵ 9100); 278 (ϵ 8200); 394 (ϵ 300) (no solvent reported) (Derep). λ_{max} 202 (ϵ 24300); 214 (ϵ 24500); 274 (ϵ 25000) (MeOH) (Derep). λ_{max} 204 (ϵ 12200); 220 (ϵ 9100); 278 (ϵ 8200); 394 (ϵ 300) (EtOH) (Berdy).

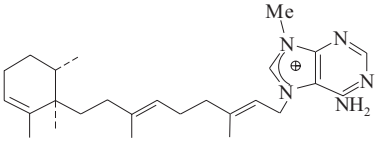
[8885-51-6]



$C_{26}H_{40}N_5^{\oplus}$ 422.635
Constit. of sponge *Agelas* sp. Active against gram-positive bacteria and fungi. ATPase inhibitor, weak ichthyotoxin. Active against *Mycobacterium tuberculosis*. Plates (MeCN) or powder (as chloride). Mp 178-180° (chloride). $[\alpha]_D^{25}$ -5.5 (c, 2.5 in MeOH). $[\alpha]_D$ -8.4 (c, 3 in $CHCl_3$). λ_{max} 212 (ϵ 18100); 272 (ϵ 10000) (EtOH/HCl) (Derep). λ_{max} 212 (ϵ 18100); 272 (ϵ 10000) (EtOH) (Derep).

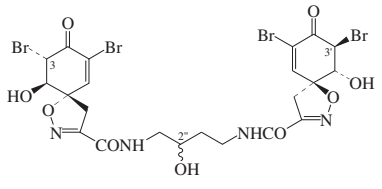
Agelocaissarine A_1 A-192

[927409-64-1]



$C_{22}H_{22}Br_4N_4O_9$ 806.053
Related to Aerothionin, A-158. Constit. of *Aplysina caissara*. Obt. as an inseparable mixt. with Agelocaissarine A_2.

3,3′-Diepimer: ***Agelocaissarine A_2***
[927409-65-2]
$C_{22}H_{22}Br_4N_4O_9$ 806.053
Constit. of *Aplysina caissara*.

Homologue: ***Agelocaissarine B_1***
[927409-66-3]
$C_{23}H_{24}Br_4N_4O_9$ 820.08
Constit. of *Aplysina caissara*. Has a C_5 bridging chain (-$CH_2CH(OH)CH_2CH_2CH_2$-) instead of C_4. Obt. as an inseparable mixt. with Agelocaissarine B_2.

Homologue, 2″-deoxy: ***Aplysinone B***
[943837-23-8]
$C_{23}H_{24}Br_4N_4O_8$ 804.081
Constit. of *Aplysina gerardogreeni*. Amorph. solid. $[\alpha]_D^{25}$ -4 (c, 0.1 in Me_2CO). Has a C_5 bridging chain instead of C_4.

Homologue, 3,3′-diepimer: ***Agelocaissarine B_2***
[927409-67-4]
$C_{23}H_{24}Br_4N_4O_9$ 820.08
Constit. of *Aplysina caissara*. Has a C_5 bridging chain (-$CH_2CH(OH)CH_2CH_2CH_2$-) instead of C_4.

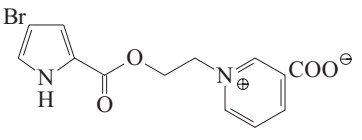
Agelongine A-193

[163564-84-9]



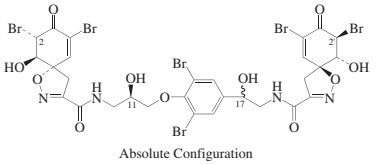
$C_{13}H_{11}BrN_2O_4$ 339.145
Alkaloid from *Agelas longissima* and *Axinella damicornis*. Exhibits antiserotonergic activity. Amorph. solid. Sol. MeOH, butanol. λ_{max} 262 (log ϵ 4.2) (MeOH).

Debromo: ***Daminine***
[862288-76-4]
$C_{13}H_{12}N_2O_4$ 260.249
Alkaloid from *Axinella damicornis*. Amorph. solid. Mp 193° dec.

Cafieri, F. *et al., Bioorg. Med. Chem. Lett.*, 1995, **5**, 799-804 (*isol, uv, pmr, cmr*)
Aiello, A. *et al., Tetrahedron*, 2005, **61**, 7266-7270 (*Daminine*)

Agelorin A A-194

[149998-47-0]



Absolute Configuration

$C_{29}H_{26}Br_6N_4O_{11}$ 1085.969
Hydrol. prod. of Fistularin 3, F-70 on standing. Metab. from the tropical marine sponge *Agelas oroides*. Shows antibacterial activity. Amorph. off-white powder. $[\alpha]_D^{25}$ -17.1 (c, 1.26 in Me_2CO). λ_{max} 220 (ϵ 12600); 250 (ϵ 7740) (EtOH) (Berdy).

11,17-Dideoxy: ***11,17-Dideoxyagelorin A***
$C_{29}H_{26}Br_6N_4O_9$ 1053.97
Isol. from the sponge *Suberea* aff. *praetensa*.

2,2′-Diepimer: ***Agelorin B***
[150133-30-5]
$C_{29}H_{26}Br_6N_4O_{11}$ 1085.969
Isol. from *Agelas oroides*. Shows antibacterial activity. Amorph. powder. $[\alpha]_D^{25}$ +50 (c, 0.27 in Me_2CO). λ_{max} 215 (ϵ 12570); 250 (ϵ 7940) (EtOH) (Berdy).

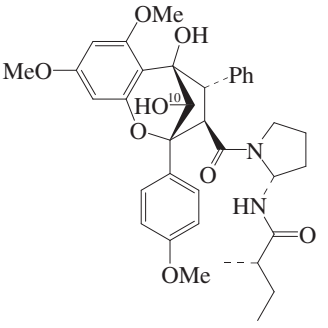
Trost, B.M. *et al., Org. Lett.*, 2007, **9**, 2357-2359 (*synth*)

Aglaforbesine A A-196

[177262-33-8]



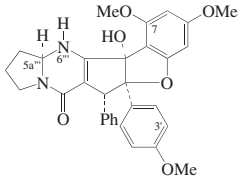
$C_{36}H_{42}N_2O_8$ 630.736
Alkaloid from *Aglaia forbesii*. Amorph. solid. $[\alpha]_D^{20}$ -18 (c, 1 in MeOH). λ_{max} 271 (log ϵ 3.25) (MeOH).

10-Epimer: ***Aglaforbesine B***
[177468-86-9]
$C_{36}H_{42}N_2O_8$ 630.736
Alkaloid from *Aglaia forbesii*. Amorph. solid. $[\alpha]_D^{20}$ +1 (c, 1 in MeOH). λ_{max} 270 (log ϵ 3.25) (MeOH).

Dumontet, V. *et al., Tetrahedron*, 1996, **52**, 6931-6942 (*isol, uv, ir, pmr, cmr*)

Aglaiastatin A-197

Aglaroxin D
[176785-78-7]



Absolute Configuration

$C_{31}H_{30}N_2O_6$ 526.588
Isol. from leaves of *Aglaia odorata* and *Aglaia roxburghiana*. Protein synthesis inhibitor. K-Ras transformed fibroblast morphology inducer. Powder + $1\frac{1}{2}H_2O$. Mp 157-160°. $[\alpha]_D^{23}$ +59.7 (c, 0.3 in MeOH). λ_{max} 281 (ϵ 4163); 304 (ϵ 4480) (MeOH).

5a‴,N$^{6‴}$-Didehydro: ***Dehydroaglaiastatin***. *Didehydroaglaiastatin*
[155595-93-0]
$C_{31}H_{28}N_2O_6$ 524.572
Isol. from roots of *Aglaia odorata* and twigs of *Aglaia duppereana* (Meliaceae). Protein synthesis inhibitor. Plates (CH_2Cl_2/MeOH). Mp 256-257°. $[\alpha]_D^{20}$ -50.1 (c, 0.41 in $CHCl_3$). λ_{max} 215 (ϵ 50000); 234 (ϵ 19000); 272 (ϵ 6000) (EtOH) (Derep).

*5a‴,N$^{6‴}$-Didehydro, 7-*O*-de-Me:* ***Marikarin***
[349642-85-9]
$C_{30}H_{26}N_2O_6$ 510.545
Alkaloid from *Aglaia gracilis*. Oil. $[\alpha]_D^{20}$ -45 (c, 0.3 in $CHCl_3$). λ_{max} 273 (MeOH).

3′-Hydroxy, 5a‴,N$^{6‴}$-didehydro: ***Didehydro-3′-hydroxyaglaiastatin***
[259143-58-3]
$C_{31}H_{28}N_2O_7$ 540.571
Isol. from *Aglaia duperreana*.

*3′-Hydroxy, 5a‴,N$^{6‴}$-didehydro, 7-*O*-de-Me:* ***3′-Hydroxymarikarin***
[349484-01-1]
$C_{30}H_{26}N_2O_7$ 526.545
Alkaloid from *Aglaia gracilis*. Oil. $[\alpha]_D^{20}$ -53 (c, 0.1 in $CHCl_3$). λ_{max} 279 (MeOH).

3′-Methoxy, 5a‴,N$^{6‴}$-didehydro: ***Aglaiformosanin***. *Didehydro-3′-methoxyaglaiastatin*
[371163-97-2]
$C_{32}H_{30}N_2O_7$ 554.598
Isol. from *Aglaia formosana*. Cytotoxic. Mp 260-262°. $[\alpha]_D^{22}$ -78.9 (c, 0.01 in $CHCl_3$). λ_{max} 213 (log ϵ 4.39); 256 (log ϵ 3.78); 274 (log ϵ 3.68) (MeOH).

Stereoisomer: [189343-27-9]
$C_{31}H_{30}N_2O_6$ 526.588
Isol. from twigs of *Aglaia duppereana*. $[\alpha]_D^{20}$ +45.7 (c, 0.19 in $CHCl_3$).

Relative Configuration

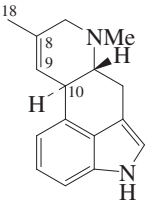
$C_{23}H_{34}N_2O_4S_2$ 466.665

Alkaloid from a marine *Agrobacterium* sp. Cytotoxic agent. Siderophore. Pale yellow oil. $[\alpha]_D^{25}$ -20.5 (c, 0.2 in $CHCl_3$). Chelates $Zn^{2\oplus}$ ion. λ_{max} 210 (log ϵ 5.18); 264 (log ϵ 4.8) (MeOH).

Acebal, C. *et al., J. Antibiot.*, 1999, **52**, 983-987 (*isol*)
Canedo, L.M. *et al., Tet. Lett.*, 1999, **40**, 6841-6844 (*isol, uv, cd, pmr, cmr*)

Agroclavine A-205

8,9-Didehydro-6,8-dimethylergoline, 9CI



(-)-*form*

$C_{16}H_{18}N_2$ 238.332

(-)-*form* [548-42-5]
Alkaloid from ergot and from several spp. in the genera *Argyreia*, *Rivea*, *Cuscuta*, *Ipomoea* (Convolvulaceae). Prod. by *Penicillium* , *Aspergillus* and *Rhizopus* spp. CNS excitator acting by stimulation of sympathetic centres. Active against gram-positive bacteria. Mycotoxin. Sol. MeOH, $CHCl_3$, Py; fairly sol. C_6H_6; poorly sol. H_2O. Mp 208-209° dec. $[\alpha]_D$ -151 ($CHCl_3$). $[\alpha]_D$ -182 (Py). λ_{max} 225 (ϵ 29512); 284 (ϵ 7586); 293 (ϵ 6456) (MeOH) (Berdy).
► LD_{50} (mus, ipr) 25 mg/kg. KE6325000

Dihydro: see Festuclavine, F-49

18-Hydroxy: ***Elymoclavine***
[548-43-6]
$C_{16}H_{18}N_2O$ 254.331
Alkaloid from ergot and several other *Claviceps* spp. and from *Stictocardia tiliaefolia*, *Stictocardia campanulata*, *Argyreia* spp. and several other spp.in the Convolvulaceae. Prod. by *Penicillium aurantiovirens.* 5HT receptor antagonist. CNS excitatory agent acting by stimulation of sympathetic centres. Mycotoxin. Sol. MeOH, $CHCl_3$; fairly sol. C_6H_6; poorly sol. H_2O. Mp 250-252° dec. $[\alpha]_D$ -152 (c, 1 in Py). λ_{max} 227 (ϵ 20417); 283 (ϵ 6918); 293 (ϵ 5754) (MeOH) (Berdy).

► KE6340000

18-Hydroxy, O-*β-D-fructofuranoside: Elymoclavine* O-*β-D-fructofuranoside*
[28986-92-7]
[121844-72-2]
$C_{22}H_{28}N_2O_6$ 416.473
Isol. from the *Claviceps* strain SD 58 grown in a culture medium containing saccharose. Amorph. Prob. artifact formed in a secondary process from Elymoclavine and fructose from saccharose in the culture medium.

18-Hydroxy, O-*[β-D-fructofuranosyl-(2→1)-β-D-fructofuranoside]: Elymoclavine* O-*β-D-fructofuranosyl-(2→1)-*O-*β-D-fructofuranoside*
[121864-94-6]
$C_{28}H_{38}N_2O_{11}$ 578.615
Isol. from saprophytic cultures of *Claviceps* strain SD 58 and *Claviceps purpurea* strain 88 EP on sucrose medium.

18-Hydroxy, O-*4-nitrobenzoyl:* Mp 176-177° dec. $[\alpha]_D^{20}$ -127 (c, 0.4 in $CHCl_3$).

*18-Hydroxy, 5,10-didehydro: 4,6,7,8-Tetrahydro-7-methylindolo[4,3-*fg*]quinoline-9-methanol.* ***Dehydroelymoclavine***
[141869-64-9]
$C_{16}H_{16}N_2O$ 252.315
Alkaloid from roots of *Securidaca longipedunculata.*

10-Epimer: ***Agroclavine I***
[82597-81-7]
$C_{16}H_{18}N_2$ 238.332
Metab. of *Penicillium kapuscinskii* strain UCM F-2156D. λ_{max} 211 (sh) (ϵ 14600); 225 (ϵ 25500); 276 (sh) (ϵ); 282 (ϵ 5470); 292 (ϵ 4560) (MeOH) (Derep).

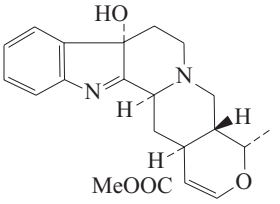
Ajmalicine hydroxyindolenine A-213

[5802-03-9]

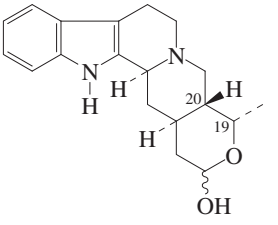


$C_{21}H_{24}N_2O_4$ 368.432
Alkaloid from *Catharanthus roseus* tissue culture (Apocynaceae).

Guéritte, F. *et al., J. Nat. Prod.*, 1983, **46**, 144-148 (*isol*)

Ajmalicinial A-214

[81737-77-1]



$C_{19}H_{24}N_2O_2$ 312.411
Alkaloid from *Strychnos johnsonii*. No phys. props. reported.

N^1*-Methoxycarbonyl:* ***Ajmalicidine***
[109031-00-7]
$C_{21}H_{26}N_2O_4$ 370.447
Alkaloid from the roots of *Rauwolfia serpentina* (Apocynaceae). Plates (MeOH/EtOAc). Mp 235-236°. $[\alpha]_D^{20}$ +190 ($CHCl_3$). The struct. assigned is prob. incorrect. Proposed by Lounasmaa *et al* to be possibly identical with Ajmalicinine, A-215. λ_{max} 208 ; 225 ; 285 (no solvent reported).

N^1*-Methoxycarbonyl, Ac:* [109031-01-8]
Needles. Mp 251-252°.

20-Epimer. ***Tetrahydroalstonial***
[85717-32-4]
$C_{19}H_{24}N_2O_2$ 312.411
Alkaloid from *Strychnos johnsonii*. No phys. props. reported.

Stereoisomer (?): ***16-Descarbomethoxy-16,17-dihydro-17-hydroxy-19-epiajmalicine***
[78184-81-3]
$C_{19}H_{24}N_2O_2$ 312.411
Alkaloid from the bark of *Hunteria zeylanica* and the root bark of *Aspidosperma marcgravianum* (Apocynaceae). Mp 185°. $[\alpha]_D$ -86 (Py). Stereochem. unclear. Shown in both papers as having same 19-config. as Ajmalicine, but both papers refer to it as an 19-epiajmalicine. May be identical with Ajmalicinial.

Arambewela, L.S.R. *et al., Phytochemistry*, 1981, **20**, 349-350 (*Descarbomethoxydihydrohydroxyepiajmalicine*)

Chatterjee, A. *et al., J.O.C.*, 1982, **47**, 3113-3117 (*synth, pmr*)
Robert, G.M.T. *et al., J. Nat. Prod.*, 1983, **46**, 694-707 (*Descarbomethoxydihydrohydroxyepiajmalicine*)
Palmisano, G. *et al., J.C.S. Perkin 1*, 1985, 923-926 (*synth, pmr, ms*)
Siddiqui, S. *et al., Phytochemistry*, 1987, **26**, 875-877 (*Ajmalicidine*)

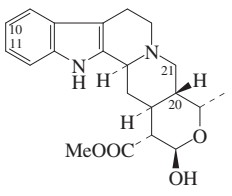
Lounasmaa, M. *et al., Planta Med.*, 1994, **60**, 480-481 (*Ajmalicidine*)

Ajmalicinine A-215

[55529-55-0]



Absolute Configuration

$C_{21}H_{26}N_2O_4$ 370.447
Alkaloid from the root bark of *Cabucala striolata* and the stem bark of *Rauwolfia cumminsii* and *Rauwolfia caffra* (Apocynaceae).

11-Methoxy: ***Tetraphyllinine***
[23924-91-6]
$C_{22}H_{28}N_2O_5$ 400.474
Alkaloid from *Rauwolfia discolor* and from the leaves of *Neisosperma glomerata* (Apocynaceae). Plates (MeOH). Mp 231-234°. $[\alpha]_D^{20}$ -35 (c, 0.42 in Py).

10,11-Dimethoxy: ***10,11-Dimethoxyajmalicinine***
[55511-11-0]
$C_{23}H_{30}N_2O_6$ 430.5
Alkaloid from the root bark of *Cabucala striolata* and the trunk bark of *Ochrosia moorei* (Apocynaceae).

Stereoisomer, 20,21-didehydro: ***16,17-Dihydro-17-hydroxy-19-epicathenamine***
[69284-02-2]
$C_{21}H_{24}N_2O_4$ 368.432
Alkaloid from *Guettarda eximia* (Rubiaceae). Isol. as an inseparable mixt. of two epimers at C-16 and/or C-17. Not named in the original papers.

Winternitz, F. *et al., Phytochemistry*, 1969, **8**, 1797-1802 (*Tetraphyllinine, synth, pmr, abs config*)

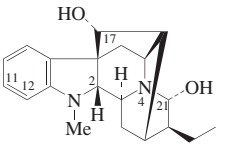
Ajmaline, BAN, JAN A-216

Ajmalan-17,21-diol, 9CI. Ajimaline. Gilurytmal. Merabitol. Raugalline. Rauwolfine. Rytmalin. Tachmalin. Many other names
[4360-12-7]



Absolute Configuration

$C_{20}H_{26}N_2O_2$ 326.438
Alkaloid from *Rauwolfia serpentina* and most *Rauwolfia* spp., *Melodinus balansae* and *Tonduzia longifolia* (Apocynaceae). Antiarrhythmic (Class Ia) drug which functions by inhibition of glucose uptake by heart tissue mitochondria. Platelet activating factor antagonist. Antiinflammatory agent. Mp 158-160° (MeOH solvate) Mp 205-207° (anhyd.). $[\alpha]_D$ +144 ($CHCl_3$). Log P 1.26 (uncertain value) (calc).

▶ High doses may cause cardiac arrhythmias, coma and death. Adverse neurological, hepatic, and haematological effects also recorded. LD_{50} (rat, orl) 360 mg/kg. LD_{50} (rat, ipr) 94 mg/kg. AX8050000

Hydrochloride: [4410-48-4]
Amber prisms + $2H_2O$. Mp 133-134° Mp 253-255° (anhyd.).

▶ AX8100000

Hydrochloride (1:2):
Plates. Mp 305-306° dec.

Picrate:
Plates (EtOH). Mp 126-127° Mp 223° (anhyd.).

21-O-β-D-Glucopyranoside: ***Rauglucine***
[119365-83-2]
$C_{26}H_{36}N_2O_7$ 488.58
Alkaloid from *Rauwolfia serpentina* (Apocynaceae).

17-Ac: ***17-O-Acetylajmaline***
[19918-92-4]
$C_{22}H_{28}N_2O_3$ 368.475
Alkaloid from cell suspension cultures of *Rauwolfia serpentina*. Rods (Et_2O), cryst. (EtOH). Mp 150° (rods) Mp 214-215° (cryst.).

17-Ac, 21-O-β-D-glucopyranoside: ***Acetylrauglucine***
[119329-01-0]
$C_{28}H_{38}N_2O_8$ 530.617
Alkaloid from *Rauwolfia serpentina* (Apocynaceae). $[\alpha]_D^{20}$ +17 (c, 0.36 in EtOH).

21-Ac:
Needles (EtOAc). Mp 190-192°.

Di-Ac: [19775-56-5]
Needles (metastable) or rods. Mp 132° Mp 187-189° (double Mp).

17-O-(3,4,5-Trimethoxybenzoyl): ***Ajmalimine. Willicourtine***
[59846-31-0]
[110941-51-0]
$C_{30}H_{36}N_2O_6$ 520.624
Alkaloid from *Rauwolfia obscura*, *Rauwolfia serpentina* and *Rauwolfia vomitoria* (Apocynaceae). Needles (MeOH/EtOAc). Mp 188-189°. $[\alpha]_D^{20}$ +105. Struct. of Ajmalimine revised in 2001.

17-O-Chloroacetyl: ***Lorajmine, INN***
[47562-08-3]
$C_{22}H_{27}ClN_2O_3$ 402.92
Cardiac depressant, antiarrhythmic agent. Cryst. Mp 232-235°. $[\alpha]_D$ +27.5 ($CHCl_3$). Log P 2.32 (uncertain value) (calc).

17-O-Chloroacetyl; hydrochloride: ***Lorajmine hydrochloride, USAN.*** *Nevergor. Ritmos. Ritmosel. Viaductor. Win 11831*
[40819-93-0]
Cryst. Mp 230-235°. $[\alpha]_D$ +40 ($CHCl_3$).
▶ LD_{50} (rat, orl) 480 mg/kg. LD_{50} (rat, ivn) 17.3 mg/kg. AX7710000

N^4-Me: ***N^b-Methylajmaline***
$C_{21}H_{29}N_2O_2^{\oplus}$ 341.472
Alkaloid from the roots of *Rauwolfia serpentina*. Amorph. powder (as chloride). $[\alpha]_D^{28}$ +113 (c, 1.1 in MeOH) (chloride). λ_{max} 205 (log ϵ 4.4); 244 (log ϵ 3.86); 288 (log ϵ 3.4) (MeOH) (chloride).

N^4-Propyl, hydrogen tartrate: ***Prajmalium bitartrate, BAN, INN.*** *Neorythmin. GT 1012. NPAB*
[2589-47-1]
$C_{27}H_{38}N_2O_8$ 518.606
Cardiac antiarrhythmic agent. Cryst. (EtOH/Et_2O). Mp 149-152°.
▶ LD_{50} (rat, orl) 54 mg/kg. LD_{50} (rat, ivn) 3.4 mg/kg. Hepatotoxic. AX7750000

N-De-Me: ***Norajmaline***
[23944-24-3]
$C_{19}H_{24}N_2O_2$ 312.411
Alkaloid from *Rauwolfia macrophylla, Rauwolfia obscura* and *Rauwolfia suaveolens* (Apocynaceae). Yellow-grey amorph. powder. $[\alpha]_D$ +36 (c, 0.67 in $CHCl_3$).

N-De-Me, 17-Ac: ***17-O-Acetylnorajmaline***
[80202-83-1]
$C_{21}H_{26}N_2O_3$ 354.448
Alkaloid from cell suspension cultures of *Rauwolfia serpentina*.

N-De-Me, 17-Ac, 21-O-β-D-glucopyranoside: ***Acetylnorrauglucine***
[119365-66-1]
$C_{27}H_{36}N_2O_8$ 516.59
Alkaloid from *Rauwolfia serpentina* (Apocynaceae).

17-Ketone: ***Ajmalidine***
[639-30-5]
$C_{20}H_{24}N_2O_2$ 324.422
Alkaloid from *Rauwolfia sellowii, Rauwolfia mauiensis* and *Rauwolfia vomitoria* (Apocynaceae). Prisms (MeOH). Mp 241-242°. $[\alpha]_D^{25}$ -80 (c, 1 in AcOH). pK_{a1} 6.3 (80% DMF). pK_{a1} 6.6 (60% DMF).

17-Ketone, O-Ac:
Needles (EtOH). Mp 218-220°. $[\alpha]_D^{25}$ +242 (c, 1 in Py).

11-Hydroxy: ***Ajmalinol***
[73012-74-5]
$C_{20}H_{26}N_2O_3$ 342.437
Alkaloid from *Rauwolfia vomitoria*

(Apocynaceae). Plates (C_6H_6/MeOH). Mp 209-210°. $[\alpha]_D^{30}$ +132 ($CHCl_3$). λ_{max} 254 ; 294 (no solvent reported).

12-Hydroxy: ***12-Hydroxyajmaline***
[152014-38-5]
$C_{20}H_{26}N_2O_3$ 342.437
Alkaloid from hairy roots of *Rauwolfia serpentina* (Apocynaceae). λ_{max} 250 ; 290 (MeOH).

12-Methoxy, 17-ketone: ***Vomalidine***
[639-28-1]
$C_{21}H_{26}N_2O_3$ 354.448
Alkaloid from the roots of *Rauwolfia vomitoria*, and root bark and stems of *Rauwolfia obscura* (Apocynaceae). Prisms (Me_2CO). Mp 242-243°. $[\alpha]_D^{20}$ +210 (c, 0.5 in Py). $[\alpha]_D$ +318 (c, 1 in $CHCl_3$).

12-Methoxy; 17-ketone, hydrochloride:
Cryst. (EtOH). Mp 239-242°.

12-Methoxy, 17-ketone, O-*Ac:*
Cryst. (Et_2O). Mp 252-254°. $[\alpha]_D^{20}$ +195 (c, 1 in Py).

2-Epimer: [51019-46-6]
Noncryst. $[\alpha]_D$ +55 (c, 1 in $CHCl_3$).

17-Epimer: ***Sandwicine****. Epiajmaline*
[509-37-5]
$C_{20}H_{26}N_2O_2$ 326.438
Alkaloid from *Rauwolfia sandwicensis, Rauwolfia mauiensis* and *Rauwolfia vomitoria* (Apocynaceae). Antiarrhythmic agent. Amorph. (MeOH aq. or Me_2CO/hexane). $[\alpha]_D^{20}$ +174 (c, 1 in MeOH).

17-Epimer, hydrochloride (1:2):
Cryst. (Me_2CO). Mp 210-213°. $[\alpha]_D$ +129 (MeOH).

17-Epimer, di-Ac:
Cryst. (petrol). Mp 105-108°. $[\alpha]_D^{20}$ +104 (c, 1 in $CHCl_3$).

20,21-Diepimer: ***Isoajmaline***
[6989-79-3]
$C_{20}H_{26}N_2O_2$ 326.438
Alkaloid from the roots of *Rauwolfia serpentina* (Apocynaceae). Prisms (MeOH aq.), plates (Et_2O). Mp 265° dec. $[\alpha]_D^{18}$ +72 (c, 0.7 in $CHCl_3$). pK_a 8.05.

20,21-Diepimer, hydrochloride (1:2):
Plates. Mp 310° dec.

20,21-Diepimer, di-Ac:
Plates (Et_2O). Mp 224-225°.

20,21-Diepimer, N^4*-Me:* ***N^b-Methylisoajmaline***
$C_{21}H_{29}N_2O_2^{\oplus}$ 341.472
Alkaloid from the roots of *Rauwolfia serpentina*. Powder (as chloride). $[\alpha]_D^{21}$ +88 (c, 1.2 in MeOH) (chloride). λ_{max} 204 (log ϵ 4.41); 244 (log ϵ 3.88); 288 (log ϵ 3.42) (MeOH) (chloride).

17,20,21-Triepimer: ***Isosandwicine***
[6835-90-1]
$C_{20}H_{26}N_2O_2$ 326.438
Alkaloid from the roots of *Rauwolfia vomitoria* (Apocynaceae). Cryst. (MeOH aq.). Mp 250° (sinters at 160°). $[\alpha]_D^{20}$ +130 (c, 1.18 in $CHCl_3$).

17,20,21-Triepimer, hydrochloride: Mp 244-245°. $[\alpha]_D^{20}$ +133 (c, 1 in MeOH).

17,20,21-Triepimer, di-Ac:
Cryst. (EtOH aq.). Mp 160° (sinters at 110°). $[\alpha]_D^{20}$ +101 (c, 1 in $CHCl_3$).

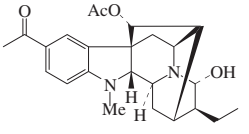
Ajmalinimine A-217

*10-Acetyl-17-*O*-acetylajmaline*



Absolute Configuration

$C_{24}H_{30}N_2O_4$ 410.512

Shown to be an artifact formed from 17-*O*-Acetylajmaline in A-216. Alkaloid from the roots of *Rauwolfia serpentina*. Elongated rods (moist MeOH). Mp 198-199°. $[\alpha]_D^{20}$ +205 (c, 0.3 in $CHCl_3$).

Ac:
Needles. Mp 205-206°.

Siddiqui, S. *et al., Heterocycles*, 1987, **26**, 463 (*isol, uv, ir, pmr, cmr, ms, struct*)
Lounasmaa, M. *et al., Heterocycles*, 2007, **72**, 647-648

Ajmalinine A-218

[73144-99-7]

$C_{22}H_{26}N_2O_3$ 366.459

Struct. unknown. Alkaloid from *Rauwolfia vomitoria* and the roots of *Rauwolfia serpentina* and *Rauwolfia sellowii* (Apocynaceae). Antihypertensive agent. Weak sympatholytic agent. Hexagonal prisms + $1H_2O$ (EtOAc). Mp 180-181°. $[\alpha]_D^{33}$ -97. Conts. OH and OMe but no NMe. Prob conts. a 5-Methoxyindole chromophore. Props. very close to Isorauhimbine in Y-13 isol. from the same sources (Bader *et al*, *Experientia*, 1954). λ_{max} 273 ; 300 (no solvent reported).

Hydrochloride:
Powder (EtOH/Et_2O). Mp 240-245° dec. $[\alpha]_D^{40}$ -44 (c, 1 in H_2O).

Methiodide:
Rods (EtOH). Mp 233-234° dec.

Picrate:
Yellow powder. Mp 200-205°.

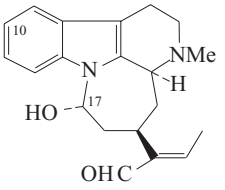
Akagerine A-222

α-Ethylidene-1,2,3,3a,4,5,6,7-octahydro-7-hydroxy-3-methyl-3,7a-diazacyclohepta[jk]fluorene-5-acetaldehyde, 9CI
[56519-07-4]



Absolute configuration

$C_{20}H_{24}N_2O_2$ 324.422
Alkaloid from *Strychnos usambarensis*, *Strychnos gardneri*, *Strychnos jobertiana*, *Strychnos parvifolia*, *Strychnos camptoneura*, *Strychnos spinosa*, *Strychnos nigritana* and *Strychnos decussata*. Convulsant. Platelets (hexane). Sol. MeOH, $CHCl_3$. Mp 188° dec. $[\alpha]_D^{20}$ -16.6 (c, 1 in MeOH). λ_{max} 227 (ϵ 32360); 276 (ϵ 6600); 283 (ϵ 6610); 293 (ϵ 5370) (MeOH) (Berdy).

Me ether: ***17-O-Methylakagerine***
[69241-17-4]
$C_{21}H_{26}N_2O_2$ 338.449
Alkaloid from *Strychnos dale*, *Strychnos decussata* and *Strychnos elaeocarpa* (Loganiaceae). Convulsant. Cryst. (EtOH). Mp 187-189°.

▶ HM1068000

Et ether: ***17-O-Ethylakagerine***
$C_{22}H_{28}N_2O_2$ 352.475
Alkaloid from the root bark of *Strychnos johnsonii* (Loganiaceae). $[\alpha]_D$ -13 (c, 0.6 in MeOH). Poss. an artifact.

10-Hydroxy: ***10-Hydroxyakagerine***
[74765-89-2]
$C_{20}H_{24}N_2O_3$ 340.421
Alkaloid from leaves of *Strychnos spinosa* (Loganiaceae). Cryst. ($CHCl_3$/EtOAc). Mp 149-150°. $[\alpha]_D^{20}$ -4.6 (c, 1 in MeOH).

10-Hydroxy, 17-Me ether: ***10-Hydroxy-17-O-methylakagerine***
[73360-05-1]
$C_{21}H_{26}N_2O_3$ 354.448
Alkaloid from *Strychnos decussata* stem bark (Loganiaceae).

▶ HM1060000

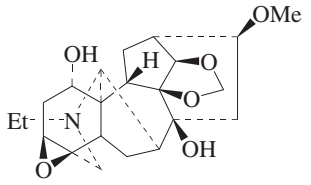
Akirine **A-226**

[402821-48-1]



$C_{22}H_{31}NO_6$ 405.49
Alkaloid from *Aconitum kirinense* (Ranunculaceae). Cryst. (Me_2CO). Mp 214-217°.

Nishanov, A.A. *et al., Khim. Prir. Soedin.*, 1992, **28**, 534-537; *Chem. Nat. Compd. (Engl. Transl.)*, 1992, **28**, 466-469 (*isol, pmr, ms, cryst struct*)

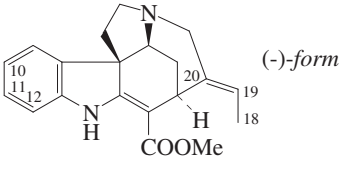
Akuammenine **A-227**

Struct. unknown
$C_{20}H_{22}N_2O_4$ 354.405
Minor alkaloid from *Picralima klaineana* (Apocynaceae). Scarlet flakes (MeOH)(as picrate). Mp 225° (picrate).

Henry, T.A. *et al., J.C.S.*, 1932, 2759-2768

Akuammicine **A-228**

Methyl 2,16,19,20-tetradehydrocuran-17-oate, 9CI



(-)-*form*

$C_{20}H_{22}N_2O_2$ 322.406

(-)-*form* [639-43-0]
Alkaloid from *Catharanthus roseus*, *Picralima nitida*, *Picralima klaineana*, *Amsonia brevifolia*, *Alstonia angustifolia*, *Alstonia scholaris* and other *Alstonia* spp., several *Vinca* spp., *Strychnos angolensis*, *Rauwolfia volkensii*, seeds of *Hunteria congolana*, *Catharanthus microphyllus*, *Cabucala erythrocarpa* leaves, and *Pandaca ochrascens*. Mp 177.5°. $[\alpha]_D^{19}$ -738 ($CHCl_3$). pK_a 7.45. λ_{max} 228 (ϵ 12300); 298 (ϵ 11800); 328 (ϵ 17400) (MeOH) (Berdy).

Hydrochloride: Mp 144° (hydrate) Mp 171° (anhyd.).

Picrate: Mp 169°.

N^b-*Oxide:* ***Akuammicine*** **N^b-*oxide***
[60048-86-4]
$C_{20}H_{22}N_2O_3$ 338.405
Alkaloid from *Alstonia scholaris* root, *Alstonia angustifolia* stem bark, *Rauwolfia* spp. and *Tabernaemontana* spp. (Apocynaceae). Amorph. powder. Mp 200.7-200.8°. $[\alpha]_D^{22}$ -624.5 (c, 0.55 in $CHCl_3$).

N^b-*Me:* ***Akuammicine*** **N^b-*methosalt***
[100680-12-4]
$C_{21}H_{25}N_2O_2^{\oplus}$ 337.441
Alkaloid from *Alstonia scholaris*, root and stem bark of *Hunteria eburnea* and leaves of *Vinca minor* (Apocynaceae). Mp 270° dec. (as chloride). $[\alpha]_D^{20}$ -120 (c, 0.1 in EtOH) (chloride). CAS no. refers to chloride.

*19,20*S*-Dihydro:* ***19,20-Dihydroakuammicine***
[2912-08-5]
$C_{20}H_{24}N_2O_2$ 324.422
Minor alkaloid from leaves of *Pleiocarpa pycnantha* var. *tubicina* and *Rauwolfia caffra* (Apocynaceae). Mp 169-171°. $[\alpha]_D^{27}$ -636.6 (c, 0.74 in MeOH).

19α,20α-Epoxide: ***19,20-Epoxyakuammicine***
[173658-92-9]
$C_{20}H_{22}N_2O_3$ 338.405
Alkaloid from leaves of *Rauwolfia sellowii* (Apocynaceae). No phys. props. reported.

10-Hydroxy: ***Sewarine***. *10-Hydroxyakuammicine*
[27160-72-1]
$C_{20}H_{22}N_2O_3$ 338.405
Alkaloid from leaves of *Rauwolfia stricta* and leaves and roots of *Rhazya stricta* (Apocynaceae). Shows cytotoxic activity. Cryst. or off-white powder. Mp 245° dec. $[\alpha]_D^{20}$ -720 (c, 0.1 in EtOH). λ_{max} 220 (ϵ 10800); 311 (ϵ 14400); 340 (ϵ 11900) (MeOH).

10-Hydroxy; hydrochloride: Mp 210° dec. $[\alpha]_D^{32}$ -724 (EtOH).

12-Hydroxy: ***Vinervine***. *12-Hydroxyakuammicine*
[1963-86-6]
$C_{20}H_{22}N_2O_3$ 338.405
Originally considered to be 11-Hydroxyakuammicine. Alkaloid from *Vinca erecta* upper parts, also obt. from cell suspension cultures of *Stemmadenia tomentosa* (Apocynaceae). Mp 154-155° dec. λ_{max} 234 (log ϵ 4.22); 290 (log ϵ 3.86); 336 (log ϵ 4.22) (EtOH).

19,20-Dihydro, 19-hydroxy: see Echitamidine, E-30

19,20-Dihydro, hydroxy: ***Hydroxy-19,20-dihydroakuammicine***
[59981-20-3]
$C_{20}H_{24}N_2O_3$ 340.421
Minor alkaloid from *Alstonia scholaris* root bark (Apocynaceae). Amorph. powder. Appears to be distinct from the 18- or 19-hydroxy compd. above. Could be identical with Echitamidine, E-30 or a stereo- or regioisomer of it.

19,20-Dihydro, 18- or 19-hydroxy: ***18(19)-Hydroxy-19,20-dihydroakuammicine***
$C_{20}H_{24}N_2O_3$ 340.421
Minor alkaloid from *Alstonia scholaris* root bark (Apocynaceae). Amorph. powder. Not compared with Echitamidine, could be identical or a stereo- or regioisomer of it.

11-Methoxy: ***11-Methoxyakuammicine***
[54484-54-7]
$C_{21}H_{24}N_2O_3$ 352.432
Minor alkaloid from *Alstonia muelleriana* bark, *Alstonia lanceolifera* stem bark, *Alstonia odontophora* and other *Alstonia* spp. (Apocynaceae). $[\alpha]_D$ -505 (EtOAc). Originally considered to be identical with Vinervinine, but when the struct. of Vinervinine was revised to 12-methoxyakuammicine it was reexamined and found to be different. λ_{max} 232 (ϵ 11500); 305 (ϵ 5620); 324 (ϵ 6525) (MeOH).

11-Methoxy, N^b*-oxide:* ***11-Methoxyakuammicine*** **N^b-*oxide***
[94444-35-6]
$C_{21}H_{24}N_2O_4$ 368.432
Alkaloid from leaves of *Alstonia macrophylla* (Apocynaceae). Solid. $[\alpha]_D^{25}$ -419.1 (c, 2.65 in MeOH).

11-Methoxy, 19,20α-epoxide: ***Alstolagumine***. *11-Methoxy-19,20α-epoxyakuammicine*
[154849-51-1]
$C_{21}H_{24}N_2O_4$ 368.432
Alkaloid from leaves of *Alstonia macrophylla* (Apocyanaceae). Solid. $[\alpha]_D^{22}$ -73.4 (c, 1.30 in MeOH).

12-Methoxy: ***Vinervinine***. *12-Methoxyakuammicine*
[17366-53-9]
$C_{21}H_{24}N_2O_3$ 352.432
Alkaloid from the epigeal parts of *Vinca major* and *Vinca erecta* (Apocynaceae). Mp 190-191°. $[\alpha]_D^{20}$ -564 (c, 1.877 in $CHCl_3$).

12-Methoxy, N^b*-Me:* ***12-Methoxy-N^b-methylakuammicine***
[123064-76-6]
$C_{22}H_{27}N_2O_3^{\oplus}$ 367.467
Quaternary alkaloid from the root bark of *Alstonia congensis* (Apocynaceae). $[\alpha]_D$ +70 (c, 0.15 in $CHCl_3$) (as 3-pyridinecarboxylate). λ_{max} 225 ; 282 ; 289 ; 333 (MeOH) (3-pyridinecarboxylate).

12-Methoxy, 19α,20α-epoxide: ***12-Methoxy-19α,20α-epoxyakuammicine***
[104696-13-1]
$C_{21}H_{24}N_2O_4$ 368.432
Alkaloid from the leaves of *Amsonia lenormandii* var. *lenormandii* (Apocynaceae). Cryst. (Et_2O). Mp 188°. $[\alpha]_D$ -590 (c, 1 in $CHCl_3$).

19,20α-Dihydro, 19-oxo, 20-hydroxy: Lagumicine
$C_{20}H_{22}N_2O_4$ 354.405
Alkaloid from the leaves of *Alstonia angustifolia* var. *latifolia*. Light yellow oil. $[\alpha]_D$ -552 (c, 0.07 in $CHCl_3$). λ_{max} 234 (log ϵ 3.79); 294 (log ϵ 3.71); 328 (log ϵ 3.85) (EtOH).

Δ^{18}-Isomer: ***Angustimicine***
[54086-20-3]
$C_{20}H_{22}N_2O_2$ 322.406

Alkaloid from *Amsonia angustifolia* (Apocynaceae). Struct. appears dubious. The obvious intercorrelation with Akuammicine has not been carried out.

(±)-form

Pseudakuammicine. Pseudoakuammicine
[7344-80-1]
Alkaloid from seeds of *Picralima nitida* (Apocynaceae). Mp 187.5°.

Hydrochloride:
Minute needles (EtOH or H_2O). Mp 216°.

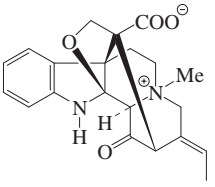
Akuammiginone A-230

[761445-62-9]



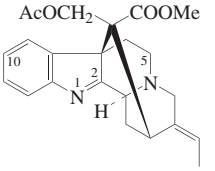
Relative Configuration

$C_{21}H_{22}N_2O_4$ 366.416
Alkaloid from the bark of *Alstonia scholaris*. Amorph. light yellow powder. $[\alpha]_D^{25}$ +23.4 (c, 0.5 in MeOH). Zwitterionic. λ_{max} 221 (log ε 3.7); 232 (log ε 3.69); 286 (log ε 3.36) (MeOH).

Salim, A.A. *et al., J. Nat. Prod.*, 2004, **67**, 1591-1594 (*isol, pmr, cmr*)

Akuammiline A-231

Methyl 17-(acetyloxy)akuammilan-16-carboxylate, 10CI. Methyl 16-[(acetyloxy)methyl]akuammilan-17-oate, 9CI
[1897-26-3]



Absolute Stereochemistry

$C_{23}H_{26}N_2O_4$ 394.469
Alkaloid from *Picralima nitida, Conopharyngia durissima, Vinca minor, Rauwolfia oreogiton* and *Rauwolfia vomitoria* (Apocynaceae). Cryst. (Et_2O). Mp 157-161°. $[\alpha]_D^{24}$ +83 (c, 0.5 in $CHCl_3$).

Hydrochloride:
Cryst. + $1H_2O$ (H_2O or EtOH). Mp 196°. $[\alpha]_D^{20}$ -29.6 (c, 3.84 in H_2O).

Methiodide:
Needles (H_2O). Mp 233°. $[\alpha]_D^{20}$ -83 (c, 1.36 in EtOH).

N^4-*Oxide:* ***Akuammiline N^4-oxide***
$C_{23}H_{26}N_2O_5$ 410.469
Alkaloid from *Kopsia griffithii*. $[\alpha]_D$ -144 (c, 0.13 in $CHCl_3$). λ_{max} 222 (log ε 4.35); 270 (log ε 3.77) (EtOH).

O-*De-Ac:* ***Rhazimol***. *Deacetylakuammiline. Ercinaminine*
[1897-30-9]
$C_{21}H_{24}N_2O_3$ 352.432
Alkaloid from *Vinca minor, Picralima nitida, Rauwolfia vomitoria, Rauwolfia oreogiton* and *Rhazya stricta* (Apocynaceae). Pale yellow amorph. powder. $[\alpha]_D^{21}$ +19.7 (MeOH).

O-*De-Ac,* O-*(3,4,5-trimethoxybenzoyl):* ***Alstolenine***
[85769-33-1]

$C_{31}H_{34}N_2O_7$ 546.619
Minor alkaloid from the leaves of *Alstonia venenata*. Amorph. $[\alpha]_D$ -70.9 (EtOH).

1,2β-Dihydro: ***1,2β-Dihydroakuammiline***
[77485-26-8]
$C_{23}H_{28}N_2O_4$ 396.485
Alkaloid from the leaves of *Rauwolfia oreogiton* (Apocynaceae). Off-white amorph. powder. $[\alpha]_D^{21}$ -9.4 (MeOH).

1,2β-Dihydro, O*-de-Ac:* ***Deacetyl-1,2β-dihydroakuammiline***
[77485-27-9]
$C_{21}H_{26}N_2O_3$ 354.448
Alkaloid from the leaves of *Rauwolfia oreogiton* (Apocynaceae). Mp 228-230°. $[\alpha]_D^{21}$ +99 (MeOH).

5-Oxo, 1,2ξ-dihydro, O*-de-Ac:* ***Deacetyl-1,2-dihydro-5-oxoakuammiline***
[870995-65-6]
$C_{21}H_{24}N_2O_4$ 368.432
Alkaloid from the leaves of *Alstonia scholaris*. Powder. Mp 290-292°. $[\alpha]_D^{13}$ -147.5 (c, 0.35 in $CHCl_3$).

10-Hydroxy, O*-de-Ac:* ***Ercinamine****. 10-Hydroxydeacetylakuammiline*
[85783-98-8]
$C_{21}H_{24}N_2O_4$ 368.432
Alkaloid from *Catharanthus roseus* and *Vinca erecta*. Mp 238-240°. $[\alpha]_D$ +53.

10-Methoxy: ***Raufloricine***
[38734-62-2]
$C_{24}H_{28}N_2O_5$ 424.496
Alkaloid from *Vinca minor* and from the root bark of *Rauwolfia confertiflora* (Apocynaceae). Cryst. (Me_2CO/hexane or EtOAc). Mp 190-193°. $[\alpha]_D^{20}$ +129 (c, 1.5 in $CHCl_3$).

10-Methoxy, O*-de-Ac:* ***Nervobscurine****. 10-Methoxydeacetylakuammiline*
[38734-63-3]
$C_{22}H_{26}N_2O_4$ 382.458
Alkaloid from *Vinca minor*. Amorph. $[\alpha]_D^{25}$ +83 (c, 0.72 in EtOH).

5α,10-Dimethoxy, O*-de-Ac,* O*-benzoyl:* ***Deacetyl-O-benzoyl-5,10-dimethoxyakuammiline***
$C_{30}H_{32}N_2O_6$ 516.593
Alkaloid from *Alstonia villosa*. Solid. $[\alpha]_D^{20}$ -169.7 (c, 0.38 in MeOH).

5α,10-Dimethoxy, O*-de-Ac,* O*-(3,4,5-trimethoxybenzoyl):* ***5,10-Dimethoxyalstolenine***
$C_{33}H_{38}N_2O_9$ 606.671
Alkaloid from *Alstonia villosa*. Prisms. Mp 190-192°. $[\alpha]_D^{25}$ -213 (c, 0.82 in $CHCl_3$). λ_{max} 218 (log ϵ 4.71); 279 (log ϵ 4.22); 300 (sh) (log ϵ 4.13) (MeOH).

5β,11-Dimethoxy, O*-de-Ac:* ***Deacetyl-5β,11-dimethoxyakuammiline***
$C_{23}H_{28}N_2O_5$ 412.485
Alkaloid from the roots of *Rauwolfia yunnanensis*. Amorph. yellow solid. $[\alpha]_D^{24}$ -124 (c, 0.46 in Py). λ_{max} 208 (log ϵ 4.24); 224 (log ϵ 4.2); 230 (log ϵ 4.21); 289 (log ϵ 3.53) (MeOH).

5β-Hydroxymethyl: ***5-Hydroxymethylakuammiline***
[77485-24-6]
$C_{24}H_{28}N_2O_5$ 424.496
Alkaloid from the leaves of *Rauwolfia oreogiton* (Apocynaceae). Off-white amorph. powder. $[\alpha]_D^{21}$ -141 (MeOH).

16-Epimer: ***16-Epiakuammiline***
[958247-21-7]
$C_{23}H_{26}N_2O_4$ 394.469
Alkaloid from *Kopsia singapurensis*. Oil. $[\alpha]_D^{25}$ +116 (c, 0.23 in $CHCl_3$). λ_{max} 210 (log ϵ 3.99); 220 (log ϵ 4.05); 265 (log ϵ 3.35) (EtOH).

16-Epimer, O*-de-Ac:* ***16-Epideacetylakuammiline***
$C_{21}H_{24}N_2O_3$ 352.432
Alkaloid from the stem bark of *Kopsia deverrei*. $[\alpha]_D^{20}$ +232 (c, 0.53 in $CHCl_3$). λ_{max} 220 (log ϵ 4.22); 265 (log ϵ 3.18) (EtOH).

$C_{18}H_{20}N_2O_2$ 296.368

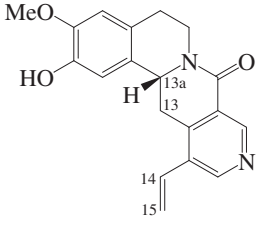
Natural-*form*
Alkaloid from the seeds of *Alangium lamarckii* (Alangiaceae). Light-yellow needles (MeOH). Mp 196°. Opt. rotn. not determined due to paucity of material. λ_{max} 226 (sh) (log ε 3.85); 258 (log ε 3.35); 286 (log ε 3.31) (EtOH).

(±)-*form* [107588-71-6]
Synthetic. Pale yellow granules (MeOH). Mp 242-244°.

Bhattacharjya, A. *et al., Tetrahedron*, 1988, **44**, 3477-3488 (*isol, uv, ir, pmr, ms, synth, struct*)
Reimann, E. *et al., Monatsh. Chem.*, 1994, **125**, 1397-1406 (*synth*)

Alangimaridine A-235

*12-Ethenyl-5,6,13,13*a*-tetrahydro-2-hydroxy-3-methoxy-8*H*-isoquino[2,1-*b*][2,7]naphthyridin-8-one, 9CI*
[77173-59-2]



$C_{19}H_{18}N_2O_3$ 322.363

(*R*)-*form* [178121-46-5]
Alkaloid from the seeds of *Alangium lamarckii* (Alangiaceae). Cryst. (MeOH/$CHCl_3$). Mp 278°. $[\alpha]_D$ +429 (c, 0.35 in $CHCl_3$).

Ac:
Cryst. (MeOH). Mp 232°.

*13,13*a*-Didehydro:* ***Alangimarine***
[77156-16-2]
$C_{19}H_{16}N_2O_3$ 320.347
Alkaloid from the seeds of *Alangium lamarckii* (Alangiaceae). Mp 247°. Achiral.

*13,13*a*-Didehydro, Ac:* Mp 202°.

*13,13*a*-Didehydro,* O*-de-Me,* O^2*-Me:* ***Isoalangimarine***
[96422-49-0]
$C_{19}H_{16}N_2O_3$ 320.347
Alkaloid from the seeds of *Alangium lamarckii* (Alangiaceae). Yellow needles ($CHCl_3$/MeOH). Mp 249°.

14-Oxo, 13,13a-didehydro, 14,15-dihydro: ***Alangimarinone***
[96422-50-3]
$C_{19}H_{16}N_2O_4$ 336.346
Alkaloid from the seeds of *Alangium lamarckii* (Alangiaceae). Yellow needles. Mp 282°.

14ξ-Hydroxy, 14,15-dihydro: ***Dihydroalamarine***
[97168-61-1]
$C_{19}H_{20}N_2O_4$ 340.378
Alkaloid from the seeds of *Alangium lamarckii* (Alangiaceae). Pale-yellow needles ($CHCl_3$/MeOH). Mp 252-253°. $[\alpha]_D$ +347 (c, 0.35 in Py).

Alangine A A-236

[6793-39-1]

$C_{15}H_{23}NO_2$ 249.352
Struct. unknown. Alkaloid from *Alangium lamarckii* (Alangiaceae). Cryst. (Et_2O/hexane). Mp 85°. $[\alpha]_D$ -41.3 (c, 0.9 in $CHCl_3$). Was assigned the struct. 3-(4-methoxyphenyl)-2-(1-piperidyl)-1-propanol, but synthetic material differed from the alkaloid.

Hydrochloride:
Cryst. (EtOH/Et_2O). Mp 250°.

Methiodide:
Cryst. (Me_2CO/Et_2O). Mp 184°.

Picrate:
Cryst. (EtOH). Mp 138°.

Bhakuni, D.S. *et al., J. Sci. Ind. Res., Sect. B*, 1960, **19**, 8-10; *CA*, **54**, 21168h
Kapil, R.S. *et al., J. Sci. Ind. Res.*, 1961, **20**, 136; *CA*, **55**, 18792g

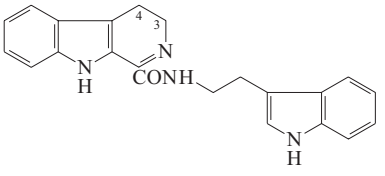
Alanginine A-237

Struct. unknown. Alkaloid from the root bark of *Alangium lamarckii* (Alangiaceae). Cream-coloured amorph. solid. Mp 245-247°.

Singh, M.P. *et al., Proc. Natl. Acad. Sci., India, Sect. A*, 1948, **17**, 1-6; *CA*, **45**, 10489h

Alangiobussine A-238

[171090-88-3]



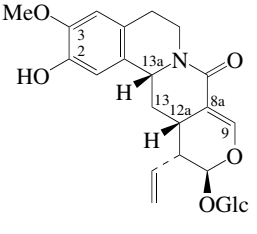
$C_{22}H_{20}N_4O$ 356.426
Alkaloid from leaves of *Alangium bussyanum*. Cryst. (MeOH). Mp 152-154°. λ_{max} 220 (log ε 4.93); 250 (sh) (log ε 4.49); 290 (log ε 4.18); 334 (log ε 4.31) (MeOH).

3,4-Didehydro: ***Alangiobussinine***
[171090-89-4]
$C_{22}H_{18}N_4O$ 354.41
Trace alkaloid from leaves of *Alangium bussyanum* (Alangiaceae). Cryst. (MeOH). Mp 188-190°.

Diallo, A.O. *et al., Phytochemistry*, 1995, **40**, 975-977 (*isol, uv, pmr, cmr, ms*)

Alangiside A-239

[34482-51-4]



$C_{25}H_{31}NO_{10}$ 505.521
Alkaloid from the roots, leaves and fruit of *Alangium lamarckii* (best source unripe fruit) (Alangiaceae). Amorph. powder + 2.5 H_2O. Mp 187° dec. (shrinks at 164°). $[\alpha]_D^{26}$ -105 (c, 1.0 in MeOH).

Tetra-Ac:
Amorph. powder. $[\alpha]_D^{21}$ -50.4 (c, 1.81 in $CHCl_3$).

2′-(4-Hydroxy-3-methoxy-E-*cinnamoyl):* ***2′*-O-trans-*Feruloylalangiside***
[173180-42-2]
$C_{35}H_{39}NO_{13}$ 681.692
Alkaloid from fruits of *Alangium lamarckii* (Alangiaceae). Amorph. powder. $[\alpha]_D^{24}$ -153 (c, 1.0 in MeOH).

2′-(4-Hydroxy-3,5-dimethoxy-E-*cinnamoyl):* ***2′*-O-trans-*Sinapoylalangiside***
[173180-45-5]
$C_{36}H_{41}NO_{14}$ 711.718
From fruits of *Alangium lamarckii* (Alangiaceae). Cryst. (H_2O). Mp 179-181°. $[\alpha]_D^{23}$ -157 (c, 1.0 in MeOH).

2′-O-*[4-(1,3-Dihydroxypropoxy)-3-methoxy*-E-*cinnamoyl]:* ***2′*-O-trans-*[4-(1,3-Dihydroxypropoxy)-3-methoxycinnamoyl]alangiside***
[173180-47-7]
$C_{38}H_{45}NO_{15}$ 755.771
From fruits of *Alangium lamarckii* (Alangiaceae). Cryst. (H_2O). Mp 166-169°. $[\alpha]_D^{27}$ -153 (c, 0.51 in MeOH).

Me ether:
Needles + 1.5 H_2O (EtOAc). Mp 236°.

O-*De-Me:* ***Demethylalangiside***
[47763-23-5]
$C_{24}H_{29}NO_{10}$ 491.494
Alkaloid from the roots of *Cephaelis ipecacuanha* (Rubiaceae) and leaves of *Alangium platanifolium* var. *trilobum* (Alangiaceae). Needles (MeOH aq.). Mp 180-182°. $[\alpha]_D^{24}$ -73 (c,0.2 in MeOH).

O-*De-Me, 2*-O-*β-D-glucopyranoside:*
[408363-51-9]
$C_{30}H_{39}NO_{15}$ 653.636
Alkaloid from the roots of *Cephaelis acuminata*. Amorph. powder. $[\alpha]_D^{27}$ -24 (c, 0.34 in MeOH). λ_{max} 206 (log ϵ 4.4); 231 (log ϵ 4.25); 242 (sh) (log ϵ 4.18); 280 (log ϵ 3.66) (MeOH).

O-*De-Me, 6′-(4-hydroxy-3-methoxycinnamoyl):* ***6′*-O-*Feruloyldemethylalangiside***
[141361-35-5 , 141434-40-4]
$C_{34}H_{37}NO_{13}$ 667.665
Alkaloid from leaves of *Alangium platanifolium* var. *trilobum* (Alangiaceae). Powder. Isol. as a mixt. of *cis*- and *trans*-forms.

O-*De-Me, 2′-(4-hydroxy-3-methoxy*-E-*cinnamoyl):* ***2′*-O-trans-*Feruloyldemethylalangiside***
[173180-41-1]
$C_{34}H_{37}NO_{13}$ 667.665
From fruits of *Alangium lamarckii* (Alangiaceae). Cryst. (H_2O). Mp 175-177°. $[\alpha]_D^{27}$ -162 (c, 0.44 in MeOH).

O-*De-Me, 2′-(4-hydroxy-3,5-dimethoxy*-E-*cinnamoyl):* ***2′*-O-trans-*Sinapoyldemethylalangiside***
[173180-44-4]
$C_{35}H_{39}NO_{14}$ 697.691
From fruits of *Alangium lamarckii* (Alangiaceae). Cryst. (H_2O). Mp 183.5-186°. $[\alpha]_D^{26}$ -155 (c, 0.43 in MeOH).

O-*De-Me, 6′-(4-hydroxy-3,5-dimethoxycinnamoyl):* ***6′-Sinapoyldemethylalangiside***
[141435-01-0 , 141361-36-6]
$C_{35}H_{39}NO_{14}$ 697.691
Alkaloid from leaves of *Alangium platanifolium* var. *trilobum* (Alangiaceae). Powder. Isol. as mixt. of *cis*- and *trans*-isomers.

O-*De-Me,* O^2-*Me:* ***3*-O-*Demethyl-2*-O-*methylalangiside***
[57071-85-9]
$C_{25}H_{31}NO_{10}$ 505.521
Alkaloid from fruits of *Alangium lamarckii* (Alangiaceae) and roots of *Cephaelis ipecacuanha* (Rubiaceae). Needles (MeOH aq.). Mp 275-277°. $[\alpha]_D^{26}$ -48 (c, 1.0 in MeOH).

O-*De-Me,* O^2-*Me, 2′-(4-hydroxy-3-methoxy*-E-*cinnamoyl):* ***2′*-O-trans-*Feruloyl-3*-O-*demethyl-2*-O-*methylalangiside***
[173180-43-3]
$C_{35}H_{39}NO_{13}$ 681.692
From fruits of *Alangium lamarckii* (Alangiaceae). Amorph. powder. $[\alpha]_D^{28}$ -115 (c, 0.43 in MeOH).

O-*De-Me,* O^2-*Me, 2′-(4-hydroxy-3,5-dimethoxy*-E-*cinnamoyl):* ***2′*-O-trans-*Sinapoyl-3*-O-*demethyl-2*-O-*methylalangiside***
[173180-46-6]
$C_{36}H_{41}NO_{14}$ 711.718
From fruits of *Alangium lamarckii* (Alangiaceae). Amorph. powder. $[\alpha]_D^{28}$ -126 (c, 0.39 in MeOH).

3-Demethoxy, 1-hydroxy: ***Demethylneoalangiside***
[169304-90-9]
$C_{24}H_{29}NO_{10}$ 491.494
Alkaloid from the fruits of *Alangium lamarckii*. Cryst. (MeOH aq.). Mp 193-195°. $[\alpha]_D^{28}$ -9.8 (c, 1 in MeOH). λ_{max} 231 (sh) (log ϵ 4.24); 239 (log ϵ 4.25); 287 (sh) (log ϵ 3.37) (MeOH).

3-Demethoxy, 1-hydroxy, O^2-*Me:* ***Neoalangiside***
[169391-62-2]
$C_{25}H_{31}NO_{10}$ 505.521
Alkaloid from the fruits of *Alangium lamarckii*. Amorph. powder. $[\alpha]_D^{25}$ +7.7 (c, 0.25 in MeOH). λ_{max} 230 (sh) (log ϵ 4.27); 234 (log ϵ 4.27); 286 (sh) (log ϵ 3.38) (MeOH).

*$\Delta^{8a,12a}$-Isomer, 9*R-*methoxy, 13,13*a-*didehydro:* [206875-77-6]
$C_{26}H_{31}NO_{11}$ 533.531
Alkaloid from the fruit of *Alangium lamarckii*. Pale yellow powder. $[\alpha]_D^{27}$ +8.5 (c, 1 in MeOH). λ_{max} 221 (log ϵ 4.32); 226 (log ϵ 4.32); 243 (sh) (log ϵ 4.02); 258 (sh) (log ϵ 3.79); 267 (log ϵ 3.84); 351 (log ϵ 4.33); 366 (sh) (log ϵ 4.24) (MeOH).

*$\Delta^{8a,12a}$-Isomer, 9*S-*methoxy, 13,13*a-*didehydro:* [206875-80-1]
$C_{26}H_{31}NO_{11}$ 533.531
Alkaloid from the fruit of *Alangium lamarckii*. Pale yellow needles (MeOH). Mp 219-220°. $[\alpha]_D^{20}$ -105 (c, 1 in MeOH). λ_{max} 226 (log ϵ 4.38); 244 (sh) (log ϵ 4.1); 260 (sh) (log ϵ 3.89); 266 (log ϵ 3.91); 334 (sh) (log ϵ 4.21); 351 (log ϵ 4.37); 367 (sh) (log ϵ 4.28) (MeOH).

6′-O-*α-D-Xylopyranosyl:* ***6′*-O-*α-D-Xylopyranosylalangiside***
[201555-41-1]
$C_{30}H_{39}NO_{14}$ 637.636
Alkaloid from the fruit of *Alangium lamarckii* (Alangiaceae). Amorph. powder. $[\alpha]_D^{29}$ -38 (c, 0.3 in MeOH). λ_{max} 233 (log ϵ 4.32); 284 (log ϵ 3.68) (MeOH).

3′-O-*β-D-Glucopyranosyl:* ***3′*-O-*β-D-Glucopyranosylalangiside***
[201555-37-5]
$C_{31}H_{41}NO_{15}$ 667.663
Alkaloid from the fruit of *Alangium lamarckii* (Alangiaceae). Amorph. powder. $[\alpha]_D^{26}$ -107 (c, 0.5 in MeOH). λ_{max} 233 (log ϵ 4.34); 284 (log ϵ 3.71) (MeOH).

6′-O-*α-D-Glucopyranosyl:* ***6′*-O-*α-D-Glucopyranosylalangiside***
[201555-38-6]
$C_{31}H_{41}NO_{15}$ 667.663
Alkaloid from the fruit of *Alangium lamarckii* (Alangiaceae). Amorph. powder. $[\alpha]_D^{26}$ -33 (c, 1 in MeOH). λ_{max} 234 (log ϵ 4.34); 284 (log ϵ 3.69) (MeOH).

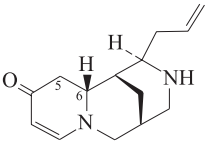
Albine A-243

Dehydroalbine
[53915-26-7]



Absolute configuration

$C_{14}H_{20}N_2O$ 232.325
Alkaloid from *Lupinus albus* and *Lupinus termis* seeds (Fabaceae). Mp 50°. $[\alpha]_D^{25}$ -103. The *N*-Methyl deriv. was formerly reported erroneously (see Alkaloid LC2, A-554).

Perchlorate: Mp 253°. $[\alpha]_D^{25}$ -76 (H_2O).

N-*Formyl:* **N-*Formylalbine***
$C_{15}H_{20}N_2O_2$ 260.335
Trace alkaloid in seeds and leaves of *Lupinus albescens* (Fabaceae). Provisional identification.

5,6-Didehydro: ***Δ⁵-Dehydroalbine***
$C_{14}H_{18}N_2O$ 230.309
Alkaloid from seeds of *Lupinus termis* (Fabaceae). Oil. $[\alpha]_D^{25}$ -44.6 (c, 0.02 in MeOH).

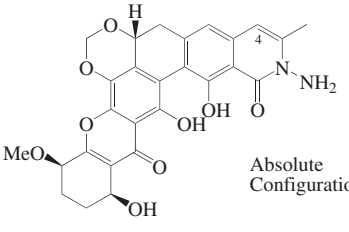
Albofungin A-244

Kanchanomycin. BA 180265A. P 42-1. Antibiotic P 42-1
[37895-35-5]



Absolute Configuration

$C_{27}H_{24}N_2O_9$ 520.495
Stereochem. revised in 1992. Metab. of *Actinomyces albus* var. *fungatus* and *Actinomyces tumemacerans*. Antifungal agent with antineoplastic props. Yellow cryst. ($MeNO_2$). Mp 304-307°. $[\alpha]_D^{20}$ -670

(DMF). Log P 0.34 (uncertain value) (calc). λ_{max} 250 (ϵ 9000); 320 (ϵ 5000); 388 (ϵ 8000) (MeOH/NaOH) (Derep). λ_{max} 230 (ϵ 36400); 253 (ϵ 36500); 300 (ϵ 14600); 364 (sh) (ϵ 22400); 373 (ϵ 23700) (MeOH) (Derep).

► LD_{50} (mus, ipr) 2 mg/kg. ZD5706000

Penta-Ac: Mp 230-233°.

4-Chloro: ***Chloroalbofungin***. *Albofungin B*
[37891-66-0]
$C_{27}H_{23}ClN_2O_9$ 554.939
From *Actinomyces albus* var. *fungatus* and from *Streptomyces* spp. Possesses antifungal and antineoplastic activities. Cryst. ($MeNO_2$). Sol. Me_2CO, DMF, DMSO, Py, $CHCl_3$, dioxan, AcOH; fairly sol. MeOH, EtOH, $CHCl_3$, C_6H_6, butanol; poorly sol. H_2O, Et_2O, hexane. Mp 327-330°. $[\alpha]_D^{20}$ -560 (DMF). Log P 1.27 (uncertain value) (calc). λ_{max} 230 (E1%/1cm 530); 257 (E1%/1cm 540); 311 (E1%/1cm 330); 365 (E1%/1cm 320) (MeOH) (Berdy). λ_{max} 233 (ϵ 26300); 254 (ϵ 31600); 305 (ϵ 12300); 384 (ϵ 20900) (EtOH) (Berdy).

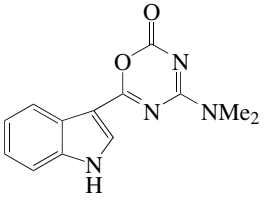
Alboinone A-245

4-(Dimethylamino)-6-(1H-indol-3-yl)-2H-1,3,5-oxadiazin-2-one, 9CI
[188547-40-2]

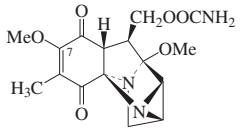


$C_{13}H_{12}N_4O_2$ 256.263
First naturally occurring oxadiazinone. Alkaloid from the ascidian *Dendrodoa grossularia*. λ_{max} 210 ; 252 ; 270 ; 334 (MeOH).

Bergmann, T. *et al., Tetrahedron*, 1997, **53**, 2055-2060 (*isol, uv, ir, pmr, cmr, ms, struct, synth*)

Albomitomycin A A-246

Antibiotic AX 1
[110934-24-2]



Absolute Configuration

$C_{16}H_{19}N_3O_6$ 349.343
Quinone antibiotic. Metab. of *Streptomyces caespitosus*. Prod. by intramolecular rearrangement of Mitomycin A, M-653. Plates ($CHCl_3$). $[\alpha]_D^{23}$ -2.7 (c, 0.5 in $CHCl_3$). Dec. at >130°. λ_{max} 215 (ϵ 3300); 288 (ϵ 10000) (MeOH) (Berdy).

7-Demethoxy, 7-amino: ***Albomitomycin C***
[111750-67-5]
$C_{15}H_{18}N_4O_5$ 334.331
From *Streptomyces* sp. Prisms. Mp 120° dec. $[\alpha]_D^{26}$ +34.7 (c, 0.3 in $CHCl_3$). Incorrect MF given in paper. λ_{max} 242 (ϵ 5012); 344 (ϵ 6310) (MeOH) (Berdy).

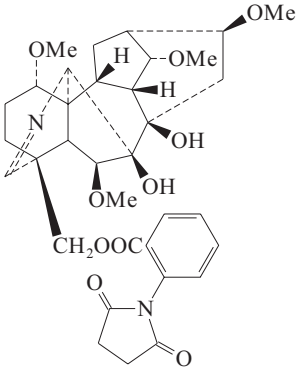
Alboviolaconitine D A-248

[138842-68-9]

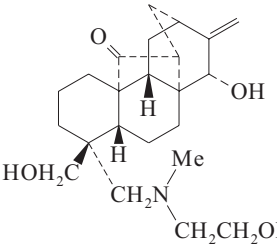


$C_{34}H_{42}N_2O_{10}$ 638.713
Alkaloid from roots of *Aconitum alboviolaceum* (Ranunculaceae).

Chen, D. *et al., Huaxue Xuebao*, 1992, **50**, 1211; *CA*, **118**, 230146m

Albovionitine A-249

[138935-81-6]

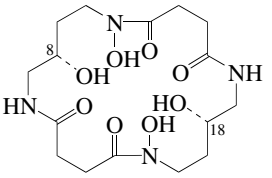


$C_{23}H_{35}NO_4$ 389.534
Alkaloid from *Aconitum alboviolaceum*. Cryst. ($CHCl_3$). Mp 150-152°.

Zhigang, H. *et al., Phytochemistry*, 1991, **30**, 3494-3496 (*isol, pmr, cmr, ms*)

Alcaligin A-250

1,8,11,18-Tetrahydroxy-1,6,11,16-tetraazacycloeicosane-2,5,12,15-tetrone, 9CI
[117959-43-0]



$C_{16}H_{28}N_4O_8$ 404.419
Isol. from *Alcaligenes denitrificans* ssp. *xylosoxydans*, *Bordetella pertussis* and *Bordetella bronchiseptica*. Siderophore. Cryst. + $2H_2O$ (H_2O). $[\alpha]_D^{27}$ +40.4 (c, 0.54 in MeOH). λ_{max} 206 ; 426 (H_2O) (Berdy).

8,18-Dideoxy: 1,11-Dihydroxy-1,6,11,16-tetraazacycloeicosane-2,5,12,15-tetrone, 9CI. ***Putrebactin***
[188944-66-3]
$C_{16}H_{28}N_4O_6$ 372.42
Prod. by *Shewanella putrefaciens*. Siderophore.

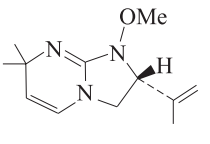
Alchorneine A-251

1,2,3,7-Tetrahydro-1-methoxy-7,7-dimethyl-2-(1-methylethenyl)imidazo[1,2-a]pyrimidine, 9CI



Absolute configuration

$C_{12}H_{19}N_3O$ 221.302

(R)-form [28340-21-8]
Alkaloid from *Alchornea floribunda* and *Alchornea hirtella* (Euphorbiaceae). Effective as a spasmolytic agent in dogs. Ganglioplegic parasympathomimetic agent. Strong vagolytic agent and inhibitor of intestinal peristalsis. Mp 43°. $[\alpha]_D$ -105 (c, 1 in $CHCl_3$).

Methiodide:
Cryst. (Me_2CO/MeOH). Mp 159°. $[\alpha]_D$ -28 (EtOH).

Cesario, M. *et al., Acta Cryst. B*, 1972, **28**, 151 (*cryst struct*)
Fr. Pat., 1972, 2 087 982; *CA*, **77**, 88757a (*isol, use*)

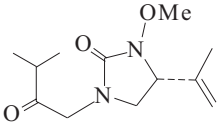
Büchi, G. *et al., J.O.C.*, 1989, **54**, 4494 (*synth*)

Alchorneinone A-252

[41758-41-2]

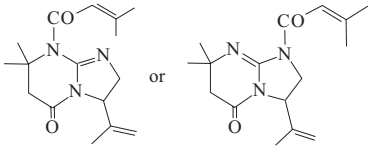


$C_{12}H_{20}N_2O_3$ 240.302
Alkaloid from the leaves of *Alchornea floribunda* (Euphorbiaceae). Liq. $[\alpha]_D$ -66 (c, 1 in $CHCl_3$).

Khuong-Huu, F. *et al., Tetrahedron*, 1972, **28**, 5207 (*isol, ir, pmr, ms, struct*)

Alchornidine A-253

[25801-15-4]



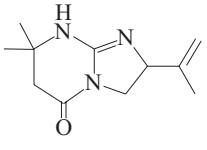
Preferred structure

$C_{16}H_{23}N_3O_2$ 289.377
Spectroscopic data do not allow a firm choice to be made between two alternative structs. Minor alkaloid from the leaves of *Alchornea javanensis* (Euphorbiaceae). Glistening needles by subl. Mp 96-97°. $[\alpha]_D$ -18 (c, 1.1 in $CHCl_3$).

Hart, N.K. *et al., Aust. J. Chem.*, 1970, **23**, 1679-1693 (*isol, ir, pmr, ms, struct*)

Alchornine A-254

[25819-91-4]



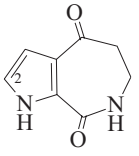
$C_{11}H_{17}N_3O$ 207.275
A major constit. of both the leaves and bark of *Alchornea javanensis* (Euphorbiaceae). Needles (petrol/C_6H_6). Mp 134-135°. $[\alpha]_D$ +74 (c, 1.5 in $CHCl_3$).

Picrate:
Yellow prisms (EtOH). Mp 275-278°.

Hart, N.K. *et al., Aust. J. Chem.*, 1970, **23**, 1679 (*isol, ir, pmr, ms, struct*)

Aldisine A-255

6,7-Dihydropyrrolo[2,3-c]azepine-4,8(1H,5H)-dione, 9CI
[72908-87-3]



$C_8H_8N_2O_2$ 164.163
Isol. from the marine sponges *Hymeniacidon aldis*, *Axinella carteri* and *Pseudaxinyssa cantharella*. Mp 275-277° (269° dec.). $[\alpha]_D$ -6 (c, 0.12 in MeOH). λ_{max} 216 (ϵ 19100); 245 (ϵ 8370); 295 (ϵ 6770) (MeOH) (Derep).

2-Bromo: ***2-Bromoaldisine***
[96562-96-8]
$C_8H_7BrN_2O_2$ 243.059
Isol. from *Hymeniacidon aldis*, an unidentified sponge from Fiji, a *Lissodendoryx* sp. of sponge from Sri Lanka and from *Pseudaxinyssa cantharella*. Cryst. (MeOH). Mp 265° (243°). $[\alpha]_D$ +5 (c, 0.47 in MeOH). λ_{max} 220 (ϵ 29600); 244 (sh) (ϵ 12100); 303 (ϵ 8130) (MeOH) (Derep).

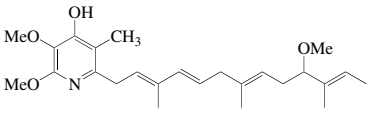
Aleicide B A-257

2,3-Dimethoxy-6-(10-methoxy-3,7,11-trimethyl-2,4,7,11-tridecatetraenyl)-5-methyl-4-pyridinol, 9CI
[156204-42-1]



$C_{25}H_{37}NO_4$ 415.572
Prod. by *Streptomyces aurantiacus*. Insecticide.

Shopotova, L.P. *et al., Zh. Prikl. Khim. (Leningrad)*, 1993, **66**, 1111-1117 (*isol, pmr, cmr, ms*)

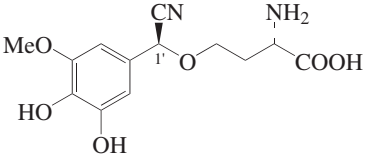
Aleicide C A-258

$C_{25}H_{37}NO_5$ 431.571
Prod. by *Streptomyces aurantiacus*. Insecticide.

Navashin, S.M. *et al., Antibiotiki (Moscow)*, 1994, **39**, 3-12

Aleurodisconitrile A-259

[1000180-33-5]



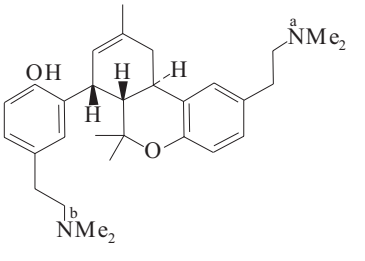
$C_{13}H_{16}N_2O_6$ 296.279
Isol. from the fruiting bodies of *Aleurodiscus amorphus*. Solid. λ_{max} 212 (log ϵ 4.07); 246 (log ϵ 3.31); 274 (log ϵ 2.79) (MeOH).

Decyano, 1′-oxo: ***Aleurodiscoester***
[1000180-34-6]
$C_{12}H_{15}NO_7$ 285.253
Isol. from fruiting bodies of *Aleurodiscus amorphus*. Solid. $[\alpha]_D^{25}$ +70 (c, 0.13 in MeOH). λ_{max} 217 (log ϵ 3.57); 277 (log ϵ 3.18) (MeOH).

Kindler, B.L.J. *et al., Angew. Chem., Int. Ed.*, 2007, **46**, 8076-8078 (*isol, cd, pmr, cmr*)

Alfileramine A-260

[73326-84-8]



$C_{30}H_{42}N_2O_2$ 462.674

A bishordeninylterpene alkaloid related structurally to the cannabinoids. Exists in soln. as an equilib. mixt. of 2 rotamers. Alkaloid from the leaves of *Zanthoxylum punctatum*, *Zanthoxylum chiriquinum* and *Zanthoxylum coriaceum* (Rutaceae). Mp 185-187°. Opt. inactive.

Methiodide (1:2): Mp 253-255°.

N[a]-*De-Me:* **N[a]-*Demethylalfileramine***
[129743-97-1]
$C_{29}H_{40}N_2O_2$ 448.647
Alkaloid from the leaves of *Zanthoxylum coriaceum* (Rutaceae). Opt. inactive.

N[b]-*De-Me:* **N[b]-*Demethylalfileramine***
[129743-98-2]
$C_{29}H_{40}N_2O_2$ 448.647
Alkaloid from the leaves of *Zanthoxylum coriaceum* (Rutaceae). Opt. inactive.

N[a],N[b]-*Di-de-Me:* **N[a],N[b]-*Didemethylalfileramine***
[129743-95-9]
$C_{28}H_{38}N_2O_2$ 434.62
Alkaloid from the leaves of *Zanthoxylum coriaceum* (Rutaceae). Amorph. Opt. inactive.

Me ether: **O-*Methylalfileramine***
[128700-82-3]
$C_{31}H_{44}N_2O_2$ 476.701
Alkaloid from the leaves of *Zanthoxylum chiriquinum* (Rutaceae). Oil (solidifies upon standing). Opt. inactive.

Alginidine A-261

[1353-94-2]

Struct. unknown

$C_{27}H_{43}NO_4$ 445.641

Steroidal alkaloid. Alkaloid from *Fritillaria severzowii* (Liliaceae). Mp 164°. $[\alpha]_D$ -24.6 (MeOH).

Hydrochloride: Mp 230-232°.

Methiodide: Mp 288-289°.

Nuriddinov, R.N. *et al., CA*, 1962, **57**, 15165

Alginine† A-262

$C_{23}H_{39}NO_3$ 377.566

Steroidal alkaloid of unknown struct. contg. 3 OH groups. Alkaloid from *Fritillaria severzowii* (Liliaceae). CNS stimulant, adrenergic blocking agent, local anaesthetic. Mp 271-272°. $[\alpha]_D$ +108.5.

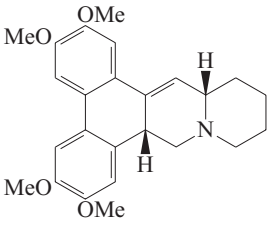
Hydrochloride: Mp 323-325°.

Methiodide: Mp 310-311°.

Yunusov, S. *et al., J. Gen. Chem. USSR (Engl. Transl.)*, 1939, **9**, 1911; *CA*, **34**, 4070

Alihirsutine A A-263

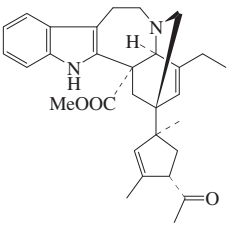
[147526-80-5]



$C_{25}H_{29}NO_4$ 407.508
Alkaloid from aerial parts of *Tylophora hirsuta* (Asclepiadaceae). Cryst. ($CHCl_3$/MeOH 1:1). Mp 296-298°.

Ali, M. *et al., Fitoterapia*, 1992, **63**, 243 (*isol, uv, ir, pmr, ms, struct*)

Alioline A-264



Absolute Configuration

$C_{30}H_{36}N_2O_3$ 472.626
Unusual iboga-type alkaloid containing an additional C_9 terpenoid unit, the origin of which is unclear. Alkaloid from *Catharanthus roseus*. $[\alpha]_D^{24}$ +105.5 (MeOH). λ_{max} 227 (log ϵ 4.13); 283 (log ϵ 3.69); 292 (log ϵ 3.61) (MeOH).

Habib-ur-Rahman, *et al., Z. Naturforsch., B*, 2005, **60**, 870-874 (*isol, pmr, cmr*)

Aconitum nemorosum C_{20} Alkaloid A-265

$C_{20}H_{25}NO_3$ 327.422

Struct. unknown. Alkaloid from *Aconitum nemorosum*. Cryst. (Me_2CO). Mp 244-246°. Could be identical with Hetisinone (see under Hetisan-2,11,13-triol, H-202.

Monakhova, T.E. *et al., Khim. Prir. Soedin.*, 1965, **1**, 113; *Chem. Nat. Compd. (Engl. Transl.)*, 1965, **1**, 88

Aconitum nemorosum C_{23} Alkaloid A-266

$C_{23}H_{29}NO_6$ 415.485

Struct. unknown. Alkaloid from *Aconitum nemorosum*. Mp 270-272° (as hydrochloride). MF erroneously given as $C_{23}H_{29}NO_3$ in ref. Anal. figures given correspond to O_6.

Monakhova, T.E. *et al., Khim. Prir. Soedin.*, 1965, **1**, 113; *Chem. Nat. Compd. (Engl. Transl.)*, 1965, **1**, 88

Erythrophleum C_{24} Alkaloid A-267

$C_{24}H_{37}NO_7$ 451.559

Struct. unknown. Alkaloid from the bark of *Erythrophleum chlorostachys* (Fabaceae). Glass.

Hydrochloride:
Needles (EtOH/EtOAc). Mp 191° (solvate).

3-Ac: **C_{24} *Amine 3β-acetate***
$C_{26}H_{39}NO_8$ 493.596
Alkaloid from the bark of *Erythrophleum chlorostachys* (Fabaceae).

C_{24} amide (rearrangement product):
Cryst. (EtOAc). Mp 186°. Obt. by treating the C_{24} amine with 5*M* NaOH.

Falkiner, M.J. *et al., Aust. J. Chem.*, 1975, **28**, 645-650 (*isol, pmr*)

Aconitum kirinense Alkaloid A-268

$C_{26}H_{41}NO_8$ 495.612

Struct. unknown. Isol. from *Aconitum kirinense*. Mp 134.5° (as nitrate). Conts. 4 OH, 3 OMe and 1 NMe groups.

Monakhova, T.E. *et al., Khim. Prir. Soedin.*, 1965, **1**, 113-116; *Chem. Nat. Compd. (Engl. Transl.)*, 1965, **1**, 88

Aconitum koreanum Alkaloid A-269

$C_{35}H_{41}NO_{10}$ 635.71

Struct. unknown. Isol. from *Aconitum koreanum*. Mp 210° (as hydrobromide). $[\alpha]_D^{27}$ -18.7 (c, 4.27 in EtOH). Species name given as coreanum in the English-language translation of the paper. No further reports to 2007. Later investigations of this species do not refer.

Monakhova, T.E. *et al., Khim. Prir. Soedin.*, 1965, **1**, 113-116; *Chem. Nat. Compd. (Engl. Transl.)*, 1965, **1**, 88-90
Kao, H.C. *et al., Yaoxue Xuebao*, 1966, **13**, 186-194; *CA*, **65**, 3922g (*Aconitum koreanum constits*)

Alstonia constricta Alkaloid A-270

Struct. unknown

$C_{43}H_{50}N_4O_7$ 734.891

Bisindole alkaloid. Alkaloid from the root bark of *Alstonia constricta* (Apocynaceae). Needles (Me_2CO). Mp 196-197°. $[\alpha]_D$ +9 (c, 3.3 in $CHCl_3$).

Crow, W.D. *et al., Aust. J. Chem.*, 1970, **23**, 2489-2501 (*isol, uv, ir, pmr*)

Ammodendron karelinii Alkaloid A-271

Struct. unknown

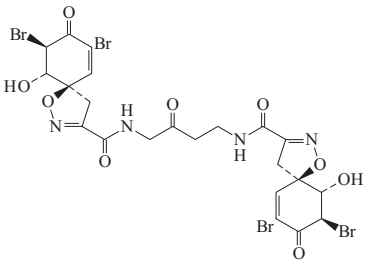
$C_{15}H_{24}N_2O$ 248.367

Quinolizidine alkaloid, prob. of Sparteine group. Alkaloid from *Ammodendron karelinii* (Fabaceae). Oil.

Kushmuradov, Yu.K. *et al., Khim. Prir. Soedin.*, 1977, **13**, 717-718; *Chem. Nat. Compd. (Engl. Transl.)*, 604-605 (*isol*)

Aplysina archeri Alkaloid A-272

[179523-37-6]



$C_{22}H_{20}Br_4N_4O_9$ 804.037

Probable abs. config. illus. Metab. from the Caribbean sponge *Aplysina archeri*. Shows antifungal activity. λ_{max} 252 (ε 7850) (MeOH).

Ciminiello, P. *et al., Tetrahedron*, 1996, **52**, 9863 (*isol, uv, ir, pmr, cmr, cd, struct*)

Artemisia rutifolia Alkaloid A-273

$C_{22}H_{31}NO_8$ 437.489

Struct. unknown. Isol. from epigeal parts of *Artemisia rutifolia*. Amorph. solid. Mp 189-190°. Prob. artifact (NH_3 used in extraction). *Artemisia* is not an alkaloid-bearing genus.

Brutko, L.I. *et al., Khim. Prir. Soedin.*, 1967, **3**, 292; *Chem. Nat. Compd. (Engl. Transl.)*, 1967, **3**, 247

Astragalus berterianus Alkaloid A-274

Struct. unknown. Alkaloid from *Astragalus berterianus* (Fabaceae). Mp 210°.

Gutierrez, C.P. *et al., An. Fac. Quim. Farm. (Univ. Chile)*, 1960, **12**, 120; *CA*, **56**, 5121h

Buxus Alkaloid 1 A-275

Struct. unknown. Alkaloid from *Buxus sempervirens* (Buxaceae). Mp 199°. $[\alpha]_D$ +31 ($CHCl_3$). Props. similar to Buxaminol E in B-456 and *Buxus* Alkaloid B398, A-398.

Stauffacher, D. *et al., Helv. Chim. Acta*, 1964, **47**, 968-981 (*isol*)

Buxus Alkaloid 2 A-276

Struct. unknown. Alkaloid from *Buxus sempervirens* (Buxaceae). Mp 195°. $[\alpha]_D$ +92 ($CHCl_3$).

Stauffacher, D. *et al., Helv. Chim. Acta*, 1964, **47**, 968-981 (*isol*)

Buxus Alkaloid 3 A-277

Struct. unknown. Alkaloid from *Buxus sempervirens* (Buxaceae). Mp 281°. $[\alpha]_D$ +68 ($CHCl_3$).

Stauffacher, D. *et al., Helv. Chim. Acta*, 1964, **47**, 968-981 (*isol*)

Buxus Alkaloid 4 A-278

Struct. unknown. Alkaloid from *Buxus sempervirens* (Buxaceae). Mp 177°. $[\alpha]_D$ +147 ($CHCl_3$). Props. corresp. to Buxtauine M, B-482.

Stauffacher, D. *et al., Helv. Chim. Acta*, 1964, **47**, 968-981 (*isol*)

Buxus Alkaloid 5 A-279

Struct. unknown. Alkaloid from *Buxus sempervirens* (Buxaceae). Mp 156°. $[\alpha]_D$ +40 ($CHCl_3$).

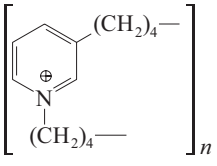
Stauffacher, D. *et al., Helv. Chim. Acta*, 1964, **47**, 968-981 (*isol*)

C-Alkaloid I A-280

Minimum formula. Struct. unknown. Alkaloid from calabash curare (*Strychnos* spp.) (Loganiaceae). Prisms (Me_2CO aq.) (as picrate). Mp 194° (picrate). Blue-violet col. with $Ce(SO_4)_2$, becoming carmine on standing.

Kebrle, J. *et al., Helv. Chim. Acta*, 1953, **36**, 102-121; 1384-1386 (*isol*)

Callyspongia fibrosa Alkaloid A-281



High molecular weight oligomer or polymer. Alkaloid from the Micronesian sponge *Callyspongia fibrosa*. Inhibitor of the epidermal growth factor receptor.

Davies-Coleman, M.T. *et al., J.O.C.*, 1993, **58**, 5925

Chamaecytisus Alkaloid A-282

$C_{12}H_{20}N_2O$ 208.303

Struct. unknown. Alkaloid from *Chamaecytisus austriacus stefanoffi, Chamaecytisus ciliatus* and *Chamaecytisus polytrichus polytrichus* (Fabaceae). Mp 168-170°. Ir 1675 cm^{-1}. Prob. a tertiary amide.

Deili, A. *et al., Farmatsiya (Sofia)*, 1977, **27**, 15-18; *CA*, **89**, 56427z (*isol*)

Colchicum luteum Alkaloid A-283

$C_{19}H_{23}NO_4$ 329.395

Struct. unknown. Alkaloid from *Colchicum luteum* (Liliaceae). Mp 237-238°.

Chommadov, B. *et al., Khim. Prir. Soedin.*, 1985, 810; *Chem. Nat. Compd. (Engl. Transl.)*, 770-773 (*isol, ir, pmr, ms*)

Crotalaria retusa Alkaloid A-284

Struct. unknown. Isol. from *Crotalaria retusa*. Cryst. (Me_2CO). Mp 130-132°.

Culvenor, C.C.J. *et al., Aust. J. Chem.*, 1957, **10**, 464-473 (*isol*)

Cytisus laburnum Alkaloid A-285

$C_{12}H_{22}N_2O$ 210.319

Struct. unknown. Pyrrolizidine alkaloid. Alkaloid from *Cytisus laburnum (Laburnum laburnum)* (Fabaceae). Mp 128-129°. $[\alpha]_D^{19}$ +18.6 (EtOH). Prob. conts. one NH (?lactam) group, no NMe group.

Galinovsky, F. *et al., Sci. Pharm.*, 1953, **21**, 256; *CA*, **49**, 6977

Cytisus ruthenicus Alkaloid A-286

$C_{15}H_{16}N_2O_5$ 304.302

Prob. a quinolizidine (Sparteine-group) alkaloid. Struct. unknown. Alkaloid from *Cytisus ruthenicus* (Fabaceae). Mp 171.5-173°. $[\alpha]_D^{18}$ -15.26. Conts. *N*-Me group. Co-occurs with Sparteine.

Hydroiodide: Mp 231-233°.

Perchlorate: Mp 198-200°.

Dipicrate: Mp 199-201°.

Alekseev, V.S. *et al., Farm. Zh. (Kiev)*, 1967, **22**, 59-60; *CA*, **67**, 54325m (*isol*)

Dendrobates Alkaloid 185 A-287

Struct. unknown. Trace alkaloid from skin extracts of *Dendrobates auratus* (Dendrobatidae). Mol. formula not known; m/e 185 (1), 170 (100). Cannot be hydrogenated.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-180 (*isol, ms, rev*)

Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 197 A-288

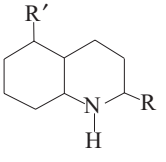
Struct. unknown. Trace alkaloid from skin extracts of *Dendrobates auratus* (Dendrobatidae). Mol. formula not known; m/e 197 (1), 180 (100), 126 (35). Cannot be hydrogenated.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-180 (*isol, ms, rev*)

Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 203 A-289

Decahydro-2-(2-penten-4-ynyl)quinoline



R = $CH_2CH{=}CHC{\equiv}CH$, R′= H

$C_{14}H_{21}N$ 203.327

Tentative struct. A major alkaloid in skin extracts of *Dendrobates fulguritus*, trace constit. in *Dendrobates auratus, Dendrobates histrionicus, Dendrobates minutus* and *Dendrobates pumilio* (Dendrobatidae). m/e 203(1), 202(2), 138(100). H_6-deriv., m/e 209, 138. Does not appear to form an *N*-Ac deriv.

Dihydro (?): **Dendrobates *Alkaloid 205***
$C_{14}H_{23}N$ 205.342
Trace alkaloid from skin extracts of *Dendrobates histrionicus* (Dendrobatidae). Tentative mol. formula. m/e 205(1), 204(2), 138(100).

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163 (*isol, ms, rev*)

Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)
Spande, T.F. *et al., J. Nat. Prod.*, 1999, **62**, 5-21 (*pmr, cmr, occur*)

Dendrobates Alkaloid 217 A-290

$C_{15}H_{23}N$ 217.353

Struct. unknown. A major alkaloid from skin extracts of one population of *Dendrobates bombetes* and *Dendrobates minutus*; minor constit. in *Dendrobates tricolor* (Dendrobatidae). m/e 217 (2), 216 (3), 152 ($C_{10}H_{18}N$, 100). H_6-deriv, m/e 223, 152. Did not form an *N*-Ac deriv.

Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 225 A-291

$C_{14}H_{27}NO$ 225.373

Struct. unknown. Trace alkaloid from skin extracts of *Dendrobates tinctorius* (Dendrobatidae). Mol. formula tentative; m/e 225 (3), 224 (6), 208 (2), 168 (100), 152 (25). Possibly a hydroxypumiliotoxin C. Cannot be hydrogenated.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-180 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 233 A-292

$C_{16}H_{27}N$ 233.396

Struct. unknown. Minor alkaloid from skin extracts of *Dendrobates* sp. (Colombia) (Dendrobatidae). Mol. formula tentative; m/e 233 (2), 232 (2), 166 (100). Probably higher homologue of *Dendrobates* Alkaloid 223B, A-404 with 2 double bonds in the R side chain. H_4-deriv, m/e 237, 166.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-180 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 295 A-293

$C_{19}H_{37}NO$ 295.507

Struct. unknown. Trace alkaloid from skin extracts of *Dendrobates auratus* (Dendrobatidae). Mol. formula tentative; m/e 295 (3), 278 (4), 138 (100).

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 301 A-294

$C_{21}H_{35}N$ 301.514

Struct. unknown. Trace alkaloid from skin extracts of *Dendrobates azureus* (Dendrobatidae). Mol. formula tentative; m/e 301 (<1), 260 (100). Possibly a member of Pumiliotoxin-C class with an allyl R-substituent and a C_9H_{15} R′-substituent, see *Dendrobates* Alkaloid 167A, A-354.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-180 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 325 A-295

$C_{19}H_{35}NO_3$ 325.49

Struct. unknown. A major alkaloid from skin extracts of *Dendrobates fulguritus* and *Dendrobates minutus* (Dendrobatidae). Mol. formula tentative; m/e 325 (3), 308 (12), 280 (3), 210 (2), 182 (56), 114 (16), 112 (9), 70 (100). Forms H_2-deriv, m/e similar to H_4-deriv of Pumiliotoxin B.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-188 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 351 A-296

$C_{21}H_{37}NO_3$ 351.528

Struct. unknown. Trace alkaloid from skin extracts of *Dendrobates auratus* (Dendrobatidae). Mol. formula tentative; m/e 351 (6), 350 (2), 336 (4), 152 (38), 138 (65), 70 (100). Probably a member of the Pumiliotoxin A class, but the large peak at 138 is atypical.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-180 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Fritillaria Alkaloid 5 A-297

Fritillaria *Base 5*

Struct. unknown. Alkaloid from *Fritillaria raddeana* (Liliaceae), occurring with Raddeamine, R-7. Mp 245-247°.

Aslanov, Kh.A. *et al., Zh. Obshch. Khim.*, 1956, **26**, 579; *J. Gen. Chem. USSR (Engl. Transl.)*, 1956, **26**, 623

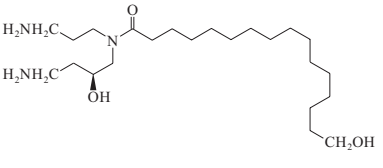
Fritillaria Alkaloid 6 A-298

Fritillaria *Base 6*

Struct. unknown. Alkaloid from *Fritillaria raddeana* (Liliaceae). Mp 197-199° (as hydrochloride).

Aslanov, Kh.A. *et al., Zh. Obshch. Khim.*, 1956, **26**, 579; *J. Gen. Chem. USSR (Engl. Transl.)*, 1956, **26**, 623

Fromia monilis Alkaloid A-299



$C_{23}H_{49}N_3O_3$ 415.658

(*S*)-*form* [162340-03-6]

Alkaloid from the New Caledonian starfish *Fromia monilis*. Cytotoxic agent. $[\alpha]_D$ +3.5.

Palagiano, E. *et al., Tetrahedron*, 1995, **51**, 3675 (*isol, pmr, cmr, struct*)

Galanthus caucasicus Alkaloid A-300

$C_{17}H_{19}NO_4$ 301.341

Amaryllidaceae alkaloid. Struct. unknown. Isol. from *Galanthus caucasicus* (Amaryllidaceae). Cryst. (H_2O). Mp 214°. $[\alpha]_D^{20}$ +94.3 (c, 0.71 in MeOH).

Tsakadze, D.M. *et al., Khim. Prir. Soedin.*, 1969, **5**, 331; *Chem. Nat. Compd. (Engl. Transl.)*, 1969, **5**, 281 (*isol*)

Gentiana Alkaloid I A-301

$C_{13}H_{16}N_2O_3$ 248.281

Struct. unknown. Monoterpene alkaloid. Alkaloid from *Gentiana asclepiadea* and *Gentiana punctata* (Gentianaceae). Mp 183-187°.

Mollov, N.M. *et al., Dokl. Bulg. Akad. Nauk*, 1965, **18**, 947-949; *CA*, **64**, 10084h (*isol, uv, ir*)
Cordell, G.A. *et al., Alkaloids (Academic Press)*, 1977, **16**, 431 (*rev*)

Gentiana Alkaloid V A-302

$C_{10}H_9NO_2$ 175.187

Struct. unknown. Monoterpene alkaloid. Alkaloid from *Gentiana asclepiadea, Gentiana bulgarica, Gentiana cruciata, Gentiana lutea* (yellow gentian) and *Gentiana punctata* (Gentianaceae). Mp 240°.

Marekov, N. *et al., Dokl. Bulg. Akad. Nauk*, 1965, **18**, 999-1002; *CA*, **64**, 11270a (*isol, ir*)
Cordell, G.A. *et al., Alkaloids (Academic Press)*, 1977, **16**, 431 (*rev*)

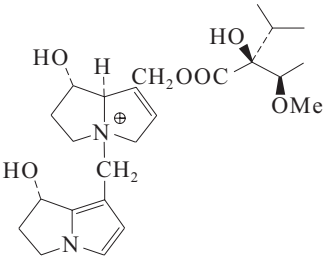
Gynura segetum Alkaloid A-303

$C_{18}H_{25}NO_5$ 335.399

Pyrrolizidine alkaloid. Struct. unknown. Possibly related to Seneciphylline, S-240. Alkaloid from *Gynura segetum*. Antimalarial agent. Cryst. Mp 223-224°.

Tang, S.-R. *et al., Zhongcaoyao*, 1980, **11**, 193-195; *CA*, **94**, 36187w

Heliotropium europaeum Alkaloid A-304



$C_{24}H_{37}N_2O_6^{\oplus}$ 449.566

Dimeric pyrrolizidine alkaloid, originally thought to be a C_{12} monomer. Alkaloid from *Heliotropium europaeum* (Boraginaceae). Prisms (Me_2CO/MeOH)(as chloride). Mp 158-159° dec. (as chloride). Results from alkylation of Heliotrine, H-95 by dehydroheliotrine in the plant. Does not appear to be an artifact.

Culvenor, C.C.J. *et al., Aust. J. Chem.*, 1954, **7**, 287 (*isol*)
Culvenor, C.C.J. *et al., Tet. Lett.*, 1969, 3603 (*pmr, struct*)

Helleborus Alkaloid V A-305

$C_{25}H_{43}NO_6$ 453.618

Struct. unknown. Alkaloid from *Helleborus viridis*. Mp 267-268° (browns from 210°). V. weak base.

Keller, O. *et al., Arch. Pharm. (Weinheim, Ger.)*, 1928, **266**, 545-572

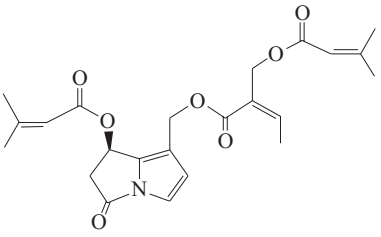
Hovea longipes Alkaloid A-306

Struct. unknown. Alkaloid from the whole plant of *Hovea longipes* (Fabaceae). Cryst. (EtOH/HCl)(as hydrochloride). Mp 238-239° (hydrochloride).

Fitzgerald, J.S. *et al., An. Quim.*, 1972, **68**, 737 (*isol*)

Jacmaia incana Alkaloid A-307

[78869-20-2]



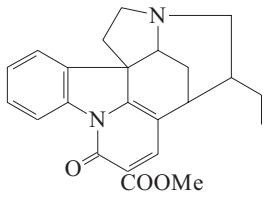
$C_{23}H_{27}NO_7$ 429.469

Alkaloid from the aerial parts of *Jacmaia incana* (Asteraceae). Gum. $[\alpha]_D^{24}$ -12 (c, 0.9 in $CHCl_3$). Closely related to the Senampelines (see Senampelines, S-233).

Bohlmann, F. *et al., Phytochemistry*, 1981, **20**, 831-832 (*ir, pmr, ms, struct*)

Leuconotis Alkaloid 376 A-308

[131242-30-3]



$C_{23}H_{24}N_2O_3$ 376.454

Alkaloid from *Leuconotis griffithii* and *Leuconotis eugenifolia*.

Goh, S.H. *et al., Tetrahedron*, 1989, **45**, 7899 (*isol, uv, ir, pmr, cmr, ms, struct*)

Leuconotis griffithii Alkaloid 308 A-309

Struct. and MF unknown. Alkaloid from *Leuconotis griffithii*.

Goh, S. *et al., Tetrahedron*, 1989, **45**, 7899-7820 (*isol, uv, pmr, cmr, ms*)

Lycopodium Alkaloid V A-310

Lycopodium *Base V*

$C_{17}H_{27}NO_2$ 277.406

Struct. unknown. Alkaloid from *Lycopodium annotinum* (Lycopodiaceae).

Methiodide: Mp 304°. $[\alpha]_D^{20}$ -66.

Methochloride: Mp 258°.

Methoperchlorate: Mp 321°.

Achmatowicz, O. *et al., Pol. J. Chem. (Rocz. Chem.)*, 1958, **32**, 485 (*isol, uv*)

Lycopodium Alkaloid X A-311

Lycopodium *Base X*

$C_{17}H_{25}NO_3$ 291.389

Struct. unknown. Alkaloid from *Lycopodium annotinum* (Lycopodiaceae).

Methiodide: Mp 315°. $[\alpha]_D^{18}$ -30.9.

Methochloride: Mp 269°.

Methoperchlorate: Mp 335°.

Methopicrate: Mp 151°.

Achmatowicz, O. *et al., Pol. J. Chem. (Rocz. Chem.)*, 1958, **32**, 485 (*isol, uv*)

Lycopodium Alkaloid 168 A-312

Lycopodium *Base 168*

$C_{16}H_{23}NO_3$ 277.363

Struct. unknown. Trace alkaloid from *Lycopodium clavatum* (Lycopodiaceae). Mp 168°.

Rodewald, W.J. *et al., Pol. J. Chem. (Rocz. Chem.)*, 1977, **51**, 1271 (*isol, ir, ms*)

Lycopodium Alkaloid 258 A-313

Lycopodium *Base 258*

Molecular formula not known; MW = 263. Struct. unknown. Trace alkaloid from *Lycopodium clavatum* (Lycopodiaceae). Mp 258°.

Rodewald, W.J. *et al., Pol. J. Chem. (Rocz. Chem.)*, 1977, **51**, 1271 (*isol*)

Lycopodium annotinum Alkaloid† A-314

Struct. unknown. Alkaloid from *Lycopodium annotinum* (Lycopodiaceae).

Perchlorate:
Cryst. (H_2O). Mp 234° dec.

Picrate: Mp 241-241.5° dec.

Methiodide:
Cryst. (EtOH). Mp 261° dec.

Bertho, A. *et al., Chem. Ber.*, 1952, **85**, 663 (*isol*)

Lycopodium annotinum Alkaloid† A-315

Struct. unknown. Alkaloid from *Lycopodium annotinum* (Lycopodiaceae).

Picrate:
Yellow rosettes (EtOH). Mp 121° dec. (sint. at 110°).

Methiodide:
Cryst. (EtOH). Mp 290°.

Bertho, A. *et al., Chem. Ber.*, 1952, **85**, 663 (*isol*)

Lycopodium clavatum Alkaloid A-316

Struct. unknown. Alkaloid from *Lycopodium clavatum* var. *megastachyon* (Lycopodiaceae). Mp 261-263°.

Ayer, W.A. *et al., Can. J. Chem.*, 1962, **40**, 2088 (*isol*)

Lycopodium thyoides Alkaloid A-317

$C_{18}H_{27}NO_3$ 305.416

Struct. unknown. Alkaloid from *Lycopodium thyoides* and *Lycopodium contiguum* (Lycopodiaceae).

Perchlorate:
Cryst. (Me_2CO). Mp 210-212°.

Ayer, W.A. *et al., Phytochemistry*, 1974, **13**, 653 (*isol, ir, ms*)

Mantella Alkaloid 161 A-318

$C_9H_{11}N_3$ 161.206

Struct. unknown. Trace alkaloid from skin extracts of the Madagascan frog *Mantella laevigata*. Minor alkaloid in *Mantella* sp. cf. *madagascariensis*.

Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016-1038 (*isol, ir, ms*)

Mantella Alkaloid 191 A-319

Struct. and MF unknown. Possibly related to Precoccinelline. Trace alkaloid from skin extracts of the Madagascan frog *Mantella betsileo*.

Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016-1038 (*isol, ms*)

Mantella Alkaloid 317 A-320

Homopumiliotoxin 317

Struct. and MF unknown. Trace alkaloid from skin extracts of the Madagascan frog *Mantella betsileo*.

Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016-1038 (*isol, ms*)

Mucuna pruriens Alkaloid X A-321

Mucuna pruriens *Base X*

$C_{11}H_{25}NO_3$ 219.323

Struct. unknown. Alkaloid from *Mucuna pruriens* (Fabaceae). Mp 94-95°.

Picrate: Mp 130-132°.

Rakhit, S. *et al., Indian J. Pharm.*, 1956, **18**, 285; *CA*, **52**, 5748e (*isol*)

Pachysandra Alkaloid V A-322

Pachysandra *Base V*

Steroidal alkaloid. Struct. unknown. Isol. from *Pachysandra terminalis* (Buxaceae). Mp 218-221°.

Kikuchi, T. *et al., Tet. Lett.*, 1964, 1817
Kikuchi, T. *et al., Yakugaku Zasshi*, 1967, **87**, 215; *CA*, **67**, 32888v

Pancratium Alkaloid 6 A-323

Pancratium *Base 6*

$C_{16}H_{17}NO_4$ 287.315

Amaryllidaceae alkaloid. Struct. unknown. Isol. from *Pancratium maritimum* (Amaryllidaceae). Needles (MeOH). Mp 267-270°. $[\alpha]_D^{21}$ -184 (c, 1.04 in MeOH).

Sandberg, F. *et al., J. Nat. Prod.*, 1963, **26**, 78-90 (*isol, ir*)

Pancratium Alkaloid 31 A-324

Pancratium *Base 31*

$C_{18}H_{21}NO_5$ 331.368

Amaryllidaceae alkaloid. Struct. unknown. Isol. from *Pancratium maritimum* (Amaryllidaceae). Prisms (Me_2CO). Mp 213-216° dec. $[\alpha]_D^{21}$ -61 (c, 1.23 in $CHCl_3$).

Sandberg, F. *et al., J. Nat. Prod.*, 1963, **26**, 78-90 (*isol, ir*)

Pancratium sickenbergi Alkaloid A-325

$C_9H_{13}NO_3$ 183.207

Amaryllidaceae alkaloid. Struct. unknown. Isol. from *Pancratium sickenbergeri* (Amaryllidaceae). Mp 161° dec.

Fahmy, I.R. *et al., J. Pharm. Sci. U.A.R.*, 1960, **1**, 133-147; *CA*, **56**, 10280i (*isol*)

Papaver rhoeas Alkaloid A-326

$C_{19}H_{19}NO_6$ 357.362

Struct. unknown. Alkaloid from *Papaver rhoeas*. Cryst. ($CHCl_3$/EtOH). Mp 208-209°. $[\alpha]_D^{23}$ +235 ($CHCl_3$).

Slavik, J. *et al., Chem. Listy*, 1958, **52**, 1957-1964; *CA*, **53**, 1640h (*isol*)

Pseudaxinyssa Alkaloid A-327

$C_9H_{14}BrN_5O$ 288.146

Struct. unknown. Isol. from the marine sponge *Pseudaxinyssa cantharella*. Amorph. $[\alpha]_D$ +15.

De Nanteuil, G. *et al., Tetrahedron*, 1985, **41**, 6019-6033

Rhynchosia pyramidalis Alkaloid A-328

Struct. unknown. Alkaloid from *Rhynchosia pyramidalis* (Fabaceae). Mp 132° (as picrate).

Ristic, S. *et al., Arch. Pharm. (Weinheim, Ger.)*, 1962, **295**, 510; *CA*, **57**, 14180e

Rosmarinus officinalis Alkaloid 2 A-329

$C_{20}H_{27}NO_4$ 345.438

Struct. unknown. Isol. from rosemary (*Rosmarinus officinalis*) using NH_3 during extraction. Cryst. (toluene). Mp 197-198° dec. $[\alpha]_D$ +36 (c, 1.48 in dioxan). Artifact.

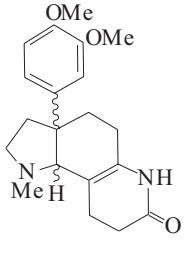
Hydrochloride:
Cryst. (H_2O). Mp 214-216° dec.

N,O,O-*Tri-Ac:*
Cryst. (MeOH). Mp 291-292° dec.

Yakhontova, L.D. *et al., Khim. Prir. Soedin.*, 1967, **3**, 140; *Chem. Nat. Compd. (Engl. Transl.)*, 1967, **3**, 118

Sceletium namaquense Alkaloid A-330

[82545-08-2]



$C_{20}H_{26}N_2O_3$ 342.437

Compd. not named in reference. Alkaloid from *Sceletium namaquense* (Aïzoaceae). Oil. Related to *Sceletium* Alkaloid A_4, A-346.

Jeffs, P.W. *et al., J.O.C.*, 1982, **47**, 3611 (*isol, ir, cd, pmr, ms, struct*)

Senecio borysthenicus Alkaloid A-331

$C_{18}H_{23}NO_5$ 333.383

Struct. unknown. Pyrrolizidine alkaloid. Alkaloid from *Senecio borysthenicus* (Asteraceae). Mp 195° dec. Conts. an OH group.

Red'ko, A.L. *et al., CA*, 1959, **53**, 20695

Senecio renardi Alkaloid 4 A-332

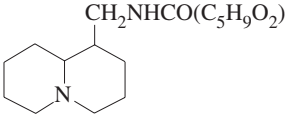
Senecio renardi *Base 4*

Struct. unknown. Alkaloid from *Senecio renardi* (Asteraceae). Cryst. (Me_2CO). Mp 176-178°.

Danilova, A.V. *et al., J. Gen. Chem. USSR (Engl. Transl.)*, 1950, **20**, 1921; *CA*, **45**, 2960

Sophora Alkaloid 9 A-333

Sophora *Base 9*



$C_{16}H_{28}N_2O_3$ 296.409

Struct. of acyl group not known. Alkaloid from *Sophora alopecuroides* (Fabaceae). Related to Sophorine in O-59.

Kuchkarov, S. *et al., Khim. Prir. Soedin.*, 1979, **15**, 413-414; *Chem. Nat. Compd. (Engl. Transl.)*, 364-365

Strempeliopsis strempelioides Alkaloid A-334

Strempeliopsis *Bisindole base*

$C_{38}H_{46}N_4$ 558.808

Struct. unknown. Alkaloid from the roots of *Strempeliopsis strempelioides* (Apocynaceae). Mp 158-171°. $[\alpha]_D^{20}$ +210 ($CHCl_3$).

Laguna, A. *et al., Planta Med.*, 1984, **50**, 285-288 (*isol, uv, ir, ms*)

Thermopsis lanceolata Alkaloid A-335

Struct. unknown. Alkaloid from *Thermopsis lanceolata* epigeal parts (Fabaceae). Cryst. (Me_2CO). Mp 235°. $[\alpha]_D$ +121.8 (c, 1 in $CHCl_3$).

Vinogradova, V.I. *et al., Khim. Prir. Soedin.*, 1971, 463-466; *Chem. Nat. Compd. (Engl. Transl.)*, 440 (*isol*)

Ulex europaeus Alkaloid A-336

$C_{15}H_{20}N_2O_5$ 308.333

Struct. unknown. Alkaloid from shoots of *Ulex europaeus* (Fabaceae). Lustrous plates (petrol). Mp 170°.

Clemo, G.R. *et al., J.C.S.*, 1935, 10 (*isol*)

Uncaria callophylla Alkaloid A-337

Bisindole alkaloid; probably derived from Gambirine, G-13 and Pseudoyohimbine. Struct. unknown. Minor alkaloid from the leaves of *Uncaria callophylla* (Rubiaceae). Yellow powder. Mp 330°. Mol. formula not reported.

Goh, S.H. *et al., Phytochemistry*, 1985, **24**, 880-881 (*isol, uv, ir, pmr*)

Ungernia severtzovii Alkaloid A-338

$C_{17}H_{19}NO_3$ 285.342

Amaryllidaceae alkaloid. Struct. unknown. Isol. from the leaves of *Ungernia severtzovii* (Amaryllidaceae). Mp 186-187°. Opt. inactive.

Nitrate: Mp 245-246°.

Picrate: Mp 241-243°.

Smirnova, L.S. *et al., Dokl. Akad. Nauk SSSR, Ser. Khim.*, 1964, **154**, 171-173; *CA*, **60**, 9324b (*isol*)

Veratrum Alkaloid X A-339

Steroidal alkaloid. Struct. unknown. Isol. from *Veratrum lobelianum* (Liliaceae). Needles (MeOH). Mp 215-217°. ir shows C=C, OH and NH_2 groups.

Shinkarenko, A.L. *et al., Khim. Prir. Soedin.*, 1966, **2**, 293; *Chem. Nat. Compd. (Engl. Transl.)*, 1966, **2**, 239

Voacanga thouarsii Alkaloid I A-340

[50924-03-3]

$C_{43}H_{48}N_4O_6$ 716.875

Bisindole alkaloid. Struct. unknown. Alkaloid from the leaves of *Voacanga thouarsii* (Apocynaceae). Amorph. Intense blue col. with HNO_3. λ_{max} 223 ; 264 ; 300 ; 327 (EtOH).

Rolland, Y. *et al., Phytochemistry*, 1973, **12**, 2039-2042 (*isol, uv, ir, pmr*)

Zephyranthes Alkaloid A-341

Amaryllidaceae alkaloid. Struct. unknown. Isol. from the bulbs of *Zephyranthes robusta* and *Zephyranthes sulphurea* (Amaryllidaceae). Stout prisms (MeOH). Mp 252-254°.

Rao, R.V.K. *et al., Indian J. Pharm.*, 1969, **31**, 62-63; 86-87; *CA*, **71**, 109780w; 128623p (*isol*)

Alkaloid 1 (Calabash curare) A-342

$C_{20}H_{21}N_2^{\oplus}$ 289.399

Struct. unknown. Alkaloid from calabash curare (*Strychnos* spp.) (Loganiaceae). Mp 239-243° (as chloride). $[\alpha]_D^{20}$ -134 (c, 8.95 in H_2O) (chloride). Deep-blue col. with $Ce(SO_4)_2$.

Wieland, T. *et al., Chem. Ber.*, 1952, **85**, 731-743

Alkaloid 2 (Calabash curare) A-343

Struct. unknown. Quaternary alkaloid from calabash curare (*Strychnos* spp.) (Loganiaceae). $[\alpha]_D^{20}$ -659 (as chloride). Red-violet col. with $Ce(SO_4)_2$.

▶ Toxic.

Wieland, T. *et al., Chem. Ber.*, 1952, **85**, 731

Lycopodium Alkaloid IV A-344

Lycopodium *Base IV*

$C_{16}H_{23}NO$ 245.364

Struct. unknown. Alkaloid from *Lycopodium annotinum* (Lycopodiaceae).

Methiodide: Mp 265°. $[\alpha]_D^{20}$ -150.1.

Methochloride: Mp 210°.

Methoperchlorate: Mp 270°.

Methopicrate: Mp 230-232°.

Achmatowicz, O. *et al., Pol. J. Chem. (Rocz. Chem.)*, 1958, **32**, 485-498 (*isol, uv*)

Daphniphyllum Alkaloid A_1 A-345

$C_{23}H_{33}NO_3$ 371.519

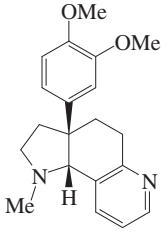
Struct. unknown. Alkaloid from the bark and leaves of *Daphniphyllum macropodum* (Daphniphyllaceae). Mp 225-226° (as methiodide).

Toda, M. *et al., Tetrahedron*, 1972, **28**, 1477 (*isol, ir, pmr, ms*)

Sceletium Alkaloid A_4 A-346

3a-(3,4-Dimethoxyphenyl)-2,3,3a,4,5,9b-hexahydro-1-methyl-1H-pyrrolo[2,3-f]quinoline, 9CI

[35135-35-4]



Absolute Configuration

$C_{20}H_{24}N_2O_2$ 324.422

Alkaloid from *Sceletium namaquense* and *Sceletium tortuosum* (Aïzoaceae). Prisms (EtOAc). Mp 153.3-154.5°. $[\alpha]_D$ +131 (MeOH).

Luhan, P.A. *et al., J.C.S. Perkin 2*, 1972, 2006 (*cryst struct*)

Jeffs, P.W. *et al., J.O.C.*, 1974, **39**, 2703 (*isol, uv, ir, pmr, ms, cd, struct*)

Hayashi, M. *et al., Tet. Lett.*, 2002, **43**, 1461-1464 (*synth*)

Abrus precatorius Alkaloid A A-347

Struct. unknown. Alkaloid from seeds of *Abrus precatorius.* Mp 143° dec.

Tung, Y.-C. *et al., CA*, 1960, **55**, 17770g; **61**, 9777c; *Biol. Abstr.*, **36**, 65720

Buxus Alkaloid A1 A-348

Struct. unknown. Alkaloid from *Buxus sempervirens* var. *rotundifolia* (Buxaceae). Cryst. (CH_2Cl_2). Mp 195-197°. Contains NMe_2 group at C-3.

Huong, L. *et al., Coll. Czech. Chem. Comm.*, 1981, **46**, 1425-1432 (*isol, ms*)

Buxus Alkaloid A2 A-349

Struct. unknown. Alkaloid from *Buxus sempervirens* var. *rotundifolia* (Buxaceae). Cryst. (Me_2CO/MeOH). Mp 138-142°.

Huong, L. *et al., Coll. Czech. Chem. Comm.*, 1981, **46**, 1425-1432 (*isol, ms*)

Buxus Alkaloid A3 A-350

Struct. unknown. Alkaloid from *Buxus sempervirens* var. *rotundifolia* (Buxaceae). Cryst. (Me_2CO/MeOH). Mp 272-274°. $[\alpha]_D^{22}$ +20 (c, 0.25 in EtOH).

Huong, L. *et al., Coll. Czech. Chem. Comm.*, 1981, **46**, 1425-1432 (*isol, ms*)

Buxus Alkaloid A4 A-351

Struct. unknown. Alkaloid from *Buxus sempervirens* var. *rotundifolia* (Buxaceae). Cryst. (CH_2Cl_2). Mp 252-256°. $[\alpha]_D^{22}$ -109 (c, 0.51 in MeOH).

Huong, L. *et al., Coll. Czech. Chem. Comm.*, 1981, **46**, 1425-1432 (*isol, ms*)

Buxus Alkaloid A5 A-352

$C_{40}H_{60}N_2O_7$ 680.923

Struct. unknown. Alkaloid from *Buxus sempervirens* var. *rotundifolia* (Buxaceae). Cryst. (CH_2Cl_2). Mp 125-127°. $[\alpha]_D^{22}$ -10 (c, 0.3 in CH_2Cl_2).

Huong, L. *et al., Coll. Czech. Chem. Comm.*, 1981, **46**, 1425-1432 (*isol, ms*)

Chondrodendron limaciifolium Alkaloid A A-353

$C_{36}H_{38}N_2O_6$ 594.706

Struct. unknown. Bisbenzylisoquinoline alkaloid. Alkaloid from the wood of *Chondrodendron limaciifolium* (Menispermaceae). Thin plates or flattened needles (Py, $CHCl_3$/MeOH or MeOH). Mp 270-300° dec.

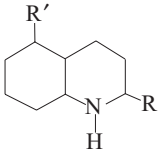
Sulfate:

Rhombic plates +10H_2O. Mp 289° (efferv.).

Barltrop, J.A. *et al., J.C.S.*, 1954, 159 (*isol*)

Dendrobates Alkaloid 167A A-354

2-Ethyldecahydroquinoline



R = CH_2CH_3, R′ = H

$C_{11}H_{21}N$ 167.294

Tentative struct. Trace alkaloid from skin extracts of *Dendrobates auratus* (Dendrobatidae). Mol. formula tentative; m/e 167(1), 166(1), 138(100). Cannot be hydrogenated.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163 (*isol, ms, rev*)

Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Spande, T.F. *et al., J. Nat. Prod.*, 1999, **62**, 5-21 (*pmr, cmr, occur*)

Dendrobates Alkaloid 181A A-355

2-Ethyldecahydro-5-methylquinoline

As *Dendrobates* Alkaloid 167A, A-354 with

R = CH_2CH_3, R′ = CH_3

$C_{12}H_{23}N$ 181.32

Tentative struct. Trace alkaloid from skin extracts of *Dendrobates auratus* (Dendrobatidae). Mol. formula tentative; m/e 181(2), 180(1), 152(100). Cannot be hydrogenated.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163 (*isol, ms, rev*)

Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Spande, T.F. *et al., J. Nat. Prod.*, 1999, **62**, 5-21 (*pmr, cmr, occur*)

Dendrobates Alkaloid 209A A-356

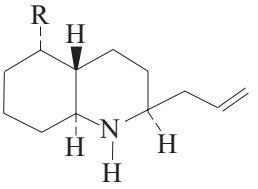
$C_{13}H_{25}NO$ 211.347

Struct. unknown. Trace alkaloid from skin extracts of an undescribed *Dendrobates* sp. from Panama (Dendrobatidae). Mol. formula tentative; m/e 209 (5), 168 (100). H_2-deriv, m/e 211, 168.

Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 219A A-357

Decahydro-2,5-bis(2-propenyl)quinoline. 2,5-Diallyldecahydroquinoline



R = $CH_2CH=CH_2$

$C_{15}H_{25}N$ 219.369

A major constit. in skin extracts of *Dendrobates auratus, Dendrobates azureus, Dendrobates granuliferus, Dendrobates histrionicus, Dendrobates parvulus* and *Dendrobates truncatus* (Dendrobatidae). $[\alpha]_D^{24}$ +9.7 (c, 2.0 in MeOH).

Tetrahydro: Decahydro-2,5-dipropylquinoline. **Dendrobates *Alkaloid 223A*†.** *Pumiliotoxin C_{II}*

[63983-61-9]

[112791-03-4 , 112790-00-8 , 112789-97-6 , 67920-43-8 , 112789-98-7]

$C_{15}H_{29}N$ 223.401

Minor or trace alkaloids in skin extracts of *Dendrobates auratus, Dendrobates histrionicus* (various populations), *Dendrobates lehmanni, Dendrobates minutus, Dendrobates occultator, Dendrobates truncatus* and *Dendrobates* sp. of Colombia (Dendrobatidae).

5-Epimer: **Dendrobates *Alkaloid 219A′***

$C_{15}H_{25}N$ 219.369

Present in skin extracts from one population of *Dendrobates histrionicus* and *Dendrobates auratus* (Dendrobatidae). $[\alpha]_D$ +5.8 (c, 0.31 in $CHCl_3$).

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)
Tokuyama, T. *et al., Tetrahedron*, 1986, **42**, 3453; 1991, **47**, 5401 (*isol, pmr, cmr, ms, cryst struct, abs config*)

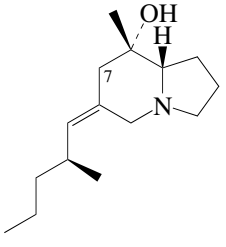
Dendrobates Alkaloid 237A A-359

Octahydro-8-methyl-6-(2-methylpentylidene)-8-indolizinol, 9CI. 8-Hydroxy-8-methyl-6-(2-methylpentylidene)indolizidine

[73376-36-0]



$C_{15}H_{27}NO$ 237.384

Proposed struct. A major alkaloid from skin extracts of *Dendrobates abditus*; trace constit. in *Dendrobates histrionicus* (Dendrobatidae).

7-Hydroxy: **Dendrobates *Alkaloid 253A***
[73376-37-1]
$C_{15}H_{27}NO_2$ 253.384
A major alkaloid of *Dendrobates abditus*; minor constit. in *Dendrobates lehmanni* and *Dendrobates auratus* (Dendrobatidae). Stereochem. undefined.

7-Hydroxy, didehydro (?): **Dendrobates *Alkaloid 251E***
$C_{15}H_{25}NO_2$ 251.368
Minor alkaloid from skin extracts of *Dendrobates minutus* (Dendrobatidae). Mol. formula and structure tentative; m/e 251(3), 250(1), 234(2), 168(30), 84(18), 70(100).

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163 (*isol, ms, rev*)
Daly, J.W. *et al., J.A.C.S.*, 1980, **102**, 830 (*struct*)

Thanh, G.V. *et al., Tet. Lett.*, 1999, **40**, 3713-3716 (*synth*)

Dendrobates Alkaloid 239A A-360

$C_{15}H_{29}NO$ 239.4

Struct. unknown. Trace alkaloid from skin extracts of *Dendrobates occultator* (Dendrobatidae). Mol. formula tentative; m/e 239 (2), 238 (3), 182 (100). Cannot be hydrogenated.

Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 241A A-361

Dendrobates *Alkaloid 241*

Struct. unknown

Trace alkaloid from skin extracts of *Dendrobates occultator* (Dendrobatidae). Mol. formula not known; m/e 241 (2), 240 (3), 166 (100), 126 (48). Does not separate from major alkaloids 239 *A, B, C, D.*

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-180 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 243A A-362

Decahydro-5-(2-penten-4-ynyl)-2-(2-propenyl)quinoline. 2-Allyl-5-(2-penten-4-ynyl)decahydroquinoline

As *Dendrobates* Alkaloid 219A, A-357 with

R = $-CH_2CH{=}CHC{\equiv}CH$ (*Z*-)

$C_{17}H_{25}N$ 243.391

A major alkaloid in *Dendrobates auratus, Dendrobates azureus, Dendrobates granuliferus, Dendrobates histrionicus*; minor or trace constit. in *Dendrobates pictus, Dendrobates tinctorius, Dendrobates trivittatus* and *Dendrobates truncatus* (Dendrobatidae). $[\alpha]_D^{16}$ -15.2 (c, 1.37 in MeOH). $[\alpha]_D^{16}$ -30.7 (c, 1.37 in $CHCl_3$).

Stereoisomer: Dendrobates *Alkaloid 243A′*
$C_{17}H_{25}N$ 243.391
Present in some skin extracts of *Dendrobates* spp. (Dendrobatidae). $[\alpha]_D^{16}$ -0.96 (c, 0.73 in MeOH). $[\alpha]_D^{16}$ -18.6 (c, 0.73 in $CHCl_3$). Of unknown config.

Dendrobates Alkaloid 251A A-363

$C_{17}H_{33}N$ 251.454

Struct. unknown. Trace alkaloid from skin extracts of *Dendrobates histrionicus* (Dendrobatidae). Mol. formula tentative; m/e 251 (2), 208 (6), 152 (100). Possibly in Pumiliotoxin-C class with R = C_7H_{15} (see *Dendrobates* Alkaloid 223C, A-438 and *Dendrobates* Alkaloid 167A, A-354.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-180 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 257A A-364

$C_{18}H_{25}N$ 255.402

Struct. unknown. Minor alkaloid from skin extracts of *Dendrobates trivittatus* (Dendrobatidae). Mol. formula tentative; m/e 257 (1), 256 (2), 216 (100). Cannot be acetylated, but consumes 4 molar equivs. of H_2. Possibly a perhydropyrroloquinoline of the gephyrotoxin class.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-180 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 265A A-365

Struct. unknown. Trace alkaloid from skin extracts of *Dendrobates abditus, Dendrobates auratus, Dendrobates azureus, Dendrobates histrionicus, Dendrobates lehmanni, Dendrobates occultator, Dendrobates parvulus* and *Dendrobates tinctorius* (Dendrobatidae). Mol. formula not known; m/e 265 (50), 264 (100), 222 (58), 180 (72). Very atypical mass spectrum for a dendrobatid alkaloid. Possibly a degradation artifact.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-180 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 269A A-366

Decahydro-2-(3,4-pentadienyl)-5-(2-penten-4-ynyl)quinoline, 9CI. Dendrobates histrionicus *Alkaloid III*

[63983-62-0]

As *Dendrobates* Alkaloid 167A, A-354 with

R = $CH_2CH_2CH{=}C{=}CH_2$,
R′ = $CH_2CH{=}CHCdCH$

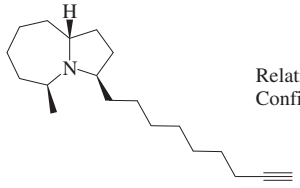
$C_{19}H_{27}N$ 269.429

Tentative struct. Minor or trace alkaloid in skin extracts of *Dendrobates granuliferus, Dendrobates histrionicus* (several populations), *Dendrobates occultator, Dendrobates trivittatus* and *Dendrobates truncatus* (Dendrobatidae), also in skin of the Madagascan frog *Mantella madagascariensis* (Ranidae, subfamily Mantellinae). m/e 269(4), 268(12), 204(100). H_{10}-deriv., m/e 279, 208.

Daly, J.W. *et al., Helv. Chim. Acta*, 1977, **60**, 1128 (*isol, ms*)
Daly, J.W. *et al., Toxicon*, 1978, **16**, 163; 1984, **22**, 905 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)
Spande, T.F. *et al., J. Nat. Prod.*, 1999, **62**, 5-21 (*pmr, cmr, occur*)

Dendrobates Alkaloid 275A A-367

*Octahydro-5-methyl-10-(8-nonynyl)-1*H*-pyrrolo[1,2-*a*]azepine, 9CI. 5-Methyl-10-(8-nonynyl)lehmizidine*



Relative Configuration

$C_{19}H_{33}N$ 275.476

Major alkaloid from the skin extracts of the frog *Dendrobates lehmanni*.

*8,9-Dihydro: Octahydro-5-methyl-10-(8-nonenyl)-1*H*-pyrrolo[1,2-*a*]azepine.* **Dendrobates *Alkaloid 277A*.** *5-Methyl-10-(8-nonenyl)lehmizidine*
$C_{19}H_{35}N$ 277.492
Alkaloid from *Dendrobates lehmanni*.

*Oxo: Octahydro-5-methyl-10-(oxo-8-nonynyl)-1*H*-pyrrolo[1,2-*a*]azepine.* **Dendrobates *Alkaloid 289A***
$C_{19}H_{31}NO$ 289.46
Alkaloid from *Dendrobates lehmanni*.
Posn. of oxo group not known.

*6′,7′-Didehydro, 8,9-dihydro: Octahydro-5-methyl-10-(6,8-nonadienyl)-1*H*-pyrrolo[1,2-*a*]azepine.* **Dendrobates *Alkaloid 275G*.** *5-Methyl-10-(6,8-nonadienyl)lehmizidine*
$C_{19}H_{33}N$ 275.476
Alkaloid from *Dendrobates lehmanni*.
Tentative struct. assigned.

3,5-Diepimer: **Dendrobates *Alkaloid 275A′***
$C_{19}H_{33}N$ 275.476
Alkaloid from *Dendrobates lehmanni*.

Dendrobates Alkaloid 297A A-369

$C_{17}H_{31}NO_3$ 297.437

Struct. unknown. A major alkaloid from skin extracts of *Dendrobates minutus* (Dendrobatidae). m/e 297 (3), 296 (4), 280 (9), 236 (2), 210 (3), 194 (4), 193 (3), 182 (21), 114 (27), 112 (16), 70 (100). Lowest molecular-weight member of the Pumiliotoxin-A class to contain 3 oxygens. H_2-deriv, m/e 299 (4), 282 (12), 256 (6), 224 (4), 110 (50), 84 (100), 70 (75).

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 309A A-370

Dihydropumiliotoxin A

$C_{19}H_{35}NO_2$ 309.491

Struct. unknown. Minor alkaloid from skin extracts of *Dendrobates minutus* and *Dendrobates viridis* (Dendrobatidae). Mol. formula tentative; m/e 309 (9), 308 (3), 292 (2), 280 (4), 206 (4), 194 (15), 176 (5), 166(100), 110 (10), 84 (20), 70 (51). Forms H_2-deriv.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-188 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Erythrophleum Alkaloid A A-371

$C_{25}H_{37}NO_6$ 447.57

Struct. unknown. Dimethylaminoethanol esterified with an α,β-unsaturated diterpene acid carrying a methoxycarbonyl group and 3 Me groups. UV shows no evidence for a 6,7-dione as observed in other *E.* alkaloids. Alkaloid from the bark of *Erythrophleum africanum* (Fabaceae). Cryst. (Et_2O/hexane). Mp 105°. Poss. identical with an alkaloid from *E. guineense* with the same MF. No further data to 2007.

Friedrich-Fichtl, J. *et al., Chem. Ber.*, 1971, **104**, 3535-3548 (*Erythrophleum guineense alkaloid*)
Jansson, S. *et al., Acta Pharm. Suec.*, 1976, **13**, 51-54; *CA*, **84**, 147726j (*isol, uv, ir, pmr, ms*)

Euonymus Alkaloid A A-372

$C_{29}H_{37}NO_{13}$ 607.61

Struct. unknown. Alkaloid from the seeds of *Euonymus europaea*. Mp 258-260°. $[\alpha]_D$ +21 ($CHCl_3$).

De-Ac: **Euonymus *Alkaloid B***
$C_{27}H_{35}NO_{12}$ 565.573
Alkaloid from the seeds of *Euonymus europaea*. Mp 288-290°. $[\alpha]_D$ +14 ($CHCl_3$).

Ac: **Euonymus *Alkaloid C***
$C_{31}H_{39}NO_{14}$ 649.647
Alkaloid from the seeds of *Euonymus europaea*. Mp 164-168°. $[\alpha]_D$ +8 ($CHCl_3$).

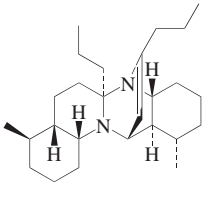
Doebel, K. *et al., Helv. Chim. Acta*, 1949, **32**, 592-597 (*isol*)

Fritillaria Alkaloid A A-373

Struct. unknown. Alkaloid from *Fritillaria meleagris* (Liliaceae). Mp 156-158°. Cooccurs with Imperialine in C-298.

Bauer, S. *et al., Chem. Zvesti*, 1958, **12**, 584

Mantella Alkaloid 384A A-374



Relative Configuration

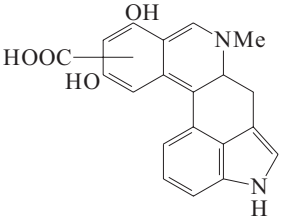
$C_{26}H_{44}N_2$ 384.647

Tentative struct. shown. Obt. as mixt. with *Mantella* Alkaloid 384B. Major constit. of skin extracts of the Madagascan frog *Mantella betsileo*. Minor constit. in *Mantella* sp. cf. *madagascariensis* and *Mantella laevigata*. No CAS no. found to 15CI.

Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016-1038 (*isol, ir, ms*)

Securidaca longipedunculata Alkaloid A A-375

[146442-66-2]



$C_{20}H_{16}N_2O_4$ 348.357

Alkaloid from roots of *Securidaca longipedunculata* (Polygalaceae).

Costa, C. *et al., J. Het. Chem.*, 1992, **29**, 1641-1647

Stephania glabra Alkaloid A A-376

Stephania glabra *Base A*

$C_{19}H_{21}NO_4$ 327.379

Struct. unknown, conts. 2 OMe groups. Authors suggest the struct. to be *N*-methylhydroxystepharine. Isol. from herbage of *Stephania glabra*. Mp 205-206°. $[\alpha]_D^{21}$ -70. λ_{max} 242 ; 282 (no solvent reported).

Shchelchkova, I.I. *et al., Khim. Prir. Soedin.*, 1965, **1**, 271-275; *Chem. Nat. Compd. (Engl. Transl.)*, 1965, **1**, 210-212 (*isol*)

Stephania glabra Alkaloid A A-377

$C_{19}H_{18}NO_2$ 292.357

Struct. unknown. The MF assigned is impossible. Isol. from tubers of *Stephania glabra*. Cryst. (Et_2O). Mp 79-81°. $[\alpha]_D$ -88 (c, 1 in EtOH). Prob. an aporphine alkaloid. Contains an NMe group. No further reports, although later investigations of the species have been reported.

Hydrochloride: Mp 252-253°.

N-*Ac:*
Cryst. (Me_2CO). Mp 146°.

Kin, F.K. *et al., Khim. Prir. Soedin.*, 1965, **1**, 392-394; *Chem. Nat. Compd. (Engl. Transl.)*, 1965, **1**, 308-309 (*isol*)

Buxus Alkaloid B A-390

$C_{24}H_{42}N_2O$ 374.609

Struct. unknown. Alkaloid from *Buxus sempervirens* (Buxaceae). Mp 205-207°.

Schlittler, E. *et al., Helv. Chim. Acta*, 1949, **32**, 2209-2226 (*isol*)

Buxus Alkaloid B1 A-391

Struct. unknown. Alkaloid from *Buxus sempervirens* var. *rotundifolia* (Buxaceae). Cryst. (Me_2CO/MeOH). Mp 280° dec. $[\alpha]_D^{22}$ +11.8 (c, 0.55 in MeOH). Contains MeNH group. λ_{max} 243 (log ϵ 4.19) (MeOH).

Huong, L. *et al., Coll. Czech. Chem. Comm.*, 1981, **46**, 1425-1432 (*isol, uv, ms*)

Buxus Alkaloid B4 A-392

Struct. unknown. Alkaloid from *Buxus sempervirens* var. *rotundifolia* (Buxaceae). Cryst. ($CHCl_3$). Mp 150-152°.

Huong, L. *et al., Coll. Czech. Chem. Comm.*, 1981, **46**, 1425-1432 (*isol, ms*)

Buxus Alkaloid B5 A-393

Struct. unknown. Alkaloid from *Buxus sempervirens* var. *rotundifolia* (Buxaceae). Cryst. ($CHCl_3$). Mp 179-182°. $[\alpha]_D^{22}$ +9.6 (c, 0.5 in $CHCl_3$).

Huong, L. *et al., Coll. Czech. Chem. Comm.*, 1981, **46**, 1425-1432 (*isol, ms*)

Buxus Alkaloid B6 A-394

Struct. unknown. Alkaloid from *Buxus sempervirens* var. *rotundifolia* (Buxaceae). Cryst. (MeOH). Mp 214-216°. $[\alpha]_D^{22}$ +6.6 (c, 0.15 in MeOH). Contains OH group and C_6-C_7 double bond.

Huong, L. *et al., Coll. Czech. Chem. Comm.*, 1981, **46**, 1425-1432 (*isol, ir, ms*)

Buxus Alkaloid B7 A-395

Struct. unknown. Alkaloid from *Buxus sempervirens* var. *rotundifolia* (Buxaceae). Cryst. (Me_2CO). Mp 245-247°.

Huong, L. *et al., Coll. Czech. Chem. Comm.*, 1981, **46**, 1425-1432 (*isol, ms*)

Buxus Alkaloid B8 A-396

Struct. unknown. Alkaloid from *Buxus sempervirens* var. *rotundifolia* (Buxaceae). Cryst. (Me_2CO). Mp 265°. $[\alpha]_D^{22}$ +34.6 (c, 0.54 in $CHCl_3$). Mass spec. indicated a MeNH group at C-20 and a dimethyl group at C-3.

Huong, L. *et al., Coll. Czech. Chem. Comm.*, 1981, **46**, 1425-1432 (*isol, ms*)

Buxus Alkaloid B387 A-397

$C_{25}H_{41}NO_2$ 387.604

Steroidal alkaloid. Struct. unknown. Alkaloid from *Buxus microphylla* var. *sinica* (Buxaceae). Mp 188-189°. $[\alpha]_D$ +6.7 ($CHCl_3$). ORD spectrum resembles that of 4,4*a*-dihydrobuxpiine.

Bauerová, O. *et al., Pharmazie*, 1973, **28**, 212-214; *CA*, **78**, 156665s (*isol, ir, uv, ms, ord*)

Buxus Alkaloid B398 A-398

Struct. unknown. Alkaloid from *Buxus sempervirens* var. *argentea* (Buxaceae). Cryst. (C_6H_6/MeOH). Mp 197-199°.

Kuchkova, K.I. *et al., Chem. Zvesti*, 1976, **30**, 174-178 (*isol*)

Buxus Alkaloid B426 A-399

Struct. unknown. Alkaloid from *Buxus sempervirens* var. *argentea* (Buxaceae). Cryst. (MeOH/CH_2Cl_2). Mp 208-210°.

Kuchkova, K.I. *et al., Chem. Zvesti*, 1976, **30**, 174-178; *CA*, **87**, 2362q (*isol*)

C-Alkaloid B A-400

$C_{20}H_{23}N_2O^{\oplus}$ 307.414

Minimum formula. Struct. unknown. Alkaloid from calabash curare and *Strychnos mitscherlichii* (Loganiaceae).

Mp 270° (as picrate). Red-violet col. with $Ce(SO_4)_2$, becoming brown on standing.

Schmid, H. *et al., Helv. Chim. Acta*, 1952, **35**, 1864-1879; 1953, **36**, 102-121

Dendrobates Alkaloid 181B A-401

Decahydro-2-propylquinoline

As *Dendrobates* Alkaloid 167A, A-354 with

R = C_3H_7, R′ = H

$C_{12}H_{23}N$ 181.32

Tentative struct. Trace alkaloid from skin extracts of *Dendrobates auratus, Dendrobates azureus, Dendrobates fulguritus* and *Dendrobates trivittatus* (Dendrobatidae). Mol. formula tentative; m/e 181(2), 180(2), 138(100). Cannot be hydrogenated.

R′ = CH_3

$C_{15}H_{25}N$ 219.369

Tentative struct. Minor alkaloid from skin extracts of *Dendrobates histrionicus* and *Dendrobates* sp. (Colombia), trace constit. in *Dendrobates azureus* (Dendrobatidae). Mol. formula tentative, m/e 219(1), 218(2), 152(100). H_4-deriv., m/e 223, 152.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)
Spande, T.F. *et al., J. Nat. Prod.*, 1999, **62**, 5-21 (*pmr, cmr, occur*)

Dendrobates Alkaloid 223B A-404

As *Dendrobates* Alkaloid 167A, A-354 with

R = C_4H_9, R′ = CH_2CH_3

$C_{15}H_{29}N$ 223.401

Tentative struct. Minor or trace alkaloid in skin extracts of *Dendrobates auratus, Dendrobates histrionicus, Dendrobates minutus, Dendrobates truncatus* and *Dendrobates* sp. of Colombia (Dendrobatidae). m/e 223(1), 222(2), 166(100). Cannot be hydrogenated.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)
Spande, T.F. *et al., J. Nat. Prod.*, 1999, **62**, 5-21 (*pmr, cmr, occur*)

Dendrobates Alkaloid 225B A-405

[103881-40-9]

$C_{15}H_{31}N$ 225.417

Struct. unknown. May be a 2,6-dipentylpiperidine. Trace constit. of *Dendrobates histrionicus* and a minor constit. in an undescribed *Dendrobates* sp. from Panama (Dendrobatidae).

Daly, J.W. *et al., J. Nat. Prod.*, 1986, **49**, 265-280

Dendrobates Alkaloid 231B A-406

As *Dendrobates* Alkaloid 167A, A-354 with

R = C_6H_7, R′ = CH_3

$C_{16}H_{25}N$ 231.38

Tentative struct. Minor or trace alkaloid from skin extracts of *Dendrobates azureus, Dendrobates histrionicus, Dendrobates lehmanni, Dendrobates occultator, Dendrobates tinctorius* and *Dendrobates* sp. (Colombia) (Dendrobatidae). Mol. formula tentative; m/e 231(2), 230(1), 152(100). Forms H_6-deriv. m/e 237, 152.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)
Spande, T.F. *et al., J. Nat. Prod.*, 1999, **62**, 5-21 (*pmr, cmr, occur*)

Dendrobates Alkaloid 237B A-407

$C_{14}H_{23}NO_2$ 237.341

Struct. unknown. Trace constit. in skin extracts of *Dendrobates abditus* and *Dendrobates fulguritus* (Dendrobatidae). Mol. formula tentative; m/e 237 (1), 236 (2), 182 (60), 114 (30), 112 (25), 70 (100).

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-188 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 239B A-408

$C_{15}H_{29}NO$ 239.4

Struct. unknown. Minor alkaloid from skin extracts of *Dendrobates bombetes*; trace constit. in *Dendrobates occultator* (Dendrobatidae). Mol. formula tentative; m/e 239 (2), 238 (3), 180 (100). Cannot be hydrogenated.

Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 253B A-409

$C_{16}H_{33}NO$ 255.443

Struct. unknown. Trace alkaloid from skin extracts of an undescribed *Dendrobates* sp. from Panama (Dendrobatidae). Mol. formula tentative; m/e 253 (1), 138 (100). Cannot be hydrogenated.

Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 257B A-410

Struct. unknown. Trace alkaloid from skin extracts of *Dendrobates lehmanni* (Dendrobatidae). Mol. formula not known; m/e 257 (60), 256 (100), 152 (20). Very atypical mass spectrum for a dendrobatid alkaloid. Possibly a degradation artifact.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-180 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 267B A-411

Struct. unknown. Trace alkaloid from skin extracts of *Dendrobates auratus* and *Dendrobates minutus* (Dendrobatidae). Mol. formula not known; m/e 267 (7), 266 (4), 250 (1), 170 (100), 152 (4), 112 (13). The base peak is atypical for a dendrobatid alkaloid.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-180 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 269B A-412

As *Dendrobates* Alkaloid 167A, A-354 with

R = $CH_2CH{=}CHC{\equiv}CH$,
R′ = $CH_2CH{=}CHCH{=}CH_2$

$C_{19}H_{27}N$ 269.429

Tentative struct. Minor or trace alkaloid in skin extracts of *Dendrobates granuliferus, Dendrobates histrionicus* (several populations), *Dendrobates occultator, Dendrobates trivittatus* and *Dendrobates truncatus* (Dendrobatidae). m/e 269(4), 286(12), 202(100). H_{10}-deriv., m/e 279, 208.

Daly, J.W. *et al., Helv. Chim. Acta*, 1977, **60**, 1128 (*isol, ms*)
Daly, J.W. *et al., Toxicon*, 1978, **16**, 163 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 281B A-413

$C_{18}H_{35}NO$ 281.481

Struct. unknown. Trace alkaloid from skin extracts of *Dendrobates granuliferus* (Dendrobatidae). Mol. formula tentative; m/e 281 (4), 264 (12), 208 (25), 206 (20), 150 (65), 98 (5), 96 (20), 70 (100). Atypical spectrum for a dendrobatid alkaloid. Probably in

Pumiliotoxin-A class. Cannot be hydrogenated.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-180 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 283B A-414

$C_{17}H_{33}NO_2$ 283.453

Struct. unknown. A major alkaloid in skin extracts of *Dendrobates histrionicus* and *Dendrobates occultator* (Dendrobatidae). m/e 283 (<1), 282 (1), 254 (2), 212 ($C_{12}H_{22}NO_2$, 40), 152 ($C_{10}H_{18}N$, 23), 140 ($C_9H_{18}N$, 100). Cannot be hydrogenated.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-180 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 297B A-415

$C_{18}H_{35}NO_2$ 297.48

Struct. unknown. Trace alkaloid from skin extracts of *Dendrobates auratus* (Dendrobatidae). m/e 297 (10), 166 (92), 70 (100). Forms H_4-deriv.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-188 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 307B A-416

Isopumiliotoxin A
[67255-98-5]

$C_{19}H_{33}NO_2$ 307.475

Struct. unknown. Isomer of Pumiliotoxin A, P-791 without a large fragment ion for loss of OH. Minor or trace alkaloid in skin extracts of *Dendrobates auratus*, *Dendrobates granuliferus*, *Dendrobates lehmanni*, *Dendrobates minutus* and *Dendrobates pumilio* (Dendrobatidae). m/e 307 (12), 306 (4), 290 (2), 194 (24), 193(45), 166 (100), 70 (56). H_2-deriv, m/e 309(1), 280 (3), 208 (10), 138 (25), 110 (60), 84(100), 70 (45). H_4-deriv, m/e 311 (1), 110(25), 84 (100), 70 (30).

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-188 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 309B A-417

$C_{20}H_{39}NO$ 309.534

Struct. unknown. Trace alkaloid from skin extracts of *Dendrobates auratus* and *Dendrobates granuliferus* (Dendrobatidae). Mol. formula tentative; m/e 309 (1), 152 (100). Possibly member of Hydroxy pumiliotoxin-C class with OH group in the side chain.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-180 (*isol, ms, rev*)
Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Gentiana macrophylla Alkaloid B A-418

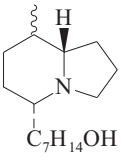
$C_9H_9NO_2$ 163.176

Struct. unknown. Monoterpene alkaloid. Alkaloid from the roots of *Gentiana macrophylla* (Gentianaceae). Cryst. (C_6H_6/petrol). Mp 128-130°.

Fu, F.-Y. *et al., Yaoxue Xuebao*, 1958, **6**, 198-203; *CA*, **53**, 8310b (*isol, uv*)

Mantella Alkaloid 253B A-419

(Octahydro-8-methyl-5-indolizinyl)-sec-*heptanol, 9CI. Indolizidine 253B*
[151871-22-6]



$C_{16}H_{31}NO$ 253.427

Provisional struct. Secondary alcohol. Minor alkaloid from skin extracts of one population of the Madagascan frog *Mantella madagascariensis*.

Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016 (*isol, ir, ms*)

Mantella Alkaloid 271B A-420

Struct. and MF unknown. Trace alkaloid from skin extracts of the Madagascan frog *Mantella betsileo*.

Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016-1038 (*isol, ir, ms*)

Mantella Alkaloid 293B A-421

Struct. and MF unknown. Minor alkaloid from skin extracts of the Madagascan frog *Mantella* sp. cf. *madagascariensis*. Minor or trace constit. in *Mantella madagascariensis*.

Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016-1038 (*isol, ir, ms*)

Mantella Alkaloid 295B A-422

Struct. and MF unknown. Tentatively classified as an indolizidine. Forms a di-*O*-Ac deriv. Minor alkaloid from skin extracts of the Madagascan frog *Mantella crocea*.

Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016-1038 (*isol, ir, ms*)

Pseudophryne Alkaloid 252B A-423

$C_{14}H_{24}N_2O_2$ 252.356

Struct. unknown. Possibly analogous to Spiropyrrolizidine 252, S-437 but with the hydroxy group in another part of the struct. Minor alkaloid from skin extracts of one population of the Australian frog *Pseudophryne coriacea* (trace constit. in a different population of the same frog).

Daly, J.W. *et al., J. Nat. Prod.*, 1990, **53**, 407-421 (*isol, ms*)

Skytanthus acutus Alkaloid B A-424

$C_{11}H_{21}N$ 167.294

Struct. unknown. Monoterpene alkaloid. Alkaloid from *Skytanthus acutus* (Apocynaceae). Bp_5 190°.

Appel, H.H. *et al., Scientia (Valparaiso)*, 1961, **28**, 5-9; *CA*, **57**, 2332g

Sophora griffithii Alkaloid B A-425

Struct. unknown. Constit. of *Sophora griffithii*.

Primukhamedov, I. *et al., Rastit. Resur.*, 1969, **5**, 572-575; *CA*, **72**, 118549

Strychnos camptoneura Alkaloid B A-426

[58572-16-0]

Struct. unknown. Bisindole alkaloid. Alkaloid from *Strychnos camptoneura* (Loganiaceae). Mol. formula not reported (MW 622).

Verpoorte, R. *et al., Acta Pharm. Suec.*, 1975, **12**, 455-460 (*isol, uv, ir, ms*)

Thermopsis lanceolata Alkaloid B A-427

[78040-77-4]

Struct. unknown. Constit. of *Thermopsis lanceolata*.

▶ AZ7675000

Chao, K.-S. *et al., CA*, 1981, **95**, 35461q (*isol, props*)

Alkaloid 241B A-428

[97380-36-4]

$C_{16}H_{35}N$ 241.459

Struct. unknown. Major alkaloid from skin extracts of the Madagascan frog *Mantella madagascariensis* (family Ranidae, subfamily Mantellinae). m/e 241 (15), 135 (45), 58 (100). Cannot be hydrogenated. No exchangeable hydrogen. Apparently lacks rings. Has not been detected in dendrobatid frogs.

Daly, J.W. *et al., Toxicon*, 1984, **22**, 905-919 (*isol, ms*)

C-Alkaloid BL A-429

$C_{40}H_{50}N_4O_2^{2\oplus}$ 618.861

An oxidn. prod. of *C*-Alkaloid D, A-476. Struct. unknown. Alkaloid from calabash curare (*Strychnos* spp.) (Loganiaceae).

▶ Toxic (0.02 x Toxiferine).

Dichloride:
Cryst. + $2H_2O$. Dec. without melting, turning yellow, red then black. Deep-blue col. with $Ce(SO_4)_2$, becoming blue-green on standing.

Dipicrate: Mp 172-178°.

Schmidt, I. *et al., Helv. Chim. Acta*, 1960, **43**, 1218 (*isol, ir, uv*)
Gorman, A.A. *et al., Alkaloids (London)*, 1971, **1**, 200-338

Buxus Alkaloid BX6 A-430

Struct. unknown. Alkaloid from *Buxus sempervirens* (Buxaceae). Mp 207-212°.

Döpke, W. *et al., Pharmazie*, 1969, **24**, 649; *CA*, **72**, 43929p (*isol*)

Buxus Alkaloid BX10 A-431

Struct. unknown. Alkaloid from *Buxus sempervirens* (Buxaceae). Mp 221-224°.

Döpke, W. *et al., Pharmazie*, 1969, **24**, 649; *CA*, **72**, 43929p (*isol*)

Chamaecytisus Alkaloid C_1 A-432

$C_{15}H_{24}N_2O_2$ 264.367

Struct. unknown. Prob. a hydroxylupanine. Alkaloid from *Chamaecytisus frivaldskyanus, Chamaecytisus albus* and *Chamaecytisus calcareus* (Fabaceae). Mp 207-209°. $[\alpha]_D^{25}$ +59.2 (c, 0.38 in EtOH).

Daily, A. *et al., Planta Med.*, 1977, **32**, 380-383

Chamaecytisus Alkaloid C_2 A-433

$C_{12}H_{20}N_2O$ 208.303

Struct. unknown. Alkaloid from *Chamaecytisus austriacus, Chamaecytisus ciliatus* and *Chamaecytisus polytrichus* (Fabaceae). Mp 168-170°. $[\alpha]_D^{25}$ +38 (c, 0.4 in EtOH).

Daily, A. *et al., Planta Med.*, 1977, **32**, 380-383,

Rauwolfia obscura Alkaloid C_2 A-434

$C_{30}H_{34}N_4O$ 466.625

Bisindole alkaloid. Struct. unknown. Alkaloid from the leaves of *Rauwolfia obscura* (Apocynaceae). Mp 142-144°.

Timmins, P. *et al., Planta Med.*, 1975, **27**, 105-111 (*isol, uv, ir, pmr, ms*)

Buxus Alkaloid C A-435

$C_{24}H_{42}N_2O$ 374.609

Struct. unknown. Alkaloid from *Buxus sempervirens* (Buxaceae). Mp 212-214°. $[\alpha]_D$ +60 ($CHCl_3$). Props. similar to Cyclobuxamine H in C-846.

Schlittler, E. *et al., Helv. Chim. Acta*, 1949, **32**, 2209-2226 (*isol*)

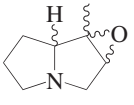
C-Alkaloid C A-436

Struct. unknown. Alkaloid from calabash curare (*Strychnos* spp.) (Loganiaceae). Characterised as picrate, dec. >270° without melting. Red-violet col. with $Ce(SO_4)_2$, becoming brown on standing.

Schmid, H. *et al., Helv. Chim. Acta*, 1952, **35**, 1864-1879; 1953, **36**, 102-121

Crotalaria goreensis Alkaloid C A-437

Crotalaria goreensis *Base C*



Possible structure

$C_8H_{13}NO$ 139.197

Alkaloid from *Crotalaria goreensis* whole plant (Fabaceae). Bp_3 112-114°. $[\alpha]_D$ +9.3 (EtOH). pK_a 8.8. Conts. one C-Me group. Gives a dihydro deriv.

Culvenor, C.C.J. *et al., Aust. J. Chem.*, 1961, **14**, 284

Dendrobates Alkaloid 223C A-438

[67217-78-1]

As *Dendrobates* Alkaloid 167A, A-354 with

R = C_5H_{11}, R′ = CH_3

$C_{15}H_{29}N$ 223.401

Tentative struct. Minor or trace alkaloid in skin extracts of *Dendrobates auratus, Dendrobates histrionicus* (various populations), *Dendrobates truncatus* and *Dendrobates* sp. of Colombia (Dendrobatidae). m/e 223(1), 222(2), 152(100). Cannot be hydrogenated.

Hydroxy (?)(1): **Dendrobates *Alkaloid 239E***

$C_{15}H_{29}NO$ 239.4

Trace alkaloid from skin extracts of *Dendrobates histrionicus* (Dendrobatidae). Mol. formula tentative. m/e 239(2), 238(3), 210(40), 152(100). Poss. a side-chain substd. deriv. of 223C. Cannot be hydrogenated.

Hydroxy (?)(2): **Dendrobates *Alkaloid 239F***

$C_{15}H_{29}NO$ 239.4

Trace alkaloid from skin extracts of *Dendrobates histrionicus* (Dendrobatidae). Mol. formula tentative. m/e 239(1), 168(100). Cannot be hydrogenated, forms *O*-Ac deriv.Poss. ring-substd. deriv. of 223C.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163 (*isol, ms, rev*)

Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Spande, T.F. *et al., J. Nat. Prod.*, 1999, **62**, 5-21 (*pmr, cmr, occur*)

Dendrobates Alkaloid 225C A-439

$C_{15}H_{31}N$ 225.417

Struct. unknown. Tentatively proposed to be a 2-*n*-butyl-5-*n*-heptylpyrrolidine. Trace constit. in *Dendrobates histrionicus* (Dendrobatidae).

Daly, J.W. *et al., J. Nat. Prod.*, 1986, **49**, 265-280

Dendrobates Alkaloid 237C A-440

$C_{16}H_{31}N$ 237.428

Struct. unknown. Minor alkaloid from skin extracts of *Dendrobates histrionicus* (Dendrobatidae). Mol. formula tentative; m/e 237 (2), 236 (1), 180 (100). Probably higher homologue of 223B. Cannot be hydrogenated.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-180 (*isol, ms, rev*)

Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 239C A-441

$C_{15}H_{29}NO$ 239.4

Struct. unknown. Trace alkaloid from skin extracts of *Dendrobates occultator* (Dendrobatidae). Mol. formula tentative; m/e 239 (2), 238 (3), 196 (100). Cannot be hydrogenated.

Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 251C A-442

$C_{16}H_{29}NO$ 251.411

Struct. unknown. Trace alkaloid from skin extracts of *Dendrobates minutus* (Dendrobatidae). Mol. formula tentative; m/e 251 (2), 234 (4), 154 (100). H_2-deriv, m/e 253, 154.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163 (*isol, ms, rev*)

Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 283C A-443

$C_{17}H_{33}NO_2$ 283.453

Struct. unknown. A major alkaloid from skin extracts of *Dendrobates histrionicus* and *Dendrobates occultator* (Dendrobatidae). m/e 283 (<1), 282 (1), 240 (5), 226 ($C_{13}H_{24}NO_2$, 28), 224 ($C_{15}H_{30}N$, 10), 166 ($C_{11}H_{20}N$, 60), 126 ($C_8H_{16}N$, 100). Cannot be hydrogenated.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-180 (*isol, ms, rev*)

Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 307C A-444

$C_{19}H_{33}NO_2$ 307.475

Struct. unknown. Minor alkaloid from skin extracts of *Dendrobates lehmanni* and *Dendrobates pumilio* (Dendrobatidae). m/e 307 (9), 290 (11), 182 (62), 70 (100). H_4-deriv, m/e 311 (3), 294 (3), 268 (5), 236(2), 110 (30), 84 (100), 70 (35).

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-180 (*isol, ms, rev*)

Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 309C A-445

$C_{19}H_{35}NO_2$ 309.491

Struct. unknown. Minor alkaloid from skin extracts of an undescribed *Dendrobates* sp. from Panama (Dendrobatidae). Mol. formula tentative; m/e 309 (3), 308 (2), 292 (1), 280 (4), 266 (4), 194 (15), 166 (100), 70(90). H_2-deriv, m/e 311 (3), 110 (25), 84(100), 70 (30).

Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Erythrophleum Alkaloid C A-446

Struct. unknown. Alkaloid from the bark of *Erythrophleum couminga* (Fabaceae). Cryst. (petrol). Mp 116°. Readily dec. Possibly an artifact.

Cronlund, A. *et al., Acta Pharm. Suec.*, 1975, **12**, 467-478 (*isol, uv, ir, pmr, ms*)

Gentiana macrophylla Alkaloid C A-447

Struct. unknown. Mol. formula not recorded. Monoterpene alkaloid. Alkaloid from the roots of *Gentiana macrophylla* (Gentianaceae). Cryst. (Me_2CO). Mp 206-208°.

Fu, F.-Y. *et al., Yaoxue Xuebao*, 1958, **6**, 198-203; *CA*, **53**, 8310b (*isol, uv*)

Leucojum Alkaloid C A-448

Leucojum *Base C*

$C_{16}H_{17}NO_5$ 303.314

Amaryllidaceae alkaloid. Struct. unknown. Isol. from *Leucojum* sp.

(Amaryllidaceae). Mp 185-186°. $[\alpha]_D$ -29 ($CHCl_3$).

Raffauf, R.F. *et al., Handb. Alkaloids Alkaloid-Containing Plants*, Wiley, 1970, 284

Mantella Alkaloid 205C A-449

Struct. and MF unknown. Trace alkaloid from skin extracts of one population of the Madagascan frog *Mantella madagascariensis*.

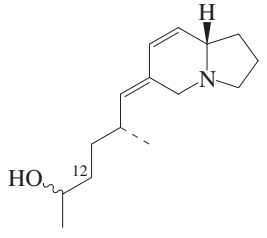
Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016 (*isol, ms*)

Mantella Alkaloid 211C A-450

Struct. and MF unknown. Trace alkaloid from skin extracts of the Madagascan frog *Mantella laevigata*.

Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016-1038 (*isol, ir, ms*)

Mantella Alkaloid 235C A-451



$C_{15}H_{25}NO$ 235.369

Structure revised in 2005. Alkaloid from skin extracts of the Madagascan frogs *Mantella aurantiaca*, *Mantella madagascariensis* and *Mantella crocea*.

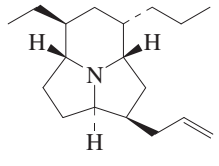
Ketone: **Mantella *Alkaloid 233F***
$C_{15}H_{23}NO$ 233.353
Trace alkaloid from skin extracts of *Mantella madagascariensis, Mantella aurantiaca* and *Mantella crocea*.

12ξ-Hydroxy: **Mantella *Alkaloid 251G***
$C_{15}H_{25}NO_2$ 251.368
Alkaloid from a *Mantella* sp. Tentative struct. assigned.

Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016-1038 (*isol, ir, ms*)

Andriamaharavo, N.R. *et al., J. Nat. Prod.*, 2005, **68**, 1743-1748 (*synth, ir, pmr, ms*)

Mantella Alkaloid 261C A-452



$C_{18}H_{31}N$ 261.45
Major alkaloid from skin extracts of the frog *Mantella betsileo*.

Dihydro(?): **Mantella *Alkaloid 263G***
$C_{18}H_{33}N$ 263.465
Alkaloid from skin extracts of *Mantella betsileo*.

Didehydro(?): Mantella *Alkaloid 259D*
$C_{18}H_{29}N$ 259.434
Alkaloid from the skin extracts of *Mantella betsileo*.

Hydroxy(?): **Mantella *Alkaloid 277G***
$C_{18}H_{31}NO$ 277.449
Alkaloid from the skin extracts of *Mantella betsileo*.

Hydroxy(?): **Mantella *Alkaloid 277H***
$C_{18}H_{31}NO$ 277.449
Alkaloid from the skin extracts of *Mantella betsileo*.

Kaneko, T. *et al., Heterocycles*, 2003, **59**, 745-757 (*isol, pmr, cmr, ms*)

Toyooka, N. *et al., Synlett*, 2005, 3109-3110 (*synth*)

Mantella Alkaloid 321C A-453

Allopumiliotoxin 321C

Struct. and MF unknown. Trace alkaloid from skin extracts of the Madagascan frog *Mantella betsileo*.

Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016-1038 (*isol, ms*)

Salicornia herbacea Alkaloid C A-454

Struct. unknown. Alkaloid from *Salicornia herbacea* (Chenopodiaceae). Mp 236-238°.

Perchlorate: Mp 210-212°.

Picrate: Mp 117°.

Borkowski, B. *et al., Pharmazie*, 1965, **20**, 390-393; *CA*, **63**, 15223c

Stephania glabra Alkaloid C A-455

$C_{21}H_{25}NO_4$ 355.433

Struct. unknown. Not reported in further investigations of this species. Isol. from tubers of *Stephania glabra*. Cryst. (Me_2CO). Mp 182-183°. $[\alpha]_D$ +259 (c, 1 in EtOH). Conts. 3 OMe and 1 NMe group. λ_{max} 267 ; 304 (no solvent reported).

Hydrochloride: Mp 230-232°.

Kin, F.K. *et al., Khim. Prir. Soedin.*, 1965, **1**, 392-394; *Chem. Nat. Compd. (Engl. Transl.)*, 1965, **1**, 308-309

Voacanga thouarsii Alkaloid C A-456

[50924-00-0]

$C_{42}H_{54}N_4O_{10}$ 774.909

Bisindole alkaloid. Struct. unknown. Alkaloid from the leaves of *Voacanga thouarsii* (Apocynaceae). Cryst. (MeOH). Mp 290-295° dec. $[\alpha]_D$ -282. Intense blue col. with HNO_3. λ_{max} 223 (log ϵ 4.57); 263 (log ϵ 4.1); 299 (log ϵ 4.17); 328 (log ϵ 4.21) (EtOH).

Rolland, Y. *et al., Phytochemistry*, 1973, **12**, 2039-2042 (*isol, uv, ir, pmr*)

Alkaloid C2 A-457

$C_{30}H_{34}N_4O$ 466.625

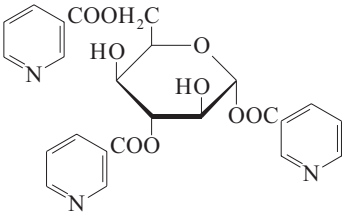
Prob. of Usambarine type. Struct. unknown. Alkaloid from the leaves of *Rauwolfia obscura* (Apocynaceae). Cryst. Mp 142-144°.

Timmins, P. *et al., Planta Med.*, 1975, **27**, 105-111 (*isol, uv, ir, pmr, ms*)

Alkaloid CB2 A-458

α-D-Glucopyranose 1,3,6-tri-3-pyridinecarboxylate, 9CI. 1,3,6-Tri-O-nicotinoyl-α-D-glucopyranose

[76129-64-1]

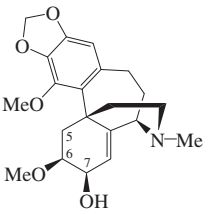


$C_{24}H_{21}N_3O_9$ 495.445
Alkaloid from stems of *Cryptolepis buchanani* (Asclepiadaceae). Mp 131-133°.

Dutta, S.K. *et al., Phytochemistry*, 1980, **19**, 1278 (*isol, uv, ir, pmr, ms, struct*)

Alkaloid CC 2 A-459

[35320-76-4]



Absolute Configuration

$C_{21}H_{27}NO_5$ 373.448
Alkaloid from the corms of *Colchicum cornigerum* (Liliaceae). Cryst. (EtOAc/Et_2O). Mp 172-174° (168-170°). $[\alpha]_D^{22}$ +40 (c, 0.48 in $CHCl_3$).

Ac: Mp 135-137°.

5,6-Didehydro, 7-ketone: ***Alkaloid CC 20***
[35320-75-3]
$C_{21}H_{23}NO_5$ 369.416
Alkaloid from the corms of *Colchicum cornigerum* (Liliaceae). Cryst. (EtOAc/Et_2O). Mp 210-212°. $[\alpha]_D^{22}$ +324 (c, 0.26 in $CHCl_3$).

Saleh, M. *et al., Coll. Czech. Chem. Comm.*, 1963, **28**, 3413 (*isol*)

Alkaloid CC 3 A-460

$C_{20}H_{25}NO_5$ 359.421

Struct. unknown. Alkaloid from the corms of *Colchicum cornigerum* (Liliaceae). Fine needles (EtOAc/Et_2O). Mp 197-199°. $[\alpha]_D^{22}$ +155 (c, 0.76 in $CHCl_3$).

El-Hamidi, A. *et al., Coll. Czech. Chem. Comm.*, 1962, **27**, 2111-2118 (*isol, uv, ir*)

Alkaloid CC 11 A-461

Mol. formula not reported. Struct. unknown. Alkaloid from the corms of *Colchicum cornigerum* (Liliaceae). Mp 251-253°.

Saleh, M. *et al., Coll. Czech. Chem. Comm.*, 1963, **28**, 3413-3423 (*isol*)

Alkaloid CC 13 **A-462**

Mol. formula not reported. Struct. unknown. Alkaloid from the seeds of *Colchicum cornigerum* (Liliaceae). Cryst. (MeOH). Mp 115-117°.

Saleh, M. *et al., Coll. Czech. Chem. Comm.*, 1963, **28**, 3413-3423 (*isol*)

Alkaloid CC 14 **A-463**

Struct. unknown. Mol. formula not reported. Alkaloid from the stems of *Colchicum cornigerum* (Liliaceae). Mp 182-185°.

Saleh, M. *et al., Coll. Czech. Chem. Comm.*, 1963, **28**, 3413-3423 (*isol*)

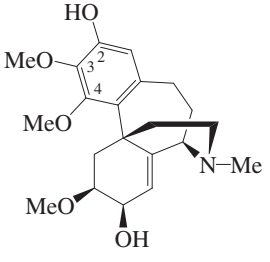
Alkaloid CC 23 **A-464**

Struct. unknown. MF = $C_{21\text{-}22}H_{23\text{-}27}NO_{5\text{-}6}$. Alkaloid from the corms of *Colchicum cornigerum* (Liliaceae). Mp 240-243°. $[\alpha]_D^{22}$ -22 (c, 0.2 in $CHCl_3$). $[\alpha]_D$ -4 (c, 0.3 in MeOH).

Potěšilová, H. *et al., Coll. Czech. Chem. Comm.*, 1969, **34**, 3540-3552 (*isol, uv, ir*)

Alkaloid CC 3b **A-465**

[35320-77-5]



$C_{21}H_{29}NO_5$ 375.464

Probable struct. May be the O^4-de-Me, O^2-Me isomer. Alkaloid from the corms of *Colchicum cornigerum* (Liliaceae). Cryst. (EtOAc). Mp 210-212°. $[\alpha]_D^{22}$ +25 (c, 0.76 in $CHCl_3$).

Di-Ac: Mp 205-206°.

Potěšilová, H. *et al., Coll. Czech. Chem. Comm.*, 1969, **34**, 3540 (*isol, uv, ir*)
Battersby, A.R. *et al., J.C.S.(C)*, 1971, 3514 (*uv, ir, pmr, struct*)

***Papaver* Alkaloid** **A-466**
$C_{21}H_{21}NO_6$

$C_{21}H_{21}NO_6$ 383.4

Struct. unknown. Alkaloid from the flowers of *Papaver rhoeas*. Yellow prisms. Mp 172-174°.

Awe, W. *et al., Arch. Pharm. (Weinheim, Ger.)*, 1957, **290**, 367-376 (*isol*)

***Hortia* Alkaloid** **A-467**
$C_{22}H_{19}N_3O_3$

$C_{22}H_{19}N_3O_3$ 373.41

Struct. unknown. Alkaloid from the bark of *Hortia arborea*. Cryst. (Et_2O). Mp 136-139° Mp 191-194° (as hydrochloride).

Antonaccio, L.D. *et al., Ann. Acad. Bras. Cinc.*, 1956, **28**, 183-188; *CA*, **51**, 7385d (*isol*)

Alkaloid CN1 **A-468**

[126161-02-2]

$C_{23}H_{25}NO_5$ 395.454

Struct. unknown. Minor alkaloid from the aerial parts of *Corydalis nobilis* (Papaveraceae). Long thin needles (MeOH). Mp 210-211°.

Slavík, J. *et al., Coll. Czech. Chem. Comm.*, 1989, **54**, 2009-2020 (*isol, ms*)

Alkaloid CN2 **A-469**

[126161-13-5]

Struct. unknown. Minor alkaloid from the aerial parts of *Corydalis nobilis* (Papaveraceae). Light yellow prismatic needles (MeOH). Mp 260-261°. Ir 1660 cm^{-1} (CO), OH band absent.

Slavík, J. *et al., Coll. Czech. Chem. Comm.*, 1989, **54**, 2009-2020 (*isol, uv, ir*)

Alkaloid CR1 **A-470**

$C_{22}H_{34}NO_2^{\oplus}$ 344.516

Struct. unknown. Alkaloid from whole plants of *Consolida regalis*. Mp 288° (as iodide). $[\alpha]_D^{24}$ +29 (c, 0.2 in MeOH) (iodide). Contains a CO group (1760 cm^{-1}) and an OH group (3320 cm^{-1}). Prob. a quaternary C_{20}-diterpenoid alkaloid.

Slavík, J. *et al., Coll. Czech. Chem. Comm.*, 1987, **52**, 804-811 (*isol, uv, pmr, ms*)

Alkaloid CRB 11 **A-471**

$C_{21}H_{26}N_2O_3$ 354.448

Struct. unknown. Trace alkaloid from root of *Rauwolfia cumminsii* (Apocynaceae). Off-white amorph. powder. Prob. an indolenine.

Iwu, M.M. *et al., Planta Med.*, 1978, **34**, 390-396 (*isol, uv, ir, ms*)

Alkaloid CSA 3 **A-472**

CSA 3

Struct. unknown. Mol. formula not reported. Co-occurs with Cryptolepine and Indolo[3,2-*b*]quinoline, I-109. Could possibly be identical with Isocryptolepine in I-110. Alkaloid from roots of *Cryptolepis sanguinolenta* (Asclepiadaceae). Mp 300°.

Dwuma-Badu, D. *et al., J. Pharm. Sci.*, 1978, **67**, 433-434 (*isol*)

***Rauwolfia obscura* Alkaloid** **A-473**
D_1

$C_{30}H_{34}N_4O$ 466.625

Struct. unknown. Bisindole alkaloid. Alkaloid from the leaves of *Rauwolfia obscura* (Apocynaceae). Mp 190-192°.

Timmins, P. *et al., Planta Med.*, 1975, **27**, 105-111 (*isol, uv, ir, ms*)

***Rauwolfia obscura* Alkaloid** **A-474**
D_2

$C_{31}H_{36}N_4O$ 480.652

Struct. unknown. Bisindole alkaloid. Alkaloid from the leaves of *Rauwolfia obscura* (Apocynaceae). Amorph. yellow powder.

Timmins, P. *et al., Planta Med.*, 1975, **27**, 105-111 (*isol, uv, ms*)

***Buxus* Alkaloid D** **A-475**

Struct. unknown

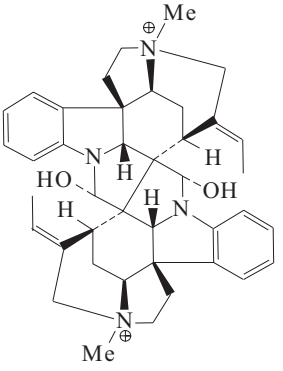
$C_{29}H_{50}N_2O$ 442.727

Alkaloid from *Buxus sempervirens* (Buxaceae). Mp 182-183°. $[\alpha]_D$ +50 ($CHCl_3$).

Schlittler, E. *et al., Helv. Chim. Acta*, 1949, **32**, 2209-2226 (*isol*)

***C*-Alkaloid D** **A-476**

[6902-18-7]



$C_{40}H_{48}N_4O_2^{2\oplus}$ 616.845

Alkaloid from calabash curare (*Strychnos* spp.) and from *Strychnos castelneana* (Loganiaceae), also obt. by acid treatment of C-dihydrotoxiferine I. Shows low curarising activity. $[\alpha]_D$ -51 (50% Me_2CO aq.) (as dichloride). Characterised as dichloride and dipicrate, dec. >270° without melting. Red-violet col. with $Ce(SO_4)_2$ turning yellowish on standing.

▶ EY5200000

Di-N-*de-Me:* ***Bisnor*-C-*alkaloid D***

[62510-51-4]

$C_{38}H_{42}N_4O_2$ 586.775

Alkaloid from stem bark of *Strychnos dolichothyrsa* and from *Strychnos matopensis*. Poss. artifact. Tentative identification.

Schmid, H. *et al., Helv. Chim. Acta*, 1952, **35**, 1864; 1953, **36**, 102; 1954, **37**, 1993; 1961, **44**, 34 (*isol, uv, props*)

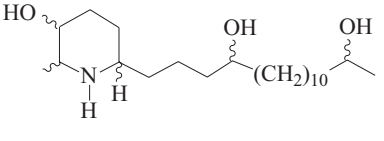
***Cassia* Alkaloid D** **A-477**

16-(5-Hydroxy-6-methyl-2-piperidinyl)-2,13-hexadecanediol, 9CI. 6-(4,15-Dihydroxyhexadecyl)-3-hydroxy-2-methylpiperidine

[38839-06-4]



$C_{22}H_{45}NO_3$ 371.602
Minor alkaloid from *Cassia carnaval* whole plant (Fabaceae). Oil. Cryst. salts could not be obt.

Lythgoe, D. *et al., An. Asoc. Quim. Argent.*, 1972, **60**, 317; *CA*, **77**, 164901 (*isol, uv, ir, ms*)

Coelidium Alkaloid D A-478

[11051-60-8]

$C_{16}H_{27}N_3$ 261.409

Struct. unknown. Alkaloid from *Coelidium fourcadei* dried leaves and branches (Fabaceae). Cryst. (hexane). Mp 138-139°. Interconverts with *Coelidium* Alkaloid E, A-497 in dil. acid. Cooccurs with Isotripiperideine, I-340 and α-Aldotripiperideine.

Arndt, R.R. *et al., J. S. Afr. Chem. Inst.*, 1968, **21**, 54-57 (*isol, ir, uv, pmr*)

Dendrobates Alkaloid 223D A-479

As *Dendrobates* Alkaloid 167A, A-354 with
R = C_6H_{13}, R′ = H

$C_{15}H_{29}N$ 223.401

Tentative struct. Minor or trace alkaloid in skin extracts of *Dendrobates histrionicus* (various populations), *Dendrobates minutus, Dendrobates pumilio* and *Dendrobates truncatus* (Dendrobatidae). m/e 223(1), 222(2), 138(100). Cannot be hydrogenated.

Hydroxy (?): **Dendrobates *Alkaloid 239G***
$C_{15}H_{29}NO$ 239.4
Trace alkaloid from skin extracts of *Dendrobates histrionicus* (Dendrobatidae). Mol. formula tentative. m/e 239(1), 238(3), 138(100). Poss. side-chain hydroxy deriv. of 223D. Cannot be hydrogenated.

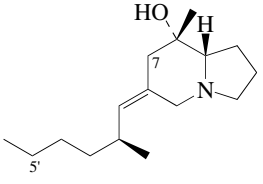
Dendrobates Alkaloid 251D A-480

Octahydro-8-methyl-6-(2-methylhexylidene)-8-indolizinol, 9CI. Pumiliotoxin 251D
[73376-35-9]



$C_{16}H_{29}NO$ 251.411
A major alkaloid in skin extracts of the neotropical poison-frogs *Dendrobates tricolor, Dendrobates silverstonei, Dendrobates bombetes, Dendrobates* sp. (Colombia); minor or trace constit. of *Dendrobates auratus, Dendrobates histrionicus, Dendrobates lehmanni* and *Dendrobates minutus* (Dendrobatidae).
$[\alpha]_D^{20}$ -8.5 (c, 1 in $CHCl_3$) (synthetic).

Hydrochloride:
Cryst. (hexane/EtOAc). Mp 206-206.5° (evac. capillary). $[\alpha]_D^{25}$ +32 (c, 0.5 in MeOH) (synthetic).

7β-Hydroxy: ***Allopumiliotoxin 267A***
[73376-38-2]
$C_{16}H_{29}NO_2$ 267.411
A major alkaloid in *Dendrobates auratus, Dendrobates azureus, Dendrobates fulguritus, Dendrobates granuliferus, Dendrobates lehmanni, Dendrobates leucomelas, Dendrobates minutus* (all populations), *Dendrobates tinctorius*; minor or trace constit. in *Dendrobates auratus* (different population), *Dendrobates histrionicus* and *Dendrobates pumilio* (Dendrobatidae). $[\alpha]_D^{25}$ +24.7 (c, 0.17 in MeOH).

5′ξ-Hydroxy: [94596-77-7]
$C_{16}H_{29}NO_2$ 267.411
Major alkaloid from skin of the Brazilian toad *Melanophyrniscus moreirae*. $[\alpha]_D^{25}$ +7.2 (c, 0.8 in MeOH). Has not been detected in dendrobatid frogs.

Dendrobates Alkaloid 307D A-483

$C_{18}H_{31}NO_3$ 309.448

Struct. unknown. Trace alkaloid from skin extracts of an undescribed *Dendrobates* sp. from Panama (Dendrobatidae). Mol. formula tentative; m/e 307 (8), 306 (5), 292 (3), 290 (5), 264 (4), 262 (11), 206 (11), 194(18), 166 (100), 70 (85). H_4-deriv, m/e 311, 110, 84, 70.

Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Leucojum Alkaloid D A-484

Leucojum *Base D*

$C_{16}H_{19}NO_3$ 273.331

Amaryllidaceae alkaloid. Struct. unknown. Isol. from *Leucojum* sp. (Amaryllidaceae).

Raffauf, R.F. *et al., Handb. Alkaloids Alkaloid-Containing Plants*, Wiley, 1970, 284

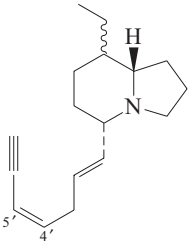
Mantella Alkaloid 211D A-485

Struct. and MF unknown. Trace alkaloid from skin extracts of the Madagascan frogs *Mantella* sp. cf. *madagascariensis, Mantella betsileo* and *Mantella laevigata*.

Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016-1038 (*isol, ir, ms*)

Mantella Alkaloid 243D A-486

8-Ethyl-5-(1,4-heptadien-6-ynyl)octahydroindolizine, 9CI. Indolizidine 243D
[151834-95-6]



$C_{17}H_{25}N$ 243.391
Provisional struct. Minor or trace alkaloid from skin extracts of 2 populations of the Madagascan frog *Mantella madagascariensis.*

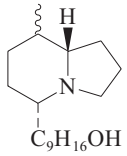
4′,5′-Dihydro: 8-Ethyl-5-(1-hepten-6-ynyl)octahydroindolizine, 9CI. **Mantella *Alkaloid 245C***. *Indolizidine 245C*
[151805-29-7]
$C_{17}H_{27}N$ 245.407
Minor or trace alkaloid in 2 populations of *Mantella madagascariensis.* Provisional struct.

Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016 (*isol, ir, ms*)

Mantella Alkaloid 279D A-487

(Octahydro-8-methyl-5-indolizinyl)-sec-*nonenol, 9CI. Indolizidine 279D*

[151871-23-7]



$C_{18}H_{33}NO$ 279.465

Provisional struct. Secondary alcohol contg. a *Z*-double bond. Minor or trace alkaloid from skin extracts of 2 populations of the Madagascan frog *Mantella madagascariensis*.

Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016 (*isol, ir, ms*)

Melodinus aeneus Alkaloid D A-488

Struct. unknown. Bisindole alkaloid. Alkaloid from *Melodinus aeneus* (Apocynaceae). No phys. props. recorded. M.W. = 534.

Baassou, S. *et al., Phytochemistry*, 1978, **17**, 1449-1450 (*isol*)

Narcissus Alkaloid D A-489

Narcissus *Base D*

$C_{17}H_{19}NO_3$ 285.342

Amaryllidaceae alkaloid. Approx. MF given (may be H_{21}). Struct. unknown. Isol. from *Narcissus* sp. (Amaryllidaceae). Prisms (Me_2CO). Mp 228-229° dec. $[\alpha]_D^{25}$ -175 (c, 0.2 in $CHCl_3$).

Boit, H.-G. *et al., Chem. Ber.*, 1957, **90**, 2197-2202 (*isol*)

Pandaca caducifolia Alkaloid D A-490

$[C_{40}H_{44\text{-}46}N_4O_{3\text{-}4}]$

Struct. unknown. Bisindole alkaloid. Alkaloid from *Pandaca caducifolia* (Apocynaceae). Noncryst. $[\alpha]_D$ +236 (MeOH). Alternative mol. formula $C_{40}H_{46}N_4O_4$.

Zeches, M. *et al., Phytochemistry*, 1975, **14**, 1122-1124 (*isol, uv, ir, pmr, ms*)

Salicornia herbacea Alkaloid D A-491

Struct. unknown. Alkaloid from *Salicornia herbacea* (Chenopodicaeae). Mp 178-180°.

Borkowski, B. *et al., Pharmazie*, 1965, **20**, 390-393; *CA*, **63**, 15223c

Stephania glabra Alkaloid D A-492

$C_{20}H_{25}NO_4$ 343.422

Struct. unknown. Isol. from tubers of *Stephania glabra*. Cryst. (C_6H_6). Mp 153-154°. Conts. 2 OMe and 1 NMe groups. Not reported in further investigations of this species. λ_{max} 265 (no solvent reported).

Hydrochloride: Mp 227-228°.

Hydrobromide: Mp 229-230°.

Kin, F.K. *et al., Khim. Prir. Soedin.*, 1965, **1**, 392-394; *Chem. Nat. Compd. (Engl. Transl.)*, 1965, **1**, 308-309 (*isol*)

Cava, M.P. *et al., J.O.C.*, 1968, **33**, 2785-2789 (*Stephania glabra constits*)

Alkaloid D1† A-493

Prob. of Usambarine type. Struct. unknown. Alkaloid from the leaves of *Rauwolfia obscura* (Apocynaceae). Off-white cryst. Mp 190-192°.

Timmins, P. *et al., Planta Med.*, 1975, **27**, 105-111 (*isol, uv, ir, pmr, ms*)

Alkaloid D2 A-494

Prob. of Usambarine type. Struct. unknown. Alkaloid from the leaves of *Rauwolfia obscura* (Apocynaceae). Amorph. yellow powder.

Timmins, P. *et al., Planta Med.*, 1975, **27**, 105-111

Alkaloid 267D A-495

[97380-35-3]

$C_{16}H_{29}NO_2$ 267.411

Struct. unknown. Alkaloid from skin extracts of the Australian frog *Pseudophryne semimarmorata* (Myobatrachidae) and the Madagascan frog *Mantella aurantiaca* (family Ranidae, subfamily Mantellinae). m/e 267 (13), 250 (10), 194 (16), 166 (100), 70(80). Forms H_2-deriv. Two exchangeable hydrogens. Has not been detected in dendrobatid frogs.

Daly, J.W. *et al., Toxicon*, 1984, **22**, 905-919 (*isol, ms*)

Buxus Alkaloid E A-496

$C_{27}H_{50}N_2O_3$ 450.704

Struct. unknown. Alkaloid from *Buxus balearica* (Buxaceae). Mp 287-289°. $[\alpha]_D^{20}$ +12 (c, 0.6 in $CHCl_3$/MeOH).

Kurakina, I.O. *et al., Khim. Prir. Soedin.*, 1969, **5**, 26-28; *Chem. Nat. Compd. (Engl. Transl.)*, 1969, **5**, 20-21 (*isol*)

Coelidium Alkaloid E A-497

[11051-61-9]

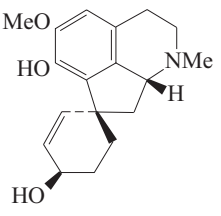
$C_{16}H_{27}N_3$ 261.409

Struct. unknown. Alkaloid from *Coelidium fourcadei* dried leaves and branches (Fabaceae). Cryst. (hexane). Mp 148-149°. Interconverts with *Coelidium* Alkaloid D, A-478 in dil. acid. Cooccurs with α-aldotripiperideine and Isotripiperideine, I-340.

Arndt, R.R. *et al., J. S. Afr. Chem. Inst.*, 1968, **21**, 54-57 (*isol, ir, uv, pmr*)

Croton linearis Alkaloid E A-498

[58206-97-6]



$C_{18}H_{23}NO_3$ 301.385

Belongs to diastereomeric series to alkaloids covered by Amuroline, A-957 and Cryprochine, C-781. Alkaloid from *Croton linearis* (Euphorbiaceae).

Di-Ac: Mp 190-193°. $[\alpha]_D^{26}$ -18 (c, 0.5 in MeOH).

4-Ketone, N-*de-Me:* ***Jacularine***
[20361-70-0]
$C_{17}H_{19}NO_3$ 285.342
Alkaloid from *Croton linearis* (Euphorbiaceae). Enantiomer of Isocrotsparinine in A-957.

Haynes, L.J. *et al., J.C.S.(C)*, 1966, 1680-1685 (*Alkaloid E*)

Stuart, K.L. *et al., Tet. Lett.*, 1968, 4473-4474 (*Jacularine*)

Casagrande, C. *et al., J.C.S. Perkin 1*, 1975, 1659-1663 (*stereochem*)

Dendrobates Alkaloid 223E A-499

$C_{14}H_{25}NO$ 223.358

Struct. unknown. Trace alkaloid from skin extracts of *Dendrobates lehmanni, Dendrobates occultator* and *Dendrobates tinctorius* (Dendrobatidae). Mol. formula tentative; m/e 223 (2), 222 (3), 168 (100). Possibly an analogue of *Dendrobates* Alkaloid 225, A-291 with double bond in side chain. H_2-deriv, m/e 223, 168.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-180 (*isol, ms, rev*)

Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 237E A-500

$C_{15}H_{27}NO$ 237.384

Struct. unknown. Trace alkaloid from skin extracts of *Dendrobates histrionicus* (Dendrobatidae). Mol. formula tentative; m/e 237 (1), 236 (3), 208 (70), 152 (100). Possibly a hydroxypumiliotoxin C. H_2-deriv, m/e 239, 152.

Daly, J.W. *et al., Toxicon*, 1978, **16**, 163-180 (*isol, ms, rev*)

Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Lycopodium Alkaloid E A-501

Lycopodium *Base E*

$C_{17}H_{25}NO_2$ 275.39

Struct. unknown. Alkaloid from *Lycopodium fawcettii* (Lycopodiaceae). Mp 267-269° dec. (as perchlorate).

Burnell, R.H. *et al., J.C.S.*, 1959, 3091 (*isol, ir*)

Muntafara sessilifolia Alkaloid E A-502

Struct. unknown. Bisindole alkaloid. Alkaloid from *Muntafara sessilifolia* (preferred genus name *Tabernaemontana*) (Apocynaceae). Other dimeric alkaloids isol. from *M. sessilifolia* designated F, I, J, N, O, P, Q and R. No phys. props. recorded.

Panas, J.M. *et al., Phytochemistry*, 1975, **14**, 1120-1122 (*isol*)

Pandaca caducifolia Alkaloid E A-503

$C_{40}H_{46}N_4O_4$ 646.828

Struct. unknown. Bisindole alkaloid. Alkaloid from *Pandaca caducifolia* (Apocynaceae). Noncryst. $[\alpha]_D$ -51 (MeOH).

Zeches, M. *et al., Phytochemistry*, 1975, **14**, 1122-1124 (*isol, uv, ir, pmr*)

Skytanthus acutus Alkaloid E A-504

$C_{10}H_{19}N$ 153.267

Struct. unknown. Monoterpene alkaloid. Alkaloid from *Skytanthus acutus* (Apocynaceae). $Bp_{1.5}$ 120-140°.

Appel, H.H. *et al., Scientia (Valparaiso)*, 1961, **28**, 5-9; *CA*, **57**, 2332g

Sophora microphylla Alkaloid E A-505

Sophora *Base E*

Struct. unknown. Alkaloid from *Sophora microphylla* (Fabaceae). Mp 168-171°.

Briggs, L.H. *et al., J.C.S.*, 1937, 1795 (*isol*)

Voacanga thouarsii Alkaloid E A-506

[50924-06-6]

$C_{43}H_{50}N_4O_7$ 734.891

Bisindole alkaloid. Struct. unknown. Alkaloid from the leaves of *Voacanga thouarsii* (Apocynaceae). Cryst. (MeOH). Mp 235-238°. $[\alpha]_D$ -140. Intense blue col. with HNO_3. λ_{max} 225 (log ϵ 4.66); 265 (log ϵ 4.08); 283 (sh) (log ϵ 3.96); 291 (sh) (log ϵ 3.9) (EtOH).

Rolland, Y. *et al., Phytochemistry*, 1973, **12**, 2039-2042 (*isol, uv, ir, pmr*)

Buxus Alkaloid F A-507

Struct. unknown. Alkaloid from *Buxus wallichiana* (Buxaceae). Mp 190°. $[\alpha]_D^{28}$ +26.6 (c, 0.76 in EtOH). MW 442.

Vassová, A. *et al., Pharmazie*, 1970, **25**, 363; *CA*, **73**, 127748n

Dendrobates Alkaloid 223F A-508

$C_{14}H_{25}NO$ 223.358

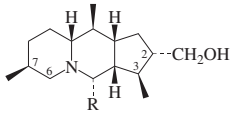
Struct. unknown. Trace alkaloid from skin extracts of an undescribed *Dendrobates* sp. from Panama (Dendrobatidae). Mol. formula tentative; m/e 223 (1), 138 (100). H_2-deriv, m/e 225, 182.

Daly, J.W. *et al., Prog. Chem. Org. Nat. Prod.*, 1982, **41**, 205 (*ms, rev*)

Dendrobates Alkaloid 251F A-509

Dodecahydro-3,7,10-trimethylcyclopenta[b]quinolizine-2-methanol, 9CI. Indolizidine 251F

[142543-01-9]



Absolute Configuration

R = H

$C_{16}H_{29}NO$ 251.411

Major alkaloid from the skin extracts of the Colombian dendrobatid frog *Minyobates bombetes*. Pale yellow oil. $[\alpha]_D$ -11.1 (c, 0.96 in MeOH).

Aldehyde: Dodecahydro-3,7,10-trimethylcyclopenta[b]quinolizine-2-carboxaldehyde, 9CI. **Dendrobates *Alkaloid 249B.*** *Indolizidine 249B*
[142543-05-3]
$C_{16}H_{27}NO$ 249.395
Alkaloid from *Minyobates bombetes*. Tentative struct.

2,3,6,7-Tetradehydro: **Dendrobates *Alkaloid 247***
[142543-06-4]
$C_{16}H_{25}NO$ 247.38
Alkaloid from *Minyobates bombetes*. Tentative struct.

2,3,6,7-Tetradehydro, aldehyde: **Dendrobates *Alkaloid 245***
[142543-07-5]
$C_{16}H_{23}NO$ 245.364
Alkaloid from *Minyobates bombetes*. Tentative struct.

Deoxy: Dodecahydro-2,3,7,10-tetramethylcyclopenta[b]quinolizine, 9CI. Dendrobates *Alkaloid 235H. Indolizidine 235H*
[142543-02-0]
$C_{16}H_{29}N$ 235.412
Alkaloid from *Minyobates bombetes*. Tentative struct.

Deoxy, 2ξ-hydroxy: Dodecahydro-2,3,7,10-tetramethylcyclopenta[b]quinolizin-2-ol, 9CI. **Dendrobates *Alkaloid 251J.*** *Indolizidine 251J*
[142543-08-6]

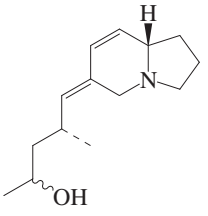
Mantella Alkaloid 221F A-510



$C_{14}H_{23}NO$ 221.342

Structure tentatively reassigned in 2005. Trace alkaloid from skin extracts of the Madagascan frog *Mantella aurantiaca*.

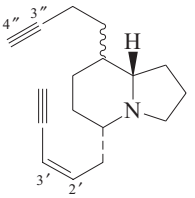
Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016-1038 (*isol, ms*)

Adriamaharavo, N.R. *et al., J. Nat. Prod.*, 2005, **68**, 1743-1748 (*struct*)

Mantella Alkaloid 241F A-511

8-(3-Butynyl)octahydro-5-(2-penten-4-ynyl)indolizine, 9CI. Indolizidine 241F

[151805-25-3]



$C_{17}H_{23}N$ 241.375

Provisional struct. Minor alkaloid from skin extracts of 2 populations of the Madagascan frog *Mantella madagascariensis*.

2′,3′-Dihydro: 8-(3-Butynyl)octahydro-5-(4-pentynyl)indolizine, 9CI. **Mantella *Alkaloid 243B.*** *Indolizidine 243B*
[151805-26-4]
$C_{17}H_{25}N$ 243.391
Trace alkaloid in one population of *Mantella madagascariensis*. Provisional struct.

3″,4″-Dihydro: 8-(3-Butenyl)octahydro-5-(2-penten-4-ynyl)indolizine, 9CI. **Mantella *Alkaloid 243C.*** *Indolizidine 243C*
[151805-27-5]
$C_{17}H_{25}N$ 243.391
Minor or trace alkaloid in 2 populations of *Mantella madagascariensis*. Provisional struct.

2′,3′,3″,4″-Tetrahydro: 8-(3-Butenyl)octahydro-5-(4-pentynyl)indolizine, 9CI. **Mantella *Alkaloid 245B.*** *Indolizidine 245B*
[151805-28-6]
$C_{17}H_{27}N$ 245.407

Trace alkaloid in 1 population of *Mantella madagascariensis*. Provisional struct.

Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016 (*isol, ir, ms*)

Mantella Alkaloid 249F A-512

Homopumiliotoxin 249F

Struct. and MF unknown. Trace alkaloid from skin extracts of one population of the Madagascan frog *Mantella madagascariensis*.

Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016-1038 (*isol, ir, ms*)

Mantella Alkaloid 265F A-513

$C_{16}H_{27}NO_2$ 265.395

Struct. unknown. May be related to alkaloids of the 235C class. Trace alkaloid from skin extracts of the Madagascan frog *Mantella aurantiaca*.

Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016-1038 (*isol, ms*)

Mantella Alkaloid 281F A-514

Struct. unknown. Probably belongs to the pumiliotoxin A class of alkaloid (see Pumiliotoxin A, P-791). Alkaloid from skin extracts of two populations of the Madagascan frog *Mantella madagascariensis*.

Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016-1038 (*isol, ir, ms*)

Pandaca caducifolia Alkaloid F A-515

$C_{40}H_{46}N_4O_4$ 646.828

Struct. unknown. Bisindole alkaloid. Alkaloid from *Pandaca caducifolia* (Apocynaceae). Noncryst. $[\alpha]_D$ +56 (MeOH).

Zeches, M. *et al., Phytochemistry*, 1975, **14**, 1122-1124 (*isol, uv, ir, pmr*)

Lycopodium Alkaloid G A-516

Lycopodium *Base G*

$C_{18}H_{27}NO_3$ 305.416

Struct. unknown. Alkaloid from *Lycopodium fawcettii* (Lycopodiaceae). Mp 198-200° (as perchlorate).

Burnell, R.H. *et al., J.C.S.*, 1959, 3091 (*isol, ir*)

Mantella Alkaloid 207G A-517

Homopumiliotoxin 207G

Struct. and MF unknown. Trace alkaloid from skin extracts of the Madagascan frog *Mantella viridis*.

Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016-1038 (*isol, ms*)

Pandaca caducifolia Alkaloid G A-518

$C_{40}H_{46}N_2O_4$ 618.814

Struct. unknown. Bisindole alkaloid. Alkaloid from *Pandaca caducifolia* (Apocynaceae). Noncryst. $[\alpha]_D$ +35 (MeOH).

Zeches, M. *et al., Phytochemistry*, 1975, **14**, 1122-1124 (*isol, uv, ir, pmr*)

Voacanga thouarsii Alkaloid G A-519

[50923-99-4]

$C_{42}H_{50}N_4O_5$ 690.881

Bisindole alkaloid. Struct. unknown. Alkaloid from the leaves of *Voacanga thouarsii* (Apocynaceae). Cryst. (Et_2O). Mp 280-285° dec. $[\alpha]_D$ +46. Pink col. with HNO_3. λ_{max} 221 (log ϵ 4.63); 260 (log ϵ 4.29); 298 (log ϵ 3.7) (EtOH).

Rolland, Y. *et al., Phytochemistry*, 1973, **12**, 2039-2042 (*isol, uv, ir, pmr*)

Alkaloid 251G A-520

[97380-38-6]

$C_{15}H_{25}NO_2$ 251.368

Struct. unknown. Alkaloid from skin extracts of the Madagascan frog *Mantella aurantiaca* (family Ranidae, subfamily Mantellinae). m/e 251 (26), 250 (45), 162 (100). Forms H_2-deriv. Two exchangeable hydrogens. Hydroxy congener of Alkaloid 235C. Has not been detected in dendrobatid frogs.

Daly, J.W. *et al., Toxicon*, 1984, **22**, 905-919 (*isol, ms*)

Alkaloid GB14 A-521

$C_{24}H_{33}NO_5$ 415.528

Struct. unknown. Alkaloid from the bark of *Himantandra belgraveana* (*Galbulimima belgraveana*) (Himantandraceae). Prisms + $1H_2O$ (Me_2CO/heptane). Mp 106°.

Binns, S.V. *et al., Aust. J. Chem.*, 1965, **18**, 569-573 (*isol*)

Alkaloid GB15 A-522

$C_{22}H_{35}NO_3$ 361.523

Struct. unknown. Alkaloid from the bark of *Himantandra* (*Galbulimima*) *belgraveana* (Himantandraceae). Needles (C_6H_6). Mp 230°. $[\alpha]_D$ +58 (c, ca. 1 in $CHCl_3$).

Binns, S.V. *et al., Aust. J. Chem.*, 1965, **18**, 569-573 (*isol*)

Alkaloid GB16 A-523

$C_{20}H_{27}NO_2$ 313.439

Struct. unknown. Alkaloid from the bark of *Himantandra* (*Galbulimima*) *belgraveana* (Himantandraceae). Prisms (EtOAc). Mp 203°. $[\alpha]_D$ +550 (c, ca. 1 in $CHCl_3$).

Binns, S.V. *et al., Aust. J. Chem.*, 1965, **18**, 569-573 (*isol*)

Alkaloid GB17 A-524

$C_{21}H_{31}NO_3$ 345.481

Struct. unknown. Alkaloid from the bark of *Himantandra* (*Galbulimima*) *baccata* (Himantandraceae). Needles + $1H_2O$ (MeOH aq.). Mp 115°. $[\alpha]_D$ -21 (c, ca. 1 in $CHCl_3$).

Binns, S.V. *et al., Aust. J. Chem.*, 1965, **18**, 569-573 (*isol*)

Alkaloid GB18 A-525

$C_{22}H_{33}NO_3$ 359.508

Struct. unknown. Alkaloid from the bark of *Himantandra baccata* (preferred genus name *Galbulimima*) (Himantandraceae). Prisms (heptane). Mp 120°. $[\alpha]_D$ +37 (c, ca. 1 in $CHCl_3$).

Binns, S.V. *et al., Aust. J. Chem.*, 1965, **18**, 569-573 (*isol*)

Gentiana Alkaloid II A-526

Struct. unknown. Monoterpene alkaloid. Alkaloid from *Gentiana asclepiadea, Gentiana bulgarica, Gentiana cruciata, Gentiana lutea* and *Gentiana punctata* (Gentianaceae).

Mollov, N.M. *et al., Dokl. Bulg. Akad. Nauk*, 1965, **18**, 947; *CA*, **64**, 10084h (*isol, ir*)

Cordell, G.A. *et al., Alkaloids (Academic Press)*, 1977, **16**, 431 (*rev*)

Sternbergia Alkaloid III A-527

Sternbergia *Base III*

Amaryllidaceae alkaloid. Struct. unknown. Isol. from *Sternbergia fischeriana* (Amaryllidaceae). Mp 212-213°. Opt. inactive, mol. formula not recorded.

Hydrobromide: Mp 174-175°.

Picrate: Mp 217-219°.

Proskurnina, N.F. *et al., Chem. Zentralbl.*, 1954, **125**, 8353 (*isol*)

Solanum Alkaloid IV A-528

Struct. unknown. A glycoalkaloid cont. NH, OH and conjugated C=O. Isol. from epigeal parts of *Solanum nigrum* (Solanaceae). Cryst. (MeOH). Mp 320-325°. Cooccurs with Solasonine, Solamargine and β-Solamargine (see Spirosol-5-en-3-ol, S-456).

Aslanov, S.M. *et al., Khim. Prir. Soedin.*, 1971, **7**, 674; *Chem. Nat. Compd. (Engl. Transl.)*, 1971, **7**, 658

Ungernia Alkaloid IV A-529

Ungernia *Base IV*

Amaryllidaceae alkaloid. Struct. unknown. Isol. from the leaves of *Ungernia minor* (Amaryllidaceae). Cryst. (MeOH). Mp 193-194°.

Normatov, M. *et al., Uzb. Khim. Zh.*, 1965, **9**, 25-30; *CA*, **63**, 7061f (*isol*)

Gentiana cruciata Alkaloid IVb A-530

$C_{10}H_{16}N_2O_7$ 276.246

Struct. unknown. Monoterpene alkaloid. Alkaloid from *Gentiana cruciata* (Gentianaceae). Mp 138-140°.

Marekov, N. *et al., Dokl. Bulg. Akad. Nauk*, 1965, **18**, 999-1002; *CA*, **64**, 11270a (*isol, ir*)

Cordell, G.A. *et al., Alkaloids (Academic Press)*, 1977, **16**, 431-510 (*rev*)

Lycopodium annotinum Alkaloid IX A-531

Lycopodium *Base IX*

$C_{17}H_{25}NO_2$ 275.39

Struct. unknown. Alkaloid from *Lycopodium annotinum* (Lycopodiaceae).

Methiodide: Mp 324°. $[\alpha]_D^{20}$ -49.8.

Methochloride: Mp 274°.

Methoperchlorate: Mp 316°.

Methopicrate: Mp 78-80°.

Achmatowicz, O. *et al., Pol. J. Chem. (Rocz. Chem.)*, 1958, **32**, 485 (*isol, uv*)

C-Alkaloid J A-532

$C_{19}H_{21}N_2$ 277.388

Struct. unknown. Alkaloid from calabash curare (*Strychnos* spp.) (Loganiaceae). Mp 260° dec. (as picrate). Red-orange col. with $Ce(SO_4)_2$.

Kebrle, J. *et al., Helv. Chim. Acta*, 1953, **36**, 102-121 (*isol, uv*)

Mantella Alkaloid 207J A-533

Struct. and MF unknown. Possibly a homologue of Precoccinelline in D-886. Trace alkaloid from skin extracts of one population of the Madagascan frog *Mantella madagascariensis.*

Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016-1038 (*isol, ir, ms*)

Mantella Alkaloid 235J A-534

Homopumiliotoxin 235J

Struct. and MF unknown. Trace alkaloid from skin extracts of one population of the Madagascan frog *Mantella madagascariensis.*

Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016-1038 (*isol, ir, ms*)

Mantella Alkaloid 235K A-535

Struct. and MF unknown. Considered to be a tricyclic alkaloid. Trace alkaloid from skin extracts of the Madagascan frog *Mantella betsileo.*

Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016-1038 (*isol, ms*)

Alkaloid K2 A-536

$C_{21}H_{27}NO_6$ 389.447

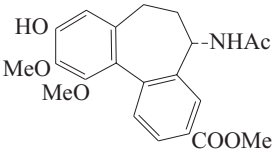
Struct. unknown. Alkaloid from the above-ground parts of *Colchicum kesselringii* (Liliaceae). Mp 226-228°.

Methiodide: Mp 247-249°.

Yusupov, M.K. *et al., J. Gen. Chem. USSR (Engl. Transl.)*, 1964, **34**, 1682 (*isol*)

Alkaloid K4 A-537

2-Demethylallocolchicine



$C_{21}H_{23}NO_6$ 385.416

(*S*)-*form*

Alkaloid from the above-ground parts of *Colchicum kesselringii* (Liliaceae). Mp 238-240° (natural) Mp 259-260° (semisynthetic). $[\alpha]_D^{20}$ -152 (c, 0.92 in MeOH) (semisynthetic).

Ac:

Cryst. ($Et_2O/CHCl_3$). Mp 230-232°. $[\alpha]_D^{22}$ -150 (c, 1.0 in MeOH).

Me ether: ***Allocolchicine****. Suhailamine. Alkaloid K3*

[641-28-1]

$C_{22}H_{25}NO_6$ 399.443

Alkaloid from the flowers of *Colchicum autumnale*, from *Colchicum decaisnei* and above ground parts of *Colchicum kesselringii* (Liliaceae). Cryst. ($Et_2O/CHCl_3$) or amorph. solid. Mp 257-258°. $[\alpha]_D^{22}$ -150 (c, 1.2 in MeOH) (semisynthetic). First descr. as Alkaloid K3 without abs. config. or opt. rotn. Suhailamine (1991) assigned (*S*)-config. However, spectroscopic and phys. props. of authentic Allocolchicine differ from those of Suhailamine and therefore the true struct. of the latter remains unclear.

Yusupov, M.K. *et al., J. Gen. Chem. USSR (Engl. Transl.)*, 1964, **34**, 1682 (*isol*)

C-Alkaloid L A-544

Struct. unknown. Alkaloid from calabash curare (*Strychnos* spp.) (Loganiaceae). Prisms (Me_2CO aq.) (as picrate). Mp 171° (picrate). Red col. with $Ce(SO_4)_2$.

Kebrle, J. *et al., Helv. Chim. Acta*, 1953, **36**, 102-121 (*isol, uv*)

Colubrina Alkaloid L A-545

$C_{37}H_{40}N_2O_6$ 608.733

Bisbenzylisoquinoline alkaloid. Struct. unknown. Alkaloid from the stem bark of *Colubrina faralaotra* ssp. *faralaotra* (Rhamnaceae).

Guinaudeau, H. *et al., Planta Med.*, 1975, **27**, 304-318 (*isol, uv, pmr, ms*)

Mantella Alkaloid 251L A-546

Homopumiliotoxin 251L

Struct. and MF unknown. Occurs mainly as the *O*-Ac deriv. Trace alkaloid from skin extracts of one population of the Madagascan frog *Mantella madagascariensis.*

Garraffo, H.M. *et al., J. Nat. Prod.*, 1993, **56**, 1016-1038 (*isol, ir, ms*)

Alkaloid L10 A-547

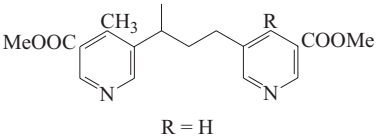
$C_{16}H_{27}NO$ 249.395

Struct. unknown. Alkaloid from *Lycopodium annotinum* (Lycopodiaceae). Mp 223° (as perchlorate).

Manske, R.H.F. *et al., Can. J. Res., Sect. B*, 1943, **21**, 92-96 (*isol*)

Alkaloid LA 4 A-548

[116097-93-9]



R = H

$C_{19}H_{22}N_2O_4$ 342.394

Alkaloid artifact generated by NH_3 and secoiridoid glucoside from ripe fruits of the common privet *Ligustrum vulgare* (Oleaceae). Semi-solid. $[\alpha]_D^{20}$ -0.23 (c, 1.0 in EtOH).

Willems, M. *et al., Arch. Pharm. (Weinheim, Ger.)*, 1988, **321**, 229 (*isol, uv, ir, pmr, cmr, ms, struct*)

Alkaloid LA 5 A-549

[115531-75-4]

As Alkaloid LA 4, A-548 with

R = CH_3

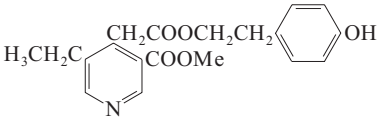
$C_{20}H_{24}N_2O_4$ 356.421

Alkaloid artifact generated by NH_3 and secoiridoid glucosides from ripe fruit of the common privet *Ligustrum vulgare* (Oleaceae). Semi-solid. $[\alpha]_D^{20}$ -0.39 (c, 1.0 in EtOH).

Willems, M. *et al., Arch. Pharm. (Weinheim, Ger.)*, 1988, **321**, 229 (*isol, uv, ir, pmr, cmr, ms, struct*)

Alkaloid LA 6 A-550

[113145-61-2]



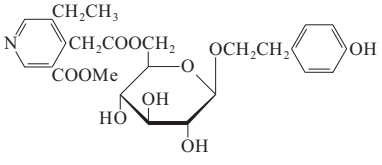
$C_{19}H_{21}NO_5$ 343.379

Alkaloid artifact generated by NH_3 and secoiridoid glucosides from ripe fruits of the common privet *Ligustrum vulgare* (Oleaceae). Needles (EtOAc/MeOH). Mp 115-116°.

Willems, M. *et al., Arch. Pharm. (Weinheim, Ger.)*, 1987, **320**, 1245 (*isol, uv, ir, pmr, cmr, ms, struct*)

Alkaloid LA 9 A-551

[116057-84-2]



$C_{25}H_{31}NO_{10}$ 505.521

Alkaloid artifact generated by NH_3 and secoiridoid glucosides from ripe fruits of the common privet *Ligustrum vulgare* (Oleaceae). Cryst. (EtOAc/MeOH). Mp 64-66°. $[\alpha]_D^{20}$ -0.1 (c, 1.0 in EtOH).

Willems, M. *et al., Arch. Pharm. (Weinheim, Ger.)*, 1988, **321**, 357 (*isol, uv, ir, pmr, cmr, struct*)

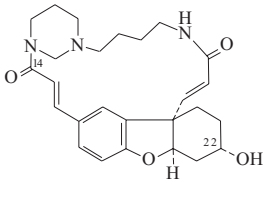
Alkaloid LB1 A-552

Prob. a spermidine related alkaloid. Struct. unknown. Minor alkaloid from the seeds of *Lunaria biennis* (Brassicaceae). Mp 220° dec.

Hairs, E. *et al., Bull. Acad. R. Med. Belg.*, 1909, 1042-1048; *CA*, 1892, **4**, 1042 (*isol*)

Alkaloid LBZ A-553

[38143-11-2]



$C_{26}H_{33}N_3O_4$ 451.564

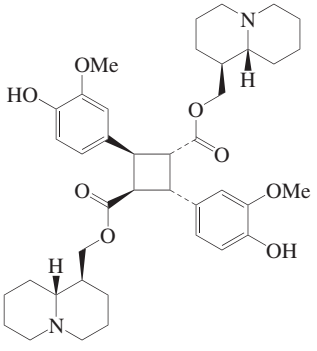
Alkaloid LC7 A-555

Alkaloid LV3†



Probable structure

$C_{40}H_{54}N_2O_8$ 690.875

Truxillate-type dimer of Epilupinyl transferulate in E-95. Alkaloid from leaves of *Lupinus cosentinii* (Fabaceae). Cryst. (MeOH/$CHCl_3$). Mp 228°. $[\alpha]_D^{25}$ +23 (c, 1 in $CHCl_3$/MeOH 1:1).

Beck, A.B. *et al., J. Nat. Prod.*, 1979, **42**, 385 (*isol, struct, uv, ir, pmr, ms*)

Alkaloid LE1 A-556

$C_{28}H_{47}N_3O$ 441.699

Struct. unknown. Alkaloid from *Lycopodium erythraeum* (Lycopodiaceae).

MacLean, D.B. *et al., Alkaloids (Academic Press)*, 1985, **26**, 241

Alkaloid LO1 A-557

$C_{31}H_{39}N_3O_2$ 485.668

Struct. unknown. Alkaloid from *Lycopodium obtusifolium* (Lycopodiaceae).

MacLean, D.B. *et al., Alkaloids (Academic Press)*, 1985, **26**, 241

Alkaloid LO2 A-558

$C_{30}H_{49}N_3O$ 467.737

Struct. unknown. Alkaloid from *Lycopodium obtusifolium* (Lycopodiaceae).

MacLean, D.B. *et al., Alkaloids (Academic Press)*, 1985, **26**, 241

Alkaloid LO3 A-559

$C_{29}H_{49}N_3$ 439.726

Struct. unknown. Alkaloid from *Lycopodium obtusifolium* (Lycopodiaceae).

MacLean, D.B. *et al., Alkaloids (Academic Press)*, 1985, **26**, 241

Alkaloid LS14 A-560

$C_{30}H_{49}N_3O$ 467.737

Struct. unknown. Alkaloid from *Lycopodium saururus* (Lycopodiaceae).

MacLean, D.B. *et al., Alkaloids (Academic Press)*, 1985, **26**, 241

Alkaloid LV1† A-561

$C_{15}H_{22}N_2O$ 246.352

Not the same as Alkaloid LV1, A-562. Struct. unknown. Alkaloid from *Lupinus digitatus* (Fabaceae). Needles (Me_2CO/petrol). Mp 108-109°. $[\alpha]_D$ -314 (MeOH). Deep-red col. with $FeCl_3$.

Perchlorate:

Cream needles + ½H_2O (EtOH). Mp 160-162° dec. Cryst. with difficulty.

Methiodide:

Cream nodules (EtOH). Mp 246-248° dec.

Crow, W.D. *et al., Aust. J. Chem.*, 1955, **8**, 136-139; 1957, **10**, 177-181

Alkaloid LV1† A-562

$C_{29}H_{45}N_3$ 435.695

Not the same as Alkaloid LV1, A-561. Struct. unknown. Alkaloid from *Lycopodium verticillatum* (Lycopodiaceae).

MacLean, D.B. *et al., Alkaloids (Academic Press)*, 1985, **26**, 241

Alkaloid LV2 A-563

$C_{15}H_{24}N_2O_2$ 264.367

Struct. unknown. Tentative mol. formula. Trace alkaloid from seeds of *Lupinus varius* (Fabaceae).

Crow, W.D. *et al., Aust. J. Chem.*, 1955, **8**, 136-139

Alkaloid LV3† A-564

$C_{20}H_{27}NO_4$ 345.438

Struct. unknown. Alkaloid from *Lupinus digitatus* (Fabaceae). Needles (MeOH). Mp 232-233° dec. Conts. one OMe group. λ_{max} 235 nm. Possibly the monomer of Alkaloid LC7, A-555.

Picrate:
Yellow needles (Me_2CO aq.). Mp 186°. Dec. sharply at 231°.

Crow, W.D. *et al., Aust. J. Chem.*, 1957, **10**, 177-181
Gladstones, J.S. *et al., J. R. Soc. West. Aust.*, 1958, **41**, 29

Alkaloid LV4 A-565

$C_{17}H_{23}NO_5$ 321.372

Provisional mol. formula. Struct. unknown. Alkaloid from *Lupinus digitatus* (Fabaceae). Needles ($CHCl_3$/petrol). Mp 235-237° dec.

Crow, W.D. *et al., Aust. J. Chem.*, 1957, **10**, 177-181
Gladstones, J.S. *et al., J. R. Soc. West. Aust.*, 1958, **41**, 29

Buxus Alkaloid M† A-566

See also *Buxus* Alkaloid M, A-567.
Struct unknown. Alkaloid from *Buxus wallichiana* (Buxaceae). Mp 261°. $[\alpha]_D^{23}$ +27 (c, 0.33 in $CHCl_3$).

Vassová, A. *et al., Pharmazie*, 1970, **25**, 363-365; *CA*, **73**, 127748n

Buxus Alkaloid M† A-567

$C_{27}H_{46}N_2O$ 414.673

Struct. unknown. Alkaloid from *Buxus sempervirens* (Buxaceae). Mp 203-205°. $[\alpha]_D$ -80 ($CHCl_3$).

Friedrich, W. *et al., Helv. Chim. Acta*, 1950, **33**, 873-878 (*isol*)

C-Alkaloid M A-568

$C_{20}H_{23}N_2O_2^{\oplus}$ 323.414

Struct. unknown. Minimum formula. Alkaloid from calabash curare (*Strychnos* spp.) (Loganiaceae). Slowly developing yellow col. with $Ce(SO_4)_2$.

Asmis, H. *et al., Helv. Chim. Acta*, 1954, **37**, 1968-1973 (*isol, uv*)

Alkaloid MB 10 A-569

$C_{23}H_{30}N_2O_5$ 414.5

Struct. unknown. Alkaloid from roots of *Rauwolfia mombasiana* (Apocynaceae). Off-white amorph. powder. Conts. 2 OMe groups.

Iwu, M.M. *et al., Planta Med.*, 1980, **38**, 260-263 (*isol, uv, ir, ms*)

Buxus Alkaloid N A-570

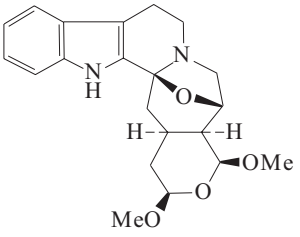
$C_{22}H_{35}NO_2$ 345.524

Struct. unknown. Poss. identical with Buxtauine M, B-482. Alkaloid from *Buxus sempervirens* (Buxaceae). Mp 178-179°. $[\alpha]_D$ +150 ($CHCl_3$). Props. corresp. to Buxtauine M, B-482.

Friedrich, W. *et al., Helv. Chim. Acta*, 1950, **33**, 873-878 (*isol*)

Alkaloid ND 370 A-571

[37304-95-3]



$C_{21}H_{26}N_2O_4$ 370.447
Alkaloid from the bark of *Nauclea diderrichii* (Rubiaceae). Cryst. by subl. Mp 209-211°.

MacLean, S. *et al., Can. J. Chem.*, 1972, **50**, 1496; 1976, **54**, 1262 (*uv, ir, pmr, ms, struct*)

Baptisia Alkaloid P_2 A-574

$C_{11}H_{18}N_2O$ 194.276

Struct. unknown. Isol. from *Baptisia australis* and *Baptisia perfoliata*. Cryst. ($MeOH/Et_2O$). Mp 300°.

Perchlorate:
Needles (MeOH). Mp 198°.

Marion, L. *et al., J.A.C.S.*, 1948, **70**, 691-692; 3253-3254 (*isol*)
Oung-Boran, *et al., Planta Med.*, 1969, **17**, 301-318 (*isol*)

Baptisia Alkaloid P_4 A-575

Struct. unknown. Isol. from *Baptisia minor*. Oil. $Bp_{0.05}$ 175-200°.

Perchlorate:
Needles. Mp 286°.

Marion, L. *et al., J.A.C.S.*, 1948, **70**, 3472-3474 (*isol*)

C-Alkaloid P A-576

$C_{20}H_{23}N_2O^{\oplus}$ 307.414

Struct. unknown. Quaternary alkaloid from calabash curare (*Strychnos* spp.) (Loganiaceae). Mp 224-232° (as picrate). Blue col. with $Ce(SO_4)_2$.

Giesbrecht, E. *et al., Helv. Chim. Acta*, 1954, **37**, 1974-1982 (*isol, uv*)

Lupinus Alkaloid P1 A-577

$C_{15}H_{22}N_2O$ 246.352

Tentative mol. form. Struct. unknown. Alkaloid from *Lupinus macounii* (Fabaceae). Small plates (EtOH/petrol). Mp 126° (sinters at 123°). Salts could not be obt. crystalline. Cooccurs with Anagyrine, A-970 and Lupanine, L-302.

Marion, L. *et al., J.A.C.S.*, 1946, **68**, 759-760

Lupinus Alkaloid P2 A-578

$C_{11}H_{18}N_2O$ 194.276

Tentative mol. formula. Lupine alkaloid. Struct. unknown. Alkaloid from *Baptisia australis* and *Baptisia perfoliata* (Fabaceae). Cryst. ($MeOH/Et_2O$). Mp 300°.

Perchlorate:
Needles (MeOH). Mp 198°.

Picrate(?): Mp 241° (sinters at 185°).

Marion, L. *et al., J.A.C.S.*, 1948, **70**, 691-692; 3253-3254 (*isol*)

Mucuna pruriens Alkaloid P A-579

Mucuna pruriens *Base P*

$C_{17}H_{26}NO_6$ 340.395

Struct. unknown. Alkaloid from *Mucuna pruriens* (Fabaceae). Bp 118-119°.

Picrate: Mp 100-101°.

Rakhit, S. *et al., Indian J. Pharm.*, 1956, **18**, 285; *CA*, **52**, 5748e (*isol*)

Alkaloid PAR 1 A-580

Struct. unknown. Mol. formula not recorded. Minor alkaloid from *Papaver argemone* (Papaveraceae). Prisms (MeOH). Mp 193-195°.

Táborská, E. *et al., Coll. Czech. Chem. Comm.*, 1988, **53**, 1845 (*isol, uv*)

Alkaloid PAR 2 A-581

Struct. unknown. Mol. formula not

recorded. Minor alkaloid from *Papaver argemone* (Papaveraceae). Prisms (MeOH). Mp 252-256°.

Táborská, E. *et al., Coll. Czech. Chem. Comm.*, 1988, **53**, 1845 (*isol, uv*)

Alkaloid PAR 3 **A-582**

Struct. unknown. Quaternary alkaloid. Mol. formula and counterion not specified. Minor alkaloid from *Papaver argemone* (Papaveraceae). Amorph.

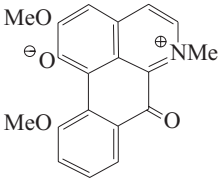
Táborská, E. *et al., Coll. Czech. Chem. Comm.*, 1988, **53**, 1845 (*isol, uv*)

Alkaloid PO3 **A-583**

1-Hydroxy-2,11-dimethoxy-6-methyl-7H-dibenzo[de,g]quinolinium hydroxide inner salt, 9CI

[27699-47-4]

[101064-66-8]



$C_{19}H_{15}NO_4$ 321.332

Alkaloid from *Papaver orientale* (Papaveraceae). Amorph.

Perchlorate: Mp 253-255°.

Preininger, V. *et al., CA*, 1967, **67**, 54290w (*isol*)

Preininger, V. *et al., Arch. Pharm. (Weinheim, Ger.)*, 1969, **302**, 808 (*uv, ir, pmr*)

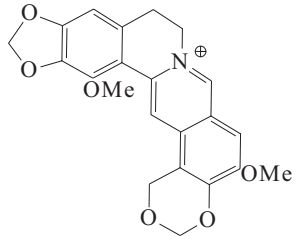
Saá, C. *et al., Tet. Lett.*, 1985, **26**, 4559 (*synth*)

Atanes, N. *et al., J.O.C.*, 1991, **56**, 2984 (*synth*)

Alkaloid PO4 **A-584**

Dehydroorientalidine

[23943-92-2]



$C_{22}H_{20}NO_6^{\oplus}$ 394.403

Alkaloid from *Papaver orientale, Papaver oreophilum, Papaver nudicaule* var. *leiocarpum, Papaver pyrenaicum* ssp. *rhoeaticum* and *Papaver alboroseum* (Papaveraceae).

Preininger, V. *et al., Coll. Czech. Chem. Comm.*, 1970, **35**, 124 (*uv, pmr, struct, bibl*)

Alkaloid PP1† **A-585**

$C_{19}H_{15}NO_5$ 337.331

Struct. unknown. Quaternary phenolic protoberberine. Minor alkaloid from *Papaver pavoninum* (Papaveraceae). Orange needles (MeOH) (as iodide). Mp 250° dec. (iodide). λ_{max} 222 ; 239 ; 251 ; 272 ; 352 (sh) ; 360 ; 468 (MeOH).

Táborská, E. *et al., Coll. Czech. Chem. Comm.*, 1988, **53**, 1845 (*isol, uv, ir, ms*)

Alkaloid PP1†, 9CI **A-586**

[158827-53-3]

$C_{17}H_{19}NO_3$ 285.342

Struct. unknown, prob. a normorphinane. Alkaloid from *Papaver pinnatifidium* (Papaveraceae). Mp 179°. Laevorotatory.

Slavík, J. *et al., Coll. Czech. Chem. Comm.*, 1994, **59**, 1879-1883 (*isol*)

***C*-Alkaloid Q** **A-587**

$C_{22}H_{27}N_3O_3$ 381.474

Minimum formula. Struct. unknown. Alkaloid from calabash curare (*Strychnos* spp.) (Loganiaceae). Mp 276-283° dec. No col. with $Ce(SO_4)_2$.

Meyer, H. *et al., Helv. Chim. Acta*, 1956, **39**, 1208-1213 (*isol, uv*)

***Mucuna pruriens* Alkaloid Q** **A-588**

Mucuna pruriens *Base Q*

Struct. unknown. Alkaloid from *Mucuna pruriens* (Fabaceae). Bp 220-221°.

Picrate: Mp 152-154°.

Rakhit, S. *et al., Indian J. Pharm.*, 1956, **18**, 285; *CA*, **52**, 5748e (*isol*)

***Veratrum* Alkaloid Q** **A-589**

$C_{32}H_{53}NO_4$ 515.775

Steroidal alkaloid. Struct. unknown. Alkaloid from *Veratrum californicum* (Liliaceae). Mp 209-210°. $[\alpha]_D^{25}$ -95 ($CHCl_3$).

Keeler, R.F. *et al., Phytochemistry*, 1968, 303 (*isol*)

***C*-Alkaloid R** **A-590**

$C_{21}H_{27}N_2O_2^{\oplus}$ 339.456

Minimum formula. Struct. unknown. Quaternary alkaloid from calabash curare (*Strychnos* spp.) (Loganiaceae). Violet col. with $Ce(SO_4)_2$. UV suggests indoline chromophore resembling *C*-Alkaloid B, A-400, *C*-Alkaloid C, A-436 and *C*-Alkaloid D, A-476.

Chloride: Mp 312° dec.

Perchlorate: Mp 317° dec.

Meyer, H. *et al., Helv. Chim. Acta*, 1956, **39**, 1208-1213 (*isol, uv*)

Fritillaria imperialis **A-591**

Alkaloid R

Fritillaria *Base R*

Prob. a steroidal alkaloid. Struct. unknown. Alkaloid from *Fritillaria imperialis* var. *lutea* (Liliaceae). Mp 134-136° Mp 213-215° (double Mp). Co-occurs with Imperonine, I-53.

Hydroiodide: Mp 205-207°.

Perchlorate: Mp 193-196°.

Methiodide: Mp 269° dec.

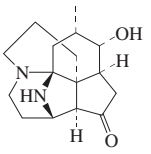
Paul, L. *et al., Chem. Ber.*, 1958, **91**, 1968

Lycopodium fawcwttii **A-592**

Alkaloid R

Lycopodium *Base R*

[53938-16-2]



Absolute Configuration

$C_{16}H_{24}N_2O_2$ 276.378

Alkaloid from *Lycopodium fawcettii* (Lycopodiaceae). Mp 129-130°. $[\alpha]_D$ +104.

Perchlorate: Mp 198-199°.

Burnell, R.H. *et al., Can. J. Chem.*, 1963, **41**, 3091 (*isol, ir*)

Burnell, R.H. *et al., Chem. Comm.*, 1974, 391 (*cryst struct*)

***Mucuna pruriens* Alkaloid R** **A-593**

Mucuna pruriens *Base R*

$C_{23}H_{35}NO_4$ 389.534

Struct. unknown. Alkaloid from *Mucuna pruriens* (Fabaceae). Bp 320°.

Oxalate: Mp 130-131° dec.

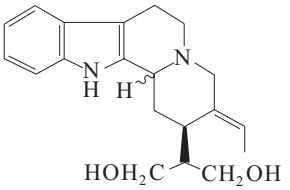
Picrate: Mp 172-173°.

Methiodide: Mp 95-96°.

Rakhit, S. *et al., Indian J. Pharm.*, 1956, **18**, 285; *CA*, **52**, 5748e (*isol*)

Alkaloid RMB 10 **A-594**

[71635-30-8]



$C_{20}H_{26}N_2O_2$ 326.438

Alkaloid from the stem bark of *Rauwolfia mombasiana* (Apocynaceae). Yellow amorph. powder.

Iwu, M.M. *et al., Planta Med.*, 1979, **36**, 208 (*isol, uv, ir, ms, struct*)

Voacanga schweinfurthii **A-595**

Alkaloid S_2

Struct. unknown. Bisindole alkaloid (*Aspidosperma-Aspidosperma* type). Alkaloid from the leaves of *Voacanga schweinfurthii* (Apocynaceae). Mol. formula not reported.

Newcombe, F. *et al., Planta Med.*, 1969, **17**, 276-280 (*isol, uv*)

Cordell, G.A. *et al., Alkaloids (Academic Press)*, 1981, **20**, 1; 266 (*rev*)

Voacanga schweinfurthii **A-596**

Alkaloid S_3

Struct. unknown. Bisindole alkaloid (*Aspidosperma-Aspidosperma* type). Alkaloid from the leaves of *Voacanga schweinfurthii* (Apocynaceae). Mol. formula not reported.

Newcombe, F. *et al., Planta Med.*, 1969, **17**, 276-280 (*isol, uv*)
Cordell, G.A. *et al., Alkaloids (Academic Press)*, 1981, **20**, 1; 266 (*rev*)

C-Alkaloid S A-597

$C_{19}H_{22}N_2$ 278.396

Approx. minimum formula. Struct. unknown. Alkaloid from calabash curare (*Strychnos* spp.) (Loganiaceae). Mp 250° (as picrate). Red-violet col. with $Ce(SO_4)_2$ becoming colourless on standing. Tertiary base.

Meyer, H. *et al., Helv. Chim. Acta*, 1956, **39**, 1208-1213 (*isol, uv*)

Mucuna pruriens Alkaloid S A-598

Mucuna pruriens *Base S*

Struct. unknown. Alkaloid from *Mucuna pruriens* (Fabaceae). Bp 320°.

Picrate: Mp 165-166°.

Rakhit, S. *et al., Indian J. Pharm.*, 1956, **18**, 285; *CA*, **52**, 5748e (*isol*)

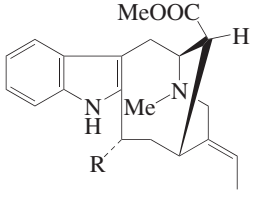
Alkaloid S-F A-599

$C_{15}H_{21}NO_3$ 263.336

Pyrrolizidine alkaloid. Struct. unknown. Alkaloid from *Senecio viscosus* dried plants (Asteraceae). Mp 228-230° dec. $[\alpha]_D^{22}$ -148 (c, 0.573 in $CHCl_3$).

Šantavý, F. *et al., Coll. Czech. Chem. Comm.*, 1962, **27**, 1666-1671

Alkaloid TC-D A-600



R = $C_2H_6NO_2$

$C_{23}H_{31}N_3O_4$ 413.516

Similar to Pagisulfine, P-11. Minor alkaloid from the root bark of *Tabernaemontana chippii* (Apocynaceae).

van Beek, T.A. *et al., J. Nat. Prod.*, 1985, **48**, 400-423 (*isol, uv, pmr, cmr, ms*)
Saxton, J.E. *et al., Nat. Prod. Rep.*, 1987, **4**, 591 (*rev, struct*)

Veratrum Alkaloid U A-601

$C_{36}H_{55}NO_{13}$ 709.829

Steroidal alkaloid, poss. an ester of Protoverine. Struct. unknown. Alkaloid from *Veratrum lobelianum* (Liliaceae). Mp 181-183°. $[\alpha]_D$ +7.6 ($CHCl_3$).

Bondarenko, N.V. *et al., Zh. Obshch. Khim.*, 1967, **37**, 332; *J. Gen. Chem. USSR (Engl. Transl.)*, 1967, **37**, 310 (*isol*)

C-Alkaloid UB A-602

$C_{19}H_{23}N_2O_3^{\oplus}$ 327.402

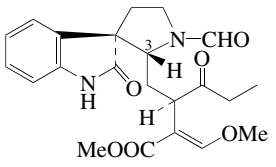
Minimum formula. Struct. unknown. Alkaloid from calabash curare (*Strychnos* spp.) (Loganiaceae). Mp 238-240° dec. (as picrate). Carmine col. with $Ce(SO_4)_2$, becoming brown on standing.

Schmid, H. *et al., Helv. Chim. Acta*, 1947, **30**, 2081-2091; 1952, **35**, 1846-1879 (*isol, uv*)

Alkaloid Us 7 A-603

Us 7

[188790-08-1]



$C_{22}H_{26}N_2O_6$ 414.457

Alkaloid from *Uncaria attenuata*. Pale yellow oil. $[\alpha]_D^{25}$ -12.9 (c, 1.10 in MeOH). λ_{max} 208 ; 244 (MeOH).

3-Epimer: ***Alkaloid Us 8***. *Us 8*
[188790-09-2]
$C_{22}H_{26}N_2O_6$ 414.457
From *Uncaria attenuata*. Yellow oil. $[\alpha]_D^{25}$ -9.6 (c, 1.25 in MeOH). λ_{max} 208 ; 244 (MeOH).

Aimi, N. *et al., J.C.S. Perkin 1*, 1997, 187 (*isol, uv, pmr, cmr, struct*)

Gentiana Alkaloid VI A-604

$C_{16}H_{18}N_2O_3$ 286.33

Struct. unknown. Monoterpene alkaloid. Alkaloid from *Gentiana asclepiadea, Gentiana bulgarica* and *Gentiana cruciata* (Gentianaceae). Mp 248-252°.

Mollov, N.M. *et al., Dokl. Bulg. Akad. Nauk*, 1965, **18**, 947-949; *CA*, **64**, 10084h (*isol, ir*)
Cordell, G.A. *et al., Alkaloids (Academic Press)*, 1977, **16**, 431 (*rev*)

Lycopodium annotinum A-605
Alkaloid VI

Lycopodium *Base VI*

$C_{16}H_{23}NO_2$ 261.363

Struct. unknown. Alkaloid from *Lycopodium annotinum* (Lycopodiaceae).

Methiodide: Mp 294°. $[\alpha]_D^{20}$ -13.9.

Methochloride: Mp 263°.

Methoperchlorate: Mp 287.5°.

Methopicrate: Mp 163°.

Achmatowicz, O. *et al., Pol. J. Chem. (Rocz. Chem.)*, 1958, **32**, 485 (*isol, uv*)

Lycopodium annotinum A-606
Alkaloid VII

Lycopodium *Base VII*

$C_{20}H_{29}NO_4$ 347.453

Struct. unknown. Alkaloid from *Lycopodium annotinum* (Lycopodiaceae).

Methiodide: Mp 292°. $[\alpha]_D^{20}$ -11.1.

Methochloride: Mp 261°.

Methoperchlorate: Mp 295°.

Achmatowicz, O. *et al., Pol. J. Chem. (Rocz. Chem.)*, 1958, **32**, 485 (*isol, uv*)

Pachysandra terminalis A-607
Alkaloid VI

Pachysandra *Base VI*

Steroidal alkaloid. Struct. unknown. Isol. from *Pachysandra terminalis* (Buxaceae). Mp 290-295°.

Kikuchi, T. *et al., Tet. Lett.*, 1964, 1817
Kikuchi, T. *et al., Yakugaku Zasshi*, 1967, **87**, 215; *CA*, **67**, 32888v

Rhodophiala bifida A-608
Alkaloid VI

Rhodophiala *Base VI*

$C_{16}H_{17}NO_4$ 287.315

Amaryllidaceae alkaloid. Struct. unknown. Isol. from the bulbs of *Rhodophiala bifida* (Amaryllidaceae). Mp 272-273°. $[\alpha]_D^{25}$ -74 (MeOH).

Di-O-*Ac:* Mp 163-165°.

Dihydro: Mp 271°.

Wildman, W.C. *et al., Pharmazie*, 1967, **22**, 725; *CA*, **69**, 19337m (*isol*)

Lycopodium annotinum A-609
Alkaloid VIII

Lycopodium *Base VIII*

$C_{16}H_{21}NO_3$ 275.347

Struct. unknown. Alkaloid from *Lycopodium annotinum* (Lycopodiaceae).

Methiodide: Mp 216-217°.

Methochloride: Mp 255°.

Methoperchlorate: Mp 234-236°.

Methopicrate: Mp 134-136°.

Achmatowicz, O. *et al., Pol. J. Chem. (Rocz. Chem.)*, 1958, **32**, 485 (*isol, uv*)

Lycopodium annotinum A-610
Alkaloid XI

Lycopodium *Base XI*

$C_{18}H_{25}NO_3$ 303.4

Struct. unknown. Alkaloid from *Lycopodium annotinum* (Lycopodiaceae).

Methiodide: Mp 272°. $[\alpha]_D^{20}$ -95.8.

Methochloride: Mp 250°.

Methoperchlorate: Mp 267-268°.

Achmatowicz, O. *et al., Pol. J. Chem. (Rocz. Chem.)*, 1958, **32**, 485 (*isol, uv*)

Lycopodium annotinum A-611
Alkaloid XII

Lycopodium *Base XII*

$C_{18}H_{25}NO_4$ 319.4

Struct. unknown. Alkaloid from *Lycopodium annotinum* (Lycopodiaceae).

Methiodide: Mp 283°. $[\alpha]_D^{20}$ -168.8.

Methochloride: Mp 270°.

Methyl perchlorate: Mp 259-260°.

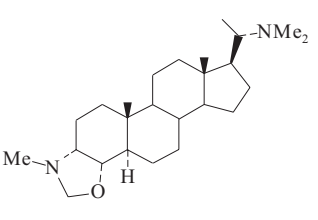
Methopicrate: Mp 219°.

Achmatowicz, O. *et al., Pol. J. Chem. (Rocz. Chem.)*, 1958, **32**, 485 (*isol, uv*)

Pachysandra terminalis A-612
Alkaloid XI

20-(Dimethylamino)-2′,3,3′,4-tetrahydro-3′-methylpregn-3-eno[3,4-d]oxazole, 8CI

[15027-86-8]



$C_{25}H_{44}N_2O$ 388.635
Alkaloid from *Pachysandra terminalis* (Buxaceae) after hydrol. Mp 201-202°. $[\alpha]_D$ -60 ($CHCl_3$). Could be an artifact.

Kikuchi, T. *et al., Tet. Lett.*, 1964, 1817-1823 (*isol*)

Rhodophiala bifida Alkaloid XIII A-613

Rhodophiala *Base XIII*

$C_{16}H_{17}NO_4$ 287.315

Amaryllidaceae alkaloid. Struct. unknown. Isol. from the bulbs of *Rhodophiala bifida* (Amaryllidaceae). Mp 248-250°. $[\alpha]_D^{21}$ +12 (MeOH).

Wildman, W.C. *et al., Pharmazie*, 1967, **22**, 725; *CA*, **69**, 19337m (*isol*)

Pachysandra terminalis Alkaloid XVI A-614

Pachysandra *Base XVI*
Steroidal alkaloid. Struct unknown. Alkaloid from *Pachysandra terminalis* (Buxaceae). Mp 272-276°.

Kikuchi, T. *et al., Tet. Lett.*, 1964, 1817
Kikuchi, T. *et al., Yakugaku Zasshi*, 1967, **87**, 215; *CA*, **67**, 32888v

Rhodophiala bifida Alkaloid XXV A-615

Rhodophiala *Base XXV*

$C_{20}H_{23}NO_5$ 357.405

Amaryllidaceae alkaloid. Struct. unknown. Isol. from the bulbs of *Rhodophiala bifida* (Amaryllidaceae). Mp 204-206°. $[\alpha]_D^{21}$ -65 (MeOH).

Wildman, W.C. *et al., Pharmazie*, 1967, **22**, 725; *CA*, **69**, 19337m (*isol*)

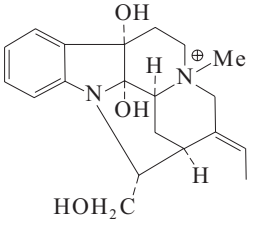
Pachysandra terminalis Alkaloid XXVII A-616

Pachysandra *Base XXVII*
Steroidal alkaloid. Struct. unknown. Alkaloid from *Pachysandra terminalis* (Buxaceae).

Kikuchi, T. *et al., Yakugaku Zasshi*, 1967, **87**, 215; *CA*, **67**, 32888v

C-Alkaloid Y A-617

C-*Profluorocurine. 2,7-Dihydroxymavacurine*
[6822-67-9]



$C_{20}H_{27}N_2O_3^{\oplus}$ 343.445
Quaternary alkaloid from *Strychnos guianensis*, *Strychnos toxifera* and calabash curare (*Strychnos* spp.) (Loganiaceae). Cryst. (as chloride). Red-violet colour with Ce(IV) becoming olive-green on standing.

17-Carboxylic acid, N-*de-Me, Me ester:*
2,7-Dihydro-2,7-dihydroxypleiocarpamine. *2,7-Dihydroxypleiocarpamine*
[87614-66-2]
$C_{20}H_{24}N_2O_4$ 356.421
Alkaloid from *Alstonia plumosa* (Apocynaceae). Cryst. (Me_2CO). Mp 152-158°. $[\alpha]_D$ +66 (c, 0.5 in MeOH). Called 2,7-Dihydroxypleiocarpamine in the lit., which is not strictly correct. No stereochem. assigned. CAS no. not found 8-14 CI.

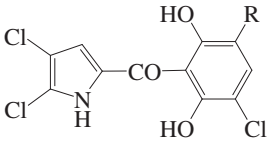
Asmis, H. *et al., Helv. Chim. Acta*, 1954, **37**, 1968-1973 (*isol, uv*)
Fritz, H. *et al., Annalen*, 1958, **611**, 268-276 (*uv*)
Hesse, M. *et al., Helv. Chim. Acta*, 1964, **47**, 878-911 (*struct*)
Jacquier, M.J. *et al., Phytochemistry*, 1982, **21**, 2973 (*2,7-Dihydroxypleiocarpamine*)
Penelle, J. *et al., Phytochemistry*, 2000, **53**, 1057-1066 (*isol, ir*)

Alkaloid YC2 A-618

Struct. unknown. Alkaloid from *Peganum harmala* (Zygophyllaceae). Characterised mainly by colour reactions and chem. props.

McKenzie, E. *et al., Phytochemistry*, 1975, **14**, 273-275 (*isol, uv*)

2-(3-Alkyl-5-chloro-2,6-dihydroxybenzoyl)-4,5-dichloro-1*H*-pyrroles A-619



2-(3-Chloro-5-hexyl-2,6-dihydroxybenzoyl)-4,5-dichloro-1*H*-pyrrole [188988-62-7]
$C_{17}H_{18}Cl_3NO_3$ 390.692
Prod. by *Streptomyces* sp. PA48424. GABA receptor antagonist, antibacterial agent. Yellow cryst. Sol. $CHCl_3$, EtOAc, MeOH; poorly sol. H_2O. Mp 145-147°. λ_{max} 225 ; 310 (ϵ 10000); 358 (ϵ 10700) (MeOH) (Berdy). λ_{max} 260 (ϵ 5200); 310 (ϵ 15000); 340 (MeOH/HCl) (Berdy). λ_{max} 233 ; 280 (ϵ 6400); 369 (ϵ 21300) (MeOH/NaOH) (Berdy).

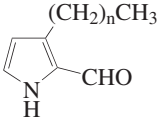
3-Alkyl-1*H*-pyrrole-2-carboxaldehydes A-623

3-Alkyl-2-formylpyrroles



Isol. as a mixt. of 3.3% n = 18, 12.5% n = 19, 49% n = 20, 25% n = 21, and 10.2% n = 22. The substitution pattern of these constits. has been questioned (Stierle *et al*). Metabs. of the marine sponge *Oscarella lobularis*.

3-Nonadecyl-1*H*-pyrrole-2-carboxaldehyde
[57992-51-5]
$C_{24}H_{43}NO$ 361.61
n = 18.

3-Eicosyl-1*H*-pyrrole-2-carboxaldehyde
*3-Icosyl-1*H*-pyrrole-2-carboxaldehyde*
[57992-52-6]
$C_{25}H_{45}NO$ 375.637
n = 19.

3-Heneicosyl-1*H*-pyrrole-2-carboxaldehyde
[57992-53-7]
$C_{26}H_{47}NO$ 389.663
n = 20.

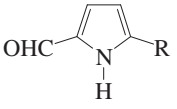
*12′,13′-Didehydro(*E*-): 13-(12-Heneicosenyl)-1*H*-pyrrole-2-carboxaldehyde, 9CI*
[57992-57-1]
$C_{26}H_{45}NO$ 387.648
Isol. from the marine sponge *Oscarella lobularis*.

3-Docosyl-1*H*-pyrrole-2-carboxaldehyde
[57992-54-8]
$C_{27}H_{49}NO$ 403.69
n = 21.

3-Tricosyl-1*H*-pyrrole-2-carboxaldehyde
[57992-55-9]
$C_{28}H_{51}NO$ 417.717
n = 22.
Cimino, G. *et al., Experientia*, 1975, **31**, 1387-1389 (*isol, uv, ir, pmr, ms, struct*)
Stierle, D.B. *et al., J.O.C.*, 1980, **45**, 4980-4982 (*struct*)

5-Alkyl-1*H*-pyrrole-2-carboxaldehydes A-624

2-Alkyl-5-formylpyrroles



5-Nonyl-1*H*-pyrrole-2-carboxaldehyde
[89631-84-5]
$C_{14}H_{23}NO$ 221.342
Isol. from a soft coral, *Telesto* sp., and its associated, but unidentified, demosponge. Yellow oil. Not possible to identify the exact source of the natural product since it perfused both organisms.

5-Pentadecyl-1*H*-pyrrole-2-carboxaldehyde
[75233-97-5]
$C_{20}H_{35}NO$ 305.503
Metab. from a marine sponge *Laxosuberites* sp. Isol. in admixture (46%) with the hexadecyl (12%), heptadecyl (23%) and nonadecyl (19%) homologues. λ_{max} 297 (ϵ 16000) (MeCN) (Derep).

*6′,7′*E*-Didehydro: 5-(6-Pentadecenyl)-1*H*-pyrrole-2-carboxaldehyde*
$C_{20}H_{33}NO$ 303.487
Metab. of the sponge *Mycale tenuispiculata*. Pale yellow solid. Mp 42-44°. λ_{max} 297 (ϵ 15400) (MeCN).

5-(13-Methyltetradecyl)-1*H*-pyrrole-2-carboxaldehyde [233744-63-3]
$C_{20}H_{35}NO$ 305.503
Isol. from the sponges *Desmapsamma anchorata* and *Mycale microsigmatosa*.

5-Hexadecyl-1*H*-pyrrole-2-carboxaldehyde
[75233-98-6]
$C_{21}H_{37}NO$ 319.529
Metab. from *Laxosuberites* sp. See note under pentadecyl above.

5-(14-Methylpentadecyl)-1*H*-pyrrole-2-carboxaldehyde [233744-64-4]
$C_{21}H_{37}NO$ 319.529
Isol. from the sponges *Desmapsamma anchorata* and *Mycale microsigmatosa*.

5-Heptadecyl-1*H*-pyrrole-2-carboxaldehyde
[75233-99-7]
$C_{22}H_{39}NO$ 333.556
Metab. from *Laxosuberites* sp. See note under pentadecyl above.

*9,10*Z*-Didehydro: 5-(9*Z*-Heptadecenyl)-1*H*-pyrrole-2-carboxaldehyde*
[233744-73-5]
$C_{22}H_{37}NO$ 331.54
Isol. from the sponges *Desmapsamma anchorata* and *Mycale microsigmatosa*.

5-Octadecyl-1*H*-pyrrole-2-carboxaldehyde
[262351-87-1]
$C_{23}H_{41}NO$ 347.583
Isol. from *Mycale mytilorum*. Pale yellow flakes. Mp 56-58°. λ_{max} 302 (ϵ 16000) (EtOH).

5-(16-Methylheptadecyl)-1*H*-pyrrole-2-carboxaldehyde
Mycalazal 6
[705973-02-0]
$C_{23}H_{41}NO$ 347.583
Isol. from the sponge *Mycale cecilia*. Amorph. powder. λ_{max} 203 (ϵ 6260); 249 (ϵ 2080); 300 (ϵ 9790) (MeOH).

5-Nonadecyl-1*H*-pyrrole-2-carboxaldehyde
[75234-00-3]
$C_{24}H_{43}NO$ 361.61
Metab. from *Laxosuberites* sp. See note under pentadecyl above.

*9,10*Z*-Didehydro: 5-(9*Z*-Nonadecenyl)-1*H*-pyrrole-2-carboxaldehyde*
[233744-74-6]
$C_{24}H_{41}NO$ 359.594
Isol. from the sponges *Desmapsamma anchorata* and *Mycale microsigmatosa*.

*12,13*Z*-Didehydro: 5-(12*Z*-Nonadecenyl)-1*H*-pyrrole-2-carboxaldehyde.* ***Mycalazal 4***
[705972-97-0]
$C_{24}H_{41}NO$ 359.594
Isol. from the sponge *Mycale cecilia*. Amorph. powder. λ_{max} 202 (ϵ 7585); 249 (ϵ 2340); 300 (ϵ 11760) (MeOH).

5-Eicosyl-1*H*-pyrrole-2-carboxaldehyde
[233744-67-7]
$C_{25}H_{45}NO$ 375.637
Isol. from the sponges *Desmapsamma anchorata* and *Mycale microsigmatosa*.

5-(9*Z*-Heneicosenyl)-1*H*-pyrrole-2-carboxaldehyde [233744-65-5]
$C_{26}H_{45}NO$ 387.648
Isol. from the sponges *Desmapsamma anchorata* and *Mycale microsigmatosa*.

5-(14*Z*-Heneicosenyl)-1*H*-pyrrole-2-carboxaldehyde
Mycalazal 8
[705973-25-7]
Isol. from the sponge *Mycale cecilia*. Amorph. powder. λ_{max} 202 (ϵ 7800); 248 (ϵ 2320); 300 (ϵ 11290) (MeOH).

5-(12*Z*,15*Z*-Heneicosadienyl)-1*H*-pyrrole-2-carboxaldehyde
Mycalazal 5
[705972-98-1]
$C_{26}H_{43}NO$ 385.632
Isol. from the sponge *Mycale cecilia*. Oil. λ_{max} 204 (ϵ 9250); 248 (ϵ 2390); 300 (ϵ 11150) (MeOH).

5-(12*Z*,15*Z*,18*Z*-Heneicosatrienyl)-1*H*-pyrrole-2-carboxaldehyde
Mycalazal 3
[705972-95-8]
$C_{26}H_{41}NO$ 383.616
Isol. from the sponge *Mycale cecilia*. Oil. λ_{max} 204 (ϵ 14690); 248 (ϵ 3440); 300 (ϵ 15400) (MeOH).

5-(12*Z*-Docosenyl)-1*H*-pyrrole-2-carboxaldehyde [233744-66-6]
$C_{27}H_{47}NO$ 401.674
Isol. from the sponges *Desmapsamma anchorata* and *Mycale microsigmatosa*. Indexed as the Δ^{11}-isomer in CAS.

5-Tricosyl-1*H*-pyrrole-2-carboxaldehyde
[233744-70-2]
$C_{28}H_{51}NO$ 417.717
Isol. from the sponges *Desmapsamma anchorata* and *Mycale microsigmatosa*.

*9,10*Z*-Didehydro: 5-(9*Z*-Tricosenyl)-1*H*-pyrrole-2-carboxaldehyde*
[233744-68-8]
$C_{28}H_{49}NO$ 415.701
Isol. from the sponges *Desmapsamma anchorata* and *Mycale microsigmatosa*.

*14,15*Z*-Didehydro: 5-(14*Z*-Tricosenyl)-1*H*-pyrrole-2-carboxaldehyde*
[233744-69-9]
$C_{28}H_{49}NO$ 415.701
Isol. from the sponges *Desmapsamma anchorata* and *Mycale microsigmatosa*.

*14,15*Z*,17,18*Z*-Tetradehydro: 5-(14*Z*,17*Z*-Tricosadienyl)-1*H*-pyrrole-2-carboxaldehyde.* ***Mycalazal 9***
[705973-27-9]
$C_{28}H_{47}NO$ 413.685
Isol. from the sponge *Mycale cecilia*. Oil. λ_{max} 201 (ϵ 14170); 248 (ϵ 4060); 300 (ϵ 21160) (MeOH).

*14,15*Z*,17,18*Z*,20,21*Z*-Hexadehydro: 5-(14*Z*,17*Z*,20*Z*-Tricosatrienyl)-1*H*-pyrrole-2-carboxaldehyde.* ***Mycalazal 7***
[705973-15-5]
$C_{28}H_{45}NO$ 411.67
Isol. from the sponge *Mycale cecilia*. Oil. λ_{max} 204 (ϵ 9250); 248 (ϵ 2390); 300 (ϵ 11150) (MeOH).

5-(11*Z*-Pentacosenyl)-1*H*-pyrrole-2-carboxaldehyde [233744-71-3]
$C_{30}H_{53}NO$ 443.755
Isol. from the sponges *Desmapsamma anchorata* and *Mycale microsigmatosa*.

5-(15*Z*-Pentacosenyl)-1*H*-pyrrole-2-carboxaldehyde [233744-72-4]
$C_{30}H_{53}NO$ 443.755
Isol. from the sponges *Desmapsamma anchorata* and *Mycale microsigmatosa*.

5-(16*Z*-Pentacosenyl)-1*H*-pyrrole-2-carboxaldehyde
Mycalazal 12
[705973-36-0]
$C_{30}H_{53}NO$ 443.755
Isol. from the sponge *Mycale cecilia*.

5-(18*Z*-Pentacosenyl)-1*H*-pyrrole-2-carboxaldehyde
Mycalazal 13
[705973-38-2]
$C_{30}H_{53}NO$ 443.755
Isol. form the sponge *Mycale cecilia*.

5-(16*Z*,19*Z*-Pentacosadienyl)-1*H*-pyrrole-2-carboxaldehyde
Mycalazal 11
[705973-35-9]
Isol. from the sponge *Mycale cecilia*. Oil. λ_{max} 202 (ϵ 6040); 248 (ϵ 1800); 301 (ϵ 7630) (MeOH).

5-(16*Z*,19*Z*,22*Z*-Pentacosatrienyl)-1*H*-pyrrole-2-carboxaldehyde
Mycalazal 10
[705973-28-0]
Isol. from the sponge *Mycale cecilia*. Oil. λ_{max} 204 (ϵ 11920); 248 (ϵ 3690); 300 (ϵ 16900) (MeOH).

5-(10*Z*,13*Z*,16*Z*,19*Z*,22*Z*-Pentacosapentaenyl)-1*H*-pyrrole-2-carboxaldehyde, 9CI
Mycalazal 2
[185389-83-7]
$C_{30}H_{45}NO$ 435.692
Metab. from *Mycale micracanthoxea*. Cytotoxic agent. Oil.

5-(7*Z*,10*Z*,13*Z*,16*Z*,19*Z*,22*Z*-Pentacosahexaenyl)-1*H*-pyrrole-2-carboxaldehyde
Mycalazal 1
[185389-71-3]
Metab. of the sponge *Mycale micracanthoxea*. Oil.

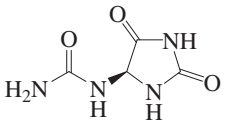
Allantoin, BAN, USAN A-625

(2,5-Dioxo-4-imidazolidinyl)urea, 9CI. 5-Ureido-2,4-imidazolidinedione. Glyoxylic diureide. 5-Ureidohydantoin. Dermalex. Cordianin. Actinac. Alphosyl



(*R*)-*form*

$C_4H_6N_4O_3$ 158.116

(±)-*form* [5377-33-3]
Occurs in allantoic fluid. A product of purine metabolism. V. widely distributed in biol. systems, isol. from numerous plants. Isol. from Bambusa oldhamii (green tomato), *Allophylus edulis* var *edulis*, *Allophylus edulis* var *gracilis*, *Strychnos cathayensis*, roots of *Pyrostegia venusta*, marine sponges *Cymbastela cantharella* and *Tedania digitala*, and cows milk. Formed in animals, except primates, by enzymic oxidn. of Uric acid, U-45. Antiinflammatory, antipsoriatic (disputed), topical vulnerary agent. Promotes wound healing. Monoclinic prisms (H_2O). V. spar. sol. H_2O; spar. sol. org. solvs. Mp 238-240° dec. Log P -1.54 (calc). Component of numerous prepns. Actinac, Alphosyl, Dermalex.

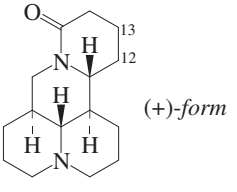
Allomatrine A-628



(+)-*form*

$C_{15}H_{24}N_2O$ 248.367
Stereoisomer of Matrine, M-121, Isomatrine, I-244, Sophoridine, S-380 and Darvasamine, D-79.

(+)-*form* [641-39-4]
Obt. by isomerisation of Matrine, M-121. Mp 103-105°. $[\alpha]_D^{25}$ +77.9. Incorr. stated by Ibragimov *et al* (1979) to have been isol. by Ueno *et al* from *Sophora flavescens*. This was Isomatrine.

Methiodide: Dec. at 315°.

Picrate: Mp 177°.

(-)-*form*
***Leontine*†**. *Isoleontine*
[6783-60-4]
Alkaloid from *Leontice eversmannii* and *Leontice darvasica* (Leonticaceae). Mp 107-108°. Bp_3 175-190°. $[\alpha]_D$ -78.2 (EtOH). The original isolate of Leontine from *L. eversmannii* (Yunusov, 1949) was opt. inactive. It may have been the (±)-form, or a different alkaloid. Platonova *et al* (1953) isolated the (-)-form, which they called Isoleontine, but later workers used the name Leontine for the (-)-form.

Perchlorate: Mp 252°.

Methiodide: Mp 297°.

13-Oxo: ***Leontalbamine***
$C_{15}H_{22}N_2O_2$ 262.351
Alkaloid from *Leontice alberti*. Mp 195°. $[\alpha]_D$ -93. Struct. dubious. Given in the ref. as the unlikely 12,13-didehydro, 13-hydroxy enol tautomer. However struct. and MF do not agree in ref. CAS no. not found 8-14 CI. λ_{max} 220 (log ϵ 3.4) (no solvent reported).

(±)-*form*
Mp 85-87°.

Hydrochloride: Mp 215-217°.

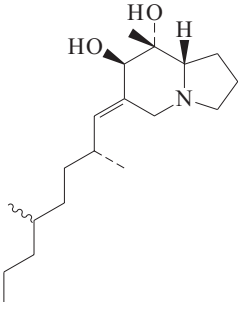
Allopumiliotoxin 309D A-629

6-(2,5-Dimethyloctylidene)octahydro-8-methyl-7,8-indolizinediol, 9CI
[141643-33-6]

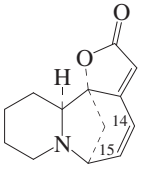


$C_{19}H_{35}NO_2$ 309.491
Alkaloid from skin extracts of the Panamanian poison frog *Dendrobates pumilio*.

Tokuyama, T. *et al., Tetrahedron*, 1991, **47**, 5415 (*isol, cmr, ms, struct*)

Allosecurinine A-630

Phyllochrysine. 2-Episecurinine. Viroallosecurinine



(-)-*form*

$C_{13}H_{15}NO_2$ 217.267
Viroallosecurinine is the (+)-enantiomer.

(-)-*form* [884-68-4]
Alkaloid from the leaves and roots of *Securinega suffruticosa*. Minor alkaloid from the roots of *Phyllanthus discoides*. Also isol. from bark and roots of *Margaritaria indica* (Euphorbiaceae). Yellow needles (Et_2O). Mp 136-138° (128°). $[\alpha]_D^{26}$ -1082 (EtOH). $[\alpha]_D$ -1140 ($CHCl_3$).

Hydrochloride:
Cubes (EtOH). Mp 248° dec. $[\alpha]_D^{30}$ -335 (EtOH).

Picrate:
Yellow needles (EtOH). Mp 231-232° dec.

14,15-Dihydro:
Needles (petrol). Mp 91°.

14,15-Dihydro, 15β-hydroxy: ***14,15-Dihydroallosecurinine-15-ol***
[119817-92-4]
$C_{13}H_{17}NO_3$ 235.282
Alkaloid from the leaves of *Phyllanthus discoides* (Euphorbiaceae). Orange-yellow cryst. (1-propanol). Mp 157-158°. $[\alpha]_D^{25}$ -96 (c, 0.48 in EtOH).

14,15-Dihydro, 15α-methoxy: ***14,15-Dihydro-15-methoxyphyllochrysine****. 15-Methoxy-14,15-dihydrophyllochrysine*
[128855-48-1]
$C_{14}H_{19}NO_3$ 249.309
Alkaloid from bark and roots of *Margaritaria indica* (Euphorbiaceae). Needles (petrol). Mp 141°. $[\alpha]_D$ +71 (c, 0.6 in MeOH).

14,15-Dihydro, 15α-methoxy, hydrobromide:
Plates (MeOH/Me_2CO). Mp 182-183°.

(+)-*form* [1857-30-3]
Alkaloid from the leaves of *Securinega virosa* (Euphorbiaceae). Yellow prisms (Me_2CO). Mp 136-138°. $[\alpha]_D^{20}$ +1084.6 (c, 0.05 in EtOH).

14,15-Dihydro, 15β-ethoxy: ***15β-Ethoxy-14,15-dihydroviroallosecurinine***
[936951-59-6]
$C_{15}H_{21}NO_3$ 263.336
Alkaloid from *Securinega suffruticosa*.

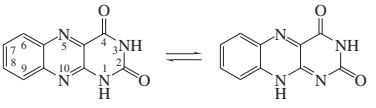
Allothiobinupharidine A-631

Struct. unknown
$C_{30}H_{42}N_2O_2S$ 494.74
Nuphar alkaloid. Alkaloid from the rhizomes of *Nuphar luteum* (Nymphaeaceae). Plates (as diperchlorate). Mp 320-325° (diperchlorate).

Achmatowicz, O. *et al., Pol. J. Chem. (Rocz. Chem.)*, 1962, **36**, 1815-1825 (*isol*)

Alloxazine A-632

Benzo[g]pteridine-2,4(1H,3H)-dione, 9CI. 6,7-Benzolumazine
[490-59-5]



$C_{10}H_6N_4O_2$ 214.183
Parent compd. exists in 1*H*,3*H*-form. In the older lit., posns. 5,6,7,8,9,10 are often numbered 10,5,6,7,8,9 respectively. Greyish-green powder. V. spar. sol. EtOH; insol. H_2O, Et_2O. Mp 300° dec. The original synthesis of alloxazine (Kühling, 1891) prob. gave a material containing little of the desired product.

(3*H*,10*H*)-*form*
Benzo[g]pteridine-2,4(3H,10H)-dione. Isoalloxazine. Flavin
Parent residue present in Riboflavine. Many substd. derivs. synthesised. Same CAS no. as Alloxazine.

3,10-Di-Me: [4074-59-3]
$C_{12}H_{10}N_4O_2$ 242.237
Orange-yellow needles (AcOH). Mp 320-325° dec. Bitter taste.

10-Ph: [6851-14-5]
$C_{16}H_{10}N_4O_2$ 290.281
Orange-yellow prisms (AcOH). V. spar. sol. H_2O. Tasteless.

10-Ph, 3-Me: [35804-39-8]
$C_{17}H_{12}N_4O_2$ 304.307
Orange-yellow cryst. (AcOH). Stable on heating to at least 360°. Tasteless.

10-Benzyl: [21708-43-0]
$C_{17}H_{12}N_4O_2$ 304.307
Mp 273-276°.

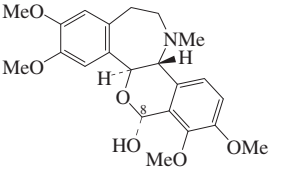
Alpinigenine A-638

2,3,10,11-Tetramethoxy-16-methylrheadan-8-ol, 9CI. Alkaloid E†



(+)-*form*

$C_{22}H_{27}NO_6$ 401.458

Biogenetic numbering shown. Other systems also used.

(+)-*form* [14028-91-2]
Alkaloid from *Papaver alpinum* various ssp., *Papaver bracteatum, Papaver fugax* (= *Papaver aucasicum*), *Papaver orientale*

and *Papaver pseudo-orientale* (Papaveraceae). Prismatic cryst. (C_6H_6/MeOH or EtOAc). Mp 193-195° (186.5-187.5°). $[\alpha]_D^{22}$ +286 (c, 0.63 in MeOH). $[\alpha]_D^{22}$ +306 (c, 1.08 in MeOH).

Hydrochloride: Mp 161-163° dec. $[\alpha]_D^{18}$ +210 (c, 0.796 in MeOH).

Me ether: ***Epialpinine***. O-*Methylalpinigenine*
[15210-99-8]
$C_{23}H_{29}NO_6$ 415.485
Alkaloid from *Papaver alpinum*, various ssp. (Papaveraceae). Cryst. (MeOH aq.). Mp 105-106° Mp 122-123°. $[\alpha]_D^{18}$ +302 (c, 0.511 in MeOH).

Et ether: **O-*Ethylalpinigenine***
$C_{24}H_{31}NO_6$ 429.512
Isol. from *Papaver fugax* (Papaveraceae). Prob. an artifact.

8-Epimer, Me ether: ***Alpinine***†. N-*Methylpapaverrubine G*
[14028-90-1]
$C_{23}H_{29}NO_6$ 415.485
Alkaloid from *Papaver alpinum*, various ssp., *Papaver bracteatum* and *Papaver pseudo-orientale* (Papaveraceae). Noncryst. $[\alpha]_D^{22}$ +288 (c, 0.82 in $CHCl_3$).

8-Epimer, Me ether, N-*de-Me:* ***Papaverrubine G.*** N-*Demethylalpinine*
[17597-20-5]
$C_{22}H_{27}NO_6$ 401.458
Alkaloid from *Papaver alpinum*, various ssp., and *Papaver anomalum* (*Papaver nudicaule* ssp. *amurense*) (Papaveraceae). $[\alpha]_D$ +397 (c, 0.12 in MeOH). Indefinite Mp.

(±)-*form* [40170-39-6]
Synthetic. Needles (EtOAc). Mp 172-173° (168-169°).

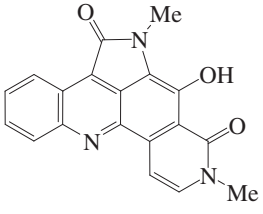
Alpkinidine A-639

[486992-29-4]

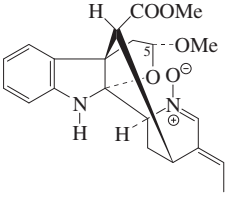


$C_{19}H_{13}N_3O_3$ 331.33
Alkaloid from *Xestospongia* cf. *carbonaria*. Purple solid.

Thale, Z. *et al., J.O.C.*, 2002, **67**, 9384-9391 (*isol, pmr, cmr, cryst struct*)

Alschomine A-640

[123045-72-7]



Absolute Configuration

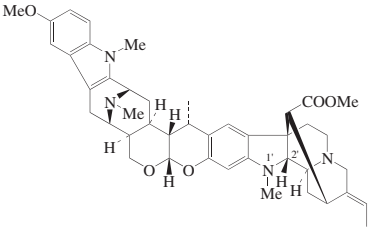
$C_{21}H_{24}N_2O_5$ 384.431
Alkaloid from the leaves of *Alstonia scholaris* (Apocynaceae). Prisms (MeOH). Mp 233-240° dec. $[\alpha]_D^{27}$ +116.1 (c, 0.25 in MeOH).

5-Epimer: ***Isoalschomine***
[123062-73-7]
$C_{21}H_{24}N_2O_5$ 384.431
Alkaloid from leaves of *Alstonia scholaris* (Apocynaceae). Prisms (MeOH). Mp 220-230° dec. $[\alpha]_D^{27}$ +112.3 (c, 0.14 in MeOH).

Abe, F. *et al., Chem. Pharm. Bull.*, 1989, **37**, 887 (*isol, uv, pmr, cmr, cryst struct*)

Alstocraline A-641

[120416-01-5]



Absolute Configuration

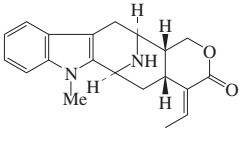
$C_{43}H_{52}N_4O_5$ 704.908
Alkaloid from the leaves of *Alstonia angustifolia* (Apocynaceae). $[\alpha]_D$ +3 (c, 0.7 in MeOH). λ_{max} 227 (log ϵ 4.02); 282 (log ϵ 4.45); 295 (sh) (log ϵ 4.44) (MeOH).

1′-N-*De-Me, 1′,2′-didehydro:* ***Foliacraline***
[120374-18-7]
$C_{42}H_{48}N_4O_5$ 688.865
Alkaloid from the leaves of *Alstonia angustifolia* (Apocynaceae). $[\alpha]_D$ +55 (c, 0.3 in $CHCl_3$). λ_{max} 220 ; 228 ; 289 ; 302 (sh) (MeOH).

Ghedira, K. *et al., Phytochemistry*, 1988, **27**, 3955-3962 (*isol, uv, ir, pmr, cmr, ms, struct*)

Alstolactone A-642

[701950-29-0]



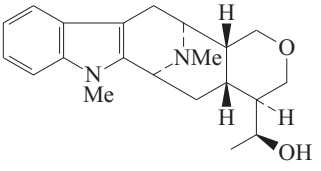
Absolute Configuration

$C_{20}H_{22}N_2O_2$ 322.406
Alkaloid from the leaves of *Alstonia angustifolia* var. *latifolia*. Light yellow oil. $[\alpha]_D$ -10 (c, 0.05 in $CHCl_3$). λ_{max} 216 (log ϵ 4.23); 228 (log ϵ 4.3); 284 (log ϵ 3.76); 293 (log ϵ 3.71) (EtOH).

Kam, T.-S. *et al., Phytochemistry*, 2004, **65**, 603-608 (*isol, pmr, cmr*)

Alstomacroine A-643

[160866-97-7]

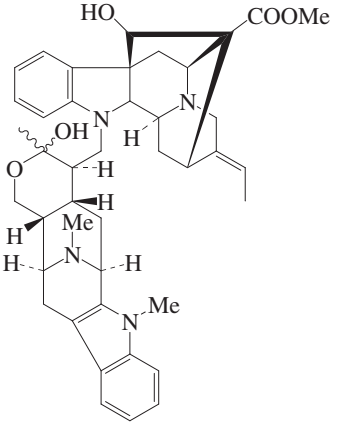


$C_{21}H_{28}N_2O_2$ 340.464
Alkaloid from the leaves of *Alstonia macrophylla*. $[\alpha]_D$ +2.6 (c. 0.02 in $CHCl_3$). λ_{max} 230 (log ϵ 4.6); 285 (log ϵ 4.5) (MeOH).

Atta-ur-Rahman, *et al., Nat. Prod. Lett.*, 1994, **5**, 201-209 (*isol, pmr, cmr, ms*)

Alstomacroline A-644

[199800-14-1]

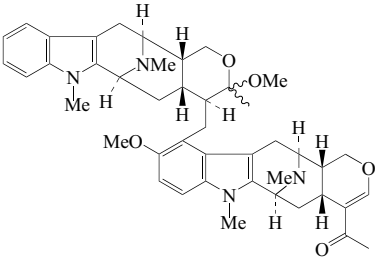


$C_{42}H_{50}N_4O_5$ 690.881
Alkaloid from the root bark of *Alstonia macrophylla*. Amorph. powder. $[\alpha]_D^{20}$ +54.6 (c, 0.4 in $CHCl_3$). λ_{max} 232 (log ϵ 4.44); 251 (log ϵ 3.88); 293 (log ϵ 3.78) (MeOH).

Keawpradub, N. *et al., Phytochemistry*, 1997, **46**, 757-762 (*isol, uv, ir, pmr, cmr, ms*)

Alstomacrophylline A-645

[199800-12-9]

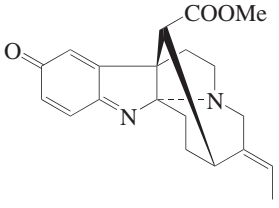


$C_{44}H_{54}N_4O_5$ 718.934
Alkaloid from the root bark of *Alstonia macrophylla* (Apocynaceae). Amorph. powder. $[\alpha]_D^{20}$ +42.8 (c, 0.09 in MeOH). λ_{max} 232 (log ϵ 4.27); 260 (log ϵ 3.67); 292 (log ϵ 3.51) (MeOH).

Keawpradub, N. *et al., Phytochemistry*, 1997, **46**, 757-762 (*isol, uv, ir, pmr, cmr, ms*)

Alstomaline A-646

[685508-21-8]

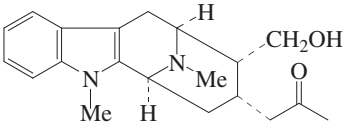


$C_{20}H_{22}N_2O_3$ 338.405
Represents a new structural subtype related to the akuammiline alkaloids, which has however been found previously in a small number of dimers, e.g. Flexicorine, F-88. Alkaloid from the leaves of *Alstonia macrophylla*. Yellowish oil. $[\alpha]_D$ -244 (c, 0.04 in $CHCl_3$). λ_{max} 202 (log ϵ 3.77); 273 (log ϵ 3.85); 317 (log ϵ 3.12) (EtOH).

Kam, T.-S. *et al., J. Nat. Prod.*, 2004, **67**, 547-552 (*isol, pmr, cmr*)

Alstomicine A-647

[5594-43-4]

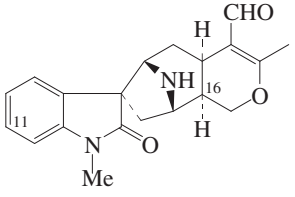


$C_{20}H_{26}N_2O_2$ 326.438
Alkaloid from the leaves of *Alstonia macrophylla*. Light yellowish oil. $[\alpha]_D$ +74 (c, 0.14 in $CHCl_3$). λ_{max} 230 (log ϵ 3.8); 289 (log ϵ 3.11) (EtOH).

Kam, T.-S. *et al., J. Nat. Prod.*, 2004, **67**, 547-552 (*isol, pmr, cmr, ms*)

Alstonal A-648

20-Deacetyl-20-formyl-17-methylalstonisine, 9CI
[172924-28-6]



$C_{20}H_{22}N_2O_3$ 338.405
Alkaloid from bark of *Alstonia macrophylla*. Needles (petrol/Me_2CO). Mp 198-199°. $[\alpha]_D$ +167 (c, 0.062 in $CHCl_3$).

N-*De-Me:* **N-*Demethylalstonal***
[301323-29-5]
$C_{19}H_{20}N_2O_3$ 324.379
Alkaloid from *Alstonia macrophylla*. Not obt. pure.

16-Hydroxy: ***16-Hydroxyalstonal***
[683239-99-8]
$C_{20}H_{22}N_2O_4$ 354.405
Alkaloid from the leaves of *Alstonia macrophylla*. Amorph. powder. $[\alpha]_D$ +153 (c, 0.26 in $CHCl_3$). λ_{max} 207 (log ϵ 4.61); 263 (log ϵ 4.35) (EtOH).

11-Methoxy: ***N^b-Demethylalstophyllal oxindole***. *11-Methoxyalstonal*
[172927-64-9]
$C_{21}H_{24}N_2O_4$ 368.432
From bark of *Alstonia macrophylla*. Needles (petrol/Me_2CO). Mp 190-191°. $[\alpha]_D$ +174 (c, 0.063 in $CHCl_3$).

11-Methoxy, 16-hydroxy: ***16-Hydroxy-11-methoxyalstonal***
[683240-00-8]
$C_{21}H_{24}N_2O_5$ 384.431
Alkaloid from the leaves of *Alstonia macrophylla*. Amorph. powder. $[\alpha]_D$ +203 (c, 0.11 in $CHCl_3$). λ_{max} 220 (log ϵ 4.54); 267 (log ϵ 4.2) (EtOH).

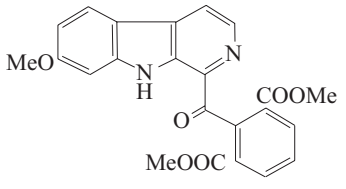
Alstonilidine A-651

[31185-76-9]



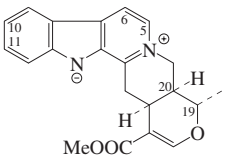
$C_{23}H_{18}N_2O_6$ 418.405
A secoyohimbane. Alkaloid from the

root bark of *Alstonia constricta* (Apocynaceae). Needles (EtOH). Mp 244-245°.

Crow, W.D. *et al., Aust. J. Chem.*, 1970, **23**, 2489 (*isol, uv, ir, pmr, ms, struct*)

Alstonine A-652

[47485-83-6]



Absolute Configuration

$C_{21}H_{20}N_2O_3$ 348.401

The early history of alkaloids called Alstonine is confused. Alkaloid from *Alstonia constricta*, *Rauwolfia obscura*, *Rauwolfia volkensii*, *Rauwolfia nitida*, *Rauwolfia serpentina*, *Catharanthus roseus*, *Strychnos camptoneura* and *Strychnos gossweileri* (Apocynaceae, Loganiaceae). Shows neoplasm-inhibiting props. Mp 205-210° dec. λ_{max} 252 ; 289 ; 309 ; 336 ; 369 (MeOH) (Berdy).

Hydrochloride: Mp 278-279° dec.

Perchlorate: Mp 239-240°. $[\alpha]_D^{20}$ +154 (Me_2CO).

10,11-Dimethoxy: ***Bleekerine***. *10,11-Dimethoxyalstonine*
[41758-43-4]
$C_{23}H_{24}N_2O_5$ 408.453
Alkaloid from the stem bark of *Bleekeria vitiensis* (preferred genus name *Ochrosia*) (Apocynaceae). Pale yellow prisms (EtOH). Mp 276-277°. $[\alpha]_{Hg}^{22.5}$ +612 (MeOH).

10,11-Dimethoxy, 5,6-dihydro: ***Ochropposine***
[38146-72-4]
$C_{23}H_{26}N_2O_5$ 410.469
Alkaloid from the bark of *Ochrosia oppositifolia* and *Ochrosia moorei* (Apocynaceae). Mp 312-314° dec. (as perchlorate). λ_{max} 222 (log ϵ 4.44); 401 (log ϵ 4.43) (no solvent reported) (perchlorate).

19-Epimer: ***19-Epialstonine***
$C_{21}H_{20}N_2O_3$ 348.401
Alkaloid from the roots of *Amphicome emodi* (preferred genus name *Incarvillea*). Cryst. Mp 245° dec.

20-Epimer: ***Serpentine***
[18786-24-8]
$C_{21}H_{20}N_2O_3$ 348.401
Alkaloid from *Rauwolfia serpentina* and many other *Rauwolfia* spp., *Strychnos camptoneura*, *Catharanthus roseus*, *Catharanthus ovalis* and *Vinca major* (Apocynaceae). Shows antitumour activity. Mp 156-157° dec. (170°). $[\alpha]_D$ +292 (MeOH). λ_{max} 251 (log ϵ 4.5); 307 (log ϵ 4.31); 368 (log ϵ 3.55) (MeOH).

20-Epimer, hydrochloride: Mp 246-248°. $[\alpha]_D^{25}$ +178 (H_2O).

19,20-Diepimer: ***19-Episerpentine***
[64753-57-7]
$C_{21}H_{20}N_2O_3$ 348.401
Alkaloid from the roots of *Rauwolfia cumminsii* (Apocynaceae). Yellow cryst. powder. Mp 240° dec.

19,20-Diepimer, 11-methoxy: ***Serpenticine***
[81149-04-4]
$C_{22}H_{22}N_2O_4$ 378.427
Alkaloid from *Rauwolfia vomitoria* (Apocynaceae). Yellow plates + $5H_2O$ ($MeOH/C_6H_6$). Mp 275-276°. λ_{max} 265 (log ϵ 4.4); 310 (log ϵ 4.2); 365 (log ϵ 3.6) (no solvent reported).

19,20-Diepimer, 11-methoxy, hydrochloride: Mp 289-290°.

19,20-Diepimer, 11-methoxy, picrate: Mp 196-198°.

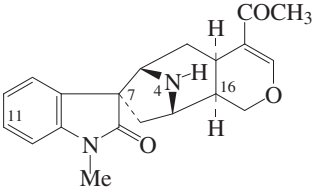
Alkaloid C†
[35804-91-2]



$C_{20}H_{22}N_2O_3$ 338.405

Alkaloid from the bark of *Alstonia muelleriana* and *Alstonia macrophylla* (Apocynaceae). Cryst. (MeOH aq.). Mp 168-169°. $[\alpha]_D^{25}$ +200 (c, 1.0 in EtOH).

Hydrochloride: Mp 250-260° dec. $[\alpha]_D^{25}$ +155 (c, 1.0 in H_2O).

N^4*-Formyl:* N^4*-Formylalstonisine.* ***Alstofoline***
[301521-97-1]
$C_{21}H_{22}N_2O_4$ 366.416
Alkaloid from *Alstonia macrophylla*. $[\alpha]_D$ +39 (c, 0.21 in $CHCl_3$). λ_{max} 214 (log ϵ 4.02); 246 (log ϵ 4.01); 254 (log ϵ 4.05); 290 (log ϵ 3.13) (EtOH).

N-*De-Me:* **N-*Demethylalstonisine***
[301323-28-4]
$C_{19}H_{20}N_2O_3$ 324.379
Alkaloid from *Alstonia macropylla*.

16-Hydroxy: ***16-Hydroxyalstonisine***
[683239-98-7]
$C_{20}H_{22}N_2O_4$ 354.405
Alkaloid from the leaves of *Alstonia macrophylla*. Amorph. powder. $[\alpha]_D$ +170 (c, 0.15 in $CHCl_3$). λ_{max} 209 (log ϵ 4.17); 256 (log ϵ 3.95) (EtOH).

11-Methoxy: $\mathbf{N^b}$***-Demethylalstophylline oxindole***
[108195-73-9]
$C_{21}H_{24}N_2O_4$ 368.432
Alkaloid from leaves and bark of *Alstonia macrophylla*. Prisms (petrol/Me_2CO). Mp 205-206°. $[\alpha]_D$ +126 (c, 0.068 in $CHCl_3$).

11-Methoxy, 16-hydroxy: ***16-Hydroxy-*** $\mathbf{N^b}$***-demethylalstophylline oxindole***. *14-Hydroxy-11-methoxyalstonisine, 9CI*
[114466-39-6]
$C_{21}H_{24}N_2O_5$ 384.431
Alkaloid from leaves of *Alstonia macrophylla*. Mp 215°. $[\alpha]_D$ +104.47 (c, 0.067 in $CHCl_3$).

7-Epimer: ***Isoalstonisine***
[301521-98-2]
$C_{20}H_{22}N_2O_3$ 338.405
Alkaloid from *Alstonia macrophylla*. $[\alpha]_D$ +207 (c, 0.07 in $CHCl_3$). λ_{max} 210 (log ϵ 3.93); 255 (log ϵ 3.8) (EtOH).

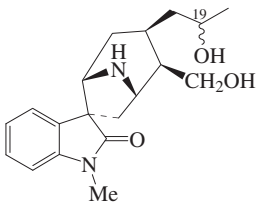
Alstonoxine B A-655

[301521-96-0]

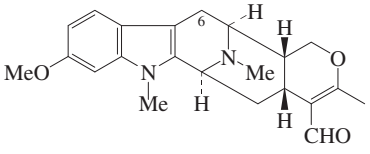


$C_{19}H_{26}N_2O_3$ 330.426
Alkaloid from *Alstonia macrophylla*. $[\alpha]_D$ -12 (c, 0.41 in $CHCl_3$). λ_{max} 213 (log ϵ 4.15); 255 (log ϵ 3.65) (EtOH).

19-Ketone: ***Alstonoxine A***
[301521-95-9]
$C_{19}H_{24}N_2O_3$ 328.41
Alkaloid from *Alstonia macrophylla*. $[\alpha]_D$ -34 (c, 0.19 in $CHCl_3$). λ_{max} 216 (log ϵ 3.89); 255 (log ϵ 3.7); 285 (log ϵ 3.18) (EtOH).
Kam, T.-S. *et al., Tetrahedron*, 2000, **56**, 6143-6150

Alstophyllal A-656

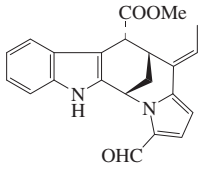
[685508-23-0]



$C_{22}H_{26}N_2O_3$ 366.459
Alkaloid from the leaves of *Alstonia macrophylla*.

6-Oxo: ***6-Oxoalstophyllal***
[683240-02-0]
$C_{22}H_{24}N_2O_4$ 380.443
Alkaloid from the leaves of *Alstonia macrophylla*.
Kam, T.-S. *et al., J. Nat. Prod.*, 2004, **67**, 547-552 (*isol, pmr, cmr*)

Alstoscholarine A-657



Absolute Configuration

(*E*)-*form*

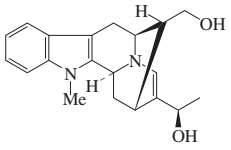
$C_{22}H_{20}N_2O_3$ 360.412

(***E*)-*form*** [937245-47-1]
Alkaloid from the leaves of *Alstonia scholaris*. Green prisms. Mp 168-170°. $[\alpha]_D^{20}$ -53 (c, 0.065 in $CHCl_3$). λ_{max} 223 ; 291 ; 300 ($CHCl_3$).

(***Z*)-*form*** [937245-48-2]
Alkaloid from the leaves of *Alstonia scholaris*. Powder. $[\alpha]_D^{25}$ -140 (c, 0.05 in $CHCl_3$). λ_{max} 220 ; 286 ; 293 ($CHCl_3$).
Cai, X.-H. *et al., Org. Lett.*, 2007, **9**, 1817-1820 (*isol, pmr, cmr, cryst struct*)

Alstoumerine A-658

[135824-73-6]

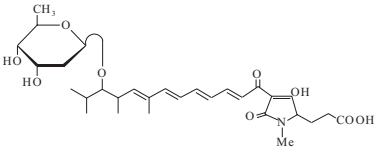


Absolute Configuration

$C_{20}H_{24}N_2O_2$ 324.422
Alkaloid from *Alstonia macrophylla* (Apocynaceae). Pale yellow cryst. Mp 170°. $[\alpha]_D$ -5.5 (c, 0.0034 in $CHCl_3$).
Atta-ur-Rahman, *et al., J. Nat. Prod.*, 1991, **54**, 750-754 (*isol, uv, ir, pmr, cmr, ms, struct*)

Altamycin A A-659

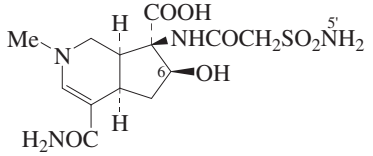
[60202-22-4]



$C_{30}H_{43}NO_9$ 561.671
Polyene-type antibiotic. Sol. MeOH, EtOH, Me_2CO, DMF, bases, AcOH, Py, butanol; poorly sol. dioxan, MeCN, $CHCl_3$, acids, H_2O, hexane. Mp 140-142°. $[\alpha]_D$ -72 (c, 0.5 in EtOH). No biol. source referred to in abstract. λ_{max} 262 (E1%/1cm 105); 343 (E1%/1cm 400); 355 (E1%/1cm 450); 375 (E1%/1cm 320) (MeOH) (Berdy).
Shenin, Yu.D. *et al., CA*, 1987, **106**, 66971f (*struct*)

Altemicidin A-660

Artemicidine
[125399-82-8]



$C_{13}H_{20}N_4O_7S$ 376.39
Prod. by *Streptomyces sioyaensis*. Possesses acaricidal, miticidal and antitumour activities. Powder. Sol. H_2O; fairly sol. MeOH, EtOH; poorly sol. Me_2CO, hexane. Mp 195-199° dec. $[\alpha]_D^{27}$ -7.6 (c, 1 in H_2O). λ_{max} 305 (ϵ 11300) (0.1*M* HCl) (Derep). λ_{max} 300 (ϵ 20800) (0.1*M* NaOH) (Derep). λ_{max} 300 (ϵ 20300) (pH 6.8 phosphate buffer) (Derep).
▶ LD_{50} (mus, ivn) 0.3 mg/kg. UW8797000

*5′-*N*-(2*S*-Amino-3*S*-methylpentanoyl):* ***Antibiotic SB 203207***. *SB 203207*
$C_{19}H_{31}N_5O_8S$ 489.549
Prod. by *Streptomyces* sp. NCIMB 40513. Isoleucyl tRNA synthetase inhibitor. Powder. λ_{max} 299 (H_2O).

*5′-*N*-(2*S*-Amino-3*S*-methylpentanoyl), 6-*O*-(2*S*-amino-3*S*-phenylbutanoyl):* ***Antibiotic SB 203208***. *SB 203208*
$C_{29}H_{42}N_6O_9S$ 650.752
Prod. by *Streptomyces* sp. NCIMB 40513. Isoleucyl tRNA synthetase inhibitor. Powder. λ_{max} 297 (H_2O).

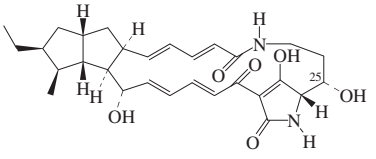
Alteramide A A-661

[142131-06-4]



$C_{29}H_{38}N_2O_6$ 510.629
Macrocylic lactam antibiotic. Isol. from an *Alteromonas* sp. associated with the sponge *Halichondria okadai*. Exhibits cytotoxicity against murine leukaemia P388 cells, murine lymphoma L1210 cells and the human epidermoid carcinoma KB cells *in vitro*. Yellow powder. Sol. MeOH, EtOAc, $CHCl_3$; poorly sol. H_2O. Mp 200° (dec.). $[\alpha]_D^{22}$ +36.2 (c, 0.1 in MeOH). λ_{max} 268 (ϵ 30300); 347 (ϵ 11000) (MeOH) (Derep).

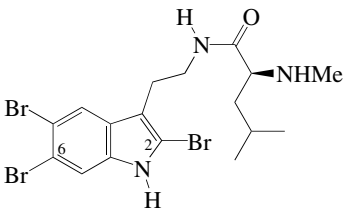
25-Deoxy: ***Alteramide B***
$C_{29}H_{38}N_2O_5$ 494.63
From an *Alteromonas* sp. Sol. MeOH, EtOAc, $CHCl_3$; poorly sol. H_2O. λ_{max} 268 ; 347 (MeOH) (Berdy).

[142131-07-5]

Shigemori, H. *et al., J.O.C.*, 1992, **57**, 4317-4320 (*isol, ir, uv, pmr, cmr, struct*)

Alternatamide B A-662

[191212-58-5]



$C_{17}H_{22}Br_3N_3O$ 524.092
Alkaloid from the marine bryozoan *Amathia alternata*. Moderate antibacterial agent. Amorph. powder.

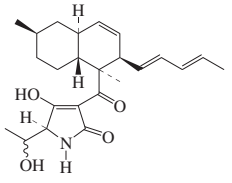
N^1-*Me:* ***Alternatamide A***
[191212-57-4]
$C_{18}H_{24}Br_3N_3O$ 538.119
Alkaloid from *Amathia alternata*. Amorph. powder.

2-Debromo: ***Alternatamide D***
[191212-60-9]
$C_{17}H_{23}Br_2N_3O$ 445.196
Alkaloid from *Amathia alternata*. Amorph. powder.

6-Debromo: ***Alternatamide C***
[191212-59-6]
$C_{17}H_{23}Br_2N_3O$ 445.196
Alkaloid from *Amathia alternata*. Amorph. powder.

Lee, N.-K. *et al., J. Nat. Prod.*, 1997, **60**, 697-699 (*isol, uv, cd, ir, pmr, cmr, ms*)

Altersetin A-663



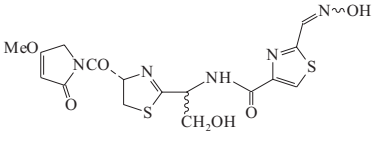
Absolute Configuration

$C_{24}H_{33}NO_4$ 399.529
Tetramic acid antibiotic. Enolised triketone. Related to Equisetin, E-142 and Phomasetin, P-373. Prod. by *Alternaria* spp. P 0506 and P 0535. Active against gram-positive and -negative bacteria and yeasts. Solid. λ_{max} 234 (log ϵ 4.37); 286 (log ϵ 3.84) (MeOH).

Hellwig, V. *et al., J. Antibiot.*, 2002, **55**, 881-892 (*isol, cd, pmr, cmr, ms*)

Althiomycin, 8CI A-664

Matamycin. Antibiotic 116A
[12656-40-5]



$C_{16}H_{17}N_5O_6S_2$ 439.472
Peptide antibiotic. The nat. prod. has the thiazole-ring *S*-config. as illus. but is prob. a mixt. of side-chain diastereoisomers. The oxime config. also appears uncertain although the *Z*-isomer has been prepd. synthetically. Isol. from *Cystobacter fuscus, Myxococcus virescens, Myxococcus xanthus, Streptomyces althioticus, Streptomyces chartreusis* and *Streptomyces matensis*. Active against gram-positive organisms. Also shows anticoccidial and antiherpes activity. Cryst. (CH_2Cl_2/EtOH). Mp 181-184° (dec.). $[\alpha]_D^{25}$ +37.8 (c, 2 in EtOH/CH_2Cl_2). λ_{max} 235 (ϵ 22800); 312 (ϵ 11500) (0.1*N* NaOH) (Derep). λ_{max} 222 (ϵ 36600); 238 (ϵ 28300); 285 (ϵ 8200) (EtOH) (Derep).

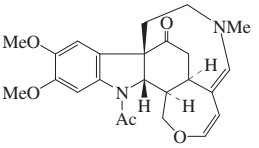
[82083-62-3]



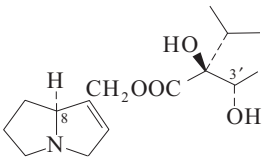
Probable Absolute Configuration

$C_{24}H_{28}N_2O_5$ 424.496
Tentative struct. Alkaloid from the bark of *Strychnos alvimiana* (Loganiaceae). Cryst. (EtOAc/hexane). Mp 103-106°.

Marini-Bettolo, G.B. *et al., An. Asoc. Quim. Argent.*, 1982, **70**, 263 (*isol, uv, pmr, cmr, ms, struct*)

Amabiline† A-669

[17958-43-9]



$C_{15}H_{25}NO_4$ 283.367
Amabiline and its stereoisomers are esters of Supinidine, S-644 with stereoisomers of 2,3-Dihydroxy-2-isopropylbutanoic acid. Alkaloid from *Cynoglossum amabile* dried whole plants and from whole plants of *Neatostema apulum* (Boraginaceae). Noncryst. $[\alpha]_D^{20}$ -7.1 (c, 2.02 in EtOH). Cryst. derivs. could not be obt.

N-*Oxide:* ***Amabiline* N-*oxide***
[145265-23-2]
$C_{15}H_{25}NO_5$ 299.366
Alkaloid from whole plants of *Neatostema apulum* (Boraginaceae). $[\alpha]_D$ -12 (c, 1.4 in EtOH).

8-Epimer: ***Cynaustine***
[17958-39-3]
$C_{15}H_{25}NO_4$ 283.367
Minor alkaloid from *Cynoglossum australe* dried plants (Boraginaceae). Pale-yellow gum. $[\alpha]_D^{20}$ +13.2 (c, 1.59 in EtOH). Ester of (+)-supinine with (-)-viridifloric acid.

▶ EK7792000

8-Epimer, picrate:
Yellow plates (EtOH). Mp 135-136°.

3′-Epimer: ***Supinine***
[551-58-6]
$C_{15}H_{25}NO_4$ 283.367
Alkaloid from *Heliotropium supinum* and *Heliotropium europaeum* (Boraginaceae). Shows antineoplastic props. Needles (Me_2CO). Mp 148-149° (146-147.5°). $[\alpha]_D$ -23.8 (EtOH). $[\alpha]_D$ -12.1 (c, 1.98 in EtOH). Log P 0.2 (calc).

▶ Hepatotoxin. WU2050000

3′-Epimer, O$^{3'}$*-Me,* N-*oxide:* ***Heleurine* N-*oxide***
[132886-10-3]
$C_{16}H_{27}NO_5$ 313.393
Alkaloid from aerial parts of *Heliotropium hirsutissimum* (Boraginaceae).

Gummy solid. $[\alpha]_D^{20}$ +19.5 (c, 0.55 in $CHCl_3$).

3′-Epimer, O$^{3'}$-Me: ***Heleurine****. Alkaloid C*†
[488-00-6]
$C_{16}H_{27}NO_4$ 297.394
Alkaloid from *Heliotropium indicum* and *Heliotropium europaeum* (Boraginaceae). Large transparent prisms. Sol. H_2O. Mp 67-68°. $[\alpha]_D^{16}$ -12 (c, 5.15 in EtOH). Discolours rapidly unless v. pure.

▶EK7879200

2′-Epimer: ***Heliovinine***
[84471-36-3]
$C_{15}H_{25}NO_4$ 283.367
Minor alkaloid from *Heliotropium curassavicum* (Boraginaceae). Gum. Probable struct. Obt. only as a mixt. with Coromandalinine and Curassavinine.

2′,3′-Diepimer: ***Coromandalinine***
[85798-06-7]
$C_{15}H_{25}NO_4$ 283.367
Probable struct. Obt. only as a mixt. with Heliovinine and Curassavinine. Minor alkaloid from *Heliotropium curassavicum* (Boraginaceae). Gum.

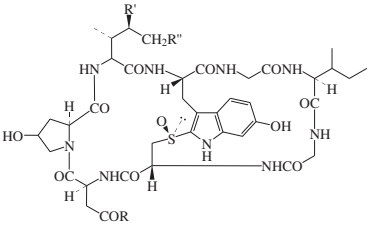
Amanitin† A-673

Amantin. Amatoxin



α-Amanitin R = NH_2, R' = R" = OH
β–Amanitin R' = R" = OH
γ-Amanitin R = NH_2, R' = OH, R" = H
ε-Amanitin R = R' = OH, R" = H
Amanullin R =NH_2, R' = R" = H
Amanullin acid R = OH, R' = R" = H

α-Amanitin [23109-05-9]
$C_{39}H_{54}N_{10}O_{14}S$ 918.98
Toxic constit. of *Amanita phalloides*. Also from *Amanita verna, Amanita bisporigera, Galerina autumnalis, Galerina marginata* and *Galerina venenata*. Needles. Sol. MeOH, H_2O. Mp 254-255° dec. $[\alpha]_D^{20}$ +191 (H_2O). λ_{max} 302 (MeOH) (Berdy).

▶Systemic effects in humans by ingestion. Can cause hepatic necrosis, liver failure and death if untreated. Nephrotoxic. LD_{50} (mus, ipr) 0.1 mg/kg. Some human and exp. toxic effects are delayed (2-8 d after administration) *cf.* phallotoxins. Gastrointestinal effects occur 2-4 h after ingestion. BD6195000

Deoxy: ***Amaninamide***
[58311-65-2]
$C_{39}H_{54}N_{10}O_{13}S$ 902.981
Isol. from *Amanita virosa*. Lacks the OH group on the tryptophan ring.

β-Amanitin
1-L-Aspartic acid-α-amanitin, 9CI
[21150-22-1]
$C_{39}H_{53}N_9O_{15}S$ 919.965
Toxic constit. of several spp. of *Amanita*, notably *Amanita phalloides* and also

found in *Galerina autumnalis, Galerina venenata, Galerina marginata* and *Amanita bisporigera*. Cryst. (EtOH). Sol. H_2O, EtOH. Mp 300°. λ_{max} 302 (MeOH) (Berdy).

► LD_{50} (mus, ipr) 0.4 mg/kg. NJ8324000

Deoxy: ***Amanin***. *1-L-Aspartic acid-4-(2-mercapto-L-tryptophan)-α-amanitin, 9CI*
[21150-21-0]
$C_{39}H_{53}N_9O_{14}S$ 903.966
Constit. of *Amanita phalloides* toxin. Lacks the OH-group on the tryptophan ring.

► LD_{50} (mus, ipr) 0.5 mg/kg. NJ8326000

γ-Amanitin
3-(4-Hydroxy-L-isoleucine)-α-amanitin, 9CI
[21150-23-2]
$C_{39}H_{54}N_{10}O_{13}S$ 902.981
Constit. of *Amanita phalloides.*

► LD_{50} (mus, ipr) 0.2 mg/kg. NJ8323000

ε-Amanitin
1-L-Aspartic acid-3-(S)-4-hydroxy-L-isoleucine-α-amanitin, 9CI
[21705-02-2]
$C_{39}H_{53}N_9O_{14}S$ 903.966

► LD_{50} (mus, ipr) 0.3 mg/kg. NJ8325000

Amanullinic acid
1-L-Aspartic acid-3-isoleucine-α-amanitin, 9CI
[54532-45-5]
$C_{39}H_{53}N_9O_{13}S$ 887.966
Constit. of *Amanita phalloides.*

► LD_{50} (mus, ipr) >20 mg/kg. BD6093000

Amanullin [21803-57-6]
$C_{39}H_{54}N_{10}O_{12}S$ 886.981
Constit. of *Amanita phalloides.*

► LD_{50} (mus, ipr) >20 mg/kg. BD6200000

Deoxy: ***Proamanullin***. *2-L-Proline-3-isoleucine-α-amanitin*
[54532-46-6]
$C_{39}H_{54}N_{10}O_{11}S$ 870.982
Constit. of *Amanita phalloides.* Lacks the 4-hydroxyprolyl OH group.

► LD_{50} >20mg/Kg (mus, ipr). BD6300000

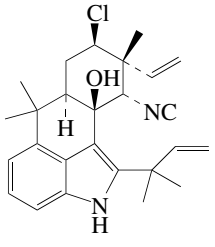
Ambiguine B isonitrile A-684

A 89271C. Antibiotic A 89271C
[138630-60-1]



Relative Configuration

$C_{26}H_{31}ClN_2O$ 422.996
Alkaloid from the terrestrial blue-green alga *Fischerella ambigua*, also from *Hapalosiphon hibernicus* and *Westrellopsis prolifica*. Amorph. solid. $[\alpha]_D$ -44.3 (c, 0.1 in MeOH). λ_{max} 223 (ε 40700); 281 (ε 9400); 291 (ε 7700) (MeOH).

Deoxy: ***Ambiguine A isonitrile****. A 89271B. Antibiotic A 89271B*
[138630-59-8]
$C_{26}H_{31}ClN_2$ 406.997
From the terrestrial blue-green algae *Fischerella ambigua* and *Hapalosiphon hibernicus*, also *Westrellopsis prolifica*. Needles (hexane/CH_2Cl_2). Mp > 300° dec. $[\alpha]_D$ -37 (c, 0.1 in MeOH). λ_{max} 225 (ε 32400); 282 (ε 7600); 295 (sh) (ε 6500) (MeOH).

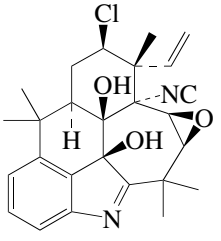
Dechloro: ***Ambiguine C isonitrile****. A 89271E. Antibiotic A 89271E*
[138630-61-2]
$C_{26}H_{32}N_2O$ 388.552
From *Fischerella ambigua*. Amorph. solid. $[\alpha]_D$ -9.5 (c, 0.1 in MeOH). λ_{max} 223 (ε 36000); 281 (ε 8400); 291 (ε 6800) (MeOH).

Dechloro, deoxy: ***Ambiguine H isonitrile***
$C_{26}H_{32}N_2$ 372.552
From a *Fischerella* sp. Amorph. solid. $[\alpha]_D^{25}$ -65 (c, 0.51 in MeOH). λ_{max} 222 (log ε 4.38); 282 (log ε 3.72); 291 (log ε 3.62) (MeOH).

Smitka, T.A. *et al., J.O.C.*, 1992, **57**, 857-861 (*isol, cd, uv, ir, pmr, cmr*)
Raveh, A. *et al., J. Nat. Prod.*, 2007, **70**, 196-201 (*isol, pmr, cmr*)

Ambiguine D isonitrile A-685

A 89271A. Antibiotic A 89271A
[138666-15-6]



Relative Configuration

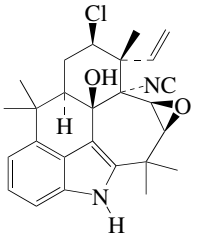
$C_{26}H_{29}ClN_2O_3$ 452.979
Alkaloid from the terrestrial blue-green algae *Fischerella ambigua* and *Westiellopsis prolifica*. Cryst. (MeOH aq.). Mp > 300° dec. $[\alpha]_D$ -30.3 (c, 0.1 in MeOH). λ_{max} 227 (ε 13900); 301 (ε 2170) (MeOH).

Dechloro: ***Ambiguine J isonitrile***
$C_{26}H_{30}N_2O_3$ 418.535
From a *Fischerella* sp. Amorph. solid. $[\alpha]_D^{25}$ -32 (c, 0.1 in MeOH). λ_{max} 222 (log ε 3.68); 270 (log ε 2.97); 308 (log ε 2.78) (MeOH).

Smitka, T.A. *et al., J.O.C.*, 1992, **57**, 857-861 (*isol, cd, uv, ir, pmr, cmr, cryst struct*)
Raveh, A. *et al., J. Nat. Prod.*, 2007, **70**, 196-201 (*isol, pmr, cmr*)

Ambiguine E isonitrile A-686

A 89271D. Antibiotic A 89271D
[138666-16-7]



Relative Configuration

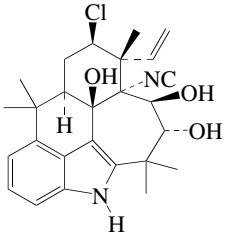
$C_{26}H_{29}ClN_2O_2$ 436.98
Alkaloid from the terrestrial blue-green algae *Fischerella ambigua*, *Hapalosiphon hibernicus* and *Westiellopsis prolifica*. Needles (hexane/CH_2Cl_2). Mp > 300° dec. $[\alpha]_D$ -59.7 (c, 0.1 in MeOH). λ_{max} 223 (ε 36000); 272 (ε 7100); 279 (ε 6800) (MeOH).

Dechloro: ***Ambiguine I isonitrile***
$C_{26}H_{30}N_2O_2$ 402.535
From a *Fischerella* sp. Amorph. solid. $[\alpha]_D^{25}$ -39 (c, 0.29 in MeOH). λ_{max} 222 (log ε 4.04); 282 (log ε 3.69); 286 (log ε 3.67) (MeOH).

Smitka, T.A. *et al., J.O.C.*, 1992, **57**, 857-861 (*isol, cd, uv, ir, pmr, cmr*)
Raveh, A. *et al., J. Nat. Prod.*, 2007, **70**, 196-201 (*isol, pmr, cmr*)

Ambiguine F isonitrile A-687

A 89271F. Antibiotic A 89271F
[138630-62-3]



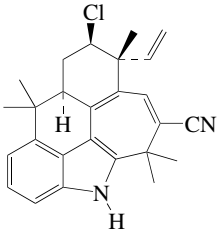
Relative Configuration

$C_{26}H_{31}ClN_2O_3$ 454.995
Alkaloid from the terrestrial blue-green alga *Fischerella ambigua*. Amorph. solid. $[\alpha]_D$ -18.2 (c, 0.1 in MeOH). λ_{max} 224 (ε 36000); 280 (ε 7200); 290 (ε 5500) (MeOH).

Smitka, T.A. *et al., J.O.C.*, 1992, **57**, 857 (*isol, uv, ir, pmr, cmr, cd, struct*)

Ambiguine G nitrile A-688

[213911-41-2]

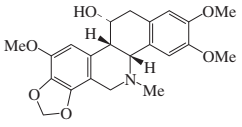


$C_{26}H_{27}ClN_2$ 402.965
Isol. from the blue-green alga *Hapalosiphon delicatulus*. $[\alpha]_D$ +138.3 (c, 0.6 in $CHCl_3$). λ_{max} 230 (ϵ 32400); 274 (ϵ 13900); 390 (ϵ 6750) (MeOH).

Huber, U *et al., J. Nat. Prod.*, 1998, **61**, 1304-1306 (*isol, uv, ir, pmr, cmr, ms*)

Ambinine A-689

[96935-26-1]



Absolute Configuration

$C_{23}H_{27}NO_6$ 413.469
Minor alkaloid from the stem tuber of *Corydalis ambigua* (Papaveraceae). Prisms (EtOH). Mp 218-219°. $[\alpha]_D^{22}$ -106 (c, 1.3 in $CHCl_3$).

Hydrobromide: [132296-33-4]
Fine needles (EtOH). Mp 199-202°.

Cui, Z. *et al., Yaoxue Xuebao*, 1984, **19**, 904; *CA*, **103**, 19853x (*isol, uv, ir, pmr, cmr, ms, struct*)

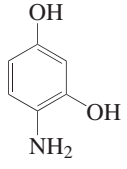
4-Amino-1,3-benzenediol, 9CI A-705

4-Aminoresorcinol, 8CI. 2,4-Dihydroxyaniline
[13066-95-0]



$C_6H_7NO_2$ 125.127
Used in hair dyes. pK_{a1} 7.91; pK_{a2} 9.16; pK_{a3} 11.24 (20°). Unstable.

3-Me ether: 4-Amino-3-methoxyphenol
[61638-01-5]
$C_7H_9NO_2$ 139.154
Reddish-brown needles (toluene). Mp 175-180°. Blackens at 160°. Aq. solns. discolour in air.

3-Me ether, N-*Ac: 4-Hydroxy-2-methoxyacetanilide*
[5307-06-2]
$C_9H_{11}NO_3$ 181.191
Isol. from a fungal endophyte of spruce needles and from a soil fungus. Also prod. by a marine-derived *Penicillium* sp. Red needles (toluene). Mp 169-171°.

Di-Me ether: 2,4-Dimethoxyaniline
[2735-04-8]
$C_8H_{11}NO_2$ 153.18
Alarm pheromone isol. from *Neanura muscorum*. Plates (petrol) or oil. Mp 32.5-33.5°. $Bp_{0.006}$ 75-80°.

▶ LD_{50} (rat, orl) 464 mg/kg. BX4200000

Di-Me ether, hydrochloride: [54150-69-5]
Mp 230° dec.

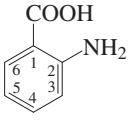
[37966-57-7]

Collins, R.F. *et al., J.C.S.(C)*, 1966, 366 (*synth*)

Messer, C. *et al., CA*, 1999, **131**, 71415y (*2,4-Dimethoxyaniline, isol*)

2-Aminobenzoic acid, 9CI A-706

Anthranilic acid, 8CI. Vitamin L_1
[118-92-3]
[1321-11-5]



$C_7H_7NO_2$ 137.138
Prod. by bacteria and fungi. An important intermed. in the synth. of many compds., corrosion inhibitor for metals. Used as 3% aq. soln. of Na salt for gravimetric detn. of Co, Ni, Cu(*II*), Hg(*II*), Mn, Pb, Cd, U(*VI*), Zn. Inducer of fruiting body formation. Transient receptor potential (TRP) channel blocker. Leaflets. Sol. hot H_2O, EtOH, Et_2O. Mp 144-148°. pK_{a1} 1.97; pK_{a2} 4.79 (25°). pK_{a1} 2.17; pK_{a2} 4.85 (25°, 0.1*M* KCl). Sublimes, triboluminescent. λ_{max} 218 (ϵ 20200); 248 (ϵ 7000); 335 (ϵ 4700) (MeOH) (Berdy).

▶ LD_{50} (mus, orl) 1400 mg/kg. Exp. reprod. effects. CB2450000

Hydrochloride: [2099-63-0]
Mp 193-194°.

β-D-Glucopyranosyl ester: β-D-Glucopyranosyl anthranilate
[55798-72-6]
$C_{13}H_{17}NO_7$ 299.28
Constit. of the fruit of piñuela (*Bromelia plumieri*, Bromeliaceae) and of *Arabidopsis thaliana*.

α-L-Rhamnopyranosyl ester: α-L-Rhamnopyranosyl anthranilate
$C_{13}H_{17}NO_6$ 283.28
Prod. by *Actinomyces* sp. Stamm K 17/2. Amorph. solid. $[\alpha]_D^{20}$ -76 (c, 0.1 in MeOH). λ_{max} 219 (log ϵ 4.25); 249 (log ϵ 3.72); 341 (log ϵ 3.55) (MeOH).

6-Deoxy-α-L-talopyranosyl ester: 2-Aminobenzoyl 6-deoxy-α-L-talopyranoside
$C_{13}H_{17}NO_6$ 283.28
Prod. by *Streptomyces* sp. GöM1. Amorph. solid. λ_{max} 219 (log ϵ 3.93); 248 (log ϵ 3.43); 340 (log ϵ 3.19) (MeOH).

Me ester: Methyl 2-aminobenzoate. FEMA 2682
[134-20-3]
$C_8H_9NO_2$ 151.165
Found in essential oils, including bergamot, orange peel, lemon peel, jasmine, ylang-ylang and neroli. Also present in concord grape, strawberry, star fruit, black tea and rice bran. Found in egg masses of the muricid mollusc *Trunculariopsis trunculus*. Used in perfumery as artificial orange blossom fragrance, also employed extensively in the form of its Schiff's bases (e.g. with Hydroxycitronellal). Flavouring agent. Cryst. Mp 24-25°. Bp_{15} 133.5°. pK_a 2.32 (25°, 1% EtOH aq.). Steam-volatile.

▶ Skin irritant. LD_{50} (rat, orl) 2910 mg/kg. Exp. reprod. effects. CB3325000

Et ester: Ethyl 2-aminobenzoate. FEMA 2421
[87-25-2]
$C_9H_{11}NO_2$ 165.191
Present in orange and grape. Flavouring ingredient. Liq. with faint orange-flower odour and flavour. d_4^{20} 1.12. Mp 13°. Bp 266-268° Bp_{15} 145-147°.

▶ DG2448000

Amide: 2-Aminobenzamide. Anthranilamide
[88-68-6]
$C_7H_8N_2O$ 136.153
Prod. by a marine *Cytophaga marinoflava* sp. AM13.1. Acetaldehyde scavenger for polyethylene beverage bottles. Fluorescent label for polysaccharides etc. Leaflets. Mp 109-111.5° dec.

▶ CU8993000

Amide, N^2*-(2S-hydroxypropanoyl): 2-[(2-Hydroxypropanoyl)amino]benzamide*
[18326-27-7]
$C_{10}H_{12}N_2O_3$ 208.216
Prod. by *Penicillium chrysogenum*. Oil.

N-*Eicosanoyl:* N-*Eicosanoylanthranilic acid.* N-*Arachidylanthranilic acid*
[165393-50-0]
$C_{27}H_{45}NO_3$ 431.657
Constit. of *Inula japonica* and *Ononis natrix*. Cryst. (MeOH). Mp 86-87°.

N-*Docosanoyl:* **N-*Docosanoylanthranilic acid***
[85563-88-8]
$C_{29}H_{49}NO_3$ 459.711
Constit. of *Inula oculus-christi* and *Inula japonica*. Cryst. (Me_2CO/petrol). Mp 91-93°.

N-*Docosanoyl, Et ester:* ***Ethyl* N-*docosanoylanthranilate***
[209523-04-6]
$C_{31}H_{53}NO_3$ 487.765
Constit. of the roots of *Gentiana tibetica*. Antifungal agent.

N-*(13Z-Docosenoyl):* N-*(13-Docosenoyl)anthranilic acid*
[129277-41-4]
$C_{29}H_{47}NO_3$ 457.695
Constit. of *Ononis natrix* ssp. *hispanica*. Oil.

N-*Tricosanoyl:* **N-*Tricosanoylanthranilic acid***
$C_{30}H_{51}NO_3$ 473.738
Constit. of *Inula japonica*.

N-*Tetracosanoyl:* **N-*Tetracosanoylanthranilic acid***
$C_{31}H_{53}NO_3$ 487.765
Constit. of *Inula japonica*.

3-Amino-5-hydroxybenzoic acid A-790

[76045-71-1]

$C_7H_7NO_3$ 153.137
Key biogenetic precursor of aromatic nuclei in ansamycin, mitomycin and maytansinoid antibiotics.

Hydrochloride: [14206-69-0]
Mp 200-230°.

Me ester: [67973-80-2]
$C_8H_9NO_3$ 167.164
Cryst. ($MeOAc/CHCl_3$). Mp 125-127°.

N-*Ac:* [93561-88-7]
$C_9H_9NO_4$ 195.174
Amorph. (MeOH aq.). Mp 245-253°.

Me ether, nitrile: 3-Amino-5-methoxybenzonitrile, 9CI. 3-Cyano-5-methoxyaniline
[269411-71-4]
$C_8H_8N_2O$ 148.164
Yellow solid. Mp 81-85°.

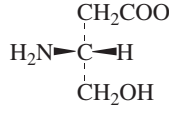
3-Amino-4-hydroxybutanoic acid, 9CI A-792

γ-Hydroxy-β-aminobutyric acid. GOBAB
[589-44-6]



(*R*)-*form*

$C_4H_9NO_3$ 119.12
Antiinflammatory, antifungal and antiseptic agent.

(*R*)-*form* [16504-56-6]

Hydrochloride: [196950-52-4]
Mp 177-178°.

*Lactone: 4-Aminodihydro-2(3*H*)-furanone. β-Amino-γ-butyrolactone*
$C_4H_7NO_2$ 101.105
Mp 175-177° (as hydrochloride). $[\alpha]_D^{20}$ +56.7 (c, 1 in H_2O).

N-*Benzyl, lactone:* [152783-42-1]
$C_{11}H_{13}NO_2$ 191.229
Oil. $[\alpha]_D^{25}$ +16.5 (c, 1.0 in $CHCl_3$).

(*S*)-*form* [16504-57-7] Pharmacol. active isomer.

Lactone: Mp 198-201° (as hydrobromide). $[\alpha]_D^{20}$ -42.6 (c, 1.08 in H_2O).

N-*Benzoyl, lactone:*
$C_{11}H_{11}NO_3$ 205.213
Mp 123.5-126°. $[\alpha]_D^{20}$ -97 (c, 1.41 in $CHCl_3$).

N-tert-*Butyloxycarbonyl, lactone:*
$C_9H_{15}NO_4$ 201.222
Solid. Mp 113-114° (106-108°). $[\alpha]_D^{25}$ -54.3 (c, 1.15 in $CHCl_3$).

N-*Benzyloxycarbonyl, lactone:*
$C_{12}H_{13}NO_4$ 235.239
Cryst. Mp 103-105°. $[\alpha]_D^{20}$ -54.9 (c, 2.27 in $CHCl_3$).

N-*Trifluoroacetyl, benzyl ester:* [673470-50-3]
$C_{13}H_{14}F_3NO_4$ 305.253
Cryst. solid. Mp 70-71°. $[\alpha]_D^{22.5}$ +9.1 (c, 0.99 in $CHCl_3$).

(±)-*form* [16504-55-5]
Needles. Mp 184°.

Lactone: [16504-58-8]
Mp 185-186° (as hydrochloride).

Lactone, N-*benzyl:* [157037-11-1]
$C_{11}H_{13}NO_2$ 191.229
Oil.

(ξ)-*form*
O-*(4-Hydroxybenzoyl),* N,N,N-*tri-Me, betaine: 1-Carboxy-3-[(4-hydroxybenzoyl)oxy]*-N,N,N-*trimethyl-2-propanaminium inner salt, 9CI.*
Zooxanthellabetaine A
[208256-89-7]
$C_{14}H_{19}NO_5$ 281.308
Isol. from the cultures of a symbiotic dinoflagellate *Symbiodinium* sp. Oil. $[\alpha]_D^{20}$ -13 (c, 0.0035 in MeOH).

4(5)-Aminoimidazole A-826

*1*H-*Imidazol-4-amine. 4-Aminoglyoxaline*
[4919-03-3]
$C_3H_5N_3$ 83.093
Present in biotin-restricted yeast. Mp 184° (as hydrochloride).

N^4-*Ac:* [51741-72-1]
$C_5H_7N_3O$ 125.13
Cryst. (dioxan). Sol. H_2O. Mp 226°.

N^4-*Ac, picrate:* Mp 208°.

1H-form

*1-Benzyl: 4-Amino-1-benzyl-1*H-*imidazole*
[53594-77-7]
$C_{10}H_{11}N_3$ 173.217
Cryst, (MeCN) (as hydrochloride). Mp 179-182° (hydrochloride). CAS no. refers to hydrochloride.

1-Benzyl, N^4-*Ac:* [7524-03-0]
$C_{12}H_{13}N_3O$ 215.254
Cryst. (EtOAc). Mp 168-168.8°.

3H-form

*3-Me: 5-Amino-1-methyl-1*H-*imidazole*
[66787-75-5]
$C_4H_7N_3$ 97.119
Purple solid. Mp 107-109°.

► UA6125000

Hydrochloride: [30533-50-7]
Hygroscopic cryst. Mp 62-65°.

N-*Benzoyl:* [33561-46-5]
$C_{11}H_{15}NO_2$ 193.245
Mp 108°.

N,N-*Di-Me: 1-(Dimethylamino)-2-methyl-2-propanol*
[14123-48-9]
$C_6H_{15}NO$ 117.191
Aggregation pheromone of cockroach *Blattella germanica*. Liq. Bp_{48} 60°.

N-*(2,4-Dinitrophenyl):*
Yellow-orange cryst. (C_6H_6/petrol). Mp 107-108°.

[119330-21-1]

2-(Aminomethyl)-2-propenoic acid, 9CI A-841

3-Amino-2-methylenepropanoic acid. α-Methylene-β-alanine
[4452-16-8]
$H_2C{=}C(COOH)CH_2NH_2$
$C_4H_7NO_2$ 101.105
Toxic amino acid from the sponge *Fasciospongia cavernosa* and other sponges. Also prod. by a *Streptomyces* sp. Shows herbicidal props. Sol. H_2O.

Hydrochloride: [75509-28-3]
Cryst. (MeOH/Me_2CO). Mp 153-154°.

Me ester: [87375-90-4]
$C_5H_9NO_2$ 115.132
From *Fasciospongia cavernosa*. Mp 107-108° (as hydrochloride).

N-*Tetradecanoyl:* [70290-27-6]
$C_{18}H_{33}NO_3$ 311.464
Isol. from *Spongia* cf. *zimocca*.

N-*Pentadecanoyl:* [70290-28-7]
$C_{19}H_{35}NO_3$ 325.49
Isol. from *Spongia* cf. *zimocca*.

N-*Hexadecanoyl:* [70290-29-8]
$C_{20}H_{37}NO_3$ 339.517
Isol. from *Spongia* cf. *zimocca*.

N-*Tetradecanoyl, Me ester:* [70290-25-4]
$C_{19}H_{35}NO_3$ 325.49
Isol. from *Fasciospongia cavernosa* and *Spongia* cf. *zimocca*.

N-*Pentadecanoyl, Me ester:* [70290-26-5]
$C_{20}H_{37}NO_3$ 339.517
Isol. from *Fasciospongia cavernosa* and *Spongia* cf. *zimocca*.

N-*Hexadecanoyl, Me ester:* [52634-29-4]
$C_{21}H_{39}NO_3$ 353.544
Isol. from *Fasciospongia cavernosa*, a *Hippospongia* sp. and *Spongia* cf. *zimocca*.

N-*(14-Methylpentadecanoyl), Me ester:* ***Hurghamide A***
$C_{21}H_{39}NO_3$ 353.544
Isol. from a *Hippospongia* sp. Wax.

N-*(15-Methylhexadecanoyl), Me ester:* ***Hurghamide B***
$C_{22}H_{41}NO_3$ 367.571
Isol. from a *Hippospongia* sp. Wax.

N-*(Methylhexadecanoyl), Me ester:* ***Hurghamide C***
$C_{22}H_{41}NO_3$ 367.571
Isol. from a *Hippospongia* sp. Wax. Posn. of methyl on *N*-acyl group not determined.

N-*Heptadecanoyl, Me ester:* [52634-30-7]
$C_{22}H_{41}NO_3$ 367.571
Isol. from *Fasciospongia cavernosa* and a *Hippospongia* sp.

N-*(13-Octadecenoyl), Me ester:* ***Hurghamide D***
$C_{23}H_{41}NO_3$ 379.582
Isol. from a *Hippospongia* sp.

N-*Octadecanoyl, Me ester:* [52634-31-8]
$C_{23}H_{43}NO_3$ 381.598
Isol. from *Fasciospongia cavernosa*.

N-*Nonadecanoyl, Me ester:* [52634-32-9]
$C_{24}H_{45}NO_3$ 395.624
Isol. from *Fasciospongia cavernosa*.

N-*Eicosanoyl, Me ester:* [52634-33-0]
$C_{25}H_{47}NO_3$ 409.651
Isol. from *Fasciospongia cavernosa*.

N-*(2-Oxotetradecanoyl), Me ester:*
[70290-19-6]
$C_{19}H_{33}NO_4$ 339.474
Isol. from *Spongia* cf. *zimocca* and *Sinularia dissecta*.

N-*(2-Oxopentadecanoyl), Me ester:*
[70290-20-9]
$C_{20}H_{35}NO_4$ 353.501
Isol. from *Spongia* cf. *zimocca* and *Sinularia dissecta*.

N-*(2-Oxohexadecanoyl), Me ester:*
[70290-21-0]
$C_{21}H_{37}NO_4$ 367.528
Isol. from *Spongia* cf. *zimocca*.

N-*(2-Hydroxytetradecanoyl), Me ester:*
[70290-22-1]
$C_{19}H_{35}NO_4$ 341.49
Isol. from *Spongia* cf. *zimocca*.

N-*(2-Hydroxypentadecanoyl), Me ester:*
[70290-23-2]
$C_{20}H_{37}NO_4$ 355.517
Isol. from *Spongia* cf. *zimocca*.

N-*(2-Hydroxyhexadecanoyl), Me ester:*
[70290-24-3]
$C_{21}H_{39}NO_4$ 369.543
Isol. from *Spongia* cf. *zimocca*.

N-*(2-Acetoxy-2-tetradecenoyl), Me ester:*
$C_{21}H_{35}NO_5$ 381.511
Isol. from *Fasciospongia cavernosa*.

N-*(2-Acetoxy-2-pentadecenoyl), Me ester:*
$C_{22}H_{37}NO_5$ 395.538
Isol. from *Fasciospongia cavernosa*.

N-*(15-Methyl-8-hexadecenoyl), Me ester:* ***Hurghamide E***
[330203-64-0]
$C_{22}H_{39}NO_3$ 365.555
Isol. from a *Hippospongia* sp. Wax.
λ_{max} 205 (ε 14700) (MeOH).

N-*(2-Alkylcyclopropyl)alkanoyl, Me ester (1):* ***Hurghamide F***
[330203-65-1]
$C_{22}H_{39}NO_3$ 365.555
Isol. from a *Hippospongia* sp. Wax. Posn. of cyclopropyl ring in side-chain not yet determined.

N-*(2-Alkylcyclopropylalkanoyl), Me ester (2):* ***Hurghamide G***
[330203-66-2]
$C_{24}H_{43}NO_3$ 393.609
Isol. from a *Hippospongia* sp. Wax. Posn. of cyclopropyl not determined.

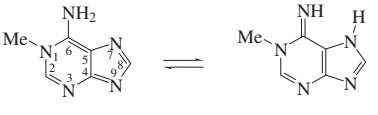
6-Amino-1-methylpurine A-842

*1-Methyl-1*H*-purin-6-amine, 9CI. 1-Methyladenine. 1-Methyl-6-iminopurine.* ***Spongopurine***
[5142-22-3]



$C_6H_7N_5$ 149.155
Exists in the imino form in nonpolar solvs. and the amino form in H_2O. Isol. from starfishes *Asterias amurensis*, *Asterias rubens* and *Marthasterias glacialis*, and sponges *Geodia gigas* and *Hymeniacidon sanguinea*. Spawning-inducing factor in *Asterias*. Cryst. (H_2O). Mp 296-299° dec. pK_{a1} 7.2; pK_{a2} 11.

Picrate: Mp 255-257°.

[34469-09-5]
Alkaloid from *Dolichothele uberiformis* (Cactaceae), also detected by ms in *Dolichothele longimamma*. $Bp_{0.15}$ 58-60°. $[\alpha]_D^{25}$ -62.5 (c, 1.0 in MeOH). n_D^{25} 1.5164.

Me ether: 2-Methoxy-2-phenylethylamine. β-Methoxybenzeneethanamine, 9CI
[55163-76-3]
$C_9H_{13}NO$ 151.208
d_4^{20} 1.02. Bp_{20} 110-113°. $[\alpha]_D^{22}$ -118.5 (neat).

Me ether, hydrochloride: [62064-68-0]
Mp 158-159°.

► SH8090000

(*S*)-*form* [56613-81-1]
Mp 61-62° (55-57°). $[\alpha]_D$ +47.9 (c, 2.4 in EtOH).

Hydrochloride: [71025-82-6]
Mp 209-210°. $[\alpha]_D^{13}$ +48.8 (c, 5.08 in H_2O).

N-*Ac:* [155073-71-5]
$C_{10}H_{13}NO_2$ 179.218
$[\alpha]_D$ +73 (c, 0.2 in $CHCl_3$) (>90% ee; room temp.).

N-*Benzoyl:* Constit. of *Oxytropis trichophysa* and *Oxytropis muricata*. Cryst. (Me_2CO). Mp 154-155°. $[\alpha]_D^{30}$ +35.2 (c, 0.68 in MeOH).

N-*Benzoyl,* O-*Ac: 2-Acetyloxy*-N-*benzoyl-2-phenylethylamine.* ***Muricatide***
[111025-01-5]
[128820-22-4 , 109393-37-5]
$C_{17}H_{17}NO_3$ 283.326
Alkaloid from *Oxytropis muricata*. Needles (hexane/petrol). Mp 114-115° (110-112°). $[\alpha]_D^{20}$ +40.7 (c, 0.43 in $CHCl_3$). λ_{max} 208 (sh) ; 226 (EtOH).

N-tert-*Butyloxycarbonyl:*
$C_{13}H_{19}NO_3$ 237.298
Solid. Mp 66-68°. $[\alpha]_D^{20}$ +3.5 (c, 1 in EtOH) (99% ee).

N-*Me: 2-(Methylamino)-1-phenylethanol*
[65058-52-8]
$C_9H_{13}NO$ 151.208
Solid. Mp 45-47° (39-40°). $Bp_{0.1}$ 99-102°. $[\alpha]_D^{20}$ +40.41 (c, 1.89 in EtOH).

N,N-*Di-Me:* [2202-69-9]
[939-45-7]
Mp 113.5° (as hydrochloride). $[\alpha]_D^{23}$ +77.6 (c, 0.1 in EtOH).

N-*Benzyl:*
$C_{15}H_{17}NO$ 227.305
Cryst. (EtOAc/petrol). Mp 105-107°. $[\alpha]_D^{20}$ +33.8 (c, 2 in EtOH) (99% ee).

(±)-*form* [1936-63-6]
Pale yellow cryst. Mp 56-57°. Bp_{17} 160°. pK_{a1} 8.79; pK_{a2} 11.9 (25°, 0.1*M* KCl).

► DA4727250

Sulfate: [50835-37-5]
Cryst. Mp 275-276°.

► DA4729900

N-*Ac:* [3306-05-6]
$C_{10}H_{13}NO_2$ 179.218
Solid. Mp 125-126°.

N-*Benzoyl:* [96328-15-3]
Leaflets (EtOH). Mp 148-149.5°.

N-tert-*Butyloxycarbonyl:*
Solid. Mp 120-121°.

N-*Me:* [68579-60-2]
Cryst. (CH_2Cl_2/hexane). Mp 72-73°.

► DA4976000

N,N-*Di-Me:* [2202-68-8]
[1797-76-8]
Isol. from leaves of *Aptenia cordifolia*, as partial racemate of low opt. rotn. Mp 144-145° (as hydrochloride)(synthetic). $[\alpha]_D^{25}$ +1.1 (c, 0.08 in $CHCl_3$) (nat.).

N-*Benzyl:*
Solid (EtOAc/petrol). Mp 93-96°.

Me ether: [3490-79-7]
Bp_{12} 103-105°.

(ξ)-*form*
Alkaloid from *Reseda luteola* (Resedaceae), also obt. by hydrol. of 5-Phenyl-2-oxazolidinone, P-347. Vasoconstrictor. Mp 112-114°. Prob. artifact. The identification is dubious in view of the Mp which is higher than that of either the chiral or racemic form of authentic substance.

O-*Benzoyl:* ***Trichophydine***. *Trichophidine*
[67031-54-3]
$C_{15}H_{15}NO_2$ 241.289
Isol. from epigeal parts of *Oxytropis trichophysa*. Cryst. (hexane/petrol). Mp 200-203° (as hydrochloride). It is claimed that a previous alkaloid, Mp 38-40°, isolated from *Oxytropis pseudoglandulosa* given this struct. was erroneous and that it is an oxazoline of undetermined struct.

N,O-*Dibenzoyl:* ***Trichophysine***
$C_{22}H_{19}NO_3$ 345.397
Isol. from epigeal parts of *Oxytropis trichophysa*. Cryst. (hexane/Et_2O). Mp 100-103°.

[36297-03-7 , 61217-79-6 , 6027-95-8 , 6589-55-5 , 6853-14-1 (*N*-Me), 18867-43-1 , 80997-83-7]

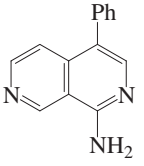
1-Amino-4-phenyl-2,7-naphthyridine A-865

4-Phenyl-2,7-naphthyridin-1-amine, 9CI. ***Lophocladine B***

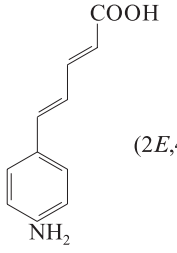


$C_{14}H_{11}N_3$ 221.261
Alkaloid from *Lophocladia* sp. Cytotoxic. Yellowish gum. λ_{max} 220 (log ϵ

4.01); 254 (log ϵ 4.02); 336 (log ϵ 3.89) (MeOH).

Gross, H. *et al., J. Nat. Prod.*, 2006, **69**, 640-644 (*isol, pmr, cmr, ms*)

5-(4-Aminophenyl)-2,4-pentadienoic acid A-866



(2*E*,4*E*)–*form*

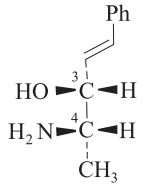
$C_{11}H_{11}NO_2$ 189.213
Prod. by *Streptomyces* sp. Tu 3946. Orange-brown solid. Mp 178°. Isol. as a mixt. of (2*E*,4*E*)- and (2*E*,4*Z*)-isomers.

Amide: 5-(4-Aminophenyl)-2,4-pentadienamide
$C_{11}H_{12}N_2O$ 188.229
Prod. by *Streptomyces* sp. Tu 3946. Yellow solid. Mp 205°. Mixt. of (2*E*,4*E*)- and (2*E*,4*Z*)-isomers.

[154824-88-1 , 154824-87-0 , 154824-83-6 , 154824-82-5]

Potterat, O. *et al., Helv. Chim. Acta*, 1994, **77**, 569 (*isol, synth*)

4-Amino-1-phenyl-1-penten-3-ol, 9CI A-867



(3*R*,4*S*)–*form*

$C_{11}H_{15}NO$ 177.246

(1*E*,3*R*,4*S*)-*form*
Merucathine
[107673-74-5]
Alkaloid from *Catha edulis* (Celastraceae). Needles. Mp 129-130°. $[\alpha]_D^{20}$ +29.6 (c, 0.6 in MeOH).

Hydrochloride: [107673-75-6]
Mp 142-144°. $[\alpha]_D^{20}$ -5.2 (c, 0.4 in H_2O).

(1*E*,3*S*,4*S*)-*form*
Pseudomerucathine
[96861-89-1]
Alkaloid from *Catha edulis* (Celastraceae). Cryst. Mp 103-104°. $[\alpha]_D^{20}$ -15 (mixed solvent).

Hydrochloride: [107673-76-7]
Powder. Mp 194-196°. $[\alpha]_D^{20}$ -17.4 (c, 0.4 in H_2O).

Ammorosine A-931

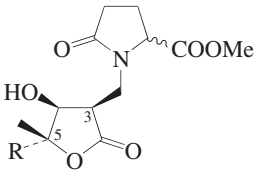
[1354-31-0]

Struct. unknown. Alkaloid from roots of *Catharanthus roseus* (Apocynaceae).
Blades (MeOH). Mp 221-225°. pK_a 7.3 (33% DMF aq.).

Svoboda, G.H. *et al., J. Nat. Prod.*, 1963, **26**, 141-153 (*isol, ir, uv*)

Amphiasterin C_1 A-932

[330680-37-0]



R = -$(CH_2)_3$$^{4"}$CH=$^{5"}CH(CH_2)_9CH_3$(*E*-)

Relative Configuration

$C_{27}H_{45}NO_6$ 479.656
Isol. from *Plakortis quasiamphiaster*. Oil. $[\alpha]_D^{20}$ -19.3 (c, 0.14 in $CHCl_3$).

4″,5″-Dihydro: ***Amphiasterin C₃***
[330680-39-2]
$C_{27}H_{47}NO_6$ 481.671
Isol. from *Plakortis quasiamphiaster*. Oil. $[\alpha]_D^{20}$ -8 (c, 0.4 in $CHCl_3$).

3-Epimer: ***Amphiasterin D₁***
[330680-41-6]
$C_{27}H_{45}NO_6$ 479.656
Isol. from *Plakortis quasiamphiaster*. Oil. $[\alpha]_D^{20}$ -16 (c, 0.06 in $CHCl_3$).

3,4,5-Triepimer: ***Amphiasterin E₁***
[330680-44-9]
$C_{27}H_{45}NO_6$ 479.656
Isol. from *Plakortis quasiamphiaster*. Oil. $[\alpha]_D^{20}$ -3.8 (c, 0.11 in $CHCl_3$).

Zampella, A. *et al., Tetrahedron*, 2001, **57**, 257-263 (*Amphiasterins C_1,C_3,D_1,E_1*)

Amphiasterin C_2 A-933

[330680-38-1]
As Amphiasterin C_1, A-932 with
R = -$(CH_2)_5CH$=$CH(CH_2)_9CH_3$(*E*-)

$C_{29}H_{49}NO_6$ 507.709
Isol. from *Plakortis quasiamphiaster*. Oil. $[\alpha]_D^{20}$ -12.3 (c, 0.65 in $CHCl_3$).

6″,7″-Dihydro: ***Amphiasterin C₄***
[330680-40-5]
$C_{29}H_{51}NO_6$ 509.725
Isol. from *Plakortis quasiamphiaster*. Oil. $[\alpha]_D^{20}$ -11.5 (c, 0.13 in $CHCl_3$).

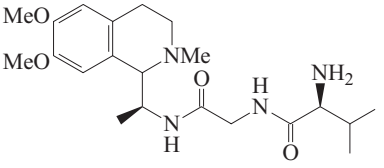
3-Epimer: ***Amphiasterin D₂***
[330680-42-7]
$C_{29}H_{49}NO_6$ 507.709
Isol. from *Plakortis quasiamphiaster*. Oil. $[\alpha]_D^{20}$ -2.9 (c, 0.24 in $CHCl_3$).

3-Epimer, 6″,7″-dihydro: ***Amphiasterin D₃***
[330680-43-8]
$C_{29}H_{51}NO_6$ 509.725
Isol. from *Plakortis quasiamphiaster*. Oil. $[\alpha]_D^{20}$ -1.5 (c, 0.1 in $CHCl_3$).

Zampella, A. *et al., Tetrahedron*, 2001, **57**, 257-263 (*Amphiasterins C_2,C_4,D_2,D_3*)

Amphibine I A-934

L-Valyl-N-*[1-(1,2,3,4-tetrahydro-6,7-dimethoxy-2-methyl-1-isoquinolinyl)ethyl]-glycinamide, 9CI*
[53098-67-2]



$C_{21}H_{34}N_4O_4$ 406.524

Consists of mixt. of diastereoisomer shown with 1,9-diepimer. Alkaloid from *Zizyphus amphibia* (Rhamnaceae). Pale yellow foam. $[\alpha]_D^{20}$ -50 (c, 0.6 in C_6H_6).

Hydrochloride (1:2):
Cryst. ($CHCl_3$/petrol). Mp 175° dec. $[\alpha]_D^{20}$ -3.4 (c, 0.24 in MeOH).

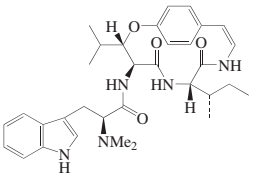
N-*Ac:*
Needles (CH_2Cl_2). Mp 188-190°. $[\alpha]_D^{20}$ -20 (c, 0.1 in EtOH).

Tschesche, R. *et al., Chem. Ber.*, 1974, **107**, 1329; 1975, **108**, 2247 (*ir, uv, ms, pmr, isol, struct, synth, config, cd*)

Koyama, J. *et al., Heterocycles*, 1978, **9**, 443 (*synth, cd*)

Amphibine A A-935

[36535-97-4]



Absolute Configuration

$C_{33}H_{43}N_5O_4$ 573.734

Prob. identical with Discarine A and possibly also with Waltherine B. Alkaloid from the bark of *Zizyphus amphibia* and *Zizyphus spinachristi* and from the root bark of *Zizyphus nummularia* (Rhamnaceae). Needles (CH_2Cl_2/MeOH). Mp 237-239° dec. $[\alpha]_D^{20}$ -310 (c, 0.021 in MeOH).

Stereoisomer (1)(?): ***Waltherine B***
[243464-60-0]
$C_{33}H_{43}N_5O_4$ 573.734
Alkaloid from the root bark of *Waltheria douradinha*. Needles ($CHCl_3$/MeOH). Mp 242-243°. $[\alpha]_D^{20}$ -201.8 (c. 0.21 in MeOH).

Stereoisomer (2)(?): ***Discarine A***
[36211-12-8]
$C_{33}H_{43}N_5O_4$ 573.734
Alkaloid from the roots of *Discaria longispina* (Rhamnaceae). Cryst. (CH_2Cl_2/Et_2O). Mp 229-231°. $[\alpha]_D$ -282 (c, ca. 0.05 in $CHCl_3$).

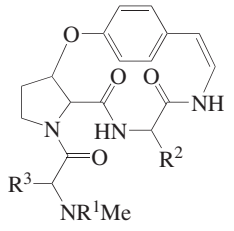
Amphibine F A-940

[52617-26-2]



$R^1 = H$, $R^2 = -CH_2Ph$
$R^3 = -CH(CH_3)CH_2CH_3$

$C_{29}H_{36}N_4O_4$ 504.628

Alkaloid from the bark of *Zizyphus amphibia*, *Zizyphus mauritiana* and *Zizyphus spinachristi* (Rhamnaceae). Amorph. $[\alpha]_D^{20}$ -171 (c, 0.26 in $CHCl_3$).

Dihydro, N-*Me:*
Needles (Me_2CO/cyclohexane). Mp 152-156°. $[\alpha]_D^{20}$ -119 (c, 0.05 in $CHCl_3$).

Tschesche, R. *et al., Chem. Ber.*, 1974, **107**, 686 (*isol, uv, ir, pmr, ms, struct*)
Tschesche, R. *et al., Annalen*, 1974, 1694 (*isol*)
Tschesche, R. *et al., Phytochemistry*, 1974, **13**, 1633 (*isol*)

Amphibine G A-941

[52617-27-3]
As Amphibine F, A-940 with
$R^1 = Me$, $R^2 = -CH_2CH(CH_3)_2$, R^3 = 3-Indolyl–CH_2–

$C_{32}H_{39}N_5O_4$ 557.691

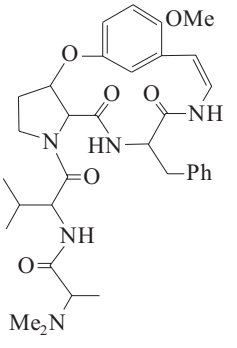
Alkaloid from the bark of *Zizyphus amphibia* (Rhamnaceae). Needles (CCl_4). Mp 182-185°. $[\alpha]_D^{20}$ -218 (c, 0.24 in $CHCl_3$).

Dihydro:
Amorph. $[\alpha]_D^{20}$ +119 (c, 0.2 in $CHCl_3$).

Tschesche, R. *et al., Chem. Ber.*, 1974, **107**, 686 (*isol, uv, cd, ir, pmr, ms, struct*)

Amphibine H A-942

[52659-55-9]



$C_{33}H_{43}N_5O_6$ 605.733

Alkaloid from the bark or root bark of *Zizyphus amphibia*, *Zizyphus nummularia*, *Zizyphus jujuba*, *Zizyphus spina-christi* and *Zizyphus xylopyra*. Shows antibacterial activity. Cryst. ($CHCl_3$/petrol). Mp 205°. $[\alpha]_D^{20}$ -570 (c, 0.12 in MeOH).

N-*De-Me:* ***Nummularine B***. N-*Demethylamphibine H*. *Daechuine S27*
[53947-96-9]
$C_{32}H_{41}N_5O_6$ 591.706
Alkaloid from the root bark or stem bark of *Zizyphus nummularia*, *Zizyphus jujuba*, *Zizyphus sativa* and *Zizyphus xylopyra* (Rhamnaceae). Shows antibacterial activity. Needles (MeOH). Mp 230-231°. $[\alpha]_D^{20}$ -390 (c, 0.2 in $CHCl_3$).

N-*De-Me,* N-*formyl:* ***Nummularine T***
[99694-95-8]
$C_{33}H_{41}N_5O_7$ 619.716
Alkaloid from bark of *Zizyphus nummularia* (Rhamnaceae). Granules (MeOH). Mp 188-190°.

*Dihydro:*Shows antibacterial activity. Needles (CH_2Cl_2/Me_2CO). Mp 281°. $[\alpha]_D^{20}$ -381 (c, 0.15 in MeOH).

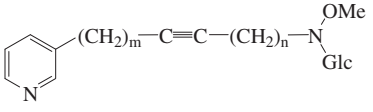
Amphimedoside A A-945

[915721-96-9]



m = 4, n = 10

$C_{28}H_{46}N_2O_6$ 506.681
Similar to Hachijodines, H-3. Alkaloid from *Amphimedon* sp. Cytotoxic.

Takekawa, Y. *et al., J. Nat. Prod.*, 2006, **69**, 1503-1505 (*isol, pmr, cmr, ms*)

Amphimedoside B A-946

[915722-03-1]
As Amphimedoside A, A-945 with
m = 4, n = 8
$C_{26}H_{42}N_2O_6$ 478.628
Alkaloid from *Amphimedon* sp. Cytotoxic.

Takekawa, Y. *et al., J. Nat. Prod.*, 2006, **69**, 1503-1505 (*isol, pmr, cmr, ms*)

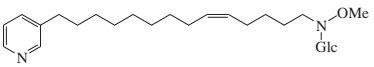
Amphimedoside C A-947

[915722-04-2]
As Amphimedoside A, A-945 with
m = 2, n = 10
$C_{26}H_{42}N_2O_6$ 478.628
Alkaloid from *Amphimedon* sp. Cytotoxic.

Takekawa, Y. *et al., J. Nat. Prod.*, 2006, **69**, 1503-1505 (*isol, pmr, cmr, ms*)

Amphimedoside E A-948

[915722-06-4]

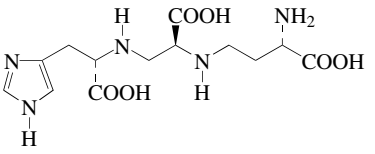


$C_{26}H_{44}N_2O_6$ 480.643
Alkaloid from *Amphimedon* sp. Cytotoxic.

Takekawa, Y. *et al., J. Nat. Prod.*, 2006, **69**, 1503-1505 (*isol, pmr, cmr, ms*)

Amphistin A-949

[199783-52-3]

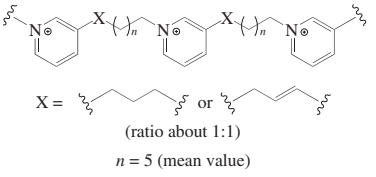


$C_{13}H_{21}N_5O_6$ 343.339
Prod. by an actinomycete strain KP-3052. Melanogenesis inhibitor. Powder. Mp 260° (dec.). $[\alpha]_D^{25}$ -9 (c, 0.6 in H_2O). λ_{max} 220 (ϵ 7500) (H_2O).

Arai, N. *et al., J. Antibiot.*, 1997, **50**, 808-814 (*isol, uv, ir, pmr, cmr, N-15 nmr*)

Amphitoxin A-950

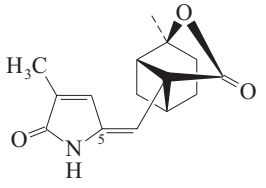
[165724-12-9]



Polymeric alkaloid from the Caribbean sponge *Amphimedon compressa*. Exhibits antifeedant activity. λ_{max} 266 (H_2O).

Albrizio, S. *et al., J. Nat. Prod.*, 1995, **58**, 647 (*isol, uv, ir, pmr, cmr*)

Ampullicin A-951



$C_{15}H_{17}NO_3$ 259.304
Metab. of an *Ampulliferina*-like fungal sp. Needles + ½ H_2O (Me_2CO/C_6H_6/hexane). Mp 197-198°. $[\alpha]_D^{20}$ -32 (c, 0.5 in MeOH). λ_{max} 281 (ϵ 14700) (EtOH) (Derep). λ_{max} 281 (ϵ 14700) (EtOH) (Berdy).

5,6-Dihydro: ***Dihydroampullicin***
[149182-93-4]
$C_{15}H_{19}NO_3$ 261.32
Metab. of an *Ampulliferina*-like fungus. Plant growth regulator. Needles. Sol. MeOH, Me_2CO, EtOAc. Mp 180-181°. $[\alpha]_D^{20}$ +36 (c, 0.25 in MeOH). λ_{max} 244 (ϵ 2490); 248 (ϵ 3000); 254 (ϵ 3350); 260 (ϵ 2400) (EtOH). λ_{max} 244 (ϵ 2940); 248 (ϵ 3000); 254 (ϵ 3350); 260 (ϵ 2400) (EtOH) (Berdy).

5Z-Isomer: ***Isoampullicin***
[127943-13-9]
$C_{15}H_{17}NO_3$ 259.304
From an *Ampulliferina*-like fungal sp. Mp 202-203°. $[\alpha]_D^{20}$ +110 (c, 0.5 in MeOH). λ_{max} 281 (ϵ 14700) (EtOH) (Derep). λ_{max} 284 (ϵ 20500) (EtOH) (Berdy).

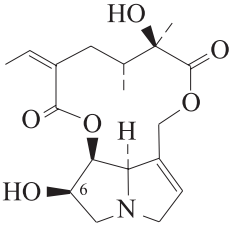
Anacrotine A-967

6,12-Dihydroxysenecionan-11,16-dione, 9CI. Crotalaburnine
[5096-49-1]



Absolute configuration

$C_{18}H_{25}NO_6$ 351.399

Cyclic diester of Crotanecine, C-775 with senecic acid. Alkaloid from *Crotalaria laburnifolia* (Fabaceae). Mp 191-192°. $[\alpha]_D$ +30 (EtOH).

▶ Hepato- and pneumotoxin. VT5707000

O^6*-Ac:* ***Acetylanacrotine***
$C_{20}H_{27}NO_7$ 393.436
Alkaloid from *Crotalaria agatiflora* (Fabaceae). Mp 106-107°. $[\alpha]_D$ +74 (c, 0.4 in EtOH).

6-Epimer: ***Uspallatine***
[98264-41-6]
Alkaloid from the roots of *Senecio uspallatensis* (Asteraceae). Cryst. ($MeOH/CHCl_3$). Mp 205-207°. $[\alpha]_D^{20}$ +4.11 (c, 0.0764 in MeOH).

*(*E*)-Isomer:* **trans-*Anacrotine***
$C_{18}H_{25}NO_6$ 351.399
Minor alkaloid from seeds of *Crotalaria capensis* (Fabaceae). $[\alpha]_D^{22}$ +11 (c, 1.7 in $CHCl_3$).

*(*E*)-Isomer,* O^6*-Ac:* ***Acetyl*-trans-*anacrotine***
$C_{20}H_{27}NO_7$ 393.436
Alkaloid from *Crotalaria agatiflora* (Fabaceae). Prisms (EtOH). Mp 96-97°. $[\alpha]_D$ +65 (c, 1.37 in EtOH).

*(*E*)-Isomer,* O^6*-angeloyl,* N*-oxide:* ***Angeloyl*-trans-*anacrotine* N-*oxide***
$C_{23}H_{31}NO_8$ 449.5
Alkaloid from *Crotalaria agatiflora* (Fabaceae). Mp 175-176°.

Anacycline A-968

N-*(2-Methylpropyl)-2,4-tetradecadiene-8,10-diynamide, 9CI. 2,4-Tetradecadiene-8,10-diynoic acid isobutylamide*
[502-57-8]
$H_3CCH_2CH_2C{\equiv}CC{\equiv}CCH_2CH_2CH{=}CHCH{=}CHCONHCH_2CH(CH_3)_2$

$C_{18}H_{25}NO$ 271.402
λ_{max} 230 (ϵ 10000); 259 (ϵ 33500); 265 (sh) (ϵ 29800) (EtOH) (Derep).

(E,E)-form [94413-18-0]
Alkaloid from the roots of *Anacyclus pyrethrum* (Asteraceae) and *Achillea* spp. Cryst. (Et_2O/petrol). Mp 122°.

Maleic anhydride adduct:
Cryst. (Et_2O/petrol). Mp 196°.

N-*Me:* N-*Methyl*-N-*(2-methylpropyl)-2,4-tetradecadiene-8,10-diynamide.* **N-*Methylanacycline***
[38340-83-9]
$C_{19}H_{27}NO$ 285.428
Constit. of the roots of *Anacyclus pyrethrum* (Asteraceae). Oil. λ_{max} 251 nm.

Tetrahydro:
Waxy needles. Mp 40°.

12,13-Didehydro: N-*Isobutyl-2,4,12-tetradecatriene-8,10-diynamide. Dehydroanacycline. 12,13-Didehydroanacycline*
[29428-83-9]
$C_{18}H_{23}NO$ 269.386
Alkaloid from *Anacyclus fuscata* and *Achillea* spp. (Asteraceae). Cryst. (petrol). Mp 150.5°. Becomes rose-pink on prolonged exposure to sunlight.

(E,Z)-form [37064-16-7]
Synthetic. Cryst. (Et_2O/petrol). Mp 85.5°.

[112711-13-4 , 94481-83-1]

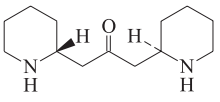
Anaferine A-969

1,3-Di-2-piperidinyl-2-propanone, 9CI



(R,R)–form

$C_{13}H_{24}N_2O$ 224.345

The isolated alkaloid is the *meso*-form, but Anaferine readily racemises and the (±)-form epimerises to the *meso*-form in aq. soln., so it is probable that the nat. alkaloid is opt. active.

(R,R)-form [19519-55-2]
[19519-54-1 dihydrobromide]
Mp 242.5-243.5° (as dihydrochloride). $[\alpha]_D^{22}$ -49.8 (c, 0.529 in MeOH) (dihydrochloride).

(S,S)-form [19519-53-0]
[19519-52-9 dihydrochloride]
Mp 242.5-244° (as dihydrochloride). $[\alpha]_D^{22}$ +50.7 (c, 0.736 in MeOH) (dihydrochloride).

(RS,RS)-form
(±)-form
[28666-51-5]
Dihydrobromide: Mp 247-249°.
Dipicrate: Mp 177-179°.

(RS,SR)-form
meso-*form*
[28699-15-2]
Constit. of root of *Withania somnifera* (Solanaceae). Mp 16-17°. $Bp_{0.01}$ 55°.
Dihydrochloride: Mp 226-228°.
Dihydrobromide: Mp 227-229°.
Dipicrate: Mp 180-182° Mp 193-195° (dimorph.).

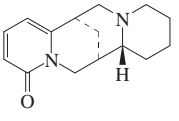
Anagyrine A-970

*7,7*a*,8,9,10,11,13,14-Octahydro-7,14-methano-4*H*,6*H*-dipyrido[1,2-*a*;1′,2′-*e*][1,5]diazocin-4-one, 9CI. Rhombinine. Monolupine. Alkaloid III*
[486-89-5]
[34389-11-2 ((±)-form)]



Absolute Configuration

$C_{15}H_{20}N_2O$ 244.336

Alkaloid from *Anagyris foetida*, several *Cytisus*, *Genista*, *Lupinus*, *Sophora* and *Ammodendron* spp, *Ulex europaeus*, *Ulex nanus*, *Templetonia retusa* and *Thermopsis chinensis*. Antiarrhythmic, diuretic, purgative agent. Cardiotonic agent inducing tachycardia. Major toxic alkaloid responsible for "crooked calf disease" caused by leguminous plants. Noncryst. $[\alpha]_D$ -165 (EtOH). Log P 0.82 (calc). A reported crystal structure determination (1991) of Anagyrine was erroneous; it was Thermopsine, T-363.

▶ Exp. teratogen. BV5620000

Hydrochloride: Mp 295-297°.
Methiodide: Mp 264° dec.

Hydroxy: ***Hydroxyanagyrine***
[67984-05-8]
$C_{15}H_{20}N_2O_2$ 260.335
Alkaloid from *Anagyris foetida* (Fabaceae). No phys. props. reported. Substd. in the D-ring (ring remote from the carbonyl function); posn. of subn. unknown.

11-Epimer: see Thermopsine, T-363

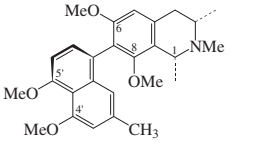
Ancistrobrevine A A-979

[169276-08-8]



$C_{27}H_{33}NO_4$ 435.562
Alkaloid from *Ancistrocladus abbreviatus* (Ancistrocladaceae).

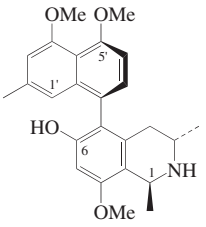
*1-Epimer, 5′,8-di-*O*-de-Me,* N*-de-Me:* ***Ancistrogriffine C***
[478796-16-6]
$C_{24}H_{27}NO_4$ 393.482
Alkaloid from *Ancistrocladus griffithii*. Light yellow powder (MeOH). Mp 165°. $[\alpha]_D^{25}$ +13.8 (c, 0.25 in MeOH).

*Atropisomer, 1-epimer, 4′,6-di-*O*-de-Me:* ***Ancistrogriffine A***
[478796-14-4]
$C_{25}H_{29}NO_4$ 407.508
Alkaloid from *Ancistrocladus griffithii*. Cryst. (MeOH). Mp 148°. $[\alpha]_D^{25}$ +26 (c, 0.4 in MeOH).

Bringmann, G. *et al., Magn. Reson. Chem.*, 1997, **35**, 297-301 (*pmr, config*)
Bringmann, G. *et al., Phytochemistry*, 2002, **61**, 195-204 (*Ancistrogriffines*)

Ancistrobrevine B A-980

[146471-74-1]



$C_{25}H_{29}NO_4$ 407.508
Alkaloid from *Ancistrocladus abbreviatus* and *Ophiopogon japonicus*. Amorph. powder (MeOH/Me_2CO). Mp 122-124°. $[\alpha]_D$ -68 (c, 0.81 in $CHCl_3$).

6-Me ether: ***Ancistrotectoriline A***
[302543-63-1]
$C_{26}H_{31}NO_4$ 421.535
Alkaloid from *Ancistrocladus tectorius*. Amorph. solid. Mp 103-105°. $[\alpha]_D^{25}$ +1.3 (c, 0.75 in $CHCl_3$).

6-Me ether, N*-Me:* ***5-Epi-6-*O*-methylancistrobertsonine A***. N*-Methylancistrotectoriline A*
$C_{27}H_{33}NO_4$ 435.562
Alkaloid from a Congolese *Ancistrocladus* sp. Amorph. solid. $[\alpha]_D^{25}$ +1.2 (c, 0.09 in MeOH). λ_{max} 237 (log ϵ 1.29); 307 (log ϵ 0.4); 321 (log ϵ 0.33); 337 (log ϵ 0.26) (CH_2Cl_2).

*4′,8-Di-*O*-de-Me, 6-Me ether,* N*-Me:*
[222409-76-9]
$C_{25}H_{29}NO_4$ 407.508
Alkaloid from *Ancistrocladus likoko*.

1,2-Didehydro, 6-Me ether: ***Ancistrotanzanine B***
[604767-80-8]
$C_{26}H_{29}NO_4$ 419.519
Alkaloid from *Ancistrocladus likoko* and *Ancistrocladus tanzaniensis*. Yellow oil. $[\alpha]_D^{25}$ +44 (c, 0.01 in MeOH). λ_{max} 230 (log ϵ 1.89); 305 (log ϵ 1.42) (MeOH).

*1-Epimer, 4′-*O*-de-Me, 6-Me ether,* N*-Me:* ***5-Epi-4′-*O*-demethylancistrobertsonine C***
$C_{26}H_{31}NO_4$ 421.535
Alkaloid from a Congolese *Ancistrocladus* sp. Cryst. (MeOH). Mp 92° (synthetic). $[\alpha]_D^{25}$ +15.7 (c, 0.12 in MeOH) (natural). $[\alpha]_D^{20}$ +51.8 (c, 1 in MeOH) (synthetic). λ_{max} 230 (log ϵ 1.05); 307 (log ϵ 0.42) (CH_2Cl_2).

Epimer, 6-Me ether, N*-Me:* [222409-80-5]
$C_{27}H_{33}NO_4$ 435.562
Alkaloid from *Ancistrocladus likoko*. Possesses *cis*-config.

Atropisomer, N*-Me:* ***Ancistrobertsonine A***
$C_{26}H_{31}NO_4$ 421.535
Alkaloid from *Ancistrocladus robertsoniorum* (Ancistrocladaceae). Cryst. (MeOH aq.). Mp 220-222°. $[\alpha]_D^{25}$ +29 (c, 0.5 in $CHCl_3$).

*Atropisomer, 5′-*O*-de-Me:* ***Ancistroguineine A***
[202343-74-6]
$C_{24}H_{27}NO_4$ 393.482
Alkaloid from *Ancistrocladus guineen-*

sis. Needles ($CHCl_3$). Mp 202-204°. $[\alpha]_D^{25}$ +191.4 (c, 0.5 in $CHCl_3$).

*Atropisomer, 5′-*O*-de-Me, 6-Me ether:* ***Ancistroealaine B***
[303752-19-4]
$C_{25}H_{29}NO_4$ 407.508
Alkaloid from *Ancistrocladus ealaensis.* Yellow powder (MeOH). Mp 248°. $[\alpha]_D^{20}$ -16.7 (c, 0.71 in EtOH).

Atropisomer, 1,2-didehydro: ***6-O-Demethylancistroealaine A***
$C_{25}H_{27}NO_4$ 405.493
Alkaloid from a Congolese *Ancistrocladus* sp. Yellow cryst. Mp 155-160°. $[\alpha]_D^{25}$ -63.2 (c, 0.1 in MeOH). λ_{max} 232 (log ϵ 1.06); 310 (log ϵ 0.34); 316 (log ϵ 0.34); 321 (log ϵ 0.35); 334 (log ϵ 0.33) (CH_2Cl_2).

Atropisomer, 1,2-didehydro, 6-Me ether: ***Ancistroealaine A***
[303752-18-3]
$C_{26}H_{29}NO_4$ 419.519
Alkaloid from *Ancistrocladus ealaensis.* Light yellow powder (MeOH). Mp 94-96°. $[\alpha]_D^{25}$ -34.3 (c, 0.55 in EtOH).

*Atropisomer, 1,2-didehydro, 4′-*O*-de-Me:* ***Ancistrolikokine D***
$C_{24}H_{25}NO_4$ 391.466
Alkaloid from *Ancistrocladus likoko*. Amorph. solid. Mp 122-124°. $[\alpha]_D^{25}$ +191.6 (c, 0.15 in $CHCl_3$).

*Atropisomer, 1,2-didehydro, 5′-*O*-de-Me:* ***5′,6-Di-O-demethylancistroealaine A***
$C_{24}H_{25}NO_4$ 391.466
Alkaloid from a Congolese *Ancistrocladus* sp. Amorph. yellow solid. $[\alpha]_D^{25}$ -68.6 (c, 0.1 in MeOH). λ_{max} 235 (log ϵ 1.15); 313 (log ϵ 0.47); 316 (log ϵ 0.47); 321 (log ϵ 0.48); 325 (log ϵ 0.47); 335 (log ϵ 0.45) (CH_2Cl_2).

Atropisomer, 1-epimer, 6-Me ether, N*-Me:* ***Ancistrobertsonine C***
[250130-68-8]
$C_{27}H_{33}NO_4$ 435.562
Alkaloid from *Ancistrocladus robertsoniorum*. Mp 148-149°. $[\alpha]_D^{25}$ -3 (c, 0.09 in $CHCl_3$).

*Atropisomer, 3-epimer, 5′-*O*-de-Me:* ***Ancistroguineine B***
[202420-24-4]
$C_{24}H_{27}NO_4$ 393.482
Alkaloid from *Ancistrocladus guineensis.* Amorph. solid. $[\alpha]_D^{25}$ -141.2 (c, 0.04 in $CHCl_3$).

Bringmann, G. *et al., Phytochemistry*, 1992, **31**, 4011; 1998, **47**, 31-35; 37-43; 1999, **52**, 321-332 (*isol, ir, cd, pmr, ms, struct, derivs*)

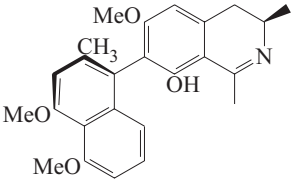
Ancistrobrevine C A-981

7-(4,5-Dimethoxy-2-methyl-1-naphthalenyl)-3,4-dihydro-6-methoxy-1,3-dimethyl-8-isoquinolinol
[151870-96-1]



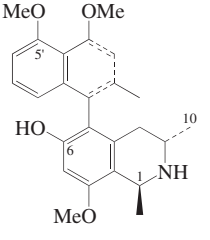
$C_{25}H_{27}NO_4$ 405.493
Alkaloid from stem bark and roots of *Ancistrocladus abbreviatus* (Ancistrocladaceae). Amorph. yellow solid. Mp 180-183°. $[\alpha]_D^{25}$ +13 (c, 0.69 in $CHCl_3$).

1,2-Dihydro, stereoisomer: ***Ancistine***
[58738-33-3]
$C_{25}H_{29}NO_4$ 407.508
Alkaloid from the roots of *Ancistrocladus ealaensis* (Ancistrocladaceae). Cryst. (Me_2CO). Mp 275-276°. $[\alpha]_D^{20}$ -34 (c, 1 in $CHCl_3$/MeOH 1:1). Stereochem. not determined.

Foucher, J.P. *et al., Phytochemistry*, 1975, **14**, 2699 (*Ancistine*)
Bringmann, G. *et al., Phytochemistry*, 1993, **33**, 1511 (*Ancistrobrevine C*)

Ancistrocladine A-982

5-(4,5-Dimethoxy-2-methyl-1-naphthalenyl)-1,2,3,4-tetrahydro-8-methoxy-1,3-dimethyl-6-isoquinolinol, 9CI
[32221-59-3]



Absolute Configuration

$C_{25}H_{29}NO_4$ 407.508
Alkaloid from *Ancistrocladus heyneanus*, *Ancistrocladus congolensis*, *Ancistrocladus hamatus* and *Ancistrocladus tectorius.* Shows antimalarial activity. Cryst. (MeOH). Mp 265-267° dec.

Hydrochloride:
Needles (MeOH/Me_2CO). Mp 220-224° dec. $[\alpha]_D^{25}$ -25.5 (c, 2.3 in MeOH).

N*-Ac:*
Cryst. (Et_2O). Mp 277-279°.

Me ether: **O***-Methylancistrocladine*
[32215-20-6]
$C_{26}H_{31}NO_4$ 421.535
Alkaloid from the root and stem bark of *Ancistrocladus congolensis* (Ancistrocladaceae). Fluffy needles (MeOH). Mp 200-202°.

Me ether, hydrochloride:
Needles (Me_2CO). Mp 315-317° dec. $[\alpha]_D^{25}$ -56.1 (c, 1.9 in $CHCl_3$).

O,N*-Di-Me:* **O,N-*Dimethylancistrocladine***
[32215-13-7]
Alkaloid from the leaves of *Ancistrocladus tanzaniensis.* Prisms (Et_2O). Mp 183-185° (163° dec.). $[\alpha]_D^{25}$ -21 (c, 2.55 in $CHCl_3$).

*4′-*O*-De-Me:* ***4′-O-Demethylancistrocladine***
[165816-69-3]
$C_{24}H_{27}NO_4$ 393.482
Alkaloid from bark of *Ancistrocladus tectorius* (Ancistrocladaceae). Gum. $[\alpha]_D$ +2.5 (c, 1 in $CHCl_3$).

*4′-*O*-De-Me, 6-Me ether:* ***4′-O-Demethyl-6-O-methylancistrocladine***
$C_{25}H_{29}NO_4$ 407.508
Alkaloid from *Ancistrocladus tectorius.* Light yellow powder. $[\alpha]_D^{25}$ -3.1 (c, 0.38 in MeOH).

1,2-Didehydro: ***Ancistrocladinine***
[36209-87-7]
$C_{25}H_{27}NO_4$ 405.493
Minor alkaloid from the roots of *Ancistrocladus heyneanus* (Ancistrocladaceae). Mp 235-238° dec. $[\alpha]_D^{25}$ -321.8 (c, 1.06 in Py).

1,2-Didehydro, Me ether: ***6-O-Methylancistrocladinine***
[134984-06-8]
$C_{26}H_{29}NO_4$ 419.519
Alkaloid from the leaves of *Ancistrocladus tanzaniensis.* Amorph. solid. Mp 102°. $[\alpha]_D^{25}$ -31 (c, 0.4 in MeOH). λ_{max} 231 (log ϵ 0.22); 303 (log ϵ 0.04) (MeOH).

1,2,3,4-Tetradehydro: ***Ancistrocladeine***
[58738-34-4]
$C_{25}H_{25}NO_4$ 403.477
Alkaloid from roots of *Ancistrocladus ealaensis* and *Ancistrocladus tectorius* (Ancistrocladaceae). Cryst. (Me_2CO). Mp 275-277°.

1-Epimer: ***Isoancistrocladine****. 1-Epiancistrocladine*
[36209-88-8]
$C_{25}H_{29}NO_4$ 407.508
Alkaloid from roots of *Ancistrocladus heyneanus* (Ancistrocladaceae). Cryst. (MeOH). Mp 230-232°. $[\alpha]_D$ +59.5 (c, 0.6 in $CHCl_3$).

1-Epimer, N*-Me:* ***Ancistrocline***
[82189-88-6]
$C_{26}H_{31}NO_4$ 421.535
Alkaloid from *Ancistrocladus tectorius* (Ancistrocladaceae). Mp 223-224°. $[\alpha]_D^{25}$ +59.1 (c, 0.23 in $CHCl_3$).

*1-Epimer, 5′-*O*-de-Me,* N*-Me:* ***5′-O-Demethylancistrocline***
[828935-65-5]
$C_{25}H_{29}NO_4$ 407.508
Alkaloid from the stem bark of *Ancistrocladus benomensis.* Amorph. brown solid (MeOH). Mp 213°. $[\alpha]_D^{25}$ +61.7 (c, 0.01 in MeOH). λ_{max} 203 (log ϵ 0.35); 227 (log ϵ 0.42); 307 (log ϵ 0.07); 319

(log ϵ 0.06); 335 (log ϵ 0.05) (MeOH).

1- And/or 3-epimer, Me ether: ***Ancistroealaensine***
[54382-93-3]
$C_{26}H_{31}NO_4$ 421.535
Alkaloid from the roots of *Ancistrocladus ealaensis* (Ancistrocladaceae). Mp 84° (softens). $[\alpha]_D^{20}$ -26 (c, 1 in MeOH). Config. unknown.

1- And/or 3-epimer, Me ether, perchlorate: Cryst. (MeOH). Mp 132-135°. $[\alpha]_D^{20}$ -84 (c, 1 in MeOH).

Atropisomer: ***Hamatine***
[56688-90-5]
$C_{25}H_{29}NO_4$ 407.508
Alkaloid from the roots of *Ancistrocladus hamatus* (Ancistrocladaceae). Mp 250-252°. $[\alpha]_D$ +77.44 ($CHCl_3$) (+68). Has opposite chirality of the biaryl system.

Atropisomer, Me ether:
Cryst. (hexane). Mp 160-162°. $[\alpha]_D$ +27.2 (c, 1 in $CHCl_3$).

Atropisomer, O,N-*di-Me:*
Needles (Et_2O). Mp 170-172°.

*Atropisomer, 4′-*O-*de-Me, 6-Me ether:* ***4′-O-Demethyl-6-O-methylhamatine***
$C_{25}H_{29}NO_4$ 407.508
Alkaloid from *Ancistrocladus tectorius*. Light yellow powder. $[\alpha]_D^{25}$ +12.4 (c, 0.36 in MeOH).

*Atropisomer, 5′-*O-*de-Me:* ***5′-O-Demethylhamatine***
$C_{24}H_{27}NO_4$ 393.482
Alkaloid from a Congolese *Ancistrocladus* sp. Amorph. solid. Mp 174-180°. $[\alpha]_D^{25}$ +26 (c, 0.1 in MeOH). λ_{max} 237 (log ϵ 1.42); 309 (log ϵ 0.41); 322 (log ϵ 0.37); 337 (log ϵ 0.34) (CH_2Cl_2).

Atropisomer, 1,2-didehydro: ***Hamatinine***
[194811-19-3]
$C_{25}H_{27}NO_4$ 405.493
Alkaloid from leaves of *Ancistrocladus cochinchinensis*. Isol. as a *ca*. 1:1 inseparable mixt. with Ancistrocladinine.

Atropisomer, 1,2-didehydro, Me ether: ***6-O-Methylhamatinine***
[194242-88-1]
$C_{26}H_{29}NO_4$ 419.519
Alkaloid from leaves of *Ancistrocladus cochinchinensis*. Amorph. $[\alpha]_D^{22}$ +34.1 (c, 1.0 in $CHCl_3$).

*Atropisomer, 1,2-didehydro, 5′-*O-*de-Me:* ***5′-O-Demethylhamatinine***
$C_{24}H_{25}NO_4$ 391.466
Alkaloid from a Congolese *Ancistrocladus* sp. Amorph. yellow solid. $[\alpha]_D^{25}$ +25 (c, 0.1 in MeOH). λ_{max} 235 (log ϵ 1.05); 311 (log ϵ 0.34); 321 (log ϵ 0.33); 335 (log ϵ 0.3) (CH_2Cl_2).

Atropisomer, 1,2,3,4-tetradehydro, 6-Me ether: ***6-O-Methylhamateine***
$C_{26}H_{27}NO_4$ 417.504
Alkaloid from the leaves of *Ancistrocladus cochinchinensis*. Cryst. ($CHCl_3$/hexane). Mp 233-236°. $[\alpha]_D^{22}$ -41.4 (c, 0.46 in $CHCl_3$).

*Atropisomer, 10-hydroxy, 1,2,3,4-tetradehydro, 4′-*O-*de-Me:* ***6-O-Demethylancistrobenomine A***
[828935-64-4]
$C_{24}H_{23}NO_5$ 405.449
Alkaloid from the stem bark of *Ancistrocladus benomensis*. Pale yellow solid (MeOH). Mp 169°. $[\alpha]_D^{25}$ -34.4 (c, 0.05 in MeOH). λ_{max} 231 (log ϵ 0.44); 259 (log ϵ 0.28); 307 (log ϵ 0.07); 335 (log ϵ 0.08); 363 (log ϵ 0.05) (MeOH).

*Atropisomer, 10-hydroxy, 1,2,3,4-tetradehydro, 4′-*O-*de-Me, 6-Me ether:* ***Ancistrobenomine A***
[828935-63-3]
$C_{25}H_{25}NO_5$ 419.476
Alkaloid from the stem bark of *Ancistrocladus benomensis*. Pale yellow powder (MeOH). Mp 270° dec. $[\alpha]_D^{25}$ -21 (c, 0.1 in MeOH). λ_{max} 219 (log ϵ 1.79); 235 (log ϵ 2.09); 259 (log ϵ 1.95); 307 (log ϵ 0.85); 323 (log ϵ 0.81); 335 (log ϵ 0.85); 363 (log ϵ 0.58) (MeOH).

Atropisomer, 1-epimer, Me ether: ***Ancistrobertsonine B***
$C_{26}H_{31}NO_4$ 421.535
Alkaloid from *Ancistrocladus robertsoniorum*. Mp 192-193°. $[\alpha]_D^{25}$ +4 (c, 0.09 in $CHCl_3$).

Stereoisomer, O,N-*di-Me: 5-(4,5-Dimethoxy-2-methyl-1-naphthalenyl)-1,2,3,4-tetrahydro-6,8-dimethoxy-1,2,3-trimethylisoquinoline.* ***Ancistrocladonine***
[54382-91-1]
$C_{27}H_{33}NO_4$ 435.562
Alkaloid from the roots of *Ancistrocladus ealaensis* (Ancistrocladaceae). Needles (Et_2O). Mp 82-83°. $[\alpha]_D^{20}$ +20 (c, 1 in MeOH). Stereochem. unknown.

Stereoisomer, O,N-*di-Me, perchlorate:* Cryst. (MeOH). Mp 256-258°. $[\alpha]_D^{20}$ +71 (c, 1 in MeOH).

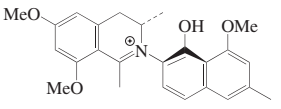
Ancistrocladinium B A-984

[918875-19-1]
[918875-20-4]



(*R*)-*form*

$C_{25}H_{28}NO_4^{\oplus}$ 406.501
Alkaloid from the leaves of *Ancistrocladus* sp. Pale yellow cryst. Mp > 230° dec. $[\alpha]_D^{20}$ -8 (c, 0.06 in MeOH). Occurs as a mixt. of the two atropisomers, to which the data refers. λ_{max} 227 (log ϵ 0.94); 346 (log ϵ 0.34) (MeOH).

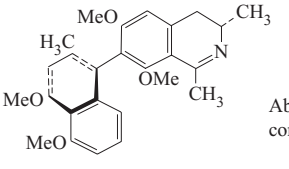
(R)-form
$[\alpha]_D$ -4.5 (c, 0.04 in MeOH).

(S)-form
$[\alpha]_D^{20}$ -11.3 (c, 0.04 in MeOH).

Bringmann, G. *et al., J.O.C.*, 2006, **71**, 9348-9356 (*isol, cd, pmr, cmr*)

Ancistrocladisine A-985

7-(4,5-Dimethoxy-2-methyl-1-naphthalenyl)-3,4-dihydro-6,8-dimethoxy-1,3-dimethylisoquinoline, 9CI
[41787-65-9]



Absolute configuration

$C_{26}H_{29}NO_4$ 419.519
Alkaloid from the roots of *Ancistrocladus heyneanus* and *Ancistrocladus hamatus* (Ancistrocladaceae). Pale-brown needles (Et_2O or petrol). Mp 178-180°. $[\alpha]_D^{25}$ +7.8 (c, 0.53 in $CHCl_3$) (synthetic).

Hydrochloride:
Needles (MeOH/Me_2CO). Mp 220-222° dec. $[\alpha]_D$ -16.13 (c, 1.29 in $CHCl_3$).

Methiodide:
Pale-yellow needles. Mp 220-224° dec.

O^6-*De-Me:* ***1,2-Didehydroancistrobertsonine D***. 6-O-*Demethylancistrocladisine*

[250131-08-9]
$C_{25}H_{27}NO_4$ 405.493

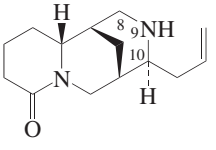
*Decahydro-4-(2-propenyl)-1,5-methano-8*H*-pyrido[1,2-*a*][1,5]diazocin-8-one, 9CI. Jamaicensine*
[550-43-6]



(-)-*form*

$C_{14}H_{22}N_2O$ 234.341

(-)-*form*
Alkaloid from *Lupinus angustifolius, Lupinus polyphyllus, Lupinus albus, Ormosia jamaicensis* and *Ormosia panamensis* (Fabaceae). Active against gram-positive bacteria. Mp 80.5-81°. $[\alpha]_D$ -7.5 (+5.2) (EtOH).

Hydrochloride: Mp 96-97°.

Picrate: Mp 182-185°.

N-*Formyl:* **N-*Formylangustifoline***
[4697-81-8]
$C_{15}H_{22}N_2O_2$ 262.351
Alkaloid from combined leaf and hypocotyl extracts of *Lupinus polyphyllus* (Fabaceae).

N-*Ac:* Mp 151-152°.

N-*Methoxycarbonyl:* ***Angustifoline* N-*carboxymethyl ester***
[145889-87-8]
$C_{16}H_{24}N_2O_3$ 292.377
Alkaloid from combined leaf and

hypocotyl extracts of *Lupinus polyphyllus* (Fabaceae).

N-*Ethoxycarbonyl:* ***Angustifoline* N-*carboxyethyl ester***
[145889-88-9]
$C_{17}H_{26}N_2O_3$ 306.404
Alkaloid from combined leaf and hypocotyl extracts of *Lupinus polyphyllus* (Fabaceae).

N-*Me:* **N-*Methylangustifoline***
[4697-79-4]
$C_{15}H_{24}N_2O$ 248.367
A principal alkaloid of the oil of *Lupinus mutabilis* (Fabaceae). Mp 86° (synthetic). $[\alpha]_D^{21}$ +7.24 (c, 2.35 in EtOH) (synthetic). Isoln. is poorly documented.

Deoxo: ***Deoxoangustifoline***. *Deoxyangustifoline*
[72710-32-8]
$C_{14}H_{24}N_2$ 220.357
Alkaloid from *Thermopsis mongolica* (Fabaceae).

8,9-Didehydro: ***Dehydroangustifoline***. *Alkaloid W102*
[85530-32-1]
$C_{14}H_{20}N_2O$ 232.325
Alkaloid from *Lupinus albus* and *Lupinus angustifolius* (Fabaceae). Mp 105°.

10-Epimer: ***Isoangustifoline***
[82189-28-4]
$C_{14}H_{22}N_2O$ 234.341
Alkaloid from phloem exudate of *Lupinus angustifolius*, and from *Lupinus polyphyllus*. Identified only by ms.

(+)-*form* [150283-69-5]
Alkaloid from seeds of *Lupinus termis*. Minor constit. in seeds of *Lupinus albus* cv. BAC. Oil. Mp 77°. $[\alpha]_D^{20}$ +4.9 (solv. unspecified). $[\alpha]_D^{25}$ +5.2 (c, 0.1 in MeOH).

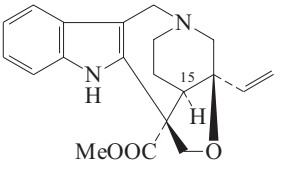
Angustilobine A A-1014

[112464-20-7]



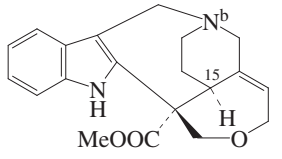
$C_{20}H_{22}N_2O_3$ 338.405
Alkaloid from *Alstonia angustiloba*, *Alstonia congensis* and *Alstonia pneumatophora* (Apocynaceae). $[\alpha]_D$ +84 (c, 0.45 in $CHCl_3$).

15-Hydroxy: ***15-Hydroxyangustilobine A***
[112464-21-8]
$C_{20}H_{22}N_2O_4$ 354.405
Alkaloid from *Alstonia angustiloba* and *Alstonia pneumatophora* (Apocynaceae). $[\alpha]_D$ -160 (c, 0.5 in $CHCl_3$).

Zeches, M. *et al., J. Nat. Prod.*, 1987, **50**, 714 (*isol*)
Caron, C. *et al., Phytochemistry*, 1989, **28**, 1241 (*isol*)

Angustilobine B A-1015

[112448-50-7]



$C_{20}H_{22}N_2O_3$ 338.405
Alkaloid from *Alstonia angustifolia, Alstonia congensis* and *Alstonia pneumatophora* (Apocynaceae). $[\alpha]_D$ -136 (c, 0.5 in $CHCl_3$).

N^b-*Oxide:* ***Angustilobine B* N^b-*oxide***
[123085-03-0]
$C_{20}H_{22}N_2O_4$ 354.405
Alkaloid from *Alstonia congensis* and *Alstonia scholaris*. $[\alpha]_D$ +97 (c, 0.2 in $CHCl_3$).

N^b-*Me:* **N^b-*Methylangustilobine B***
$C_{21}H_{25}N_2O_3^{\oplus}$ 353.44
Alkaloid from *Alstonia scholaris*. Counterion not specified.

Parent acid: ***Angustilobine B acid***
[126594-74-9]
$C_{19}H_{20}N_2O_3$ 324.379
Alkaloid from leaves of *Alstonia scholaris* (Apocynaceae). Fine prisms. Mp 230-235° dec. $[\alpha]_D^{24}$ -117.4 (c, 0.66 in Py).

15-Epimer(?): ***Alstonamine***
[1394-99-6]
$C_{20}H_{22}N_2O_3$ 338.405
Alkaloid from the leaves of *Alstonia scholaris* (Apocynaceae). Amorph. solid. Mp 126°. $[\alpha]_D^{20}$ +46 (c, 2 in $CHCl_3$). Same gross struct. assigned to Alstonamine as to Angustilobine B but with undetd. 15-config. Clearly not the same as Angustilobine B.

Zeches, M. *et al., J. Nat. Prod.*, 1987, **50**, 714 (*Angustilobine B*)
Atta-ur-Rahman, *et al., Phytochemistry*, 1987, **26**, 2139 (*Alstonamine*)

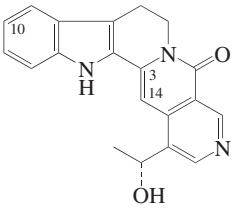
Angustoline A-1020



(*R*)-*form*

$C_{20}H_{17}N_3O_2$ 331.373

(*R*)-*form* [40041-95-0]
Alkaloid from *Strychnos angustiflora* and several other *Strychnos* spp., and from *Uncaria* spp. (Loganiaceae, Rubiaceae). Yellow needles ($CHCl_3$/MeOH). Mp 310-314°. $[\alpha]_D$ -34 ($CHCl_3$).

Me ether: ***19-O-Methylangustoline***
[132074-99-8]
$C_{21}H_{19}N_3O_2$ 345.4
Alkaloid from the seeds of *Camptotheca acuminata* (Nyssaceae). Cytotoxic agent. Yellow cryst. (Me_2CO). Mp 222-225°. $[\alpha]_D$ -6.3 (c, 0.008 in MeOH). λ_{max} 204 (ϵ 56234); 370 (ϵ 17380); 395 (ϵ 14125) (MeOH) (Berdy).

3,14-Dihydro: ***3,14-Dihydroangustoline***
[142115-22-8]
[142186-12-7]
$C_{20}H_{19}N_3O_2$ 333.389
Alkaloid from leaves of *Nauclea orientalis* (Rubiaceae). Yellowish amorph. solid. $[\alpha]_D^{20}$ -172.5 (c, 0.20 in EtOH). $[\alpha]_D^{20}$ -301.4 (c, 0.33 in EtOH). Two diastereoisomers isol. λ_{max} 204 ; 265 ; 373 ; 396 (EtOH) (Berdy).

Ketone: ***Naucletine***
[54698-29-2]
$C_{20}H_{15}N_3O_2$ 329.357
Alkaloid from the root bark of *Nauclea latifolia* (Rubiaceae). Orange cryst. (MeOH). Mp 310°.

10-Hydroxy: ***Naucleofficine E***
$C_{20}H_{17}N_3O_3$ 347.373
Alkaloid from the stems of *Nauclea officinalis*. Orange-yellow powder. Mp 279-281°. $[\alpha]_D^{20}$ -29.3 (c, 0.21 in MeOH). Probable abs. config. λ_{max} 220 (log ϵ 4.31); 251 (log ϵ 4.02); 307 (log ϵ 3.9); 400 (log ϵ 4.67) (MeOH).

(±)-*form*
Synthetic. Pale-yellow cryst. (MeOH/$CHCl_3$). Mp 292-294°.

(ξ)-*form*
O-*Ac:* **O-*Acetylangustoline***
[40042-53-3]
$C_{22}H_{19}N_3O_3$ 373.41
Alkaloid from the root bark of *Nauclea pobeguinii* (Rubiaceae). Yellow needles + 1.5H_2O ($CHCl_3$). Mp 148-152° (synthetic). Nat. alkaloid obt. only in small amt., no info. on opt. rotn. or abs. config.

Et ether: ***19-O-Ethylangustoline***
[210895-10-6]
$C_{22}H_{21}N_3O_2$ 359.427
Alkaloid from the stem bark *of Sarcocephalus latifolius*. Mp 230-240°. $[\alpha]_D$ -0.01 ($CHCl_3$). Appears to be a virtual racemate.

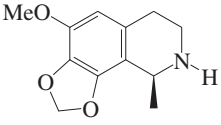
Anhalonine A-1021

6,7,8,9-Tetrahydro-4-methoxy-9-methyl-1,3-dioxolo[4,5-h]isoquinoline, 9CI. 1,2,3,4-Tetrahydro-6-methoxy-1-methyl-7,8-methylenedioxyisoquinoline



(*S*)-*form*

$C_{12}H_{15}NO_3$ 221.255

(*R*)-*form*
Obt. by resoln. Mp 84.5-85.5°. $[\alpha]_D^{25}$ +56.7 ($CHCl_3$).

(*S*)-*form* [519-04-0]
Alkaloid from *Anhalonium lewinii* (*Lophophora williamsii*), *Gymnocalycium lecanum* and *Trichocereus terscheckii* (Cactaceae). Also obt. by resoln. and by synth. Cryst. (Et_2O/petrol). Mp 85-86°. $[\alpha]_D^{25}$ -56.3 ($CHCl_3$). $[\alpha]_D^{25}$ -62.9 (c, 1 in MeOH). $[\alpha]_D^{25}$ -51 (c, 1 in 1*M* HCl).

Hydrochloride: Mp 258-259°. $[\alpha]_D^{25}$ -40 (c, 1 in 50% EtOH).

Hydrobromide:
Cryst. (H_2O). Mp 270-271°. $[\alpha]_D^{25}$ -30 (c, 1 in H_2O).

N-*Me:* ***Lophophorine***. *6,7,8,9-Tetrahydro-4-methoxy-8,9-dimethyl-1,3-dioxolo[4,5-h]isoquinoline, 9CI. 1,2,3,4-Tetrahydro-6-methoxy-1,2-dimethyl-7,8-methylenedioxyisoquinoline*
[17627-78-0]
$C_{13}H_{17}NO_3$ 235.282
Alkaloid from *Gymnocalycium gibbosum*, *Gymnocalycium lecanum*, *Lopho-*

phora diffusa and *Lophophora williamsii* (Cactaceae). Respiratory stimulant, convulsive agent. Oil. $Bp_{0.05}$ 140-145°. $[\alpha]_D^{25}$ -47.3 ($CHCl_3$).

▶ Toxic, LD_{50} (rbt, ivn) 15-20 mg/kg. JI4800000

N-*Me; hydrochloride:* Cryst. (EtOH). Mp 236-237°. $[\alpha]_D^{25}$ -15.6 (c, 1 in H_2O).

N-*Me, picrate:* Mp 162-163°.

N-*Formyl:* ***N-Formylanhalonine***
$C_{13}H_{15}NO_4$ 249.266
Isol. from *Anhalonium lewinii* (Cactaceae). Abs. config. of this isolate unknown; identified by glc/ms comparison with an authentic prepn.

N-*Ac:* **N-*Acetylanhalonine***
$C_{14}H_{17}NO_4$ 263.293
Constit. of *Anhalonium lewinii* (Cactaceae). Identified by glc/ms comparison.

N-*Et:* ***Peyophorine***. N-*Ethylanhalonine*
[22030-12-2]
$C_{14}H_{19}NO_3$ 249.309
Alkaloid from *Anhalonium lewinii* (Cactaceae). Abs. config. not determined.

N-*Et, picrate:* Mp 155-156°.

N,N-*Di-Me: 6,7,8,9-Tetrahydro-4-methoxy-8,8,9-trimethyl-1,3-dioxolo[4,5-h]isoquinolinium(1+), 9CI.* ***Lophotine***
[19267-94-8]
[19445-63-7]
$C_{14}H_{20}NO_3^{\oplus}$ 250.317
Alkaloid from *Anhalonium lewinii*. Cryst. (EtOH/EtOAc) (as iodide). Mp 223° (softens) Mp 240-242° (iodide). Abs. config. not certain. Double Mp attributed to thermal racemisation.

(±)-form
Synthetic. Cryst. (MeOH) (as hydrochloride). Mp 262-264° (hydrochloride).

N-*Me; hydrobromide:* Cryst. (EtOH). Mp 221-222°.

Anhweiaconitine A-1022

[1354-38-7]

Struct. unknown

$C_{30}H_{41}NO_9$ 559.655

Probably a C_{19}-diterpene alkaloid. Alkaloid from the roots of the Chinese drug Tzu-Tsao-Wu (*Aconitum* spp.) (Ranunculaceae). Mp 199°. $[\alpha]_D^{11}$ +25.2 (c, 1 in $CHCl_3$). Conts. *N*-Me, 4 OH, 3 OMe and PhCOO groups.

Nitrate: Mp 188-189°.

Perchlorate: Mp 226°.

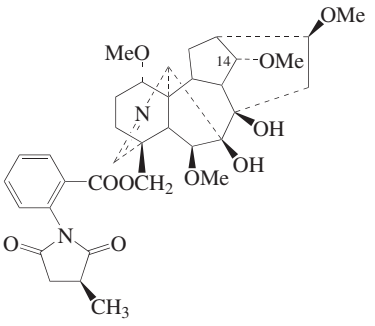
Methiodide: Mp 210-213°.

Tetra-Ac: Mp 181-183°.

Chu, J.-H. *et al., Huaxue Xuebao*, 1959, **25**, 214-217; *CA*, **54**, 4642e

Anhweidelphinine A-1023

[102503-60-6]



$C_{35}H_{44}N_2O_{10}$ 652.74
Alkaloid from the roots of *Delphinium anhweinse* and whole plants of *Delphinium nuttallianum*. Defective diag. in CAS.

O^{14}-*De-Me, 14-Ac:* ***14-O-Demethyl-14-acetylanhweidelphinine***
$C_{36}H_{44}N_2O_{11}$ 680.75
Alkaloid from *Delphinium pentagynum*. Amorph. solid. $[\alpha]_D^{25}$ +67.1 (c, 0.16 in $CHCl_3$).

O^{14}-*De-Me, 14-*O-*(2-methylpropanoyl):* ***14-O-Demethyl-14-isobutyrylanhweidelphinine***
$C_{38}H_{48}N_2O_{11}$ 708.804
Alkaloid from *Delphinium pentagynum*. Amorph. solid. $[\alpha]_D^{25}$ +65.2 (c, 0.14 in $CHCl_3$).

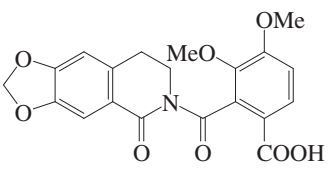
Anhydroberberillic acid A-1024



$C_{20}H_{17}NO_8$ 399.356
Alkaloid from the roots of *Phellodendron amurense* var. *wilsonii*. Powder (MeOH). Mp 252-253°. λ_{max} 224 ; 254 ; 299 ; 335 (MeOH).

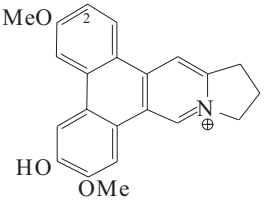
Me ester:

$C_{21}H_{19}NO_8$ 413.383
Alkaloid from the roots of *Phellodendron amurense* var. *wilsonii*. Powder (MeOH). Mp 183-184°. λ_{max} 224 ; 260 ; 316 (MeOH).

Chiang, Y.-L. *et al., Heterocycles*, 2006, **68**, 339-345 (*isol, pmr, cmr, ms*)

Anhydrodehydrotylophorinidine A-1025

[52985-89-4]



$C_{22}H_{20}NO_3^{\oplus}$ 346.405
Trace quaternary alkaloid from the leaves and stems of *Tylophora asthmatica* (Asclepiadaceae). No phys. props. reported. Prob. an artifact.

Me ether: ***Anhydrodehydrotylophorinine***. *Tylophoridicine D*
[52936-83-1]
[415898-72-5]
$C_{23}H_{22}NO_3^{\oplus}$ 360.432
Trace quaternary alkaloid from leaves and stems of *Tylophora asthmatica* and from *Tylophora atrofolliculata*. Yellow amorph. powder (as chloride). Mp 295-310° (chloride). $[\alpha]_D^{16}$ +0.5 (c, 1 in MeOH) (chloride). Prob. an artifact. λ_{max} 257 (log ε 4.68); 284 (log ε 4.56); 309 (sh) (log ε 4.06); 340 (log ε 3.46) (MeOH).

2-*Methoxy, Me ether:* ***Dehydrotylophorine***
[52936-55-7]
$C_{24}H_{24}NO_4^{\oplus}$ 390.458
Quaternary alkaloid from leaves and stems of *Tylophora asthmatica* (Asclepiadaceae), also obt. by air oxidn. of Tylophorine in diffused daylight. Yellow needles + $2H_2O$ (MeOH)(as chloride). Mp 245-250° dec. (chloride). Prob. an artifact.

7-*Demethoxy, 2-methoxy, Me ether:* ***Dehydroantofine***
[126262-29-1]
$C_{23}H_{22}NO_3^{\oplus}$ 360.432
Quaternary alkaloid from the leaves, twigs, roots and fruit of *Cryptocarya phyllostemon* (Lauraceae). Yellow cryst. (MeOH)(as perchlorate). Mp 230° dec. (perchlorate). Poss. artifact. CAS no. refers to perchlorate.

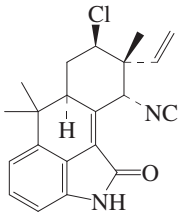
Huang, X.S. *et al., Planta Med.*, 2004, **70**, 441-445 (*Tylophoridicine D*)

Anhydrohapaloxindole A A-1026

[109217-16-5]



$C_{21}H_{21}ClN_2O$ 352.862
Minor alkaloid from the blue-green alga *Hapalosiphon fontinalis*. Mp 123° dec. $[\alpha]_D$ +150 (c, 0.4 in EtOH). Appears to be a $^1O_2$ oxidn. prod. of Hapalindole A, H-48, the major alkaloid in this cyanophyte.

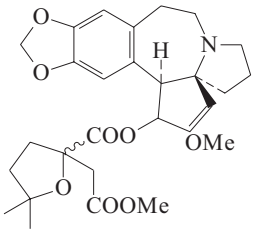
Isothiocyanate: ***Anhydrohapaloxindole B***
[123519-73-3]
$C_{21}H_{21}ClN_2OS$ 384.928
Minor alkaloid from the blue-green alga *Hapalosiphon fontinalis*. Has -NCS replacing -NC.

Dechloro, isothiocyanate: ***Anhydrohapaloxindole M***
[123498-03-3]
$C_{21}H_{22}N_2OS$ 350.484
Minor alkaloid from *Hapalosiphon fontinalis*.

Moore, R.E. *et al., J.O.C.*, 1987, **52**, 3773 (*Anhydrohapaloxindole A*)
Moore, R.E. *et al., Phytochemistry*, 1989, **28**, 1565 (*Anhydrohapaloxindoles B,M*)

Anhydroharringtonine A-1027

[142735-74-8]

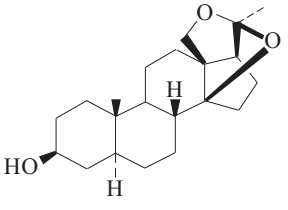


$C_{28}H_{35}NO_8$ 513.586
Alkaloid from *Cephalotaxus fortunei*. Shows significant antileukaemic activity.

Wang, D.Z. *et al., Yaoxue Xuebao*, 1992, **27**, 173; *CA*, **117**, 86698c

Anhydroholantogenin A-1028

14,20:18,20-Diepoxypregnan-3-ol
[28719-41-7]



$C_{21}H_{32}O_3$ 332.482
Aglycone from Holantosine B. Cryst. (Me_2CO). Mp 179°. $[\alpha]_D^{20}$ -38 ($CHCl_3$).

*4-Amino-2,4,6-trideoxy-3-*O*-methyl-β-D-*ribo*-hexopyranoside:* ***Holantosine B***
[28719-39-3]
$C_{28}H_{45}NO_5$ 475.667
Constit. of *Holarrhena antidysenterica* (Apocynaceae). Cryst. (Me_2O) (as *N*-Ac). Mp 0° (-290° as *N*-Ac). $[\alpha]_D$ -29 ($CHCl_3$) (as *N*-Ac).

*4-Amino-2,4,6-trideoxy-3-*O*-methyl-α-L-*arabino*-hexopyranoside:* ***Holantosine D***
[33662-04-3]
$C_{28}H_{45}NO_5$ 475.667
Constit. of *Holarrhena antidysenterica* (Apocynaceae). Cryst. (Me_2CO)(as Ac). Mp 262-263° (Ac). $[\alpha]_D$ -67 (c, 6 in $CHCl_3$).

*4-Amino-2,4,6-trideoxy-3-*O*-methyl-β-D-*xylo*-hexopyranoside:* ***Holantosine F***
[40738-41-8]
$C_{28}H_{45}NO_5$ 475.667
Isol. from *Holarrhena antidysenterica* (Apocynaceae). Mp 134° (as *N*-Ac). $[\alpha]_D^{20}$ -43 (c, 1 in $CHCl_3$) (as *N*-Ac).

Schaffner, B.P. *et al., Helv. Chim. Acta*, 1970, **53**, 2266 (*synth*)

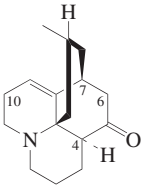
Anhydrolycodoline A-1029

[18834-79-2]



Absolute Configuration

$C_{16}H_{23}NO$ 245.364
Alkaloid from *Lycopodium alopecuroides*, *Lycopodium carolinum*, *Lycopodium clavatum* var. *borbonicum*, *Lycopodium gnidioides*, *Lycopodium inundatum*, *Lycopodium phlegmaria* and *Lycopodium saururus* (Lycopodiaceae). Oil; off-white cryst. (as hydrochloride). Mp 274-276° dec. (as hydrochloride). Darkens and dec. on exp. to air.

N-*Me:* ***Lycopodatine B***
[872610-91-8]
$C_{17}H_{26}NO^{\oplus}$ 260.399
Alkaloid from *Lycopodium inundatum*. Solid. $[\alpha]_D^{33}$ -36 (c, 0.3 in MeOH). Counterion not specified.

7-Hydroxy: ***Serratidine***
[20084-82-6]
$C_{16}H_{23}NO_2$ 261.363
Alkaloid from *Lycopodium serratum* (Lycopodiaceae). Mp 143-144°. First Lycopodium alkaloid with a bridgehead OH group.

10β-Hydroxy: ***Lycophlegmine***
[82841-97-2]
$C_{16}H_{23}NO_2$ 261.363
Alkaloid from *Lycopodium phlegmaria* (Lycopodiaceae). Mp 121-123°.

4,7-Dihydroxy: ***4-Hydroxyserratidine***
[485817-34-3]
$C_{16}H_{23}NO_3$ 277.363
Alkaloid from *Huperzia serrata*. Prisms (Me_2CO/MeOH). Mp 230-232° dec. $[\alpha]_D^{25}$ -0.7 (c, 0.18 in MeOH).

6α,7-Dihydroxy: ***6α-Hydroxyserratidine***
[485817-33-2]
$C_{16}H_{23}NO_3$ 277.363
Alkaloid from *Huperzia serrata*. Prisms (Me_2CO/MeOH). Mp 223-225°. $[\alpha]_D^{25}$ -0.5 (c, 1.2 in MeOH).

4,6α,7-Trihydroxy: ***4,6α-Dihydroxyserratidine***
[485817-35-4]
$C_{16}H_{23}NO_4$ 293.362
Alkaloid from *Huperzia serrata*. Yellow amorph. solid. $[\alpha]_D^{25}$ -0.2 (c, 0.17 in MeOH).

4-Epimer: ***Lycopodatine C***
[872610-92-9]
$C_{16}H_{23}NO$ 245.364
Alkaloid from *Lycopodium inundatum*. Solid. $[\alpha]_D^{33}$ -118 (c, 1 in MeOH).

Ayer, W.A. *et al., Can. J. Chem.*, 1964, **42**, 2514-2522; 1968, **46**, 14-20 (*isol, ir, pmr, ms, synth*)

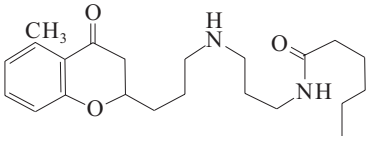
Anhydroperipentamine A-1033

N-*[3-[[3-(3,4-Dihydro-5-methyl-4-oxo-2*H*-1-benzopyran-2-yl)propyl]amino]propyl]hexanamide, 9CI*

[100595-82-2]



$C_{22}H_{34}N_2O_3$ 374.522

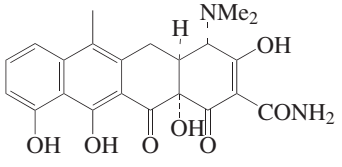
Minor alkaloid from the bark of *Peripentadenia mearsii* (Elaeocarpaceae). Also obt. by dehydration of Peripentamine under mild acid conditions. Needles + 2½ H_2O (Me_2CO aq.). Mp 96°.

Bick, I.R.C. *et al., Tetrahedron*, 1985, **41**, 5627 (*isol, uv, ir, pmr, cmr, ms, struct, synth*)

Anhydrotetracycline A-1034

*4-(Dimethylamino)-1,4,4*a*,5,12,12*a*-hexahydro-3,10,11,12*a*-tetrahydroxy-6-methyl-1,12-dioxo-2-naphthacenecarboxamide, 9CI. Deschloroanhydroaureomycin*

[1665-56-1]



$C_{22}H_{22}N_2O_7$ 426.425

Toxic degradn. and photolysis prod. derived from Tetracycline. Intermed. in tetracyline biosynth. Cryst. (C_6H_6/hexane). Mp 225-226° (215-220° dec.). $[\alpha]_D^{25}$ +25 (c, 1 in 2-ethoxyethanol).

[7518-17-4]

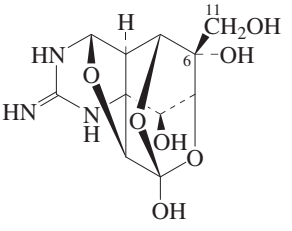
4,9-Anhydrotetrodotoxin A-1035

[13072-89-4]



$C_{11}H_{15}N_3O_7$ 301.255

Isol. from newts, other marine animals incl. *Cynops ensicauda*, *Fugu* spp. and *Octopus maculosus*, prob. as endobacterial prod. Toxic sodium channel blocker; phycotoxin. Amorph.

▶ Paralytic poison.

6-Epimer: ***4,9-Anhydro-6-epitetrodotoxin***
[113565-40-5]
$C_{11}H_{15}N_3O_7$ 301.255
Isol. from the newt *Cynops ensicauda*. Amorph. $[\alpha]_D^{25}$ +10 (c, 0.08 in AcOH aq.).

11-Deoxy: ***4,9-Anhydro-11-deoxytetrodotoxin***
[113507-22-5]
$C_{11}H_{15}N_3O_6$ 285.256
Isol. from the newt *Cynops ensicauda*. Amorph.

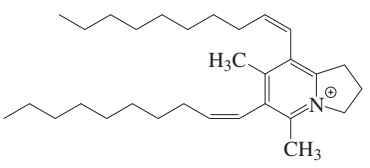
Anibamine A-1036

[725265-00-9]



$C_{30}H_{50}N^{\oplus}$ 424.732

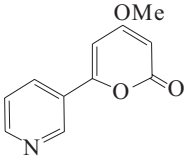
Quaternary alkaloid from the stems of an *Aniba* sp. Amorph. solid (as TFA salt). λ_{max} 222 (ϵ 36270); 284 (ϵ 17140) (MeOH) (TFA salt).

Jayasuriya, H. *et al., J. Nat. Prod.*, 2004, **67**, 1036-1038 (*isol, pmr, cmr*)

Anibine A-1037

*4-Methoxy-6-(3-pyridinyl)-2*H*-pyran-2-one, 9CI*

[643-91-4]



$C_{11}H_9NO_3$ 203.197

Alkaloid from *Aniba rosaeodora* and other *Aniba* spp. (Lauraceae). Mp 179-180°.

Picrate: Mp 199-201°.

Methiodide: Mp 233-236° dec.

Annapawine A-1048

$C_{16}H_{17}NO_3$ 271.315

Amaryllidaceae alkaloid. Struct unknown. Isol. from the *Hippeastrum* hybrid "Anna Pavlovna" (Amaryllidaceae). Cryst. (Me_2CO). Mp 219°. $[\alpha]_D^{25}$ +74 (c, 0.2 in $CHCl_3$).

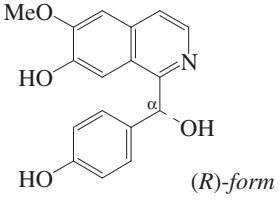
Hydroiodide: Mp 221° dec.

Picrate: Mp 249° dec.

Boit, H.-G. *et al., Naturwissenschaften*, 1960, **47**, 470-471 (*isol*)

Annocherine A A-1049

Annocherine C



(*R*)-*form*

$C_{17}H_{15}NO_4$ 297.31

Annocherine A was the *S*-enantiomer and Annocherine C the *R*-form.

(*R*)-*form* [431982-10-4]
Alkaloid from the leaves of *Annona cherimola* (cherimoya). Yellow amorph. powder. Mp 123-125°. $[\alpha]_D^{25}$ -125 (c, 0.3 in $CHCl_3$). λ_{max} 260 ; 300 ; 331 (MeOH).

(*S*)-*form*
Alkaloid from *Annona cherimola* (cherimoya). Yellow needles. Mp 156-158°. $[\alpha]_D^{24}$ +135 (c, 0.1 in $CHCl_3$). λ_{max} 260 (log ε 3.41); 300 (log ε 3.1); 330 (log ε 3.52) (MeOH).

α-Me ether: ***Annocherine B***
$C_{18}H_{17}NO_4$ 311.337
Alkaloid from *Annona cherimola* (cherimoya). Amorph. yellow powder. Mp 196-198°. $[\alpha]_D^{24}$ +115 (c, 0.1 in $CHCl_3$). λ_{max} 260 (log ε 3.32); 300 (log ε 3.11); 331 (log ε 3.6) (MeOH).

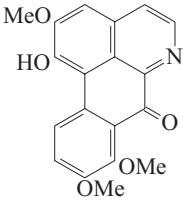
Chen, C.-Y. *et al., Phytochemistry*, 2001, **56**, 753-757 (*Annocherine A,B*)

Annolatine A-1050

[149998-52-7]

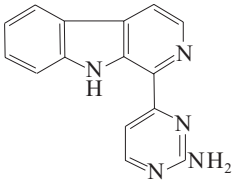


$C_{19}H_{15}NO_5$ 337.331
Alkaloid from leaves of *Annona montana* (Annonaceae). Green amorph. powder.

Wu, Y.-C. *et al., Phytochemistry*, 1993, **33**, 497 (*isol, uv, ir, pmr, ms, struct*)

Annomontine A-1051

*4-(9*H*-Pyrido[3,4-*b*]indol-1-yl)-2-pyridinamine, 9CI. 1-(2-Amino-4-pyrimidinyl)-β-carboline. Annomurine*
[82504-00-5]



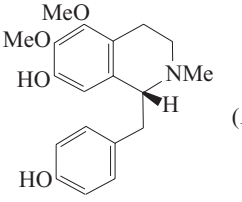
$C_{15}H_{11}N_5$ 261.285
Alkaloid from the bark of *Annona foetida* and *Annona montana*. Yellow cryst. (CH_2Cl_2). Mp 249-250°. λ_{max} 246 ; 312 ; 398 ; 428 ($CHCl_3$).

N^9*-Hydroxy:* ***N^9-Hydroxyannomontine***
$C_{15}H_{11}N_5O$ 277.285
Alkaloid from the bark of *Annona foetida*. Red needles ($CHCl_3$). Mp 249-250°. Hydroxylated at the indolic N. λ_{max} 244 (log ε 4.3); 314 (log ε 3.97); 434 (log ε 3.63) ($CHCl_3$).

*6-Methoxy: 4-(6-Methoxy-9*H*-pyrido[3,4-*b*]indol-1-yl)-2-pyrimidamine, 9CI. 1-(2-Amino-4-pyrimidinyl)-6-methoxy-β-carboline.* ***Methoxyannomontine***
[82504-01-6]
$C_{16}H_{13}N_5O$ 291.312
Alkaloid from the root bark of *Annona montana* (Annonaceae). Orange cryst. (EtOH). Mp 229-230° (223°).

Yokomori, Y. *et al., Bull. Chem. Soc. Jpn.*, 1982, **55**, 2236 (*isol, cryst struct*)
Leboeuf, M. *et al., J.C.S. Perkin 1*, 1982, 1205 (*uv, ir, pmr, cmr, ms, struct, deriv*)
Bracher, F. *et al., Annalen*, 1993, 837 (*synth*)
Costa, E.V. *et al., J. Nat. Prod.*, 2005, **69**, 292-294 (*N-Hydroxyannomontine*)

Annonelliptine A-1052



(*R*)–*form*

$C_{19}H_{23}NO_4$ 329.395

(*R*)-*form* [96400-46-3]
Alkaloid from the leaves and stems of *Annona elliptica* (Annonaceae). Needles (MeOH). Mp 198-200°. $[\alpha]_D^{22}$ -101 (c, 0.38 in $CHCl_3$/MeOH 1:1). λ_{max} 225 (sh) (log ε 4.22); 282 (log ε 3.51) (MeOH).

N-*De-Me:* ***Anomoline***
[142287-93-2]
$C_{18}H_{21}NO_4$ 315.368
Alkaloid from stems of *Annona cherimola* (Annonaceae). Mp 193-194.5°. $[\alpha]_D^{25}$ +27.82 (MeOH).

(±)-*form*
Synthetic. Mp 182.5-184°. CAS No. not found 10-14CI.

Hydrochloride: [173789-57-6]
Cryst. (EtOH). Mp 230-231°.

N-*De-Me, hydrochloride:* [173789-58-7]
Cryst. (EtOH). Mp 238.5-240°.

Sandoval, D. *et al., Phytochemistry*, 1985, **24**, 375-376 (*isol, uv, ir, pmr, cmr, ms, ord, struct*)

Delle Monache, F. *et al., Gazz. Chim. Ital.*, 1989, **119**, 435 (*isol*)

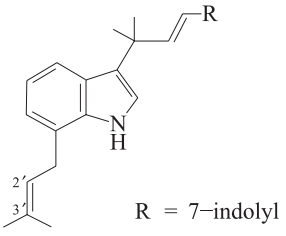
Annonidine B **A-1054**

[99102-31-5]
As Annonidine A, A-1053 with
R = 3-indolyl
$C_{26}H_{28}N_2$ 368.521
Alkaloid from the stem bark of *Anonidium mannii* (Annonaceae).

Achenbach, H. *et al., Heterocycles*, 1985, **23**, 2075 (*isol, uv, pmr, cmr, ms, struct*)

Annonidine C **A-1055**

[99102-32-6]



R = 7−indolyl

$C_{26}H_{28}N_2$ 368.521
Alkaloid from the stem bark of *Anonidium mannii* (Annonaceae) and roots of *Esenbeckia leiocarpa* (Rutaceae). Oil.

2′,3′-Epoxide: ***Annonidine E***
[99102-36-0]
$C_{26}H_{28}N_2O$ 384.52
Alkaloid from the stem bark of *Anonidium mannii*.

Achenbach, H. *et al., Heterocycles*, 1985, **23**, 2075 (*isol, uv, pmr, cmr, ms, struct*)
Delle Monache, F. *et al., Gazz. Chim. Ital.*, 1989, **119**, 435 (*isol*)

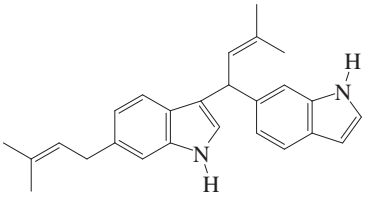
Annonidine D **A-1056**

[99102-34-8]
As Annonidine C, A-1055 with
R = 6-indolyl
$C_{26}H_{28}N_2$ 368.521
Alkaloid from the stem bark of *Anonidium mannii* (Annonoceae). Oil.

Achenbach, H. *et al., Heterocycles*, 1985, **23**, 2075 (*isol, uv, pmr, cmr, ms, struct*)

Annonidine F **A-1057**

[820965-40-0]

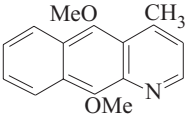


$C_{26}H_{28}N_2$ 368.521
Alkaloid from *Monodora angolensis.* Yellow oil.

Nkunya, M.H.H. *et al., Nat. Prod. Res.*, 2004, **18**, 253-258 (*isol, pmr, cmr*)

Annopholine **A-1058**

5,10-Dimethoxy-4-methylbenzo[g]quinoline, 9CI
[112494-58-3]



$C_{16}H_{15}NO_2$ 253.3
Alkaloid from the stem bark of *Annona hayesii* (Annonaceae). Amorph.

Rasamizafy, S. *et al., J. Nat. Prod.*, 1987, **50**, 759 (*isol, uv, pmr, ms, struct*)

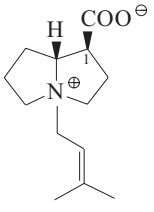
*1-Carboxyhexahydro-4-(3-methyl-2-butenyl)-1*H*-pyrrolizinium, 9CI.* N-*Isopentenyllaburninic acid*
[28942-07-6]



$C_{13}H_{21}NO_2$ 223.314
Alkaloid from *Anodendron affine* (Apocynaceae). $[\alpha]_D^{25}$ +9.5 (EtOH). pK_a 3.7 (MeOH).

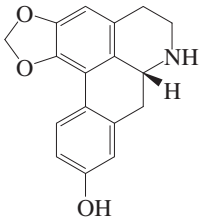
Picrate:
Yellow needles. Mp 123-124°.

1-Epimer: ***Alloanodendrine***
[29391-56-8]
$C_{13}H_{21}NO_2$ 223.314
From *Anodendron affine* (Apocynaceae). Oil. $[\alpha]_D^{25}$ +18 (EtOH). pK_a 3.2 (H_2O).

Sasaki, K. *et al., Tetrahedron*, 1970, **26**, 2119

Anolobine A-1066

9-Hydroxy-1,2-methylenedioxynoraporphine. Analobine



(*R*)-*form*

$C_{17}H_{15}NO_3$ 281.31

(R)-form [641-17-8]
Alkaloid from a variety of genera in the Annonaceae (*Annona, Asimina, Duguetia, Guatteria, Monodora, Polyalthia, Schefferomitra*) and Magnoliaceae (*Magnolia*). Shows antimicrobial activity. Sol. MeOH, $CHCl_3$; poorly sol. H_2O. Mp 242-244° (>310°). $[\alpha]_D^{30}$ -19 (c, 0.42 in $CHCl_3$/MeOH).

N-*Formyl:* **N-*Formylanolobine***
$C_{18}H_{15}NO_4$ 309.321
Alkaloid from *Sciadotenia toxifera*. Purple-grey needles (CH_2Cl_2). Mp 284° dec. λ_{max} 246 (log ε 2.8); 282 (log ε 2.8); 294 (log ε 2.81); 310 (log ε 2.79) (MeOH).

N-*Ac:* **N-*Acetylanolobine***
[220464-95-9]
$C_{19}H_{17}NO_4$ 323.348
Alkaloid from *Magnolia coco*. Cryst. (MeOH). Mp 295-297°. λ_{max} 201 (log ε 3.56); 282 (log ε 3.04) (MeOH).

N-*Me: 9-Hydroxy-1,2-methylenedioxyaporphine.* ***Roemeroline****. Remeroline.* N-*Methylanolobine*
[21059-86-9]
$C_{18}H_{17}NO_3$ 295.337
Alkaloid from *Roemeria refracta*, *Stephania pierrei*, *Stephania sasakii* and *Duguetia obovata*. Shows antimalarial props. Needles + 1MeOH (MeOH). Mp 218-220° (sint. at 133-135°). $[\alpha]_D$ -32.1 (c, 0.437 in $CHCl_3$). λ_{max} 281 (ε 8912) (MeOH) (Berdy).

N-*Me; hydrochloride:*
Cryst. (HCl aq.). Mp 220-225°.

Me ether: 9-Methoxy-1,2-methylenedioxynoraporphine. ***Xylopine****.* O-*Methylanolobine. Artabotrinine*
[517-71-5]
$C_{18}H_{17}NO_3$ 295.337
Alkaloid from *Guatteria amplifolia*, *Xylopia discreta* and *Xylopia papuana*, poss. also from the bark of *Artabotrys suaveolens* (Annonaceae). CNS depressant, shows antimicrobial activity. Mp 78-102°. $[\alpha]_D^{22}$ -28.2 (c, 0.001 in MeOH). Struct. of Artabotrinine not definitely establ., identity with Xylopine not certain.

Me ether, hydrochloride: Mp 250°.

Me ether, N-*formyl:* **N-*Formylxylopine***
[89368-31-0]
$C_{19}H_{17}NO_4$ 323.348

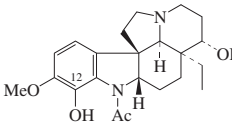
Anomaline† A-1067

1-Acetyl-16-methoxyaspidospermidine-6,17-diol, 9CI
[88660-02-0]



Relative Configuration

$C_{22}H_{30}N_2O_4$ 386.49
Alkaloid from the bark and leaves of *Microplumeria anomala* (Apocynaceae). Needles (EtOAc). Mp 216-218°. λ_{max} 226 (log ϵ 4.27); 259 (log ϵ 3.85) (MeOH).

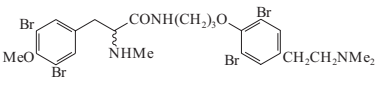
O^{12}-*Me:* ***12-O-Methylanomaline****. 1-Acetyl-16,17-dimethoxyaspidospermidin-6-ol, 9CI*
[88660-03-1]
$C_{23}H_{32}N_2O_4$ 400.517
Minor alkaloid from leaves of *Microplumeria anomala* (Apocynaceae).

Demethoxy: ***Demethoxyanomaline****. 1-Acetylaspidospermidine-6,17-diol, 9CI*
[88669-30-1]
$C_{21}H_{28}N_2O_3$ 356.464
Minor alkaloid from leaves of *Microplumeria anomala* (Apocynaceae). Needles (EtOAc). Mp 263-265°. λ_{max} 221 (log ϵ 4.13); 260 (log ϵ 3.72); 288 (log ϵ 3.47) (MeOH).

Luz, A.I.R. *et al., Phytochemistry*, 1983, **22**, 2301-2304 (*isol, uv, ir, pmr, cmr, ms, struct*)

Anomoian A A-1068

[129602-20-6]

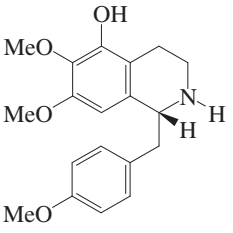


$C_{24}H_{31}Br_4N_3O_3$ 729.143
Metab. of the verongid sponge *Anomoianthella popeae*. Powder (as hydrochloride). Mp 200° dec. (hydrochloride). $[\alpha]_D$ +5.1 (c, 0.013 in MeOH). λ_{max} 245 (ϵ 12300); 276 (ϵ 9400); 283 (ϵ 7800) (MeOH).

Kernan, M.R. *et al., J. Nat. Prod.*, 1990, **53**, 720-723 (*isol, uv, ir, pmr, cmr, ms*)

Anomuricine A-1069

1,2,3,4-Tetrahydro-6,7-dimethoxy-1-[(4-methoxyphenyl)methyl]-5-isoquinolinol, 9CI. 1,2,3,4-Tetrahydro-5-hydroxy-6,7-dimethoxy-1-(4-methoxybenzyl)isoquinoline
[78416-89-4]



$C_{19}H_{23}NO_4$ 329.395

(R)-form

Me ether, N,N-*di-Me:* **N,N-*Dimethylanomurine***
Quaternary alkaloid from the roots of *Xylopia parviflora*. Amorph. powder (as perchlorate). $[\alpha]_D^{22}$ -26.3 (c, 0.32 in MeOH) (perchlorate). λ_{max} 277 (log ϵ 3.49); 283 (log ϵ 3.47) (MeOH) (perchlorate).

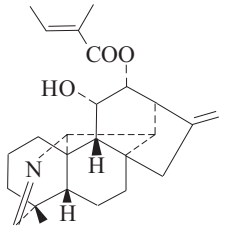
(ξ)-*form*
Minor alkaloid from the root and stem barks of *Annona muricata* (soursop) (Annonaceae). Noncryst.

Me ether: 1,2,3,4-Tetrahydro-5,6,7-trimethoxy-1-[(4-methoxyphenyl)methyl]isoquinoline, 9CI. ***Anomurine***
[78478-27-0]
$C_{20}H_{25}NO_4$ 343.422
Minor alkaloid from the root and stem bark of *Annona muricata* (soursop) (Annonaceae). Noncryst.

Leboeuf, M. *et al., Planta Med.*, 1981, **42**, 37 (*Anomurine, Anomuricine*)
Nishiyama, Y. *et al., Phytochemistry*, 2004, **65**, 939-944 (*N,N-Dimethylanomurine*)

Anopterimine A-1070

19,21-Didehydro-4-methyl-16-methylene-14,20-cycloveatchane-11,12-diol 12-(2-methyl-2-butenoate), 9CI
[60718-14-1]



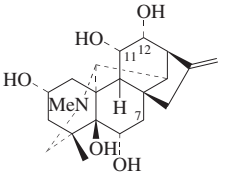
$C_{25}H_{33}NO_3$ 395.541
Minor alkaloid from the leaves of *Anopterus macleayanus* (Escalloniaceae). Prisms (Me_2CO). Mp 235-238°. $[\alpha]_D$ +106 (c, 0.6 in $CHCl_3$).

N-*Oxide:* ***Anopterimine* N-*oxide***
[60706-77-6]
$C_{25}H_{33}NO_4$ 411.54
Minor alkaloid from the leaves of *Anopterus macleayanus* (Escalloniaceae). Needles (Me_2CO). Mp 233-235°. $[\alpha]_D$ +95 (c, 1.1 in $CHCl_3$).

Hart, N.K. *et al., Aust. J. Chem.*, 1976, **29**, 1295; 1319 (*isol, ir, pmr, cmr, ms, struct*)

Anopteryl alcohol A-1071

[38826-63-0]



Absolute Configuration

$C_{21}H_{31}NO_5$ 377.48

12-Tigloyl: ***Anopteryl 12-tiglate***
$C_{26}H_{37}NO_6$ 459.581
Minor alkaloid from the root bark of *Anopterus macleayanus* (Escalloniaceae). Cryst. (Me_2CO). Mp 172-173°. $[\alpha]_D$ +15 (c, 0.21 in $CHCl_3$). Sometimes resolidifies and remelts at 205° when slowly heated.

11,12-Ditigloyl: ***Anopterine****. Anopteryl 11,12-ditiglate*
[38826-62-9]
$C_{31}H_{43}NO_7$ 541.683
Alkaloid from leaves and bark of *Anopterus macleayanus* and *Anopterus glandulosus* (Escalloniaceae). Antineoplastic agent. Prisms (Me_2CO). Sol. MeOH, $CHCl_3$; poorly sol. H_2O. Mp 222-223°. $[\alpha]_D$ -12 (c, 1.47 in $CHCl_3$). Log P 0.88 (uncertain value) (calc).
▶ LD_{50} (mus, ipr) 100 mg/kg.

11-O-(4-Hydroxybenzoyl), 12-tigloyl: ***Anopteryl 11-4′-hydroxybenzoate 12-tiglate***
$C_{33}H_{41}NO_8$ 579.689
Minor alkaloid from *Anopterus macleayanus* (Escalloniaceae). Prisms (Me_2CO). Mp 273-276°. $[\alpha]_D$ -28 (c, 1.0 in $CHCl_3$/MeOH, 1:1).

7β-Hydroxy, 11,12-ditigloyl: ***Hydroxyanopterine***
$C_{31}H_{43}NO_8$ 557.683
Alkaloid from leaves and bark of *Anopterus macleayanus* and *Anopterus glandulosus* (Escalloniaceae). Needles (Me_2CO). Sol. MeOH, $CHCl_3$; poorly sol. H_2O, hexane. Mp 247-249°. $[\alpha]_D$ -14 (c, 1.1 in MeOH).

*7β-Hydroxy, 11-O-(4-hydroxy-3-methyl-2*E*-butenoyl), 12-tigloyl:* ***Dihydroxyanopterine***
$C_{31}H_{43}NO_9$ 573.682
Minor alkaloid from *Anopterus macleayanus* and *Anopterus glandulosus*

(Escalloniaceae). Cryst. (Me_2CO). Sol. MeOH, $CHCl_3$; poorly sol. H_2O, hexane. Mp 242-244°. $[\alpha]_D$ -9 (c, 1.2 in MeOH).

7β-Hydroxy, 11-benzoyl, 12-tigloyl: ***7-Hydroxyanopteryl 11-benzoate 12-tiglate***
$C_{33}H_{41}NO_8$ 579.689
Minor alkaloid from *Anopterus macleayanus* (Escalloniaceae). Amorph.

*7β-Hydroxy, 11-*O*-(4-hydroxybenzoyl), 12-tigloyl:* ***7-Hydroxyanopteryl 11-4′-hydroxybenzoate 12-tiglate***
$C_{33}H_{41}NO_9$ 595.688
Minor alkaloid from *Anopterus macleayanus* (Escalloniaceae). Noncryst.

Denne, W.A. *et al., Tet. Lett.*, 1972, 2727 (*Anopterine, cryst struct*)
Hart, N.K. *et al., Aust. J. Chem.*, 1976, **29**, 1295 (*isol, ir, pmr, cmr, ms, struct*)

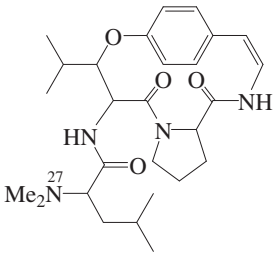
Anorldianine A-1072

[123690-71-1]



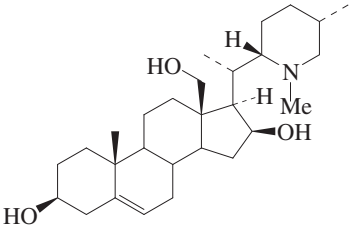
$C_{27}H_{40}N_4O_4$ 484.637
Alkaloid from the stem bark of *Canthium anorldianum* (Rubiaceae). Pinkish cryst. (Et_2O). Mp 160°.

N^{27}-Oxide: ***Anorldianine N^{27}-oxide***
$C_{27}H_{40}N_4O_5$ 500.637
Alkaloid from *Heisteria nitida*.

Dongo, E. *et al., J. Nat. Prod.*, 1989, **52**, 840 (*isol, uv, ir, pmr, cmr, ms, struct*)
El-Seedi, H.R. *et al., Phytochemistry*, 1999, **52**, 1739-1744 (*N^{27}-oxide*)

Anrakorinine A-1073

20-(1,5-Dimethyl-2-piperidinyl)-pregn-5-ene-3,16,18-triol, 9CI
[78285-94-6]

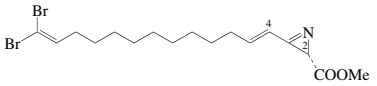


$C_{28}H_{47}NO_3$ 445.684
Alkaloid from the aerial parts of *Fritillaria camtschatcensis* (Liliaceae). Needles (Me_2CO). Mp 248-251°. $[\alpha]_D$ -50.4 (c, 0.79 in $CHCl_3$).

Tri-Ac:
Amorph.

Kaneko, K. *et al., Tet. Lett.*, 1978, 2099-2102 (*isol, struct, synth, pmr*)

Antazirine A-1074



(2*S*,4*E*)-*form*

$C_{17}H_{25}Br_2NO_2$ 435.198

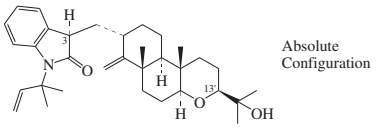
(2*S*,4*E*)-*form* [170385-24-7]
Isol. from the sponge *Dysidea fragilis*. Oil. $[\alpha]_D^{24}$ +16.7 (c, 0.58 in hexane) (30% e.e.). λ_{max} 213 ; 220 (sh) (MeOH).

(2*S*,4*Z*)-*form* [170554-75-3]
Isol. from *Dysidea fragilis*. Oil. $[\alpha]_D^{24}$ +98.9 (c, 3.33 in hexane) (78% e.e.). λ_{max} 215 ; 220 (sh) (MeOH).

Salomon, C.E. *et al., J. Nat. Prod.*, 1995, **58**, 1463-1466 (*isol, uv, ir, pmr, cmr, ms, struct*)
Skepper, C.K. *et al., J.O.C.*, 2008, **73**, 2592-2597 (*isol, pmr, cmr*)

Anthcolorin A A-1075

[358334-50-6]



$C_{33}H_{47}NO_3$ 505.739
Prod. by *Aspergillus versicolor* OUPS-N136 isol. from the sea urchin *Anthocidaris crassispina*.

3-Hydroxy: ***Anthcolorin G***
[358334-56-2]
$C_{33}H_{47}NO_4$ 521.739
Prod. by *Aspergillus versicolor* OUPS-N136 from the sea urchin *Anthocidaris crassispina*.

3-Epimer: ***Anthcolorin B***
[358334-51-7]
$C_{33}H_{47}NO_3$ 505.739
Prod. by *Aspergillus versicolor* OUPS-N136 from the sea urchin *Anthocidaris crassispina*.

3-Epimer, 3-hydroxy: ***Anthcolorin H***
[358334-57-3]
$C_{33}H_{47}NO_4$ 521.739
Prod. by *Aspergillus versicolor* OUPS-N136 from the sea urchin *Anthocidaris crassispina*.

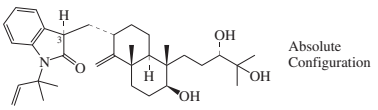
13′-Epimer: ***Anthcolorin C***
[358334-52-8]
$C_{33}H_{47}NO_3$ 505.739
Prod. by *Aspergillus versicolor* OUPS-N136 from the sea urchin *Anthocidaris crassispina*.

3,13′-Diepimer: ***Anthcolorin D***
[358334-53-9]
$C_{33}H_{47}NO_3$ 505.739
Prod. by *Aspergillus versicolor* OUPS-N136 from the sea urchin *Anthocidaris crassispina*.

Yamada, K. *et al., CA*, 2001, **135**, 204898 (*isol*)

Anthcolorin E A-1076

[358334-54-0]



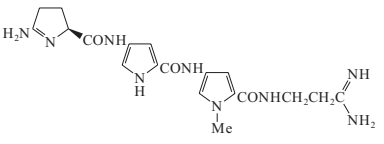
$C_{33}H_{49}NO_4$ 523.754
Prod. by *Aspergillus versicolor* OUPS-N136 isol. from the sea urchin *Anthocidaris crassispina*.

3-Epimer: ***Anthcolorin F***
[358334-55-1]
$C_{33}H_{49}NO_4$ 523.754
Prod. by *Aspergillus versicolor* OUPS-N136.

Yamada, K. *et al., CA*, 2001, **135**, 204898 (*isol*)

Anthelvencin A A-1077

[58616-25-4]



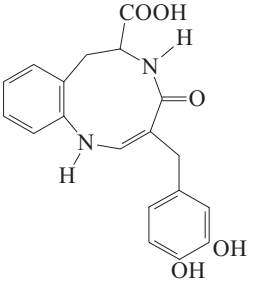
$C_{19}H_{25}N_9O_3$ 427.465
Oligopeptide antibiotic. Similar to Kikumycin A, K-43. Isol. from *Streptomyces venezuelae* ATCC14583. Anthelmintic, antiparasitic and nematocidal agent. Sol. MeOH, acids; fairly sol. H_2O; poorly sol. Me_2CO, hexane. Mp 170-175° dec. $[\alpha]_D^{22}$ +9.7 (H_2O). λ_{max} 235 (ϵ 18700); 300 (ϵ 19300) (HCl salt/H_2O) (Derep). λ_{max} 235 (E1%/1cm 437); 300 (E1%/1cm 451) (H_2O) (Berdy).
▶ LD_{50} (mus, ipr) 177 mg/kg. CA7808000

[113598-34-8 , 113598-28-0]

Probst, G.W. *et al., Antimicrob. Agents Chemother.*, 1965, 789
Lee, M. *et al., J.O.C.*, 1988, **53**, 1855 (*synth*)

Anthocerodiazonin A-1078

[159903-66-9]



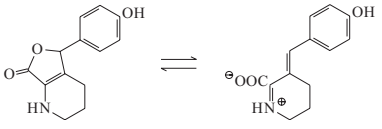
$C_{19}H_{18}N_2O_5$ 354.362

Alkaloid from *in vitro* cultures of *Anthoceros agrestis*. Amorph. solid. $[\alpha]_D^{20}$ +73.

Trennheuser, F. *et al., Phytochemistry*, 1994, **37**, 899 (*isol, uv, ir, pmr, cmr, struct*)

Anthosamine A A-1079

3,4,5,6-Tetrahydro-3-[(4-hydroxyphenyl)-methylene]-2-pyridinecarboxylic acid, 9CI
[165074-97-5]



$C_{13}H_{13}NO_3$ 231.251

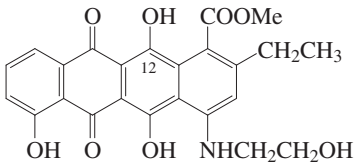
Shows reversible equilib. between lactone and zwitterion form; the latter predominates in protic solv. the former in aprotic solvs. Metab. from the marine sponge *Anthosigmella* aff. *raromicrosclera*. Induces larval metamorphosis in ascidians. Yellow solid. λ_{max} 229 (ϵ 7300); 249 (ϵ 6400); 283 (ϵ 4200); 368 (ϵ 14500) (MeOH) (Berdy). λ_{max} 287 (ϵ 7000) (DMSO) (Berdy).

N-*Me:* ***Anthosamine B****. 1,3,4,5-Tetrahydro-5-(4-hydroxyphenyl)-1-methylfuro[3,4-b]pyridin-7(2H)-one, 9CI*
[165074-96-4]
$C_{14}H_{15}NO_3$ 245.277
Metab. of *Anthosigmella* aff. *raromicrosclera*. Induces larval metamorphosis in ascidians. Yellow solid. $[\alpha]_D^{24}$ 0 (c, 0.15 in MeOH). λ_{max} 249 (ϵ 7100); 369 (ϵ 18400); 453 (ϵ 1900) (MeOH) (Berdy). λ_{max} 285 (ϵ 6000); 357 (ϵ 2400); 486 (ϵ 3600) (DMSO) (Berdy).

Tsukamoto, S. *et al., Tetrahedron*, 1995, **51**, 6687 (*isol, uv, ir, pmr, cmr, struct*)

Anthracyclinone blue B A-1080

Methyl 2-ethyl-5,7,12-trihydroxy-4-[(2-hydroxyethyl)amino]-6,11-dioxo-1-naphthacenecarboxylate
[140900-60-3]



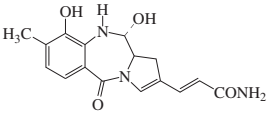
$C_{24}H_{21}NO_8$ 451.432
Prod. by a blocked mutant of *Streptomyces griseus* sp. ZIMET 43707. Deep blue solid.

12-Deoxy: ***Anthracyclinone blue A***
[140900-59-0]
$C_{24}H_{21}NO_7$ 435.432
Prod. by a blocked mutant of *Streptomyces galilaeus* S 383. Blue solid.

Eckardt, K. *et al., J. Basic Microbiol.*, 1991, **31**, 371-376

Anthramycin, USAN A-1081

3-(5,10,11,11a-Tetrahydro-9,11-dihydroxy-8-methyl-5-oxo-1H-pyrrolo[2,1-c][1,4]benzodiazepin-2-yl)-2-propenamide, 9CI. ***Antramycin, INN****. Refuin. Ro 5-9000. Antibiotic Ro 5-9000*
[4803-27-4]



$C_{16}H_{17}N_3O_4$ 315.328
Isol. from *Streptomyces refuineus* var. *thermotolerans* and *Streptomyces spadicogriseus*. Antibiotic with antineoplastic activity. DNA complexing agent. Small yellow prisms (Me_2CO aq.). Sol. DMF, DMSO, MeOH, butanol; poorly sol. hexane. Mp 188-194°. $[\alpha]_D^{25}$ +930 (c, 1 in DMF). Log P -1.1 (uncertain value) (calc). Cryst. from hot aq. MeOH gives the Me ether. Epimerises in soln. λ_{max} 235 (ϵ 18200); 333 (ϵ 31800) (MeCN) (Derep). λ_{max} 220 (ϵ 34000); 235 (sh) (ϵ 30000); 335 (ϵ 39400) (MeOH) (Derep).

▶ LD_{50} (mus, ipr) 0.65 mg/kg. UY8429000

11-Me ether:
Pale-yellow needles (H_2O). Mp 120° dec. $[\alpha]_D^{25}$ +1002 (c, 1 in DMF). λ_{max} 218 (ϵ 30000); 231 (ϵ 22100); 232 (sh); 334 (ϵ 40800); 360 (sh) (MeCN) (Derep).

Stereoisomer(?): ***Antibiotic PBA***
[16397-13-0]
$C_{16}H_{17}N_3O_4$ 315.328
Isol. from *Streptomyces spadicogriseus*. Antitumour agent. Cryst. (Me_2CO/EtOAc). Stereochem. not determined, may be identical with Anthramycin.

$C_{54}H_{50}N_{16}O_{15}S_3$ 1259.285

Thiazole peptide antibiotic. Prod. by *Streptomyces gardneri* and *Streptomyces* sp. R1401. Yellow powder.

Favret, M.E. *et al., J. Antibiot.*, 1992, **45**, 1499-1511; 1809-1811 (*isol, pmr, cmr*)

U.S. Pat., 1993, 5 229 362; *CA*, **119**, 269171m (*isol*)

Ohyama, S. *et al., J. Antibiot.*, 2002, **55**, 83-91 (*Thioplabin*)

Antibiotic A 10255F A-1109

A 10255F

[119166-41-5]

Thiazole-peptide antibiotic. Struct. unknown. Prod. by *Streptomyces gardneri*. Feed additive. Yellow powder. Sol. DMSO, $CHCl_3$, Me_2CO, DMF, THF-H_2O, MeOH, $CHCl_3$-MeOH, Py; poorly sol. H_2O. λ_{max} 245 (ϵ 71500) (MeOH).

▶ LD_{50} (mus, ipr) 300 - 700 mg/kg.

U.S. Pat., 1993, 5 229 362; *CA*, **119**, 269171m

Antibiotic A 10255H A-1110

A 10255H

[119166-43-7]

Thiazole-peptide antibiotic. Struct. unknown. Prod. by *Streptomyces gardneri*. Feed additive. Yellow powder. Sol. DMSO, Me_2CO, $CHCl_3$, MeOH, DMF, Py, $CHCl_3$-MeOH, THF-H_2O; poorly sol. H_2O. λ_{max} 244 (ϵ 74000) (MeOH). λ_{max} 245 (ϵ 74500) (MeOH/HCl) (Berdy). λ_{max} 211 (ϵ 23800) (MeOH/NaOH) (Berdy).

▶ LD_{50} (mus, ipr) 300 - 700 mg/kg.

U.S. Pat., 1993, 5 229 362; *CA*, **119**, 269171m

Antibiotic AB 97 A-1111

AB 97

[68652-25-5]

Thiazole-peptide antibiotic. Struct. unknown. Prod. by *Actinomadura helvata* var. *antibiotica*. Active against gram-positive bacteria. Yellow powder. Sol. EtOAc, bases, DMSO, MeOH; poorly sol. acids, hexane. $[\alpha]_D$ +764 (DMSO). λ_{max} 245 ; 290 ; 350 ; 410 (MeOH). λ_{max} 245 ; 360 (MeOH/HCl) (Berdy). λ_{max} 295 ; 415 (MeOH/NaOH) (Berdy).

Japan. Pat., 1978, 78 101 301; *CA*, **90**, 37630q

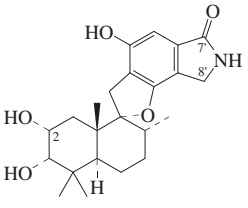
F 1839A
[159096-43-2]



Probable Absolute Configuration

$C_{23}H_{31}NO_5$ 401.502

Struct. of Stachybotrylactam revised in 2003. The structs. of other members of the group must currently be regarded as probable only. Prod. by *Stachybotrys* sp. F-1839. Inhibitor of pancreatic cholesterol esterase. Amorph. powder. Sol. MeOH, Py, DMSO; fairly sol. EtOAc, 2-butanone; poorly sol. H_2O, hexane. $[\alpha]_D^{25}$ -29.6 (c, 0.1 in MeOH). λ_{max} 218 (ϵ 37400); 262 (ϵ 6550); 301 (ϵ 3180) (MeOH) (Derep).

2,3-Di-Ac: [163391-78-4]
$C_{27}H_{35}NO_7$ 485.576
Prod. by *Stachybotrys chartarum* and *Stachybotrys complementi*. Immunosuppressive. Powder. $[\alpha]_D$ -29 (MeOH). λ_{max} 216 ; 258 ; 299 (MeCN).

N-*(2-Hydroxyethyl):* ***Antibiotic F 1839E***. *F 1839E*
[159096-46-5]
$C_{25}H_{35}NO_6$ 445.555
From *Stachybotrys* sp. F-1839. Inhibitor of cholesterol esterase, anticholesterolemic. Amorph. powder. Sol. MeOH, Py, DMSO; fairly sol. EtOAc, 2-butanone; poorly sol. H_2O, hexane. λ_{max} 217 (ϵ 31500); 262 (ϵ 6410); 302 (ϵ 2310) (MeOH) (Derep).

N-*(3-Carboxypropyl):* [214132-31-7]
$C_{27}H_{37}NO_7$ 487.592
Metab. of *Stachybotrys chartarum*.

N-*(3-Methoxycarbonylpropyl):* ***Antibiotic F 1839F***. *F 1839F*
[159096-48-7]
$C_{28}H_{39}NO_7$ 501.619
From *Stachybotrys* sp. F-1839. Inhibitor of cholesterol esterase, anticholesterolemic. Amorph. powder. Sol. MeOH, Py, DMSO; fairly sol. EtOAc, 2-butanone; poorly sol. H_2O, hexane. λ_{max} 217 (ϵ 33100); 267 (ϵ 5290); 300 (ϵ 2530) (MeOH) (Derep).

N-*(4-Carboxybutyl):* ***Antibiotic Q 11270B***. *Q 11270B*
[150459-98-6]
$C_{28}H_{39}NO_7$ 501.619
Prod. by *Stachybotrys chartarum*. Powder. $[\alpha]_D^{25}$ +25.5 (c,0.19 in MeOH). C-2 config. not certain.

N-*(1-Carboxy-2-methylpropyl):* [685141-56-4]
$C_{28}H_{39}NO_7$ 501.619
Metab. of *Stachybotrys chartarum*. Amorph. solid.

N-*(1-Carboxy-2-methylbutyl):* [685141-58-6]
$C_{29}H_{41}NO_7$ 515.645
Constit. of *Stachybotrys chartarum*.

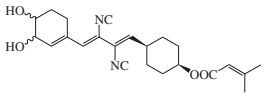
Antibiotic L 970843 A-1198

L 970843



Relative Configuration

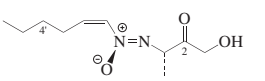
$C_{23}H_{28}N_2O_4$ 396.485
Related to Xanthocillin X, X-7. Prod. by fungal species HIL Y-903146. Antifungal agent. Pale yellow solid. Mp 118-119°. $[\alpha]_D^{20}$ -20 (c, 0.02 in MeOH). λ_{max} 224 ; 288 ; 300 (MeOH).

Stereoisomer: ***Antibiotic L 970844***. *L 970844*
$C_{23}H_{28}N_2O_4$ 396.485
Prod. by fungal species HIL Y-903146. Antifungal agent. Pale yellow shiny flakes. Mp 116-117°. $[\alpha]_D$ +20 (c, 0.02 in MeOH).

Vijayakumar, E.K.S. *et al., J. Antibiot.*, 2001, **54**, 973-976 (*isol, pmr, cmr*)

Antibiotic LL-BH872α A-1199

[3-(1-Hexenyl)-ONN-azoxy]-1-hydroxy-2-butanone, 9CI. LL-BH872α
[24397-77-1]



Absolute Configuration

$C_{10}H_{18}N_2O_3$ 214.264
Prod. by *Streptomyces hinnulinus*. Potent antifungal agent. Light yellow oil. $[\alpha]_D^{25}$ +157 (c, 1.7 in MeOH). Dec. v. readily. λ_{max} 238 (ϵ 9000) (MeOH) (Berdy).

Ac: [36846-66-9]
Semisynthetic. Antifungal agent. More stable than parent compd.

2ξ-Alcohol: ***[3-(1-Hexenyl)-ONN-azoxy]-1,2-butanediol***
[131205-70-4]
[637035-36-0]
$C_{10}H_{20}N_2O_3$ 216.28
Prod. by an *Actinomadura* sp. isol. from the roots of *Prunus armeniaca* (apricot). Also prod. by *Streptomyces misionensis* FERM 10459. Antihepatotoxic agent. Yellow oil. $[\alpha]_D^{25}$ -30 (c, 0.2 in MeOH). Stereochemical information incomplete. The two isolates may be stereoisomeric. λ_{max} 228 (ϵ 9900) (EtOH).

4′ξ-Hydroxy, 2ξ-alcohol: 3-[(4-Hydroxy-1-hexenyl)-ONN-azoxy]-1,2-butanediol. ***Antibiotic MH 072***. *MH 072*
[131205-71-5]
$C_{10}H_{20}N_2O_4$ 232.279
Isol. from *Streptomyces misionensis*. Antihepatotoxic.

McGahren, W.J. *et al., J.A.C.S.*, 1969, **91**, 2808-2810; 1970, **92**, 1587-1590 (*isol, cd*)

Antibiotic LL-BO 2964 A-1200

LL-BO 2964
[96119-50-5]
Nucleoside-type antibiotic complex. Struct. unknown. Prod. by *Streptomyces coeruleorubidus* ssp. *rubidus*. Active against gram-positive and -negative bacteria and mycobacteria.

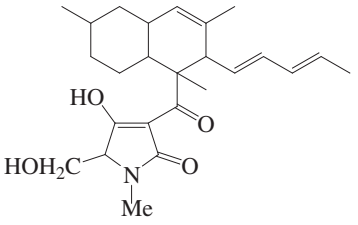
Antibiotic LL-BO 2694α
LL-BO 2964α
[96119-51-6] Cell wall biosynth. inhibitor. Powder. Sol. MeOH, EtOH, H_2O; poorly sol. hexane, $CHCl_3$, toluene. $[\alpha]_D$ -10 (H_2O). λ_{max} 221 ; 254 (H_2O). λ_{max} 240 (NaOH aq.) (Berdy). λ_{max} 221 ; 254 (HCl) (Berdy).

Antibiotic LL-BO 2964β
LL-BO 2964β
[96119-52-7] Cell wall biosynthesis Inhibitor. Powder. Sol. MeOH, EtOH, H_2O; poorly sol. $CHCl_3$, toluene, hexane. $[\alpha]_D$ -19 (H_2O). λ_{max} 220 ; 256 (HCl) (Berdy). λ_{max} 238 (NaOH aq.) (Berdy). λ_{max} 220 ; 256 (H_2O) (Berdy).

Antibiotic LL-BO 2964γ
LL-BO 2964γ
[96119-53-8] Cell Wall Biosynthesis Inhibitor. Powder. Sol. MeOH, EtOH, H_2O; poorly sol. hexane, $CHCl_3$, toluene. $[\alpha]_D$ -20 (H_2O). λ_{max} 225 ; 259 (H_2O). λ_{max} 245 (NaOH aq.) (Berdy). λ_{max} 220 ; 262 (HCl) (Berdy).
U.S. Pat., 1985, 4 499 075; *CA*, **102**, 183743m

Antibiotic LL-49F233α A-1201

LL-49F233α
[220756-92-3]



$C_{25}H_{35}NO_4$ 413.556
Tetramic acid deriv. Similar to Equisetin, E-142. Prod. by an unknown fungus, LL-49F233.

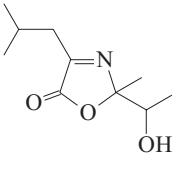
Singh, M.P. *et al., J. Antibiot.*, 1998, **51**, 1109-1112

Antibiotic M 259 A-1202

Antibiotic A 6413. A 6413. M 259. NSC 51954
Benzodiazepine-type antibiotic. Struct. unknown. Prod. by *Streptomyces nigellus*. Antiinflammatory and cytotoxic agent. Yellow prisms (Me_2CO/EtOAc). Sol. $CHCl_3$, DMSO, DMF, MeOH, EtOH; fairly sol. butanol, Me_2CO, EtOAc, hexane, C_6H_6; poorly sol. H_2O. Mp 155-157° (dec.). $[\alpha]_D^{25}$ +0.9 (EtOH). λ_{max} 235 ; 335 (EtOH). λ_{max} 235 (E1%/1cm 480); 335 (E1%/1cm 960) (EtOH) (Berdy).
▶ LD_{50} (mus, ipr) 1.47 mg/kg, LD_{50} (mus, ivn) 2.21 mg/kg.
U.S. Pat., 1963, 3 094 461; *CA*, **59**, 5733d

Antibiotic MBH 001 A-1203

2-(1-Hydroxyethyl)-2-methyl-4-(2-methylpropyl)-5(2H)-oxazolone, 9CI. MBH 001
[147368-20-5]

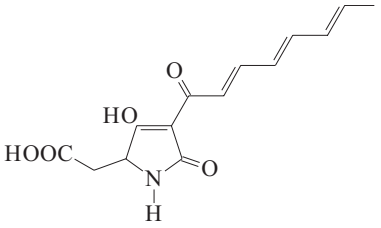


$C_{10}H_{17}NO_3$ 199.249
Prod. by an insect symbiotic microorganism N1-Ishi-YC50807-1-7. Shows herbicidal props. Sol. MeOH, butanol, EtOAc, DMSO, hexane, $CHCl_3$; poorly sol. H_2O. $[\alpha]_D^{25}$ 0.

Japan. Pat., 1992, 92 342 576; *CA*, **118**, 211447 (*isol, uv, ir, pmr, cmr*)

Antibiotic MBP 039-06 A-1204

*2,5-Dihydro-3-hydroxy-5-oxo-4-(1-oxo-2,4,6-octatrienyl)-1*H*-pyrrole-2-acetic acid, 9CI. MBP 039-06*
[152158-05-9]

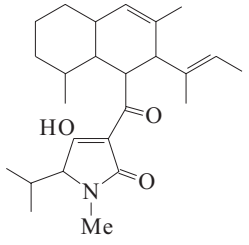


$C_{14}H_{15}NO_5$ 277.276
Prod. by *Phaeosphaeria* sp. L288. Proline hydroxylase inhibitor. Mp 212-214°. λ_{max} 254 (ϵ 8450); 386 (ϵ 19500) (MeOH) (Berdy). λ_{max} 257 (ϵ 6770); 347 (ϵ 15300) (MeOH-NaOH) (Berdy).

Japan. Pat., 1993, 93 239 023; *CA*, **120**, 52821 (*isol, pmr, cmr, ir, uv*)

Antibiotic MBP 049-13 A-1205

MBP 049-13
[143208-09-7]

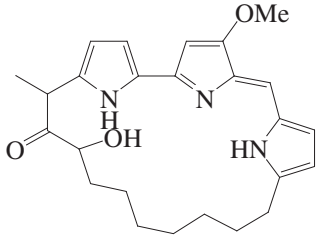


$C_{25}H_{37}NO_3$ 399.572
Prod. by *Ophiobolus rubellus*. Proline hydroxylase inhibitor. $[\alpha]_D$ +58.9. λ_{max} 248 (ϵ 5023); 292 (ϵ 8069) (MeOH) (Berdy). λ_{max} 224 (ϵ 8405); 291 (ϵ 6028) (MeOH/HCl) (Berdy).

Japan. Pat., 1992, 92 74 163; *CA*, **117**, 169564g (*isol, pmr, cmr, ir, uv*)

Antibiotic 610MF A-1206

610MF

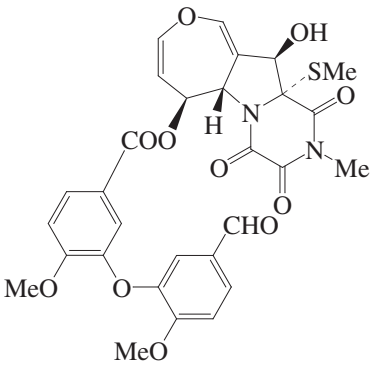


$C_{25}H_{31}N_3O_3$ 421.538
Pyrrole antibiotic. Struct. not certain, may have oxo and OH functions interchanged. Prod. by *Actinomadura madurae*. λ_{max} 547 ($CHCl_3$) (Berdy). λ_{max} 538 (EtOH/HCl) (Berdy).

Gerber, N.N. *et al., J. Het. Chem.*, 1973, **10**, 925-929

Antibiotic MPC 1001F A-1207

MPC 1001F

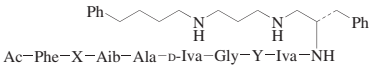


$C_{29}H_{26}N_2O_{11}S$ 610.597
Related to Emestrin. Prod. by *Cladorrhinum* sp. KY4922. Powder. Mp 138-139°. $[\alpha]_D^{28}$ +19.7 (c, 0.12 in $CHCl_3$). λ_{max} 262 (ϵ 21600) (MeOH).

Onodera, H. *et al., Org. Lett.*, 2004, **6**, 4101-4104 (*isol, ir, pmr, cmr, ms*)

Antibiotic MS 681 A-1208

MS 681



Ac–Phe–X–Aib–Ala–D-Iva–Gly–Y–Iva–NH

Antibiotic		
	MS 681A	X = Aib, Y = Trp
	MS 681B	X = Aib, Y = Phe
	MS 681C	X = Iva, Y = Trp
	MS 681D	X = Iva, Y = Phe

Peptide antibiotic complex. Prod. by *Myrothecium* sp. (KY6568; FERM-BP-4634). Inhibitor of myosin light chain kinase and cyclic nucleotide phosphodiesterase.

Antibiotic MS 681A

MS 681A
[173485-72-8]
$C_{61}H_{91}N_{13}O_9$ 1150.472
Pale yellow solid. Sol. MeOH, Me_2CO; fairly sol. EtOAc, $CHCl_3$; poorly sol. hexane, H_2O. $[\alpha]_D^{26}$ +20.4 (c, 0.2 in MeOH). λ_{max} 217 (ϵ 26700); 281 (ϵ 3700); 289 (ϵ 3100) (MeOH).

Antibiotic MS 681B

MS 681B
[173485-73-9]
$C_{59}H_{90}N_{12}O_9$ 1111.435
Pale yellow solid. Sol. MeOH, $CHCl_3$, Me_2CO; fairly sol. EtOAc; poorly sol. hexane, H_2O. $[\alpha]_D^{26}$ +28.2 (c, 0.2 in MeOH). λ_{max} 260 (ϵ 1200) (MeOH).

Antibiotic MS 681C

MS 681C
[173485-74-0]
$C_{62}H_{93}N_{13}O_9$ 1164.498
Pale yellow solid. Sol. MeOH, Me_2CO; fairly sol. EtOAc, $CHCl_3$; poorly sol. hexane, H_2O. $[\alpha]_D^{26}$ +24.7 (c, 0.2 in MeOH). λ_{max} 218 (ϵ 31100); 281 (ϵ 4100); 289 (ϵ 3600) (MeOH).

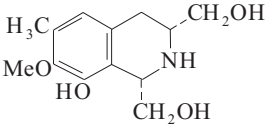
Antibiotic MS 681D

MS 681D
[173485-75-1]
$C_{60}H_{92}N_{12}O_9$ 1125.462
Pale yellow solid. Sol. MeOH, $CHCl_3$, Me_2CO; fairly sol. EtOAc; poorly sol. hexane, H_2O. $[\alpha]_D^{26}$ +24.4 (c, 0.2 in MeOH). λ_{max} 260 (ϵ 1500) (MeOH).

Japan. Pat., 1995, 7 285 993 (*isol*)
Yano, H. *et al., J. Antibiot.*, 1997, **50**, 992-997; 998-1006 (*isol, uv, ir, pmr, cmr, ms*)

Antibiotic MY 336a A-1209

1,2,3,4-Tetrahydro-8-hydroxy-7-methoxy-6-methyl-1,3-isoquinolinedimethanol, 9CI. MY 336a
[95727-08-5]



$C_{13}H_{19}NO_4$ 253.297
Isol. from *Streptomyces gabonae* ATCC15282. Effective in blocking sympathetic nerve receptors. β-Adrenergic antagonist. Needles. Sol. acids, MeOH; fairly sol. Me_2CO, H_2O, Et_2O; poorly sol. hexane. Mp 177-178°. λ_{max} 293 (ϵ 3500) (EtOH/NaOH) (Derep). λ_{max} 285 (ϵ 2800) (EtOH) (Derep).

Eur. Pat., 1985, 130 554; *CA*, **102**, 147548 (*isol*)
Kase, H. *et al., J. Antibiot.*, 1986, **39**, 354 (*isol*)
Hirayama, N. *et al., Acta Cryst. C*, 1990, **46**, 86 (*cryst struct*)
Kaufman, T.S. *et al., J.C.S. Perkin 1*, 1996, 2497 (*synth*)

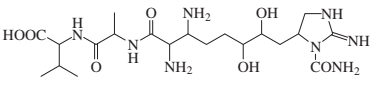
Antibiotic MYC 8005 A-1210

MYC 8005
[37372-39-7]
Tunicamycin-type antibiotic. Struct. unknown. Prod. by *Streptomyces exfoliatus* var. *echinosporus*. Acaricide and insecticide. Cryst. (1-butanol aq.). Sol. Py, MeOH, bases, Me_2CO-H_2O; poorly sol. Me_2CO, hexane. $[\alpha]_D$ +60 (Py). λ_{max} 219 ; 259 (MeOH). λ_{max} 219 (E1%/1cm 170); 259 (E1%/1cm 118) (MeOH) (Berdy).
▶ LD_{50} (mus, ipr) 1.5 mg/kg, LD_{50} (mus, orl) 37 mg/kg.

Meltzer, J. *et al., Eur. J. Plant Pathol. (Neth. J. Plant Pathol.)*, 1972, **78**, 1-14; 77-78

Antibiotic NA 22598A$_1$ A-1211

NA 22598A$_1$
[188674-15-9]

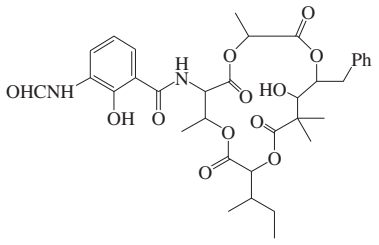


$C_{20}H_{38}N_8O_7$ 502.57
Prod. by *Streptomyces* sp. NA22598. Cytotoxic agent. Powder. Mp 190-195°.

Kuwahara, A. *et al., J. Antibiot.*, 1997, **50**, 712-713 (*isol, pmr*)

Antibiotic NA 30851A A-1212

NA 30851A
[221209-96-7]

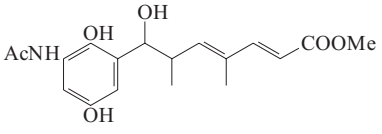


$C_{34}H_{42}N_2O_{12}$ 670.712
Prod. by *Streptomyces* sp. NA 30851A.

Japan. Pat., 1999, 99 49 768; *CA*, **130**, 337075n

Antibiotic NFAT 68 A-1213

Methyl 7-(3-acetylamino-2,5-dihydroxyphenyl)-7-hydroxy-4,6-dimethyl-2,4-heptadienoate. NFAT 68
[165133-84-6]

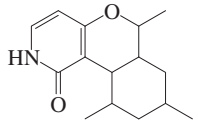


$C_{18}H_{23}NO_6$ 349.383
Prod. by a *Streptomyces* sp. Blocks NFAT-dependent transcription and shows immunosuppressant props. Oil.

Burres, N.S. *et al., J. Antibiot.*, 1995, **48**, 380 (*isol, pmr, cmr, props*)

Antibiotic NG 311 A-1214

2,6,6a,7,8,9,10,10a-Octahydro-6,8,10-trimethyl-1H-[2]benzopyrano[4,3-c]pyridin-1-one, 9CI. NG 311
[172318-70-6]

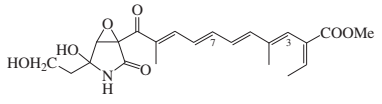


$C_{15}H_{21}NO_2$ 247.336
Related to Fusaricide, F-225. Prod. by a fungal sp. strain TF0407. Shows nerve growth factor-like activity. Neuroprotective and antidementia agent. Powder.

Japan. Pat., 1995, 95 233 168; *CA*, **124**, 86990m

Antibiotic NG 391 A-1215

NG 391
[185850-14-0]



$C_{22}H_{27}NO_7$ 417.458
Tetramic acid deriv. Closely related to Fusarin C, F-227. Prod. by *Fusarium* sp. TF-0452, *Fusarium* sp. RK 97-94 and *Metarhizium anisopliae* (KOB1-3). Neuroprotectant. Mutagenic. Yellow powder. Sol. MeOH. $[\alpha]_D$ +39.3 (MeOH). λ_{max} 283 (ϵ 9100); 366 (ϵ 35500) (MeOH).

*(3Z)-Isomer: **Antibiotic NG 392**. NG 392*
[185850-15-1]
$C_{22}H_{27}NO_7$ 417.458
Prod. by *Fusarium* sp. TF-0452. Neuroprotectant. Yellow powder. Sol. MeOH. $[\alpha]_D$ -13.4 (MeOH). λ_{max} 290 (ϵ 7600); 343 (ϵ 11900) (MeOH).

*(7Z)-Isomer: **Antibiotic NG 393**. NG 393*
[185850-16-2]
$C_{22}H_{27}NO_7$ 417.458
Prod. by *Fusarium* sp. TF-0452 and *Metarhizium anisopliae* (KOB1-3). Neuroprotectant. Mutagenic. Yellow powder. Sol. MeOH. $[\alpha]_D$ +32 (MeOH). λ_{max} 273 (ϵ 8000); 367 (ϵ 61200) (MeOH).

Japan. Pat., 1996, 96 319 289; *CA*, **126**, 103149e
Kakeya, H. *et al., J. Antibiot.*, 2001, **54**, 850-853 (*isol*)
Hayashi, Y. *et al., Tetrahedron*, 2002, **58**, 9839-9846 (*synth, abs config*)

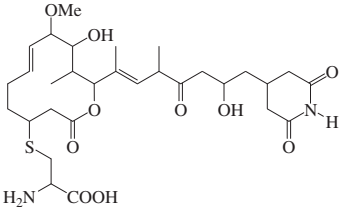
Antibiotic NK 30424A A-1216

NK 30424A



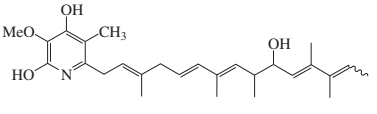
$C_{30}H_{46}N_2O_{10}S$ 626.767
Glutarimide-macrolide antibiotic. Prod. by *Streptomyces* sp. NA30424. Antitumour agent. Powder. Mp 129-131° dec. $[\alpha]_D^{20}$ +10.8 (c, 0.5 in H_2O). λ_{max} 206 (log ϵ 4.28); 286 (log ϵ 2.53) (no solvent reported).

*Stereoisomer: **Antibiotic NK 30424B**. NK 30424B*
$C_{30}H_{46}N_2O_{10}S$ 626.767
Prod. by *Streptomyces* sp. NA30424. Antitumour agent. Powder. Mp 129-133° dec. $[\alpha]_D^{20}$ +11.2 (c, 0.5 in H_2O). λ_{max} 206 (log ϵ 4.28); 283 (log ϵ 2.72) (no solvent reported).

Takayasu, Y. *et al., J. Antibiot.*, 2001, **54**, 1111-1115 (*isol, pmr, cmr*)

Antibiotic NK 170204B A-1217

4-Hydroxy-6-(10-hydroxy-3,7,9,12,13-pentamethyl-2,5,7,11,13-pentadecapentaenyl)-3-methoxy-5-methyl-2(1H)-pyridinone, 9CI. NK 170204B
[161161-46-2]



$C_{27}H_{39}NO_4$ 441.609
Closely related to Piericidin, P-421. Prod. by *Streptomyces* sp. NK170204.

Japan. Pat., 1994, 94 293 736; *CA*, **122**, 158767c

Antibiotic NP 522 A-1218

NP 522
$C_{14}H_{15}N_3O_2$ 257.291
Struct. unknown. Prod. by *Streptomyces hygroscopicus*. Antibacterial agent. Prisms (MeOH/EtOAc). Sol. MeOH, Me_2CO, EtOH, butyl acetate, $CHCl_3$, EtOAc; fairly sol. H_2O, C_6H_6, Et_2O; poorly sol. hexane. Mp 204-205°. $[\alpha]_D$ -190 (c, 2 in MeOH). λ_{max} 220 (E1%/1cm 2741); 274 (E1%/1cm 250); 281 (E1%/1cm 266); 290 (E1%/1cm 229) (MeOH) (Berdy).
▶ LD_{50} (mus, ims) 800 mg/kg; LD_{50} (mus, scu) 800 mg/kg.

Japan. Pat., 1964, 64 10 247; *CA*, **61**, 12593d

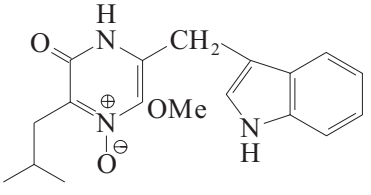
Antibiotic NRCS 15 A-1219

NRCS 15
[52229-10-4]
Related to Ferrimycin A_1, F-37. Prod. by *Streptomyces* sp. NRCS15. Siderophore. Antibacterial agent. Powder. Sol. H_2O, MeOH, $CHCl_3$; fairly sol. Et_2O; poorly sol. hexane. λ_{max} 210 (EtOH). λ_{max} 210 (E1%/1cm 122.5) (EtOH) (Berdy). λ_{max} 208 (E1%/1cm 112) (EtOH-HCl) (Berdy). λ_{max} 222 (E1%/1cm 12.2) (EtOH-NaOH) (Berdy).
▶ LD_{50} (mus, scu) 50 mg/kg.

Haroun, B.M. *et al., J. Antibiot.*, 1974, **27**, 14-19

Antibiotic OPC 15161 A-1220

OPC 15161
[121071-92-9]



$C_{18}H_{21}N_3O_3$ 327.382
Artifact. Degradn. prod. of Antibiotic OPC 15160 (isol. from *Thielavia major*). Inhibitor of superoxide anion generation. More potent than OPC 15160. Pale yellow prisms (MeOH). Mp 223.5-225.5°. $[\alpha]_D$ 0. λ_{max} 220 (ϵ 49400); 279 (ϵ 10320); 354 (ϵ 7370) (EtOH) (Derep).

Nakano, Y. *et al., J. Antibiot.*, 1991, **44**, 52 (*isol, pmr, cmr, struct*)

Antibiotic SF 1739 A-1254

SF 1739
[61991-01-3]

$C_{22}H_{29}N_3O_6$ 431.488

Struct. unknown. See also Antibiotic SF 1739HP in N-32. Isol. from *Streptomyces griseoplanus*. Antibiotic active against gram-positive and -negative bacteria. Orange powder (as hydrochloride). Sol. H_2O, MeOH; poorly sol. C_6H_6, hexane, Et_2O. Mp 120-135° (hydrochloride). $[\alpha]_D^{20}$ +163 (hydrochloride). λ_{max} 268 (E1%/1cm 190); 455 (E1%/1cm 30) (H_2O) (Berdy). λ_{max} 262 (E1%/1cm 166); 410 (E1%/1cm 25) (HCl) (Berdy). λ_{max} 272 (E1%/1cm 144); 510 (E1%/1cm 43) (NaOH aq.) (Berdy).

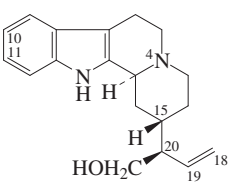
Antiostatin B_5 [131602-20-5]
$C_{27}H_{38}N_4O_3$ 466.622
Sol. MeOH, EtOAc, $CHCl_3$, Me_2CO; poorly sol. H_2O, hexane. Mp 92-94°. Grad. starts to subl. at 90°. λ_{max} 218 (ε 44300); 238 (ε 35300); 301 (ε 20900); 338 (ε 6160); 352 (ε 6290) (MeOH) (Derep).

Mo, C.-J. *et al., J. Antibiot.*, 1990, **43**, 1337 (*isol, cmr*)

Antirhine A-1328

Rhazinine. Anthirine
[16049-28-8]



Absolute Configuration

$C_{19}H_{24}N_2O$ 296.411

Alkaloid from *Antirhea putaminosa*, *Rhazya stricta*, *Catharanthus longifolius* and some other spp. in the Apocynaceae. Mp 115-116°. $[\alpha]_D^{25}$ -2 ($CHCl_3$) ((+4)). λ_{max} 225 ; 275 (sh) ; 282 ; 290 (MeOH).

Hydrochloride: Mp 220°. $[\alpha]_D^{25}$ +2 (EtOH).

N^4 *α–Me: Antirhine* α-N-*methosalt*
[50315-65-6]
[50315-63-4] Synthetic. Cryst. (Me_2CO aq.)(as chloride). Mp 325-328° dec.(chloride). $[\alpha]_D$ -17.9 (c, 0.27 in MeOH aq.) (chloride). CAS no. refers to chloride.

N^4*-β-Me:* ***Antirhine β-N-methosalt***. N^4-*Methylantirhine*
[58580-53-3]
$C_{20}H_{27}N_2O^{\oplus}$ 311.446
Quaternary alkaloid from *Hunteria eburnea, Amsonia elliptica* and *Strychnos usambarensis* and *Strychnos camptoneura* (Apocynaceae, Loganiaceae). Cryst. (EtOH)(as chloride). Mp 306° dec.(chloride). $[\alpha]_D$ +75 (c, 0.04 in EtOH) (chloride).

18,19-Dihydro: ***Dihydroantirhine***
[16049-29-9]
$C_{19}H_{26}N_2O$ 298.427
Alkaloid from *Aspidosperma marcgravianum* (Apocynaceae). Mp 106-108° (120-125°). $[\alpha]_D$ +23 (c, 0.12 in $CHCl_3$).

18,19-Dihydro, N^4*-α-Me: Dihydroantirhine α-methochloride*
[53729-45-6]
Synthetic. Cryst. (EtOH aq.)(as chloride). Mp 310-312° dec. (chloride). $[\alpha]_D$ -8 (c, 0.13 in EtOH aq.) (chloride). CAS no. refers to chloride.

18,19-Dihydro, N^4*-β-Me:* ***Dihydroantirhine β-N-methosalt***. H-*Alkaloid J*
[53643-59-7]
$C_{20}H_{29}N_2O^{\oplus}$ 313.462
Quaternary alkaloid from the root and stem bark of *Hunteria eburnea* (Apocynaceae). Cryst. (EtOH) (as chloride). Mp 305° dec. (chloride). $[\alpha]_D$ +71.4 (c, 0.13 in H_2O) (chloride). CAS no. refers to chloride.

15-Epimer, Δ^{19}*-isomer (Z-):* ***Isoantirhine***†. *Isoanthirine*
[113122-68-2]
$C_{19}H_{24}N_2O$ 296.411
Isol. from stem bark of *Strychnos johnsonii* and *Aspidosperma marcgravianum*. Yellow cryst. $[\alpha]_D$ -15 (c, 0.1 in MeOH). λ_{max} 228 ; 275 ; 282 ; 290 (MeOH).

10-Hydroxy: ***Hunterburnine***. *10-Hydroxyantirhine*
[6870-62-8]
$C_{19}H_{24}N_2O_2$ 312.411
Alkaloid from leaves of *Ochrosia alyxioides* (Apocynaceae). Noncryst. $[\alpha]_D^{20}$ +15 (c, 0.5 in MeOH). λ_{max} 230 (log ϵ 3.76); 276 (log ϵ 3.62); 291 (log ϵ 3.52); 310 (log ϵ 3.33) (MeOH). λ_{max} 280 (log ϵ 3.66); 300 (sh) (log ϵ 3.56); 312 (sh) (log ϵ 3.5); 330 (sh) (log ϵ 3.23) (MeOH/NaOH).

10-Hydroxy, N^4*-α-Me:* ***Hunterburnine α-N-metho salt***
$C_{20}H_{27}N_2O_2^{\oplus}$ 327.445
Quaternary alkaloid from *Hunteria eburnea, Ochrosia sandwicensis* and *Pleiocarpa mutica* (Apocynaceae). Cryst. (H_2O) (as chloride). Mp 335° (322-324°) (chloride). No CAS no. to 14CI. λ_{max} 268 (sh) (log ϵ 4.05); 274 (log ϵ 4.08); 302 (log ϵ 3.78); 311 (sh) (log ϵ 3.72) (MeOH) (chloride).

10-Hydroxy, N^4*β–Me:* ***Hunterburnine β-N-metho salt***
$C_{20}H_{27}N_2O_2^{\oplus}$ 327.445
Quaternary alkaloid from *Hunteria eburnea* and *Pleiocarpa mutica* (Apocynaceae). Cryst. (Me_2CO aq.)(as chloride). Mp 307-308° (chloride). $[\alpha]_D$ +105 (72.5% MeOH aq.) (chloride). No CAS no. to 14CI. λ_{max} 276 (log ϵ 4); 300 (sh) (log ϵ 3.66) (95% EtOH) (chloride).

10-Methoxy: ***10-Methoxyantirhine***
[126223-76-5]
$C_{20}H_{26}N_2O_2$ 326.438
Alkaloid from leaves and stem bark of *Ochrosia alyxioides* (Apocynaceae). Noncryst. $[\alpha]_D^{20}$ +17 (c, 0.2 in MeOH). λ_{max} 230 (log ϵ 3.78); 276 (log ϵ 3.64); 291 (log ϵ 3.53); 310 (log ϵ 3.33) (MeOH).

10-Methoxy, 11-hydroxy: ***Alangine***
[262369-77-7]
$C_{18}H_{25}NO_3$ 303.4
Alkaloid from the fruit of *Alangium lamarckii*. Amorph. powder. $[\alpha]_D$ -0.9 (c, 0.21 in MeOH). $[\alpha]_D$ -2.5 (c, 0.2 in $CHCl_3$). λ_{max} 225 (sh) (log ϵ 3.74); 285 (log ϵ 3.45) (MeOH).

ar-*Methoxy:* ***Methoxyantirhine***
[88608-78-0]
$C_{20}H_{26}N_2O_2$ 326.438
Alkaloid from the seeds of *Aspidosperma oblongum* (Apocynaceae). Obt. in admixture with Antirhine. May be identical with 10-Methoxyantirhine.

3-Epimer: ***3-Epiantirhine***. *3-Isoantirhine*
[34384-65-1]
$C_{19}H_{24}N_2O$ 296.411
Alkaloid from the leaves of *Guettarda heterosepala* (Rubiaceae). Cryst. ($CHCl_3$). Mp 207°. $[\alpha]_D^{20}$ +57 (c, 0.42 in EtOH).

20-Epimer: ***20-Epiantirhine***
[155418-10-3]
$C_{19}H_{24}N_2O$ 296.411
Alkaloid from roots of *Antirhea portoricensis* (Rubiaceae) and from *Strychnos potatorum*. Amorph. $[\alpha]_D^{25}$ +57 (c, 0.5 in $CHCl_3$).

20-Epimer, 18,19-dihydro: ***(20S)-Dihydroantirhine***
[144606-86-0]
$C_{19}H_{26}N_2O$ 298.427
Alkaloid from *Strychnos potatorum*. No phys. props. reported.

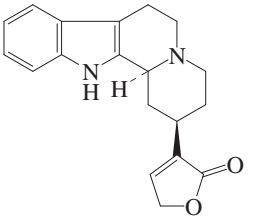
Antirhine lactone A-1329

Anthirine lactone
[113122-67-1]



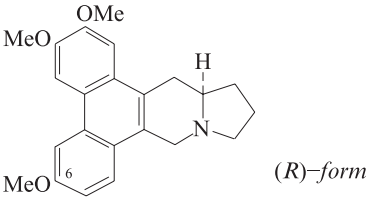
$C_{19}H_{20}N_2O_2$ 308.379

CAS gives the opposite abs. config., apparently incorrectly. Alkaloid from stem bark of *Strychnos johnsonii*. λ_{max} 228 ; 282 ; 290 (MeOH).

Massiot, G. *et al., Phytochemistry*, 1987, **26**, 2839-2846 (*isol, uv, ir, pmr, cmr, ms, struct*)

Antofine A-1330

9,11,12,13,13a,14-Hexahydro-2,3,6-trimethoxydibenzo[f,h]pyrrolo[1,2-b]isoquinoline, 9CI. 2,3,6-Trimethoxyphenanthroindolizidine. Tylophorine B



(*R*)–*form*

$C_{23}H_{25}NO_3$ 363.455

Tylophorine B was the racemate.

(*R*)-*form* [32671-82-2]

Alkaloid from *Antitoxicum funebre* (preferred genus name *Vincetoxicum*), *Cynanchum vincetoxicum*, *Vincetoxicum nigrum*, *Tylophora asthmatica* and *Ficus septica* (Asclepiadaceae, Moraceae). Possesses pronounced antibacterial and antifungal props. Cryst. (EtOH or $CHCl_3$/EtOH). Mp 212-214°. $[\alpha]_D^{22}$ -165 (c, 1.9 in $CHCl_3$). λ_{max} 259 (log ϵ 4.71); 286 (log ϵ 4.46); 342 (log ϵ 2.99); 360 (log ϵ 2.61) (MeOH).

Methiodide:
Needles (EtOH). Mp 206°.

N-*Oxide(α-):* ***Antofine α*-N-oxide**
[142698-18-8]
$C_{23}H_{25}NO_4$ 379.455
Alkaloid from *Cynanchum vincetoxicum* (Asclepiadaceae).

N-*Oxide(β-):* ***Antofine β*-N-oxide**
[314744-19-9]
$C_{23}H_{25}NO_4$ 379.455
Alkaloid from *Cynanchum vincetoxicum* (Asclepiadaceae). Shows cytotoxic activity. $[\alpha]_D^{21}$ -37.3 (c, 0.13 in MeOH).

O^6-*De-Me:* ***6-Demethylantofine***. *Alkaloid C*†
[32392-19-1]
$C_{22}H_{23}NO_3$ 349.429
Alkaloid from aerial parts of *Cynanchum vincetoxicum* and *Cynanchum hancockianum*. Cryst. (EtOH). Mp 226-228°. $[\alpha]_D^{22}$ -125 (c, 1.05 in Py). $[\alpha]_D^{26}$ -51.5 (c, 0.27 in Py). λ_{max} 260 (ϵ 4.74); 287 (ϵ 4.47); 344 (ϵ 3.05); 362 (ϵ 2.75) (MeOH).

*14*R-*Hydroxy:* ***14-Hydroxyantofine***
[32684-56-3]
$C_{23}H_{25}NO_4$ 379.455
Alkaloid from *Cynanchum komarovii* and *Cynanchum vincetoxicum* (Asclepiadaceae). $[\alpha]_D^{25}$ -72.2 (c, 1 in $CHCl_3$).

*14*R-*Hydroxy,* N-*oxide(β-):* ***14-Hydroxyantofine β*-N-oxide**
[142330-17-4]
$C_{23}H_{25}NO_5$ 395.454
Alkaloid from *Cynanchum komarovii* and *Cynanchum vincetoxicum*. Gum.

(*S*)-*form* [51745-04-1]
Synthetic. Mp 206-211°. $[\alpha]_D^{22}$ +66 ($CHCl_3$).

(±)-*form* [26648-81-7]
Alkaloid from *Albizzia julibrissin*. Needles (Me_2CO). Mp 213-215°.

Methiodide:
Cryst. (EtOH). Mp 204-205°.

O^6-*De-Me:* [26648-80-6]
Synthetic. Mp 225-228° (216-218).

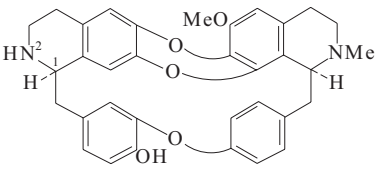
Apateline A-1331

[68779-85-1]



$C_{34}H_{32}N_2O_5$ 548.637

Alkaloids covered by this entry are diastereomeric with those under Isotrilobine, I-339. Alkaloid from the bark of *Daphnandra apatela* (Monimiaceae). Cryst. + 1MeOH (MeOH). Mp 197-200° dec. $[\alpha]_D$ +270 ($CHCl_3$).

Dipicrate:
Cryst. + $1.5H_2O$. Mp 205-210° dec.

N-*Me:* **N-*Methylapateline***
[68779-86-2]
$C_{35}H_{34}N_2O_5$ 562.664
Alkaloid from the leaves, stems and bark of *Daphnandra johnsonii* and from the stems of *Cocculus pendulus* (Monimiaceae, Menispermaceae). Cryst. (MeOH). Mp 165-167° (sinters) Mp 198-200° dec.

O-*De-Me:* Mp 286-292° dec.

O-*De-Me,* N-*Me:* **N-*Methylnorapateline***
[69088-72-8]
$C_{34}H_{32}N_2O_5$ 548.637
Alkaloid from the leaves, stems and bark of *Daphnandra johnsonii* (Monimiaceae). Needles + $0.2CHCl_3$. Mp 257-259° dec. $[\alpha]_D^{19}$ +235 ($CHCl_3$).

Me ether: ***Telobine***
[41758-42-3]
$C_{35}H_{34}N_2O_5$ 562.664
Alkaloid from the bark of *Doryphora apatela* and *Doryphora* sp. Dt-7 (Monimiaceae). Yellow powder + 1/3 CCl_4. Mp 185-195° dec. $[\alpha]_D^{19}$ +188 ($CHCl_3$).

Me ether, dipicrate:
Cryst. + $1H_2O$. Mp 198-204° dec.

Me ether, N-*Ac:* Mp 178-182° dec. $[\alpha]_D^{18}$ +115 ($CHCl_3$).

Me ether, N-*Me:* **N-*Methyltelobine***
$C_{36}H_{36}N_2O_5$ 576.691
Alkaloid from tubers of *Stephania erecta* (Menispermaceae). Cryst. (Me_2CO aq.). Mp 175-180° dec. (172°). $[\alpha]_D^{18}$ +248 (+226) ($CHCl_3$). λ_{max} 207 (ϵ 44600); 233 (ϵ 36300); 280 (ϵ 4460); 305 (ϵ 2950) (MeOH) (Berdy).

5′-Hydroxy: ***5′-Hydroxyapateline***
$C_{34}H_{32}N_2O_6$ 564.637
Alkaloid from the leaves of *Cocculus pendulus*. $[\alpha]_D^{25}$ +185 (c, 0.07 in MeOH).

5′-Hydroxy, O^{12}-*Me:* ***5′-Hydroxytelobine***
$C_{35}H_{34}N_2O_6$ 578.663
Alkaloid from the leaves of *Cocculus pendulus*. $[\alpha]_D^{25}$ +154 (c, 0.11 in $CHCl_3$).

Bick, I.R.C. *et al., Aust. J. Chem.*, 1978, **31**, 2077; 2539 (*Telobine, Apateline, N-Methylapateline, N-Methylnorapateline*)

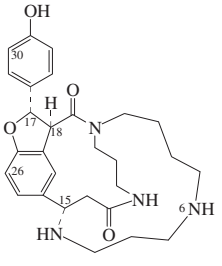
Aphelandrine A-1334

11-Epiephedradine A. 11-Epiorantine



(+)-*form*

$C_{28}H_{36}N_4O_4$ 492.617

(+)-*form* [69721-57-9]
Alkaloid from *Aphelandra squarrosa* and other *Aphelandra* spp., from *Encephalosphaera lasiandra* and *Premna integrifolia* (Acanthaceae, Verbenaceae). Plates (MeOH), needles (H_2O). Mp 263° dec. $[\alpha]_D$ +214 (c, 0.674 in $CHCl_3$/MeOH 9:1).

Perchlorate (1:2):
Cryst. (EtOH). Mp 252-253° dec.

N^6-*Hydroxy:* **N^6-*Hydroxyaphelandrine***
[259813-07-5]
$C_{28}H_{36}N_4O_5$ 508.616
Alkaloid from *Aphelandra fuscopunctata*. Cryst. Mp 186-190° (dec.). $[\alpha]_D^{21}$ +125 (c, 0.18 in EtOH). λ_{max} 232 ; 280 ; 286 (EtOH).

N^6-*Acetoxy:* **N^6-*Acetoxyaphelandrine***
[259813-08-6]
$C_{30}H_{38}N_4O_6$ 550.653
Alkaloid from *Aphelandra fuscopunctata*. Cryst. Mp 176-184° (dec.). $[\alpha]_D^{22}$ +192 (c, 0.2 in EtOH). λ_{max} 232 ; 280 ; 286 (EtOH).

17,18-Diepimer: ***Orantine**. Ephedradine A*
[71461-13-7]
$C_{28}H_{36}N_4O_4$ 492.617
Isol. from the crude drug "Mao-kon", made from the roots of *Ephedra* spp. (Ephedraceae). Hypotensive principle. Noncryst.; cryst. + $1H_2O$ (as dihydrochloride). Mp 222-225° (dihydrochloride).

17,18-Diepimer, N,N,O-*tri-Ac:* Mp 165-175°.

17,18-Diepimer, Me ether: **O-*Methylorantine***
[64366-67-2]
$C_{29}H_{38}N_4O_4$ 506.644
Alkaloid from *Chaenorhinum minus, Chaenorhinum villosum* and *Aphelandra sinclairiana* (Scrophulariaceae, Acanthaceae). Cryst. (C_6H_6). Mp 167° dec. $[\alpha]_D$ -84 (c, 0.88 in $CHCl_3$/MeOH).

17,18-Diepimer, 26-methoxy: ***Ephedradine D***
[81349-26-0]
$C_{29}H_{38}N_4O_5$ 522.643
Isol. from the crude drug "Mao-kon", made from the roots of *Ephedra* spp. (Ephedraceae). Hypotensive principle. Noncryst. Mp 219-221° (as hydrobromide). $[\alpha]_D$ -85.3 (H_2O) (hydrobromide).

17,18-Diepimer, 30-methoxy, Me ether: ***Ephedradine C***
[73276-37-6]
$C_{30}H_{40}N_4O_5$ 536.67
Isol. from the crude drug "Mao-kon", made from the roots of *Ephedra* spp. (Ephedraceae). Hypotensive principle. Noncryst.; cryst. + $1H_2O$ (as hydrobromide). Mp 224-225° (hydrobromide). $[\alpha]_D$ -100.7 (H_2O).

17,18-Diepimer, deoxy, 30-methoxy: ***Ephedradine B***
[71327-57-6]
$C_{29}H_{38}N_4O_5$ 522.643
Isol. from the crude drug "Mao-kon", made from the roots of *Ephedra* spp. (Ephedraceae). Hypotensive principle. Noncryst.; cryst. + $1H_2O$ (as hydrobromide). Mp 219-221° (hydrobromide). $[\alpha]_D$ -101.5 (H_2O).

(-)-*form* [133162-95-5]
Alkaloid from the whole plant of *Schweinfurthia papilionacea* (Scrophulariaceae). Mp 200° dec. $[\alpha]_D$ -13 (c, 0.3 in MeOH). This alkaloid, claimed as new and named as 11-Epiephedradine A or 11-Epiorantine, appears to be (-)-Aphelandrine of low opt. purity. However this requires confirmation.

Dätwyler, P. *et al., Helv. Chim. Acta*, 1978, **61**, 2646-2671; 1979, **62**, 2712-2723 (*Aphelandrine, Orantine, O-Methylorantine*)

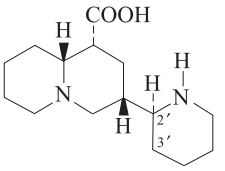
Aphyllic acid A-1335

Octahydro-3-(2-piperidinyl)-2H-quinolizine-1-carboxylic acid, 9CI. Aphyllinic acid
[642-67-1]



Absolute configuration

$C_{15}H_{26}N_2O_2$ 266.383
Artifact obt. during coml. acid treatment of *Anabasis aphylla* alkaloids (Chenopodiaceae). Powder, cryst. + $5H_2O$. Mp 218-219° (anhyd.). $[\alpha]_D$ +14. Almost certainly derived by ring-opening of Aphylline, which it readily reforms (with some stereomutation).

Hydrochloride (1:2): Mp 262-264°.

Me ester: ***Methyl aphyllate***
Alkaloid from seeds of *Anabasis aphylla* (Chenopodiaceae). Cryst. (petrol). Mp 80-81°. $[\alpha]_D$ +8.9 (synthetic).

2′,3′-Didehydro: ***Aphyllidinic acid***
$C_{15}H_{24}N_2O_2$ 264.367
Alkaloid artifact from *Anabasis aphylla* acid treatment, also obt. from Aphyllidine by treatment with H_2SO_4 aq.(Chenopodiaceae). Mp 215-216° dec. $[\alpha]_D^{20}$ -8 (c, 7 in MeOH).

2′,3′-Didehydro, picrate: Mp 196° dec.

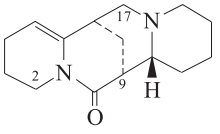
[643-32-3]



(+)–*form*

$C_{15}H_{22}N_2O$ 246.352

(+)-*form* [124223-08-1]
Alkaloid from *Anabasis aphylla* (Chenopodiaceae) and *Lupinus argenteus* spp. *rubricaulis* (Fabaceae). Mp 112-113°. $[\alpha]_D^{26}$ +7.3 (c, 2.18 in EtOH). $[\alpha]_D^{18}$ +5.6 (MeOH).

Hydrochloride: Mp 235-237°. $[\alpha]_D$ +30 (H_2O).

*2*R-*Hydroxy:* **2R-*Hydroxyaphyllidine***
[124223-06-9]
$C_{15}H_{22}N_2O_2$ 262.351
Constit. of *Lupinus argenteus* ssp. *rubricaulis* (Fabaceae). Solid. Mp 150-155°. $[\alpha]_D^{26}$ -15 (c, 0.2 in $CHCl_3$).

*2*S-*Hydroxy:* **2S-*Hydroxyaphyllidine***
[124223-07-0]
$C_{15}H_{22}N_2O_2$ 262.351
Constit. of *Lupinus argenteus* ssp. *rubricaulis* (Fabaceae).

*2*R,*9*R-*Dihydroxy:* **2R,9R-*Dihydroxyaphyllidine***
[124125-78-6]
$C_{15}H_{22}N_2O_3$ 278.35
Constit. of *Lupinus argenteus* ssp. *rubricaulis* (Fabaceae). Oil (as di-Ac). $[\alpha]_D^{26}$ +38.5 (c, 0.62 in $CHCl_3$) (as di-Ac).

*2*S,*9*R-*Dihydroxy:* **2S,9R-*Dihydroxyaphyllidine***
[124125-77-5]
$C_{15}H_{22}N_2O_3$ 278.35
Constit. of *Lupinus argenteus* ssp. *rubricaulis* (Fabaceae). Prisms (MeOH/Et_2O). Mp 122-123°. $[\alpha]_D^{26}$ +53.6 (c, 1.48 in $CHCl_3$).

17-Oxo: ***Oxoaphyllidine***. *Oxaphyllidine*
$C_{15}H_{20}N_2O_2$ 260.335
Alkaloid from *Anabasis aphylla* (Chenopodiaceae). Also obt. by oxidn. of Aphyllidine. Mp 188-189° (182-184°). $[\alpha]_D^{20}$ -29.8 (c, 0.56 in EtOH) (-21). The higher Mp and opt. rotn. are for semisynthetic material, the lower for the nat. prod. An incorr. abs. config. was prev. given. λ_{max} 244 (log ϵ 0.75) (EtOH).

*13*S-*Hydroxy:* ***13α-Hydroxyaphyllidine***
$C_{15}H_{22}N_2O_2$ 262.351
Alkaloid from *Lupinus hartwegii* (Fabaceae). Oil. $[\alpha]_D^{25}$ +44 (c, 0.1 in $CHCl_3$). λ_{max} 239 (log ϵ 3.9) (MeOH).

(-)-*form*
Alkaloid from *Argyrolobium megarhizum* (Fabaceae). Prisms (Et_2O/hexane). Mp 101-106°. $[\alpha]_D$ -9.1 (c, 2.2 in EtOH).

Hydrochloride:
Prisms (MeOH/Me_2CO/Et_2O). Mp 228-230° dec.

2ξ-Hydroxy: ***Argyrolobine***
[6871-18-7]
$C_{15}H_{22}N_2O_2$ 262.351
Alkaloid from *Argyrolobium megarhizum* whole plants (Fabaceae). Prisms (Me_2CO). Mp 168-169°. $[\alpha]_D$ +13.3 (c, 1.4 in $CHCl_3$). Subl. undec. Unstable in $CHCl_3$ soln.

2ξ-Hydroxy; hydrochloride:
Prisms (MeOH/EtOAc). Mp 170-172°.

2ξ-Acetoxy:
Prisms. Mp 61°.

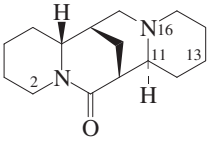
Aphylline A-1337

10-Oxosparteine
[577-37-7]



$C_{15}H_{24}N_2O$ 248.367
Alkaloid from *Anabasis aphylla, Virgilia oroboides, Cytisus canariensis* and *Lupinus hartwegii* (Chenopodiaceae, Fabaceae). Mp 52-53°. Bp_4 200°. $[\alpha]_D$ +10.3 (20% MeOH aq.). Cryst. with difficulty.

Hydrochloride:
Cryst. + $1H_2O$. $[\alpha]_D^{20}$ +13.6 (H_2O).

Picrolonate: Mp 230-231° dec.

Methiodide: Mp 212-213° dec.

N*16*-*Oxide:* ***Aphylline* N*16*-*oxide***
[41451-56-3]
$C_{15}H_{24}N_2O_2$ 264.367
Alkaloid from *Anabasis aphylla* leaves (Chenopodiaceae).

2α-Hydroxy: ***2α-Hydroxyaphylline***
[197297-29-3]
$C_{15}H_{24}N_2O_2$ 264.367
Alkaloid from *Lupinus hartwegii*.
Amorph. $[\alpha]_D^{25}$ +30.4 (c, 0.1 in $CHCl_3$).

11-Epimer: ***Epiaphylline***. *Alkaloid A1*. *α-Isoaphylline*
[1218-51-5]
$C_{15}H_{24}N_2O$ 248.367
Alkaloid from *Lupinus hartwegii* whole plants (Fabaceae). Cryst. Config. incorr. descr. as 11*S*-.

11-Epimer, 2,3-didehydro: ***2,3-Dehydroepiaphylline***. *2,3-Dehydro-α-isoaphylline*. *2,3-Dehydro-10-oxo-α-isosparteine*
$C_{15}H_{22}N_2O$ 246.352
Alkaloid from *Uresiphita reversalis* larvae fed on *Cytisus monspessulanus* leaves. Needles. Mp 98-103°. $[\alpha]_D^{26}$ +132 (c, 0.6 in EtOH). λ_{max} 257 (log ϵ 3.07) (MeOH).

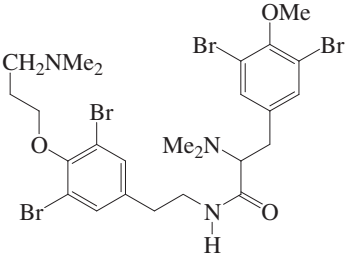
Aplyzanzine A A-1358

[327165-67-3]

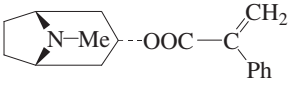


$C_{25}H_{33}Br_4N_3O_3$ 743.17
Isol. from an *Aplysina* sp. Pale orange oil.

Evan, T. *et al., J. Nat. Prod.*, 2001, **64**, 226-227

Apoatropine A-1359

8-Methyl-8-azabicyclo[3.2.1]oct-3-yl α-methylenebenzeneacetate, 9CI. Tropine atropate. Atropamine. Atropyltropein
[500-55-0]



$C_{17}H_{21}NO_2$ 271.358
Alkaloid from *Atropa belladonna, Datura pruinosa, Datura stramonium, Duboisia leichhardtii, Anisodus tanguticus* root, *Hyoscyamus orientalis, Mandragora* spp., *Physochlaina alaica* and other spp. (Solanaceae). Also obt. by dehydration of atropine with acids, acetic anhydride, etc. Antispasmodic agent. Cryst. (Et_2O). Mp 60-62°. Log P 2.64 (calc).

▶ YM4025000

Hydrochloride:
Leaflets (H_2O). Mp 245-246° (237-239°).

Picrate:
Yellow needles. Mp 166-168°.

N-*Oxide:*
Cryst. (EtOH/Me_2CO). Mp 127-128°.

N-*De-Me:* ***Aponoratropine****. Atropoylnortropan-3-ol*
$C_{16}H_{19}NO_2$ 257.332
Minor alkaloid from leaves of *Anthotroche myoporoides* (Solanaceae).

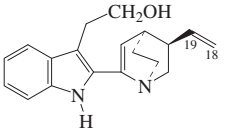
Apocinchonamine A-1360



Absolute Configuration

$C_{19}H_{22}N_2O$ 294.396
Parent not isol.

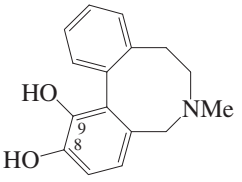
O-*Ac:* ***5-O-Acetylapocinchonamine***
$C_{21}H_{24}N_2O_2$ 336.433
Alkaloid from the leaves of *Remijia peruviana*. Amorph. $[\alpha]_D^{25}$ +4.6 (c, 0.22 in EtOH). λ_{max} 207 (log ϵ 4.26); 302 (log ϵ 3.8) (EtOH).

18,19-Dihydro: ***Apodihydrocinchonamine***
[151271-88-4]
Alkaloid from the leaves of *Isertia haenkeana*. Amorph. solid. $[\alpha]_D^{20}$ +12 (c, 2 in $CHCl_3$). λ_{max} 224 (log ϵ 4.46); 347 (log ϵ 4.34) (MeOH).

Bruix, M. *et al., Phytochemistry*, 1993, **33**, 1257-1261 (*Apodihydrocinchonamine*)
Díaz, J.G. *et al., J. Nat. Prod.*, 2004, **67**, 1667-1671 (*5-Acetylapocinchonamine*)

Apogalanthamine A-1361

5,6,7,8-Tetrahydro-6-methyldibenz[c,e]azocine-1,2-diol, 9CI
[26955-02-2]



$C_{16}H_{17}NO_2$ 255.316
Mp 202-203° dec.

▶ CD9380000

O^8-*Me:* ***Nivalidine***
[18126-83-5]
$C_{17}H_{19}NO_2$ 269.343
Alkaloid from *Galanthus nivalis* var. *gracilis* (Amaryllidaceae). Antiarrhythmic, hypertensive. Approved for use as a hypertensive agent *ca.* 1969 (USSR). Needles (C_6H_6). Mp 206-208°. Log P 3.4 (calc). Also produced by treatment of Galanthamine with HCl aq. Probably an artifact.

O^8-*Me, hydrochloride: Apochlorine. Apokhlorin*
[24620-67-5]

Creamy cryst. (EtOH). Mp 163-166° (foaming).

▶ CD9380000

O^8-*Me, hydrobromide:* Mp 238-239°.

O^8-*Me, Ac:*
Cryst. (Et_2O). Mp 107-109.5°.

O^9-*Me:* ***8-O-Demethylbuflavine***
[61972-44-9]
$C_{17}H_{19}NO_2$ 269.343
Alkaloid from bulbs of *Boophone flava* (Amaryllidaceae). Amorph. solid. Mp 112-114°. Genus name given as Boophane.

Di-Me ether: ***Buflavine***
[65762-70-1]
$C_{18}H_{21}NO_2$ 283.369
Alkaloid from bulbs of *Boophone flava* (Amaryllidaceae). Amorph. solid. Mp 106-108°.

Kobayashi, S. *et al., J.C.S.*, 1957, 638-645 (*Apogalanthamine*)

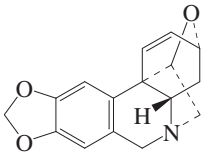
Apohaemanthamine A-1363

Apohemanthamine
[6900-81-8]

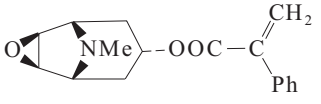


$C_{16}H_{15}NO_3$ 269.299
Alkaloid from *Eucharis amazonica*. Amorph. solid. Mp 145-147°. $[\alpha]_D^{22}$ +198 (c, 0.63 in $CHCl_3$).

Campbell, W.E. *et al., Phytochemistry*, 2000, **53**, 587-591 (*synth, pmr, cmr*)
Cabezas, F. *et al., Chem. Pharm. Bull.*, 2003, **51**, 315-317 (*isol, cd*)

Apohyoscine A-1364

9-Methyl-3-oxa-9-azatricyclo[3.3.1.0^{2,4}]-non-7-yl α-methylbenzeneacetate, 9CI. 6,7-Epoxy-3-atropolyoxytropane. Oscine atropate. Aposcopolamine
[535-26-2]



$C_{17}H_{19}NO_3$ 285.342
Alkaloid from the aerial parts of *Datura innoxia, Datura meteloides, Hyoscyamus niger* and *Anthocercis frondosa* (stem-bark and roots)(Solanaceae). Needles (Et_2O). Mp 97°. Opt. inactive (*meso*-).

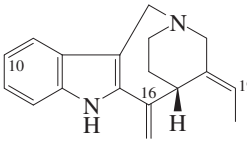
Picrate:
Needles (MeOH aq.). Mp 216° dec.

N-*De-Me:* ***Aponorhyoscine***
[25650-56-0]
$C_{16}H_{17}NO_3$ 271.315
Minor alkaloid from roots of *Anthocercis genistoides* (Solanaceae). Plates (EtOH aq.)(as picrate). Mp 224-225° (picrate).

Evans, W.C. *et al., J.C.S.*, 1965, 4936 (*isol*)
Sharova, E.G. *et al., Khim. Prir. Soedin.*, 1977, **13**, 126; *Chem. Nat. Compd. (Engl. Transl.)*, 1977, **13**, 117 (*isol*)
Evans, W.C. *et al., J. Pharm. Pharmacol., Suppl.*, 1979, **31**, 9P (*isol*)
Evans, W.C. *et al., Phytochemistry*, 1981, **20**, 497 (*isol, Aponorhyoscine*)

Appariicine A-1365

*4-Ethylidene-1,3,4,5,6,7-hexahydro-6-methylene-2,5-ethano-2*H*-azocino[4,3-b]indole, 9CI. Gomezine. Pericalline. Tabernoschizine*



(*R*)-*form*

$C_{18}H_{20}N_2$ 264.369

(R)-form [3463-93-2]
Alkaloid from the bark of *Aspidosperma dasycarpon* and from *Aspidosperma olivaceum*, *Vallesia antillana*, *Parkia speciosa*, *Tabernaemontana dichotoma* and *Sapium sebiferum*. Cryst. (Me_2CO). Mp 192-194°. $[\alpha]_D^{27}$ +176 (c, 2.16 in $CHCl_3$). λ_{max} 303 (ϵ 46500) (EtOH) (Berdy).

(S)-form [2122-36-3]
Found in *Aspidosperma olivaceum* and several other *Aspidosperma* spp., *Catharanthus ovalis*, *Catharanthus roseus*, *Pandaca ochrascens*, *Pandaca eusepala*, *Ervatamia heyneana*, *Tabernaemontana cumminsii*, *Schizozygia caffaeoides* and other spp. in the Apocynaceae. Shows cytotoxic activity against mouse lymphocyte P-388 cells. Also shows weak antibacterial activity. Antiviral agent active against Polio virus but not Vaccinia. Shows pronounced analeptic props. Cryst. (Me_2CO or petrol/$CHCl_3$). Mp 196-202° (188-190°). $[\alpha]_D^{27}$ -179 (c, 2.16 in $CHCl_3$). pK_{a1} 8.05 (33% DMF). pK_{a1} 7.26 (80% 2-methoxyethanol). λ_{max} 218 (ϵ 31300); 230 (ϵ 49000); 307 (ϵ 41800) (MeOH) (Berdy).

*19*R,*20*R-*Epoxide:* ***Epchrosine***. *19,20-Epoxyapparicine*
[103763-50-4]
$C_{18}H_{20}N_2O$ 280.369
Alkaloid from cell suspension cultures of *Ochrosia elliptica* (Apocynaceae).

10-Hydroxy: ***10-Hydroxyapparicine***
[70503-70-7]
$C_{18}H_{20}N_2O$ 280.369
Alkaloid from the leaves of *Ochrosia oppositifolia* (Apocynaceae). Noncryst. $[\alpha]_D^{25}$ -90 ($CHCl_3$). λ_{max} 314 (log ϵ 4.92) (no solvent reported).

16α-Hydroxy, 16,22-dihydro: ***16,22-Dihydro-16-hydroxyapparicine***
[94061-32-2]
$C_{18}H_{22}N_2O$ 282.385
Alkaloid from the leaves of *Tabernaemontana dichotoma* (Apocynaceae). Also isol. from whole plants and callus cultures of *Tabernaemontana elegans*. $[\alpha]_D^{20}$ +129 (c, 0.1 in EtOH). λ_{max} 220 (log ϵ 4.43); 284 (log ϵ 3.79); 292 (sh) (EtOH).

10-Methoxy: ***10-Methoxyapparicine***
[70503-71-8]
$C_{19}H_{22}N_2O$ 294.396
Alkaloid from the leaves of *Ochrosia oppositifolia* (Apocynaceae). Cryst. (Me_2CO). Mp 199-202°. $[\alpha]_D^{25}$ -129 ($CHCl_3$). λ_{max} 314 (log ϵ 4.92) (no solvent reported).

(ξ)-form

19,20-Dihydroxy, 19,20-dihydro: ***Brafouedine***
[104021-43-4]
$C_{18}H_{22}N_2O_2$ 298.384
Alkaloid from the stem bark of *Strychnos dinklagei*. Noncryst. $[\alpha]_D^{20}$ -26 (c, 0.02 in MeOH). Stereochem. undefined. CAS assigns an abs. config. although none was determined. λ_{max} 220 (log ϵ 4.02); 230 (sh) (log ϵ 3.93);

300 (log ϵ 3.65); 313 (sh) (log ϵ 3.6) (EtOH).

Apratoxin C A-1367

[444885-30-7]
As Apratoxin A, A-1366 with
R = -CH(CH$_3$)$_2$
$C_{44}H_{67}N_5O_8S$ 826.108
Isol. from *Lyngbya* sp. Cytotoxic agent. Amorph. solid. $[\alpha]_D^{25}$ -171 (c, 0.22 in MeOH). λ_{max} 201 (log ϵ 4.64); 230 (log ϵ 4.31) (MeOH).

Luesch, H. *et al., Bioorg. Med. Chem.*, 2002, **10**, 1973-1978

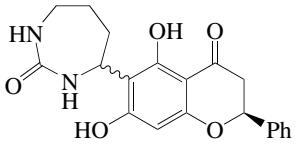
Aquaticine A-1368

$C_{18}H_{25}NO_5$ 335.399
Struct. unknown. Alkaloid from *Senecio aquaticus* (Asteraceae). Octahedral cryst. (EtOH). Mp 220° dec. $[\alpha]_D^{15}$ -83 (c, 1 in $CHCl_3$).

Picrate:
Yellow needles (MeOH). Mp 182°.

Evans, W.C. *et al., Nature (London)*, 1949, **164**, 30-31

Aquiledine A-1369



$C_{20}H_{20}N_2O_5$ 368.388
Constit. of *Aquilegia ecalcarata*. Amorph. powder (MeOH). Mp 214-215°. $[\alpha]_D$ +21 (c, 0.54 in MeOH). λ_{max} 288 ; 368 (sh) (MeOH).

Chen, S.-B. *et al., J. Nat. Prod.*, 2001, **64**, 85-87

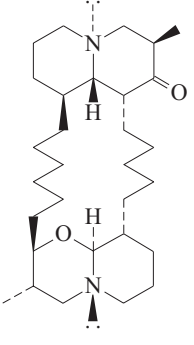
Aquileginine A-1370

$C_{41}H_{56}N_2O_2^{2\oplus}$ 608.906
Struct. unknown. Prob. a bisbenzylisoquinoline alkaloid. Alkaloid from the roots of *Aquilegia hybrida* "Scott-Elliott" (Ranunculaceae). Plates (MeOH)(as diiodide). Mp 238-239° (diiodide). $[\alpha]_D^{22}$ -7.8 (c, 0.36 in $CHCl_3$) (diiodide).

Winek, C.L. *et al., J. Nat. Prod.*, 1964, **27**, 111-114 (*isol, uv*)

Aragupetrosine A A-1371

[125236-58-0]

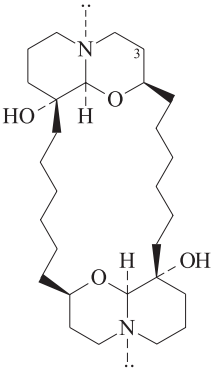


$C_{30}H_{52}N_2O_2$ 472.753
Alkaloid from an Okinawan marine sponge *Xestospongia* sp. Exhibits vasodilatory activity. $[\alpha]_D$ -18.8 ($CHCl_3$).

Kobayashi, M. *et al., Tet. Lett.*, 1989, **30**, 4149 (*isol, ir, pmr, cmr, struct, abs config*)

Aragupetrosine C A-1372

[122908-10-5]



Relative configuration

$C_{28}H_{50}N_2O_4$ 478.714
Alkaloid from an Okinawan marine sponge, *Xestospongia* sp. and from the sponge *Haliclona exigua*. Exhibits vasodilative activity. $[\alpha]_D$ +11.1 ($CHCl_3$).

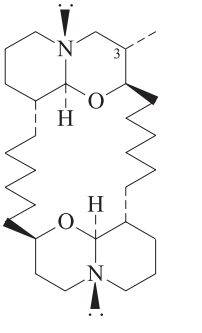
N-*Oxide:* ***Aragusponginе L***
$C_{28}H_{50}N_2O_5$ 494.713
Alkaloid from *Xestospongia exigua*. Needles. $[\alpha]_D^{25}$ +1.7 (c, 0.36 in $CHCl_3$).

3α-Methyl: ***3α-Methylaragusponginе C***
[159392-28-6]
$C_{29}H_{52}N_2O_4$ 492.741
Alkaloid from the sponge *Haliclona exigua*. Amorph. solid. $[\alpha]_D$ +1.2 (c, 0.15 in $CHCl_3$).

Kobayashi, M. *et al., Chem. Pharm. Bull.*, 1989, **37**, 1676 (*isol, pmr, cmr, struct*)
Venkateswarlu, Y. *et al., J. Nat. Prod.*, 1994, **57**, 1283 (*3α-Methylaragusponginе C*)
Orabi, K.Y. *et al., J. Nat. Prod.*, 2002, **65**, 1782-1785 (*Aragusponginеs C,L*)

Aragusponginе F A-1373

[122908-11-6]



Absolute configuration

$C_{29}H_{52}N_2O_2$ 460.742
Alkaloid from an Okinawan marine sponge, *Xestospongia* sp. Exhibits vasodilatory activity. $[\alpha]_D$ +8.6 ($CHCl_3$). Work in 1998 suggested that the stereochemistries may require revision.

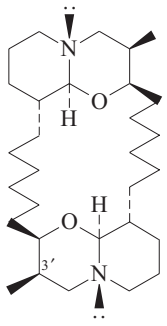
3-Epimer: ***Aragusponginе G***

[123000-04-4]
$C_{29}H_{52}N_2O_2$ 460.742
Alkaloid from *Xestospongia* sp. Shows vasodilatory activity. $[\alpha]_D$ -16 ($CHCl_3$).

Kobayashi, M. *et al., Chem. Pharm. Bull.*, 1989, **37**, 1676 (*isol, pmr, cmr, struct, abs config*)
Baldwin, J.E. *et al., J.A.C.S.*, 1998, **120**, 8559-8560 (*configs*)

Araguspongine J A-1374

[123000-05-5]



$C_{30}H_{54}N_2O_2$ 474.769
Alkaloid from an Okinawan marine sponge, *Xestospongia* sp. Exhibits vasodilatory activity. $[\alpha]_D$ -23.4 ($CHCl_3$). Work in 1998 suggested that the stereochemistries may need revision.

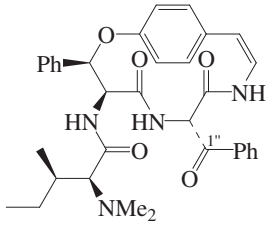
3′-Epimer: ***Araguspongine H***
[122908-12-7]
$C_{30}H_{54}N_2O_2$ 474.769
Alkaloid from *Xestospongia* sp. Shows vasodilatory activity. $[\alpha]_D$ -9 ($CHCl_3$).

3,3′,5,9-Tetraepimer: ***3R,3′R-Dimethylxestospongin C***
[203576-22-1]
$C_{30}H_{54}N_2O_2$ 474.769
Isol. from a *Xestospongia* sp.

Kobayashi, M. *et al., Chem. Pharm. Bull.*, 1989, **37**, 1676 (*isol, ir, pmr, cmr, struct, abs config*)
Reddy, M.V.R. *et al., Nat. Prod. Lett.*, 1997, **11**, 53-59 (*3,3′-Dimethylxestospongin C*)
Baldwin, J.E. *et al., J.A.C.S.*, 1998, **120**, 8559-8560 (*configs*)

Aralionine A A-1375

N-*(7-Benzoyl-5,8-dioxo-3-phenyl-2-oxa-6,9-diazabicyclo[10.2.2]hexadeca-10,12,14,15-tetraen-4-yl)-2-(dimethylamino)-3-methylpentanamide, 9CI. Aralionine*
[21761-48-8]



$C_{34}H_{38}N_4O_5$ 582.698
Major alkaloid from the leaves of *Araliorhamnus vaginatus* (Rhamnaceae). Cryst. (petrol or EtOH aq.). Mp 165-167°. $[\alpha]_D^{20}$ +82 (c, 0.2 in MeOH). λ_{max} 246 (ε 19000) (MeOH). λ_{max} 305 (ε 10600) (MeOH/KOH).

*1″-Alcohol(*R*):* ***Aralionine C***
[64309-20-2]
$C_{34}H_{40}N_4O_5$ 584.714
Alkaloid from the bark of *Araliorhamnus vaginatus* (Rhamnaceae). Needles (EtOH aq.). Mp 95-97°. $[\alpha]_D^{20}$ -17 (c, 0.015 in MeOH).

1″-Deoxo: ***Deoxoaralionine A***. *Deoxyaralionine A*
[70420-57-4]
$C_{34}H_{40}N_4O_4$ 568.714
Alkaloid from the root bark of *Ceanothus integerrimus* var. *integerrimus* and *Ceanothus integerrimus* var. *californicus* (Rhamnaceae). Mp 350°. No stereochem. indicated.

Tschesche, R. *et al., Chem. Ber.*, 1969, **102**, 50-63 (*isol, uv, cd, ir, pmr, ms, struct*)
González Sierra, M. *et al., Chem. Comm.*, 1972, 915-916 (*stereochem*)

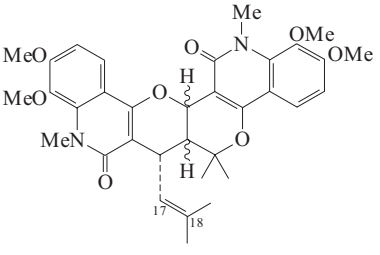
Araliopdimerine A A-1376

[119089-40-6]



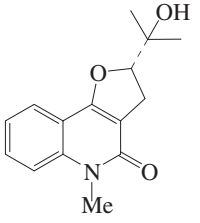
$C_{34}H_{38}N_2O_8$ 602.683
Alkaloid from the bark of *Araliopsis tabouensis* (Rutaceae). Cryst. ($CHCl_3$/hexane). Mp 259-260°. Racemic.

17,18-Dihydro, 18-hydroxy: ***Araliopdimerine B***
[119089-41-7]
$C_{34}H_{40}N_2O_9$ 620.698
Alkaloid from the bark of *Araliopsis tabouensis* (Rutaceae). Yellow granules (Et_2O). Mp 246-247°. Racemic. Authors' numbering.

Ngadjui, B.T. *et al., Phytochemistry*, 1988, **27**, 2979 (*isol, uv, ir, pmr, cmr, ms, struct*)

Araliopsine A-1377

3,5-Dihydro-2-(1-hydroxy-1-methylethyl)-5-methylfuro[3,2-c]quinolin-4(2H)-one, 9CI. Pseudoisoplatydesmine



(*S*)-*form*

$C_{15}H_{17}NO_3$ 259.304
Absolute configuration revised in 2000.

(S)-form [82226-76-4]
[60354-62-3]
Alkaloid from the root bark of *Araliopsis soyauxii* (Rutaceae). Beige cryst. ($CHCl_3$). Mp 152°. $[\alpha]_D$ +40 (c, 1 in $CHCl_3$).

(±)-form [89708-41-8]
Synthetic. Mp 141-144°.

(ξ)-form

1′-Deoxy, 1′,2′-didehydro: 3,5-Dihydro-5-methyl-2-(1-methylethenyl)furo[3,2-c]quinolin-4(2H)-one. 3,5-Dihydro-2-isopropenyl-5-methylfuro[3,2-c]quinolin-4(2H)-one. ***Almeine***
[88839-93-4]
$C_{15}H_{15}NO_2$ 241.289
Alkaloid from the stem and root barks of *Almeidea guyanensis* (Rutaceae). Noncryst.

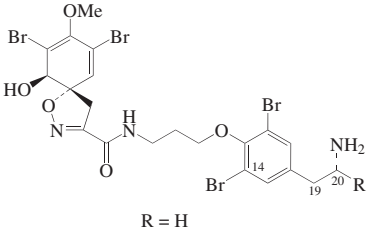
Araplysillin I A-1378

N-*[3-[4-(2-Aminoethyl)-2,6-dibromophenoxy]propyl]-7,9-dibromo-10-hydroxy-8-methoxy-1-oxa-2-azaspiro[4.5]deca-2,6,8-triene-3-carboxamide, 9CI. Hexadellin A*
[129313-98-0]



R = H

$C_{21}H_{23}Br_4N_3O_5$ 717.046
Relative configs. only known in this series. The compds. covered by this entry have not been correlated. Identity of Araplysillin I and Hexadellin A not confirmed. Isol. from the sponge *Psammaplysilla arabica*. ATPase inhibitor. Shows antimicrobial props. Amorph. Mp 140-142°. $[\alpha]_D$ -70 (c, 0.7 in MeOH).

N^{20}-Sulfo: ***Araplysillin I N^{20}-sulfamate***
[945408-71-9]
$C_{21}H_{23}Br_4N_3O_8S$ 797.11
Isol. from *Aplysina fulva*. Amorph.

solid (as Na salt). $[\alpha]_D^{23}$ +100 (c, 0.06 in MeOH) (Na salt). λ_{max} 206 (log ϵ 4.7); 278 (log ϵ 3.84) (MeOH) (Na salt).

N^{20}-*(13-Methyltetradecanoyl):* ***Araplysillin II***
[129277-05-0]
$C_{36}H_{51}Br_4N_3O_6$ 941.431
From the sponge *Psammaplysilla arabica*. ATPase inhibitor. Shows antimicrobial props. Amorph. Mp 40-42°. $[\alpha]_D$ -38 (c, 0.73 in $CHCl_3$). λ_{max} 270 (ϵ 11650) (MeOH) (Berdy).

N^{20},N^{20}-*Di-Me:* ***Purealidin P***
[167394-81-2]
$C_{23}H_{27}Br_4N_3O_5$ 745.099
Alkaloid from the Okinawan sponge *Psammaplysilla purea*. Cytotoxic against murine lymphoma and human KB carcinoma cells. Oil (as trifluoroacetate). Sol. MeOH, EtOAc; poorly sol. H_2O. $[\alpha]_D$ +6.6 (c, 0.75 in MeOH). λ_{max} 277 (ϵ 1700); 284 (ϵ 1400) (MeOH) (Berdy).

N^{20},N^{20},N^{20}-*Tri-Me:* ***Purealidin B***
[138590-55-3]
$C_{24}H_{30}Br_4N_3O_5^{\oplus}$ 760.134
Quaternary alkaloid from *Psammaplysilla purea* and *Pseudoceratina verrucosa*. Antibacterial and cytotoxic. Amorph. solid (prob. as trifluoroacetate). $[\alpha]_D^{18}$ -4.5 (c, 1.3 in MeOH). λ_{max} 220 (ϵ 10000); 284 (ϵ 1000) (MeOH) (Berdy).

14-Debromo: ***14-Debromoaraplysillin I***
[136685-29-5]
$C_{21}H_{24}Br_3N_3O_5$ 638.15
From the sponge *Psammaplysilla purpurea*. Glass. $[\alpha]_D$ +21 (c, 0.47 in MeOH/$CHCl_3$). λ_{max} 240 (ϵ 23000); 287 (ϵ 16700) (MeOH) (Berdy).

19-Hydroxy, N^{20}*-Ac:* ***Aplysinamisine III***
[150417-69-9]
$C_{23}H_{25}Br_4N_3O_7$ 775.082
Isol. from the Caribbean sponge *Aplysina cauliformis*. Semisolid. $[\alpha]_D^{26}$ +69 (c, 6.4 in MeOH). λ_{max} 218 (ϵ 14500); 282 (ϵ 5200) (MeOH) (Berdy).

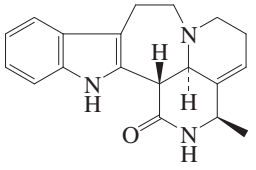
Araplysillin III A-1379

[245436-90-2]
As Araplysillin I, A-1378 with
R = COOH
$C_{22}H_{23}Br_4N_3O_7$ 761.056
Isol. from the sponge *Aiolochroia crassa*. Amorph. solid. $[\alpha]_D$ +96.3 (c, 0.19 in MeOH). λ_{max} 208 (ϵ 8100); 284 (ϵ 1200) (EtOH).

Gao, H. *et al., Tetrahedron*, 1999, **55**, 9717-9726

Arboflorine A-1380

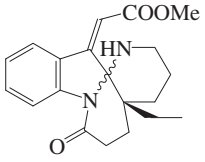


$C_{19}H_{21}N_3O$ 307.394
Modified Tubotaiwine-type alkaloid. Alkaloid from the stem bark of *Kopsia arborea*. Oil. $[\alpha]_D$ +71 (c, 0.07 in $CHCl_3$). λ_{max} 224 ; 283 ; 291 (EtOH).

Lim, K.-H. *et al., Org. Lett.*, 2006, **8**, 1733-1735 (*isol, pmr, cmr*)

Arboloscine A-1381

[926927-38-0]



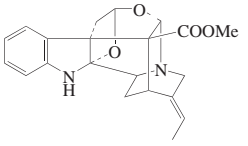
Absolute Configuration

$C_{20}H_{24}N_2O_3$ 340.421
Highly rearranged aspidosperma-type skeleton. Alkaloid from the stem bark of *Kopsia arborea*. Oil. $[\alpha]_D$ +137 (c, 0.15 in $CHCl_3$). λ_{max} 210 (log ϵ 3.83); 247 (log ϵ 4.14); 265 (log ϵ 3.99); 321 (log ϵ 3.38) (EtOH).

Lim, K.-H. *et al., Helv. Chim. Acta*, 2007, **90**, 31-35 (*isol, pmr, cmr, ms*)

Arbophylline A-1382

[917600-41-0]



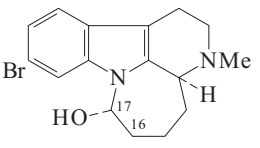
Relative Configuration

$C_{21}H_{22}N_2O_4$ 366.416
Sarpagine-related skeleton. Alkaloid from the leaves of *Kopsia arborea*. Oil. $[\alpha]_D$ +2 (c, 0.16 in $CHCl_3$). λ_{max} 210 ; 242 ; 297 (EtOH).

Lim, K.-H. *et al., Tet. Lett.*, 2006, **47**, 8653-8655 (*isol, pmr, cmr*)

Arborescidine C A-1383

[147395-94-6]



$C_{16}H_{19}BrN_2O$ 335.243
Alkaloid from the marine tunicate *Pseudodistoma arborescens*. Cryst. (MeOH). Mp 172-173°. $[\alpha]_D$ +3 (c, 1 in $CHCl_3$).

17-Epimer: ***Arborescidine D***
[147512-45-6]
$C_{16}H_{19}BrN_2O$ 335.243
Alkaloid from the marine tunicate *Pseudodistoma arborescens*. Exhibits moderate cytotoxicity *in vitro* against KB human buccal carcinoma. Amorph. solid. λ_{max} 231 (ϵ 29800); 285 (ϵ 8000) (MeOH) (Berdy).

17-Deoxy, 16,17-didehydro: ***Arborescidine B***
[147395-93-5]
$C_{16}H_{17}BrN_2$ 317.228
Alkaloid from *Pseudodistoma arborescens*. Oil. $[\alpha]_D$ +70 (c, 0.6 in $CHCl_2$).

Chbani, M. *et al., J. Nat. Prod.*, 1993, **56**, 99-104 (*isol, cd, uv, ir, pmr, cmr, ms*)

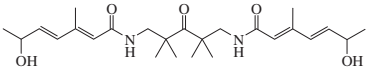
Arboreumine A-1384

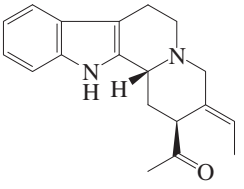


$C_{25}H_{40}N_2O_5$ 448.601
Alkaloid from the leaves of *Piper arboreum*. Antifungal agent. Amorph. solid. λ_{max} 240 (ϵ 2607) (MeOH).

Vasques da Silva, R. *et al., Phytochemistry*, 2002, **59**, 521-527 (*isol, pmr, cmr*)

Arboricine† A-1385

[929606-10-0]

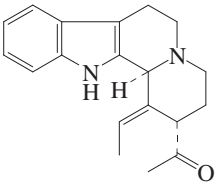


$C_{19}H_{22}N_2O$ 294.396
Alkaloid from the leaves of *Kopsia arborea*. Prisms. Mp 126-128°. $[\alpha]_D$ -110 (c, 0.14 in $CHCl_3$). λ_{max} 225 ; 282 ; 290 (EtOH).

Lim, K.-H. *et al., Tet. Lett.*, 2007, **48**, 1143-1145 (*isol, pmr, cmr*)

Arboricinine A-1386

[929606-12-2]

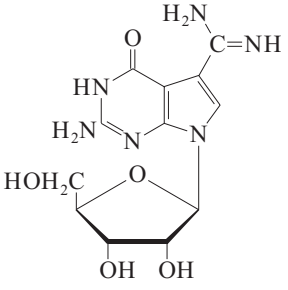


$C_{19}H_{22}N_2O$ 294.396
Alkaloid from the leaves of *Kopsia arborea*. Oil. $[\alpha]_D$ -18 (c, 0.14 in $CHCl_3$).

Lim, K.-H. *et al., Tet. Lett.*, 2007, **48**, 1143-1145 (*isol, pmr, cmr*)

Archaeosine A-1387

*2-Amino-4,7-dihydro-4-oxo-7-β-D-ribofuranosyl-1*H*-pyrrolo[2,3-*d*]pyrimidine-5-carboximidamide. 7-Formamidino-7-deazaguanosine*
[148608-52-0]

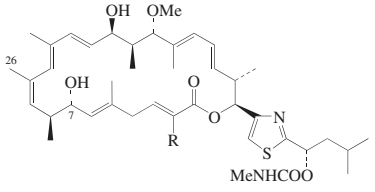


$C_{12}H_{16}N_6O_5$ 324.296
Constit. of archaeal transfer RNA.

Gregson, J.M. *et al., J. Biol. Chem.*, 1993, **268**, 10076 (*isol, synth*)

Archazolide A A-1388

[149633-98-7]



R = CH_3

$C_{42}H_{62}N_2O_7S$ 739.027
Prod. by *Archangium gephyra* and *Cystobacter violaceus*. V-ATPase inhibitor. Antifungal and antineoplastic agent. Sol. MeOH, EtOAc; poorly sol. H_2O. λ_{max} 228 (ϵ 39810) (MeOH) (Berdy).

*7-*O*-β-D-Glucopyranoside:* ***Archazolide C***
$C_{48}H_{72}N_2O_{12}S$ 901.169
Isol. from *Cystobacter violaceus* Cb vil05. Amorph. solid. $[\alpha]_D^{22}$ -33.9 (c, 6.2 in MeOH). λ_{max} 228 (log ϵ 4.6) (MeOH).

*26-Hydroxy, 7-*O*-β-D-glucopyranoside:* ***Archazolide D***
[945027-76-9]
$C_{48}H_{72}N_2O_{13}S$ 917.168
Prod. by *Cystobacter violaceus* strain Cb vi105. V-ATPase inhibitor. Amorph. solid. $[\alpha]_D^{22}$ -26.8 (c, 0.22 in MeOH). λ_{max} 231 (MeOH).

Ger. Pat., 1993, 4 142 951; *CA*, **119**, 137527 (*Archazolide A*)
Sasse, F. *et al., J. Antibiot.*, 2003, **56**, 520-525 (*Archazolide A, activity*)

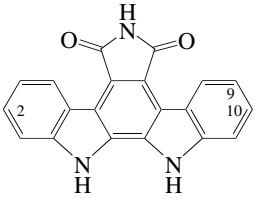
*12,13-Dihydro-5*H*-indolo[2,3-*a*]pyrrolo[3,4-*c*]carbazole-5,7(6*H*)-dione, 9CI*
[118458-54-1]



$C_{20}H_{11}N_3O_2$ 325.326
Minor pigment from the fruiting bodies of the slime mould *Arcyria denudata*. Also isol. from the tunicate *Eudistoma* sp. and from *Nocardiopsis* sp. Orange solid. Mp 360°. λ_{max} 235 (log ϵ 4.8); 257 (log ϵ 4.42); 272 (log ϵ 4.45); 281 (log ϵ 4.55); 300 (sh) (log ϵ 4.64); 314 (log ϵ 4.86); 402 (log ϵ 3.81) (MeOH).

N^{12}-β-D-Glucopyranosyl: ***Antibiotic BMY 41219****. BMY 41219. Didechloro-4′-*O*-demethylrebeccamycin*
[158204-55-8]
$C_{26}H_{21}N_3O_7$ 487.468
Prod. by *Saccharothrix aerocolonigenes*. Orange-yellow powder. Sol.

MeOH, DMSO, THF; poorly sol. H_2O. λ_{max} 236 (ϵ 29970); 284 (ϵ 17750); 316 (ϵ 37420); 404 (ϵ 3020) (MeOH).

Deoxo: see Antibiotic K 252c, A-1190

2-Hydroxy: ***Arcyriaflavin B***
[73697-64-0]
$C_{20}H_{11}N_3O_3$ 341.325
Isol. from *Arcyria denudata* and *Metatrichia vesparium*. Pale yellow. Mp 350°. λ_{max} 229 (log ϵ 4.07); 271 (log ϵ 3.7); 280 (log ϵ 3.75); 323 (log ϵ 4.11); 414 (log ϵ 3.19) (MeOH).

1,11-Dihydroxy: ***Antibiotic BE 13793C****. BE 13793C. Antibiotic J 104303. J 104303*
[133805-03-5]
$C_{20}H_{11}N_3O_4$ 357.325
Prod. by *Streptomyces mobaraensis* sp. BA-13793. Antitumour agent. Topoisomerase inhibitor. Yellow-orange powder. Sol. THF, DMSO; fairly sol. MeOH; poorly sol. H_2O. Mp 295°. λ_{max} 245 (ϵ 63500); 298 (ϵ 38100); 307 (ϵ 37400); 325 (sh) (ϵ 21900); 430 (ϵ 5600) (MeOH) (Derep).

▶ NM3457000

2,3-Dihydroxy: ***2,3-Dihydroxyarcyriaflavin A***
$C_{20}H_{11}N_3O_4$ 357.325
Isol. from *Lycogala epidendrum*. Cytotoxic. Amorph. yellow solid. λ_{max} 230 (log ϵ 10.5); 284 (log ϵ 9.8); 330 (log ϵ 10.5) (MeOH).

2,9-Dihydroxy: ***Arcyriaflavin D***
[179077-55-5]
$C_{20}H_{11}N_3O_4$ 357.325
Pigment from *Dictydiaethalium plumbeum*. Yellow cryst. powder. Mp > 300°.

2,10-Dihydroxy: ***Arcyriaflavin C***
[73697-65-1]
$C_{20}H_{11}N_3O_4$ 357.325
Isol. from *Arcyria denudata*, *Metatrichia vesparium* and *Streptosporangium vulgare* K254. Enzyme inhibitor, calmodulin antagonist, shows insecticidal props. Pale yellow. Mp 350°. λ_{max} 229 (ϵ 13800); 255 (sh) (ϵ 5890); 270 (ϵ 4570); 280 (ϵ 5010); 318 (sh) (ϵ 12300); 331 (ϵ 19500); 422 (ϵ 2190) (MeOH) (Derep).

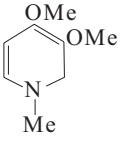
Arecolidine A-1400

1,2-Dihydro-3,4-dimethoxy-1-methylpyridine, 9CI
[57680-57-6]



$C_8H_{13}NO_2$ 155.196
Although arecolidine has been referred to in the recent lit., the struct. proposed for it, if it is a genuine alkaloid, is very poorly founded. Recent synthetic studies show that the stability of compds. decreases the closer the target struct. is approached. Minor alkaloid from *Areca catechu* (betel) nuts (Arecaceae). Needles (Et_2O or by subl.). Mp 110°.

Hydrochloride: Mp 250°.

Hydrobromide: Mp 268-271°.

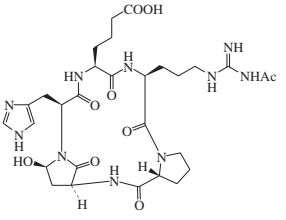
[929101-60-0]
$C_{29}H_{39}N_3O_2$ 461.646
Prod. by *Aspergillus penicilloides* and *Aspergillus restrictus*. Cryst. (MeOH). Mp 228°. $[\alpha]_D^{25}$ -36.8 (c, 0.51 in $CHCl_3$). λ_{max} 230 (log ϵ 4.62); 278 (log ϵ 3.96); 283 (log ϵ 3.96); 294 (log ϵ 3.86) (MeOH).

Itabashi, T. *et al., Chem. Pharm. Bull.*, 2006, **54**, 1639-1641 (*isol, cd, pmr, cmr*)

Argadin A-1407

Antibiotic FO 7314. FO 7314
[289665-92-5]



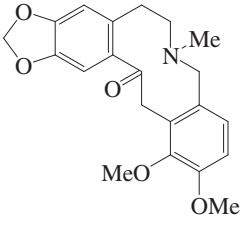
Absolute Configuration

$C_{29}H_{42}N_{10}O_9$ 674.712
Prod. by *Clonostachys* sp. FO-7314. Chitinase inhibitor. Powder. Mp 270° dec. $[\alpha]_D^{25}$ +52.1 (c, 0.1 in H_2O). λ_{max} 200 (ϵ 31400) (H_2O).

Arai, N. *et al., Chem. Pharm. Bull.*, 2000, **48**, 1442-1446 (*isol, pmr, cmr*)
Dixon, M.J. *et al., Eur. J. Org. Chem.*, 2006, 5002-5006; 5602 (*synth, stereochem*)

Argemexicaine A A-1408

[624736-05-6]

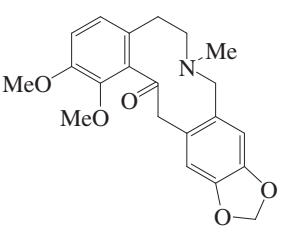


$C_{21}H_{23}NO_5$ 369.416
Alkaloid from the whole plant of *Argemone mexicana*. Cryst. (hexane). Mp 158-160°. λ_{max} 225 (log ϵ 4.35); 290 (log ϵ 4.21) (EtOH).

Chang, Y.-C. *et al., Planta Med.*, 2003, **69**, 148-152 (*isol, pmr, cmr, ms*)

Argemexicaine B A-1409

[624736-06-7]

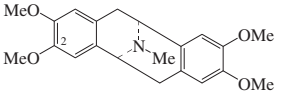


$C_{21}H_{23}NO_5$ 369.416
Alkaloid from the whole plant of *Argemone mexicana*. Powder. Mp 131-133°. λ_{max} 225 (log ϵ 4.33); 290 (log ϵ 4.04) (EtOH).

Chang, Y.-C. *et al., Planta Med.*, 2003, **69**, 148-152 (*isol, pmr, cmr, ms*)

Argemonine A-1410

*5,6,11,12-Tetrahydro-2,3,8,9-tetramethoxy-13-methyldibenzo[*a,e*]cyclooct-en-5,11-imine, 9CI. 2,3,8,9-Tetramethoxypavinane.* N-*Methylpavine*



(-)-*form*

$C_{21}H_{25}NO_4$ 355.433

(+)-*form* [16584-62-6]
Alkaloid from *Leontice smirnovii*, also obt. by resoln. (Leonticaceae). Shows weak *in vitro* antimicrobial activity against *Mycobactericum smegmatis*. Cryst. ($CHCl_3$). Mp 152-153°. $[\alpha]_D$ +218 (c, 2.11 in EtOH).

(-)-*form* [6901-16-2]
Alkaloid from *Argemone gracilenta*, other *Argemone* spp., *Berberis buxifolia, Thalictrum revolutum* and *Thalictrum strictum* (Papaveraceae, Berberidaceae, Ranunculaceae). Mp 155.5-156.5° (147-148°). $[\alpha]_D^{24}$ -214.22 (c, 1.01 in EtOH). $[\alpha]_D^{20}$ -222 (c, 0.1 in $CHCl_3$). Forms a hydrate Mp 125-135°. λ_{max} 230 (sh) (log ϵ 4.15); 276 (sh) (log ϵ 3.79); 282 (log ϵ 3.91); 287 (log ϵ 3.93); 292 (log ϵ 3.89) (95% EtOH).

N-*Oxide:* ***(-)-Argemonine* N-*oxide***
[18841-61-7]
$C_{21}H_{25}NO_5$ 371.432
Alkaloid from the above-ground parts of *Argemone gracilenta* (Papaveraceae). Glass + $1H_2O$ + $0.5CHCl_3$. Mp 140-160° dec. (efferv.). $[\alpha]_D^{25}$ -185 (c, 2.81 in $CHCl_3$).

N-*Me:* ***(-)-Argemonine* N-*methosalt***
[55056-96-7]
[18826-69-2]
$C_{22}H_{28}NO_4^{\oplus}$ 370.467
Quaternary alkaloid from above-ground parts of *Argemone gracilenta*, the roots and aerial parts of *Argemone platyceras* and the fruits of *Thalictrum revolutum* (Papaveraceae, Ranunculaceae). Needles (MeOH) (as iodide). Mp 272-274° (iodide). $[\alpha]_D^{25}$ -200 (c, 0.14 in MeOH). CAS no. refers to iodide.

O^2-*De-Me: 2-Hydroxy-3,8,9-trimethoxypavinane.* ***Norargemonine***
[5876-16-4]
$C_{20}H_{23}NO_4$ 341.406
Alkaloid from *Argemone brevicornuta, Argemone hispida, Argemone platyceras, Argemone munita* var. *rotundata, Eschscholtzia californica, Eschscholtzia glauca, Eschscholtzia douglasii, Berberis buxifolia, Thalictrum dasycarpum* and *Cryptocarya longifolia* (Papaveraceae, Berberidaceae, Ranunculaceae, Lauraceae). Cryst. ($CHCl_3$, $CHCl_3$/MeOH, C_6H_6/$CHCl_3$ or MeOH aq.). Mp 255-256° dec. (241-242°, 244-250°). $[\alpha]_D$ -154 (c, 2.79 in $CHCl_3$) (-147). λ_{max} 230 (sh) (log ϵ 4.12); 278 (sh) (log ϵ 3.81); 283 (log ϵ 3.92); 287 (log ϵ 3.93); 293 (log ϵ 3.92) (95% EtOH).

O^3-*De-Me: 3-Hydroxy-2,8,9-trimethoxypavinane.* ***Isonorargemonine***
[18826-67-0]
$C_{20}H_{23}NO_4$ 341.406
Alkaloid from *Argemone munita* var. *argentea*, the above-ground parts of *Argemone gracilenta*, and the tops of *Thalictrum revolutum* (Papaveraceae, Ranunculaceae). Cryst. + $1H_2O$ (MeOH aq.). Mp 219-221°. $[\alpha]_D^{25}$ -202 (c, 3.31 in $CHCl_3$). λ_{max} 287 (log ϵ 3.96) (MeOH).

O^2,O^9-*Di-de-Me: 2,9-Dihydroxy-3,8-dimethoxypavinane.* ***Bisnorargemonine***. *Rotundine*†
[6808-63-5]
$C_{19}H_{21}NO_4$ 327.379
Alkaloid from *Argemone hispida*, *Argemone munita* var. *rotundata*, *Thalictrum dasycarpum, Eschscholtzia californica, Eschscholtzia douglasii* and *Eschscholtzia glauca*, and *Cryptocarya longifolia* (Papaveraceae, Ranunculaceae, Lauraceae). Cryst. (MeOH or EtOH). Mp 254-255° (244-246°). $[\alpha]_D^{20}$ -244 (c, 0.19 in $CHCl_3$). $[\alpha]_D^{25}$ -265.8 (c, 0.158 in MeOH). λ_{max} 230 (sh) (log ϵ 4.07); 279 (sh) (log ϵ 3.83); 285 (log ϵ 3.92); 288 (log ϵ 3.93); 294 (log ϵ 3.89) (95% EtOH).

(±)-*form* [5531-95-3]
Synthetic. Cryst. (Et_2O/CH_2Cl_2). Mp 138-140°.

O^2-*De-Me:* [5876-37-9]
Synthetic. Needles (EtOH or EtOH aq.). Mp 222-223° (218-220°).

O^3-*De-Me:* [5876-50-6]
Synthetic. Plates (heptane). Mp 175-177°.

O^2,O^9-*Di-de-Me:* [29944-24-9]
Synthetic. Cryst. ($CHCl_3$ or butyronitrile). Mp 233.5-235° (226-227°).

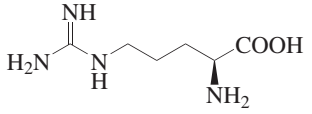
Arginine, INN, USAN A-1413

2-Amino-5-[(aminoiminomethyl)amino]-pentanoic acid. 2-Amino-5-guanidinovaleric acid. Arg
[7004-12-8]



(*S*)-*form*

$C_6H_{14}N_4O_2$ 174.202
Basic genetically coded amino acid. Essential amino acid for human development. Precursor of nitric oxide and is synth. by the body from 2,5-Diaminopentanoic acid. Diuretic agent. Growth hormone releaser. Immune stimulating agent and wound healing agent. Acidifying agent. Dietary supplement. Ammonia detoxicant (hepatic failure). Diagnostic aid for pituitary function. Log P -4.79 (calc).

(*S*)-*form*
L-*form*. L-*Arginine*. *FEMA 3819*
[74-79-3]
Found in seeds/shoots of pine, fir, acacia, arachis etc. and in many proteins. Reagent for the fluorimetric anal. of reducing sugars by hplc. Diagnostic aid (pituitary function determination); ammonia detoxicant; dietary supplement, nutrient. Plates or prisms + $2H_2O$ (H_2O), plates (EtOH). Sol. H_2O (15.0g/100g at 21°). Mp 207° Mp 244° dec. (anhyd. 105°). $[\alpha]_D$ +21.8 (H_2O). $[\alpha]_D^{25}$ +48.1 (c, 1 in 5*M* HCl). pK_{a1} 2.17; pK_{a2} 9.04; pK_{a3} 12.48 (guanido). Isoelectric point 10.76. Bitter taste. *N*-Protected derivs. useful in peptide synth. have been listed alphabetically elsewhere.

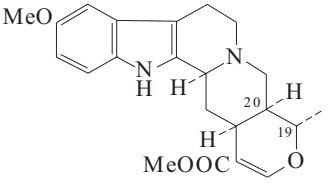
Aricine A-1423

Heterophylline†. *Cinchovatine*
[482-91-7]



$C_{22}H_{26}N_2O_4$ 382.458

Alkaloid from several *Cabucala*, *Ochrosia*, *Rauwolfia* and *Aspidosperma* spp., also from *Cinchona ledgeriana* and *Cinchona pelleteriana* (Apocynaceae, Rubiaceae). Cryst. (EtOH aq.). Mp 190° dec. $[\alpha]_D^{20}$ -91 (c, 1.4 in $CHCl_3$). $[\alpha]_D^{20}$ -63 (c, 1.5 in Py). $[\alpha]_D^{20}$ -57 (c, 1.0 in EtOH). λ_{max} 227 (log ϵ 4.54); 250 (log ϵ 4.05); 279 (log ϵ 3.98); 298 (sh) (log ϵ 3.88) (EtOH or MeOH).

Hydrochloride:
Plates (MeOH/Me_2CO). Mp 254°. $[\alpha]_D^{20}$ -5 (c, 0.9 in 50% EtOH aq.).

Hydrobromide:
Needles (MeOH). Mp 262-263° dec.

20-Epimer: ***Cabucine****. 10-Methoxyajmalicine*
[16812-97-8]
$C_{22}H_{26}N_2O_4$ 382.458
Alkaloid from *Cabucala madagascariensis, Cabucala erythrocarpa, Cabucala fasciculata, Cabucala striolata, Cabucala torulosa* and *Cabucala cryptophlebia* (Apocynaceae). Mp 125°. $[\alpha]_D$ -60 ($CHCl_3$).

19,20-Diepimer: ***Raumitorine***
[549-74-6]
$C_{22}H_{26}N_2O_4$ 382.458
Alkaloid from *Rauwolfia vomitoria* (Apocynaceae). Needles (MeOH). Mp 138°. $[\alpha]_D^{20}$ +60 (c, 0.54 in $CHCl_3$).

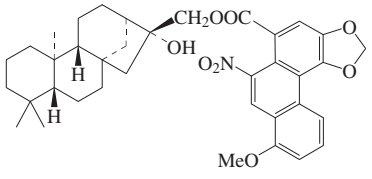
Aristoloin I A-1435

[611211-57-5]



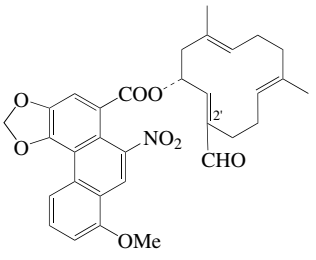
$C_{37}H_{43}NO_8$ 629.749
Ester of 8-Methoxy-3,4-methylenedioxy-10-nitro-1-phenanthrenecarboxylic acid, M-262 with 16,17-Kauranediol. Alkaloid from the tubercula of *Aristolochia pubescens.* Amorph. yellow solid. $[\alpha]_D^{25}$ -42.1 (c, 0.2 in $CHCl_3$). λ_{max} 223 (log ϵ 4.42); 256 (log ϵ 4.24); 289 (log ϵ 4.06); 316 (log ϵ 3.86); 389 (log ϵ 3.68) (MeOH).

Demethoxy: ***Aristoloin II***
[611211-59-7]
$C_{36}H_{41}NO_7$ 599.722
Alkaloid from the tubercula of *Aristolochia pubescens.* Amorph. yellow solid. $[\alpha]_D^{25}$ -53.4 (c, 0.16 in $CHCl_3$). λ_{max} 219 (log ϵ 4.28); 250 (log ϵ 4.19); 314 (log ϵ 3.8); 387 (log ϵ 3.5) (MeOH).

Nascimento, I.R. *et al., Phytochemistry*, 2003, **63**, 953-957 (*isol, pmr, cmr*)

Aristoloterpenate I A-1436

[184955-22-4]



$C_{32}H_{31}NO_8$ 557.599
Constit. of *Aristolochia mollissima* and *Aristolochia heterophylla*. Yellow needles (Me_2CO). Mp 247-249°. $[\alpha]_D$ -39.5 (c, 0.02 in $CHCl_3$). Ester of 8-Methoxy-3,4-methylenedioxy-10-nitro-1-phenanthrenecarboxylic acid, M-262. Abs. config. revised in 1999. λ_{max} 226 (log ϵ 4.5); 239 (log ϵ 4.4); 250 (log ϵ 4.36); 268 (log ϵ 4.21); 287 (log ϵ 3.98); 322 (log ϵ 3.99); 393 (log ϵ 3.76) (MeOH). λ_{max} 226 ; 239 ; 250 ; 268 ; 287 ; 322 ; 393 (MeOH) (Berdy).

*2′*E*-Isomer:* ***Aristoloterpenate III***
[222412-32-0]
$C_{32}H_{31}NO_8$ 557.599
Constit. of *Aristolochia heterophylla*. Yellow needles (Me_2CO). Mp 245-247°. $[\alpha]_D$ -86 (c, 0.038 in $CHCl_3$). λ_{max} 225 (log ϵ 4.31); 251 (log ϵ 4.31); 267 (log ϵ 4.18); 284 (log ϵ 3.98); 321 (log ϵ 3.96); 391 (log ϵ 3.74) (MeOH).

8-Demethoxy: ***Aristoloterpenate II***
[222403-62-5]
$C_{31}H_{29}NO_7$ 527.573
Constit. of *Aristolochia heterophylla*. Yellow needles (Me_2CO). Mp 241-243°. $[\alpha]_D$ -35.4 (c, 0.016 in $CHCl_3$). Ester of 3,4-Methylenedioxy-10-nitro-1-phenanthrenecarboxylic acid, M-447. λ_{max} 226 (log ϵ 4.57); 241 (log ϵ 4.46); 250 (log ϵ 4.41); 267 (log ϵ 4.27); 283 (log ϵ 4.08); 321 (log ϵ 4.05); 392 (log ϵ 3.82) (MeOH).

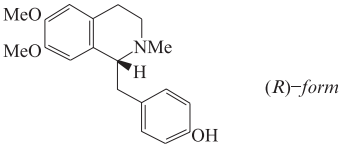
Armepavine A-1444

4-[(1,2,3,4-Tetrahydro-6,7-dimethoxy-2-methyl-1-isoquinolinyl)methyl]phenol, 9CI. 1,2,3,4-Tetrahydro-1-(4-hydroxybenzyl)-6,7-dimethoxyisoquinoline. Evoeuropine



(*R*)–*form*

$C_{19}H_{23}NO_3$ 313.396

(*R*)-*form* [524-20-9]
Alkaloid from *Papaver armeniacum* and many other spp. in several different families (Papaveraceae). Convulsive and irritant agent. Shows no spasmolytic, parasympatholytic or anaesthetic props. Produces cardiac irregularity. Mp 148-149° (138-148°). $[\alpha]_D^{18}$ -109 ($CHCl_3$).

Hydrochloride: Mp 151-152°.

Me ether: ***(-)-O-Methylarmepavine***
[5701-00-8]
$C_{20}H_{25}NO_3$ 327.422
Alkaloid from *Discaria serratifolia, Xylopia pancheri* and *Aconitum leucostomum* (Rhamnaceae, Annonaceae, Ranunculaceae). Cryst. (petrol). Mp 65°. $[\alpha]_D^{20}$ -81 (c, 1.2 in $CHCl_3$).

Me ether, N-*oxide:* **N-*Methylarmepavine* N-*oxide***
$C_{20}H_{25}NO_4$ 343.422
Alkaloid from *Xylopia pancheri* (Annonaceae). Cryst. (Me_2CO). Mp 170-172°. $[\alpha]_D$ -7.9 (EtOH).

N-*De-Me:* ***Norarmepavine***. N-*Demethylarmepavine*. N-*Desmethylarmepavine*
$C_{18}H_{21}NO_3$ 299.369
Alkaloid from the wood of *Magnolia kachirachirai*. Mp 157-158°. $[\alpha]_D^{22}$ +31.5.

(*S*)-*form*
From reductive cleavage of dimeric isoquinoline alkaloids, e.g. Stepinonine. Mp 149-150°. $[\alpha]_D^{20}$ +118 ($CHCl_3$).

Me ether: ***(+)-O-Methylarmepavine***
[3423-02-7]
$C_{20}H_{25}NO_3$ 327.422
Alkaloid from *Annona squamosa* (sugar apple) and *Magnolia acuminata* (Annonaceae, Magnoliaceae). Cryst. (petrol). Mp 60-62°. $[\alpha]_D^{20}$ +85.

Me ether, hydrochloride:
Cryst. ($CHCl_3$/petrol). Mp 198-199°.

O,N-*Di-Me:* ***Zanoxyline***
[73529-17-6]
$C_{21}H_{28}NO_3$ 342.457
Quaternary alkaloid from the stem bark of *Zanthoxylum oxyphyllum*. Mp 128° (as iodide) (nat.) Mp 135-137° (sinters at 128°) (iodide) (synthetic). $[\alpha]_D^{20}$ +66.3 (MeOH) (hydroxide) (nat.). $[\alpha]_D^{24}$ +91.7 (c, 0.193 in MeOH) (iodide) (synthetic). No abs. config. was assigned to the natural alkaloid but from the reported opt. rotation it is clearly *S*-.

N-*De-Me:* Alkaloid from leaves and stems of *Nelumbo lutea* and wood of *Machilus kusanoi*. Weak mydriatic and local anaesthetic. Cryst. (Me_2CO). Mp 152-153°. $[\alpha]_D^{25}$ -23 (c, 1.33 in $CHCl_3$).

N-*De-Me, hydrochloride:*
Cryst. (MeOH). Mp 159-162°.

(±)-*form*
Synthetic. Mp 166°.

Me ether: [1934-93-6]
Synthetic. Prismatic needles (Et_2O). Mp 92° (62.5-63°).

O,N-*Di-Me:*
Small yellow prisms (MeOH)(as iodide). Mp 135-136° (iodide).

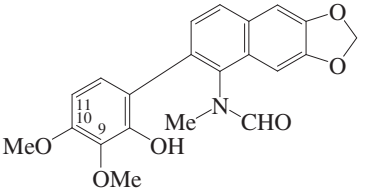
Arnottianamide A-1446

N-*[6-(2-Hydroxy-3,4-dimethoxyphenyl)-naphtho[2,3-*d*]-1,3-dioxol-5-yl]*-N-*methylformamide, 9CI*
[60394-88-9]



$C_{21}H_{19}NO_6$ 381.384
A secobenzo[*c*]phenanthridine alkaloid. Alkaloid from the bark of *Zanthoxylum (Zanthoxylum, Fagara) arnottianum, Zanthoxylum cuspidatum* and *Zanthoxylum ailanthoides*, the root wood of *Zanthoxylum integrifoliolum*, the roots of *Toddalia asiatica*, and *Zanthoxylum bungeanum*, and the root bar. Cryst. (EtOAc/MeOH or $CHCl_3$/MeOH). Mp 271-273° (264-267°, 267-269°).

Ac: Mp 237°.

O^{10}-*De-Me:* ***Iwamide***
[61774-74-1]
$C_{20}H_{17}NO_6$ 367.357
Minor alkaloid from the bark of *Zanthoxylum arnottianum* (Rutaceae). Prisms ($CHCl_3$/MeOH). Mp 271-273° (267-268.5°).

9-Demethoxy, 11-methoxy: ***Isoarnottianamide***
[60394-91-4]
$C_{21}H_{19}NO_6$ 381.384
Alkaloid from the bark of *Zanthoxylum cuspidatum* (Rutaceae). Cryst. ($CHCl_3$). Mp 254-257° dec.

9-Demethoxy, 11-methoxy, O^{10}*-de-Me,* O^{8}*-Me:* ***Turraeanthine A***
$C_{21}H_{19}NO_6$ 381.384
Alkaloid from the stem bark of *Turraeanthus africanus*. Brown cryst. (Me_2CO). Mp 237-239°. λ_{max} 237 (log ϵ 4.73); 291 (log ϵ 4); 332 (log ϵ 3.85)

(MeOH).

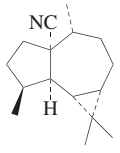
Aromadendrane 1-isonitrile A-1447

1-Isocyanoaromadendrane



(1α,4β,5α,6β,7β,10α)-*form*

$C_{16}H_{25}N$ 231.38

(1α,4β,5α,6β,7β,10α)-*form*

Isothiocyanate:
$C_{16}H_{25}NS$ 263.446
Constit. of *Axinyssa aplysinoides*. Oil. $[\alpha]_D$ +128 (c, 0.24 in $CHCl_3$). Has -NCS replacing -NC.

(1β,4β,5α,6β,7β,10β)-*form* [112757-34-3]
Metab. of marine sponge *Acanthella acuta*. Ichthyotoxin, spongicide. Cryst. Sol. MeOH, C_6H_6; fairly sol. hexane; poorly sol. H_2O. Mp 65-66°. $[\alpha]_D$ -13.7 (c, 1.4 in $CHCl_3$).

Isothiocyanate: ***Aromadendrane 1-isothiocyanate****. 1-Isothiocyanatoaromadendrane*
[112767-01-8]
$C_{16}H_{25}NS$ 263.446
Metab. of *Acanthella acuta*. Oil. $[\alpha]_D$ -32.8 (c, 0.7 in $CHCl_3$).

Formamide: ***1-Formamidoaromadendrane***
[126609-93-6]
$C_{16}H_{27}NO$ 249.395
Constit. of *Hexabranchus sanguineus*. Oil. $[\alpha]_D^{20}$ +16.7 (c, 1 in $CHCl_3$). Has -NHCHO replacing -NC.

Mayol, L. *et al., Tetrahedron*, 1987, **43**, 5381-5388 (*Acanthella acuta constits*)
He, H.-Y. *et al., J.O.C.*, 1992, **57**, 3191-3194 (*Axinyssa aplysinoides constit*)

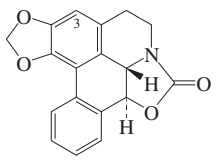
Artabonatine A A-1448

[247244-62-8]



Relative Configuration

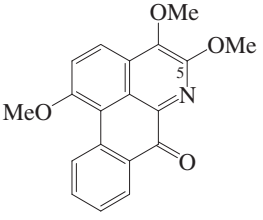
$C_{18}H_{13}NO_4$ 307.305
Alkaloid from fresh unripe fruit of *Artabotrys uncinatus*. Amorph. powder. $[\alpha]_D^{24}$ -102.7 (c, 0.4 in $CHCl_3$). λ_{max} 205 (log ϵ 4.11); 275 (log ϵ 3.94); 325 (log ϵ 3.76) (EtOH).

3-Methoxy: ***Artabonatine E***
[368422-66-6]
$C_{19}H_{15}NO_5$ 337.331
Alkaloid from *Artabotrys uncinata*. Amorph. powder. $[\alpha]_D^{24}$ -116.7 (c, 0.8 in $CHCl_3$). λ_{max} 250 (log ϵ 3.94); 280 (log ϵ 3.76); 325 (log ϵ 2.64) (EtOH).

Hsieh, T.-J. *et al., J. Nat. Prod.*, 1999, **62**, 1192-1193; 2001, **64**, 1157-1161 (*isol, uv, ir, pmr, cmr, ms*)

Artabonatine C A-1449

*1,4,5-Trimethoxy-7*H*-dibenzo[*de,g*]quinolin-7-one, 9CI*
[368422-64-4]



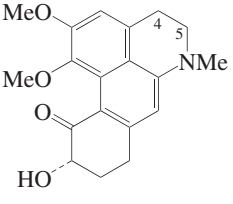
$C_{19}H_{15}NO_4$ 321.332
Alkaloid from *Artabotrys uncinata*. Green amorph. powder. λ_{max} 268 (log ϵ 3.34); 436 (log ϵ 3.42); 592 (log ϵ 4.62) (EtOH).

O^5*-De-Me:* ***Artabonatine D***
[368422-65-5]
$C_{18}H_{13}NO_4$ 307.305
Constit. of *Artabotrys uncinata*. Red amorph. powder. λ_{max} 204 (log ϵ 3.04); 280 (log ϵ 3.71); 506 (log ϵ 4.52) (EtOH).

Hsieh, T.-J. *et al., J. Nat. Prod.*, 2001, **64**, 1157-1161

Artacinatine A-1450

[123131-49-7]



$C_{19}H_{21}NO_4$ 327.379
Unusual reduced aporphine. Alkaloid from the stem parts of *Artabotrys uncinatus* (Annonaceae). Greenish prisms ($CHCl_3$/Me_2CO). Mp 160-162°. $[\alpha]_D^{24}$ 0 (c, 0.1 in MeOH). λ_{max} 214 (log ϵ 5.03); 261 (log ϵ 4.92); 290 (sh) (log ϵ 4.55); 344 (sh) (log ϵ 4.43); 382 (log ϵ 4.79) (no solvent reported).

4,5-Dioxo: ***4,5-Dioxoartacinatine***
[1001858-73-6]
$C_{19}H_{17}NO_6$ 355.346
Alkaloid from the stems of *Artabotrys uncinatus*. Yellow needles. Mp 167-169°. $[\alpha]_D$ +52.2 (c, 0.03 in MeOH). λ_{max} 230 ; 252 ; 282 ; 345 ; 355 ; 396 (no solvent reported).

Wu, Y.-C. *et al., Phytochemistry*, 1989, **28**, 2191-2195 (*Artacinatine, isol, uv, ir, pmr, cmr, ms, cryst struct*)
Lan, Y.-H. *et al., Chem. Pharm. Bull.*, 2007, **55**, 1597-1599 (*pmr, cmr, 4,5-Dioxoartacinatine*)

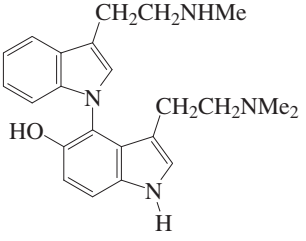
Arthrobactin A-1451

Terregens factor
[39007-57-3]
$[AcN(OH)(CH_2)_5NHCOCH_2]_2C(OH)$-COOH
$C_{20}H_{36}N_4O_9$ 476.526
Growth factor from *Arthrobacter pascens*. Microbial iron chelator. Powder. Sol. H_2O; poorly sol. $CHCl_3$, hexane. λ_{max} 405 (ϵ 1590) (pH 7.6 buffer) (Berdy). λ_{max} 477 (ϵ 940) (HCl) (Berdy).

Linke, W.D. *et al., Arch. Microbiol.*, 1972, **85**, 44
Lee, B.H. *et al., J.O.C.*, 1983, **48**, 24 (*synth*)

Arundamine A-1452

[475977-53-8]



$C_{23}H_{28}N_4O$ 376.5
Alkaloid from the roots of *Arundo donax*. Cryst. + $1H_2O$ (EtOH). Mp 104-105°.

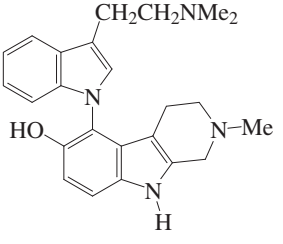
N′*-Ac:* ***Arundacine***
$C_{25}H_{30}N_4O_2$ 418.538
Alkaloid from the roots of *Arundo donax*. Cryst. (Me_2CO). Mp 192-193°.

N′*-Me:* ***Arundanine***
[618852-71-4]
$C_{24}H_{30}N_4O$ 390.527
Constit. of the roots of *Arundo donax*. Cryst. ($CHCl_3$/hexane). Mp 198-199°. λ_{max} 223 (log ϵ 4.65); 284 (log ϵ 4.07) (EtOH).

Zhalolov, I.Z. *et al., Chem. Nat. Compd. (Engl. Transl.)*, 2002, **38**, 83-86; 276-279; 280-283 (*isol, pmr, cmr, cryst struct*)
Khuzhaev, V.U. *et al., Russ. Chem. Bull. (Engl. Transl.)*, 2003, **52**, 745-747 (*Arundanine*)

Arundarine A-1453

[844830-22-4]



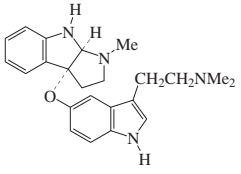
$C_{24}H_{28}N_4O$ 388.511

Alkaloid from the roots of *Arundo donax*. Cryst. Poorly sol. $CHCl_3$, MeOH, Me_2CO. Mp 250-252°.

Khuzhaev, V.U. *et al., Russ. Chem. Bull. (Engl. Transl.)*, 2004, **53**, 1765-1767 (*isol, pmr, cmr*)

Arundinine **A-1454**

[246856-96-2]

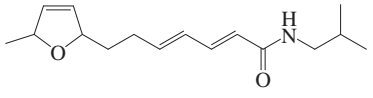


Absolute Configuration

$C_{23}H_{28}N_4O$ 376.5
Alkaloid from *Arundo donax*. Mp 148-150°.

Zhalolov, I. *et al., Chem. Nat. Compd. (Engl. Transl.)*, 1998, **34**, 706-710 (*isol, cryst struct*)

Asaramide **A-1455**

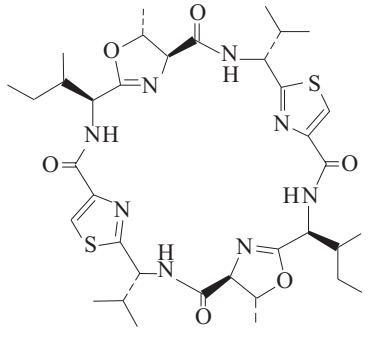


$C_{16}H_{25}NO_2$ 263.379
Alkaloid from *Asiasarum sieboldii*. Amorph. solid. λ_{max} 244 (ε 24145); 264 (ε 23710) (MeOH).

Opitz, M. *et al., Pharmazie*, 1999, **54**, 218-223

Ascidiacyclamide **A-1456**

[86701-12-4]



$C_{36}H_{52}N_8O_6S_2$ 756.989
Cyclic peptide antibiotic. Prod. by an unidentified ascidian. Cytotoxic. Active against PV_4 cultured cells transformed with Polyoma virus. Prisms (C_6H_6). Sol. Me_2CO, $CHCl_3$; poorly sol. H_2O. Mp 245-246° (139-139.5°). $[\alpha]_D^{25}$ +164 (c, 0.466 in $CHCl_3$). λ_{max} 232 (ε 21000) (MeOH) (Derep).

Hamamoto, Y. *et al., Chem. Comm.*, 1983, 323-324 (*struct, pmr, cmr*)

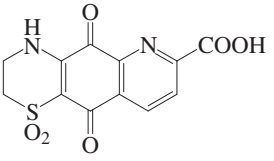
Ascidiathiazone A **A-1457**

[880137-41-7]

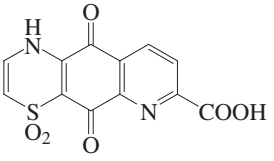


$C_{12}H_8N_2O_6S$ 308.271
Isol. from *Aplidium* sp. Antiinflammatory agent. Yellow powder. Mp 155° dec. λ_{max} 216 (log ε 4.37); 236 (log ε 4.46); 268 (log ε 4.21); 416 (log ε 3.4) (MeOH). λ_{max} 205 (log ε 4.43); 237 (log ε 4.55); 274 (log ε 4.18); 421 (log ε 3.56) (MeOH/trifluoroacetic acid). λ_{max} 211 (log ε 5.07); 236 (log ε 4.52); 329 (log ε 3.97); 467 (log ε 3.59) (MeOH/KOH).

Pearce, A.N. *et al., J. Nat. Prod.*, 2007, **70**, 936-940 (*isol, synth, uv, pmr, cmr*)

Ascidiathiazone B **A-1458**

[880137-42-8]

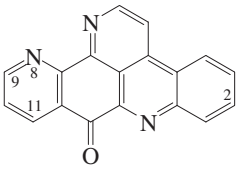


$C_{12}H_6N_2O_6S$ 306.255
Isol. from *Aplidium* sp. Pink powder. Mp 280° dec. λ_{max} 214 (log ε 4.5); 237 (log ε 4.02); 269 (log ε 3.91); 417 (log ε 3.11) (MeOH/trifluoroacetic acid). λ_{max} 207 (log ε 4.95); 237 (log ε 4.04); 279 (log ε 3.81); 311 (log ε 3.62); 472 (log ε 3.29) (MeOH/KOH).

Pearce, A.N. *et al., J. Nat. Prod.*, 2007, **70**, 936-940 (*isol, uv, pmr, cmr*)

Ascididemin **A-1459**

*9*H-*Quino[4,3,2*-de*][1,10]phenanthrolin-9-one, 9CI. Leptoclinidinone. Ascididemnin*
[114622-04-7]



$C_{18}H_9N_3O$ 283.289
CAS numbering shown. Other systems have been used. The name Ascididemnin found in the lit. appears to be an error. Alkaloid from the Okinawan tunicate *Didemnum* sp., *Cystodytes delle chiajei*, *Didemnum rubeum* and the Seychelles tunicate *Eudistoma* sp. Exhibits potent antineoplastic activity. Ca release agent. DNA intercalator and cleavage agent. Yellow solid. Sol. MeOH, EtOAc. Mp 300°. λ_{max} 220 (ε 49500); 248 (ε 48000); 273 (sh) (ε 27500); 298 (ε 17000); 308 (ε 15700); 340 (sh) (ε 11300); 377 (ε 13600) (MeOH) (Derep). λ_{max} 220 ; 247 ; 270 ; 308 ; 340 ; 375 (EtOH) (Berdy).

10-Hydroxy: ***11-Hydroxyascididemin***. *Cystodamine*
[129741-41-9]
[158761-11-6]
$C_{18}H_9N_3O_2$ 299.288
Alkaloid from the ascidian *Leptoclinides* sp. and *Cystodytes delle chiajei*. Cytotoxic agent. Yellow amorph. solid. Mp 250°. Struct. of Cystodamine revised in 2000. λ_{max} 203 (ε 25000); 227 (ε 38000); 275 (ε 18000); 285 (ε 17000); 370 (ε 11000) (MeOH) (Derep).

10-Hydroxy, 12,13-dihydro: ***8,9-Dihydro-11-hydroxyascididemin***
[151392-04-0]
$C_{18}H_{11}N_3O_2$ 301.304
Alkaloid from the Okinawan marine sponge *Biemna* sp. Cytotoxic agent. Yellow amorph. powder. Mp 300°. λ_{max} 218 (ε 17000); 273 (ε 9300); 319 (ε 6700); 355 (ε 5300) (MeOH) (Berdy).

6-Bromo: ***2-Bromoleptoclinidinone***
[109802-17-7]
$C_{18}H_8BrN_3O$ 362.185
Alkaloid from an ascidian, prob. *Leptoclinides* sp. Toxic to lymphocytic leukaemia cells *in vitro*. Protein phosphatase inhibitor. Yellow powder ($CHCl_3$/MeOH). Sol. MeOH, $CHCl_3$; poorly sol. H_2O. Mp 300°. Revised struct. λ_{max} 227 (ε 152000); 247 (ε 27800); 254 (sh) (ε 27300); 278 (ε 32000); 298 (ε 30600); 335 (ε 18500); 371 (ε 21000) (EtOH) (Derep).

5-Hydroxy: Neocalliactine
[143370-24-5]
Obt. from Calliactine, C-34 by treatment with dil. acid. Cryst. (CH_2Cl_2/Et_2O)(as Ac). Mp 280-290° (Ac).

Bloor, S.J. *et al., J.A.C.S.*, 1987, **109**, 6134-6136 (*2-Bromoleptoclinidinone*)

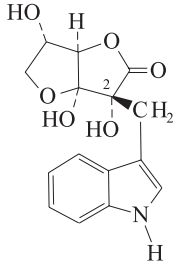
Ascorbigen A-1461

*2-*C*-(1*H*-Indol-3-ylmethyl)-3-hexulofuranosonic acid γ-lactone, 9CI*
[8075-98-7]



(2*R*)*–form*

$C_{15}H_{15}NO_6$ 305.287
Present in plants, esp. cabbage and other crucifers. Bound form of Ascorbic acid.

(2R)-form
*β-L-*xylo*-form.* ***Ascorbigen B***
[26548-49-2]
Light yellow amorph. powder. Mp 70° (sinters). $[\alpha]_D^{25}$ +12.5 (c, 1.0 in MeOH).

(2S)-form
*β-L-*xylo*-form.* ***Ascorbigen A***
[26676-89-1]
Amorph. powder. Mp *ca.* 65° (sinters). $[\alpha]_D^{25}$ +11 (c, 2.0 in EtOH).

[29400-26-8]

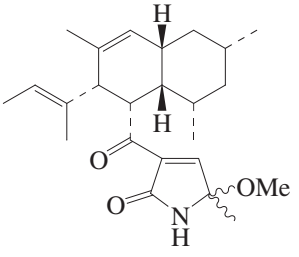
Ascosalipyrrolidinone B A-1462

[303052-08-6]



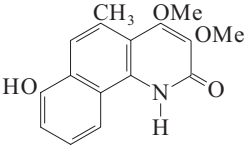
$C_{24}H_{35}NO_3$ 385.545
Prod. by the marine fungus *Ascochyta salicorniae*. Powder. Racemic. Related to Oteromycin, O-134. λ_{max} 207 (log ϵ 4.38); 225 (log ϵ 4.08); 273 (log ϵ 3.24) (EtOH).

O*-De-Me,* O*-butyl:* ***Ascosalipyrrolidinone A***
[303052-07-5]
$C_{27}H_{41}NO_3$ 427.626
Prod. by *Ascochyta salicorniae*. Antiplasmodial and antimicrobial agent. Inhibitor of tyrosine kinase. Amorph. powder. $[\alpha]_D^{20}$ -51.3 (c, 0.16 in EtOH). λ_{max} 211 (log ϵ 4.1); 225 (sh) (log ϵ 3.89); 267 (log ϵ 3.08) (EtOH).

Osterhage, C. *et al., J.O.C.*, 2000, **65**, 6412-6417 (*Ascosalipyrrolidinones A,B*)

Asimicilone A-1463

*7-Hydroxy-3,4-dimethoxy-5-methylbenzo[*h*]quinolin-2(1*H*)-one, 9CI*
[145701-06-0]



$C_{16}H_{15}NO_4$ 285.299
Alkaloid from twigs of *Asimina parviflora* (Annonaceae). Toxic to brine shrimp. Mp 191° (with dec. at 151°). λ_{max} 242 (ϵ 50100); 282 (ϵ 61700); 293 (ϵ 61700); 331 (ϵ 15500); 348 (ϵ 12900) (EtOH) (Derep). λ_{max} 242 (ϵ 50120); 282 (ϵ 61660); 293 (ϵ 61660); 331 (ϵ 15500); 348 (ϵ 12880) (MeOH) (Berdy).

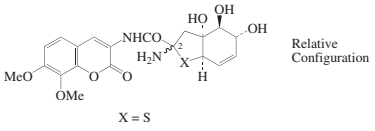
Aspergillazine B A-1473



Relative Configuration

$C_{20}H_{22}N_2O_8S$ 450.468

Related to Trichodermamide A, T-487. Prod. by *Aspergillus unilateralis* (MST-F8675). Amorph. yellow solid. $[\alpha]_D$ -172 (c, 0.07 in MeOH). λ_{max} 203 (ϵ 17850); 243 (sh) ; 335 (ϵ 9400) (MeOH).

2-Epimer: ***Aspergillazine C***
$C_{20}H_{22}N_2O_8S$ 450.468
Prod. by *Aspergillus unilateralis* (MST-F8675). Amorph. yellow solid. $[\alpha]_D$ +23 (c, 0.08 in MeOH). λ_{max} 205 (ϵ 16400); 243 (sh) ; 335 (ϵ 7700) (MeOH).

Capon, R.J. *et al., Org. Biomol. Chem.*, 2005, **3**, 123-129 (*isol, pmr, cmr*)

Aspergillazine D A-1474

As Aspergillazine B, A-1473 with X = O

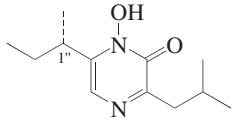
$C_{20}H_{22}N_2O_9$ 434.402
Prod. by *Aspergillus unilateralis* (MST-F8675). Amorph. yellow powder. $[\alpha]_D$ -79 (c, 0.14 in MeOH). Isol. as an equilibrating mixt. with Aspergillazine E to which data refers. λ_{max} 204 (ϵ 17280); 228 (sh) ; 333 (ϵ 11400) (MeOH).

2-Epimer: ***Aspergillazine E***
$C_{20}H_{22}N_2O_9$ 434.402
Prod. by *Aspergillus unilateralis* (MST-F8675).

Capon, R.J. *et al., Org. Biomol. Chem.*, 2005, **3**, 123-129 (*isol, pmr, cmr*)

Aspergillic acid, 8CI A-1475

*1-Hydroxy-6-(1-methylpropyl)-3-(2-methylpropyl)-2(1*H*)-pyrazinone, 9CI. Aspergillin*†*. Granegillin*
[490-02-8]



(*S*)-*form*

$C_{12}H_{20}N_2O_2$ 224.302

Identity of Granegillin with Aspergillic acid is tentative.

▶ CI9625000

(S)-form

Prod. by *Aspergillus flavus* and *Aspergillus sojae*. Shows antibiotic and hypotensive props. Pale yellow needles (MeOH) with odour of black walnuts. Sol. most org. solvs.; insol. H_2O. Mp 97-99°. $[\alpha]_D^{18}$ +13.3 (c, 3.9 in EtOH). pK_a 5.5 (20°, H_2O). λ_{max} 238 (ϵ 10900); 326 (ϵ 8900) (EtOH) (Berdy). λ_{max} 235 (ϵ 15900); 332 (ϵ 10400) (pH 7.5 buffer) (Berdy). λ_{max} 242 (ϵ 7300); 350 (ϵ 9700) (HCl) (Berdy).

▶ LD_{50} (mus, ipr) 150 mg/kg, LD_{50} (mus, orl) 250 mg/kg.

Hydrochloride: Mp 182° dec.

Fe complex: Ferriaspergillin
[77423-90-6]
$C_{36}H_{57}FeN_6O_6$ 725.73
Pigment from *Aspergillus flavus*, *Aspergillus parasiticus* and *Aspergillus subolivaceus*. Red oil.

Zn complex: Zn-Aspergillin
$C_{24}H_{38}N_4O_4Zn$ 511.979
Isol. from *Aspergillus sojae*.

Deoxy: ***Deoxyaspergillic acid***
[21641-71-4]
$C_{12}H_{20}N_2O$ 208.303
Metab. of *Aspergillus sojae*. Needles. Mp 85° Mp 102°. No antibiotic activity.

(ξ)-form

*1''ξ-Hydroxy: 1-Hydroxy-6-(1-hydroxy-1-methylpropyl)-3-(2-methylpropyl)-2(1*H*)-pyrazinone.* ***Hydroxyaspergillic acid***
[4562-39-4]
$C_{12}H_{20}N_2O_3$ 240.302
Isol. from *Aspergillus flavus*, *Aspergillus sojae* and *Aspergillus oryzae*. Shows antibiotic props. Needles (hexane). Sol. MeOH, bases, C_6H_6; fairly sol. Et_2O; poorly sol. H_2O, hexane. Mp 148-150°. $[\alpha]_D$ +36 (c, 1 in EtOH). pK_a 4.9. λ_{max} 232 (ϵ 7500); 330 (ϵ 7900) (MeOH) (Berdy). λ_{max} 235 (ϵ 8250); 328 (ϵ 8800) (EtOH) (Berdy). λ_{max} 245 (E1%/1cm 440); 363 (E1%/1cm 310) (H_3PO_4) (Berdy).

▶ LD_{50} (mus, ivn) 101 mg/kg, LD_{50} (mus, ipr) 90 - 100 mg/kg.

Deoxy, 1''ξ-hydroxy: ***Deoxyhydroxyaspergillic acid***

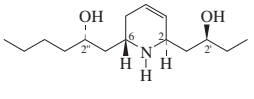
Aspertine B A-1487

1,2,5,6-Tetrahydro-2-(2-hydroxybutyl)-6-(2-hydroxyhexyl)pyridine
[442155-61-5]



Absolute Configuration

$C_{15}H_{29}NO_2$ 255.4
Alkaloid from the aerial parts of *Andrachne aspera*. Gum. $[\alpha]_D$ -85 (c, 0.8 in $CHCl_3$).

Ahmad, V.U. *et al., Turk. J. Chem.*, 2002, **26**, 245-250 (*isol, pmr, cmr*)

Aspidexcelcine A-1488

[1354-51-4]

Bisindole alkaloid. Struct. unknown. Alkaloid from *Aspidosperma excelsum* (Apocynaceae). Mp 76-81°. $[\alpha]_D^{20}$ +72 (c, 0.2 in $CHCl_3$). Mol. formula not recorded (MW 622 by ms).

Relyveld, P. *et al., Pharm. Weekbl.*, 1965, **100**, 614-615; *CA*, **63**, 7254d (*isol, uv, ir*)

Aspidexcine A-1489

[1354-55-8]

$C_{42}H_{56}N_4O_4$ 680.929

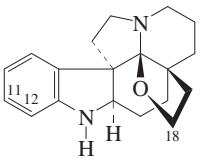
Bisindole alkaloid. Struct. unknown. May be the same as Tetrahydrosecamine in S-174 (same source and MF, but no further information). Alkaloid from *Aspidosperma excelsum* and *Aspidosperma marcgravianum* (Apocynaceae). Sol. Me_2CO, H_2O. Mp 76-81°. $[\alpha]_D^{20}$ -14 (c, 0.2 in $CHCl_3$). λ_{max} 220 ; 283 ; 292 (MeOH) (Berdy).

Hydrochloride: Mp 212° dec.

Relyveld, P. *et al., Pharm. Weekbl.*, 1965, **100**, 614-615; *CA*, **63**, 7254d (*isol, uv, ir*)

Aspidoalbidine A-1490

19,21-Epoxyaspidospermidine, 9CI. Fendleridine
[36459-35-5]



Absolute Configuration

$C_{19}H_{24}N_2O$ 296.411
Alkaloid from seeds of *Aspidosperma fendleri* (Apocynaceae). Cryst. (Me_2CO). Mp 185-186°. λ_{max} 242 (ϵ 7300); 293 (ϵ 3050) (EtOH).

N-*Ac:* **N-*Acetylaspidoalbidine***. *Dehydroxyhaplocidine*
[2671-45-6]
$C_{21}H_{26}N_2O_2$ 338.449
Alkaloid from *Vallesia dichotoma* and bark of *Aspidosperma pyrifolium* (Apocynaceae). Mp 173-174°. $[\alpha]_D$ +46 ($CHCl_3$) (+1). The low opt. rotn. of the *A. pyrifolium* sample (Dehydroxyhaplocidine) suggests that it was largely racemic. λ_{max} 212 (log ϵ 4.43); 253 (log ϵ 4.17) (EtOH).

12-Hydroxy, N-*Ac:* ***Haplocidine****. 1-Acetyl-12-hydroxyaspidoalbidine*
[2671-46-7]
$C_{21}H_{26}N_2O_3$ 354.448
Alkaloid from *Haplophyton cimicidum, Aspidosperma discolor* and *Vallesia dichotoma* (Apocynaceae). Cryst. ($MeOH/Et_2O$). Mp 184-189°. $[\alpha]_D^{23}$ +214 (c, 0.35 in $CHCl_3$).

12-Hydroxy, N-*propanoyl:* ***Haplocine***
[6879-62-5]
$C_{22}H_{28}N_2O_3$ 368.475
Alkaloid from *Haplophyton cimicidum* (Apocynaceae). Mp 186-187°. $[\alpha]_D$ +196 ($CHCl_3$).

12-Methoxy: ***Fannine***
[79405-65-5]
$C_{20}H_{26}N_2O_2$ 326.438
Alkaloid from stems of *Strempeliopsis strempelioides* (Apocynaceae).

12-Methoxy, N-*formyl:* **N-*Formyl-12-methoxyaspidoalbidine***. N-*Formyl-17-methoxyaspidoalbidine*
[2671-44-5]
$C_{21}H_{26}N_2O_3$ 354.448
Alkaloid from *Vallesia dichotoma* (Apocynaceae). Mp 208-210°. $[\alpha]_D$ +20 ($CHCl_3$).

12-Methoxy, N-*propanoyl:* [100979-51-9]
Plates (MeOH). Mp 240-241°. $[\alpha]_D^{30}$ +5 (c, 1.25 in $CHCl_3$).

11,12-Dihydroxy, N-*Ac:* ***Aspidofendlerine***
[4913-97-7]
$C_{21}H_{26}N_2O_4$ 370.447
Constit. of the seeds of *Aspidosperma fendleri* (Apocynaceae). Cryst. (EtOH). Mp 278° dec. λ_{max} 225 (ϵ 11500); 259 (ϵ 5000) (EtOH).

11-Methoxy, 12-hydroxy, N-*Ac:* ***Aspidolimidine***
[2494-58-8]
$C_{22}H_{28}N_2O_4$ 384.474
Constit. of *Aspidosperma limae, Aspidosperma fendleri* and *Aspidosperma album* (Apocynaceae). Prisms (MeOH). Mp 196-199°. $[\alpha]_D$ +245 (c, 1.26 in $CHCl_3$).

11-Methoxy, 12-hydroxy, N-*propanoyl:* ***Fendlerine***. N-*Propionyl*-N-*deacetylaspidolimidine*
[4913-93-3]
$C_{23}H_{30}N_2O_4$ 398.501
Alkaloid from the stem bark of *Aspidosperma album*, also from fruit and bark of *Aspidosperma fendleri* (Apocynaceae). Glass or cryst. (Me_2CO). Mp 179-181°. $[\alpha]_D$ +226 (c, 1.08 in $CHCl_3$). λ_{max} 225 (ϵ 19200); 258 (ϵ 3560) (EtOH).

10,11-Dimethoxy, 12-hydroxy, N-*Ac:* ***Kromantine***. N-*Acetyl*-N-*depropionylaspidoalbine*
[2122-26-1]
$C_{23}H_{30}N_2O_5$ 414.5
Alkaloid from the bark of *Aspidosperma album* and other *Aspidosperma* spp. (Apocynaceae). Mp 194-195° (176°). $[\alpha]_D$ +174 (c, 1.93 in $CHCl_3$) (+159). λ_{max} 227 (log ϵ 4.43); 267 (log ϵ 4.11) (EtOH).

10,11-Dimethoxy, 12-hydroxy, N-*propanoyl:* ***Aspidoalbine***
[2122-25-0]
$C_{24}H_{32}N_2O_5$ 428.527
Alkaloid from the bark of *Aspidosperma album* and other *Aspidosperma* spp. (Apocynaceae). Mp 174-177°. $[\alpha]_D^{25}$ +164 (c, 2.12 in $CHCl_3$). λ_{max} 227 (log ϵ 4.16); 267 (log ϵ 3.88) (EtOH).

10,11,12-Trimethoxy, N-*propanoyl:* Mp 128-131°. $[\alpha]_D$ +9.2 (c, 1.84 in MeOH).

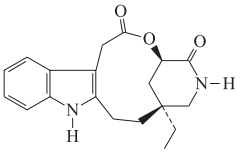
Aspidochibine A-1491

Alkaloid AQC2
[139955-86-5]



Relative configuration

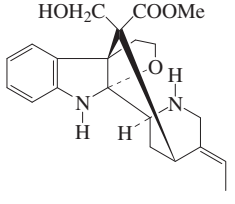
$C_{19}H_{22}N_2O_3$ 326.394

New structural class of the quebrachamine series. Alkaloid from cell cultures of *Aspidosperma quebracho-blanco* (quebracho) (Apocynaceae). Amorph.

Aimi, N. *et al., Tet. Lett.*, 1991, **32**, 4949 (*isol, pmr, cmr, struct*)

Aspidodasycarpine A-1492

Methyl 2,5-epoxy-1,2-dihydro-16-(hydroxymethyl)-4,5-secoakuammilan-17-oate, 9CI
[2744-47-0]



Absolute Configuration

$C_{21}H_{26}N_2O_4$ 370.447

Alkaloid from the bark of *Aspidosperma dasycarpon* and *Aspidosperma cuspa* (Apocynaceae). Cryst. (Me_2CO). Mp 207-209°. $[\alpha]_D^{25}$ -101 (c, 1.42 in $CHCl_3$).

N^4*-Ac:* Mp 250-253°. $[\alpha]_D$ -147.

N^4,O-*Di-Ac:*
Cryst. (Me_2CO). Mp 175°. $[\alpha]_D$ -174 ($CHCl_3$).

16-Epimer: ***Lonicerine***†. *16-Epiaspidodasycarpine*
[26988-11-4]
$C_{21}H_{26}N_2O_4$ 370.447
Alkaloid from the root bark of *Callichilia barteri* (Apocynaceae). Plates (Me_2CO/hexane). Mp 105-107°. $[\alpha]_D^{24}$ -127 (c, 0.98 in $CHCl_3$).

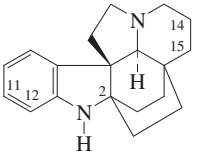
Aspidofractinine A-1494

*2,3,4,5,11,12-Hexahydro-6*H,*13*a*H-3a,5a-ethano-1*H*-indolizino[8,1-*cd*]carbazole, 9CI*
[6871-25-6]
[60365-41-5 ((±)-form)]



Absolute Configuration

$C_{19}H_{24}N_2$ 280.412

Considerable confusion regarding the abs. configs. of this group of alkaloids. All appear to have the abs. config indicated. The key ref. is Guggisberg 1969 but this has often been overlooked in CAS and elsewhere. Note also that in Aspidofractinine and other alkaloids unsubstituted on the ethylene bridges, C-2 is not a chiral centre. Alkaloid from *Aspidosperma refractum*, the leaves of *Pleiocarpa tubicina*, and the stem and root barks of *Hunteria elliotii* (Apocynaceae). Prisms (pentane). Mp 101-102°. $Bp_{0.001}$ 110°. $[\alpha]_D^{23}$ -20 (c, 0.58 in $CHCl_3$). λ_{max} 241 (log ε 3.83); 291 (log ε 3.46) (EtOH).

N-*Ac:* Mp 127-130°. $[\alpha]_D^{23.5}$ +27 (c, 0.25 in $CHCl_3$).

N^1*-Me:* ***N^1-Methylaspidofractinine***
[132356-83-3]
$C_{20}H_{26}N_2$ 294.439
Alkaloid from the roots of *Vinca sardoa* (Apocynaceae). Amorph. solid. λ_{max} 208 (log ε 4.13); 257 (log ε 3.7); 300 (log ε 3.15) (MeOH).

14,15-Didehydro, N^1*-formyl:* ***N-Formyl-14,15-didehydroaspidofractinine***
$C_{20}H_{22}N_2O$ 306.407
Alkaloid from *Vinca sardoa* (Apocynaceae). Cryst. (cyclohexane). Mp 138-140°. $[\alpha]_D^{23}$ +55.8 (c, 0.5 in MeOH). CAS no. not found to 14CI. λ_{max} 211 (log ε 4.34); 254 (log ε 4.13); 278 (log ε 3.76); 287 (log ε 3.7) (MeOH).

14,15-Didehydro, N^1*-Me:* ***N^1-Methyl-14,15-didehydroaspidofractinine***
[131711-44-9]
$C_{20}H_{24}N_2$ 292.423
Alkaloid from the roots of *Vinca sardoa* (Apocynaceae). Cryst. (EtOH) (hydrobromide). Mp 285-295° (hydrobromide).

12-Hydroxy, N-*Ac:* ***Aspidofiline***
$C_{21}H_{26}N_2O_2$ 338.449
Alkaloid from the leaves of *Aspidosperma pyrifolium* (Apocynaceae). Needles (Et_2O). Mp 190-191°. $[\alpha]_D^{20}$ -174 ($CHCl_3$). Publ. details on abs. config. are fragmentary. The abs. config. given here is probable on biogenetic grounds. λ_{max} 231 (log ε 3.76); 308 (log ε 4.31) (EtOH/base). λ_{max} 258 (log ε 3.85); 282 (sh) (EtOH).

12-Hydroxy, N-*Ac, picrate:*
Cryst. (Me_2CO). Mp 146°.

12-Hydroxy, 14,15-didehydro, N^1*-formyl:* ***N^1-Formyl-14,15-didehydro-12-hydroxyaspidofractinine***
$C_{20}H_{22}N_2O_2$ 322.406
Alkaloid from *Vinca sardoa* (Apocynaceae). Cryst. (cyclohexane). Mp 165° dec. $[\alpha]_D^{20}$ -39 (c, 0.3 in MeOH). CAS no. not found to 14CI. λ_{max} 216 (log ε 4.41); 256 (log ε 3.94); 286 (log ε 3.69) (MeOH).

12-Hydroxy, 14,15-didehydro, N^1*-Me:* ***14,15-Didehydro-12-hydroxy-N^1-methylaspidofractinine****. 12-Hydroxy-*N^1*-methyl-14,15-didehydroaspidofractinine*
$C_{20}H_{24}N_2O$ 308.422
Alkaloid from *Vinca sardoa* (Apocy-

naceae). Amorph. $[\alpha]_D^{23}$ +98.4 (c, 0.2 in MeOH). CAS no. not found to 14CI. λ_{max} 214 (log ε 4.3); 253 (log ε 3.76); 292 (log ε 3.46) (MeOH).

12-Methoxy: ***12-Methoxyaspidofractinine****. 17-Methoxyaspidofractinine*
$C_{20}H_{26}N_2O$ 310.438
Alkaloid from *Aspidosperma populifolium* (Apocynaceae). Cryst. (Me_2CO). Mp 128-130°. $[\alpha]_D^{25}$ +3 (c, 0.67 in $CHCl_3$). CAS no. not found 8-14 CI.

12-Methoxy, N-*formyl:* **N-*Formyl-12-methoxyaspidofractinine***
$C_{21}H_{26}N_2O_2$ 338.449
Alkaloid from *Aspidosperma populifolium* (Apocynaceae). Amorph. CAS no. not found 8-14CI. λ_{max} 255 (log ε 4.04); 288 (log ε 3.42) (EtOH).

12-Methoxy, 14,15-didehydro, N^1*-Me:* ***14,15-Didehydro-12-methoxy-N^1-methylaspidofractinine****. 12-Methoxy-*N^1*-methyl-14,15-didehydroaspidofractinine*
$C_{21}H_{26}N_2O$ 322.449
Alkaloid from *Vinca sardoa* (Apocynaceae). Cryst. (EtOAc/cyclohexane). Mp 138-140°. $[\alpha]_D^{23}$ +159 (c, 0.1 in MeOH). CAS no. not found to 14CI. λ_{max} 211 (log ε 4.35); 257 (log ε 3.96); 295 (log ε 3.56) (MeOH).

11,12-Dimethoxy: ***11,12-Dimethoxyaspidofractinine****. 16,17-Dimethoxyaspidofractinine*
$C_{21}H_{28}N_2O_2$ 340.464
Alkaloid from *Aspidosperma populifolium* (Apocynaceae). Cryst. (Me_2CO). Mp 140-142°. $[\alpha]_D^{27}$ -141 (c, 2.61 in $CHCl_3$). CAS no. not found. λ_{max} 214 (log ε 4.5); 298 (log ε 3.39) (EtOH).

11,12-Dimethoxy, N^1*-formyl:* **N-*Formyl-11,12-dimethoxyaspidofractinine***
$C_{22}H_{28}N_2O_3$ 368.475
Alkaloid from *Aspidosperma populifolium* (Apocynaceae). Amorph. CAS no. not found. λ_{max} 253 (log ε 3.86); 287 (log ε 3.42) (EtOH).

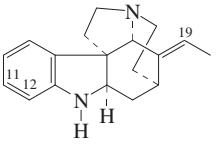
Aspidospermatidine A-1497

14,19-Didehydrocondyfolan, 9CI
[3890-05-9]



Absolute Configuration

$C_{18}H_{22}N_2$ 266.385
Alkaloid from *Aspidosperma quebracho-blanco* (quebracho) (Apocynaceae). Cryst. (Et_2O/hexane). Mp 168-170° Mp 184-186°. λ_{max} 242 (log ε 3.83); 296 (log ε 3.48) (EtOH).

N-*Ac:* **N-*Acetylaspidospermatidine***
$C_{20}H_{24}N_2O$ 308.422
Alkaloid from *Vallesia dichotoma* (Apocynaceae). Noncryst. $[\alpha]_D$ -28 (EtOH). CAS No. not found 8-14CI. λ_{max} 210 ; 253 ; 289 ($CHCl_3$).

N-*Me:* **N-*Methylaspidospermatidine***
$C_{19}H_{24}N_2$ 280.412
Alkaloid in *Aspidosperma quebracho-blanco* (quebracho) (Apocynaceae). Amorph. CAS No. not found 8-14CI.

11-Hydroxy, N-*Ac:* **N-*Acetyl-11-hydroxyaspidospermatidine***
$C_{20}H_{24}N_2O_2$ 324.422
Minor alkaloid from *Aspidosperma compactinervium* (Apocynaceae). Noncryst. CAS No. not found 8-14CI. λ_{max} 218 (log ε 4.23); 252 (log ε 3.89); 294 (log ε 3.65); 300 (log ε 3.65) (EtOH).

12-Hydroxy, N-*Ac:* ***Limatinine***
[11035-45-3]
[19046-21-0]
$C_{20}H_{24}N_2O_2$ 324.422
Alkaloid from *Aspidosperma tomentosum, Aspidosperma limae* and *Aspidosperma subincanum* (Apocynaceae). Prisms (Et_2O/pentane). Mp 162-163° (158-160°). $[\alpha]_D^{22}$ +170 (c, 0.24 in EtOH). $[\alpha]_D^{25}$ +162 (c, 0.83 in $CHCl_3$). 19-Config. uncertain. λ_{max} 220 (log ε 4.36); 259 (log ε 3.85); 290 (log ε 3.49) (EtOH).

12-Hydroxy, N-*Ac, picrate:*
Cryst. (Me_2CO/MeOH or Me_2CO aq.). Mp 250° dec.

12-Hydroxy, N-*propanoyl:* ***Limatine***
$C_{21}H_{26}N_2O_2$ 338.449
Alkaloid from the stem bark of *Aspidosperma limae* (Apocynaceae). Cryst. (Me_2CO/hexane). Mp 175-176°. $[\alpha]_D^{20}$ +166 (c, 0.85 in $CHCl_3$). 19-Config. uncertain. CAS No. not found 8-14CI. λ_{max} 220 (log ε 4.66); 259 (log ε 4.51); 290 (log ε 3.83) (EtOH).

12-Hydroxy, N-*propanoyl, picrate:*
Cryst. (Me_2CO/EtOAc or Me_2CO aq.). Mp 265° dec.

11-Methoxy, 12-hydroxy: ***11-Methoxylimatine***
[11044-89-6]
$C_{22}H_{28}N_2O_3$ 368.475
Alkaloid from the stem bark of *Aspidosperma limae* (Apocynaceae). Prisms (MeOH/Et_2O/pentane). Mp 75-78°. $[\alpha]_D^{23}$ +168 (c, 0.21 in $CHCl_3$). 19-Config. uncertain. λ_{max} 227 (log ε 4.39); 262 (log ε 3.91) (EtOH).

11-Methoxy, 12-hydroxy, N-*Ac:* ***11-Methoxylimatinine***
[11035-48-6]
$C_{21}H_{26}N_2O_3$ 354.448
Alkaloid from *Aspidosperma limae* (Apocynaceae). Prisms (Et_2O/pentane or Me_2CO/hexane). Mp 139-140°. $[\alpha]_D^{23}$ +181 (c, 0.17 in $CHCl_3$). 19-Config. uncertain. λ_{max} 229 (log ε 4.38); 261 (log ε 3.77) (EtOH).

11-Methoxy, 12-hydroxy, N-*Ac, picrate:*
Cryst. (Me_2CO/EtOH). Mp 238-244° dec.

11-Methoxy, 12-hydroxy, N-*propanoyl, picrate:*

Cryst. (Me_2CO/EtOH). Dec. >250° without melting.

12-Methoxy, N-*Ac:* ***Aspidospermatine***
[5794-14-9]
$C_{21}H_{26}N_2O_2$ 338.449
Alkaloid from *Aspidosperma quebracho-blanco* (quebracho) and *Vallesia glabra*. Mp 162° (157-159°). $[\alpha]_D$ -73 (EtOH). 19-Config. uncertain. λ_{max} 219 (log ϵ 4.54); 255 (log ϵ 4.1); 290 (log ϵ 3.62) (EtOH).

12-Methoxy, 19,20-dihydro, N-*Ac:* ***Dihydroaspidospermatine***
$C_{21}H_{28}N_2O_2$ 340.464
Alkaloid from *Aspidosperma quebracho-blanco* (quebracho) (Apocynaceae). Noncryst. CAS No. not found 8-14CI.

Biemann, K. *et al., J.A.C.S.*, 1963, **85**, 631-638 (*Aspidospermatidine, N-Methylaspidospermatidine, Aspidospermatine, Dihydroaspidospermatine*)

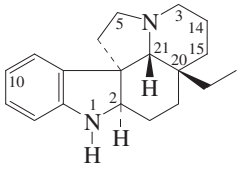
Aspidospermidine A-1498



(+)-*form*

$C_{19}H_{26}N_2$ 282.428

(+)-*form* [2912-09-6]
Alkaloid from *Amsonia tabernaemontana, Gonioma kamassi, Aspidosperma quebracho-blanco* (quebracho) and several other *Aspidosperma* spp. (Apocynaceae). Mp 119.5-121°. $[\alpha]_D^{23}$ +21 (EtOH).

N^1-*Ac:* **N-*Acetylaspidospermidine***. *Demethoxyaspidospermine*
[2111-81-1]
$C_{21}H_{28}N_2O$ 324.465
Alkaloid from *Aspidosperma exalatum*, *Aspidosperma discolor*, *Geissospermum argenteum* and *Vallesia dichotoma* (Apocynaceae). Cryst. (hexane or Et_2O/hexane). Mp 114° (103-105°). $[\alpha]_D^{20}$ -15 (c, 1 in $CHCl_3$).

N^1-*Ac; perchlorate:*
Cryst. (MeOH/Et_2O). Mp 164-170° dec.

N-*Propanoyl:* ***Demethoxypalosine***
[17472-57-0]
$C_{22}H_{30}N_2O$ 338.492
Alkaloid from seeds of *Aspidosperma exalatum*, bark of *Aspidosperma rhombeosignatum, Aspidosperma discolor* and *Aspidosperma limae* (Apocynaceae). Cryst. (pentane). Mp 117-120°. $[\alpha]_D$ -20 ($CHCl_3$).

N-*(β-threo-Pentopyranos-4-uloside):* ***Aspidospermiose***
[183803-80-7]
$C_{24}H_{32}N_2O_5$ 428.527
Alkaloid from leaves of *Rhazya stricta*. Stereochem. of sugar residue not totally determined. λ_{max} 207 (log ϵ 4.12); 235 (log ϵ 3.18); 250 (log ϵ 3.14); 300 (log ϵ 2.3) (MeOH).

N^1*-(β-D-*xylo-*Hexos-4-uloside):* ***Aspidospermidose***
[110325-67-2]
$C_{25}H_{34}N_2O_5$ 442.554
Alkaloid from leaves of *Rhazya stricta* (Apocynaceae). $[\alpha]_D^{24}$ +203 (MeOH). The first alkaloidal glycoside with an oxidised sugar unit.

N^1*-Me:* ***α-Methylaspidospermidine***
[2671-47-8]
$C_{20}H_{28}N_2$ 296.455
Alkaloid from *Vinca minor* (Apocynaceae). $[\alpha]_D^{24}$ +24.4 (c, 1.25 in $CHCl_3$).

14,15-Didehydro, N^1*-Me:* ***14,15-Dehydro-N-methylaspidospermidine***. *6,7-Didehydro-1-methylaspidospermidine, 9CI*
$C_{20}H_{26}N_2$ 294.439
Alkaloid from *Vallesia herbacea* (Apocynaceae). Cryst. (EtOH). Mp 110-112°. $[\alpha]_D$ -40 (c, 0.3 in $CHCl_3$).

21-Hydroxy: ***Fendlispermine***
[52309-71-4]
$C_{19}H_{26}N_2O$ 298.427
Alkaloid from *Aspidosperma fendleri* (Apocynaceae).

14β,15α-Dihydroxy, N^1*-Me:* ***14,15-Dihydroxy-N-methylaspidospermidine***
$C_{20}H_{28}N_2O_2$ 328.453
Alkaloid from *Tabernaemontana bovina*. Cryst. (Me_2CO). Mp 200-203°. $[\alpha]_D^{30}$ +15.3 (c, 0.06 in MeOH).

3-Oxo: ***Melocelinine***
[52628-61-2]
$C_{19}H_{24}N_2O$ 296.411
Alkaloid from *Melodinus celastroides* (Apocynaceae).

5-Oxo: ***Meloceline***
[52617-21-7]
$C_{19}H_{24}N_2O$ 296.411
Alkaloid from *Melodinus celastroides* (Apocynaceae).

10-Methoxy: ***10-Methoxyaspidospermidine***
$C_{20}H_{28}N_2O$ 312.454
Alkaloid from stem bark of *Aspidosperma pyrifolium*. $[\alpha]_D$ +2.4 (c, 0.5 in $CHCl_3$). Largely racemic.

20,21-Diepimer: ***20,21-Epiaspidospermidine***. *5,19-Epiaspidospermidine*
[52152-79-1]
$C_{19}H_{26}N_2$ 282.428
Alkaloid from *Melodinus celastroides* (Apocynaceae).

20,21-Diepimer, N^b*-oxide:* ***20,21-Epiaspidospermidine N-oxide***. N^b*-Oxy-20,21-epiaspidospermidine*
[52077-40-4]
$C_{19}H_{26}N_2O$ 298.427
Alkaloid from *Melodinus celastroides* (Apocynaceae).

(-)-*form*

14,15-Didehydro, N^1*-Me:* **ent-*14,15-Didehydro-*N^1*-methylaspidospermidine***
[16718-72-2]
$C_{20}H_{26}N_2$ 294.439
Alkaloid from the roots of *Vinca sardoa* (Apocynaceae). Cryst. (petrol). Mp 118-120°. Double bond omitted from struct. diag. in ref.

(±)-*form* [7689-02-3]
Mp 108-110°.

N^1*-Ac:* [56197-28-5]
Resin.

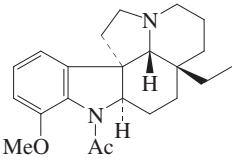
1-Acetyl-17-methoxyaspidospermidine, 9CI
[466-49-9]



(-)-*form*

$C_{22}H_{30}N_2O_2$ 354.491
Alkaloid from *Aspidosperma quebracho-blanco* (quebracho) and several other *Aspidosperma* spp., *Vallesia glabra*, *Vallesia dichotoma* and *Strychnos angolensis*. Diuretic, repiratory stimulant. λ_{max} 218 (ϵ 37500); 255 (ϵ 11000); 285 (ϵ 3400) (MeOH) (Berdy).

▶ LD_{50} (mus, ipr) 40 mg/kg.

N-*De-Ac:* ***Deacetylaspidospermine***. *Deformylvallesine. 17-Methoxyaspidospermidine*
[2447-50-9]
$C_{20}H_{28}N_2O$ 312.454
Alkaloid from *Strempeliopsis strempelioides* and *Vallesia antillana*. Cryst. (pentane). Mp 107-109°. $[\alpha]_D^{20}$ +8 (MeOH).

N-*De-Ac, hydroiodide (1:2):*
Prisms. Mp 243° (after sintering from 235°).

N-*De-Ac,* N-*formyl:* ***Vallesine***
[466-46-6]
$C_{21}H_{28}N_2O_2$ 340.464
Alkaloid from *Strempeliopsis strempelioides, Vallesia glabra* and *Vallesia dichotoma* (Apocynaceae). Needles (Me_2CO/Et_2O). Mp 154-155°. $[\alpha]_D$ -92 (c, 0.12 in $CHCl_3$).

N-*De-Ac,* N-*propanoyl:* ***Palosine***
[466-48-8]
$C_{23}H_{32}N_2O_2$ 368.518
Alkaloid from *Aspidosperma polyneuron* and stem bark of *Aspidosperma pyrifolium* (Apocynaceae). Needles (Et_2O/petrol). Mp 149-152°. $[\alpha]_D^{24}$ -85.9 (c, 0.734 in $CHCl_3$).

O-*De-Me:* ***Demethylaspidospermine***
[2122-21-6]
$C_{21}H_{28}N_2O_2$ 340.464
Alkaloid from *Aspidosperma discolor, Aspidosperma neblinae, Aspidosperma eburneum, Geissospermum argenteum, Strempeliopsis strempelioides* and *Vallesia antillana* (Apocynaceae). Needles. Mp 112-114°. $[\alpha]_D^{20}$ +114 ($CHCl_3$).

O-*De-Me, perchlorate:*
Cryst. + 1 MeOH (MeOH). Mp 170° dec. $[\alpha]_D^{25}$ +94 (c, 0.98 in MeOH).

O-*De-Me,* N-*de-Ac:* ***Aspidosine***
[466-47-7]
$C_{19}H_{26}N_2O$ 298.427
Alkaloid from the leaves of *Strempeliopsis strempelioides* (Apocynaceae). Mp 255.5-257.5° (250-253°). $[\alpha]_D^{20}$ -12 (EtOH). λ_{max} 246 (log ϵ 3.91); 289 (log ϵ 3.42) (MeOH).

O-*De-Me,* N-*de-Ac,* N-*propanoyl:* **O-*Demethylpalosine***
[16049-40-4]
$C_{22}H_{30}N_2O_2$ 354.491
Alkaloid from *Tabernaemontana amygdalaefolia* roots (Apocynaceae). Mp 169°. $[\alpha]_D^{20}$ +118 (c, 0.36 in $CHCl_3$).

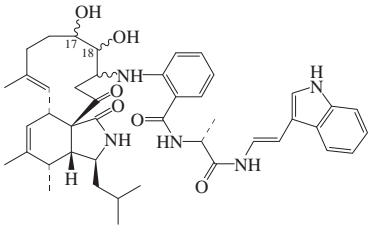
Aspochalamin A A-1500



$C_{44}H_{55}N_5O_6$ 749.948
Prod. by *Aspergillus niveus* LU 9575.

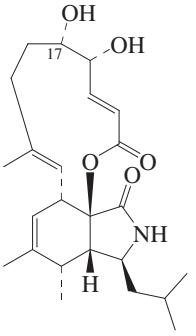
17-Deoxy: ***Aspochalamin C***
$C_{44}H_{55}N_5O_5$ 733.949
Prod. by *Aspergillus niveus* LU 9575.

17,18-Dideoxy: ***Aspochalamin D***
$C_{44}H_{55}N_5O_4$ 717.95
Prod. by *Aspergillus niveus* LU 9575.

Stereoisomer: ***Aspochalamin B***
$C_{44}H_{55}N_5O_6$ 749.948
Prod. by *Aspergillus niveus* LU 9575.

Gebhardt, K. *et al., J. Antibiot.*, 2004, **57**, 707-714; 715-720 (*isol, pmr, cmr*)

Aspochalasin I A-1501



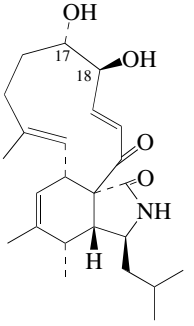
$C_{24}H_{35}NO_5$ 417.544
Prod. by *Aspergillus flavipes*. Solid. Mp 136-138°. $[\alpha]_D^{27}$ -166.6 (c, 0.2 in $CHCl_3$).

17-Deoxy: ***Aspochalasin J***
$C_{24}H_{35}NO_4$ 401.545
Prod. by *Aspergillus flavipes*. Solid.

Zhou, G.-X. *et al., J. Nat. Prod.*, 2004, **67**, 328-332 (*isol, pmr, cmr*)

Aspochalasin C A-1502

[72401-79-7]



$C_{24}H_{35}NO_4$ 401.545
Metab. of *Aspergillus microcysticus*. Metab. inactive. Amorph. powder. $[\alpha]_D^{25}$ -86 (c, 1.37 in $CHCl_3$). λ_{max} 244 (ϵ 7320) (EtOH) (Derep). λ_{max} 240 (EtOH) (Berdy).

18-Ketone: ***Aspochalasin B***
[72363-47-4]
$C_{24}H_{33}NO_4$ 399.529
From *Aspergillus microcysticus*. Inactive. Yellow amorph. powder. $[\alpha]_D^{25}$ -118 (c, 1.37 in $CHCl_3$). λ_{max} 225 (ϵ 9770) (EtOH) (Derep). λ_{max} 225 (ϵ 9900) (EtOH) (Berdy).

17,18-Diketone: ***Aspochalasin A***. *Asposterol*
[72363-48-5]
$C_{24}H_{31}NO_4$ 397.513

From *Aspergillus microcysticus*. Antibiotic. Light yellow amorph. powder. $[\alpha]_D^{25}$ -20 (c, 0.27 in $CHCl_3$). λ_{max} 265 (ϵ 407); 410 (ϵ 12) (EtOH) (Derep).

17-Deoxy: 17-Deoxyaspochalasin C. ***TMC 169****. Antibiotic TMC 169*
$C_{24}H_{35}NO_3$ 385.545
Prod. by *Aspergillus flavipes*. Powder. Mp 103-105° Mp 112-114°. $[\alpha]_D^{23}$ -50 (c, 0.31 in MeOH). C-18 config. not determined.

17,18-Dideoxy: ***Aspochalasin Z***
$C_{24}H_{35}NO_2$ 369.546
Prod. by *Aspergillus niveus* LU 9575.

17,18-Dideoxy, 17,18-epoxide: ***Aspochalasin G***
$C_{24}H_{33}NO_3$ 383.53
Prod. by *Aspergillus* sp. FO-4282. Inhibits lipid droplet formation. Pale yellow solid. Mp 95°. $[\alpha]_D^{25}$ -77.9 (c, 1 in EtOH). Stereochem. not determined. λ_{max} 205 (ϵ 9800); 240 (sh) ; 280 (sh) (MeOH).

19,20-Dihydro, 19ξ-hydroxy: ***Aspochalasin E***
[149598-68-5]
$C_{24}H_{37}NO_5$ 419.56
Prod. by *Aspergillus flavipes* and an unidentified fungal sp. FA-2277. Powder. Sol. MeOH, $CHCl_3$. Mp 129-131°. $[\alpha]_D^{24}$ -52 (c, 0.5 in $CHCl_3$). λ_{max} 265 (ϵ 407); 410 (ϵ 12) (EtOH) (Derep).

19,20-Dihydro, 19ξ-hydroxy, 18-Me ether: ***Aspochalasin K***
$C_{25}H_{39}NO_5$ 433.587
Prod. by *Aspergillus flavipes*. Amorph. solid. Mp 185-186°. $[\alpha]_D^{27}$ -81.4 (c, 1 in $CHCl_3$). Stereochem. not confirmed.

17-Epimer: ***Aspochalasin D***
[71968-02-0]
$C_{24}H_{35}NO_4$ 401.545
Prod. by *Aspergillus flavipes* and *Aspergillus microcysticus*. Shows selective cytotoxicity. Needles (EtOAc). Mp 148° dec. $[\alpha]_D^{25}$ -81 (c, 1.43 in EtOH). Unknown stereochem. λ_{max} 244 (ϵ 7320) (EtOH) (Derep). λ_{max} 248 (ϵ 9300) (EtOH) (Berdy).

17-Epimer, 19α, 20β-epoxide: ***Aspochalasin H***
$C_{24}H_{35}NO_5$ 417.544
Prod. by *Aspergillus* sp. AJ117509. Powder.

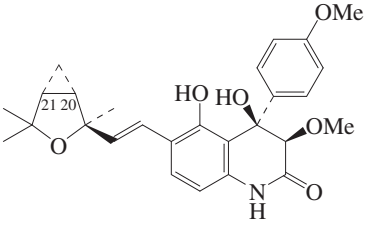
Aspoquinolone A A-1504

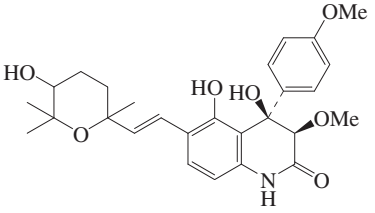


$C_{27}H_{31}NO_6$ 465.545
Prod. by *Aspergillus nidulans* HKI0410. Amorph. solid. λ_{max} 201 (ϵ 34200); 217 (ϵ 27900); 279 (ϵ 15100); 323 (ϵ 14000) (MeOH).

20,21-Diepimer: ***Aspoquinolone B***
$C_{27}H_{31}NO_6$ 465.545
Prod. by *Aspergillus nidulans* HKI0410. Amorph. solid. λ_{max} 201 (ϵ 33000); 217 (ϵ 27100); 279 (ϵ 14400); 323 (ϵ 13200) (MeOH).

Scherlach, K. *et al., Org. Biomol. Chem.*, 2006, **4**, 3517-3520 (*isol, pmr, cmr, ms*)

Aspoquinolone C A-1505



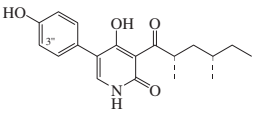
$C_{27}H_{33}NO_7$ 483.56
Closely related to Penigequinolone A, P-191. Prod. by *Aspergillus nidulans* HKI0410. Amorph. solid. Isol. as an inseparable mixt. with Aspoquinolone D to which data refers. λ_{max} 201 (ϵ 30600); 279 (ϵ 11800); 323 (ϵ 10600) (MeOH).

Stereoisomer: ***Aspoquinolone D***
$C_{27}H_{33}NO_7$ 483.56
Prod. by *Aspergillus nidulans* HKI0410. Stereoisomeric on pyran ring.

Scherlach, K. *et al., Org. Biomol. Chem.*, 2006, **4**, 3517-3520 (*isol, pmr, cmr, ms*)

Aspyridone A A-1506

[935863-26-6]



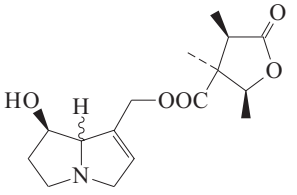
$C_{19}H_{23}NO_4$ 329.395
Prod. by *Aspergillus nidulans*. Amorph. powder. λ_{max} 203 (log ϵ 4.39); 247 (log ϵ 4.37); 344 (log ϵ 3.74) (MeOH).

3″-Hydroxy: ***Aspyridone B***
[935863-27-7]
$C_{19}H_{23}NO_5$ 345.394
Prod. by *Aspergillus nidulans*. Amorph. powder. λ_{max} 204 (log ϵ 4.4); 214 (log ϵ 4.41); 251 (log ϵ 4.21); 344 (log ϵ 3.61) (MeOH).

Bergmann, S. *et al., Nat. Chem. Biol.*, 2007, **3**, 213-217 (*isol, biosynth, pmr, cmr, ms*)

Assamicadine A-1507

[126260-96-6]

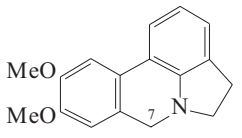


$C_{16}H_{23}NO_5$ 309.361
Rel. config. only of lactone portion detd. Minor alkaloid from seeds of *Crotalaria assamica* (Fabaceae). Viscous oil. $[\alpha]_D^{19}$ -9.4 (c, 0.4 in MeOH).

Cheng, D. *et al., J. Nat. Prod.*, 1989, **52**, 1153 (*isol, ir, pmr, cmr, ms, cd, struct*)

Assoanine A-1508

*4,5-Dihydro-9,10-dimethoxy-7*H*-pyrrolo[3,2,1-*de*]phenanthridine, 9CI. Anhydromethylpseudolycorine*
[107208-75-3]



$C_{17}H_{17}NO_2$ 267.327
Alkaloid from the bulbs of *Narcissus pseudonarcissus*, the aerial parts of *Narcissus assoanus* collected at flowering and from the whole plant of *Narcissus jace-*

tanus (Amaryllidaceae). Cryst. (EtOH). Air oxidn. occurs during determination of the Mp, and the dec. point finally observed is that of the 7-oxo compd.

N-*Me:* **N-*Methylassoaninium***
[132368-07-1]
$C_{18}H_{20}NO_2^{\oplus}$ 282.361
Alkaloid from *Lapiedra martinezii* (Amaryllidaceae). CAS no. refers to the chloride.

O^{10}-*De-Me:* ***Anhydropseudolycorine***
$C_{16}H_{15}NO_2$ 253.3
Alkaloid from *Hymenocallis guianensis*, *Hymenocallis lobata* and *Hymenocallis tubiflora*.

*7(*N*)-Dehydro:* see Vasconine, V-35

4,5-Didehydro, O^{10}*-de-Me:* ***4,5-Dehydroanhydropseudolycorine***
$C_{16}H_{13}NO_2$ 251.284
Alkaloid from *Hymenocallis tubiflora* and *Hymenocallis venezuelensis.*

7-Oxo: ***Oxoassoanine****. 7-Oxoanhydromethylpseudolycorine*
[65367-74-0]
$C_{17}H_{15}NO_3$ 281.31
Alkaloid from the aerial parts of *Narcissus assoanus* collected at flowering and from the whole plant of *Narcissus jacetanus* (Amaryllidaceae). Prisms ($CHCl_3$/EtOH). Mp 272-274° (247-250°).

7-Oxo, N-*oxide:* ***Oxoassoanine* N-*oxide***
[129225-26-9]
$C_{17}H_{15}NO_4$ 297.31
Alkaloid from the bulbs of *Narcissus bicolor* (Amaryllidaceae). Cryst. + $2^1/_2H_2O$. Mp 196-198°.

8-Methoxy, 7-oxo: ***8-Methoxyoxoassoanine***
$C_{18}H_{17}NO_4$ 311.337
Alkaloid from *Eucharis amazonica*. Amorph. solid. Mp 245-247°.

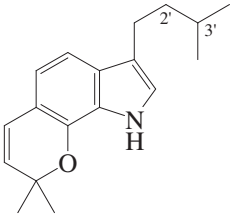
Asteranthine A-1510

*2,9-Dihydro-2,2-dimethyl-7-(3-methylbutyl)pyrano[3,2-*g*]indole*



$C_{18}H_{23}NO$ 269.386
Parent not known.

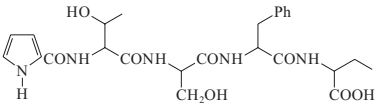
2′,3′-Didehydro, 2′,3′-epoxide: ***2′,3′-Epoxyasteranthine***
[187523-31-5]
$C_{18}H_{21}NO_2$ 283.369
Alkaloid from *Asteranthe asterias.* Yellowish oil. $[\alpha]_D^{21}$ +4 (c, 1 in $CHCl_3$). Mixt. of stereoisomers.

2′,3′-Dihydroxy: ***2′,3′-Dihydroxyasteranthine***
[187523-32-6]
$C_{18}H_{23}NO_3$ 301.385
Alkaloid from *Asteranthe asterias.* Cryst. Mp 138-140°. $[\alpha]_D^{21}$ -8 (c, 0.7 in $CHCl_3$). Mixt. of stereoisomers.

Nkunya, M.H.H. *et al., Nat. Prod. Lett.*, 1996, **9**, 71-78

Asterin A† A-1511

[151964-51-1]



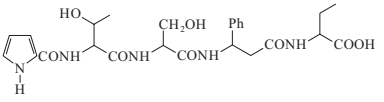
$C_{25}H_{33}N_5O_8$ 531.564
Oligopeptide. Constit. of the roots of *Aster tataricus.*

Me ester: ***Asterin B***
[151964-52-2]
$C_{26}H_{35}N_5O_8$ 545.591
Constit. of the roots of *Aster tataricus.*

Chen, D. *et al., Chin. Chem. Lett.*, 1993, **4**, 605 (*isol, struct*)

Asterinin A A-1512

2,3,4,5-Tetradehydroprolylallothreonylseryl-3-phenyl-β-alanyl-2-aminobutanoic acid, 9CI
[157536-40-8]



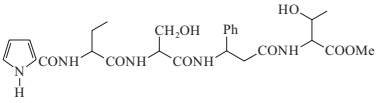
$C_{25}H_{33}N_5O_8$ 531.564
Constit. of the roots of *Aster tataricus.* Amorph. powder (MeOH aq.). Mp 272-274°. $[\alpha]_D$ +38.5 (c, 0.33 in Py).

Me ester: ***Asterinin B***
[157536-41-9]
$C_{26}H_{35}N_5O_8$ 545.591
Constit. of the roots of *Aster tataricus.* Amorph. powder (MeOH aq.). Mp 235-237°. $[\alpha]_D$ +3.1 (c, 0.57 in Py).

Cheng, D. *et al., Phytochemistry*, 1994, **36**, 945 (*isol, pmr, cmr, uv, ir, ms*)

Asterinin C A-1513

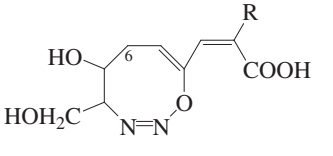
[157605-23-7]



$C_{26}H_{35}N_5O_8$ 545.591
Constit. of the roots of *Aster tataricus* (Asteraceae). Amorph. powder. Mp 250-252°. $[\alpha]_D$ -4.9 (c, 0.33 in Py). λ_{max} 209 (ϵ 13800); 267 (ϵ 18200) (MeOH).

Cheng, D. *et al., Phytochemistry*, 1994, **36**, 945 (*isol, uv, pmr, cmr, ms*)

Asterionellin A A-1514



R = CH_3

$C_{10}H_{14}N_2O_5$ 242.231

Isol. from an *Asterionella* sp. Not indexed in CAS.

Shimizu, Y. *et al., Chem. Rev.*, 1993, **93**, 1685-1698

Asterionellin B **A-1515**

As Asterionellin A, A-1514 with R = H

$C_9H_{12}N_2O_5$ 228.204

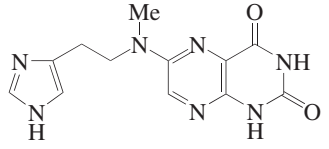
Isol. from the microalga *Asterionella* sp. Antibiotic.

6-Hydroxy: ***Asterionellin C***
$C_9H_{12}N_2O_6$ 244.204
Isol. from *Asterionella* sp.

Shimizu, Y. *et al., Chem. Rev.*, 1993, **93**, 1685-1698

Asteropterin **A-1516**

[1041186-56-4]

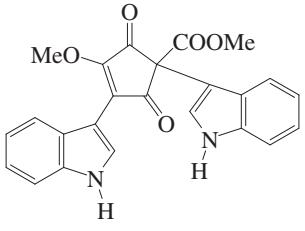


$C_{12}H_{13}N_7O_2$ 287.28

Alkaloid from *Asteropus simplex*. Cathepsin B inhibitor. Yellowish powder. λ_{max} 279 (ϵ 1360); 416 (ϵ 290) (MeOH).

Murayama, S. *et al., Tet. Lett.*, 2008, **49**, 4186-4188 (*isol, pmr, cmr*)

Asterredione **A-1517**



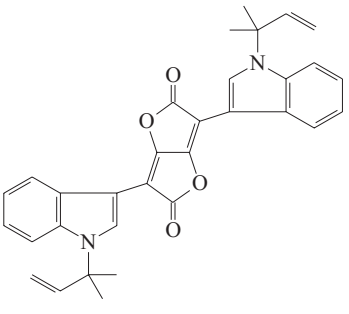
$C_{24}H_{18}N_2O_5$ 414.417

Prod. by *Aspergillus terreus* isol. from *Opuntia versicolor*. Cytotoxic. Yellow powder. $[\alpha]_D^{25}$ -2.3 (c, 0.5 in $CHCl_3$). Dec. at >112°. λ_{max} 218 (log ϵ 5.68); 269 (log ϵ 5.23); 411 (log ϵ 4.92) (EtOH).

Wijeratne, E.M.K. *et al., J. Nat. Prod.*, 2003, **66**, 1567-1573 (*isol, pmr, cmr*)

Asterridinone **A-1518**

[161300-75-0]



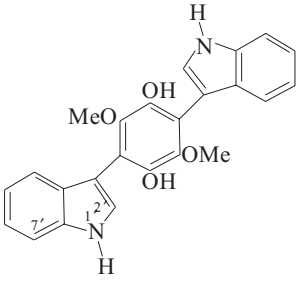
$C_{32}H_{28}N_2O_4$ 504.584

Metab. from the mycelium of *Aspergillus terreus*. Orange needles (MeOH). Mp 261-263° dec.

Kaji, A. *et al., Chem. Pharm. Bull.*, 1994, **42**, 1682 (*isol, uv, ir, pmr, struct*)

Asterriquinol D **A-1519**

*2,5-Bis(1*H*-indol-3-yl)-3,6-dimethoxy-1,4-benzenediol. Asterriquinone D hydroquinone*



$C_{24}H_{20}N_2O_4$ 400.433

Parent compd. (currently unknown as a natural product) of a series of prenylated metabolites related to the asterriquinones; see Asterriquinone, A-1520 and Asterriquinone D, A-1521.

Di-Me ether: ***Di-O-methylasterriquinol D***
$C_{26}H_{24}N_2O_4$ 428.487
Prod. by *Aspergillus solerotiorum* and *Aspergillus terreus*. Solid. Mp 187-189°.

2′,3′-Dihydro, 2′-oxo, di-Me ether: ***2′-Oxoasterriquinol D di-Me ether***
$C_{26}H_{24}N_2O_5$ 444.486
Prod. by *Aspergillus sclerotiorum*. Solid. Mp 145-147° (dec.). $[\alpha]_D$ -13.9 (c, 0.001 in MeOH). λ_{max} 232 (ϵ 5500); 276 (ϵ 2600) (MeOH).

1′-(1,1-Dimethyl-2-propenyl), di-Me ether: ***1-(1,1-Dimethyl-2-propenyl)-3-[4-(1*H*-indol-3-yl)-2,3,5,6-tetramethoxyphenyl]-1*H*-indole, 9CI***
[78279-80-8]
$C_{31}H_{32}N_2O_4$ 496.605
Metab. of *Aspergillus terreus* var. *africanus*. Mp 202-204°.

2′-(1,1-Dimethyl-2-propenyl): ***2-[2-(1,1-Dimethyl-2-propenyl)-1*H*-indol-3-yl]-5-(1*H*-indol-3-yl)-3,6-dimethoxy-1,4-benzenediol, 9CI***. *Asterriquinone C1 hydroquinone*
[78279-79-5]
$C_{29}H_{28}N_2O_4$ 468.551
Metab. of *Aspergillus terreus* var. *africanus*. Mp 206-208°. Oxidised gradually in air, rapidly by aq. $FeCl_3$, to Asterriquinone C1 in A-1521.

1′,1″-Bis(1,1-dimethyl-2-propenyl): ***2,5-Bis[1-(1,1-dimethyl-2-propenyl)-1*H*-indol-3-yl]-3,6-dimethoxy-1,4-benzenediol, 9CI***. *Asterriquinone A1 hydroquinone*
[78279-78-4]
$C_{34}H_{36}N_2O_4$ 536.669
Metab. of *Aspergillus terreus* var. *africanus*. Mp 242-245°. Oxidised gradually in air, rapidly by $FeCl_3$ aq., to Asterriquinone A1 in A-1520.

1′,1″-Bis(1,1-dimethyl-2-propenyl), di-Me ether: ***3,3′-(2,3,5,6-Tetramethoxy-1,4-phenylene)bis[1-(1,1-dimethyl-2-propenyl)-1*H*-indole], 9CI***
[78302-49-5]
$C_{36}H_{40}N_2O_4$ 564.723
Metab. of *Aspergillus terreus* var. *africanus*. Mp 158-159°.

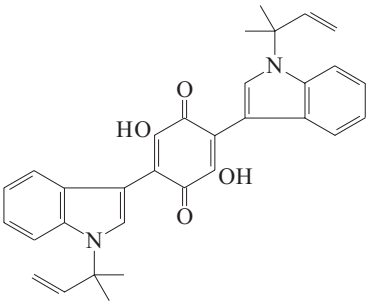
7′-(3-Methyl-2-butenyl), di-Me ether: ***3-[4-(1*H*-Indol-3-yl)-2,3,5,6-tetramethoxyphenyl]-7-(3-methyl-2-butenyl)-1*H*-indole, 9CI***
[78279-81-9]
$C_{31}H_{32}N_2O_4$ 496.605
Metab. of *Aspergillus terreus* var. *africanus*. Mp 226.5-228.5°.

Arai, K. *et al., Chem. Pharm. Bull.*, 1981, **29**, 1005

Whyte, A.C. *et al., J. Nat. Prod.*, 2000, **63**, 1006-1009 (*2′-Oxoasterriquinol D*)

Asterriquinone **A-1520**

*2,5-Bis[1-(1,1-dimethyl-2-propenyl)-1*H*-indol-3-yl]-3,6-dihydroxy-2,5-cyclohexadiene-1,4-dione, 9CI. NSC 289487*
[60696-52-8]



$C_{32}H_{30}N_2O_4$ 506.6

Benzoquinone antibiotic. Metab. of *Aspergillus terreus*. Antineoplastic agent, shows anti-HIV activity. Dark purple needles (MeOH). Sol. MeOH, Et_2O; poorly sol. H_2O. Mp 218-220° dec. Log P 5.92 (uncertain value) (calc). λ_{max} 298 (ϵ 32400); 508 (ϵ 5500) ($CHCl_3$) (Derep). λ_{max} 298 (ϵ 30000); 508 (ϵ 6600) ($CHCl_3$) (Berdy).

Mono-Ac: ***Asterriquinone monoacetate***
[160786-85-6]
$C_{34}H_{32}N_2O_5$ 548.637
Metab. of *Aspergillus terreus*. Blue-purple needles (hexane/CH_2Cl_2). Mp 172-174° dec. λ_{max} 225 (ϵ 46000); 292 (ϵ 27600); 487 (ϵ 6400) (EtOH) (Berdy).

Mono-Me ether: O-*Methylasterriquinone.* ***Asterriquinone SU5504***
$C_{33}H_{32}N_2O_4$ 520.627
Prod. by *Aspergillus candidus*. Purple powder. λ_{max} 225 ; 292 ; 489 (no solvent reported).

Di-Me ether: ***Asterriquinone A1***
[60924-75-6]
$C_{34}H_{34}N_2O_4$ 534.654
Metab. of *Aspergillus terreus* var. *africanus*. Purple needles (EtOH). Sol. MeOH, Et_2O; poorly sol. H_2O. Mp 168°. λ_{max} 295 ; 299 ; 490 (EtOH)

(Berdy).

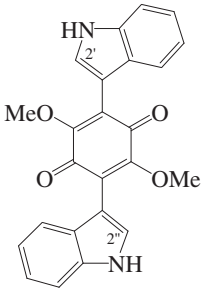
Asterriquinone D A-1521

[78723-19-0]



$C_{24}H_{18}N_2O_4$ 398.417

Benzoquinone antibiotic. Isol. from *Aspergillus terreus* var. *africanus*. Shows weak antitumour activity. Purple powder (Me_2CO). Mp 178-180°. λ_{max} 222 (log ϵ 5.69); 282 (log ϵ 5.42); 480 (log ϵ 4.71) (EtOH).

N-*(1,1-Dimethyl-2-propenyl)*: ***Asterriquinone B3***
[78708-37-9]
$C_{29}H_{26}N_2O_4$ 466.535
From *Aspergillus terreus* var. *africanus*. Shows weak antitumour activity. Reddish-purple powder (cyclohexane). Sol. MeOH, C_6H_6; poorly sol. H_2O. Mp 148-150°. λ_{max} 240 ; 284 ; 484 (EtOH) (Berdy).

Di-O-*de*-*Me*: ***Didemethylasterriquinone D***
[78860-40-9]
$C_{22}H_{14}N_2O_4$ 370.364
Prod. by *Aspergillus terreus* and *Chrysosporium merdarium*.

2′-(1,1-Dimethyl-2-propenyl): ***Asterriquinone C1***
[78723-18-9]
$C_{29}H_{26}N_2O_4$ 466.535
From *Aspergillus terreus* var. *africanus*. No biol. activity. Purple needles (C_6H_6). Mp 162-164° Mp 213-214°. λ_{max} 222 (log ϵ 5.49); 281 (log ϵ 5.12); 367 (log ϵ 3.97); 489 (log ϵ 4.19) (EtOH).

2′,N$^{I''}$-Bis(1,1-dimethyl-2-propenyl): ***Asterriquinone A3***
[78723-15-6]
$C_{34}H_{34}N_2O_4$ 534.654
From *Aspergillus terreus* var. *africanus*. Shows weak antitumour activity. Deep purple powder (C_6H_6). Sol. MeOH, Et_2O; poorly sol. H_2O. Mp 112-114°. λ_{max} 284 ; 292 ; 376 ; 516 (EtOH) (Berdy).

2′,2′′-Bis(1,1-dimethyl-2-propenyl): ***Asterriquinone B4***
[78723-17-8]
$C_{34}H_{34}N_2O_4$ 534.654
From *Aspergillus terreus* var. *africanus*. Shows weak antitumour activity. Reddish-purple plates (MeOH). Sol. MeOH, C_6H_6; poorly sol. H_2O. Mp 300°. λ_{max} 284 ; 292 ; 385 ; 502 (EtOH) (Berdy).

2′-(3-Methyl-2-butenyl), di-O-*de*-*Me*: ***Asterriquinone SU5228***
[78860-46-5]
$C_{27}H_{22}N_2O_4$ 438.482
Prod. by *Aspergillus candidus*. Purple powder. Mp 150-154°. λ_{max} 260 ; 285 ; 290 ; 489 (no solvent reported).

5′-(3-Methyl-2-butenyl), di-O-*de*-*Me*: ***Semicochliodinol A***
[194224-72-1]
$C_{27}H_{22}N_2O_4$ 438.482
Prod. by *Chrysosporium merdarium*. Mp 195-197°.

6′-(3-Methyl-2-butenyl), di-O-*de*-*Me*: ***Semicochliodinol B***
[194224-73-2]
$C_{27}H_{22}N_2O_4$ 438.482
Prod. by *Chrysosporium merdarium*. Mp > 240°.

7′-(3-Methyl-2-butenyl): ***Asterriquinone C2***
[78708-38-0]
$C_{29}H_{26}N_2O_4$ 466.535
From *Aspergillus terreus* var. *africanus*. Shows weak antitumour activity. Purple needles (MeOH). Mp 202-203°. λ_{max} 285 ; 290 ; 485 (EtOH) (Berdy).

7′-(3-Methyl-2-butenyl), 2′-(1,1-dimethyl-2-propenyl): ***Asterriquinone B2***
[78708-36-8]
$C_{34}H_{34}N_2O_4$ 534.654
From *Aspergillus terreus* var. *africanus*. Shows weak antitumour activity. Deep purple prisms (C_6H_6). Sol. MeOH, C_6H_6; poorly sol. H_2O. Mp 199-200°. λ_{max} 283 ; 292 ; 372 ; 518 (EtOH) (Berdy).

7′-(3-Methyl-2-butenyl), 2′,2′′-bis(1,1-dimethyl-2-propenyl): ***Asterriquinone A4***

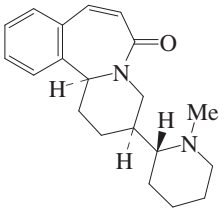
Astrocasine A-1524

*1,3,4,12*b*-Tetrahydro-3-(1-methyl-2-piperidinyl)pyrido[2,1-*a*][2]benzazepin-6(2*H*)-one, 9CI*
[2114-92-3]



$C_{20}H_{26}N_2O$ 310.438
Alkaloid from *Astrocasia phyllanthoides* (Euphorbiaceae). Mp 171-172°. $[\alpha]_D^{24}$ -270 (EtOH).

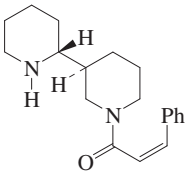
Perchlorate: Mp 149-151°.

Methiodide: Mp 227-228°.

Lloyd, H.A. *et al., Tet. Lett.*, 1965, 1761 (*isol, uv, ir, pmr, struct*)
Bright, W.M. *et al., J.O.C.*, 1976, **41**, 2454 (*cryst struct, abs config*)

Astrophylline A-1525

1′-(1-Oxo-3-phenyl-2-propenyl)-2,3′-bipiperidine, 9CI. 1′-Cinnamoyl-2,3′-bipiperidine
[5081-53-8]



Absolute Configuration

$C_{19}H_{26}N_2O$ 298.427
Alkaloid from *Astrocasia phyllanthoides* (Euphorbiaceae). Viscous oil. $Bp_{0.001}$ 115°. $[\alpha]_D^{20}$ +27 (c, 0.35 in EtOH).

Perchlorate: Mp 172-174°.

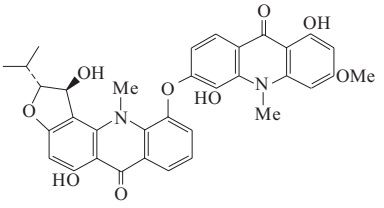
Picrate: Mp 146-148° dec.

N-*Me:*
Oil. $[\alpha]_D$ +92 (EtOH).

Lloyd, H.A. *et al., Tet. Lett.*, 1965, 4537-4540 (*isol, uv, ir, pmr, struct, abs config*)
Schaudt, M. *et al., J.O.C.*, 2003, **68**, 2913-2920 (*synth, pmr, cmr, ms*)

Atalanine A-1526

trans-*Atalantine*
[50906-85-9]

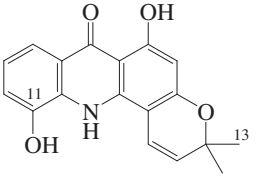


$C_{34}H_{30}N_2O_9$ 610.619
Alkaloid from *Atalantia ceylanica* (Rutaceae). Mp 216.5-217.5°.

Fraser, A.W. *et al., Chem. Comm.*, 1973, 615 (*isol, struct*)

Atalaphyllidine† A-1527

*3,12-Dihydro-6,11-dihydroxy-3,3-dimethyl-7*H*-pyrano[2,3-*c*]acridin-7-one, 9CI*
[57959-88-3]



$C_{18}H_{15}NO_4$ 309.321
See also 1,3,8-Trihydroxy-2,7-diprenylacridone, T-548. Alkaloid from the root bark of *Atalantia monophylla* (Rutaceae). Mp 275° dec.

N-*Me:* **N-*Methylatalaphyllidine****. 5-Hydroxynoracronycine*
[27067-70-5]
$C_{19}H_{17}NO_4$ 323.348
Alkaloid from *Atalantia ceylanica*, *Citrus depressa* and *Citrus maxima*; metab. of Acronycine, A-120 in the guinea pig. Red needles (Et_2O/petrol). Mp 252-254°.

N-*Me, di-Ac:*
Prisms (Et_2O/petrol). Mp 178-181°.

11-Me ether: Mp 200°.

11-Me ether, N-*Me:* see 11-Methoxy, *O*-de-Me, in Acronycine, A-120

Di-Me ether, N-*Me: 5-Methoxyacronycine*
Yellow needles (Et_2O/petrol). Mp 97-98°.

13-Hydroxy, N-*Me:* ***5,13-Dihydroxynoracronycine***
[904327-13-5]
$C_{19}H_{17}NO_5$ 339.347
Alkaloid from the stem bark of *Citrus maxima* (pummelo). Yellow. Mp 162-163°. λ_{max} 266 (log ϵ 4.34); 283 (log ϵ 4.21) (MeOH).

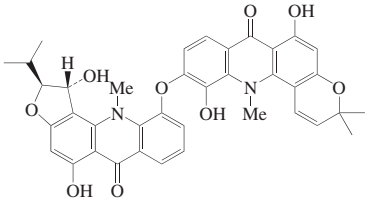
Ataline A-1528

[50906-86-0]



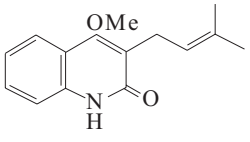
Relative Configuration
Probable structure

$C_{38}H_{34}N_2O_9$ 662.695
Alkaloid from *Atalantia ceylanica* (Rutaceae). Mp 209-210°.

Fraser, A.W. *et al., Chem. Comm.*, 1973, 615 (*isol, struct*)

Atanine A-1529

*4-Methoxy-3-(3-methyl-2-butenyl)-2(1*H*)-quinolinone, 9CI. 2-Hydroxy-4-methoxy-3-prenylquinoline*
[7282-19-1]



$C_{15}H_{17}NO_2$ 243.305
Alkaloid from the heartwood of *Fagara xanthoxyloides* and the leaves of *Ravenia spectabilis* (Rutaceae). Also present in *Evodia rutaecarpa*. Possesses anthelmintic and antiparasitic activity. Needles (Me_2CO). Mp 133°.

N-*Me:* **N-*Methylatanine***
[22826-43-3]
$C_{16}H_{19}NO_2$ 257.332
Alkaloid from the root bark and stem bark of *Almeidea guyanensis* (Rutaceae). Needles (MeOH). Mp 130°.

O-*De-Me,* N-*Me:* ***4-Demethyl-*N*-methylatanine***
[15954-07-1]
$C_{15}H_{17}NO_2$ 243.305
Alkaloid from the root bark of *Almeidea guyanensis* (Rutaceae). Needles (Et_2O). Mp 164°.

O-*De-Me,* O-*(3-methyl-2-butenyl):* ***3-(3-Methyl-2-butenyl)-4-[(3-methyl-2-butenyl)oxy]-2(1*H*)-quinolinone****. 3-(3,3-Dimethylallyl)-4-(3,3-dimethylallyloxy)-2-quinolone. 2-Hydroxy-3-prenyl-4-prenyloxyquinoline. 3-Prenyl-4-prenyloxy-2(1*H*)-quinolinone*
[18118-29-1]
$C_{19}H_{23}NO_2$ 297.396
Alkaloid from the leaves and stems of *Haplophyllum tuberculatum* (Rutaceae). Also isol. from *Evodia roxburghiana*. Exhibits modest anti-HIV activity against HIV-1 in cultured human lymphoblastoid CEM-SS cells. Cryst. (Me_2CO). Mp 114-115°.

2′,3′-Epoxide, O-*de-Me,* N-*Me: 3-(2,3-Epoxy-3-methylbutyl)-4-hydroxy-*N*-methyl-2-quinolone.* ***2′,3′-Epoxy-4-*O*-demethyl-*N*-methylatanine***
$C_{15}H_{17}NO_3$ 259.304
Alkaloid from the bark of *Galipea officinalis.*

Paul, B.D. *et al., J. Indian Chem. Soc.*, 1968, **45**, 552 (*occur*)

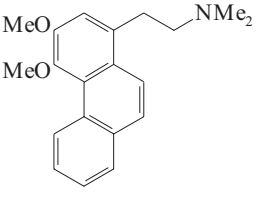
Atherosperminine A-1532

*3,4-Dimethoxy-*N*,*N*-dimethyl-1-phenanthreneethanamine, 9CI. 1-Dimethylaminoethyl-3,4-dimethoxyphenanthrene*
[5531-98-6]
[98900-05-1]



$C_{20}H_{23}NO_2$ 309.407
Alkaloid from the bark of *Atherosperma moschatum* and *Cryptocarya angulata*, the leaves of *Enantia chlorantha*, the stem bark of *Duguetia calycina* and *Annona muricata* (soursop), the leaves and stem bark of *Annona montana*. Needles (Me_2CO/petrol). Mp 199-200°.

Hydrochloride: [54749-97-2] Shows antiplatelet and vasorelaxing activity. Mp 234-235° dec.

Picrate: [5531-99-7]
Yellow needles (Me_2CO/MeOH). Mp 189-190°.

N-*Oxide:* ***Atherosperminine* N-*oxide***
[91174-15-1]
$C_{20}H_{23}NO_3$ 325.407
Alkaloid from the stem bark of *Guatteria discolor* (Annonaceae). Shows antiplatelet and vasorelaxing activity. Noncryst.

N-*Me:* **N-*Methylatherosperminium***
[98900-03-9]
[98900-04-0 , 5532-00-3]
$C_{21}H_{26}NO_2^{\oplus}$ 324.442
Alkaloid from the stem bark and stem wood of *Fissistigma glaucescens* (Annonaceae). Needles (EtOH)(as iodide). Mp 282-284° (iodide).

N-*De-Me:* ***Noratherosperminine***
[74606-53-4]

$C_{19}H_{21}NO_2$ 295.38
Alkaloid from *Duguetia* spp. (Annonaceae). Mp 180°.

2-O-De-Me: 1-[2-(Dimethylamino)ethyl]-4-methoxy-3-phenanthrenol. 1-(2-Dimethylaminoethyl)-3-hydroxy-4-methoxyphenanthrene. ***Argentinine***
[16625-57-3]
$C_{19}H_{21}NO_2$ 295.38
Alkaloid from the roots of *Aristolochia argentina*, the leaves of *Enantia chlorantha*, the stem bark and leaves of *Annona montana* and from *Monodora angolensis* (Aristolochiaceae, Annonaceae). Oil.

2-O-De-Me, N*-oxide:* ***Argentinine* N-oxide**
[138690-45-6]
$C_{19}H_{21}NO_3$ 311.38
Alkaloid from *Monocyclanthus vignei* (Annonaceae). Oil. Possible artifact.

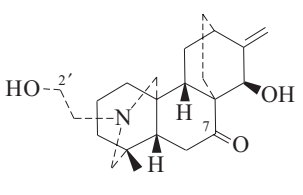
Atidine A-1533

[467-91-4]



$C_{22}H_{33}NO_3$ 359.508
Alkaloid from the roots of *Aconitum heterophyllum* (Ranunculaceae). Prisms (C_6H_6 or Et_2O). Mp 182.5-183.5°. $[\alpha]_D$ -47 ($CHCl_3$). pK_a 7.53 (50% MeOH).

Hydrochloride:
Rosettes (MeOH/Me_2CO). Mp 204-215° dec.

7α-Alcohol: ***Dihydroajaconine***
[1466-07-5]
$C_{22}H_{35}NO_3$ 361.523
Minor alkaloid from the seeds of *Consolida ambigua* (*Delphinium ajacis*), also obt. by mild redn. of Ajaconine (Ranunculaceae). Needles (EtOH aq.). Mp 99-100°. $[\alpha]_D^{24}$ -35 (c, 1.0 in EtOH).

7α-Alcohol, 2′-aldehyde: ***Consorientaline***
$C_{22}H_{33}NO_3$ 359.508
Alkaloid from *Consolida orientalis*. Amorph. $[\alpha]_D^{25}$ -22.7 (c, 0.33 in $CHCl_3$).

1′,2′-Didehydro, 7α-alcohol: ***Uncinatine***
$C_{22}H_{33}NO_3$ 359.508
Alkaloid from *Delphinium uncinatum*. Amorph.

7-Deoxo: ***Dihydroatisine***
[17934-91-7]
$C_{22}H_{35}NO_2$ 345.524
Alkaloid from roots of *Aconitum heterophyllum* (Ranunculaceae). Cryst. (Me_2CO). Mp 159-161°. $[\alpha]_D$ -44.5 (EtOH). $[\alpha]_D^{27}$ -43.9 (c, 1.41 in $CHCl_3$).

7-Deoxo, 2′-aldehyde: ***Chellespontine***
[149998-46-9]
$C_{22}H_{33}NO_2$ 343.508
Alkaloid from aerial parts of *Consolida hellespontica* (Ranunculaceae). Plates. Mp 227-230°. $[\alpha]_D$ +14.6 (c, 0.56 in MeOH).

7-Deoxo, 19-oxo: ***19-Oxodihydroatisine***
$C_{22}H_{33}NO_3$ 359.508
Alkaloid from *Delphinium staphisagria*. Cryst. ($CHCl_3$). Mp 221-223°. $[\alpha]_D^{25}$ -31.2 (c, 0.57 in $CHCl_3$).

7-Deoxo, 19-oxo, 2′-Ac: ***22-O-Acetyl-19-oxodihydroatisine***
$C_{24}H_{35}NO_4$ 401.545
Alkaloid from *Delphinium staphisagria*. Gum. $[\alpha]_D^{25}$ -35.2 (c, 0.54 in $CHCl_3$).

14-Oxo, 15-deoxy, 7α-alcohol: ***Spiramine G***
[142750-44-5]
$C_{22}H_{33}NO_3$ 359.508
Alkaloid from roots of *Spiraea japonica* var. *acuminata* (Rosaceae). Needles (Et_2O). Mp 160-162°. $[\alpha]_D^{20}$ -16 (c, 0.95 in $CHCl_3$).

15-Epimer, 7α-alcohol, 2′-aldehyde: ***Spiratine A***
$C_{22}H_{33}NO_3$ 359.508
Alkaloid from the roots of *Spiraea japonica* var. *acuta*. Amorph. powder. $[\alpha]_D^{24}$ -6.2 (c, 1 in MeOH).

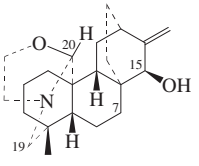
Atisine, 9CI A-1534

Anthorine
[466-43-3]



Absolute Configuration

$C_{22}H_{33}NO_2$ 343.508
Exists as a mixt. of C-20 epimers in soln. Alkaloid from *Aconitum heterophyllum, Aconitum gigas, Aconitum anthara* and *Aconitum heterophylloides* (Ranunculaceae). Resin. $[\alpha]_D$ -21 (c, 2.4 in EtOH). $[\alpha]_D$ -30.7 (EtOH). pK_a 12.8 (50% MeOH). Undergoes a ready isomerisation of the oxazolidine ring to Isoatisine, I-192 on treatment with methanolic alkali or even by boiling MeOH.

Hydrochloride: Atisinium chloride. Guanfu base H
[4758-99-0]
Mp 311-312° (303°) dec. $[\alpha]_D^{25}$ +28 (c, 1.10 in H_2O). Exists as a quaternary iminium salt rather than a protonated NH^+ salt.

*7β,19*R*-Dihydroxy:* ***Delphatisine A***
[1003600-46-1]
$C_{22}H_{33}NO_4$ 375.507
Alkaloid from *Delphinium chrysotrichum*. Amorph. powder. $[\alpha]_D^{27}$ +16 (c, 1 in $CHCl_3$).

6β,7α-Diacetoxy, 15-deoxy, 19-oxo: ***Spiramide***†

[301541-30-0]
$C_{26}H_{35}NO_6$ 457.566
Alkaloid from the roots of *Spiraea japonica* var. *acuta*. Amorph. powder. $[\alpha]_D^{26}$ -63.4 (c, 4.2 in $CHCl_3$).

15-Epimer, 19-oxo, 7α-hydroxy: ***Deacetylspiramine S***
[340814-10-0]
$C_{22}H_{31}NO_4$ 373.491
Alkaloid from *Spiraea japonica* var. *ovalifolia*. Prisms ($CHCl_3$/MeOH). Mp 113-115°. $[\alpha]_D^{21}$ -74.3 (c, 0.27 in MeOH).

15-Epimer, 19-oxo, 7α-hydroxy, 7-Ac: ***Spiramine V***
[501327-99-7]
$C_{24}H_{33}NO_5$ 415.528
Alkaloid from *Spiraea japonica* var. *ovalifolia*.

15-Epimer, 19-oxo, 7α-hydroxy, 15-Ac: ***Spiramine S***
$C_{24}H_{33}NO_5$ 415.528
Alkaloid from *Spiraea japonica*. Incorrect struct. given in one ref.

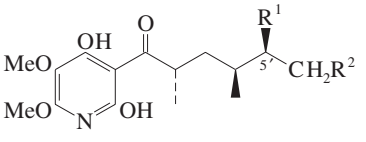
Atpenin A-1535



Atpenin A_4 R^1 = Cl, R^2 = H
A_5 R^1 = R^2 = Cl
B R^1 = R^2 = H

Antibiotic complex of which 3 components have been isol. Prod. by *Penicillium* sp. FO-125. Antifungal agent.

Atpenin A_4 [119509-25-0]
$C_{15}H_{22}ClNO_5$ 331.795
Powder. Sol. MeOH, Et_2O; poorly sol. H_2O. Mp 98°. $[\alpha]_D^{22}$ -8.6 (c, 1 in EtOH). λ_{max} 240 (ε 11500); 270 (ε 7500); 318 (ε 7000) (EtOH/HCl) (Derep). λ_{max} 242 (ε 9500); 290 (ε 9600); 355 (ε 4300) (EtOH/NaOH) (Derep). λ_{max} 235 (ε 12200); 267 (ε 8400); 320 (ε 5800) (EtOH) (Derep).
▶ LD_{50} (mus, ipr) 50 - 150 mg/kg. CJ8794000

Atpenin A_5
WF 16775A_1. Antibiotic WF 16775A_1
[119509-24-9]
$C_{15}H_{21}Cl_2NO_5$ 366.24
Also prod. by *Chaetasbolisia erysiphoides*. Angiogenesis inhibitor. Needles. Mp 86°. $[\alpha]_D^{22}$ -0.8 (c, 1 in EtOH). λ_{max} 240 (ε 11500); 270 (ε 7000); 318 (ε 7000) (EtOH/HCl) (Derep). λ_{max} 242 (ε 9500); 290 (ε 9500); 355 (ε 4300) (EtOH/NaOH) (Derep). λ_{max} 236 (ε 16800); 270 (ε 11300); 319 (ε 9500) (EtOH) (Derep).
▶ CJ8800000

5′-Chloro: ***Antibiotic WF 16775A_2****. WF 16775A_2*
$C_{15}H_{20}Cl_3NO_5$ 400.685
Prod. by *Chaetasbolisia erysiphoides*. Angiogenesis and neovascularisation inhibitor. Needles. Sol. MeOH, EtOAc; poorly sol. H_2O. Mp 119.5-121°. $[\alpha]_D^{20}$ -52 (c, 0.5 in $CHCl_3$). λ_{max} 240 (ε 11500); 270 (ε 7500); 318 (ε 7000) (MeOH/HCl) (Derep). λ_{max} 242 (ε 9500); 290 (ε 9600); 355 (ε 4300) (MeOH/NaOH) (Derep). λ_{max} 236 (ε 19200); 269 (ε 12400); 322 (ε 11600) (MeOH) (Derep). λ_{max} 235 (ε 14600); 270 (ε 9600); 322 (ε 8400) (MeOH-HCl) (Berdy). λ_{max} 245 (ε 11400); 292 (ε 11200); 350 (ε 4000) (MeOH-NAOH) (Berdy).

Atpenin B [119509-26-1]
$C_{15}H_{23}NO_5$ 297.35
Prod. by *Chaetasbolisia erysiphoides*. Powder. Sol. MeOH, Et_2O; poorly sol. H_2O. Mp 78°. $[\alpha]_D^{22}$ -27 (c, 1 in EtOH). λ_{max} 240 (ε 11500); 270 (ε 7500); 318 (ε 7000) (EtOH/HCl) (Derep). λ_{max} 242 (ε 9500); 290 (ε 9600); 355 (ε 4300) (EtOH/NaOH) (Derep). λ_{max} 237 (ε 5600); 270 (ε 3600); 318 (ε 3100) (EtOH) (Derep).

Tetramic acid glycoside. Isol. from the sponge *Theonella swinhoei*. Orange solid. $[\alpha]_D^{24}$ -116 (c, 0.1 in MeOH). λ_{max} 240 (log ϵ 3.72); 280 (log ϵ 3.69); 376 (log ϵ 3.57) (MeOH).

2′-O-*β-D-Arabinopyranosyl:* ***Aurantoside H***

$C_{28}H_{35}ClN_2O_{12}$ 627.043

Isol. from *Theonella swinhoei*. Orange solid. $[\alpha]_D^{24}$ -295 (c, 0.1 in MeOH). λ_{max} 240 (log ϵ 3.79); 280 (log ϵ 3.79); 434 (log ϵ 3.95) (MeOH).

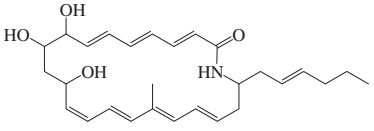
2′-O-*[5-Deoxy-2-*O*-methyl-β-D-arabinofuranosyl-(1→4)-β-D-arabinopyranosyl]:* ***Aurantoside I***

$C_{34}H_{45}ClN_2O_{15}$ 757.187
Isol. from *Theonella swinhoei*. Orange solid. $[\alpha]_D^{24}$ -210 (c, 0.1 in MeOH). λ_{max} 242 (log ϵ 3.68); 282 (log ϵ 3.68); 430 (log ϵ 3.72) (MeOH).

Ratnayake, A.S. *et al., J. Nat. Prod.*, 2005, **68**, 104-107 (*isol, pmr, cmr*)

Aureoverticillactam A-1555

22-(2-Hexenyl)-9,10,12-trihydroxy-17-methylazacyclodocosa-3,5,7,13,15,17,19-heptaen-2-one, 9CI
[682774-28-3]

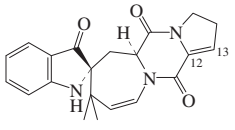


$C_{28}H_{39}NO_4$ 453.62
Closely related to Antibiotic BE 14106, A-1127. Prod. by the marine *Streptomyces aureoverticillatus* (NPS001583). Shows moderate cytotoxic activity. Amorph. solid. λ_{max} 283 (sh) ; 290 ; 310 (sh) ; 330 (sh) (MeCN aq.).

Mitchell, S.S. *et al., J. Nat. Prod.*, 2004, **67**, 1400-1402 (*isol, pmr, cmr*)

Austamide A-1556

[34427-31-1]



Absolute Configuration

$C_{21}H_{21}N_3O_3$ 363.415
Metab. of *Aspergillus ustus*. Tremorgenic toxin. Yellow amorph. solid. Sol. MeOH, $CHCl_3$. $[\alpha]_D^{20}$ +152 (c, 1 in EtOH). λ_{max} 234 (ϵ 26300); 256 (ϵ 2344); 282 (ϵ 8700); 392 (ϵ 2700) (EtOH) (Berdy).

12S,13-Dihydro: ***12,13-Dihydroaustamide***
[34506-79-1]
$C_{21}H_{23}N_3O_3$ 365.431
Minor metab. of *Aspergillus ustus*. Cryst. (Me_2CO). Mp 235-238°. $[\alpha]_D^{22}$ +55 (c, 1.1 in $CHCl_3$). Fluorescent.

12ξ-Hydroxy, 12,13-dihydro: ***12,13-Dihydro-12-hydroxyaustamide***
[59476-59-4]
$C_{21}H_{23}N_3O_4$ 381.43
Minor metab. from *Aspergillus ustus*. Cryst. (MeOH). Mp 164-165°.

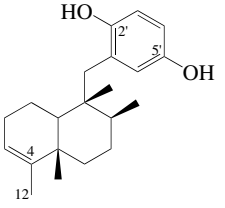
Avarol A-1560

[55303-98-5]



Absolute Configuration

$C_{21}H_{30}O_2$ 314.467
Constit. of *Dysidea avara*. Immunostimulant. Shows antiinflammatory, analgesic, ichthyotoxic, antimutagenic and anti-HIV activity. Cryst. ($CHCl_3$). Sol. MeOH, $CHCl_3$; poorly sol. H_2O, hexane. Mp 148-150°. $[\alpha]_D$ +6.1. Log P 6.98 (calc). λ_{max} 298 (ϵ 3900) (no solvent reported) (Derep).

▶ LD_{50} (mus, ipr) 269 mg/kg. Antimutagenic activity with inhibiting effect on

benzo[*a*]pyrene monooxygenase.
CZ9026700

2′,5′-Quinone, 3′-amino: ***3′-Aminoavarone***
$C_{21}H_{29}NO_2$ 327.466
Isol. from a *Dysidea* sp. Red oil. $[\alpha]_D^{22}$ +45 (c, 0.1 in CH_2Cl_2).

2′,5′-Quinone, 3′-(methylamino): ***3′-Methylaminoavarone***
[83995-06-6]
$C_{22}H_{31}NO_2$ 341.492
Found in the sponge *Dysidea avara*. Inhibitor of cell division in sea urchin eggs. Red cryst. Sol. MeOH, $CHCl_3$; poorly sol. hexane. Mp 153-155°. Poss. artifact. Called 2-methylamino in the lit. λ_{max} 288 (ϵ 50029); 486 (ϵ 2088) (MeOH) (Berdy).

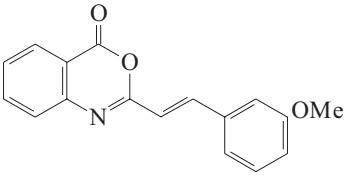
2′,5′-Quinone, 4′-(methylamino): ***4′-Methylaminoavarone***
[83995-05-5]
$C_{22}H_{31}NO_2$ 341.492
Isol. from the sponge *Dysidea avara*. Inhibitor of cell division in sea urchin eggs. Red cryst. Sol. MeOH, $CHCl_3$; poorly sol. hexane. Mp 160-163°. Poss. artifact. Called 3-methylamino in the lit. λ_{max} 288 (ϵ 5030); 486 (ϵ 2090) (MeOH) (Derep). λ_{max} 289 (ϵ 4688); 485 (ϵ 1065) (MeOH) (Berdy).

2′,5′-Quinone, 3′-(2-phenylethylamino): ***3′-(2-Phenylethylamino)avarone***
$C_{29}H_{37}NO_2$ 431.617
Isol. from a *Dysidea* sp. Reddish oil. $[\alpha]_D^{22}$ -89 (c, 0.1 in CH_2Cl_2).

Cimino, G. *et al., Experientia*, 1982, **38**, 896 (*Methylaminoavarones*)
Puliti, R. *et al., J. Mol. Struct.*, 2000, **516**, 31-41 (*3′-Methylaminoavarone, cryst struct*)
Diaz-Marrero, A.R. *et al., Org. Lett.*, 2006, **8**, 3749-3752 (*3′-Aminoavarone, 3′-Phenethylaminoavarone*)

Avenalumin II A-1561

*2-[2-(3-Methoxyphenyl)ethenyl]-4*H*-3,1-benzoxazin-4-one, 9CI. 2-(3-Methoxycinnamoyl)-4*H*-3,1-benzoxazin-4-one*
[78214-14-9]



$C_{17}H_{13}NO_3$ 279.295
The proposed struct. illus. has been questioned (see Crombie *et al*). Phytoalexin from oat (*Avena sativa*) infected with rust fungus *Puccinia coronata*. Poorly sol. hexane. λ_{max} 317 ; 336 (MeOH) (Berdy).

Mayama, S. *et al., Physiol. Plant Pathol.*, 1981, **19**, 217 (*isol*)

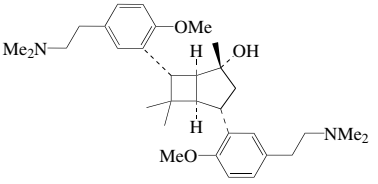
Avicennamine A-1565

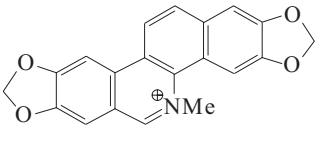


$C_{32}H_{48}N_2O_3$ 508.743
Alkaloid from *Zanthoxylum avicennae*. Amorph. $[\alpha]_D^{28}$ -52.9 (c, 1 in $CHCl_3$).

Thuy, T.T. *et al., Phytochemistry*, 1999, **50**, 903-907 (*isol, cd, pmr, cmr, ms*)

Avicine A-1566

5-Methyl-1,3-benzodioxolo[5,6-c][1,3]dioxolo[4,5-j]phenanthridinium(1+), 9CI
[24939-31-9]



$C_{20}H_{14}NO_4^{\oplus}$ 332.335
Alkaloid from the root bark of *Zanthoxylum avicennae* and the bark of *Zanthoxylum inerme* (= *Fagara boninensis*) (Rutaceae). Rather unstable; disproportionates into its dihydro- and oxy-derivs.

Acetate:
Bright yellow needles + $2H_2O$ (EtOH). Mp 160° dec.

N-*De-Me:* ***Des*-N-*methylavicine***. *Noravicine*

[217-52-7]
$C_{19}H_{11}NO_4$ 317.3
Alkaloid from the bark of *Zanthoxylum cuspidatum* (Rutaceae). Needles (Py). Mp 325° dec. (290-295°).

8-Methoxy, N*-de-Me:* ***Rhoifoline A***
$C_{20}H_{13}NO_5$ 347.326
Alkaloid from the stem bark of *Zanthoxylum rhoifolium*. Solid. Mp 168-169°.

Arthur, H.R. *et al., J.C.S.*, 1959, 4007 (*isol*)

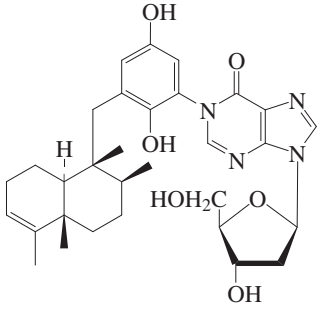
Avinosol A-1567

[909576-71-2]

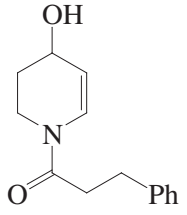


$C_{31}H_{40}N_4O_6$ 564.68
Conjugate of Avarol, A-1560 and 2′-Deoxyinosine. Isol. from a *Dysidea* sp. Unstable solid. $[\alpha]_D^{22}$ -26.9 (c, 0.35 in MeOH).

Diaz-Marrero, A.R. *et al., Org. Lett.*, 2006, **8**, 3749-3752 (*isol, pmr, cmr*)

Awaine A-1568

3-Phenylpropanoic acid 2,3-didehydro-4-hydroxypiperidide
[593254-86-5]

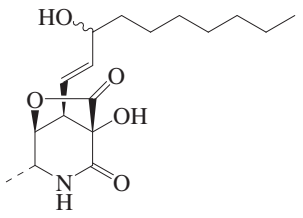


$C_{14}H_{17}NO_2$ 231.294
Alkaloid from the aerial parts of *Piper methysticum*. Oil.

Dragull, K. *et al., Phytochemistry*, 2003, **63**, 193-198 (*isol, pmr, cmr*)

Awajanomycin A-1569

[913260-20-5]

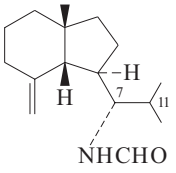


$C_{17}H_{27}NO_5$ 325.404
Prod. by a marine-derived *Acremonium* sp. AWA16-1. Cytotoxic. Gum. $[\alpha]_D^{25}$ +78 (c, 0.1 in MeOH). λ_{max} 274 (log ϵ 3.73) (MeOH).

Jang, J.-H. *et al., J. Nat. Prod.*, 2006, **69**, 1358-1360 (*isol, pmr, cmr*)

Axamide 1 A-1570

[56012-88-5]



$C_{16}H_{27}NO$ 249.395
Constit. of *Axinella cannabina*. Oil. $[\alpha]_D$ +10 (c, 1.2 in $CHCl_3$).

7,11-Didehydro: ***Axamide 4***
[62078-09-5]
$C_{16}H_{25}NO$ 247.38
Constit. of *Axinella cannabina*. Cryst. Mp 81-84°. $[\alpha]_D$ +63.3.

Isothiocyanate: ***Axisothiocyanate 1***
[53822-97-2]
$C_{16}H_{25}NS$ 263.446
Isol. from *Axinella cannabina*. Oil. $[\alpha]_D$ +5.9 (c, 2.5 in $CHCl_3$). Has -NCS replacing -NHCHO.

Isocyanide: ***Axisonitrile 1***
[53822-96-1]
$C_{16}H_{25}N$ 231.38
From *Axinella cannabina* and *Phyllidia pulitzeri*. Ichthyotoxic agent. Cryst. Mp 43-45°. $[\alpha]_D$ +22.6 (c, 1 in $CHCl_3$). Has -NC replacing -NHCHO.

7,11-Didehydro, isocyanide: ***Axisonitrile 4***
[62078-10-8]
$C_{16}H_{23}N$ 229.364
Isol. from *Axinella cannabina*. Cryst. Mp 56-58°. $[\alpha]_D$ +51.4 (c, 1 in $CHCl_3$).

7,11-Didehydro, isothiocyanate: ***Axisothiocyanate 4***
[62078-11-9]
$C_{16}H_{23}NS$ 261.43
Isol. from *Axinella cannabina*. Oil. $[\alpha]_D$ -35.9 (c, 1.2 in $CHCl_3$).
